Divers Learned Men
C O N C E R N I N G
Fryer B A C O N.

C. Selden *de Diis Syris*
Sintag. I. 1.2.---7.25.
That singular Mathematician, learned beyond what the Age he liv'd in did ordinarily bring forth, Roger Bacon an Oxford man, and a Fryer minorite.

The Testimony of Gabriel Powel in his Book of *Antichrist* in Preface, p. 14.

A 4 Roger

Roger Bacon an Englishman, a founded Scholar of Merton-Colledg in Oxford, a very quick Philosopher, and withall a very famous Divine, he had an incredible knowledge in the Mathematicks, but without Necromancy (as John Balleus doth report), although he be defam'd for it by many: Now this man after he had sharply reprov'd the times wherein he liv'd; these Errours, saith he, speak Antichrist present. Nicholas the Fourth Pope of Rome did condemn his Doctrine in many things, and he was by him kept in prison for many years together; as Antonine hath it in his Chronicle. He flourished in the year of our Lord, 1270.

John Gerhard Voffius in his Book of the four Popular Arts, printed at Amsterdam, 1650. is every where full of the praises of Bacon, as in the year 1252. About these mens time Roger Bacon also flourished, an Englishman, and a Monk of the Order of St. Francis; who as he had divid'd into all Arts and
Scien-

Sciences: so also he writ many things of them, he was a man both learned and subtil unto a Miracle, and did such wonderful things by the help of Mathematicks, that by such as were envious and ignorant, he was accused of Diabolical Magick, before Pope Clement the 4th, and for that cause was detain'd in prison by him for some time. J. Pecus Earl of Mirandula, the Phoenix of all the wits of his Age, calls him likewise, very ingenious. Moranicus also commends highly his Opticks. He was buried at Oxford in the Monastery of the Monks of his own Order, anno 1284. So Chap. 35. §. 32. anno 1255. So Chap. 60. §. 13. Of Musick, anno 1270. So Chap. 70. §. 7. 1270. Roger Bacon flourisht in England, a man wonderfully learned. And Chap. 71. §. 8. anno 1270. Roger Bacon a Franciscan Monk, and a Divine of Oxford, was famous amongst the English in all sort of Sciences; a man of so vast learning, that neither Eng^d land,

land, no nor the world beside, had almost any thing like or equal to him. And either by envy or ignorance of the Age, wherein he lived, was accused of Magick. He in the mean time did write and recommend to the Memory of Posterity, a Book of Weights, of the Centers of heavy things, of the Practicks of Natural Magick, &c. For he was a man well vers'd in all sorts of study, very learned in the Latine, Greek and Hebrew Tongues, a Mathematician every way accomplisht, and very skilfull both in Philosophy, Physick, Law and Divinity.

THE

THE
CONTENTS
Of the
Several Chapters.

- Chap. 1. Of and against fictitious Appearances and Invocation of Spirits. 1.
Chap. 2. Of Charms, Figures, and their Use. 4.
Chap. 3. Of the force of Speech, and a Check to Magick. 16.
Chap. 4. Of admirable Artificial Instruments. 17.
Chap. 5. Of Perspective Artificial Experience. 19.
Chap. 6. Concerning strange Experiments. 23.
Chap. 7. Of Retarding the Accidents of Old Age, and Prolongation of Life. 28.
Chap. 8. Of obscuring the Mysteries of Art and Nature. 35.
Chap. 9. Of the manner to make the Philosophers Egge. 41.
Chap. 10. Of the same Subject another way. 46.
Chap. 11. Of the same Subject another way. 49.

BE pleased to take notice, that there is now in the Press 18 Books of the *Secrets* of Art & Nature, Collected out of the choicest Authors, both Antient and Modern; first designed by *John Vecker* D^r of Physick, and now much enlarged by D^r *R. Read*. The like never before in the *English* Tongue. To be sold at the Starre in S^t Pauls Church-yard.

A
LETTER
SENT BY
Frier ROGER BACON
TO
William of Paris,
Concerning both
The Secret Operation
OF
NATURE & ART,
As also
The Nullity of Magick.

CHAP. I.

Of and against fictitious Apparances and Invocation of Spirits.

That I may carefully render you an answer to your desire, understand, *Nature* is potent and admirable in her working, yet Art using the advantage of
B nature

2 *Of the Invocation of Spirits.*

nature as an instrument (experience tels us) is of greater efficacy than any natural activity.

Whatsoever Acts otherwise than by natural or artificial means, is not humane but meerly fictitious and deceitfull.

We have many men that by the nimbleness and activity of body, diversification of sounds, exactness of instruments, darkness, or consent, make things seem to be present, which never were really existent in the course of Nature. The world, as any judicious eye may see, groans under such bastard burdens. Jugler by an handsome sleight of hand, will put a compleat lie upon the very sight. The *Pythonisse* sometimes speaking from their bellies, otherwhile from the throat, than by the mouth, do create what voices they please, either speaking at hand, or farre off, in such a manner, as if a Spirit discoursed wjth a man, and sometimes as though Beasts bellowed, which is all easily discovered by private laying hollow Canes in the grasse, or secret places, for so the voices of men will be known from other creatures.

When inanimate things are violently moved, either in the Morning or Evening

Of the Invocation of Spirits. 3.

ning twilight, expect no truth therein, but down-right cheating and consen- age.

As for consent, men by it may undertake any thing they please, if so be they have a mutual disposition.

These I mention, as practices wherein neither philosophical Reasons, Art, or power of Nature is prevalent. Beyond these there is a more damnable practice, when men despising the Rules of Philosophy, irrationally call up wicked Spirits, supposing them of Energy to satisfy their desires. In which there is a very vast error, because such persons imagine they have some authority over Spirits, and that Spirits may be compelled by humane authority, which is altogether impossible, since humane Energy or Authority is inferior by much to that of Spirits. Besides, they admit a more vast mistake, supposing such natural instruments, as they use, to be able either to call up, or drive away any wicked Spirit. And they continue their mistake in endeavouring by Invocations, Deprecations or Sacrifices to please Spirits, making them propitious to their design. Without all question, the way is incomparably more easie

to obtain any thing, that is truly good for men, of God, or good Angels, then of wicked Spirits. As for things which are incommodious for men, wicked Spirits can no further yeeld assistance, then they have permission, for the sins of the sonnes of men, from that God, who governs and directs all humane affairs. Hence therefore I shall conclude (these things being beyond, or rather against the Rules of Wisdome) No true Philosopher did ever regard to work by any of these six wayes.

CHAP. II.

Of Charms, Figures, and their Use.

WHat men ought to believe touching Figures, Charms, and such stuff, I shall deliver my opinion. Without doubt there is nothing in these dayes of this kind, but what is either deceitfull, dubious, or irrational, which Philosophers formerly invented to hide their secret operations of Nature and Art from the eyes of an unworthy generation. For instance, if the virtue of the Load-stone, whereby

whereby it draws iron to it were not discovered, some one or other who hath a mind hereby to cosen the people, so goes about his businesse, as leat any by-stander should discover the work of attraction to be natural, he casts Figures, and mutters forth some Charmes. Thus many things lie dark in Philosophical writings; in which the wiser sort of Readers will expresse so much dilcretion, as reject the Figures and Charmes, eying the works of Nature and Art, that so they may see the mutual concurrence of animate and inanimate creatures, occasioned by Natures conformity, not any efficacy of Figures or Charmes. This is the cause why the unlearned crew have judged such natural or artificial operations to be meerly Magical. And some fond Magicians beleeve, That their casting of Figures and Charmes was the sole cause of such operations; hereupon leaving their natural and artificial operations have stuck close to their erroneous casting of Figures and Charmes. And thus they both have by their own folly deprived themselves of the benefit of the others wisdome. In times past, godly and religious men, or rather God himself, or his Numb. 6. 27.

6 *Of Charms, Figures,*

good Angels composed several Prayers, which yet may retain their primitive virtue. As to this day, in several Countreys, certain prayers are made over hot irons, and water in the River, &c. By which the innocent are cleared, and guilty condemned; yet all this is done by the Authority of the Church, and her Prelates. Our Priests exercise their holy

water, as formerly the
Numb. 5. *Jews* did in the Old Testament, in making the water of Tryal, whereby the wife was tryed, whether she were an adulteresse, or honest. Not to instance in others of the like nature. Concerning those Secrets, which are revealed in Magicians writings, although they may contain some truth, yet in regard those very truths are enveloped with such a number of deceits, as it's not very easie to judge betwixt the truth and falshood, they ought all worthily to be rejected. Neither must men be believed, who would assure us, That *Solomon*, or some other of our sage Progenitors were Authors of such Books, because those Books are not received either by the Churches Authority, or by any prudent men, but only by a few cheating Compa-
nions

and their Use.

7

nions to be the works of such men. Mine own experience assures me they compose and set forth new works and inventions of their own, in lofty high flown expressions, the more colourably to make their lies passe under the shelter of the Text; prefixing some specious titles, the better to set them off, impudently ascribe such bastard births to famous Authors.

Figures are either composed of words involved in the formes of letters, invented to contain the sense of some * speech or prayer; or * *Oraionis*. they are made according to the face of the Heavens in proper and select seasons. The Figures of the former sort must have the same sentence that I gave of prayers formerly; as for Figures and * *Impressi*. * *Sigilla*. ons of the other kind, unlesse they be made in their peculiar seasons, they are not of any efficacy. And hence it is that all wise men think they effect nothing, who only go according to their prescribed Characters, not at all regarding more than the bare external forme. The more knowing sonnes of Art, dispose all their works of Nature and Art accord-
B. 4. ing

ing to the power of the Heavens, casting their work under a right Constellation, no lesse than the casting it in a right Figure. Now in regard there is much difficulty to discern the motion of Celestial Bodies, many are confesed, and very few know, how to begin their work either profitably or truly. Hence it comes to passe, that the croud of judicious Mathematicians and Starre-gazers effect little, and that unprofitable, while the more expert Professours, who sufficiently understand their own Art, attain many conveniences both by their Operations and Judgements in select and proper opportunities: And yet let us take notice, how the Physician, or he that would re-erect a drooping soul, effects his designe by the use of Figures or Charmes, which in themselves are meerly fictitious (as *Constantine* the Physician is of opinion.) Physicians use Figures or

This some think the Kings evil is cured, by creating a belief the touch of the King can cure.

Charmes, not for any prevalency in them, but that the raising of the soul is of great efficacy in the curing of the body, and raising it from infirmity to health, by
oy and confidence is done by Charmes.

for

for they make the Patient receive the Medicine with greater confidence and desire, exciting courage, more liberal belief, hope and pleasure: The Physician then who would magnifie his cure, may work some way of exciting hope and confidence in his Patient; not that hereby he should cheat, but stirre up the sick to believe he shall recover, which if we pin our faith on *Constantines* sleeve, is very tolerable. Upon this account he defends the hanging Charmes or Figures about the Neck. The soul no question is of much prevalency by reason of its strong affections over its proper body, as *Avicen* saith in *lib. de anima, & 8. & animal.* to which all wise men accord. Hereupon it was, that they concluded sick persons should be delighted by the company of children to play before them, and other pleasing objects. Yea they frequently consent to such things as please the appetite, though they be obnoxious to their disease; because affection, desire and hope of the soul conquers many diseases.

This may be done lawfully, if the party that is the principal agent doth nothing by way of compact with any Spirit, or faintly.

CHAP. III.

SERMONS.

Of the force of Speech, and a Check to
Magick.

IN regard truth must not receive the least injury, we should take more exact notice how every agent communicateth the Virtue and Species which is in it to other extrinsecal objects; I mean not only the substantial Virtue, but even Accidents and Accidents, such as are in *tertia specie Qualitatis*.

As for the Virtues which flows from the Creature, some of them are sensible, some insensible. Man which is both the most noble corporeity, and dignified rational soul, hath no lesse than other things heat and spirits exhaling from him; and so may no lesse than other things emit and dispose of his Virtues and Species to external Objects.

Some creatures we know have power to metamorphose and alter their objects. *Plin. Nat. Hist.* As the Basilisk, who kills by sight alone. The Wolf,

if the first see a man before the man see him, makes the man hoarse. The Hyana suffers not the dog which comes within his shadow to bark (as *Solinus de mirabilibus mundi*, and others)

And *Aristotle lib. 2. de Vegetab.* saith, That Female Palma-trees bring forth fruit to maturity by the smell of their Males. And Mares in some Kingdoms impregnate by the smell of Horses (as *Solinus* affirms.) *Aristotle* in his

Secrets assures us of several other contingencies which issue from the Species and Virtues of Plants and Animals. Hence I argue, If Plants and Animals, which are inferiour in dignity to our humane Nature, can emit, then surely may man more abundantly emit Species, Virtues and Colours to the alteration of external Bodies. To this purpose is that, which *Aristotle* tells us (*Lib. de somno & Vigilia*) a menstruous woman looking in a glasse, doth infect it with spots, like clouds of blood. *Solinus* further writes, That in *Seythia* there are women which have two

1 lin. lib. 8. cap. 22.

sights

lights in one eye. (Hence *Ovid*, *Nocet pupilla duplex*.) and that these women by their glances kill men. And

In the Northern Country some are said to have an evil eye, and to do harm by their looks, yea though they do it not voluntarily.

we our selves know, That men of an evil complexion, full of contagious infirmities, as Leprosie, the Falling-sickness, spotted Fever, bleer-eyed, or the like, infects those men in their company: While on the other side, men of a sound

and wholesome complexion, especially young men, do by their very presence exulterate and comfort others; which no

He holds fight by emission.

question, as *Galen* in his *Techné*, proceeds from their pure spirits wholesome and delightful vapours, their sweet natural colour, and from such *Species* and Virtues as they emit.

The soul sinful or not, works morally, not physically to the hurt of others, but the man who hath a body may do

That man whose soul is defiled with many hainous sins, his Body infirme, his Complexion evil, and hath a vehement fancy and desire to hurt his neighbour, may bring more inconveniencies,

Remani g. medicante co. p. re.

then.

then another man. The Reason may be, the Nature of Complexion and infirmity yeelds obedience to the thoughts of the Heart, and is more augmented by the intervention of our desires. Hence it is that a leproous person, who is solicitous, desirous and fancying to infect some one or other in the room, may more easily and forcibly effect it, than he which hath no such intention, fancy or desire. For (as *Avicenn* observes in the fore-cited place) the nature of the body is obedient to the thoughts, and more intent fancies of the soul. And (as *Avicenn* in the 3^d *Metaph.* affirms) the thought is the first mover, after that the desire is made conformable to the thought, then after that the natural virtue, which is in the members, obeys the desire and thought; and thus it is both in good and bad effects. Hence it is that a young man of a good Complexion, healthfull, fair, well featured Body, having his soul not debauched with sinne, but of a strong fancy and vehement desire to compass the effecting of some magnificent designe, withall adding the power of his Virtues, *Species* and natural heat; He may by the force of these

*Spirits, Vapours and in- * Al. Species

fluences

fluences work both more powerfully and vehemently, than if he should want any of these fore-going qualifications, especially strong affections and forceable imaginations. Hence I conclude, Men by the concurrence of the foresaid Causes, Words and Works being the Instruments, bring great undertakings to perfection.

As for words, they are hatched within, by the thoughts and desires of the mind, sent abroad by heat, *Vocale arteries*, and motion of the Spirits. The places of their generation are in open passages, by which there is a great efflux of such Spirits, heat, vapours, virtues, and *Species*, as are made by the soul and heart. And therefore words may so farre cause alterations by these parts or passages, as their Nature will extend. For it's evident, That breathings, yawnings, several resolutions of Spirits and heat come thorow these open passages from the heart and inward parts: Now if these words come from an infirm and evil complexionated body, they are constantly obnoxious. But if from a pure sound and wholsome constitution, they are very beneficial and comfortable. It's clear then, That the
bare

bare generation and prolation of words joynd with desire and intention are considerable in natural operations. Hereupon we do justly say, *Vex viva magnam habet virtutem*; Living words are of great Virtue. Not that they have any such Virtue of doing or undoing, as *Magicians* speak of, but only they have the Virtue of Nature, which makes me put in this Caution of being extream cautelous herein. For a man may, as many have already done, erre on both hands: Some wholly denying any operation of words: Others superfluously decline to a Magical use thereof. Our duties should be to have a care of such Books, as are fraught with Charms, Figures, Orizons, Conjurations, Sacrifices, or the like, because they are purely Magical. For instance, the Book *De Officiis Spirituum, liber de morte anime, liber de arte notariâ*, with infinite others, containing neither precepts of Nature or Art, having nothing save Magical Fopperies. Yet herewithall we must remember, there are many Books commonly reputed to be Magical, but have no other fault then discovering the dignity of wisdom. What Books are suspicious, and what not; Every discreet Readers

experience will show him. The Book which discovers natural or artificial operations imbrace; that which is void of either or leave both, as suspicious and unworthy the consideration of any wise man. 'Tis usual with *Magicians*, to treat of both unnecessary and superfluous subjects. 'Twas excellently said of *Isaac* (*in lib. de Febribus*,) *The rational soul is not impeded in its operations, unlesse by the Manicles of ignorance.* And *Aristotle* is of opinion, (*in lib. secret.*) *That a clear and strong intellect, being impregnated by the influences of divine Virtue, may attain to any thing which is necessary.* And in 3^d *Meteor*, he saith, *There is no influence or power, but from God.* In the Conclusion of his *Ethicks*, *There is no Virtue, whether Moral or Natural without divine influence.* Hence it is, that when we discourse of particular agents, we exclude not the Regiment of the universal Agent, and first Cause of all things. For every first Cause hath more influence on the Effect, than any second Cause, as he speaks in the first proposition of Causes.

CHAP. IV.

Of admirable Artificial Instruments.

THAT I may the better demonstrate the inferiority and indignity of Magieal power to that of Nature or Art, I shall a while discourse on such admirable operations of Art and Nature, as have not the least Magick in them, afterwards assign them their Causes and Frames. And first of such Engines, as are purely artificial.

It's possible to make Engines to sail withall, as that either fresh or salt water vessels may be guided by the help of one man, and made sail with a greater swiftness, than others will which are full of men to help them.

It's possible to make a Chariot move with an inestimable swiftnesse (such as the *Currus falcati* were, wherein our fore fathers of old fought,) and this motion to be without the help of any living creature.

It's possible to make Engines for flying, a man sitting in the midst whereof, by turning onely about an

18 *Of Artificial Instruments.*

an Instrument, which moves artificial Wings made to beat the Aire, much after the fashion of a Birds flight.

It's possible to invent an Engine of a little bulk, yet of great efficacy, either to the depressing or elevation of the very greatest weight, which would be of much consequence in several Accidents: For hereby a man may either ascend or descend any walls, delivering himself or comrades from prison; and this Engine is only three fingers high, and four broad.

A man may easily make an Instrument, whereby one man may in despite of all opposition, draw a thousand men to himself, or any other thing, which is tractable.

A man may make an Engine, whereby without any corporal danger, he may walk in the bottoms of the Sea, or other water. These *Alexander* (as the Heathen Astronomer assures us) used to see the secrets of the deeps.

Such Engines as these were of old, and are made even in our dayes. These all of them (excepting only that instrument of flying, which I never saw or know any, who

Artificial Experiments, &c. 19

who hath seen it, though I am exceedingly acquainted with a very prudent man, who hath invented the whole Artifice) with infinite such like inventions, Engines and devices are feasible, as making of Bridges over Rivers without pillars or supporters.

CHAP. V.

Of Perspective Artificial Experiences.

THE physical figuration of rayes are found out to be very admirable. Glasses and Perspectives may be framed, to make one thing appear many, one man an Army, the Sun and Moon to be as many as we please. As *Pliny* in the 2^d Book, Nat. Hist. chap. 30 saith, *That Nature so disposeth of vapours, as two Sunnes, and two Moons; yea sometimes three Sunnes shine together in the Air.* And by the same Reason one thing may in appearance be multiplied to an infinity, in regard that after any creature hath exceeded his own virtue (as *Aristotle* cap. *de vacuo.*) no certain bounds is to be assigned it.

This

This designe may seem advantagious to strike terrours into an Enemies Camp or Garison, there being a multiplication of appearances of Starres, or men assembled purposely to destroy them: Especially if the following designe be conjoynd to the former (*viz.*) Glasses so cast, that things at hand may appear at distance, and things at distance, as hard at hand: yea so farre may the designe be driven, as the least letters may be read, and things reckoned at an incredible distance, yea starres shine in what place you please. A way, as is verily believed, *Julius Caesar* took by great Glasses from the Coasts of *France*, to view the site and disposition of stoth the Castles and Sea-Towns in great *Britain*. By the framing of Glasses, bodies of the largest bulk, may in appearance be contracted to a minute volumne, things little in themselves show great, while others tall and lofty appear low and creeping, things creeping and low, high and mighty, things private and hidden to be clear and manifest. For as *Socrates* did discover a Dragon, whose pestiferous breathings and influences corrupted both City and Countrey thereabouts, to have
his

his residence in the Caverns of the Mountains. So may any other thing done in an Enemies Camp or Garison, be discovered. Glasses may be framed to send forth *Species*, and poisonous infectious influences, whither a man pleaseth. And this invention *Aristotle* shewed *Alexander*,! by which he erecting the poison of a Basilisk upon the Wall of a City, which held out against his Army, conveyed the very poison into the City it self. Glasses may be so framed and placed, as that any man coming into a room, shall undoubtedly imagine he sees heaps of gold, silver, precious stones, or what you please, though upon his approach to the place he shall perceive his mistake.

It's then folly to seek the effecting that by Magical Illusions, which the power of Philosophy can demonstrate.

To speak of the more sublimate powers of Figurations, leading and congregating rayes by several Fractions and reflexions to what distance we please, so as any object may prove combustible. It's evident by Perspectives,

22 *Artificial Experiments, &c.*

atives they burn backward and forward, which Authours have treated on in their Books. That which is the most strange of Figurations and Mouldings, is the description of Celestial Bodies, both according to their Longitude and Latitude, in such Corporeal Figures, as they naturally move by their diurnal motion. An Invention of more satisfaction to a discreet head, than a Kings Crown.

But this will suffice as to Figurations, though we might produce infinite prodigies of the like Nature.

CHAP.

Of strange Apparitions. 23

CHAP. VI.

Concerning strange Experiments.

TO our former discourse we may adjoyn such works as are effected without Figurations. We may have an artificial composition of Saltpeter, and other ingredients; *Oleum rubrum* or of the oil of Red Petrolei, *Petroleum.* and other things, or with Maltha, Naphtha, with such like, which will burn at what distance we please, with which *Pliny* reports, *Lib. 2. Chap. 104.* that he kept a City against the whole Roman Army: For by casting down *Maltha* he could burn a Souldier, though he had on his Armour. In the next place, to these we may place the *Grecian* fire, and other combustibles. To proceed, Lamps may be made to burn, and waters to keep hot perpetually. For I know many things which are not consumed in the fire, as the Salamanders skin Talk, with others, which by some adjunct both are inflamed and shine, yet are not consumed, but rather purified. Besides these, we may speak of divers

24 *Of strange Apparitions.*

* Art it should be, as I suppose. *** Nature.** As the making Thunder and Lightning in the Air; yea with a greater advantage of horrow, then those which are onely produced by Nature. For a very competent quantity of matter rightly prepared (the bignesse of ones thumb) will make a most hideous noise and corruscation, this may be done several wayes; by which a City or Army may be overcome, much after the fashion as *Gideon* overcame that vast Army of the *Midianites* with three hundred men, by the breaking of their Pitchers, and shining of their Lamps, together with the sudden leaping forth of the fire, and inestimable cracklings. These would appear strange, if they were designed to their just height both of proportion and matter. I might produce many strange works of another kind, which though they bring no sensible profit, yet contain an ineffible spectacle of wit, and may be applied to the probation of all such secrets, as the ignorant crew will not embrace. Such might I name the attraction of Iron to the Loadstone, a thing so incredu-

Of strange Apparitions. 25

credulous, as none save an eye-witnesse would believe. And in this attraction of Iron, experience will show a diligent searcher, more wonders than any vulgar capacity can entertain.

But to proceed to greater, and more than these. There is an attraction of gold, silver, and all other metals, by a certain stone, much after the same manner. Besides one stone will runne to the heap. Plants may have their mutual concurrence, and the parts of sensible creatures locally divided, will naturally move to a mutual imbracement. The consideration whereof makes me think, that there is not any thing, whether in divine or outward matters too difficult for my faith. To proceed higher. The whole power of the Mathematicks may compose a spherical Engine, according to *Protonvies* frame in eight *Almagest*; which sincerely describes both longitude and latitude of all Celestial Bodies; but to give them a natural diurnal motion is not in the power of the Mathematicks. However a discreet head-piece would do well to try the making hereof of

Silver and all other metals.
Plin. Hist. l. 36. cap. 20.
Aliter Vinegar.

26 *Of strange Apparitions.*

such materials and artifice, as it might have a natural diurnal motion. Which seems to me possible; and because many things are moved with the motion of the Heavens, as Comets, the Sea tides, with several other things, which are turned about either in the whole or in part. Such a work might be thought more miraculous, and of a vaster benefit than any thing hitherto mentioned. For the perfecting of this would frustrate all other, whether the more curious, or the more vulgar Astronomical Instruments, which surely would be more valuable than a Kings Coffers; and yet there may matters be brought to passe, which though they will not reach so near a miracle, yet of farre greater publick and private profit. As the producing so much gold or silver, as we please, not by the work of Nature

Quid sint decem & septem modi auri, octo scilicet ex admixtione argenti cum auro, & primus modus sit.

yet accomplishment of Art: seeing there may be ten and seven wayes of gold; eight by the mixture of silver with gold; and the first way is made by sixteen parts of gold with some parts of silver, which will attain the four and twentieth degree of gold, alwayes

Of strange Apparitions. 27

wayes augmenting one degree of gold with one of silver, and so for the mixture of brasse with gold. So the last way is * by the four and * Ex from. twenty degrees of pure gold without mixture of other metal. And beyond this, Nature knows no further progresse, as experience tels us. Though Art may augment gold in the degrees of purity, even to infiniteness, and compleat silver, without the least cheat: And yet that which seems more rare than all this is, That though the rational soul (hath so farre its free-will, as) it cannot be compelled, yet may effectually be excited, induced and disposed freely to alter its affections, desires and behaviours to the dictates of another man. And this may not only be practised upon one particular person, but upon a whole Army, City, or Body of a Nation living under one Region, if we believe experience. And this experience, Aristotle discloseth in his Book of Secrets, both of an Army, Region and single person. And thus I have well nigh finished my thoughts of Nature and Art.

CHAP. VII.

*Of Retarding the Accidents of Old age,
and Prolongation of Life.*

THe furthest attainment, which the complement of Art, joyned with the whole Energy of Nature can reach unto, is the Prolongation of Life to a very old date. How farre this is attainable, manifold experience hath shewed us. *Pliny* reports, That *Pellio*, a man of a strong body and Lib. 22. cap. 24. mind, lived much longer then men usually now: of whom *Octavius Augustus* enquiring, What course he took to live so long? was answered enigmatically, he used Oyl without, and Mulsam within (now according to the opinion of some, it's eight parts of water, and nine of honey) I might produce many examples of the same quality: as that which fell out in the dayes of King *William*; A Countrey-man plowing in the field, found a golden vessel, containing a certain liquor, which he supposing to be the Dew of Heaven, washed his face withall, and drunk

drunk of it, whereby he became renewed in spirit, body and excellency, *De bubulio factus est Bajulus Regis Sicilia*, from a Plow-man he was made Porter to the King of *Sicily*. And the Popes Letters assures us, That *Almannus*, held Prisoner by the *Saracens*, through the use of a Medicine lived five hundred years. For the King, whose Captive he was, having received this Medicine from the Embassadors of the great King, and being suspicious of them, made tryal hereof upon this Captive, which was brought him for that purpose. And the Lady of the Woods in great *Britanny* searching for a white Hinde, found an Ointment, wherewith the Keeper of the Woods anointed his whole body, except the soles of his feet, and he lived three hundred years without any corruption, save in the soles of his feet, which had some passions. We our selves know it frequent in these dayes, That plain Countrey men, without the advantage so much as of a Physicians advice, live very healthfully an hundred years, or little lesse. And these are the rather confirmed by the operations of Animals, as Harts, Eagles,

30 *Of Old Age, and Long Life.*

gies, Serpents, and many others, who by the efficacy of heart or stones, have renewed their youth: And wise men seeing, that even bruits could reach so farre to their Prolongation, adjudging it no lesse feasible by reasonable men, set themselves on the Spurre to find out this secret. Hereupon *Artesius* from his own ingenuity, having found the Secrets, of Stones, Herbs, Sensibles, &c. both for the knowledge of Nature, and especially the Prolongation of
 * *Al. Glory.* Life, did *rejoyce, that he had lived 1025. yeares. Further, to confirme this Assertion of the Prolongation of Life, it's considerable, That man naturally is immortal, that is to say, *Potens non mori*, hath a possibility of not dying. Yea, even after his fall, he might live a thousand yeares, though by degrees the length of life was abbreviated. Hence it follows, That this abbreviation is Accidental, and consequentially may be repaired in whole or in part; and upon search we shall find the accidental cause of this corruption, is not from the Heavens, or any other than the defect of true Government of our health. In that our Fathers are
 corrupt

Of Old Age, and Long Life. 31

corrupt and imbecil, they beget sonnes of a corrupt complexion and composition, and their children upon the same score are corrupted. Thus the Pedigree of corruption is deprived from Fathers to sonnes, untill we settle upon our heirs an assured abbreviation of our dayes. Yet this doth not conclude, That to perpetuity there shall succeed an abbreviation of our life, since there is a positive period set to our life, men may live till they be
 Psalm 90.
 eighty yeares, though then their dayes be but labour and sorrow.

Now if every man would from the best exercise a compleat Regiment of health (which consists in such things as have relation to Meat, Drink, Sleep, Walking, Motion, Rest, Evacuation, Retention, Air, and the Passions of the mind.) He might find a remedy resisting his proper malady. For upon the prosecution of such a Regiment, one might arrive at the uttermost limit of that Nature he had from his Parents will permit, and be led to the very last period
Deest parenthesis in alio exemplo.
 of Nature (I mean Nature fallen from its origi-

32 *Of Old Age, and Long Life.*

nal uprightneſſe) beyond which there is no further progreſſe; becauſe it doth little or nothing availe againſt the corruption of our Anceſtours: and yet the great impoſſibility of any mans ſo ordering himſelf in a mean, in all the fore-mentioned things, as the Regiment of health exacts, wherefore abbreviati- on of our dayes does not only from our Progenitors, but hath its advanta- ges from the want of Regiment. How- ever the Art of Phyſick ſufficiently de- termines this. Although nor rich, or poor, wiſe or ignorant, no nor the moſt accurate Phyſicians themſelves, do accompliſh this Regiment in themſelves or others, as every eye can diſcern. Yet Nature is not deficient in Neceſſaries, or Art any wayes incompleat, but rather is advantagious to make inſurrections and irruptions againſt, and ſo farre in- to theſe accidental paſſions, as they are either whole or in part rooted out. At firſt, and in the beginning of our ages declining, the remedy was eaſie: But ſince we have five thouſand years or more diſadvantage, the Cure is more craggy.

But waving the Inconveniencies wiſe
men

Of Old Age, and Long Life. 33

men moved by the conſiderations fore- mentioned, have endeavoured to find out the means and wayes, which not only are forceable againſt the defects of every mans proper Regiment, but alſo againſt the corruptions of our Parents: Not that hereby they can attain to the yeares of *Adam* or *Arte- ſius*, by reaſon of the growing corrup- tion, but that our dayes may be aug- mented an hundred yeares, or more, above the ordinary age of moſt men in theſe dayes. And though it be im- poſſible abſolutely to retard the acci- dents of old age, yet hereby they may mitigate them, ſo as life will happily be prorogued beyond the common account, yet alwayes with- in the ultimate circuit of Nature. There is a bounder of Nature, ſet in men ſince their Fall. There is a bounder of every particular man ari- ſing from the proper corruption of his Parents. Beyond both theſe bound- ers it's impoſſible to paſſe; yet happi- ly one may arrive beyond the latter: nor yet ſo farre to go beyond it, as that the wiſeſt of men can ever reach the former. Although there be a poſ-
C 5 * ſibility

sibility and aptitude of Nature to proceed to that boundary our first Parents set them. Let no man think this strange, since this aptitude extends itself to immortality, as appears both before the fall, and shall be evident after the Resurrection.

Perhaps you may object, That neither *Aristotle*, *Plato*, *Hippocrates*, or *Galen* ever attained that prolongation. I shall answer, They have not attained the knowledge of many ordinary truths, which other ingenious heads have found out; and if so, they may easily miscarry in a business of such weighty consequence, though they made it their study: especially, if we consider, how they were burdened with other impertinencies, and so were sooner brought to their gray haire, spending the inch of their Candles in more debased and vulgar subjects, than in finding out the wayes to so great Secrets. We are not ignorant *Aristotle* says in his Predicaments, *That the Quadrature of a Circle is possible, yet not then known.* Yea he confesses, himself, and all his Predecessors, were ignorant hereof, yet we in our times know

know it. Now if *Aristotle* did come short in such a trivial, much more might he in the deep mysteries of Nature. "Even in these dayes wise men are ignorant of many things, which the most ordinary capacity shall understand ere long. Thus the Objection is of little force.

 CHAP. VIII.

Of obscuring the Mysteries of Art and Nature.

AFTER an enumeration of some few examples concerning the prevalence of Nature and Art (that by these few we may gather many,) by these parts the whole; and so from particulars, universals, which will demonstrate the unnecessary aspiring to Magick, since both Nature and Art afford such sufficiencies. I shall now endeavour a methodical procedure in singulars, laying open both the causes and wayes in particular: and yet I will call to mind how as secrets (of * Nature) are not com- * *Left in alio.* mitted.

36 *Of obscuring Art and Nature.*

mitted to Goats-skins and Sheeps-pelts, that every clown may understand them, if we follow *Secrates* or *Aristotle*. For the latter in his *Secreta Secretarum* affirms, *He breaketh the heavenly Seal, who communicateth the Secrets of Nature and Art; the disclosing of Secrets and Mysteries, producing many inconveniencies.* In this case *Annius Gellius* in *Noct. Attic. de Collatione Sapientum*, sayes, *It's but folly to profer Lettices to an Ass, since hee's content with his Thistles. Et in lib. lapidum, The divulging of Mysteries is the diminution of their Majesty, nor indeed continues that to be a Secret, of which the whole fry of men is conscious.*

For that which all men, which wise, and the more noted men affirme is truth. That therefore which is held by the multitude, as a multitude, must be false; I mean of that multitude, which is distinct from knowing men. The multitude, it's true, agree with wise men in the more vulgar conceptions of their mind; but when they ascend to the proper principles and conclusions of Sciences and Arts, they
much

Of obscuring Art and Nature. 37

much dissent (striving to get onely the appearances in Sophismes and subtilties which wise men altogether reject.) Al. Vacans sophismatibus & inutilibus. And this their ignorance of the proprieties and Secrets, makes the division from knowing men. Though the common conception of the mind, have all one Rule and Agreement with knowing men. Yet as for common things, they are of small value, nor enquirable for themselves, but rather for particular and proper ends.

The Reason then, why wise men have obscured their Mysteries from the multitude, was, because of their deriding and slighting wise mens Secrets of wisdom, being also ignorant to make a right use of such excellent matters. For if an accident help them to the knowledge of a worthy Mystery, they wrest and abuse it to the manifold inconvenience of persons and communities. Hee's then not discreet, who writes any Secret, unlesse he conceal it from the vulgar, and make the more intelligent pay some labour and sweat before they understand it. In this
stream

38 *Of obscuring Art and Nature.*

stream the whole fleet of wise men have failed from the beginning of all, obscuring many wayes the abstruser parts of wisdom from the capacity of the generality. Some by Characters and Verses have delivered many Secrets. Others by ænigmatical and figurative words, as *Aristotle* sayes, (*in lib. Secret, O Alexander, I shall disclose to you the greatest of Secrets, which it becomes you by divine Assistance to keep secret, and perfect the thing proposed. Take then then the Stone, which is no Stone, which is in every man, and in every place, and in all times; and it shall be called the Philosophers Egge, and the Terminus Ovi.* And thus we find multitudes of things obscured in the Writings and Sciences of men, which no man without his Teacher can unvail.

Thirdly, They have obscured their Secrets by their manner of Writing, as by Consonants without Vowels, none knowing how to read them, unlesse he know the signification of those words. Thus the *Hebrewes, Caldees, Arabians*, nay the major part of men do most an end
write

Of obscuring Art and Nature. 39

write their Secrets, which causeth a great obscurity amongst them, especially amongst the *Hebrewes*. For, as *Aristotle* sayes in his fore-recited Book, *God gave them all manner of wisdom long before they were Philosophers: And all Nations had their Originals of Philosophy from the Hebrews, as Albu-mazar in lib. Introductorii Majoris; and other Philosophers, with Josephus lib 1. & lib. 8. Antiquit. makes it evident.*

Fourthly, This obscuring is occasioned by the mixture of several sorts of Letters, *Ethicus Astronomus* fortasse for so the *Ethick Astronomer* had his knowledge, writing it in *Hebrew, Greek and Latine* letters altogether.

Fifthly, This obscuring was by their inventing other letters, than those which were in use in their own, or any other Nation, being framed meerly by the pattern of their own fancy, which surely is the greatest impediment; yet this was the practice of *Artesius in lib. de Secretis Natura.*

Sixthly,

40 *Of obscuring Art and Nature.*

Sixthly, They used not the Characters of Letters, but other Geometrical Characters, which have the power of Letters according to the several Position of Points, and Markes. And these he likewise made use of.

Seventhly, There is a greater Art of obscuring, which is called *Ars Notoria*, which is the Art of Noting and Writing, with what brevity, and in what manner we desire. This way the *Latines* have delivered many things. I held it necessary to touch at these obscurings, because it may fall out, I shall thorow the magnitude of our Secrets discourse this way, that so I may help you so farre as I may.

CHAP.

How to make the Philosophers Egge. 41

CHAP. IX.

In aliis Adverg.

Of the Manner to make the Philosophers Egge.

NOW I shall methodically handle those things I promised above, the dissolving the Philosophers Egge, and finding out the parts thereof; a work which will give beginning to other enterprises. Make a diligent purification of the *Calx* with the waters of *Alkali*, and other acute waters, grind it by several contrition with the salts, and * burn it with many affations, that the earth may be perfectly separated from other elements, which I hold worthy the * longitude of my stature. Understand it if you can. For without doubt there will be a composition of Elements, and so it will be part of that Stone which is no Stone, which is in every man, and in every place of man; and you may find this

* Al. *Contermina.*

* Al. *Melancholia statura.*

this in all the seasons of the year in its place. Then take oyl after the form of a Saffron-cheese, and so viscouous first

Al. *Insensibile.*

(as not to be smitten asunder by a stroak) divide the whole fiery virtue, and se-

parate it by dissolution, and let it be dissolved in acute water, of a temperate acutenesse, with a slight fire, and let

† Al. *Terrę-
streitas.*

it be boyled till his † fatnesse, as the fatnesse of flesh be separated by distillation,

that nothing of the unctiousnesse may issue forth; and let this fiery virtue be distilled in the water of Urine. Afterwards boyl it in Vinegar, untill the least part, which is the cause of aduision be dried up, and the fiery virtue may be had; but if there be

† Al. *Tum fac.*

no regard of it, † again let it be made. Mind and search

what I say: for the speech is difficult. The Oyl is dissolved in acute waters, or in com-

† Al. *Ur.*

mon Oil which works more expressly, † or in acute Oyl

of Almonds upon the fire; so as the Oyl be separated, and the spirit remain occult, in the parts of living creatures, Sulphur and Arsnick. For the stones, in which the Oyl of humidity overflows, have their

terminus

terminus in the union of its parts: for there is no vehement union, but one may be dissolved from another by the nature of water, which is the subject of liquefaction in the spirit, which is the *Medium* betwixt the dry parts and the Oyl. The dissolution being made there will remain in the spirit, a pure humidity, vehemently mixed with dry parts, which are moved in it, when the fire resolves it, which is sometimes called of the Philosophers, *Sulphur fusibile*, sometimes Oyl, other while an aery humour, sometime a conjunctive substance, which the fire separates not, sometimes *Camphore*: and if you please, this is the Philosophers Egge, or rather the *Terminus* and end of the Egge; and it came to us from these Oyls, and may be esteemed amongst the subtilties, when it is purged and separated from the water and oyl in which it is. Further, the Oyl is corrupted by grinding it with desiccating things, as with salt or *Atrimentum*, and by assation, because there is a passion arising from the contrary; and afterwards it is to be sublimated, untill it be deprived of † its

oleaginity, and because its † Al. *Olio suo.*

as Sulphur or Arsnick amongst Minerals, it may be prepared, even as it. Yet it's bet-

ter

ter to boil it in waters, that are temperate in acuity, untill it be purged and whitened. Which wholsom exaltation is made either in hot or moist fire: The distillation must be re-iterated, that it may sufficiently receive its goodnesse, untill it be rectified, the signs of its last rectification are candor and crystalline serenity: And when other things grow black by fire, this grows white, is cleansed, shines with clearnesse and admirable splendour. From this water

*Al. Quodque
in salem Arano-
macum.*

and its earth comes *Argentum vivum* in Minerals, and * when the matter hath waxed white, this way it is congealed; the Stone of *Aristotle*, which is no Stone, it's set in a Pyramid a hot place, or (if you please) in the belly of an Horse or Ox, and it imitateth an acute Feavor. For from seven to fourteen, and from that it sometimes proceeds to one and twenty, that the Fecis of the Elements may be dissolved in its water, before it be separate: The dissolution and distillation is to be iterated, untill it be rectified. And here is the end of this intention. Yet know that when you have consummated your work, you are then to begin.

Another

Another Secret I shall shew you, you must prepare *Argentum vivum* by mortifying it with the vapour of Tin for Pearls, and with the vapour of Lead for the Stone *Iberus*; then let it be ground with defecating things, and *Atramentis*, and the like, as is said, and let there be an assiation: Then let there be a sublimation * if for Pearles * *Al. Septies.* twelve times; if for rednesse one and twenty times, untill the humidity within it be totally corrupted. Nor is it possible, that its humidity be separated by vapour, as the fore-said oyl; because its vehemently mixed with its dry parts; nor doth it constitute, as in the fore-said metals. In this Chapter you may be deceived, unlessse you distinguish of the signification of the words. It's now high time I involve the third Chapter: that you acquire the Calx, the * Calx * *Al. Clarem operis.* of the body, which you intend, the body is calcined, when it is apodiated, *i.e.* that the humour in it may be corrupted by salt, and with salt Armoniack and vinegar, and sometimes with burning things, and with Sulphur and Arsnick: and sometimes bodies are fed with *Argentum vivum*, and sublimated from them,

* Remaneant
putris, ni fallor
male imprimi-
tur aut debet
esse pura aut
putres.

them, untill they remain*putred. The Claves of the Art are congelation, resolution, inceration, proportion; and another way purification, distillation, separation, calcination and fixation, and then you may acquiesce.

C H A P. X.

F O R T E. 620.

Of the same Subject another way.

IN the 602. Arabian year you intreated me for some Secrets. Take then the Stone, and calcine it with a light assation and strong contrition, or with acute things. But in the end mingle it a little with sweet water, and compound a Laxative Medicine of seven things (if you will) or of six, or of five, or as many as you please; but my mind rests in two things, whose proportion is better than the other six proportion, or thereabouts, as experience

ence will teach you. Resolve notwithstanding the gold at the fire, and tried it better; but if you will credit me, take one thing that is the Secret of Secrets of Nature, able to do Miracles. Let it be mixed from two or more, or a Phoenix, which is a singular creature † at the fire, and incorporate by a strong motion: to which if hot liquor four or five times be applied, you have the composition. Yet afterwards the coelestial nature is debilitated, if you use hot water three or four times. Divide therefore the weak from the strong in several vessels, if you believe me: Let that which is good be evacuated. Again, use the powder, and the water which remains, carefully expresse: For of a certain, it will produce the parts of the powder, not incorporated: therefore take the water by it self; because the powder exiccated from it hath power to be incorporated into the Laxative Medicine. Work therefore as formerly, untill you distinguish the strong from the weak, and apply the powder three, four, five times or oftener, and work

Al. Mollius calciscant.

† Al. Adjunge.

work alwayes the way : And if you cannot work with hot waters, do it with water of *Alkali*, and by such acute things you make the violence of the Medicine: But if by reason of the acuity and softnesse of the Medicine it be broken, the powder, being applied, apply very carefully more of the hard and soft. But if it be by reason of the abundance of the powder apply more of the Medicine; if it be by reason of the strength

Pisillo. of the water, water it with pistils; and congregate the matter, as you can, and separate the water by little and little, and it will return to its state, which water you must exccate: for it contains both powder and water of the Medicine, which are to be incorporated, as the principle powder. Here you may not sleep, because here is contained a very great and profitable Secret. If you rightly order in a right series of things, the parts of the Shrub or Willow, they will keep natural union: and do not deliver this to oblivion, for it is profitable for many things. You must mingle

Vine facta. Pearls with the made union: as I think there will arise something

thing like the Stone *Iberus*: and without doubt it mortifies that which is to be mortified by the vapour of Lead. You shall find Lead, if you expresse the living from the dead; and the dead you must bury in *Olibanum* and *Sarcocolla*. Keep this Secret, for it is of some profit, and so must you do with the vapour of Pearls, and the Stone *Tagus*, and you must (as I have said) bury the dead.

 C H A P. XI.

F O R T E. 603.

Of the same Subject another way.

TO your desire in the *Arabian* year 630. I return this Answer. You must have the Medicine which may be dissolved in the thing liquified and steeped in it, and penetrate its interior parts, and may be mingled with it; and it may not be a fugitive servant, but transmute it. Let it be mingled by reason of the Spirit, and let it be fixed by the Calx of the metal: it is to be thought that fixation is prepared, when the

D

body

body and spirit are set in its place, and the spirit is made a body. Take then of the bones of *Adam*, and of the Calx the same weight; let there be six to the Stone *Tagi*, and five to the stone of Pearl; let them be ground with *Aqua vita*, whose property it is to dissolve all other things, so as in it they are dissolved and assated, untill it be incerated, *i. e.* let the parts be united, as the parts in wax. The sign of inceration is, that the Medicine liquifies upon iron very hot. Then let it be put in the same water in some hot and moist place, or let it hang in the vapour of waters made very hot: after that dissolve and congeal them against the Sunne. Afterwards take Saltpeter, and *argentum vivum* shall be converted into lead: And again, wash the lead with it, and mundifie it, that it may be the next to silver, and then work as a pious man, and also the whole weight must be 30. But yet of Saltpeter *LURU. VOPO Vir Can Utriet Sulphuris*: and so you may make Thunder and Lightning, if you understand the Artifice: but you must observe, whether I speak ænigmatically, or according to the truth. Some men have supposed otherwise: For it is told me, that you must resolve all into its first

first matter, of which you have *Aristotle* speaking in vulgar and known places, which makes me silent herein. When you have this, you have pure, simple and equal Elements. And this you may do by contrary thing and various operations, which formerly I have called the Claves of the Art. And *Aristotle* sayes, *That the equality of potencies excludes action, and passion, and corruption.* And these things *Averbo's* affirms, reproving *Galen*. And this Medicine is esteemed the more pure and simple which may be found, which is prevalent against Feavers, passions of the mind and body. Farewell. *Whoever unlocks these, hath a key which opens and no man shuts: and when he hath shut no man opens.*

In this Translation, I followed Dr *Deos* Edition, Printed at *Hamburg*, 1618.

F I N I S.

Courteous Reader, These Books following, are printed for Simon Miller, and Sold by him at the Starre in St. Paul's Church-yard.

Small Folio.

DOCTOR Lightfoot his Harmony on the New Testament, which will shortly be reprinted with large Additions.

The civil Warres of Spain in the Reigne of Charles the fifth, Emperour of Germany, and King of that Nation, wherein our late unhappie differences are paralleled in many particulars.

A general History of Scotland, from the year 767. to the death of King James, containing the principal

Revolutions and Transactions of Church and State, with Political Observations, and reflections upon the same: by David Hume of Godscroft.

The History of this Iron Age.

Mr Paul Baine on the Ephesians.

The Queen of Aragon, a Play: In fol.

In Quarto large.

Jo. Barklay his Argenis, Translated by Sir Robert le Grise Knight, by his Late Majesties special Command.

Quarto

Books Sold, &c.

Quarto Small.

An Experimental Treatise of Surgery, by Felix Wontz.

Abraham's Faith, or the good Old Religion, proving the Doctrine of the Church of England to be the only true Faith of Gods Elect By John Nicholson Minister of the Gospel.

The Anatomy of Mortality: By George Strood.

Three Treatises: 1. The Conversion of Nineveh, touching Prayer and Fasting. 2. Gods Trumpet sounding to Repentance. 3. Sovereigne preservatives against distrustfull Thoughts and Cares: By Will Atterholt Minister of Gods Word at Isfield in Suffex.

Synsworth on the Canticles.

Paul Baine, his Diocessans Trial

Gralle against Apponius.

A Treatise of Civil policy, being a clear Decision of 43 Queries concerning prerogative, right and priviledge, in reference to the supreme Prince and people: By Samuel Rutherford Professor of Divinity of St Andrews in Scotland.

Politick and Military Observations of Civil and Military Government, containing the Birth, Encrease, Decay of Monarchies, the carriage of Princes and Magistrates.

Mr Pinchin his Meritorious price of mans Redemption, cleared.

Astrology Theologized, shewing what nature and influence the Starres and Planets have over men, and how the same may be diverted and avoided.

Wells his Soules Progress.

Christ tempted, the Devils Conquered; Being a plain Exposition on the fourth Chapter of

Books Sold at the

of *S^t Mathews Gospel*: By *John Gumbledon*, Minister of the Gospel.

The *Saints Society*. Dr *Stoughtons* thirteen choice Sermons, with his Body of Divinity.

The Reasons of the dissenting Brethren concerning the Presbyterian Government, together with the answer of the Assembly of Divines.

Camdens Remains.

The Harmonious Consent and Confession of Faith, of all the Protestant Reformed Churches in Christendom.

The description of the Universal Quadrant, by which is perform'd with great Expedition, the whole Doctrine of Triangles, both plain and Sphericall: Also the Resolution of such Propositions as are most usefull in *Astronomy, Navigation, and Dialling*: By which

is performed the proportioning of Lines for measuring of all manner of Land, Board, Glass, Limber, Stone, &c. by *Tho. Stirrup* Mathematic.

Large Octavo.

Florus Anglicus, with the lively Effigies of all the Kings and Queens since the Conquest, cut in Brass.

The Reconciler of the Bible, wherein above two thousand seeming Contradictions are fully and plainly Reconciled.

Evidences for Heaven, containing infallible Signs and real Demonstrations for assurance of Salvation: published by *Edm. Calamy* Minister of *Aldermanbury, Lond.*

The Life and Reign of King *Charles* from his Birth to his Death. By *Lambert Wood*.

The Night-Search, the second part: By *H. Mill*. A

Star in St. Pauls Church-yard.

A view of the Jewish Religion, with their Rites, Customs and Ceremonies.

Usefull Instructions for these Evil times; held forth in 20 Sermons, by *Nicholas Lockyer*, Provost of *Eaton* Colledge

The Nullity of Church Censures, or Excommunication, not of Divine Institution, but a meer humane Invention: Written by the famous *Tho. Erastus*, and never before Englished.

Small Octavo.

Ed. Waterhouse Esq; His Discourse of Piety and Charity.

Panacea, or the Universal Medicine; being a Discourse of the Admirable Nature and Virtues of Tobacco: By *Dr. Everard*, and Others.

A view and Defence of the Reformation of the Church of *England*.

very usefull in these times.

Daphnis and Chloe, A most sweet and pleasant Romance for young Ladies, by *Geo. Thornhill*, Gent.

M. Fct. du Moulin, his *Antidote* against Popery; published on purpose to prevent the Delusions of the Priests and Jesuites who are now very usie amongst us

Herberts Devotions, or a Companion for a Christian, containing Meditations and prayers usefull upon all occasions.

Ovid de Ponto, in English.

The spirituall Seaman, or the Mariners Companion, being a Compendium of the Principles of Religion, by *F. Duran*, formerly in the Navy, now at *Christ-Church Cant.*

The Loves of *Ulvio* and *Lezio*s Romance.

Mr. Quorotes, his Rudiments of the Hebrew Tongue. A

Books Sold at the

A Book of Schemes or Figures of Heaven, ready set for every four Minutes of times, and very usefull for all Astrologers.

Florus Anglicus, or an exact History of England, from the Reign of *William* the Conquerour to the death of the Late King.

Lingua, or the Combate of the Tongue, and five Senses for Superiority: a serious Comedy.

Venus Cabinet unlockt, and her Secrets laid open.

The Spirits Touchstone; being a clear discovery how a man may certainly know whether he be truly taught by the Spirit of God, or not.

The poor mans Physician and Chyrurgion.

Physicall Rarities, containing the most choice Receipts in Physick and Chyrurgery, for

the cure of all Diseases Incident to mans body: By *R. Williams*. To which is added the physical Mathematicks: By *Hermes Trif-Magistus*.

The Idol of Clowns, or the Relation of *Wat Tyler's* Rebellion.

Historicall Collections or Ecclesiastick affairs in Scotland, including the murder of the Cardinal of *St. Andrews*, and the beheading of their Queen *Mary* in England, by *R. Watson*

The Christian Moderator, in 3 parts.

The Golden Fleece, or a Discourse of the cloathing of England.

Dr. Sibbs his Divine Meditations.

Vicerius Preceptes of *Idiotismes*.

Grosij Poemata.

Three Books of *Mr. Mathews* Minister at *Swansey* in *South-wales*.

The Messiah Magnified by the mouthes of

Star in St. Pauls Church-yard.

of Babes in America; or *Gaius* and *Gemalial*, a helpfull Father, and his hopeful Sonne, discoursing of the three most considerable points: 1. The great want of Christ. 2. The great worth that is in Christ. 3. The good way that is chalkt out by Christ.

2. The New Congregationall Church, prov'd to be the old Christian Church, by Scripture, Reason, and History.

3. The Rending Church-member Regularly call'd back to Christ and his Church.
