## An Apologue for an Epilogue

A Bout the year 1648 we Studied Aftronancy and Geomancy, and writ the Harmony of the World in two Books, the firft Printed for Mar. Brome with the Temple of Wi Sdome at his houfe inIzy-Lane, The Holy Guide, Elbavareuna, being an Introduction to the Rofre Crucian philorophy, and diverlly Compiled in thefe Books, in fhort words, yet fufficient for thofe who are wife; fome of thefe things are written Methodically, fome without order pur pofely fome things are delivered by fragments, fome things are even hid and left for the fearch of the wife, who more acutely contemplating thefe things which are written, and diligently fearching (the Harmony of the World, the Temple of Wi domee, and the Holy Guide ) may obtain the Compleat rudiments of the Rofie Crucian Philofophy and alfo infallible experiments: and if you defire to ftudy thefe Books, keep filence and Conftantly conceal within the fecret clofet of your Religous breaft, fo holy a determination;
for (as Taphthartharath faith) to publifh to the knowledge of many an Art wholly filled with fo great Majefty of the Deity, is a fign of an Irreligious fpirit; and Divine Plato Commanded that holy and fecret mitteries fhould not be made publique to the people, Fythagoras and Prophiry confecrated their followers to a religious Silence, The Rofie Crucians with a certain terible authority of religion, do exact an oath of filence from thofe they initiate to the Arts of Aftromancy Geomancy \& Telefmaticall Images, becaufe by them the dead are raifed to life, by them they alter change and amend bodies, cure the defeafed prolong Life, preferve Health, renew youth in old folke, make dwarfs grow great men, make fools and Madmen wife and vertuous, deftroy the power of writchs, by thefe Arts they make men. fortunate in play, law fuits love, victory over enimies, in Horle Riaces in Gameing ${ }_{2}$ in Merchandize and at fea: Glencing the violent waves, by thefe Arts shey know all things and refolve all mannes of queftions prefent or to come, as faith Beata.

In Apologue for an Epilogue.

* Ou that admirers are of vertue, Stay Confider well what I to you floll $\int a y$, But you, that facred laws contemn, prophane Away from bence, return no more again, But thou 0 my Engenius wohofe mind is high obferve my mords circad them with thine eye, And them within thy facred breaft repone And in thy journy thinke of God alone, The Author of all things that cannot die. of mhom we now fball Treat -_
And Engenius The odidactus Proclaims, Beata Pulchra comes, bence, bexce, all ye (propbane Ibeodidatus cryes, ev from bergrove refrain.

Now in celebrating the holy mifteries of Hester Heaton, and Beata pulcbra they only were admitted to be initiated, Eugenius Iheodidactus proclaiming the prophane vulgar to depart, of thefe goddeffes youmay read at Large in our Temple of Widdome; in Efdras we read this precept concerning the Cabalifticall fecret of the Hebrews declared in thefe verfes, thou fhalt deliver thofe Books to the wifemen of the people, whofe hearts thou knoweft can comprehend them and keep thofe fecrets, in the Temple ofWifdome youfee obfcure Figures of Aftromancy
and Gcomancy, whereunto is added the AIphabet of Angels or writing and Language of Haeven, affording compendious words partly by Starrs, Characters fet in manner of a wheel thick, the reading thereby being defended from the Curiofity of the prophane , therefore my worthy Schollers in this fcience be filent, and hide thofe things which are fecret in Religion, for the promife of filence is due to Religion as Tertullian affirms but they which do orherwife are in great danger, Now concerning thefe fecrets my Ingenious difeiples, $I$ would tell you, if it were lawfull to tell you, you fhould know all, if it were lawfull to hear it; but both eares and tongue would contract the fame guilt of rafh curiofity, the divine Goddefs
( of God
Hefter Heaten fings in thofe verfestbe power The Heavens Ioves Roiall Pallace, he's King Fountain vertuc and God of every thing, He is omnipotent, and in bis breft Earth, water, fire, and aire do take their refos Both night and day, true wif donse with fweet Love
Are all contein'd in this wast bulke of Iove His neck and glorious bead if you would fee Eebold the Hearens high, and 11, ijefty

## An Apologue for an Epilogue

The glorious Rajes of Stars do represent His golden lock, and's herd adornament. And again the fings elfe where to her friend Eugenius Theodidactus, Bright Phoebus and the Moon, are the two eyes of this great Jove by which all things, be

His bead which predicts all, is placid $i^{6}$ th sky From which no Noyfe can whisper Secretly It piercetb all, bis body raft extends Both far and wide, and knows no bounds (nor ends The Spations Air's bis breath, bis wings the wind By which be flyes far Swifter then the mind. His belly is our Mother Earth, who swells Into huge Mountains, whom the Ocean fills And Circles, bis feet are the rocks and fines Which of this globe are the foundations, Thisfove under the Earth conceals all things And from the depth into the light them brings.

This goddess commands fecrefie, and Theodorus the Tragick Poet, when he would have reforced fomething of the mifaeries of the fens Scripture to the abhored actions and deeds of harlots and villains upon the ftage was deprived of fight, ard the Journimen Traitors or Tailors in their nativities, Almanacks, and monthly

## An Apologuc for an Epilogue.

Predictions verfes and obfervations againft their Sacred Majeityes King Charles the firlt and fecond and the Duke of Euckinham are now deprived of trith, and they cannot writeorpredict any thing againlt this Divine government; but lies \& my difciples concurred the difpleafure of Beata Pulchra and HeSter Heaton, Fecaufe they interpreted the phenomana of Narure, from the Harmony of the World, The Temple of Wifdome, and the Holy Guide \& publifned them, they dreamed next thatthe goddeffes Hefter Heatan and Beata Pulchra ftood in (whores habits betore the Brothell houfe and they wrathfully anfwered their admiration, that they were by shem violently drawn from their modefty \& proftituted every where to all common, by which they are adinonifhedthat the cerimonies of the Gods ought not to be divulged, Pithagoras Socrates Flato Ariftoxenus kept the Mifteries of God and nature inviolable, but plotinus as Porphiry relates, broke the oath whichhe made to his Mafteral Ammonius, and publifhed his Mifteries, for the punifhment of his tranfgreffion he was burnt with lightning, and confumed alive to his bones with Lice, our Saviour Cbrift alfo himfelfe while he lived on Earth, fooke after that manner and fafhion, that only the more intimate Apottes thould underitand the
mittery of the word of God, but the other fhouldperceive the Parables only:Commanding moreover that holy things hould not be given to dogs, nor pearly caft to fwine, I would alfo warn you Readers of the Har ${ }^{\circ}$ mony of the World, The Temple of Wi fome and the Holy Guide, that even as the Divine powers deteft publique things and profane, and love fecrecy: So every. Rofie Cruican experiment fleeth the publique, feeks to be hid, is ftrengthened by filence but is deftroyed by publication, neither doth any compleat effect follow after all thefe things fuffer lors, when they are powred into prating; and ins credulous mindes; therefore it behpveth a Phylofopher, if he would get fruit from this Art, to be fecret, and to manifeft to none, neither his work nor place, nor time, neither his defire nor will unlefs either to a Mafter or partner or Compaion who ought alfo to be faithfull beleiving filent, and Digified by nature and education: Seeing that even the prating of a companion, his incredulity and unworthinefs hindreth and difturbeth the effect of every operation, we have now delivered this Harmony of the world, The Temple of WiSdome and the Holy Guide, in fuch a manner, thatit may not be hid from the prudent and intelligent, and yet may not admit wicked and inciedulons men
to the Mifteries of the Rofle Crucian Philofophy: but leave them deftitute and aftonifled ${ }^{5}$ in the fliade of ignorance and defperation, you therefore fons of wifdome and Learning fearch diligently in the Harmony of the world, The Temple of Wifdome and the Holy Guid, gathering together our difperfed intentions, which in divers places we have propounded and. what is hid in one place, we make manifert in another, that it may appear to you wife men; For, for you only have we written, whofe mind is not corrupted but regulated according to the right order of living, unmarryed, who in Chaftity and honefty, and in found faith fear and reverence of God : whofe hands are free from fin and wickedinefs, whofe manners are gentle, Cober, and Modeft, you only fhall find out this knowledge conteined in the Harmony of the World, The Temple of ziVidome and the Holy Guide, which is preferved for you, and the fecrets whichare hid by many enigmas cannot be perceived but by wife men, which when you fhall obtaip the whole fcjence of the invincible Rofic Crucian difcipline will infinuate it felf unto you and thefe vertues will appear to you, which the Rofie Crucians,
who wrought miracles, obtained, but yee envious Tallors or anworthy Scorpionilts, Calumniators, funs of bule ignorance, Journimen Traitors, foolifh writers of Almanacks and other leudnefs, that deceives them that truft him, railing down sight and with ftudied lyes difparages our perfon, that was fo kind to them as to lend them ten pound in Gold and had lent them 100 l. if we had not found Them of an ungratefull ill Nature, we fcorn to feak how much our love was to the fending and giving great gifts, Thefe in requitall Provoke men to anger, and quarrell, and pick words to advantage, and ifany man invite them to fight, then begargly cowardlike run to Law, and bring falfe witneffes to jutifie their deceitfull devies, to get money And fo fome of thefe Aftrologicals live, at this Leud rate being not worthy of any regard,But faith a poet.

Since by thy late lof love, I bave fourd out, Thy frindjhips fand like the Common rout; Who prife mens voorths at an vnconftant rate Juft as they $\int e^{\prime}$ them raifed ar pref d by fate,

When we look uppon his naturall parents, Kiadred, and relations, and. confider his

## An Apologue for an Epilogue.

his education, we indeed muft give him his due title $i, e$ a man that by his own in-. duftry and a little inftruction (of an Aftrologer and our felf) hath obtained knowledge in Aftrology and Geomancy and can make an Almanack \&c. but he is fo envious fcandalous and malitious againft others, that it clouds his better parts, The late years of tirany admitted focking weavers Shomakes, Millers Mafons, Carpenters, Bricklaiers Gunfiniths Porters, Butlers \&c. To write and teach Aftrology and Phifick, and what a noyfome fawn of brates, (as Arr. $I$ albot calls them) are generated of the Frothy brains of thefe illegitmate fcriblers, that went a whoring after the prefs, and railed againft Monarthy and all men, \& cannot yet love one another, we forbid thefe to come nigh our writings for they are your emimies and fand out a precipice, that ye may ere and fall head long into mifery; if any therefore through hisincredulity or dulnefs of intellect, doth not obtain his defire let him not impute the fault of his Ignorance to us', or fay that we have erred, or written falfely and lied, but let him accufe himfelf, who underftandeth not our writings for they are obfcure, and covered with divers mifteries, by the which it will
eafily happen, that many may ere and louse their fenfe, therefore let no man be angry with us, for we are envious againft no man, but have folded up the truth of this Science with many Enigmas, and differfed it in divers places, for we have not hidden it from the wife but from the wicked and ungodly and have delivered it in fuck words which neceflarily blind the foolifh, and eafily may admit the wife to the underftanding of them thus being willing to teach any ingenuous man form out Vergin wallace in

The Son of
FRANCIS and MARTHETDO Now of Sidmouth in Devonflire.

obn Heydon is not bafely but Nobly defcended, The Antiquaries derive them from Fulius Heydon the King of Hungary and Weftpbalia, that were defcended from that noble family of Cesar Heydon in Rome, and fince in this Royal Race the line run down to the Honorable Sr. Chriftopher Heydon of Heydon near Northwich Sr. Fohn Heydon late Lord Lieutenant of the Kings Tower of London, and the noble chandlers in Worcefler-Bire of the Mothers fide $\because \sim 8+1$

## The Life of

which line Spread by Marriage into Devonfhire, among the Collin's, Ducks, Dries and Bears, he had one Sifter named Anve Hejdon, who dyed two years fine, his Fathen and Mother being yet living: He was born at his Fathers Hunfe in Green-Arbour London $\xi_{2}$ and Baptized at St. Sepulclores and fo was his Sifter, and both in the fifth and feventh years of the Reign of King charles thelfirft, he was educated in Warwickjfire among his mothers friends, and fo careful were they to keep him and his filter from danger and to their Books, that they had one continually to wait upon them, both to the School and at home.

He was Commended by Mr. FobnDennis his Tutor in Tardebick to Mr. George Linacre Prieft of Coughton, where he learned the Latine and Greek tongues, the War at this time began to motet the Iniverfities of this Nation, He was then Articled to Mr. Mic. Felly an Attorney of Clifford In ne with eighty pound, that at five years end he gould be Sworn before Chief Juftice Foll now being very young he applyec hisminde to Learning, and by his happy wit obtained great knowledge in all Arts and Sciences, afterwards alifo he followed the Armies of the King and for his valour

Commanded in the Troops, when he was bytheie means famous for Learning and Arms, he Travelled into spain, Italy, Arabia, Aligypt and Perfla, and gave his minde to writing, and Compofed about 20 years fi.ce The Harmony of the World in two Books, The Temple of Wijdome in three Book; The Holy Guide in fix Books, Elbavareuna in one Book, Hampaneab Hammegulehs in one Book, Ocia Imperialia in one Book; The Idecz of the Law, The Idea of Government, The Ided of Iyrainny in three parts, The Fundamental Elementsof Miorral Phy. lofophy, Policy, Governmerit and War, ouco

Thefe Books were written near 20 years fince, and preferved by the good hand of God in the Cuftodyo Mr.Thomas Heydon, Sr. Jobn Hanmer, Sr. Kalph Freman, and Sr. Richard Tem; le during the Tyrants time, firf one had the Books, then another, \&xc. And at laft at the Command of thefe Honoumble Learned, and va'iant Knights they were Printed.

He wrote many cxcellent things, and performed many rare experiments in the Arts of Afromancy and Geomancy \&c. but efpecially eighty one, the firt upon the Kings Death, Predicted in Arabia by him to his Friends, The fecond upon the lofles of
the King at ix ercefter Predieted at I baur is in Perfia, the thisd Predicted the Death of (lizer cromw:ll in Lambeth houfe to many Perfons of Honour menzioned in hisbooks, the fourth he wrote of the oyerthrow of Lambert, and of the Duke of Albymarle h's bringing again (f the King to his happy Countries, and gave it to Major Chrifteptier serikenbead a Goldmith at the Anchor by Fetter laze end in Holloors, the Hith precaution or Prediction he gave t hisH:ghnefs the Duke of auckinghana two Moneths before the evil was practifed: And This Enemy Abralans Goodman lies now in the Tower for att $m$ ting the death of that Noble Prince. The fixth for Count Gramant when he was banifned into England by the King of France, and he predicted by the Art of Aftromancy and Geomancy the Kings receiving of him again into favor and of his marriage to the Lady Hamelton. The Eeventh forDuke Minulaus a Peer ofGermany that the Emperour fent to him, when the Turk had an Army agunfthim, aind of the death of the Pope the reft are in his Booke, And therefore by thefe Monuments the name of Heydon for his variety of Learning was famous not onely in England, but alfo in many otherNations into which bis Books
are Tranflated. And is feems fomething difficult to determite, whetioe the fophiflication of trath, cit the fucus of errors hath of late years been the mote Epidemical cheat in Print, it berginticienty netorisus how this genemation of Taylors Almanacks, the under-whog a whonigg afier the Prefs, and what a moy fone frewn of: Brats are generated of the froth finegitemate Brains, not lefs numerous then furious, that neither their male conent Pasents nor Religion, Law, Rearon, nor Charity are able to maintain. And aithough Mr.jobsis Heydon's works be of a moregenerous exthation, yet they are vey far fiom Corrplementing themfelves with the leaft va: hopes of exemption from thefe cenfures which are common to allmen, it is worth an Afterisk to obforve how, infeazable it hath been in all ages for the moft inncent to efcape this Corrcetio, Divine Plato that Prince of Phylofophers is acculed for being too confured and inmethodical, Virgilly fome is counted but a fhallow and weak witted Poet, and by others charged as if he were wholy be holding to Homer for his works, and Homer himflef is derided by Horace, as if he were too drowhie a Poet, Demoithenes could not pleafe Marcots

Set with Angels, Planets and Mettals $\mathcal{O}^{\circ} \mathrm{Ga}$

> The Firft Book:

## CHAP.I.

I of the Gold Mercury or Argess eiver 2 Purification. 3 Sublination. 4 Cal. ciration. 5 Exuberation. 6 Solution. 7 Separation. 8 Conjunction. 9 Putres fac̃ion into Sulphar. 10 Fermentation. II Multiplication in vertue. 12 Mul ? tiplication in quantity.
Son E that can make the Stone of $\mathrm{Ar}^{2}$ gent vive or alone, is the greateff fearcher out of Art and Nature : becaufe there is all that in I which wife men do feek, for, Quick-filver is the mother and fperm of all Metals andकtieir neareft matter: and it is not onely a fpirit but a body, is is allo a middle Nature and alfo a fulphur, it is a lingsing ? is dieth and rifeth again and is fixed with its own proper Elements: wherefore it is firft neceffary that it be purged from its impurities.

The purgation or purification is on this wife ; grind it upon a Marble witha muller or a wodoen Pefill in a wodden Morter with common falt and a litcle vinegar fpringled thercupon till the falt be black, then wafn it well with vineger and dry it earily at the fire, or at the Sun, then frainjit chrough a double cloath or a new skin of a Ahceptill it be dry and the vineger clear taken awny and be of a white $\mathrm{co}=$ lour and clear.

Grind it upon \& Marble with a litele z fublimate and let it mortifie and in corporate with it : then grind it with its equall weight of fale-Peter and green Coperas till ic be like a patte; Then put all into a fubliming glals and in Athes subline all the क that it be white and clear as fnow in the head of the limbeck fublime it again three times ór oftener and is will be pure and Gublimate.

Put one pound of this Y fublimate into two pount of common Agua fortis by little and little at once as by two at a time till all be diffolved like fugar in wine then thut the glats and fet it in Balneo co diffolve the fpace of 10 days then dintilaway the Aga fort is in a lentheat in Balnco and the will remain in thebottome like butter of a white colour. And calcined by corrofive water.

Put this calcined Y into an Earthen body

Book I. The Rofie Crucian Crown 3
with a Limbeck and in afhes fubline the whole diffoived fubftance three times which will then be very white and then it is called Merciry $E_{\text {x. }}$, siberate.

VVhen you liave three or four pound of this, receive the third part and fix it by often fublimatoontill it remain in a hard mafs and afcend no more bue remain fixed.
$\checkmark$ Which is called the Glue of the Eaple or the prepared body permanent andsthe volatile made fixed which is to be referved fogthe earth of the fone.

Diffolve the other two parts in Balneo or in 2 cold Cellar or put it in a blader and hang it oven, fuming hot water till it be allcome to water.

Tase chis water thus made, and digeft it in a Circulatory well clofed the face of nine days Tac then putit in a body with a head and receiver well luted and in afhes or Balneo diftill the wsrer of a white coniour or miltie and is called Lac Virginis, diffolving all mettalls and fo yota have feperated the pirit of the fone which is alfo called the lingring firit and the white Tincture of the white fone of Mercuy

Take the third pate which before you re: ferved and fixed called the glue of the Eagle, as much of it as you pleafe and add thereto equal weight of its furit or Lac Virgizis and clofe up the glafs and fo you have joined the Man and the woman, I with his own Earch; the fpirit with the body. See the Holy Gwid.

Set your Lac Virginis thus joyned with his Own, Each in Balneo to potrifie 150 days and
there let is ftatd unmoved; after forty days it will beblack, and it is then called the head of the Crow: then it will be of a green colour afect that the Peacocks tail, and many falle colours for between this and white it will appear red but at laft you fhallfee it white and then encreafe your fire and it will ftick to the fides of the glaffe like fifhes eyes Then have you each in the nature of Sulpher, Rend the Holy Guid.

Take of this Gulphur as much as you pleare and wei, h it and add thereto two parts of the white 7 initure or $L$ ac Virginisand fet it in Balneo to diffolve the fpace of fix days then difill away the Lac Virginis or Thinclure and the Sulphur will remain in the form of Liquor for it is the : iquor of the white fulphur of which is to be joined with the liquor of the fulphur of Luna or fiver.

The Sulphut of the white Laminary or filver or $L$ ana is made as the other whercof we fhail fpeak more in the next Branch. This Liquor of the fulphar is the foul which is joined with the fpirit and body which quickeneth the whole ftone. The other conjunction before was onely the union of the fpirit and the body : bat this is a threefold copulation viz. The uniting of the foul, Spirit, and body.

Adde equal weight of thefe tw Liquors of fulphur that is to lay the liquor of the fulphur of Mcreury and of filver and Lana, and clofe well the giafle and fet it in Aftes till if be white, for it will be of all coulours again

Book I. The Rofie Crucian Crean
and at laft white; And then is it the perfect fone converting all Mettalis into filver.

This ftone or Elisir is thas muktiplied in vertuc diffolve it in your Lac Virgmis and diftill it away and dry it and diffolve is again \&c. And let it be fo often diffolved and fryed till it will drie no more buferemain in an incombuftible oyl. And is then Eixer of the third Order.

Take one part of this Elixir and project it upon 100 or 1000 parts of melted filver (according to the geodnefs ano vertue thereof) and it will eurn the fiver into a brietle Mafs or fubfance, which beat to powder in an Iron or braffe Morter or upon a Marble, and project one part of this powder upon 100 parts of purged made bor, and it will be parfect medicine whereof one part turne:h 100 or 1000 parts of other bodies into good filver. And this way is your Medicine mulsiplyed in quantity.

D 3

## A Corollary.

IT remaineth now that we fpeak of the Mcdicine or the Elixir of 1 ife , which is called potabie filver. But althongh the Liquor of filver may be enade perable filver if it be corroberated before by digeftion in Balneo 7 days with the ipiriz of wine and then diftill away the tais pirtit of wine that the ofl of the filver maferemain in the bottome which may eafily be given for medisine, Yet the Philoiophers would have us do otherwife for they teach us to bring the mettalls firft into ther quinteffence before they be taken inwardIy, and that their is no other quinteffences but thofe chat are of a fecond nature according to the oid faying,

> Elixir de te eft res focunda De quo funt fadta corpora mumada.

That is to fay the 4 Elements are defroy: ed and by purrifuction a new body created sid mace into a fone, which is the quintefience as Ripley would have it; But I do boldily and conftantly affirm that there is no true filver or potabic filver nor Qinteffence umlefs it be firft Elixir and that is done in a quarter of an hour by projection of the Elixir upon filver or pure gold molten according as the Elixir waz red or white. If thersfore you defire after

Book I. The Rofie Crucian Crown. 7
the firf compofition of the Elixir to make the Arcansm of Argentum or Astrom potabile project the Elixir or Medicine according to his quality or property upon pure filver or gold molten, and then it is made britele and frangible and grind it to powder and take thereof fo much as you pleafe and diffolve it in diftilled vinegar (or rather in fpirit of wine) the space of nine days, then diftillaway the vineger or firit of wirie, that which remaineth in the bottome is the true Medicing, Quintefence, Elisir of life, Ferment of ferments and incombufible oyl converting mettalls and Mans body into perfect health from all difeales of mans body which proceed from Mercsyy and Lusa, And thas is the true potable filver made cureing the Vertioo, Sincope, Spilep $\int y$, Madnefs, Pbrency Leprofie. ©rc. And this is the righs way of making the fone of Mercaiy alone: but the Elixir cannot be made withour the eddition of fiver :o the white, and of gold to the red.

## CHAP. II.

1 Luna. 2 pure Silver. 3 Calcination. 4 Sointion. 5 Putrefaltion. 6 ahe Sulphur. 7 The Liquor of the Sulphur. 8 White Fer\#nent.

HERMES faith, The Elixir is nothing cife but Mercy Sol and Lana, by Meycery nothing is underftood but the fulphur of nature which is called the true is of the Phylofophers, and that fulphur goten by putrifaction by the conjunction of the fpirit and of the body of imperfect bodyes or mettals.

By Sol is meant gold, by Luna filver, both ofthem are to be joyned to imparica bodief, that is to lay, white fulphurs and red, whence the fame Hermes in his 7 treatife of Soi laith there happencia a conjundtion af two bodies and it is necelfars inour Maitry ; And if one of there bodics onely were not in our ftone it would never by any means give any Tincture, Upon which Morrenus faith, Eor the Ferment prepareth the imperfect body and converteth it to its own nature and chere is no Ferment but Sol and Luisa, shat is, goid and filver. Of which Rofinass Sol and Lura prepared (that is -o fay their fulphurs) are the ferments of mettles in colour. See the Holy Guid.

But this is made more cvident by Rajmund in his Apertory where he faith there is no ferment except Sol and Lana, for the Ferment of the ftone to white is filver and to the red gold, as the phylofophers do demonfrate becaure without ferment there doch proceed neither gold nor filver nor any thing elfe rhat is of its kind or nature, therefore join the Ferment with its fulohur thes it may beget its like, becawe the Ferment draweth the fulphur to its own colour and nature alfo, and weight and found becaule every like begetteth its I:ke. Becaufe the Ferment even as $S$ ltingerh and changeth his futphur into a permanent and piercing Medicine, Therefore the Philofopher faith he that knoweth how to tinge fulphur and Mercury with Soland Luna, fhallatain to the greateif fecret. And for this reafon it is neceffary that Sol and Luna be the Tincture and Ferment thereof. You may read in the Holy Gride.

And fo alfo Arnoldsts in his Rojary, There is no body more noble or pure chen Sol, or his fhaddow that is to fay filver without which no tingeins Mercury is generated. He that endeavoureth to give colour without this gold or filver gocth blindly to work like an Afe to a Harp, for gold giveth a golden and filver an argentive colour therefore he that knoweth how to tinge $\bar{y}$ with Sol and I ana cometh or seacheh to the fecret which is called white fulphur, the beft foflerer which when it is made red, will bered fulphur to gold the beft.

10 The Rofie Crucian Crown. Book I.
Take pare Luns, that is to fay filver that is beft which is beaten into leaves and bring it into calx with And it is then called water filver then is the Luna well prepared for Calcinafion. See the Holy Gwide.

When you have your filver thus prepared, cake 4 or 6 ounces thercof, and put it in double proportions of Lac Varginis mixed with equall quantity of corrafive water to diffolve in an esge glaffe. After it hath diflolved to much as it can in the cold, fet in Balneo and there let it ftand 9 dayes till the whole fuoftance of the Ilver be diffolved into a green water, then let the Baheo cool and take it out, and put the diffolution inco the body and fet thereon a head and diftill of the water from the matter remaining which isthe oylof the filver Calcined net into 2 cals but a Liquor, becaufe this Lac it irginis if it be mixed or joned with common Agur fortis or alone without it (as it pleafech the Operator) is fo ftrong that the very Dizmond cannot refift it but is diffolved: Therefore this water is called the water of Helland is the onely miracle of miracles of the World, secaufe it containeth fuch a fiery nature in it felfand propriety of burning of all bodies into liquor whereas the Elementall fire prevaileth no furcher then to reduce mettalls into calx or afhes. But to return from whence we digreffed I now come to the third operation.

To she end therefore that this liquor or oyl of filver may be more perfectiy diffolved and that all the imperfection of aduftion may be
taken away, which by the Antients is called the corroberating of the left humidity. Put this Oyi or liquor into another egge glaffe like the former powerthereupon o much firic of wine above it 4 fingers then clofe well the glaffe and fer it in balneo to digeft 7 or 10 dayes and you fhall tind the oyl or liquor turned into a ihin or rare water ofl: put this water into a fill and in balreo draw away the foiric of wine till none of the fpirit of wine remaio with the fiver diffolved. And thus have you your fiver prepared for pitrifaction.

This Liquor of fiver is potable but rot the Quinteffence put this water into a fit putrifying eiaffe and feal it up and fet ic to putrifie in balneo till the time of purrifaation be part which is about 150 days, and when you fee the firft fign of purrifaction which is called the head of the Crow cncreale your fire a lictle till all colours begin to appear and you fee it begin to be whites,

When you fee it white encreale your fire yet more and it will rife up and fick co the lidas of the glaffe moft tran\{parent like the eyes of himes which is Sulphur of Nature or falt, or the purrified body of the white Luminary, viz. Liera, which yet is not fo hard as a body nor fo foft as a fpirit but of a mean hardnefs between a fpirir, and a body, and is cailed the Phylofophers Mofcrry and the Kay and mean of joining Tinctures.

But to come to the liquor of the white Luminary, thin boay bsing brought into Quint-

12 The Rofie Crucian Crown. Book I.
effence is prepared for diffolution like the futphur of the imperfect body, bur whereas that is done by the vertue of the white tincture or Lac Virgines I rather do it by vertue of the fire naturall which is the Spirit of wine and after the drawing away thercof it remaineth in a Liquor.

Now this liquor of $L_{\text {uns }}$ diffolved is the Quinteffence which then is the liquor of the white Luminary and the fole as Eximadius raith quickening the whole fone without which it is dead and will neither give form nor colour.

Therefore the fourth part of this liquor of the white Luminary is to be joined to three parts of the former liquor of the rolphur of I and after to be kept in a lent fire of Afhes well clored till it paffe through all colours and $2 t$ laft come to its former colour of whitenels and fo the ftone is fermented and turned into the white Elixir.

The Refidue of the forefaid diffolved fulphur keep diligently and therewith ferment the white fulpher of other imperfect bodies or fones into Elixirs, which when they are thrice diffolved and again congcaled and remain in a liquid fubftance then they are ca!!ed incombuftible oyles and Elixirs of the third order.

And thus the fone is made of ralone.

# Eonk I. The Rofie Crucian Crown. 13 

## A Corrollary.

HAving 1poken of the white fone it now refteth that we fpeak of the making of the red Elixir, whereof there is two proceffes the firlt whereof is from the Radix i.e. the long way: the other an accurtation that is much fhorter and more excellent, And this way the Elixir may be made in 80 days and excells all other accurtations neither is there found therein any dimination of the vertue but is a plentifull and perfect fulnefs of power and vertue having all the properties which the Elixit ought to have. The procefs whercof thefe three following Chaperes will plainly thew.

## CHAP. III.

I Vizunt. 2 Sublimation. 3 Calcination. 4 Irecipitation. 5 Solution. 6 Fixed oyl. 7 Inceration. 8 veficcation. 9 Contrition. Io Fermentaiion. I I The Red Elixir. 12 The third 'rable"

| 薂 |

$T$ is not neceffary to rpeak in this place of the urgation of $s$ becaule we fpoke thereof before.
The fublimation is ro be done otherwife then in the former worke for that which is called fublimation here is not done with vitrioll and falt petcr but is only the diftillation of the z in an earthenbody with a limbeck and that by is felf without any addilament.

When the I is once fublimed in afhes wholly into the head of the limbeck having a retainer joined thereto take off the head and with a feather gather the fublimed matcer and you fhall find your 3 of a black colour having loft his fairnels and like a duft or powder ficking to his body.

Put it againinto the body and fublime it as before and reiterate this work 7 or 9 times untill you have a fufficient quantity of this powder that is to fay a pound or more. And this is the Calcination.

Eook 1. The Rofie Crucian Crown. 15
When you fee your will a afend no more but remain in the bortome of a black colour and that is dead and brought perfectiy into calx let it cool and remove your body into fand til it be turned into a red colour; And this is the perfect. precipitation profe without the help of any corrofive water, take a little of this powder upon a hotiron plate if it fume, dry it longer, if not is is well.

Take of this red powder as much as you will diffolve and pat thereupon at leatt his double weight of Lac Virginis and fee in Balneo till you fee your Lac Virginis Rained a yeliow or red colour then filcer it from its feces and keep it by it felf in a glafs well flopped and dry the motter that: remaineth in $A$ hhes and pour thereonnew Lac Virginis and do as before cill you have drawn out all the tincture. And fo your 8 is diffolved.
Pat thefe folutions into abody luting to a head and in balneo difill sway the Lac Virginis and the red oyl precipitate will remain which is fixed and needeth no difiliation but is the tinging oyl of red Mercary and the red tincture of the red fone of $\bar{y}$ and the foul and fpirtt of the fame ftone joyned,

Therefore take part of the white Sulphur rea ferved in the firlt Table and rubify it in athes cill it be red then imbile it with equal weight of the ogl of the tineture of this red $\bar{y}$ and fet it to diffolve in Balneo, and when you fe' it is ciffolved into a liquid fubftance taise it out.

Then fet it in affes or under the fire to fix

16 The Rofie Crucian Cromn. Book I.
till the matter being dried remain fixed and fufible ftending in a mean heat not over hot which try upona hot Iron plate and if it fume not it is well, if it do, encreafe your fire till it be cotally fixed and dry.
If this matter be imbibed again with its $0 \% 1$ cill it drink up as much as it will and again diffolved in Balneo and then dried in Afhes, it will Thew many colours and laftly appeared. And then it is the ftone penetrating and fufible, apt for forme.

Join this imbiled matter (or ftone) with the 4 eb part of the liquor or oyl of the red fulphur of Gold or the red Ferment, and diffolve it in Bal-. neo, and drie it again, and again diffolve it in a glaffe hanged in the fume of het water or Balneumand congeal it again till is ftand like honey; Then it is the perfect red Elixir of Mercury.

The Multiplication or Augmentation of the vertue and quantity is chewed in the former Chapter.

## CHAP. IV.

i Gold sol. 2 Purged Gold. 3 Calcination. 4 Solution. 5 Putrifaction. 6 Filius, , 0 . lis Calefis. 7 Filial Lune Cceleftis.

THe petrifaction or purgation of gold is done as the Goldsmiths ale to do by melting it with Antimony that the gold may remain in the botrome pure and clear from other mettalis which they call Regulus.

Take 4 or 5 ounces of this refined gold,' leaf or filings and diffolve it in $L_{a<}$ Virgins, mixed with equal weight of Aqua fort is wherein fall Armoniack fuolimed is diffolved, and when it is dilfolved into a red Liquor or deep yellow then it is well calcined.

The elution and putrifaction is done as bet. fore you did with filer in the preparation of the white Ferment.
When you have your white fulphur of nature (after putifaction) nicking to the fides of the ghat, let it cool, and take our your glass and feet it in Athes, and encreafe your fire but nos too much left your matter vitrifies, and let your aches be no hotter then you can bold your hand therein, and fo let in fad will the Sulphur be of a perfect deep red colour, Then have you she red fulphur of the red Luminary.
If you refolve this red fulphur in spirit of wine or di tilled Vinegar mego an of it is then the Li
is The Rofie Crucian Crown. Book I. quor of the, red Luminary, And Auram potabile curing all infitmeses of: he pirit of wine or vinegar be deftilled fromit; But for this work it were betier to diffolve it in our red Lac Zirginis Spoken of in the fecond Chapter of the fecond Book; diftill away the Lac from the fulphur in Afhes, and the fulphur remaineng in an oile is the Ferment of all fones to the red. The augmentation of this red Elixir in versue is with his red Tinctureas before in the white Elixir with his white Tincture. The augmentation in quantity is by projection upon the body of gold molten: And that brittle matter of gold upon and ifit be powdered and refolved with fpirit of wine inan oylas was faid before of filver then it is the Quintelfence of gold, and the great Elixir of life and the firitual ferment for the tranfmutation of mettals and for the health of mans body.

The 5 Chapter fheweth the abbreviation of the Red Elixir.

## CHAP. V.

I The Liquor of the red fulphur. 2 Fermen ${ }^{2}$ tation.

AL.though Raymzundwriting to King Robert t was pleafed to lay, That every Aiccurtation diminifech the perfegion: Boephave diminifneth the perfection: becaule Medicines mentone which are made by accurtation have lefs effect of this leiter tranfmutation, which I alfo afcent to with him $/ 0 / 10 \mathrm{Goz}$ L for a truth, it the work be begun from the firt Jaing ol lny fountain : yet becaufe this work hath its beginning from thofe things which before wers brought to a perfect degree of perfection, therefore in this there is no diminution of the perfection as the fame 'Raymund witneffech 126 . CNecur! pag. 103. faying thus.

Therefore it ought to be declared unto thee, that if they be both well prepared (and that thou begin with them) shou wilt do a wonderful work without any great labour fooner then if thou thould begin with one thing alone, Therefore my fon begin thy work of two things together as I thewed to thee in the greater frone, when we fpose of the twofold cultody of the actions which are caufed by the bodies and fil rits.

By that which is caufed by the bodies and foirits he means nothing elfe but fulphur, willing thas we fhould begin with fulphur, to which I do To well agree that I begin this my accurtation this Elixir but onely the fulphur of $₹$ alone created of his own body and fprit.

Take therefore 2 ounces of the white fulphur that was defcribed in the firft Chapter and fet it in athes to rubifie, in 30 days it will be turned into red fulphur.

Which when you have done diffolve that fulphur in the red Tincture of Mecury when it is diffolved draw away the Tincture, in the bottom remaineth the Liquor of the fulphur.

To which if you add a due proportion of the liquor of the red Luminary it will be perfect Fer ment, which if you diffolve and congeal as before is कhewed, it is then Elisir of very great veriue to the red work and no man can make a Thorter abreviation in the world ; And when the fulphur, of any body is prepared it may this way very fpeedily be converted into Elixir by adding the liquor of the ferment.

Book I. The Rofie Crucian Crow 2 I

## CHAP VI.

1 The Body. a The Spirit. 3 The Lion. 4 The Eagle. 5 The Pbylofopbers Lead. 6 Anti mong. 7 Antimony Mercury. 8 The Glue of the Eagle. 9 Solution of the red Lion into Blood. 10 Solution of the Glue of the Eagle. II Solution of the Blood of the red Lion. 12 Conjunction. 13 Putrifaction. I4 The Stone. 15 Fermentation. 16 In the Trinity of The Pbifical and Alchemical Tincture The Soul. 17 Is the Unity of the Medicine.

下雨Ale Antimony calcined fo much as you pleafe, and grind it to a fubtile powder, then take twice fo much Lac Virginis and put your powder of Antimony herein and fee it in baineo 7 days, then put it into a body, and fer it in rand or athes till the Lac be turned red, whicls draw of and pour on more and fo let ic land, when that is coloured red, pour it to the other and thus do till you have drawn out all the tincture fat all chis water in balneo or lent aShes to distill with a Limbeck, and diftill it with a lent fire and first of ail the Lac will ascend, then you Shall fee a fupendious Miracle because you Shall fee through the note of the Alimbeck as it were athoufand veins of the liquor of this
bleffed minere to defend in red drops juft like bloud, which when you have got thou haft a thing whereto all the treafure in the world is not eguall; Now you have the blood of the Lion according to Rapefiff, let us here reft a litele and fpeas of the Glew of the Eagle, of which Paracel $\int_{\text {us thus laith. }}$

Reduce Mercury fo far by fublimation till it be a fixed Chriftall ; this is his preparation of Mercury and his way of reducing it into the Glew of the Eaple, but above all I require that that way be ufed which is delcribed by me before in the firft Chapter, or that hereafter fet down after this.

Then faith the forefaid Author, go on to refolution and coagulation, and I again will you to obferve the fame manner of folution newed in the firf Chapter before.

Now let as come to conjuaction after the folution of there two, take equal weight of them and put them in a velfel wel! Mut.

After you have thus joined them together fet your glass in your furnace to putrifie and alter the fpace of certain days. Therefure Paracelfus saith, then at length and prefently aftor your Li$l i$ is made hot ha your glafs it appearech in wonderfulmanaers (or demonftrations) biacker then the Crow : after that in prosefs of time whiter then the Swan and then pafing by yellow to be more red then bloud.

This being putrified and turned into red is to be taken for the frone, and then it is time it be fermented.

## Pook I. The Rofie Grucian Croven 23

Cf which Fermentation Paracelfiss thus $\frac{1}{2}$ ?aketh, one patt thereof is to ke projucted upon 1000 parts of molton gold, and then the medicine is prepared and this is the Fermentat on of it. Butif the half or one part of the itquor of the fulphur of gold before defcribed be added to it then it would be fpitituall ferment, and would be mutch more penetrating in fortitude and fufible as Paracelfus doth teltifie in his Aurora where he would have us to join the ftar of the fun or the oyl of fol to this ftone. And thus the phifical Alchimical twiture is performed in a fhort time for curing all manner of Infirmities and humane difeafes (which is alfo the great Elixir for metalo) fo courtly concealed by the Antients. Which Hermes ITrifmatifus the eisgrptinn, Cfus the Gretian, Haly an Arabian, and Alocrios Magnus a German, with many others, have fonghe and profecuted every one after their own methoi, and one in one fubjec another in another, fo much defired by the Philofophers onely for prolongation of life.

In this compofition Wercury is made a fired 1 . and diffoived body, the blood or lpirit of the red Lion is the ferment or foul, and to of trinity is made unity, which is called the Phifical and Aichimicall tincture, never before that I knew of collected or writ in one work And I fwear: I had not done this except that otherwife the compofition of this bleffed medecine had for ever been forgot.

A Shorter way to make the glue of the Eagle.
If you defire to make the glue of the Eagle in a breifer way. Take part of the red precipitate prote as is taught before in the table of Nercury and difolve it in diftilied vineger and the vineger - will be coloured into a yelow or delighifull golden colour and after you have deftilled away the vineģer there will remain in the bottome a white flibfance of the Mercury fixed and sair. which is to be joyned to the oyle of the Lion; And this work is much forter and lels laborious, look more hereof in the third Book.

The Calcixation of Antimony int the red Lion.
Take Antimony well ground fo much as you pleafe and rnelt it in naked fire with falt Armoniack, and when ir is melted caft it fuddainly into a veffel almoit full of diftilled vineger wherein falt Armoniack bath been dimolved and thus mele ant and caft it in three times, then pour offthe vineger from che Calx of the Antimony and drie it well and grind it fmall and diffolve ic as before is taught, and fo have you the Red Lion of the Philofophers Lead or Antimony.

## CHAP. VIl.

1 Elixir. 2 Conjunction. 3 Scperation. 4 the Stone. 5 Fermentation. 6 The Earth. -7 Sirit oyl, Blood of the Lame. 8 Diftillation. 9 Refolution. 10 Putrifaction. II Solution. I2 Vitrioll. I 3 Calcination 14 Copper.

$$
\begin{gathered}
\text { The fire Chapter of the Elixir } \\
\text { of Copper }
\end{gathered}
$$

等离Any have fought out the way of the Mineral tone in vitriol or green Coperas, but they were altogether received which common vitriol by the Philofo. peers is called the green Lion of fools. But this our noble red Lion taketh its original from
 the Mctallick body of Copper. Although I am not ignorant how to draw an oyl out ot Romaine vitriol of a more fret mel and delightful tate then any balfome if the Tincture be taken out of the calcined vitriol in fpirit of wine, yet the Philofophers will is, and command that it do confift of a Metalick vertue wherewith the tranimutaion of mettalls is to be effected. Therefore they fay it is to be made of bodies and not of firits as of vitriol fulphur as well and the like. Whence I find it written in the Philofophers

26 The Rofie Crucian Crown. Book 1.
Philofophers Tarba and in the firft Exercitation: But the Philofophers ftone is a metallick matter converting the fubftances and forms of imperfect mettalls, and it is concluded by aif the philofophers that the converfion is not made exrept by its like, therefore it is neceffary that the Philofophers ftone be made of a metallick matter, yet if any be made of feirits yet it would be better and mach more Philofophical and more near to a metall ck nature to be made ot bodies then of fpirits: but if by Att the body frould be turned into a fpirit then the, fame body would be both body and fpirit, and not to be doub'ed but the fone mighe be made of fuch a body or fpirit. bu: let us return to our purpole; It being granted chat this our vitroll is fuch a body according to which Paracelyses tefitifect in his Aurara Pbilofophoram under this fienigura or ficret of the Abticne Phbuiopher;.

Vificabis Interiora Terra Rectis indo invenies Occulturs Lapidem Veram Medicinam.

Out of the firt leteer of every wo:d of this Aenigura is gathered tilis word VITRIOLUM by whichis meint that thereof the ftone or medicine may be made.

Therefore puracelfus faith, the inward parts of the Earch are to be vifited; not onely the Earth wilit is vitrioll, but the Inward parts of the Earth, he meaneth the focernefs and rednefs, bicaufe there lieth hid in the inward parts of vitrioll a fubsill noble and fragrant juice and pure oyle,

Book I. The Rolie Crucian Crown. 27
And this is efpecially to be noted the production of this Copper into vitrioll is not to be done neither by calcination of the fire nor difillaw tion of the matter, left it be deprived of its greennefie which being loft it wants both power and ftrenoth.

Paracelfus !peaks not one word of the prepsration of this vitriol by whofe filence many have crred, therefore I determined to leave him here a little and to profecute and follow the cind of the Table wherefore I begin with the calcination of the metall. And note that this caicma. tion of Copper is made thatit may be turned into vitrioll and not the calcination of virrioll made of copper.

Take therefore as mush copper as you pleafe and difolve, Calcination it siciatia fort is to a fa rgreen water, thenfet it 3 or 4 ciags to difgeft till the matter be clear which pour out into a limbeck andin Bahieo diav away the corrafive water fo that the matter remsin dry for chen it is calcined. .

Then upon every 3 pound of this calched matter pour a gallon of difilled Vinegar and lute it up in a g!afs, and fet it in balneo almoft boyling the fpace of 7 deys, when it is cold put into a limbeck to diftill away all the vineçar in balnee, and in the bottom of the Alimbeck you thall have yous vierioll very well congealed far fairer then Romain virrioll which is corporeal and metallick vitrioll.

Which Vierioll I do not diffoive in rair. water like she Paracelfans, but rather with

Lac Virgin is as before is taught in the former Chapters or in Raymunds Calcination water, and after its diffolutionand perfect digeftion, thaz is to fay 15 days I put it into a limbeck andbaliseo draw eff the Lac virginis, which being done you Thail find an oylie water green and clear upon which pour the fpirit of wine and after is hath been digefted 7 days and the firit of wine diAtilled away in balneo you hall find your green water perfecfly re?ified made pure fubtile and fpiritual, and apt for putrifaction, for if it be not well dilfolved and rarified it will not pue trific.

But now that I may join wich Parăcelfus in the manner of purrifaction I return to him and fay with him commanding to difeett in a warm heat in a glafs well cluled the pace of fornemonechs, and fo leng sill diverfe colours appear and be at length red which theweth the termination of its putrifaction.

But yet in this proceís this rednefs is not fufficiently fixed, but is to be more fully purged from its feces in this manner.

Refolve it or rectifie it in diffilled vineģar, till the vinegar be coloured then filler is from its feces. This is its true Tincture and beft refolution and rectification out of which a Dleffed oyl is to be drawn.
This Tincture bsing thus refolved and rectified, is to be put into a body with 2 limbeck and in balneo diftil the vinegar gently away.

Book I. The Rofie Crucian Cromon. 29
Then in fand or athes lift up the fipirit gently and temperately, and when you lee a fume afcend into the glafs and red drops begin to fall out of the nofe of the limbeck into the receiver, then the red oyl beginneth to diftit, continue your diftillation till all be come over, when it is done you thall have the oyl in the receiver lifted up and feparated from its Earth more delightfut and fweet then any balfom, or Aromatick withe out any fharpnefs at all, which oyl is called the: blood of the Lamb. In the bottome of the body you thall find a white Chining Earth like fnow, which keep well from duft and fo yous have the clear Earch feperated from its oyl.

Take this white Earth and put it in a glafs riol, and pur thereto equal weight of the oyl or foul and body, will reccive it and embraceit in a moment.

But that it may be turned into a fone when you have joined thefe two together, fet it into our furnace the fpace of 40 days and you fhall have in abfolute oyl of wonderful perfeation wherewith Meercary and other imperfect mettals are turned into gold. As Paracelfus was pleaifed to fay.

The fone being thus made, Inow come to the fermentation without which it is not poffible to give form to it neither will I adhere to the opinion of one man alone contrary to all the Philofophers alone, that is to fay, Paracelfos repugnant to the reft of the Philofophers becaufe they all of necefficy have decreed to give form to the

## 30 The Rofie Crucian Crown. Book I

ftone by ferment and union, that is to fay, of an imperfect body, and by how much the ferment is more fipitituall the fone will be of fo much more penetration and tran!mutation.

There things being promifed I do not think it fit that you thould proceed to projection upon Mercary intiead of fermentation as Paraceljus reachech, or that the fone thould be fermented his way with gold cither corporea I or fpiritaal.

Which gold will be the foundation of the firf projection. but what do the Philofophers command us to do? that projection that is to fay fermentation, be made of a perfect foundation, and that upon imperfect bodies that medicines may be made which foundation of the Aone or Hixir is not except it be onely the while or sed ferment, in refpect of whichbeth gold and filver are laid to be imperfect bodics, thencore this fone is to be fermented before it be projected upon the corporeal fourdation or imperfect, that is to fay corporeal gold.

Therefore joyn this oyle to the fourth part of the oyte of the fulpur of gold, and this is the tue fermentation or converfion unto the E!!xir.

Then Augment it in vertue by folution and cosgation, and in quantity by projection firft upan the corporea fomdation that is to fay gotd, tien that upon purified Mercsry and that tiedtone upon other bodies which are moft fit for projection, that is to fay molt fufible

## Book I. Iberofie Crucian Crown. 3 I

as Lead or Tinne, which after they are purified are moft apt by reafon of their eafie melting.
And thas the Inward parts of the Earth are vifited and by reflection the hiden fone is found, the true Medicine out of the green Lion of the philofophers, and not of fools, and out of Corporeal and metallick vitrioll not terreftrial and made of mineral coperas.

The Second Chapter of Augmentalion and projection of tbeSTOENE.

FIRST, Let us fpeak of the Augmentation of the vertue or quality; of which Rayo mund faith, The Augmentation in quality and goodnefs is by folution and coagulation of the Tincture, that is to fay, by imbiling it with our Mercury and drying it. But lee us hear Arnoldus more attentively, take one part of your prepared Tincture, and diffolve it in three parts of our Nerescry, then put it in a glafs and feal it up and fet it in afhes till it be diry and come to a powder, then open the

> glafs
glafs and imbile it again, and dry it again And the oftener you do the thus fo much fha jou gain and giveth more cincture.

And alloss it is found in Clangor Buccine, Difolve it in the water of Mercusy of which the Medicine was made till it be clear then congeal it by lighe decoction and imbile it with its oyluponthe firetill it flow by vertue whereof it will be doubled in tincture, with all its perfections as you will fee in projection becaute the weight that was before projected upon a thoufand, is now to be projected upon, en thouland, and there is no great labour in this multiplication.

Again the medicine is multiplyed two manner of ways.

By folution of calidity and folution of vari= ty. By folution of calidity, is that you take the Medicine pur in a glafoveffel and burie if in ou: moilt fire feven days or more, till the mediciae be diffuived inro warer without any turoulency. By folution of rarity, is chat you take your glals velel with your medicine ant hang it in a new b:afs pot full of water that boilctis and clole up the mouth of the pot that the medicine may diffoive in the vapour of the builing water.

But note that the boiling water muft not touch the glafs wherein the medicine is but hang a'oove it three fingers, and this folution will be aboveit in 2 or 3 days afrer your medicine is dificulved, rake it from the fire to cool fie and

## Book I. The Roofie Crucian Crown 33

congeal and be hard and dry this do often and and how much the more the medicine thall be diffolved it will be fo much more perfect, and fuch a solution is the fublimation of the medicine and its virtual sublimation, which the ot ener it is reiterated fo much more abundantly and more parts it tingeth.

Whence Rafts faith the goodness of this mil: tiplication confifteth in the reiteration fublimazion ard fixation of the medicine and by how much more this order is repeated it worketh to much more and is augmented for fo often as you Sublime your medicine and diffolve it you fall gain fo much every time in projection one up on a thousand and if the first fall upon a thouland the third upon a hundred thoufand the fourth upon a million and to infinitely. For Morienus the Philofopher faith; Know for certain that the oftener our tone is diffolved and congealed the frit and foul is joined more to the body and is retained by it and in every time the Tincture is multi played.

Whence we thus read in Scala Pbilofophod rum, which alto the Philofophers fay. Diffolve and congeal, fo without doubt it is underfood of the Solution of the body and foul with the spirit into water and congelation makes the foul and fairies mix with the body and if with one Solution and rimple congelation the foul and spirit would be perfectly joined to the body the Philosophers would not fay diffolve again, and conceal, and again diffolve and congear shat the Tincture of the fine may grow

## 34

if it could be done with one congelation on$1 y$.

The Medicine is another way multiplyed by fermentation and che ferment to the white is pure filter, and the ferment to the red is pure gold, therefore project one part of your medicine upon 2 of the ferment (but I fay 3 parts of the medicine upon one of the ferment) and all will be Medicine, which put in a gals upon the fire and fo close it that no air go in not out, and keep it there till it be fubtilited as you did with the fir medicine and one part of the fecond medicine will have as much vertue as one part, of the firf medicine had (but here again Clangor Buccine hath erred for it should be write thus) one part of the fecond medicine will have as much vertus as en parts of the first medicine had. And thus by folution and fermentation the medicine may se multiplied infinitely.

We have Spoken enough of this multiplication, we now come to the other way of augmentation which is called corporeal multiplication and according to Raymond is thus defined.

Augmentation is the Addition of Quantity ; whence Anicen writeth, It is hard to project upon a million and to preducate it incontigently wherefore $I$ will reveal one great recrest unto you, one pars is to be mixed with a thoufand parts of its neareft in kind (I call' that neareft that is the body of the fame mettall whereof the medicine was made or pere

## Book I. The Rolie Crucian Cromon. 35

perfected) but to return again to Anicek, clofe all this firmly in a fit veffel and fet it in a furnace of fufion 3 days till it be wholly joined together. Whereof it is more largely and better fet down by the faid Author and the manner of the work is thus projected, one part of the forefaid medicine upon 100 parts of molten gold and it makes it brittle and will all be- medicine whereof one part projected a hundred of any melted metall convert ethit into pure gold and if you project it upon filver in like manner it converteth all bodies. into filver.

In Scala Pbilofophorum all forte of projestion is tet thus down in few words. Yu mult know that firft it is laid project, that is to fay one upon roo \&c. yet it is better to project nunc dimittis upon fundamensa and fundamenta upon verba mea and verba mea upon diligans te Domine and diligam te upon attendite. This breif Aerigun is thus expounded it is nothing elfe but the words and opinion of the former Author concealed under the Aenigur. Therefore let us repeat the words of this Aenigura or Oraccle.

> Nunc dimittis fuper fundamenta Fundamenta fuper verba mea Verba mea fuper diligam te Diligannte fuper attendite.

Thefe are triffes for the hiding and concealing the pertceition of the Arr- if the expert Artift could be diverted with fuch firple words which though they are hard at firt to yourg Artits, yet they are thus explained. We therefore brgin with the firft fentence.

## Cows <br> Nunc dimittis fuper fundimenta.

This is here Allegorically taken for the laftaction almolt of the work which is called the medicine or ftone, which medicine is to be projected upon the ferment tbat is to fay upen the oylof Sol or Luma, which are the ferments or foundations of the Art in fpiritual augmentation(as before was faid) upon molten gold and filver. And that fpiritual ferment converted into medicine is to be projected upon molten gold or filver which are corporeal ferments in corporea! Augmentation and the corporeal fundaments of the Art upon quick filver.

Fundamenta fuper verbamea.
This is alfo fpoken ailegorically becaufe in the Adage it is faid words are wind, as if a word were nothin! elfe but the motion of the lips and exhalcation of the lungs which no fooner arife from motion but fly away and are turned to air fo likewife Quick filver or Mercury goeth out of the bodies of other

Book I. The Rofie Crucian Crown. 37 metals, and is to volatile in the fire or hear as words in the air. And therefore Mercury is likened to words upon which the fundaments are to be projected,

Werbesmea (vir Mercury) Super diligams te.
That is to fay upon other metals which have moot affinity with quick-filver, and earle of faffon as Saturn aud Jupiter that is to fay Lead and Tin, which by this concord and love are eafily by the penetration and amiableness of the medicine converted into medicine. And one part of this medicine converteth other parts of mettells into gold or filler according to the force and poiver of the Elixir, which other mettalls becaufe they are the fubftances of the former bodies whereof the medicines were made. They are the attendanes of those medicines wherefore the Philofopher commandeth that.
Diligom te be projected upon aitendite that the fecund medicine or this la ft projected upon mettalefrecially that whereof the medicine (that is to fay the fore) was made, frould turn that metal into gold or filver according to the proverty and quality of the medicine.

But to put an end to this projection, take it according to the opinion of Arnoldus gathered out of the 3 I Chapter who willeth to project one pars of the Elixir upon roo of Meicug purged and all will be medicine upon ollie ion parts of Mercury purged and all will be medicine, afterward project one part of this

38 The Rofie Crucian Crown. Book I:
medicine lift congealed upun 100 parts of Mer . cury wathed and all will be goid or filver, in all tryalls according as the Elixir is white and red Laftly that I may briefly rehearte the abfoluce manner of projection. Firtt the medicine is $t$ b : projeted upon gold or filver molten, then upon quickfilver purged fó long tillit turns it into medicine and laftly upon mettals moft near, that they may be converted into pure gold or filver according to the properties and qualities of the medicine.

Becaufe we have faid fomething of the 'propinquity of mettalls that is to fay, that the Elixir is tw he projcted upon that imperfect bocy out of which its Macascy and fulphur was firft extracted, Elerefore it will not be unneceffary to fet down one example that is to tay if the medicine "as made of Mercsry then it is to be projected upon quick fiver for makeing gold or filver becaufe quick filver is 2 near body to Mercury, and to of the reft. Yet it is to be noted, that all Elisits may and ought to be projected upon quickijile ver, becaure quickfilver is the Mother and fperm_of all mettals therefore quick filver made and tumed inso medicine, is to be projected upon a body, moft near to it ; Which is Lead or Tinne; Upon which the medicine is always to be projected, whether white or red for the maling and rranfmuting of mettals, but both the quickfiver and lead are firf to be purged that they may be purfifed and deprived of cleir filth.

Book I. The Rosie Crucian Crown
Enough hath been raid before of the purgesion or purification of Mercury. We will now speak of the purification of I cad.

Met your Lead in a Crucible and when it is melted let it ftand in the fire a quarter of an hour and put therein a little fat Armoniacik and lee ic land a while in the fire and fir it with an Iron spatula till all the fat Armoniack be gone away in fume then crape the skin away out of the crunble, that is up. on the lead, then let it ftand to cool and it will be much whiter and fairer. And that yous mut purifie your lead or cine, before pion jection, because no other bodies are fo tuiole and apt to melt wherefore every Eliza ought to be projected upon quickfilver arid upon Lead or Time for making or tranfmuting of metals.

But to the end the manner of projection may be yet more plain I will fer down two rules which mut be carefully observed.

The first whereof is that the frit medicine that is to fay the ftone be projected upon the ferment always three parts of the medicine upon one of the ferment and one part of this upon 10 or 100 of pure molten gold, and one part of this medicine thus made upon 100 parts of an imperfect body, that is to fay, of Mercury for medicine. The later is that you mut always confider the fortitude and debility of your medicine for it is to be projected fo often upon quickfilver as it bringer it into a brittle medicine and when it failsith then

## 40 The Rofie Crucian Crown. Book I.

project one part thereof upon Lead or Tinne for making tranfonuration, according to the order and form of the Elixir.

Theie being remembred you pay eafily conceive the order of Augmentation in vertue and quantizy.

Thefe Chapters being-ended the other three which follow are fet-down in the next book, becaufe we have fpoken before of potable gold and filver, it is therefore neceffary atter we have made an end of projection to let down another sable of the Elixir of life in the next place, and after fpas of its vertue and power as $w$ find it among all the Antient and modern Phophers and fo make an end of the firfo Book.

## The Second Book.

CHAP. I.
Of the bleffed ftone of the Philofophers or the Elixir of life, and alfo the way of making mallcable glaffe.

1 Elixir of life. 2 Gold diffolved. 3 Silver dijfolusd. 4 Gold melted. 5 melied silver. 6 projection of the red Medicine. 7 Projection of the white Medicine.

ERMESSpeaking of fermentation bids us to take the fun and his fhadow by the fhadow he meaneth the moon becaule in refpect of digniey loftere and power the is much more weak and inferiour then the fun And

Book II. The Rofie Crucian Crown. 47
And the moon followeth the fun as a fhadow doth the body and is nor illuminated except by the light of the fun, we will firt fpeak of the body, that is to fay of gold, and after come to the fhadow of which gold it is written in a book of Chimicall Art in this manner. The Philolophers ftone is made of gold alone and onely by nature and is more fublime then them, which the Philofophers affirme cureth all infirmities. According to the opinion of this Philofopher I purpole to begin with gold alone and the medicine which is a new and fole nature, and antient and found Quinteffence.

But tothe end this gold may be better and more pure, it may be purged two manner of wayes that is to fay, by Antimony and by diffolution in corrofive waters with which copper plates are mixed as Goldfmiths ufe to do which is called water gold.

When you have thus prepared your gold project one part of your red medicine (or red Elixir) upon 100 parts thereof when your medicine is augmented in vertue and all that weight of molten gold will be converted into

## $\frac{1}{49}$

 a red brittle maffe which grind upon a marble to an impalpable powder.Then diflolve thefe hundred parts of to much thereof as you pleafe in diftilled vineger or in fpirit of wine, and fet it to difgeft in Balneo the pace of a day or two then diftill the fpirit of wine from it in Balneo, and in the bottome will remain the fixed and pure oyl of the gold

## 48. The Rofie Crucian Crown. Book II.

which is then the rrue Auruirs potabile, and fpiritual Elixir of life Tf you would give to any one of this powder prefently before it be converted to oy 1 , warm a little white or Rhenim wine and diffoive in either of them to much of the red powder as will tincture the fame into ared colour and the wine fo tinctured will be Aurum forabile, but it would be betterand more. penetrating if it were inctured with the foreraid oyl.

In like manner is tire white medicine to be projeeted after the purification of the filver in a corrofive water as is before declared.

And fo the meleed filver will be converted into a brittle powder and white maffe which likewife is to be diffolved and curned into oyi and thus the white Elixir of life is made and potable filver curing and healing fo far as it is able humane difeales for it cannot be fuppofed that the Elixir of Lexs hath fogreat vertue as the Elixir of Sol hath.

Whence the Author of the boo': call'd correctio falnerum and Ruchard Anglicus in this correctory. fay whereas among the vulgar and "Philofophers: God hath this report that being in his fift difpofition thac it cureth the Leprofy and many other vertues, this is not except by its compleat difgeftion becaufe the excellency of the fire acting in it confumeth all evil humours that are in fick bodies as well in hot as cold caures, Bat fiver can not do this becaufe it hath not io much fuperfluiry of fire and is not fo much difgefted and deroifed with haturail

Book II. The kefie Crucian Cromon. 49 maturity, yet notwithtanding this it hath fierinets occully and vertually in it, but no ${ }^{5}$ fo fully becaule the fire caufeth not fuch Ele? meneal quallities as in gold. And therefore filver being in his firft dilpofition doth not cure the Leprofy fo potently unlefs it be firft difgefled by Art untill it have the cheif degrees of gold in all maturity. Wherefore other fick merallick bodies more weakly cure infirmities according as they differ more from them in perfection and maturity fome differ more fome lefs, which is by reafon of the fulphur infected feid and burning of which they were made at the beginning in their generation and coasulation and cherefore they care not whereas the fire in them is burning and fo infected with the Elemenrall feces with the mixture of other Elementall quallities.

Seeing therefore that gold is of fuch vigor amongtt the vulgar and that being in his fift difpolition what wonder is it if it being brought into medicine (as is experienced) by Art and his vercue be fubciliated by difgetion of decoction and purgation of the quallities bue it may then cure mure nay infinite or all difeafes.

It makes an old man yoang and revive, it preferveth healch ftrengtheneth nature and expeileth all fickneffes of the body it drivet') poyfon away from the heart it moyfteneth the Arteries and breifly preferveth the whole body found.

## 5o The Rofle Crucian Crown. Book II.

In the $L_{\text {sd }}$ as purorum it is thus written of the afe of this medicine the manner of ufeing it according to all the Philofophers is thus, if you will ufe to eat of this medicine then take the weight of two florence Duccats of our Elixir and one pound of any confection, and eat of that confection the quantity of one dram in winzer. And if you do thus it driveth away all bodily infirmities from what caule foever they proceed whether het or cold, and conferveth healch and youth in a man, and maketh an old man young, and maketh gray hairs to fall, it allo prefenely cureth the Leprofy, and diffolveth Flegm mundifieth the bloud it fharpeneth the fight and all the fenfes after a moft wonderful manner above all the medicines of the Philofophers.

To which purpofe we thus find in the Rofary of the Philofophers, In this (that is to lay in the Elixir) is compleated the pretious gife of God, which is the Arcinnm of all the Sciences in the world, and the incomperable rreafure of treafures (for as Plato faith) he that hath this guift of God hath the dominion of the world (that is to fay of the Microcofme) becaule he attaineth to the end of Riches and hath broke the bonds' of nature, not onely, for that he hath power to convert all imperfect mettalls into pure gold and filver, but rather becaufe he can convert and preferve both man and every Anumall in perfect healch.

Book II. The Roofie Crucian Crown. 5 I
To this purpofe ipeaketh Geber, Hermes Arnodus, Raymundus, Lullius, Ripley, Penotus, Ausurellus, Aegidius, Valefous, Roger Bacon, Scotus, Luncentius, Venture ; and diverfe uncertain Authors.

Laftly, I now come to the generall confent of all the Philofopters and repeat what is found in their writings in the Book de Aurora confurgeat, and in Clangor Buccina, it is to be noted that the An vent Philofophers have found 4 principal effects or vertus in the glorious repofitary of this treafure.

1. Firft, it is fid to cure mans body of all infirmities.
2. Secondly, to cure imperfect metals.
3. Thirdly, to tranfmate bate flones into presthous genomes.
4. Fourthly, to make Glass malleable.

Of the fife. All Philofophers lave contented that when the Elixir is perfectly ruoified it doth not onely work miracles in fold bodies but alfo in mans body of which there is no doubt, for being taken inwardly it cureth all infirmities, it curet outwardly by unction. The Philofophers alto fay, if it be given to any in water or wine first warmed it cureth them of the Phren fy, Dropfie, and Leprosy, and all kind. of Fevers are cured by this Tincture and taketh away whatsoever is in a weak flomack it bindeth and confumeth the Flux of peccant humours being taken farting it driveth away malencholly and fadnefs of the mind it cureth the infermities of the eyes and dryeth up their
moittenefs and blearednefs, it helpeth the pureblind, red or bloodshot eyes it mollifieth the prime or web the Inflamation of the eyes and all other incident difeafes are eafily cured by this Philofophical medicine.

It comforteth the heart and Spiritual parts by taking inwardly it mittigateth the pain of the head by anointing the temples therewith maketh the deaf to hear and fuccorecth all pains of the ears it reatifieth the contracted Nerves by unction, it reftoreth rotten teth by walking alto all kind of impolthumes are cured with it, by oyntments or emplaytors or injecting the dry powder therein.

It cureth Ukers wounds Cancers Fiftulas ngli me tangere, and foch like difeafes and generateth new fin if it be mixed with corrupee and lower wine it reftores it, it expelleth poyfon being taken inwardly it alto killeth wormes if it te given in powder it taketh 2way wrinkles and foes in the face by anointing therewith and maketh the face feer young, it helpeth women in travail being taken inwardly and bringeth out the dead child by emplaifter, it provketh Vine, and helpeth generation it prevenceth drunkenness, helpech the memory, and Augmenteth the radical moifure it ftrengtheneth nature and alfo Adminiftreth many other good things to mans body.
2. Of the fecond it is written that it tranfmuteth all imperfect metals in colour fubftance lating weight ductibility melting hardness and fort nets

## Book II. The Rofie Crucian Crown.

3. Of the third, that is to fay of tranfmuting bale and ignoble ftones into pretious gems, I will not fpeak of in thus place, becanfe I bave referved it for another place, that is to fay the third Book.

Of the fouth it is writ that it maketh glaffe malleable by mixtare (that is to lay of the powder of the white corporeal Elixir) when the glafs is melted. Thus far Anrora Confurgezs and Clangor Buscina.

Now if you defire to make pure and clear malleable glais learn this of me, and beware of what glafs you make your mettal for you muif not take glafs of Flints, wherewith glafs of windows are made but fuch as your Venice gla fo is made of, and that is to be chofen out of the firt mettal of the glafs, which hath ftud molten in the fire, in the glafs makers furnace the fpace of a night \& then it will be without fpots and pure therefore take as much of the faid glafs out of the furnare with your Iron rod, as you have a defire to convert, and when it is cold weigh it, and melt it by it felf in a por, and when it is well molten project your white corporeal Elixir upon it and it will be converted into malleable mettal and fitand apt glafs tor all Gold Smiths operations. And thus is glafs made malleable and prepared for any ufe but if this were done with the red Elisir it would be much more during, for there is nothing more pretious of which we will not now fpeak.
Therefore Son or or Reader whofoever thou art who readeft my Books give credic to me and beleive me, becaufe all things that you fhall find

## 54 The Rofie Crucian Crown Book If.

writ here are either the molt approved writings and collections of all writers or the Authors own experiments. For I have tryed many things and found many things true. I beleive no man liveth amongt Mortals that knoweth more ways of prepartions which are concealed by almolt all the Pii:lofophers.

For that which perfecteth the great work that they have all concealed which truely is the errour of all Artifts. And this is all I would have you to do. To calcine, diffo ve and feperate the Elements after join them together putrifie them or reduce them into fulphur ferment, project, Augment in vertue and quantity. This is onely the work of the Philofophers of which the whole Company of Philofophers have writ in a continuate courfe.

## 

To the Worthy, Learned, Noble, and Valiant Colonel Samuel Sands, late Governon of his Majefies Garrifon in the Famous City of worcefter, and now one of the Right Honorable Members of Parliament, OJ $^{2}$

Our late respects to me have comminded my Soul to Serve you : and. knowing you are afwell a philofopher and Learned, as a Souldier. that can command Armies of Horse and Foot into good order for War; I therefore humbly present this little Piece of Pbilofoply to your pleasure: As the Book is. Art and Nature united to Serve you, fo the Epistle may make you merry, by the great power of Natural things, for you know they not onely work upon all things that are nee them by their Virtue, but aldo bejides this, they infuse into them a like Power, through which by the fame Virtue they aldo work upon other things, as in the LoadStone, which fore doth not onely draw Iron a Rings, but aldo infufeth aVertue into the Rings themselves, whereby they can do the fame: After this manner it is, that the common Harlots and Villains, grounded daily ir boldness and lmpudence in Stage-Plays,' infect all that are need

## The Epifle Dedicatory.

them by this property; whereby the Spectors are made like them, therefore they Say that if any one fhall put on the inward Garments of a StagePlayer, or fball bave about bim that Lookingglafs swhich they daily look into, be fhall become bold, Confident, Ignorant, Impudent and wanton; fo a Cloth that was about a dead Corps, makes bim that carries it fad and melancholy: And if you put a Green Lizard made blind, together with Iron or Gold Rings into a GlafsVefSel, putting under them Some earth, Sbutting then the Veffel; and when it appears that the Lizard bath received bis fight, fball put them
 eyes; the (ame may be done with Gold Rings: and a Weefel, whofe eyeswith any kind of prick are put out, it is certain are reftored to fight again; upon the fame account Rings are put for a certain time in the Neft of Sparrows or Swallows, which afterwards are used to procure Love and Favor: Thefe obfervations and ten thoufand more I made to ferve you, and they fball teftifie, you Jball know you bave power to commands,

## Your moft affectionate

## humble fervant

## The third Book.

Of Saturne or Lead the firft Direction.

## C HAP. I.

Of the Elixar, Putrefaction into Sulphur, the Oyl of the Sulpbur, of the Conjunction of the Salt and Oyl of the Spirit, or Salt of Saturne, wobich containeth the Oyl or Soul of the Menftruum of white Mercury and red poater of Pa radice, Refolution, Solutior, diftillation, $\boldsymbol{H y l}$, Purgation, refolution of Sericon, of the Gums of Sericon, of the Solution of the Minium or Adrop, of Calcination of Minium into Adrop and red Leads of Calcination of Lead with Aqua Forris.

F Ery many havewrir of Saturne or Lead, but none that I know of have writ fully thereof in any particular Treatife; therefore I do not here onely fet down what I have gathered from them moft briefly and truely, but alfo thofe things which I have found and proved by my own experience, which I have annexed to them, that the work may be abrolute and compleat.

Of which, as they fay, Mary the Prophetefs, and the sifter of chopes in her Books of the work of Saturne is thus faid to write, Make your water running like the water of the two Zaiberh, and fix it upon the heart of Saturne : And in another place, Marry the Gum with the true Marrimonial Gum, and you fhall make it like running water. Of which procefs of Mary, George Ripley our Country man hath thefe verfes.

> Mariamira Sonat
> Qua nobis talia dosat Gumimis cum binis
> Fugitivum fugit inimis
> Horis in trinis
> Tria vinclat fortia finis
> Fila Plutonis
> Confortia juugit Amoriso

## Or thus,

## Maria mira fonat, breviter qui talia donat

 Gummi cum binis fug itivum fug it in innis Horis in trinis tria vinclat fortia finis. eNaria lux roris ligam ligat in tribus horis Filia Plutonis confortia jungit Amoris Gaudet inaffala fola per tria fociata.The heart of Saturne, faith Ripley, is his white and clear body, out of whofe doctrine the work dotn briefly thus proceed, that is ro fay, that a water he made out of the body of Sacurne, like the water Zaibeth, and that water fixed upon the beart of Saturne, but becaufe the practice of
$\frac{\text { Book 3. The Rofle Crucian Crown. } 3}{\text { drawing out chis water of Zaibeth, doch not ap. }}$ pear out of this, nor the way of making che heart of Saturne, therefore the foregning direction in he Holy Guide will fhew them both.

Therefore I have joyned two Tables, in one of which rhe fhorter is the demonftration of the reduction of the body of Saturne into his heart or Salt, the other longer and greater, is the extra? ction of the water Zabieth; and the confummation of the work of Saturne.

Having thus defcribed this work, I now come to the explanation, and fay, that the Calcination of the Body is cwofo!d; for the Calcination thereof in the fhorter work, for extracting the heart of Saturse, is done on this wife by Aqua Fortis.

Take 8 or 10 Ounces of Lead in Filings, and diffolve it in Aqua Fortis in double proportion, and fortified with Salt Armoniack in an Earthen Veffel with a narrow neck, and fec in afhes till it be tocally diffolved; and there will remain a white matter in the bottom like Grains of white Sale, which is a figure of perfect folution; then pour your matter that is diffolved in the water into a body, and fet thereon a Limbeck, and in Balneo draw away the corrolive water, till there remain a dry fubftance in the botrom; and fo you have the body converted white by Calcination with corrofive water, out of which the heart of Saturne is to be drawn.

The way to wafh away and purge the corrofive water from the body, pour warm water upon the fubftance in a Limbeck, and pour it often off till ic have no fharpnefs as all upon the

$$
\text { A } 4 \quad \text { congue, }
$$

tongue, and then your body is prepared for drawing out the Salt.

When your matter is well dried, diffolve it ait again in diftilled Vinegar, and diftill the Vinegar twice or thrice fromit, and in the bottom you thall have a lucid clear and white fhining Salt, which is then called the heart of Sa turse.

Now I come to the practice of the other greater work, that the verity of the fone may be found, of which many have made mention in their Books, as Raymundus, who calleth it the Vegetable Mineral, and Animal Stone; Geber faith there groweth a Saturnian Herb on the top of a Hill or Mountain, whofe blood if it be extracted, cureth all infirmities.

Ripley writ a whole Book, called his Practical Compendium, of the practice of the Vegetable Stone, teaching the manner and form of operation; but becaufe he neither fet down the folntion plainly nor perfectly, he hath been the caule of much error, and hath not onely deceived me but all thofe that followed him, untill after a long time I found a way to diffolve Saturne, fo that is could never after by diltallation be curned into Lead again, which is the chiefelt and greatelt fecret of the Vegetable Stone.

But let us hear the words of Mary the Prophetefs, and R ipley taken from her: The Radix of our matter is a clear and white body which putrifieth not, but congealeth Mercury or Quickfilver, with its odor makes its water like the running water of the two Zabieth (alis Zubech) and fix it upon the fixed heart of Saturne: which

## Book 3.

words do moft aptly agree with the properties of Lead; for if any one be fmit or wounded with a Bullet, and the Bullet remain in the body, it will never purrifie.
And allo if Quick-filver be hanged in a Por over the fume of molten Lead, fo as the fume of the Lead touch the Quick-filver, it will congeal it.

Thus far of the preparation of Lead, we now come to its denomination, They bid us fix the water $Z$ aibeth upon the fixed body of the heare of Saturne; now for the expofition of the body, for the name of Saturne, Ripley calleth ic Adrop, of which that is made which the Malters call Sericon; the water of Sericon they call their Menftruum, the two Zabietbs joyned together in one water, are the two Mercuries, that is to fay white and red contained in one Menflruum, that is to fay of the water and Oyle of the fixed body or heart of Saturne : Follow what I have written concerning the imbibition of the earth, our operation is no otherwife then in the Practical Com: pendium of Ripley.

IJaacus alfo writ a Treatife of Lead, he worketh chiefly according to the doctrine of Mary the Prophetess, and laboreth much to fix the earth of Saturne, and after to diffolve the body in diftilled Vinegar ; that by the addition of corroding and Tharp things, his red Oyl may be diAtilled, which he callerh the water of Paradice, thar he may imbibe his fixed earth therewith: which way is much thorter then Ripleys, but the rubification and fixation of the earch is long and uncerrain; wherefore I have both forraken

Ifacus and Ripley in making the earth, in thead of which I have given the fixed heart of $S_{a}$ turne, as you may read in the Holy Guide.

But chat the body may be prepared according to this Table, and after my intention and the defire of Ripley, we boch will that the Oyl or Water of Paradice be drawn out of the Gum of Sericon (whole father is Adroo) Sericon is made of Red-lead ; therefore it is firlt neceflary to Thew the way of making Miniun of Lead, which Thomas $\} u c$ an Englifhman hath defcribed, rogether with the Compolition of the Gum of Sericon, which Auchor I purpofe to follow, as being the bett.

Take ten or twelve pound of Lead, and melt it in a grear Iron veffel, as Plumbers ufe ro do, and when it is molten, fir it ftill with an Iron Sproula till the Lead be turned to powder, which powder will be of a green colour; when you fee it thus, take it from the fire and let it cool, and grind that powder upon a Marble till it be impalpable, moittening the powder with a little common Vinegar, till it be like thick honey, which put intoa broad Earchen Veffel, and fer ir on a Trevet over a lent fire, to vapor away the Vinegar and drie the powder, and it will be of a yellow colour; grind it again and do as before, till the powder be fo Red as Red-lead, which is called Adrop: And thus is Saturne calcined into RedTead or Minium.
TTake a pound of chis Read-lead and diffolve it in a Gallon of Vinegar, and fir it with a fick three or four times in a day, and foler it ftand in a cold place the fpace of three days: then take
your Earchen Veffel and ler it in Batneo twenty four hours, then let it cool and filter the liquor three times; and when it is clear, puc it in a body with a Limbeck thereupon, and diltill the Vinegar fo long as it will afcend, and in the bottom the Gum of the Sericon will remain like thick Honey, which fet apart, and diffolve more new Lead as before for more Gum, till you have ten or cwelve pound thereof.

Now givecareful attention, for we now come to the point and period of Ripleys error, for if you put four pound of this Sericon to diltill in a Limbeck, and from thence would draw a Menftruum, as Ripley teacheth, perhaps you would have farce one ounce of this Oyl , and fome parc of a black earth will remain in the bottom, and molt part of the Gum melted again into Lead, by which you may know that the Sericon is not well diffolved, nor as yet fufficiently prepared, that a Chaos may be made thereof fit for diftillation, becaufe it is not yet well diffolved; therefore in Ifaacus there is found a way of refolving this Gum with ditilled Vinegar, acuated with calcined Tartar and Salt-armoniack; Wherefore, faith he, if thou be wife, refolve thy Gum; but Ilike not this acuation of the Vinegar, as I may call it, I rather choofe to refolve the Sericon in Raymusd's calcinative water, which is a compounded water of the Vegetable Mercury or fire natural, with the fire againft nature, as $R i p$. ley teflifieth, and it is more verified by $R$ aymund in his Book of Mercarriis, where he teacheth how to diffolve bodies with his calcinative water.

I will reveal unto you this water, which is a1-
molt unknown : Note therefore, that the Vegetable Mercary is che fpitic of Wine (inftead of which we may fometimes ufe diftilled Vinegar) and that the fire againtt Nature is a corrofive water made of Vitriol and Salt-Peter.

Therefore take which you will, either fpirit of Wine rectified (or AguaVita) or diftilled Vinegar four pound, and two pound of corrofive water, and mix them together.

In this watet thus compounded, refolve half a pound of Gum of Sericon in a circulatory, and fet it in Balneo four or five days, and the Gum will be totally diffolved into the form of water of Oyl of a duskifh red colour.

Then diftill away the water in Balneo, and there will remain an Oyl in the bottom, which is then the Chaos, out of which you may draw a Menftruum containing two elements ; and this is the true refolution of the Gum of Sericon, in this water you may refolve fo much Gum as you pleafe by reiteration.

Take two pound of this Chahodical fubltance, and prepare it for diltillation in naked fire or fand, and lift up the clear red Oyl, wherein both the f pirit and foul doth fecretly lie hid, which Ifeacus calleth the water of Paradife, which when you have you may rejoyce, for you have gone throughall the grols work, and come to the Philofophical work.

Therefore now proceed to conjunction, and joyn the white heart of Saturne wi:h the red Oyl, as it is found in the Rofary.

Candida fuccincto jacet uxor nupta marito, That is to fay, the red Mercury to the Sale, if you proceed to the red work.

There-

## Book 3. The Rofie Crucian Crown. 9

Therefore take four ounces of the Salt or heart of Saturne, and as much of the red Oyl or water of Paradice, and feal them up in a Philofophers Egg, and fo foon as they fhall feel the heat of the Balneum, the Salt will diffolve and be made all one with the Oyl , fo as you fhall not know which was the Salt, which was the Oylo

Set your glafs in Balneo, and there let it ftand in an equal degree of fire, till all your matter be turned white and flick to the fides of the glafs, and Thine like fifhes eyes, and then it is white Sulphure of Nature; but if you proceed to the red work, then divide your white Sulphure into equal parts, referving one part for the white work, and go on with the other part, and in a new glafs well fealed up, fet it in Aghes till ir be turned into a red colour.

When your Sulphure is thus converted, imbibe it again with equal weight of irs foul, diffolving and congealing till it remain in an Oyl , and is will congeal no more, but remain fixed and flowing.

This then is to be fermented with the fourth part of the Oyl of Gold, as is often mentioned before.

We have fet down already before of the augmentation in quanrity and quality, therefore it is not neceffary to repeat it here.

We will now return to the whire Sulphure kefore referved, that we may fee down the manner of the white work.

When you have your red Oyl or Soul, if you defire to make the white Elixir, fet part of the faid Oyle in a glais in Balneo to digeft, then take
it out and putitinto a body, and in a lent fire diftill away the firit or whice Mercury, which you mult try, that you may know whether it arife pure without water or not, as you do when yous try the fpirit of Wine, for if it burn all up, it is well ; if it do not, rectifie it fo often, till it be without any wateriness at all ; then have you rectified your fpirit, wherewith diffolve your white Sulphure, till it remain fixed, and flowing, as you did before in the red work, then ferment it and augment it with the fourth parc of the Oyl of the white Luminary or Luna, as youdid the red, and ic will be the white Elixir, converting imperfect bodies into perfect Silver.

## A Corollary.

Ripley divided the fcope of this work into four operations, whereof the firf is the diffolution of the body, the fecond, the extraction of the Menftruum and the feparation of the Elements ; the third is not neceffary in our work, becaufe we caft away the earth after every difililation, inflead of which we ufe our Salt or heart of Saturne ; the fourth is, that there be a conjunction of our sait as is before defcribed.

> Hereafter followeth the eAccurtation of the work of Sacurn.

The way of extracting Quick-fflver out of Saturne is found in Jfaacus, of which I know how to make a pecial accurtation with his water of Paracice, which 1 gathered partly from the
forefaid Author and orhers ; Ripley made his accurtation with Quick-filver precipitated with Gold, and the imbibition with Corrofive water, which I like nor, becaufe the Elixir fo made will be the greareft poiion, as himfelf confeffeth, that it were better for a man to eat the eyes of a Baflisk, then tafte that Elixir.

But becaufe I defire tofer down this accurtation of Lead alone and his Elements; that no ftrange body may be added to our Elixir, and alfo that it may be made a Medicine for all ules ; I have found out the way of making alone with the CMercury of Saturne and his own proper Tincture ; for I make a body of one thing which is a fprit, and make that Medicine with its owa proper ipirit. Read all the Philofophers, and you thall never find a word of this procefs, nor none of the Ancients will teach thee how to make the Mercxry of Saturse, which that ir may be briefly done, this following work will Shew at large in our.'Holy Guide.

## C H A P. II.

The Medicine, Elixir, Fermentation, Imbibition Precipitation, Ouick-Silver, Saturne, Lead, The Toad.

MY great Grandfather Chriftopher Heydons faith in a certain Manufcripr of his, Levs enim Arte norunt Alchimifta Mercurium currextems conficere explumbo, that is to fay, the Alchimifts
knew how by an eafie Art to make current Mercury out of Lead ; but what Art that was, neither he nor any of the ancients have fhewed unto us, Quarite, guarite, faith the firt Alchimilt (fo Paracelfus was pleafed to fay in imitation of him) Ơ invenietis, pulfate ơ operietar vobis, that is to fay, Seek and you fhall find, knock and it thall be opened unto you; which may rather feem to be the words of an envious Mafter, then the preceprs of a Teacher. But having learned this, I learned to feek, that is to fay to read; I read, I knocked, that is, I tried many experiments, although they were repugnant to doctrine and Philofophy, therefore although I almolt defpaired of that Art, yet becaufe nothing is difficulc to the induftrious, by often knocking, at laft I found it apart, by what means I atcained to the Art of fuch a facility, that is to hay, of making Quick-filver of Lead; and when the procefs is read to the operator, it will be rather rejected then believed: but tothe end this Art may be revealed as a great fecret, I thought it necer. fary to fpeak firtt of the Inttruments neceffary in this work, before I come to declare the docirine, which are three in number, chat is to fay,a Furnace, a Ctucible and a pair of Tongs, as appearech in the Holp Guide.

## CHAP.

## CHAP. III.

The cracible, the Furnace, the Hole in the Top of the Furnaee, the Tongues, the Coals.

LEt the Furnace be $D$, the place filled with Coles $E$, whereunto pur fire and when the Coals are well burnt, fo that they give a clear flame and fire, cake your Crucible A, well anailed that it break not with the fuddain hear, and put therein three ounces cffiled Lead, having twelve ounces of Mercury fublimate well ground, and Salt Armoniack lix ounces mixed together; which put upon the filings of Lead into the Crucible A; and when the fire is ftrong and glowing hot; take your Tongs $C$; and prefently rake up your Crucible, and put it in $B$, the hole in the top of the Furnace till you hear a great noife and buzzing, then fo foon as you can (leaft the Quickfilver flie away with the fpirits) take away the Crucible with the matter therein, and fet it in an earchen difh filled with a fhes to cool ; and when it is cold Itrike the lower part of the Crucible, fo that the matter of the Lead may fall into an earchen difh; and you thall find your Lead converted into Quick-filver.

This Crucible and Furnace is ar large charactered in the Holy Gride.

This work is to be reicerated with new fpirits till you have a fufficient quantity of Quick-filver, with which proceed as followeth to precipi-
tate this Quick-filver, that from a ipirit it may be convertéd into a fixed body by fixation.

Take of this Quick-filver fo much as you pleafe, and put it to precipitare in a round glafs well lured, and fet it in athes to the topnof the glafs: yet let us ftay here a while, that your unftanding may be the more enlighrened.

Therefore underftand that the intention of this work is to fix the fpirit, which may faoner be done with the fpirit of a fixed body, which before was Homogeneal with the body; and which of its own nature defireth to joyn again with its body.

Therfore nature requiferh that fhe may be helped by"Art in this works to which the Artift confenting, he adminfreth tbereto the pure and defired metal, which ie delighterh to adhere unto; which meral is Gold, which is thus prepared, that is be foonet parted by the Quick-filver and ftick thereunto.

Take as much pure Gold as you pleafe, and diffolve it in aqua reg is mixed withequal part of acetum ncerimums, ot Lac virginis, then fer it to digeftythe fpace of aday, then put your diffolution into an Alimbeck, and fet it Balneo, to diftill away the water as dry as you can, and do thus three times, andithe shird time diftill it in afhes, thate the Salc Armoniack may fublime. Then put difilled Vinegar upon the matter remaining; and afrer it hath tood chree days in Balnéo, diftill the Vinegar away in afhes, that all the fubftance of the Salt: Arinoniack may fublime : and do thus thtee times, always purting in new Vinegar, untill the Oyl of the diffolved Gold remain in the

## Book 3. The Rofle Crucian Crown. 15

 bottom; then take of your Quick-filver chree times fo much as your Gold, and pour it upon the folution of the Gold, that they may mix together and be united: then put your quick-filver with che folution in a round Glass ftopped onely with a peece of Cotton, and with a itick put it down every day as it doth afcend, and keep your Glals in afhes the fpace of a moneth, till your quickfilver be turnedinto a red precipitate, then again diffolve it in new diftilled Vinegar, till the whole ublance of the quick-filver be diffolved, and the Vinegar be coloured in a golden colour, then ditill away the Vinegar in afhes, and again pres ipitate the quick-filver, which is in the botrom of a Gold colours into a red and fixed body; and o have you the Mercury precipitate of Saurne.It remaineth now that the body be imbibed vith its foul, that this being from a fpirit redu= ed into a body, may again imbibe its foul, that it) aay be diffolved therewith; therefore put it into: Glass, and add thereto equal proportion of its oul or water of Paradice, and fiut your Glafs? rell the fpace of five days, till the body be difo olved with the foul.
Then dry it in andes till it penetrate and flow ; nd whent it is dried, try it upon a hot Iron plate it be fixed and melt, if not, imbibe it again with alf the weight of its water, and do fo till yout lake it fufible and piercing by imbibing and ying it, and when it will melt in the fire, and enerrate, it is then the fones and fir for ferment. tion.

We have faid enough of che manner of fermentation in the fecond Book, and therefore ic is not necefflary to repeat it here: and fo after fermentation it will be the Elixir.

Then it is to be augmented and projected, as is before declared; and thus the work of Saturne is accurtated, of which George Ripley faith,

Adrop is the father of the flone, Sericon his brother, Lympha his fifter, the earth its mother.

But if you defire to ktrow all the fecret of $S a-$ turne or Lead, I will fet yeu down one procefs out of $P$ aracel $y$ us: when you have well prepared the heare of Saurrne, faith he, take two or three ounces of that heart and grind it fmall wich double weight of Salt-peter, and purit in a fubliming Glafs, with a head well luted to fublime, encreafing the fire hy little and little as long as any thing will afcend or fublime; thus far Paracelf ses : now if you find this true, Ripley will tell you what you fhall do with it, in there words.

When by the violence of the fire in the diftillation of the Gum of the Sericon, a certain white matter Chall afcend fticking to the head of the Limbeck, like Ice, keep this matter: which hath the property of Sulphiut not burning, and is a fit matter for receiving form, you fhall give it form after this manner by rubifying it in a hes, and when it is red Sulphur, give it of ics \{oul, until ir pierce and flow, then ferment ir.

Here I have delivered unto you all the ways and manneis of Saturne, which are found in any of the Philofophers Books: to the end therefore that the work may be compleated with a demon-
ftration of this word Plambum Philofophorsm, as appears in the Practical Compendium of $R$ ipley, we lay that the Philofophers Lead is not taken for Antimony but for Adrop, being converted into the Gum of Sericon.

It remaineth now that we in order treat of the thisd termination of this Book : therefore after we have done with Saturse, it is neceffary to fpeak of $\mathcal{J}$ upiter, viz. Tin : but becaufe chere are many orher ways of handling Saturne belides thofe we mentioned, therefore we refer the Reader thither, feeing he followeth his foorteps; for he is the off-fpring of Saturne and naturally born from him.

## C H A P. IV.

## The third T able of the Elixir of Iron.

$T$ is not neceflary to prefix a peculiar Table to this metal alone, becaufe it is fer down before this book, neverthelefs I will here reckon upits parts and operations as followeth.

1. Calcination.
2. Solution.
3.Seperation.
3. Conjusction,
4. Putrefaction.
5. Sulphur.
6. Fermen:ation.
7. Elixir.

Exaltation or augmentation and projection is Spoken of fufficiently in the former Books.

Mars

Mars being moft earthly of all the Planets or bodies, it is not to be doubted but that it may eafily be reduced into a body with little labor; and therefore molt eafily converted into Salt, which is done by Calcination : therefore we will firt fhew his converfion into Salt.

Underftand therefore, that hence ariferh a ewofold confideration, that is to fay, that it be calcined one way into its body or Salt, the other way that the body be prepared for folution by calcination.

The practice differeth but a little, for whether you calcine Iron' for its Salt or its Mentruum, one onely manner of preparation fufficerh.

That is to fay, that you take filings of Iron or Stecl, as much as you pleafe, and mix therewith equal weight of Sulphur in an earthen body with a Limbeck will luted thereto, then fet it in a fhes so fublime till all the Sulphur be fublimed from it, then diffolve the filings which remain in the botrom in Aqua Regia, and it, will be converred into Salt, which will be cleanfed from the faid water, if you put chereon dillilled Vinegar and difill it away; do thus three times with new Vinegar, and you fhall have a yellowifh red Sale in the bottom, which then is a body to be joyned to the foul, which keep in warm athes till you ure it.

Now for the practice of Iron for diffolution, take filings of Iron or Steel, fo much as you pleafe, and put it in an Iron difh filled with Vinegar, and fer it inthe flaming fire the fpace of three hours, then take it out and let it cool; seiterate this work four or five times, then calcine

## Book 3.

calcine it with Sulphur is you slid before. When it is chus calcined, fet ic to diffolve in a corrofive water, by adding equal weight of our acetum acerrimum; and let it Atand till it have diffolved fo much as it can in the cold, then fet it in hotafhes, and let it Atand there the face of four or five days, pour off the water and dry which is not diffolved, and again calcine it and diffolve it, and when it is diffolved, $f 0$ as the wa ter be coloured red, pour it out into a body, and keep it till you have diffolved as much calcined Iron as you pleare.

Then take all your diffolutions, and with an Alimbeck diftill away the water in Balneo, and put difilled Vinegar upon the matter remaining in the bottom, and let it fand upon it in Balneo the fpace of feven days; then take out your Glafs and filter the diffolution, and then again in Balneo diftill off the Vinegar, and in the botcom will remain a thick Oyl of the Iron or Steel; but if it be not diffolved to your mind, reiterate your folurion in Raymunds calcinative water, but it would be better if it were edulcorated with Aqua vita, drawing it away again in Balneoz and fo you have your Iron diffolved into a liquor.

Therefore proceed to diftillation, that there may be a feparation, and diftill it in an earthen Veffel in a frong fire, encreafing the fire as much as you can, and receive the oyl, or foul, or red tincture of cMars feparated from the remaining feces by the nofe of the Limbeck, which oyl is the moft permanent tincture for colouring Sulphures for the red work, or for exalcation of all

20 The Rofie Crucian Crown. Book 3.
Elixirs in colour, for it makes it tinge and coloar higher.

When you have thus prepared the tincture, then proceed to conjunction, and work with the Salc before referved, taking three or four ounces of the Salt, and equal weight of the foul.

Then feal it up and fet is to putrifie in Balneo, and keep it there till it pais through all colours and be white, and then it is Sulphur of $\mathrm{Na}-$ ture.

Then take out your Glafs and fet it in afhes in a greater degree of heat till it be red, then difolve the red Sulphur with its own foul, and again diffolve and fix it; diffolving it in Bulneo, and fixing it under the fire, and fo it is prepared for fermentation.

The fermentation is,as hath often been fpoken of before, with the refoived oyl of the Sulphur of Gold in a fourfold proportion to the Medicine, that by the addition of the ferment, it may be made Elixir tranfmuting all bodies.

And note that this Elixir of Iron excelleth all other Elixirs, for it rubifieth more, and tingerh higher, and is betrer for mans body, for it preyagileth againft the fpleen, conftringeth the belly and cureth wounds, it knitteth broken bones yogether, and foppech the fuperflwous Flux of the Courles.

## CHAP. V.

The fourth Table of the Phy $f$ ical and Alchymical Tincture out of the red Lyon and Glue of the Eagle, dramon out from the Authors experience.

I is chiefly to be remembred how we firf taught you to diffolve Antimony with our acetum acerrimum, which may be alfo well done if you diffolve it in our calcinative water, and after that Antimony is calcined which we fpoke of in the end of the fecond book; it is allo to be remembred that in the end of the book I fpoke of the Glue of the Eggle in the fixth Table of the firft book; thefe being remembred, it is to be underftood that we attribute no other beginning to this accurtation, except that where before we took the blood of the red Lyon and the Glue of the Eagle when they were both deftroyed; we now joyn them found and not hurt together, that they living may mortifie and diffolve themelelves, which I have firly called Corporeal Marrimony, or the Union, for in this wedlock they dye together, that they may be vivified in the Celeftial Matrimony ; therefore it is not to be wondred if this Table differ from the other, for this pertaineth to the handling of fpirits, the other way reacheth the manner of making the Elixir of bodies; therefore we now come to demonftrate she foregoing Table.

Therefore chat I may plainly reveal all things
unto you, take Antimony well ground, half a pound, and as much Mercury fublimate, likewife ground, and grind them both togeth upon a marble, till you cannot know them one from another; then fec them in a cold place, that she matter diffolving may drop into a Glafs fet underneath, for when the matters are. well mixed rogether, then fay, that they will both Chortly be diffolved when the water is petfectly diffolved, it will be of a greenifh colour and lothforne fmell.

Puc this water wish the thick parc wich it into a Glass, and let it Atand the face of chree days in a fixatory under the fire, and in fort time you thall fee yout diffolvednefs of a brownifh black colour, and after, thar is to fay, in the forefaid time it will be red, fomerhing higher then red Lead.

Diffolve this cakined matter in Raymunds calcinative water, and when you have diffolvedic al! into a red liquar or deep yelow, then is your matrer brought well into irs Chaos.

Put this liquor inio a fit body with an Alimbeck and receiver, and by diftallation feparate the red oyl or the red Mercury from the white body which remaineth in the earth; and if any matter afcend into the head of the Alimbeck, defpife it not, but trie if it be fixed; and if it be not fixed enough, fubline it till it be fixed.

Whereunto joyn equal weight of its foul, for the Celeftial Marrimony, and always leave out the earth in the bottom if you have any fublimate fixed, if not, take the whice earch remaining in the bottom, with which proceed as before is faid, and joyn the white body with the foul; when
they are thus joyned or married, fec them to impregnare and revivifie in Bulneo, till is pars chrough all colours, and at laft be converted into red, which then is the Itone.

The manner of Fermentation, Augmentation, both in quantity and quality, and projection, is Spoken of before in orher works.

And thus Sons, Brethren and Reader, I have delivered and opened (and allo have amended many things) all the fecrets of the Ancient Philofophers, whofe writings were rather publifhed ro conceal the Art, then to make it manifelt or teachit; although it pleafed Hermes Trifmegiftus, the firf writer of this Art, both to fay and protelt that he had never revealed, taught, nor prophefied any thing of this Art to any, exept fearing the day of Judgement or the damnation of his Soul, for huning the danger thereof,even as he received the gift of Faith from the Author of Faith, fo he left it to the faithful; yet when you read his writings, either in his Smaragdine Table, or in his Apocalips, or his twelve Golden Gares, and thall find nothing plain or manifeft, what will you think of fuch an Author? Believe me all the Ancients have concealed the fecret of their preparations in the grols work, although they writ mof famoufly of the Philofophical operation ; therefore I have ufed my endeavour to trye, for out of their writings I found that the Elixir might be made of the Planets or Mettals, and alfo of mean Minerals, which came more neer to a metallick nature, then reading more, I found a certain merhod amongt them all, as it were witt one confent or voice on this wife.

Firtt and principally, that bodies fhould be made incorporeal, that is to fay, diforporated, or difcompounded, which then is called the Hyle or Chaos.

Secondly, That out of this Chaodical fubfance, which is one thing, three Elements,hould be reparated and purified.

Thirdly, That the feparated and purified elements hould be joyned, the man and the woman, the body and the foul, heaven and earth, with infinite other rames fo called, that the ignorant might think they were diverre, which onely were nothing elre but water and Silt, or the body and fpirit or foul, that is to fay, white Mercury and red, which they joyned together that a new and pure body mighr be created in putrefaction, that a Microcofmical infane might be created in imitation of the Creation, that is to fay, Sulphur of Nature.

Fourthly, That it fhould be fed with Milk,that is cofay, with its own proper Tincture, and after nourighed by Fermentation, that it may grow to its perfect ftrength.

Having learned thefe, I begun to practice, and in the practice of every body and fpirit, I found diverfe errors; but reading more and trying more, at lalt I found the manner and true way of diffolving all bodies, feparating and conjoyning them; finding the compofition of their fecret of fecrets, that is to fay, Lac virginis, or Acetum acerrimum, and Raymusds calcining warer, wherewith Idiffolved all bodies at pleafure, and perfected the grols work; wherefore I purpoled, contrary to the cuftome of the Philofo

Book 3: The Rofie Cruciarl Croma. 25
phers, to reveal the whole work, lelt I being envious, fhould be the Auchor of error like them; therefore I have added their works to my own experiments and inventions, which areplainly and cruely writ, that the Arrift need to read no books but mine, for herein is almolt all things contained, which are found plainly. writ by the Philofophers; and alfo thofe things which are found true by my own experience.

Now you have all things methodically in this Art without error, with which by'the help of God, you may atrain to the end.

Alchymy revealeth and openeth unto us four other fectets.

The firf is, the compofition of Pearls, far greater and fairer then natural ones, which cannot be perfectly done without tre help of the Elixir.

The fecond is the manner of making precionis Stones of ignoble ones, by the fame Art which we raught before in malleable Glafs.

The third is the manner of making arcificial Carbunckles in imitation of natural ones, which few or none have fpoken of.

The fourth is the manner of making Mineral Amber, of which Paracelfus hath onely writ in his book of vexations of Philofophers, and in the laft Edition of bis works in the fix of his Archidoxes : but becaufe they cannot be made without the help of the Elixirs, therefore they deferve a place amongt the Elixirs; of the fourth, that is to fay; of the vertue or rather the vice of making Amber, I fiall handle it coldly: 1 have referyed the explanation of this Enigmar till the laft place, wherefore it is faid, that the Elixir is perfected in the Decimal number,

## CHAP. VI.

## The fifth Table, of making of Pearls.

THis Table of making Pearls, confifterh of there parts, that is to fay,

> Lac Virginio. Hyimachlinin Acid Diffolved Pearls,
> Quick-filver, And
> The White Elixir.

Take Lac Virginis, or Acctum Acerrimums, fo much as you think fufficient for diffolving the Pearls, as in double proportion to the Pearls; as if there be three ounces of the Pearls, let there be fix ounces of Lac Virginis, wherein diffolve the Pearls, and lef the Glats in Balneo to diifgeft the fpace of a day, then pour out the folution, and diltill ir in Balneo, and in che bortom of the Glais you fhall find the thick Oyl of the Pearls, whereunto add fo much of your white corporeal Elixir as fufficieth to make the matter like paite, and put thereto equal weight of the Pearls of Quick-filver ; if the matter be too thin, put more powder of the Elixir, if it be too thick, add more Lac Virginis or Cuick-filver, till it be like Liver; grind this mafs upon a fone till it be brought to a fit thicknefs.

Then make it up in what form you pleate, therefore ic is neceffary that you have a pair of Brafs or Iron Moulds in readinefs (but it would be berter they were of Silver ) of what form you will, and fill them with this matcer while it is foft; then peirce them through with a needle, or fuch like thing, and pur as many of chere in a Glafs as you will (but fift hang them upon a thred) and clofe well the Glafs, and bury it with the Pearls therein two foor under the earth, and let it fand there the fpace of fix months till they be congealed with the cold into a fhining and clear fubftance like natural Mârogrites. Thefe Pearls made and compounded in this manner, are no lefs then. natural ones, but much greater and more excellent by reafon of the white Elixir.

## C H A P. VII.

The fixth Table of the Magifery of Car-s brinckles.
$W^{\text {Enow come to fpeak of Carbunckles, whick }}$ have their birth or original in the pits, and Golden Mines of the earth, of the fpiric of Gold and Mineral Salt indurated and corporeal, being decocted and difgefted into the hardnefs of fone by the Archeus of Nature, as well by the heat of the Climate, as by the great heat of ihe Snn ; for they arife from the firit of the Minere of Sol
or Gold under the earth, by whole influence they thine, as allo from the hard Mineral Salt, by the mixture of which they are hardned into the nature of ftone; whence the Philoropher intendeth and endeavoureth as near as he can to imitate. nature by Art, and to make and compound artificial Carbunckles above the earth, with the fame materials which Nature formerh them of under the earth; therefore he ufeth the fame principles, operating with the fpiric and foul of Sol undivided, and the molt hard Salt of the earth, whereof Venice Glafs is made, which two are the material Organs for Manuals : three things are required, that is to fay, a Glafs-maker, Furnace, a flaming fire, and a Crucible.

- We now come to the materials, which are cwo, and are to be joyned together ; the firt giveth the form, the other receiveth it: that which giveth the form is the fpirit and foul of Sol or Gold joyned rogether in the red Elixir, and is the agent, as it were the man ; that which receiveth the form, is the hardeft Salt of the earch contained in Glafs, and is the patient; as it were the wonan; the agent is the power of heaven impregnating the earth, the patient is the power of the earth, retaining the impreffion of the heaven:

Having thus demonltated the Theory, we now, lay the foundation of the practice, which are ewo, whereof the firlt is che preparation of the Elixir, the orter of the Glass.

Therefore your red corporeal Elixir is to be diffolved with the oyl or cincture of Mars or Iron, becaule it hath the greatelt vercue above
all other bodies, by whole Coleltial power the Earth, that is to fay the glaffe, is brought to the hardneffe of Atone, and converted into a tone : And fo the Elixir is prepared for projection upon glafe; but for the preparation of glafle there is no more required but that it be made of the fame matter that Verice-glaffe is made of ; the compofition of which if you know not, Take as much Venice-glaffe as you pleafe, and weigh it exactly; upon which project your Elixir: when you have fo done, put your glaffe in the Crucible to melt; and when it is well molten, then take your Corporeal red Elixir diffolved as before (or if you will, undiffolved) as much as fufficeth to tinge the molten glaffes and put it tied up in a paper into the Crucible upon the molten gaffe, tiring it a little with a rod; and there let it land the face of one hour : then take our the Crucible; and pour the matter into an ingot, and it wilt be malleable, but as hard as olaffe, and fonelike to the fight : and you may either cut it like a fine; or work it with a hammer. This Car-bunckle-fone or metal hath the property of a Carbunckle in fining and glittring above all narural Carbuncles; and if it couch a Toad or Sppder, they presently die, because it taketh virtue from the Elixir against all poyfon: And if the fuck carrie this Carbunckle about him, fo that it doth touch the region of his heart, it takes away the Cardiack paffions, and diminifheth the Atrength of the difeafe

## CHAP. VIII.

The Serienth Table denoting the compojution of Minerall Electrum or Aimber, as well naturall as Artificiall; and alfo Speaketh of a Bell made of Amber used by Trisemius.

HAving finifhed thefe two Secrets, we now cone to the Electrum: but whether it is to be reckoned amongit fones, or amongft bodies, it may be doubred; becaufe in the Weft-Isdies it is found writ in the Spanifh Decads of the vertue thereof; it is effirmed to be the greateft Antidote againft all poyfon, and far more noble then Gold : but if it be a metal, it mult neceffarily be the chief and fupreme of all metals; for other metals have their original from Sulphure and Mercury, but this metal confifleth of feven merals, and is che belt of ath thore which grow in the Archeas of the Earch. For where Gold is taken for the molt noble of all metals by reason of its perfect digeftion and colour, this hath a greater degree of digettion and colour, having a higher colour, that is to fay, clear red, approaching neerer to the true colour of the Sun. For as Gold is the Sun of other metals, fo this Eleitrum is to Gold as the Heaven to the Sun, wherein Natare as it were in Heaven hath created certain fars fhining with clear beams of a Silverifh colour, fhewing plain to the eye that it confifteth of red and white metals mixt in the highelt degree of digeftion.

## On the Contrary it may be objected,

Ob. I. That there are onely fix metallick boo dies, amonglt which this is found to be notie ; therefore it is rather a Spirit theri a body.

## Alfo thus.

Ob. 2. The minere of every body or metal is converted into metal by fufion, but the minere of Electrum in melting always remaineth; therefore it is no metal.

Otherwife thus :
Ob. 3. There is nothing generated in the earth but fones; fpirits, mecals, or mean minecals: but Electrum is none of thefe; therefore it leems to be no mineral.

1. To the firf objection it is thus anfwered: We fay, that it is not apparent out of the books of any of the antient Philofophers; that they ed ver dreamed of this natural and mineral Electramo. But more to the purpofe: thofe are called Spiits, which flie from the fire; but the electrum fieth not from the tire : therefore it is no Spirit, is Quickfilver and the reft, and alfo mean mineals.
2. We now come to the next. We grant hat the minere of every metal is converted ino metal by the fire, which confifts of Mercury and Sulphure. This Axiome is eviderit in thofe netals which are imperfect, and flie from the fire sither in their minere or in themielves, after they re reduced into metall; and allo the Gold mitere, although before melting it flie from the ire, before the Gold be molten and coriverted
into metal ; yet becaufe Gold never flieth after it be molten, but is found fixed in all probation, therefore it is accounted the worthieft of all metals which confift of Sulphur and Mercury.
3. Now to the third, I fay, that I think it rao ther is of a fony and metallick nature joyned together ; by which mixture it differs from a fone, and alfo from metal: but becauife it confiftech of Mercury, Earthly Salt and Sulphur mixed, therefore it gers unto it a mixt nature of chem ; fo that it is half fone, half metal.

Wherefore it is to be judged that it confifteth of three natures mixed together ; that is to fay, mineral, mecallick, and fonty ; and is the beft of all thofe which grow in the Archeas of the Earth: for it exceeds mean minerals in fixation and confancy, becaufe they paffe away in fume by long. melting, and vanifh to nothing ; or elfe they melt cafily in moyfture as falts, $\sigma_{c} c$. But this EleCtrums or Amber remaineth fixed and conftant as well in the fire as water.

It exceeds metals in digeftion, colour and dignity. In digeflion, becaufe it is en ewved with the figne of greater and more perfect digeftion : for as Gold is more yellow by reafon of his greater heat and more perfect digeftion; So this $\mathcal{E}$ lectrum, becaure it hath a higher colour chen Gold hath, therefore it is more digefted in colour : for as Gold exceeds ocher metals in colour, To Elea Itrum exceeds Gold ; for Gold is yellow, but Electrum red, which is a higher colour then yellow. And as Silver is the, $L_{\text {una }}$ of white metals, fo Gold is the Sol of red metals: So Electrum is to Golda as the heaven is to Sol in dignity or value :

Book 3. The Rofie Crucian Cramon. 33
for by how much Gold is more noble then Silver, fo much this Electrum is more noble then Gold.

Laftly, it excels ftones in fining, and vertue. In fhinng, becaufe they Thine by reafon of their hardneffe; fo this Electrum Cheweth many fparkes, not by reafon of its hardneifs, but by reafon of his compleatneffe. And as the heaven is adorned with Stars, fo this Eledrum with (parkling,becaufe it hath the clearnefs and brightneffe of all metals. And as the Heaver containeth all the Stars and Planets, Po this Eleetram, which is the Heaveriof potals, containerh the Sun and Moon, and the reft of the Planers in it felf; Gold andSilver as it were the greater Luminaries, the otherbodies or metalsas the ret of the Planers, mean minerals as Stars in vertue. For although many fones have fingular properties and vertues; fo that fome help the fight, others the Spleen, fome the Heatr; fome top blood, fome hindet abortivenefle, fome haften childbirth, fome tefif poyfon: yet there is no one found which takes away all infirmities, as Elettrum doch, mofe then all mean minerals, met als or fones, according to his threefold conjurnction, that is to fay, Mineral, Mecallick, and Lapidifick.

Therefore whitioever others pleare to think of this Natural Eleetrumsthis feemeth moft probable to me, that it is not fimply a metal; but of a hab rure exceeding metal:- for whereas fones, mean minerals and metals are generated of Salc, Sulphur and Mercury, this Electrum takes his original from Stones's ; Minerals and Metals: from Stones ix "takes iSalt, from Minerals Mercury, from Metals Snlphur. Thefe three being brought
inco one by che Archeas of nature, are its Elements, from a greater vertue and power of nature; which Elements have formed a higher degree of perfection then in any other fone, mineral or metal, as it were by the Commandment of God Nature mould afcribe a Crown of vertue and dignity above all minerals.

But bowever it be, it is taken two manner of ways amonglt che later Magitians and Alchymilts, shar is to fay, that which is made naturally, and artificially ; naturally is that which groweth in the naturfal Archeas of the Earth'; che Artificial is chat which is made by Art above the Earch in imitation of Nature.

Whence Paracels a worthy Mafter in Magick feeing fully the nature of ic, and the utility of Alchymy, commanding to make the Elixir thereof when as irs natural body cannot be had, in his, booke of the Vexations of Pbilo opheris, and the fixth of his Magical Archidoxes, teacheth to compound an Artificial Electrum, that the Elix ir mult be made thereof, as appeárs more at large in the faid Bookes; which I like not at all. He teacheth how to make the Elixir out of Electrum; I contrarily, the Electrum out of the Elixir: he would make the Elixir of the vertue of the Electrwm; and I the Electrum of the vertue of the Elixir. I leave his way to his own folSowers, but I defire mine not co weary and vex themfelves in fuch a weak, but a more ftrong principle.

I make two kindes of Electrum one way; the fiff whereof is Spiricual, the orher Corporeal. Firt of the former: after you have made your red

## Book 3. The Rofie Crucian Crown. 35

Corporeal Elixir by projection, in the fame Crucible melt one ounce of Lead, and likewife another of Tin; and when they are hot, take the Crucible from the fire, and pour therein one ounce of Silver melted in another Crucible; and when the er three white metals begin to be cold, take two ounces of Mercury well purged, and put thole two ounces of Quickfilver upon the molten metall by drops : then increase the fire gently, that too much of the Mercury do not fume away: For then in three other feveral Crucibles melt Iron, Cup ait you mut have in readiness molten. And frt, $\operatorname{aum} 3$; put your molten Gold into the Crucible, where your four white metals ftand molten, and pour it upon them; then your Copper, and lat of all your Iron, firing the whole male with a flick, that it may mix together; and let it Candia a melting hear the pace of an tour : then rake all our that is melted in the Crucible, and confider well the weight of it ; and according to the goodneffe of your Elixir, make projection for medcine. And thus you have created and compounTed fipitual Electrum of the weight of fever ounces, confiding of Seven metals; which metales to converted into medicine, will be the Elixix of Electrum, and an Universal medicine, for you need not "after regard upon what body (or metall ) you project it. It is also the chiefelt medicine for mans body: for although three or four of all the Difeafes of the Microcoim were united together, yet they may be cured with this one medicine. If you diffolve past of this in Ppirit of V Vine, and difill away the fame Spirit in
$3^{\circ}$ The Rofie Crucian Crown. Buok 3.
Balneo, and the Oyl of the medicine or Elixir remain in the bortome, as is taught in the fecond book, you fhall have the chiefeft medicine of life, and moft Noble Aur um potabile.:
Note that if your Iron mele not well, then diffolve your Electrum in the Oyl or Tinoture of Mars, diffolving and congeling until it have imbibed a fufficient quanticy.

But if you defire to make corporeal Electrums, When your medicine beginneth to fail to convert matals any more into medicine, then in like mariner project your medicine upon your melced metals or bodies, and they will be converted into corporeal Eleftrum metallick and malleable; of the vertue of which as I do endeavour to write sothing ; fo alfo of its vice, or rather of the vicioufneffe of thofe that abure it, I will touch a litcle fparingly.

Paracelf ws writeth, that Virgill Hifpanes and Trithemius made a Diabolical Bell of this Arsificiall Electrum, upon which when they would invocate Spirits (which they called by a more decent name of Intelligences )they writ the Character of what Spirit they deffred; and at the third ring of the bell the Spirits obeyed their defires fo. long as they defired to talk withthem; and when shey would talk no more, they hid the Character, and by the reverfe ringing of the bell the Spirits departed. He that will forfake God, and require knowledge, aid and affiftance from the Devil, lec him fhare with Arbucell, and with him defcend to the Infernal Lake. But we that are true Magicians, or rather Philofophers, confiding in God the Father, and the holy Trinity, approving
of Natural and lawful Magick or true Philofophy, but accounting the fupernatural altogether infamous and unlawful. And we require the dotrine and wifdome of divine goodneffe, and the holy Spirit, to whom be honour and glory for evermore. Amen.

## C. HAP. IX.

The eigbth Table, mhich explaineth the meaning of the Philofophers when they Speak of the tenth Number wherein the Elixir is finifb20 edt: And alfo Jberseth the wonderfull fecret -n of the Animal fone., out of George Riply, prith two other of bis workes.

WE now come to the Laft Chapter of this Book, wherein is declared what the Philog fophers mean when they bid us finifh the worke in the renth number : it is to be underfood that as out of the Hyle or Chaos four are divided; fo out of the Hyle or Chaos of merals, Becaufe metals or bodies when they are diffolved into li. quor, then they arecontained in the firft or one namber, which is the folution of the body, of which by diftillation is made two, (That is to fay? Heaven and Earth, the Menffruum and Salt) that which remaineth in the bottome is the Earth or Salf, that which is diftilled over is the Menfrusmand Heaven. And fo you have Ore, two. When the Menfruum is feparated, it is divided into Three, that is to fay, into Water, Air, and

Fire : Yet it is to be noted, that the Air, which is the firlt part of the water containing an aery diipofition, although it be in the form of water, yee it is reputed aer, by reafon of the confimilitude of the quality; and after its perfect rétification, it is a tinging CMercary, and the white Spirit of metals. In like manner is to be confidered of the Oyl, which although it is not in the form of fire, but a liquor; yet by reason of its Ardent heat, it is called fire, and the Soul or red tinging Mercury. And fo there is One, Two, Threc.

When there is a Conjunction of there three, that is to fay, the air and water with its Sale or Earth, in purrefaction, thefe three are united into one quinteffence, and are made a new body; in which three are unired in one Sulphur, which Sulphur is the rrue Philofophers Mercury: and in making this whire Sulphur, you have once turned the Philofophers wheel.

- But that the work may be perfeced in the tench Number, if you adde the fire which is the fourth Element, to thefe three concluded in the forefaid unity, and rubified; then if thefe four in a new Conjunction be purrified in a lent fire of aftes, then it is the fone: for in this work it changeth colours again, and is converted into a red fone : and by this means you have joyned fout into one, that is to fay, 1. 2.3.4. make ten: And fo the fone is finifhed in the tenth number, becaure you have tarned the Philofo. phers wheel wice, as Ripley witneffech thus.

But yet ag ain two times turn abour the wheel.

The fone is to be diffolved again with the fires. or Soul, ar Tincture, and dried again until it pierce and flow ; then it is to be fermented into Elixir with the Oyl of the Luminary; and fo you haye turned the Philofophers wheel again, which is shen called the medicine of the third order. Of the folution of chis, Ripley hath writ there verfes, teaching the refolution of the white and red ftone before it be tranfmuting Elixir, calling them his Bafes, faying,

> Do as I bid thee, then diflolve thefe forefaid Bafes witty,
> And turn themsinto perfect Oyls with our trye zoater Ardent:
> By Circulation that muft be done, according to our Intent.
> Thefe Oyls will fix crude Mercury, and convers
bodies all
> Into perfect Sol and Luna when thos Shalt make projection:
> That Oylie Subftance pure and fixt Raymond Lully did call
> His Bafilisk, of which he never made so plain desection.

By which veries it plainly appeareth, his Bares were onely two Sulphurs, or two ftones, which in another place he called his Mineres : and thele mineres ought to be diffolved by his Ardent warer, by circulation of the Oyl or foul upon the Sulphur, until it become a fone : for in this place he takes both the firit and the foul for the Ardent water, willing that the fpirit and foul be
adminitred according to their tinging natures, for the refolution of the proper Batis. And thus have you the words of this 压higma explained of the tentil number; which feeing it is the end of the Art, I have referved it cill the end:

It, now remaineth that we reveal one fecret of Ripley, which was pever fpoken of by any Phis lofophers shat is tolay, the manrier of making the Sulphar of Nature out of the Minere of the Microcofm, which is mans blood, of which he writ the whole practice in his book of the twelve Eiares, but molisecriefy in his Midisllas where he reacheth its preparation and workmore plainly. And becaufer faveppoved itto be tuestherefore I teil it more canfidently, becaule I defire to Wrise nothing of my own fancy, buc thas which I have firft proved. Hearken almoft che lait verfes which he writin his Tmelvegates;
-I I* Inever fow true work truly but ones 0 mi Of which in this Treatife the truth I bave told: Stwdy onely therefore bow to màke our fowsonn ins For thereby mayft thou win both Sitwer and Gold. Opon iny writing therefore to ground thee be bold. So Shalt thon loofe nought, if God be thy guide: Iruft to my dostrine, and thereby abide.
nis. Remember that mas is moft noble Creatsre: Of Earthly compofition that ever God wrought? In whom is the four elements proportioned by natures A natural Mercurializy which cofteth right nougbt, Our of bis minere: by Art it is brought:
For our metalls be nought elfe but our mineres two, Of Sun ard Moons wif ely Raymund faid fo:

Book 3. The Rofie Crucian Crown.
The clearmess of the Moon and of the Sun fobright, In thefe two mineres de ceendeth fecretly;
Howbeit the clearkeffe is hid from thy fight, By craft thon Jhalt make it appear opesily.
This hid fone, this one thing therefore putrifie, Wafh him in his own broth till white he becomes Then ferment himmittily., Lo bere is all and sum.

Out of thefe onely words there are twa points oblerved, whereunco che Authorfteereth: The firl is, chat mans blood be putco putrefaction, that Sulphar may be made thereof. The fecond is, that it be fermented wittily; As if he fhould fay, the Artilt Thould prepare it, that it may be fit for fermearation. Thus far of the Theory; Now we come to declare the practice out of $R i$ piey's medulla.

Take Mansblood drawn out of the Veine in March, and of a Martial man the Author meaneth (as I think) of a Cholerick complexion; and when the blood is drawn out of the vein, let it cools that the Green water may be drawn fromit, which is faltifh: for as long as that faltifh water remaineth with the blood, it will nor ler it putrifie, becaufe the water preferveth the blood from: putrifaction while it is in a mans body.

When it is thus prepared, put it in an Eggeolaffe well cloled, and fer it in Balneo to putrine, forty days or eife it will be black; and fo go on till it be white. When you have your white Sulphar, divide it into two parts, and keep one for the white Aone, and rubifie the other for the red work. And fo you have two mineres, of which it is.faid,
'For our wetals be nought elfe but our mineres two Of Sun and CMoon, mifely Raymond faid fo.

And fo to the end of the verfes, as before. Yet here it is to be underfood, that the Philofophers Sulphur is not mineral or metallick Sulphur, from which metalls grow under the Earth: but it is a purified Sulphar drawn out of metalls made by Art above the Earth: out of which and the Mercury of the body the ftone arifeth. For believe me, I had never writ any thing of this Art, except I had feen the Sulphur of the Microcofm; and the perfect folution of otber bodies and Sulphurs.

Now have you prepared your Sulpbur out of the minere of the M crocorm : If yoube a Philofopher, proceed to che end, and conclude your work in the tenth number: If not, you are not born to our Philofophy; therefore give the Sulphur Mercury, that the work may be compleat.

I believe there lieth not any Secret in the Chymicall Art, which thou halt not cruly declared and playnly taught. But to the end that there things which we have fpoken may be more furely, committed to memory, we will repear the general procels of the parts as it is defcribed in the beginning of this third book. And becaufe there is not one, but diverfe handling of the bodies, therefore the Table is divided into three parts; the middle whereof difcribeth the procels of imperfect bodies to the fone ; the other two teach the preparation of perfect metals for fermentation of the itone of imperfect bodies.

## Book 3.- The Rofie Cruciaris Crown. 43

The manner of preparing imperfeet bodics.

CAlcination of the body. Solution of the body into Hyle. Separation by Dillillation.
Conjunction of the reparated.
Putrefaction of the conjoyned.
Sulphar by putrefaction to the Stone.
Fermentation of the Stone to the Elixir. Augmentacion of the Elixir. Projection of the Elixir:

Some make twelve parts, as Ripley and others, who call them twelve gates: but becaufe three other degrees are contained in thefe, it would be ridiculous to repear them : and becaufe the way of toch ferments, whecher white or red, is the fame.

> The Table of Eormentatiox.

CAlcination.
Solution.
Purrefaction.
Sulphur.
Solution of the Sulphur.
Red ferment. Aurum Potabile.
Quinteffence, Elixir vite.
Solikewife it is faid of Silver when it is prepared.

> White Ferment. Argentum Potabile. Quinteffence. White Elixir of Life.

Now the Radiant Sun of the Philofophers arifech, which will drive away the dark Chimera's, and difperfe the black clouds. Here the Enigma's are opened, chiflles and thorns areaut up and barned. Now Reader mayeft thow fafely walke in the Philofophers gardens, and gather molt wholeforne fruit. Here grow moft fragrant rofes both white and red. Here grow Viries bearing full grapes, of which is made the wholerome Nectar. Hère are found trees of health and wealth, Trees of the Sun and of che Moon. Here fpring two cool fountaines of Sciences and Knowledge niding arrificially through the garden upon the molt pretious gems, and Silver and Golden Sands. Thou haft one field of Paradice given thee from God; that during the Life of his eleet they may be kept in healthifree ftom all ficknefs. Here the corrupt Nature puts on an incorrupe Na ature. Here impure things are turned inco pure things. Hére are all difeafes loit, and healch encreaferh. Here the perfect unity' and harmony of bodydwell, and here is alfo all the miof excellent treafures. Therefore det us alwhys praife God for his gifts: let us worfhip him, obey him, love him, and befeech him to eftablifh bis grace upon us; and conduet us to eternity through all his ways of goodieffe, knowledge and faith, to Life eternal. Amen'.
