Richard M. Dorson (1916–1981), often referred to as the “Dean of American Folklore,” was trained within this intellectual milieu. Dorson’s publishing career began with *Davy Crockett: American Comic Legend* (1939), which was merely a selection of the “better” stories in the Crockett almanacs. Nevertheless, Dorson regarded this humor—as did other historians—as a comic mythology that was at once vigorous and robust and that captured the confidence and boldness of those who settled the vast American wilderness. In *Jonathan Draws the Long Bow* (1946), Dorson again set out to

capture aspects of national character and historical circumstance in the traditions—supernatural as well as humorous—of New England from a variety of subliterate sources.

From Dorson's point of view, the short span of American history did not allow the creation of the kind of heroic legendry found in the Old World. American mythology was fragmented and scattered, rather than a consistent and sober whole. Fashioned in an age of unbelief, American mythology could only be an assortment of humorous episodes about scalawags, fools, and other comic types. Nevertheless, Dorson came to see these heroes as the embodiment of a democratic impulse—one of the four great impulses, in his view, that conditioned the development of American character and culture. On the whole, folklorists regarded American humor as an expression of democratic optimism born in the confident rejection of European and Eastern manners and gentility. They tended to see the humor in a more positive light than historians who seemed more attuned to undercurrents of darkness and despair.

Although students of American humor recognized that the true roots of 19th-century American humor were oral, there was little choice but to establish the character of this bygone era from newspapers and other subliterate sources. Nevertheless, only Dorson was concerned to demonstrate that such sources were genuine repositories of orally circulated traditions. He was careful to call attention to the descriptions of oral storytelling in this subliterate and to identify the traditional narratives that appeared in their pages. Dorson collected folklore in rural American communities and encountered oral humor firsthand. He severely criticized social and literary historians for failing to recognize the spurious character of much of what had been promoted as America's comic mythology. Too often the materials were what Dorson called "fakelore"—ersatz compositions of boosters and promoters—rather than genuine American folklore. Dorson and other American folklorists remained keen to record and document the persistence of frontier humor—particularly tall lying, practical joking, exaggerated metaphor, and dialect stories—in oral tradition, attending not only to documenting the texts but also to occasionally characterizing their styles of performance as well.

Another major influence on folklorists' approach to humor came from psychology via anthropology. In 1905 Sigmund Freud published *Jokes and Their Relation to the Unconscious*, in which he argued that jokes and other forms of humor were, like dreams, vehicles for the expression of otherwise unacceptable sexual and aggressive thoughts. Freud's theory of jokes was part and parcel of his psychoanalytic psychology, which held that socially unacceptable impulses were repressed and achieved expression only indirectly through disguised representations. Freud's theory was enormously influential, and numerous books were written about folklore and humor from a psychoanalytic perspective—although not by folklorists. Folklorists continued assiduously to collect, catalog, and publish humorous texts from oral tradition with little or no commentary or interpretation. Anthropologists, however, in their fieldwork, encountered joking relationships, trickster figures, and ritual clowning. The fact that such humor—often of the most outrageous and obscene kinds—organized relations between kin and proved central to an assortment of mythological and ritual expressions required explanation. In some instances, anthropologists found that explanation in psychoanalytic theory.

Alan Dundes (1934–) single-handedly brought the psychoanalytic perspective to the attention of American folklorists. His interpretations of scores of myths, legends, tales, rituals, artifacts, and jokes made the perspective seem more prominent in the discipline

than it, in fact, was. Dundes' interest in humor centered on joke cycles—elephant jokes, Polish jokes, quadriplegic jokes, Jewish American Princess (JAP) jokes, and the like—prominent in the United States in the latter decades of the 20th century. Generally, Dundes viewed these jokes as providing a socially sanctioned outlet for the expression of forbidden thoughts. Thus, the elephant was a symbol of the Black person against whom the jokes permitted certain symbolic aggressions—aggressions that could no longer be openly expressed in a the post-civil rights era. Dead-baby jokes, with their graphic images of mutilation and destruction, served to express a hatred of babies aroused by guilt over abortion. JAP jokes allowed for the expression of ambivalent attitudes toward the redefinition of women's roles. On the one hand, the Jewish American Princess expressed women's discontent with traditional domestic demands, particularly cooking and sex. On the other, she symbolized the resentment against feminist dogma that a woman abandon house and home in favor of business and career. Dundes' interpretations often presume the underlying hostility of humor and the requisite identification of groups against whom that hostility is directed. Yet they remain sensitive to the sociohistorical conditions in which such jokes emerge and are told. The targets of aggression are not constant; they are a function of time and place.

Dundes' joke interpretations have been particularly influential in folklore, and the presumption of aggression runs through a good deal of folklorists' interpretations of humor. Nevertheless, recent perspectives have emphasized the close analysis of humorous texts and performance contexts without the presumption that the humor is motivated by the desire to attack or degrade. Some scholars have urged that more attention be paid to the structure of humor and the way information is encoded within that structure. Humor demands the perception of an "appropriate incongruity"—that is, the perception of a relationship of two incongruous semantic domains that are somehow made to seem appropriately linked. The examination of the incongruous semantic categories and the way that they are made appropriate may lead to alternative understandings of the meaning of some of the contemporary jokes whose interpretations have frequently been based on details of plot and character. Thus the question-and-answer racial epithet, but this incongruity can be recognized as a joke from the 1960s, "What do you call a Negro with a Ph.D.?"—"Nigger," cannot immediately be regarded as motivated by racial hatred. The joke depends upon the incongruity that someone with a Ph.D. degree who deserves a title of respect such as "Doctor" or "Professor" earns only an odious racial epithet, but this incongruity can be recognized as appropriate if one accesses the information that there are individuals for whom race is a stigma that no achievement can overcome. Hearers of this joke need not believe this to be the case; they need only recognize that such a view exists. Whether the joke is motivated by racial hatred or is, in fact, a critical comment on the racist character of a society where Blacks cannot succeed no matter what they do, cannot be determined from the text alone. That determination can be made only if something of the context of the joke is known, such as who is telling it to whom and under what conditions.

Joke texts are ambiguous; they are usually capable of bearing more than a single interpretation. Sometimes even the most detailed contextual data may not be sufficient to resolve the ambiguity. Nevertheless, close attention to the incongruous semantic categories and the means by which they are made appropriate may alert interpreters to a range of potential messages encoded within particular humorous texts and repertoires.

Recently, there has been greater emphasis placed on the study of folklore performance, including humor performance. These approaches regard an oral performance as a verbal work of art and attend to the full range of devices and techniques by which this art is accomplished. Performance approaches also regard this art as created in performance and thus scrutinize the dynamics of the social event within which it is created. Performance approaches have paid close critical attention to instances of tall lying, comic anecdotes, and the recounting of practical joking, highlighting their aesthetic structures, the manipulation of point of view, the use of quoted speech, the employment of meta-narration, as well as how such techniques and devices contribute to the narrative as a tactical social accomplishment.

As it stands in the mid-1990s, the primary contribution of folklore to the study of humor does not lie in the advancement of a particular theoretical perspective or interpretive methodology. Rather it lies in the relentless collection and publication of humorous materials from folk sources, the classification and cataloging of these materials in indexes and finding lists, and the insistence that the contexts of performance are crucial to understanding the meanings and uses humor.

Hungarian Americans

Immigrants and their descendants from Hungary. The self-designation of Hungarians as *Magyar*, their country as *Magyarország*, originates from the Ugric period and describes their tribal position at the time they separated from their Finno-Ugric language kin, and blended with Central Asian nomadic Turks. According to legend, under the leadership of chieftain Arpad seven tribal chiefs pledged brotherhood by letting their blood flow together and invaded the Carpathien Basin in A.D. 896. Over the centuries, however, the romantically conceptualized "Oriental" *Magyar* culture blended into its central European neighborhood and at the time emigration from Hungary began, 40 percent of Hungarian arrivals belonged to ethnic minorities.

The Hungarian American subculture is a small but heterogeneous part of the patchwork of American ethnics. In itself it does not stand out as a solidly knit community united by conspicuous folkloric identity features, but is more characterized by fragmentation in its display of cultural consciousness, due to Hungary's ethnic heterogeneity and hereditary class hierarchy.

Opening the telephone directory of any American town or industrial area, Hungarian presence is easy to detect by listings such as Szabó (tailor), Kovács (Smith), Varga (cobbler), Kocsis (coachman), and other surnames that indicate occupations. Other names feature physical character, mood, or temper, such as Kiss (small), Nagy (large), Jó (good), and Balogh (awkward), or the geographical region of origin, such as Szegedi (from Szeged) and Veszprémi (from Veszprém). The multinational character of Hungarians is indicated by such common names as Magyar, Tóth (Slovak), Nemeth (German), Oláh (Romanian), or Horváth (Croatian). Revealing of the same is the fact that people often keep their foreign-sounding names (spelled in Hungarian), like Resetar, Lakcsik, Sisák, Hoffer, or Duczer.

Others may not be so easy to identify as *Magyars*. In the desire to preserve their original names, some anglicize the spelling, (Sillaghe for Szilágyi); those who want to assimilate may simply translate their names into English, like Mr. Shepherd (Juhász) and Mrs. King (Király) did. Dialing any of these listings, however, may lead to different meanings of Hungarianness. We might reach a newcomer who strives for acceptability, a veteran custodian of Hungarian values surviving his succumbing generation, the conscious or unconscious preserver of a selected set of traditions, the young seeker of roots who makes a pilgrimage to Hungary and relearns the forgot-

ten mother tongue, or the person whose Hungarian family name is the only connection to the ancestral past.

Regardless of the individuals place in the timetable of the immigration process, Hungarians never represented a large number in America, nor has their presence greatly fluctuated. In the peak years between 1907 and 1910, two million Hungarian job seekers came to the United States. *Magyars* are shown sporadically and in low and slowly declining numbers in the censuses between 1910 and 1980, in larger cities, townships and industrial counties of the Eastern United States—today there are about 1.8 million Americans in the United States who claim to be of Hungarian ancestry.

A historical overview of the emergence of the Hungarian American subculture must review the period primarily from 1870 to 1956. Emigrant groups of diverse nationality

and social status migrated from Hungary to the United States for different reasons, a fact that explains their lack of solidarity.

The first arrivals were exiles of the failed 1848–1849 revolution against the Hapsburg rule, numbering 800 to 900 people who settled in fifteen locations. They dispersed soon to urban centers where they joined other elite emigrés: patriotic, politically conscious intellectuals and businessmen. They launched the symbols that would later form the core of a constructed Hungarian American ethnic identity.

As the second wave, mass emigration began in the 1870s and affected mostly the agricultural population. Until World War I, more than two million people crossed the ocean. In 1882, when steamship agents offered to book passage for a group of thirty-two villagers of County Sopron to bring them to South Bend, Indiana, as laborers for Studebaker's wagon factory and Oliver's plow plant, the farmhands displayed good entrepreneurial skills, mobility, and readiness to sacrifice for a better future. They accepted the worst labor- and living-conditions in order to save every penny, return home, and become prosperous farmers. These single, transitory male workers were no "immigrants." Austere communal living kept them within the institution known as the "boarding family" headed by "the lady," wife of a fellow worker and acquaintance from the old country, who provided room and board to young men. With the passing of time and conditions changing, temporary workers had to decide whether to stay or to return. Staying meant breaking out from isolation, learning the language and basic skills, settling with family, and changing loyalty from the homeland to the land of choice.

When political and economic situations in Hungary and the United States forced people to stay where they happened to be, shortly before World War I, several enclaves of peasant settlers emerged in the United States. The emigrants, including ethnic minorities originating from historic Hungary and *Magyars* speaking regional dialects, together established a specific Hungarian American culture. In spite of the diversity of regional Hungarians, with their uneven representation of cultural dialects, religions, and loyalties, four generations of peasant immigrants—the foreign-born, and their first-, second-, and third-generation American-born offspring—comprised the largest, most conspicuous group that established the image and identity of the Hungarian American as it is known today. The group as a whole was nicknamed *öreg Amerikások* (veteran Americans) and represents the main culture-bearing community of Hungarians. However, this population group, totaling about 450,000, never settled anywhere in mass and never created a solid, closed ethnic residency. (Even in Cleveland, the legendary "American Debrecen," stronghold of Hungarian Protestants in America, Hungarians accounted for less than 10 percent of the residents.) People were spread out in the suburban regions of industrial towns, making their living from heavy industry. Only 1 percent ever returned to farming, like the founders of Arpádhon (The Home of Arpád) in Louisiana. This unique settlement of strawberry farmers was established in 1896, the 1,000th anniversary of the birth of Hungary, and romantically named after the nomadic land taker Arpád, although the settlers were of mixed ancestry. Tired of industrial labor in Detroit, South Bend, Akron, Ohio, and other company towns, Hungarian, Slovak, Croatian, German, and Ukrainian peasant emigrants from historic Hungary together, forged the farming community of Arpádhon and invented a Hungarian identity, symbolized by songs and dances celebrating the harvest of their crops.

The third category of emigrants was composed of professionally trained people who began to arrive from Hungary after World War I. They did not join the settling trend of peasants and did not seek companionship with them. Traditionally, peasantry constituted a solid subculture in Hungary and was isolated from the elite, not only as servants (the poor and powerless isolated from the rich and powerful), but also by different standards of education, worldview, language, and the arts. Urban elite emigres included educated professionals; Jewish intellectuals (who left Hungary between the two World Wars, fearing anti-semitism); and those who left after the end of World War II (displaced military men, politicians, old nobility, and determined emigrants fearful of Communism). Concentrated in large cities—New York, Chicago, Cleveland, Pittsburgh, Los Angeles—these emigrés represent only a symbolic community whose members host cultural events and attend commemorative programs and banquets related to political-patriotic causes. The offspring of these displaced persons no longer claim a Hungarian identity. Many of the so-called “freedom fighters” who fled during the 1956 revolution were not politically motivated but took the opportunity to seek freedom from Communist rule. These newcomers were mostly young people, ready for a new career. Working-class Hungarians opened their purses and hearts to assist them, but the sponsors’ enthusiasm soured because their wards targeted higher education not factory jobs; a world’s difference separated peasant thrift and the goals of these immigrants, who soon vanished in the mainstream.

In Hungary, peasant culture developed more regionally than nationally. Whereas individuals were efficient in local folk education and loyal to local tradition, they were ignorant of the overall national culture established by school education. Immigrants, at the outset, continued their loyalty to native local heritage and maintained regional identities even after they were forced to disperse and intermingle. Consciousness of Hungarian national identity and its symbols, however, began to infiltrate local-identity features quite early. The Romantic nationalist image of the late 19th century was recast to fit the nostalgic mood of elite expatriates. This image was stronger and more attractive to the masses of homesick immigrants than more divisive, less prestigious ancestral peasant traditions. The new image helped the peasant folk unify through a set of standardized, homogenized identity symbols representing “the noble Hungarian nation” that embraced them only in exile.

The construction of a homogenized Hungarian American culture was conveyed by social, beneficent, and religious organizations whose regional chapters followed the guidance of their national or global headquarters. Enthusiastic clergymen assumed leadership in the promotion of a standardized patriotic-national culture that replaced the inherited local and regional customs, demeaned as stigmas of backwardness. Calendar and life-cycle rituals were supplemented by Hungarian and American patriotic commemorative celebrations, supervised by elite community leaders and filling the ethnic recreational needs of the settlers, who were eager to learn and improve themselves in the new situation. The sensation of a newly acquired dignity by former farmhands made it easier for them to blend into the mainstream.

While the imported repertoire of regional folk costumes, dances, music, and foodways was suppressed and moved from the public to the private area of consciousness and later to complete oblivion, a unanimously accepted stock of new Hungarian American forms emerged and became important symbols of Hungarianness. Among these are the *magyar*

ruha (Hungarian dress, a fabricated festive costume); the *Csárdás* pair dance; Gypsy music; a few popular folk and imitationfolk melodies; and a menu of holiday dishes limited to stuffed cabbage, *gulyás*, chicken *paprikás*, *kolbász* (smoked sausage), *csiga* and other homemade noodles, *kalács* (milk bread), *kifli* (horns with walnut filling), *rétés* (strudel), and *palacsinta* (crepe)—none of which can be missing from weddings, funerals, associational banquets, church feasts, March Fifteenth (commemorating the 1848 War of Independence) and July Fourth picnics, and the most enduring feasts—the Wine Harvest Dance and the pig-slaughter dinner. The minutes of organizing associations, photo-illustrated yearbook reports, and locally compiled cookbooks inform the carbon-copy similarity of these rituals across Hungarian America.

If prior to 1914 the emigrant elite suppressed regional peasant traditions, the 1956 “freedom fighter” generation temporarily assumed leadership in the revival of ethnic arts. The ambition to teach dances, songs, and crafts, to organize festivals, and to teach the grandchildren of immigrants the forgotten language was motivated by the teachers’ own needs. The political-ethnic revival movement, claiming recognition of a multi-ethnic America, activated latent awareness of folk traditions, resulting in the revitalization of fading forms of folklore. It energized the new immigrant intelligentsia and reached out to the young generation of American-born enthusiasts.

In the preliminary stage as “birds of passage,” the migrant, temporary workers lived in isolation between two worlds. Their life is well documented in mournful lament poetry, songs, fictitious letters, anecdotes, and amateur skits caricaturing the hardships of adjustment of greenhorns. Without a conscious effort to give up old values, however, assimilation began by learning elementary skills, new concepts, and idioms of the English language, changing habits of eating and clothing, operating appliances, and so forth. When small neighborhoods emerged, they seemed perfect cells to accommodate cultural heritage on a broad base. Similar to other European labor migrants, Hungarians formed their self-sufficient settlements between 1907 and the 1930s. Bankers, lawyers, doctors, food merchants, innkeepers, mail carriers, and pawnshop owners served the immediate needs of patrons in the native neighborhoods of cities, while local chapters of basic Hungarian American institutions—benevolent fraternities, political clubs, and churches—also began to take shape, providing for the physical and spiritual welfare of the community.

The parishes had an overall strong influence on the maintenance of ethnic loyalty and cultural preservation. Nevertheless, while the majority religion of Hungarians is Roman Catholic (ca. 65 percent), the Americanized Protestant denominations of the minority (ca. 25 percent) churches became the centers of cultural and social life. Not only did the church organize life-cycle and calendar rituals, patriotic, political, and civil festivities, and entertaining programs, it also offered education to both children and adults in language, history, literature, and folklore, such as handicraft, dancing, and singing.

The ethnic enclave, an irrational, nostalgic imitation of the hometown, was founded by the immigrant generation seeking temporary shelter in the alien world. Within it, essential values could be maintained while members also built the bridge to the future; it provided help to adjust to the industrial environment, the multilingual neighborhood, and the mainstream.

As long as the ethnic enclaves existed with a majority of the immigrant generation, they were culture-forming and culture-maintaining entities with masters of ceremonies

leading traditional customs and practices. Habitat and housing patterns, interior decoration, use of space, religious symbols, vegetable and flower gardens, and the gossip bench in front of the house all corresponded to old-country forms. But as Old World values shifted to a new Hungarian American consciousness with the passing of the generations, there emerged a new brand of ethnic folklore, rooted in the old, but addressing contemporary issues of everyday life. Old stories about bewitching, magic, and healing were replaced by American-style ghost stories and local-character anecdotes highlighting funny cases of ignorance and smartness, tricksters, and dupes in the community. Greenhorn housewives use gesture language in the grocery store; the judge grants citizenship to the numbskull thought to be witty; a smart “Hunkey” peddler outwits other ethnics; an ignorant waitress serves marshmallow instead of mushroom soup; and a short-witted Bible-class student mistakes Pittsburgh for Bethlehem as Christ’s birthplace because both are in Pennsylvania.

The ethnic community eventually outlived its usefulness, as the children and grandchildren of immigrants, born in the diaspora, found the environment restrictive. For the first American-born generation, the meaning of ethnicity and loyalty to heritage is different from that of the foreign born. It is an option to choose, retain, and develop images and emblems of ethnicity or reject them completely. In their cultural spectrum, ethnic heritage occupies only a small compartment reserved for special occasions. The ethnic images are select elements displayed more for the general public than for insiders. What is chosen for these occasions is spectacular, attractive, and classy, taken more from the national than from the regional heritage as a more usable item in status-promoting social activities. While everyday life—home decoration, eating habits, and the like—no longer contain traces of homeland ethnicity, a few display items appear prominently at festival occasions, particularly in the performance of dance and music, the wearing of costumes, and the preparation of special dishes. When the International Institute of Indianapolis invited local ethnics to introduce their specialties to the public in 1986, Hungarian women were dressed in *Matyó* (a regional group of northern Hungary) blouses with black skirts and boots mass-produced and exported from Hungary. They served potato stew in paprika with green salad and sang sentimental pseudo-folksongs. This hybrid revival appears as a response to the national appeal of ethnic Americans; it is a conscious self-stereotyping, a message to others, but also a nostalgic gesture toward the in-group and an attempt to preserve elements of a distant past that the new generations do not understand.

The Hungarian-by-choice may be a member of a totally integrated family. The American-born children of the 1956 freedom fighters seem not susceptible to the festival movement propagated by both American and Hungarian agencies. Lacking roots and continuity, however, the movement is superficial, following the performance guidelines given by agencies to amateur performing groups throughout the United States. Ethnicity may be active or latent, depending on circumstances; it may be recalled or completely forgotten.

The accidents of history, the lasting isolation of Hungarian Americans from the old country, the peculiarity of the language belonging to the Finno-Ugric family, and the ideological, social, and cultural segmentation of the immigrant generations, singly and together, have contributed to the discoloration of the modern-day Hungarian American identity.

Hunting

The seeking and taking of game animals in a variety of ways. Over time, hunters have evolved stylized modes of pursuit and capture, to which they may attach social and moral significance. Until recently, most anthropological studies of hunting focused on subsistence societies exotic to the investigator, while materials collected by folklorists largely comprised accidental texts—hunting songs, tall tales about hunting, and related lore about animals—gathered in the course of building collections of tales, songs, superstitions, and folk speech. Hunting is, indeed, abundantly indexed in symbolic discourse, flashing through everyday speech in sayings like “hot on the trail” or “that dog won’t hunt” (said of a bad idea). Songs like “Rabbit in a Log,” and “Groundhog,” which allude to traditional techniques of harvesting and preparing game, are standard fare in bluegrass and old-time music repertoires. In more elaborate figures, hunting has inspired children’s games (“hare and hounds”), square-dance maneuvers (“chase the rabbit”), virtuoso imitations of fox chases on fiddle, bagpipes, harmonica, and banjo, and that paramount practical joke, the snipe hunt.

However serious attention to hunting as a form of symbolic interaction in modern society, exemplifying what Victor Turner called the “liminoid phenomena” of complex industrial societies, has been sparse. Only in the 1990s have scholars begun to explore how, through hunting as ritual performance, American hunters come to terms with social and natural hierarchies, and their own positions within them (Hufford 1992; Marks 1992). In the United States, the Civil War roughly divides historically distinctive phases in hunting. Before the Civil War, hunting was part of rural life, providing a pleasurable break from routine as well as putting food on the table. After the Civil War, an industrializing, urbanizing nation—grappling with the detachment of civilization from nature and the separation of livelihoods from the land—radically restructured access to game. As the frontier ebbed toward closure, hunters’ associations lobbied for regulations protecting wildlife from market gunners and wilderness from the whims of irresponsible landowners (Ives 1988; Marks 1992). This had the effect of removing game from local control and of pitting backwoodsmen and farmers, who deemed hunting necessary to their ways of life, against urban, elite men of means, for whom hunting offered a form of respite from the modernizing world. The battle lines having been drawn, game became a different kind of cash crop—luring metropolitan dollars into the pockets of seasonal guides and other providers and institutionalizing a running conflict between game wardens and poachers. Stock narratives of poachers as heroes and wardens as buffoons have flourished ever since within thriving traditions of local resistance (Hufford 1992; Ives 1988).

Social relations continue to take shape around the political production and stylized acquisition of wildlife, which varies not only regionally but across the social spectrum. For instance, on the outskirts of Middleburg, Virginia, red foxes race over rolling hills, pursued by packs of pedigreed hounds, followed in turn by red-coated women and men leaping fences on half-bred “hunters.” In the mountains of Tennessee, “one gallus”

hunters pause in their conversations around ridgetop campfires to decipher the voices of unseen hounds, “singing” on the trails of gray foxes. In West Virginia in the spring, a solitary man dressed in camouflage, his back against a tree, coaxes hen-like calls from a small wooden box to entice a wary gobbler. In December, fathers, sons, uncles, nephews, grandsons, and neighbors, encamped for a week in southern New Jersey gun clubs, organize “deer drives” to flush bucks out of patches of woodland. Each winter, in marshlands along the routes of migratory waterfowl, some gunners conceal themselves with retrievers in duck blinds and eye the skies over their decoy spreads for signs of descending ducks. Others (traditionally a clientele of high social status) are propelled in railbird skiffs by local guides looking not only for railbirds but also for opportunities to perform rites of reversal on their wealthy patrons. “You couldn’t hit the side of a barn, Admiral!” said Albert Reeves, a “mudwalloper” from south Jersey, recalling with relish an incident from his guiding career (Parsons 1987).

Such acts of engaging with game are portals on myriad domains built around the central idea of sportsmanship, an idea combining principles of conservation with a gentleman’s code of honor. Hunting as the stylized enactment of sportsmanship is thus distinguished from hunting as the mere taking of food for livelihood. Sportsmen, as stewards of wilderness, are enjoined to take no more than their fair share and to retrieve and use any animals they cripple or kill. In a curious twist, the sportsman on the post-frontier hunts not because he needs to, but because his hunting is *needed* in order to protect what remains of wildlife and wilderness. From the sportsman’s perspective, hunters’ license fees support the land, and their vigilance and discipline keep the stock culled and the species healthy.

While principles of sportsmanship guide the construction of hunting domains, possibilities for enacting sportsmanship and debates about what constitutes it in practice are endless. The ideal of sportsmanship is debated and played out in class ways. Cast as a gentleman’s code of honor in an aristocratic setting, the ideal is recast among working men to embody egalitarian principles of honesty, loyalty, fair play, and fellowship.

Domains of hunting are as varied as the communities of sportsmen taking shape around their chosen species. Each domain orders its denizens, categorizing animal players as quarry, allies, and “trash”—players that interfere with the hunt by distracting hounds or competing with hunters for quarry. For coon hunters, “trashing” describes the behavior of a hound diverted by rabbits, possum, or deer. English-style fox hunters call this behavior “rioting,” intolerable in the pedigreed hounds of their subscription packs. Hilltoppers, working-class fox hunters who breed their own hounds, contend that pedigree is no guarantee of superior performance, that a “potlicker” with the proper disposition and training can “get out there and do the job” just as well. For working-class hunters whose packs consist of individually owned hounds, the hunting pack can be a study in egalitarian principles of fair competition, honoring the leader, and sharing the leadership. Thus, hunters explore the underpinnings of social hierarchy, justifying or challenging them through discourse about animals (Hufford 1992; Marks 1992).

What distinguishes hunting from other secular rituals in industrial societies is the use of animals, ostensibly to enhance the hunters’ grasp of nature and the human position in it. At the heart of hunting rests a paradoxical relationship between hunters and their quarry. Jose Ortega y Gasset argues that the hunter and the hunted must be located at a precise distance from each other on the zoological scale (Ortega y Gasset 1972:124).

Maintenance of that distance is crucial to tenets of sportsmanship, whereby hunters relinquish their superiority to give the quarry a competitive edge. Thus, they limit their capacity to kill animals by rules that make practices like hunting during breeding seasons, shooting into a flock of feeding waterfowl, or “spotting” (using lights at night) or “dogging” (pursuing with dogs) for deer illegal. Lowering their status in the animal kingdom, hunters ingeniously seek to enter and inhabit the ordinarily uninhabitable. Imagining themselves from the perspective of their quarry, hunters may contrive to blend with the landscape through camouflage clothing, use of animal scent, decoys, deceptively designed watercraft (such as the Barnegat Bay “sneakbox”), temporary “blinds,” sink boxes, and tree stands that stud the landscape, as well as permanent cabins and camps.

Animal helpers, especially dogs, help define and sustain a precise distance on the zoological scale. Through breeding and training, hunters shape hounds to meet regionally distinctive conditions for hunting particular quarry. Walker hounds bred to tree racoons and pursue foxes in mountainous terrain are deemed less well suited to conditions on the Atlantic coastal plain than Maryland hounds (Hufford 1992). Hunters preferring the chase over the kill favor hounds bred to follow the trail on the ground rather than on the wind. Mountain Feist dogs are bred to follow the movements of squirrels by eye through treetops. Blocky and compact English Labs are “wrestlers,” shaped to storm hedgerows in search of downed pheasants. Bushy-tailed “decoy dogs” (Nova Scotia duck-tolling [luring] retrievers) are designed to lure ducks for waterfowlers. This breed is modeled after foxes seen cavorting about on banks, using their tails to lure their prey within snatching range.

In conversations and in writing, hunters constitute their quarry and assign meaning to the zoological distance they traverse through empathy, pitting their mental acuity and physical stamina against the intelligence or guile of a most worthy adversary. Hunting domains are staged on the margins, in areas set aside for time-out activities. Not surprisingly, the quarries centered within these marginal worlds often emerge in narratives as paradoxical, anomalous creatures—protagonists of stock tales of tricksters subverting the hunt: the turkey who steals the call box; the flock of ducks departing with the decoys; the buck that melts into the swamp; or the fox that loses a pack of dogs by running through a flock of sheep.

Hunting domains persist as enclaves of wholeness in a world fragmented by industrial expansion. Such worlds are powerful resources for identity building, conferring wholeness and authenticity on their inhabitants. Over time, hunters become historical personages in their domains, evaluated as sportsmen and comrades. Their abilities, personality quirks, and accomplishments may be registered in nicknames, place names, names for hounds, CB handles, and narratives of hunting exploits and blunders.

While maintaining their own perspective, hunters paradoxically must aspire to the quarry’s point of view, for, as Ortega y Gasset observes, “the pursuer cannot pursue if he does not integrate his vision with that of the animal” (Ortega y Gasset 1972:124). The ability to “think like a duck” (fox/ quail/racoon/bear/squirrel/railbird/or deer), necessary for successful hunting, lends itself to the formation of human identity. As James Fernandez argues, in order to gain identity, humans must first “become objects to themselves, by taking the point of view of the other,” before they can become subjects to themselves” (Fernandez 1983:35). Animals provide what he calls primordial metaphors. In line with “taking the animal other,” hunters often sport images of their quarry on caps,

bumper stickers, mailboxes, stationary, and t-shirts. Regionally distinctive quarry thus become resources for regional identity.

Though deemed avocational, hunting is cast as a true career through language. Hunters speak of the “calling” that continually draws them into a world that takes a lifetime to complete. In some traditions, hunting practices mark the transition from one stage of life to another. A boy killing his first buck may be ritually sprinkled with the animal’s blood, while hunters past their prime commonly eschew killing, having proven themselves in youth and mid-life, as multipronged buck “racks” mounted over domestic hearths attest. Mock shaming rituals keep the pressure on those not old enough for this dispensation. A hunter smitten with “buck fever” may be conscripted into the “shirttail club,” whose members are required to yield up a shirttail for failing to shoot at a deer within range or for firing and missing.

The recurrent aspects of hunting provide continuity over long lives and offer elderly hunters an organizing principle for their life stories. A famous example is Siegfried Sassoon’s *Memoirs of a Foxhunting Man* (1944), but examples abound in sportsmen’s magazines (such as *Hunter’s Horn*, which Duncan Emrich once said deserves a spot on every folklorist’s bookshelf), as well as in memoirs, written and tape-recorded for posterity (Hufford 1992). In these stories, a normative pattern of maturation emerges, as the autobiographer details the mastery of tradition and the concomitant molding of a disciplined, other-centered sportsman from a self-centered youth eager for trophies of conquest.

The world of hunting is a potent conversational resource, engendering sociality among hunters away from the field. Through narrative, hunters constitute a world in which they appear as characters who exercise sportsmanship and fellowship (or whose exercise of sportsmanship is vigorously debated by those present at the storytelling.) This fellowship is generally a fellowship of men, shaped through conversational practices in which quarry are not the only tricksters. Positioned at the margins of everyday life, the sociality of hunting conjures a prankish milieu in which men trick each other. Just as the sociality of men hunting includes a fair amount of teasing and practical joking, so does the sociality of hunters narrating, telling stories termed “lies” because exaggeration is expected. Tall tales, such as “The Wonderful Hunt” (Tale Type 1890), constitute a form of practical joke designed to dupe the gullible hearer. As the hunter in the story may get the better of a colleague, or as an animal pulls one over on a human, so the narrator hopes to bag his listeners, who must in turn be “good sports” about being “taken in.” On the other hand, pranksters and liars are expected to exercise restraint and not take undue advantage of the unsuspecting. Thus, the necessary exercise of sportsmanship in dealing with animals spills over from narrated worlds into human affairs.

Hurston, Zora Neale (1891–1960)

Anthropologist, essayist, novelist, dramatist, and folklorist who played a major role in compiling and analyzing African American and Afro-Caribbean folktales. Born January 7, 1891, in Eatonville, Florida—the first incorporated black township in the United States—Hurston enrolled at Howard University in 1918. Her first published story, “John Redding Goes to Sea,” appeared in the Howard University literary magazine *Stylus* in 1921. In 1925 Hurston moved to New York City, where she became a part of the Harlem Renaissance movement and entered Barnard College. She earned her B.A. from Barnard in 1928, and continued her studies at Columbia University under anthropologist Franz Boas. It was Boas who encouraged her to return to the South to collect folklore, with funding from New York socialite Osgood Mason. *Mules and Men* (1935) is a representative collection of materials she gathered in Florida and Alabama between 1929 and 1931. It also includes a revised and expanded version of Hurston’s celebrated essay “Hoodoo in America,” which had appeared four years earlier in the *Journal of American Folklore* (44:318–418). *Mules and Men* illustrates its author’s concern for what Henry Louis Gates termed “the figurative capacity of Black language” (Gates 1990:294) a concern reflected in all of Hurston’s books.

The year 1937 saw the publication of her most critically acclaimed novel, *Their Eyes Were Watching God*, considered an accurate and insightful depiction of African American folk beliefs, manners, and speech patterns of the period. This was followed in 1938 by a collection of folktales from Jamaica and Haiti entitled *Tell My Horse*. Part travelogue, part ethnography, *Tell My Horse* provides a detailed and vivid description of the ceremonial aspects of voodoo, with special attention to the role of spirit possession. *Tell My Horse* also stands as one of the most engaging and accessible introductions to Haitian voodoo.

Commissioned by her publisher, J.P.Lippincott, her autobiography, *Dust Tracks on the Road*, appeared in 1942. It has been suggested that this book may contain as much folklore as biography. For example, Lillie P.Howard points out that there is considerable speculation as to whether she even gives her correct date of birth (Howard 1980:13). Nevertheless, always the ethnographer, Hurston in *Dust Tracks on the Road* successfully positions herself as a mediator between the Black folk community and her largely White reading audience. She masterfully represents herself within the context of African American folk traditions.

Her last novel, *Seraph on the Suwanee*, which dealt with psychological and emotional problems of a working-class Southern White woman, was published in 1948. Biographers have noted that Hurston’s career declined precipitously thereafter. In the 1950s, she worked as a librarian and a maid before suffering a serious stroke in 1959. She died in obscurity on January 28, 1960, at the Saint Lucie County Welfare Home in Fort Pierce, Florida, and was buried in an unmarked grave.

Hyatt, Harry M. (1896–1978)

Folklore collector and Episcopal clergyman. Hyatt was the son of an Illinois state senator and grew up in Quincy, Illinois, on the Mississippi River across from Hannibal, Missouri.

After advanced religious studies at Oxford University, Hyatt became interested in missionary work and produced a scholarly text on the Coptic Church of Abyssinia in 1928. His wife, Alma, a prominent businesswoman, supported his in-

*Zora Neale Hurston in 1938. Photo

Congress.*

terest in folklore fieldwork. With the help of his sister Minnie, who lived in Quincy (Adams County), Hyatt began the regional folklore collection that he hoped would exceed the 4,000 entries in a similar Kentucky work. The first edition contained 11,000 entries, while the revised edition contained more than 16,000 items, an effort folklorist Richard M. Dorson described as the most intensive single collection of American superstition.

From 1936 to 1940, Hyatt collected materials in the Eastern and Southern states on hoodoo, conjuration, witchcraft, and rootwork. The hoodoo collection involved beliefs in witchcraft predominantly among African Americans, and it included interviews with nineteen hoodoo doctors and more than 1,600 informants. The five-volume collection, based on more than 3,000 recording cylinders, is more than 5,000 pages in length (Hyatt 1970–1978). Dorson described this collection as the greatest feat of collection in African-American folklore.

Hyatt received many honors, including appointment as an officer of the French Academy. He expressed great pride, as a nonacademic folklorist, in his recognition, in 1972, by the American Folklore Society for his contributions to folklore fieldwork collection.

I

Immigrant Folklore, Study of

Study of the importation of folk traditions by foreign nationals who immigrate to the United States, settle, and form their own communities. As Andrew M. Greely observes, “the immigrants brought many pieces of cultural baggage with them when they came to the New World. Art, political styles, religious perspective are but a few such pieces. But none was as important as the ‘how’ of being a family. It provided a stable continuous pattern of development in the new surrounding” (Greely 1974). As part of this cultural baggage, old-country folklore becomes crucial to the foundation of New World settlements; it is intimate, like a family, and it allows the foreign-born pioneers to establish their new national identity model and pass it on to their American-born children.

Immigrant folklore is distinguished from the folklore of earlier English, Scottish, German, French, and Spanish colonists who populated large regions of the American continent between 1607 and 1850; these earlier pioneers were culture builders on uninhabited virgin land that inspired them to create their own regional dialect of a commonly formed basic American folklore. But the immigrants who streamed into the United States in masses from impoverished countries of Europe and Asia after the Civil War, and who kept coming until World War I, landed on civilized grounds and sought employment in the labor forces of established cities, industrial areas, and rural areas. Under such conditions, their folklore developed betwixt and between the mainstream in small enclaves close to the workplaces where the processes of transgenerational transformation passed through the ethnic stage and ended up in cultural integration, persisting only in a “symbolic ethnicity” (Gans 1979) of personal choice, thus conforming to the governmental “melting pot” policy of the time.

Mass immigration to the United States uprooted bankrupt small farmers and farm workers from their peasant existence in Europe. Their exodus coincided with the introduction of large-scale commercial farming and the construction of cities and heavy industry where they found employment. Immigrants’ success depended on their ability to adjust to new labor conditions and to the multinational environment; they had to adapt to a lifestyle suitable for establishing social relationships. The immigrants’ cultural knowledge—peasant self-sufficiency, worldview, and oral and ritual artistry—helped them to cope in the new situation, but at the same time it prolonged their reliance on a heritage that kept them alienated from their homeland and isolated in their new colony from other colonists. As Oscar Handlin aptly observed, the immigrants knew “...they would not come to belong.... The only adjustment they had been able to make to life in the United States had been one that involved the separateness of their group, one that

increased their awareness of the differences between themselves and the rest of the society” (Handlin 1951:285).

The folklore of the immigrant generation, disjointed bits and pieces of an archaic cultural system, since the 1880s attracted the attention of American folklorists as fascinating and exotic. Items of foreign origin surviving in American towns keep appearing on the pages of folklore journals up to this day, and they cover a broad field. Superstitions, curses, magical medicine, evil-eye beliefs, witchcraft, weatherlore, proverbs, riddles and nursery rhymes, stories and myths, customs and rituals (weddings, baptisms, and funerals), celebrations of holidays (such as Easter and Christmas) abound. Scholarly presentations of arts, crafts, and costume could fill volumes, proving the continued interest in the folklore repertoire of the unacculturated alien population. However, the contents of most of the so-called “memory culture” items in folklore collections remain unrepresentative of either the old or the new country; rather, they are evidence of alienation from both. One example is the collection made from a Finnish immigrant woman from Vermont, who after forty-three years in America told her stories for the first time, upon direct questioning by the folklorist (Kongas 1960). Another example is that of a traditional Macedonian *guslar* (singer of epic verse) in Gary, Indiana, who recited his lengthy epic at a Croatian *tamburitza* festival while eager young dancers barely concealed their disdain. On another occasion, a seventy-four-year-old east Chi-

cago woman, president of the Ladies Aid Society of the Hungarian Reformed Church, remarked, "I am a guest in America for sixty years."

Yet, the heritage of an imported folklore residue of immigrants must determine the future formation of the folklore of American ethnic subcultures. It also determines either the survival or the demise of ethnic identity. Greely and William C. McCready's investigation of the persistence of Old World cultural heritage among children and grandchildren of Irish Catholics and Italians goes back to the roots of the traditions. They argue that the present behavior of American ethnic groups would be difficult to understand without knowing something about the cultural background of their country of origin (Greely and McCready 1975:229). A field study of a Hungarian farming

community founded ninety-four years ago on the Great Plains, by settlers from two different regional subcultures in the old country, showed that loyalty to different regional identities rather than to the common national one can maintain long-term hostilities and lead eventually to assimilation (Dégh 1980).

The flow of peasant immigration from Europe and Asia was stopped by World War I, but new waves soon followed as new political and economic conditions forced people to leave their countries of origin and seek their fortunes in North America. Emigrants and exiles came from all over the world, so that the earlier argument for the dominance of Europeans in the racial-ethnic composition of Americans had to be reconsidered. Likewise, the Anglo-centric cultural model changed to recognize multiculturalism. Over the last decades, the schedule of immigrant timetables accelerated as the number of arrivals grew, and the speed of transgenerational acculturation began to change. New population groups keep showing up on the borders of the United States almost daily, seeking admittance to a safe haven and deliverance from political upheavals, "ethnic cleansing," genocide, and hunger. In the 1990s, Asian, South American, and African immigrants outnumber European arrivals, and under given conditions their adjustment to American life is smoother and faster than that of their European predecessors.

The latest wave of immigrants skipped the bird-of-passage stage and settled for good from the start. They may form large self-contained urban or suburban settlements where their native language, religious philosophy, and imported cultural values may be maintained. An informed public may support continuation of the immigrants' heritage. The ideological spheres of folklore are manifested not only in private, but also in the public representation of identity via spectacular customs, rituals, and artistic displays aimed partly at the outside world. This is a far cry from the situation of groups such as unskilled European laborers in the West Virginia mining towns, or workers in the company towns of the Midwest. We cannot yet measure the transgenerational ethnic process of acculturation of the folklore of current immigrants to mainstream America, because time has been too short to judge the future.

Each wave of immigration and each category of arrivals need to be examined separately, considering the origin, culture, and status of the immigrants, the motivation for their immigration, and the intercultural contacts they make in their settlements. Changing governmental policies toward immigrants have greatly influenced retention or extinction of imported folklore. The masses of peasants arriving at the receiving port of Casde Garden in the 19th century, and later at Ellis Island, were regarded as inferior aliens—"illiterate peasants who differ greatly in enterprise and intelligence from the average American citizen," wrote one observer in 1907, adding that they settle "in communities by themselves, where they continue to speak their native languages and are slow to assimilate American ideas." Governmental agencies always saw these miserable creatures as candidates for happiness in the new country, depending upon their ability to assimilate. Schools for immigrants were established, in hope of soon helping them forget the tortured memories of their homes of birth and embrace the opportunity to become Americans fast. So-called "International Institutes," founded in the 1920s and 1930s in large industrial cities, receiving great numbers of immigrants were the only government-sponsored organizations that encouraged folk-art programs. These had the purpose of stilling the pain of homesick immigrants. In the early 1970s, following the civil rights

movement, the tide turned from speedy enforcement of acculturation toward a politically conceived multiculturalism.

The idea of a “nation of immigrants” became the leitmotiv for Washington’s celebration of America’s Bicentennial in 1976, with the attendance of all contributing nations. In preparation for the program of “Old World—New World” unity, the Smithsonian Institution hired trained folklorists to collect folklore materials from ethnic American communities (the New World) in order to provide for the performance of spectacular programs or exhibits and demonstrations of arts and crafts on the National Mall. The Smithsonian also invited folk-art ensembles from the countries of origin (the Old World) in order to renew ties between compatriots on American soil in front of a national audience. While new fieldwork enriched archival holdings, creating a gold mine for future research, it did not induce innovative scholarly study of immigrant and ethnic folklore, and it did not generate any new theories. Instead, it opened the way to public-sector propagation of folklore, turning traditional performers into merchants of heritage, functioning to entertain a nostalgic urban-industrial audience that eagerly consumed defunct folkloric symbols of the past in abstracted, condensed, and simulated forms on the stage. The 1976 Washington festival started the series of summer folklife festivals sponsored by the Smithsonian Office of Folklife Programs. It is no longer limited to immigrant folklore, but the original idea behind the program has not changed. The aim is still to present the life of the American folk—natives, races, regionals, ethnics, and immigrants together—following the politics of multiculturalism. The high rating of the recently arrived immigrants’ imported folklore—that of the Hmong, the Vietnamese, Cubans, the Yuruba, and Bosnians, for example—may help extend its lease on life, with the assistance of the American Folklife Center’s team of folklore fieldworkers and managers.

European scholars saw America as a relic area where foreign nationals, detached from their mother culture, would be able to preserve long-forgotten treasures of their homeland. Between 1916 and 1918, Cecil Sharp visited the southern Appalachian region in search of surviving British balladry. He “often pictured in imagination what it would have been like to have been born a few centuries earlier, when English folksong was the common musical expression of old and young alike. And it seemed almost like a miracle when he discovered that England of his dreams in the United States of America...” (Karpeles 1967:140). In 1962 Norwegian folklorist Reidar Christiansen noted that North America “consists of people from practically every European country.... All arrived with their store of tradition,” but they were “absorbed within a generation or two,” emerging as Americans two generations later (Christiansen 1962:15). He suggested that British tradition is fundamental to American culture, absorbing others, and that the English pattern appears to be the main strain in American folklore (Christiansen 1962:122–123).

American folklorists also accepted the characterization of American folklore as essentially *Anglo-American*, and they viewed the process of Americanization of aliens as assimilation to the Anglo-American model. Richard M. Dorson’s distinction between colonial, regional, and immigrant cultures remained consistent with the melting-pot idea, yet Dorson’s determination to find and characterize folklore in the urbanindustrial settlements of the Calumet region of the Midwest led him to experience a multicultural coexistence of ethnics with other entities, regional, racial, and occupational (Dorson 1981). Dorson’s description of the position of ethnic individuals within their groups, their

behavior, community involvement, and display of their identity in terms of their folklore opened new perspectives to immigrant folklore study in a multicultural society.

American folklore as a scholarly field emerged from European antecedents, borrowing and applying methods and theories to specific New World conditions. From a cultural-historical perspective, Dorson proposed a new field that studies folklore in emergence within the course of American history—a contextual study of “American folklore vs. folklore in America” (Dorson 1978). The outline of his proposal was provided in the chapters of his book *American Folklore* in 1959, and he established an innovative university curriculum at Indiana University to train specialists in that field and to have them test the validity of his assumptions in their term papers and doctoral dissertations. Dorson’s immigrant folklore was only a part of what he wanted to explore. The monographic studies Dorson directed between 1961 and 1977 researched folklore in the immigrant-community contexts of Greek, Finnish, Yiddish, Sephardic, Danish, Swedish, Ukrainian, Italian, Mexican, and Romanian settlements; they were conducted by native ethnographers—ethnic Americans and immigrants themselves. This innovative series had its own strengths and weaknesses. Lacking experience, linguistic competence, and a balanced familiarity with both Old World backgrounds and immigrant conditions, the authors were guided only by common sense and their findings. They highlighted the most conspicuous and most attractive features, finding almost incredible evidence of the preservation of archaic songs and customs. Yet, the variety of case studies revealed the differential roles that immigrant lore can play in the lives of the settlers. They also revealed that the maintenance of heritage does not necessarily foster ethnic survival, though invented identity markers may substitute for it in the construction of ethnic awareness by the first American-born generation. The questions that the studies raised opened vistas for the study of ethnicity: What motivates people to settle? What happens to the inherited tradition after they leave their country, settle in an unfamiliar place, learn a new language and new skills? How and in what ways can their imported anachronistic folklore be maintained after the passing of the first generation? What is the contribution of immigrant lore to an all-American folklore?

With reference to the study of acculturation and assimilation of immigrants and their descendants by anthropologists, sociologists, and historians, Stephen Stern reviewed the publications of Dorson, his disciples, and other folklorists up to 1975. Stern criticized them for focusing on the nature and function of the immigrant generation’s heritage and the potentials of its survival (Stern 1977). Calling this “survivalistic perspective” one that is “based on preconceived notions of what the materials of ethnic folklore studies were to be, namely Old World immigrant forms of expression,” Stern charged that researchers ignored the development of new forms and the creativity of American-born ethnics and idealized the importations from the Old World; any noticeable alteration, folklorists would refer to with terms like “demise” or “contamination” (Stern 1977:12). A misapplication of Alan Dundes’ “devolutionary premise” (Dundes 1969) was used to argue against the rigorous analysis of immigrant folklore—imported baggage that exhibited natural variations between devolution and revolution, contamination, revitalization, wear and tear. All folklore has its life trajectory from inception to high tide, ebb, and demise; at the end of the cycle, new forms emerge from the remains of the old. This is what Stern misconceives as survivalist belief, but the replacement of dysfunctional older forms is a natural and healthy process that opens the door for the

production of new folklore. This process belongs to the ethnic stage, not to the study of the immigrant generation. The student of immigrant folklore has to reach back to the roots of the immigrants' baggage and to experience and follow its functions within its own context and authority. Only such focused research can solidify the basis of studying the total cycle of the folklore process from immigration to ethnicity and integration.

Independence Day

National and state holiday celebrated each July 4 (hence often called “the Fourth of July”). The Second Continental Congress voted for independence from England on July 2, 1776. Two days later, the group ratified the Declaration of Independence, which John Hancock, president of the congress, and Charles Thomson, secretary, then signed. The first celebration of these events occurred on July 2, 1777, when Philadelphians sounded bells and lit bonfires and fireworks. Though contemporary sentiment favored retaining July 2 as the festive date, July 4 soon supplanted the anniversary of the actual vote for independence.

Factional displays by Republicans and Federalists marked Independence Day until about 1820, when observances shifted to nonpartisan celebrations of American freedom. That focus, though, yielded to increasing stress on recreation and amusement, manifested especially in noisy, dangerous fireworks. By the early 1900s, injuries resulting from fireworks had reached such proportions that Independence Day became known as the “Barbarous Fourth.” In response to what they viewed as degeneration of the holiday and to the growing presence of non-English-speaking immigrants, reformers successfully shifted the emphasis to a generalized Americanism, which foregrounds points of common concern across partisanly political, ethnic, and regional lines.

The federal government and all of the states and territories recognize Independence Day. Public observances usually feature parades, martial music, decorations using national colors and symbols, bell ringing, fireworks, and speech making. Precedents for these activities may be found in mid-19th-century celebrations such as those in frontier Nebraska. These might begin with a dance on July 3. Another dance—this one outdoors—took place on the afternoon of the Fourth itself, with still another scheduled for the evening. The day commenced with bell ringing and fireworks, and a mid-morning parade with military escort set an appropriate

*Independence Day Parade. Mayville,
North Dakota, 1908. Photo
J.C.Jansrub. Library of Congress.*

tone. In addition to orations on patriotic topics, the morning's schedule might include vocal soloists and a reading of the Declaration of Independence.

In addition to dancing, the afternoon program, which followed an elaborate feast, usually featured ball games and horse races. Other competitions included three-legged races, potato races, sack races, and greased-pole climbings. Perhaps a picnic would conclude the daylight festivities before more dancing began, which could last until the next morning.

Family-oriented celebrations of Independence Day, which lack overt patriotic trappings, involve trips to recreational areas such as lakes or parks. Picnic menus include foods (for example, hamburgers and hot dogs) easily prepared on outdoor grills, summertime beverages such as lemonade and beer, and handcranked ice cream. In addition to gossip and storytelling, celebrants may use the day for swimming, fishing, or informal sports such as softball. Neighborhood observances and block parties often center on collaborative meals, each household providing a dish to be generally shared. Frequently, family and neighborhood gatherings adjourn at dusk so that participants can watch community-wide fireworks displays.

Independence Day festivities often evince distinctive ethnic or regional flavors. Italian Americans, for instance, may stage bocce tournaments. Western communities schedule rodeos for the date. Native Americans are likely to hold powwows and other events reflecting tribal or pan-Indian identity on July 4.

Index of American Design

A collection of approximately 22,000 renderings of objects of folk and popular manufacture made before 1890, housed at the National Gallery of Art in Washington, DC. Many works of folk art and craft can be viewed there in the form of highly realistic watercolor renderings. The Index of American Design was one of the many innovative projects sponsored by President Franklin D. Roosevelt's New Deal, and when proposed in 1935 it was suggested that, in addition to employing hundreds of out-of-work draftsmen, the Index would preserve a record of past American achievement, inspire new design, and serve as a reference work for scholars. However, the project proved to be most successful mainly as an unemployment relief effort.

Because Index administrators fell far short of their anticipated goal of 100,000 images, they never made any serious moves toward assembling the numerous illustrations into the authoritative encyclopedia on early American material culture that they had promised. Furthermore, initial claims of high scholarly standards and a keen focus on interpretation were . relinquished when Constance Rourke, then one of the country's foremost cultural historians, was dismissed from the project's administrative staff in 1936. The Index was then transformed essentially into an exercise in fine-art skill and collector taste. Index plates were selected principally on the basis of their appearance, and little attention was paid to the social or historical relevance of the object depicted. Consequently, coverage of many genres, media, technologies, regions, social and ethnic groups, and periods is, at best, spotty. While the images in the Index of American Design are often beautiful to look at, they reveal more about New Deal artists than they do about the history of American folk art and craft.

Irish Americans

Descendants of those who made up the earliest major U.S. immigrant group; their lore and traditions; stereotypes of them. Ireland's exceptionally rich folklore tradition was revitalized in the late 19th and early 20th centuries by a vigorous nationalist movement and literary revival. Little rural Irish folk tradition carried over into the Irish American context, however, except as a kind of quaintness—shillelaghs and leprechauns decorating St. Patrick's Day cards, for example, or a few items from the originally extensive stock of Irish proverbs, toasts, and blessings. Probably the most famous examples of the latter are "May you be in heaven a half-hour before the devil knows you're dead," and the longer one beginning "May the road rise with you and the wind be always at your back"

The Irish in America have retained a remarkable degree of ethnic identity and communal tradition based largely on the surviving racial memory of Ireland itself, which remains a kind of mythic, pastoral homeland in the group's consciousness, even for generations who were not born there and who, for the most part, have never even visited "the old sod." Much of the Irish American cultural identity was centered in traditional Roman Catholicism, however, and in the old stable neighborhood structure of the American city, neither of which are any longer a significant cohesive influence. In the late 20th century, the group is having to remind itself of its kinship and traditions in order to rekindle its sense of Irishness and to avoid disappearing further into American mass culture. Consequently, there is a trend among Irish Americans to take whatever small measures they can to reinforce their traditions—sending their children, especially daughters, to Irish step-dancing classes, for instance. And there is a greater tendency than formerly to drink Guinness Stout, the Irish national brew. Once available only in a few big city bars, it is now popular enough to be nationally distributed. The Irish American Cultural Institute, headquartered in St. Paul, Minnesota, is one of a number of organizations working for the preservation of Irish American ethnic tradition. The institute publishes a quarterly journal, *Eire-Ireland*.

In the 1990 Census, roughly forty million Americans, one out of six, identified themselves as having some Irish ancestry. For many the Irish connection was immediate and clear; for others it may have been remote, guessed at on the basis of a surname or word-of-mouth family tradition. The likelihood of a contemporary American's having Irish forebears is considerable, given the historical fact of extensive Irish immigration to America, particularly in the 1820s through the 1850s.

There was significant earlier immigration, however, voluntary and forced, as far back as the American colonial period. The 1630s through the 1650s were decades of extraordinary political upheaval in Ireland, of devastating British invasion, and a great many Irish refugees were shipped to work as servants on American plantations. Many others were exiled into penal servitude in the West Indies, from where they ultimately made their way to the Carolinas. (An enduring anti-British sentiment has been a defining trait of Irish American culture, especially up to World War II.)

During the same period, and through much of the 18th century, there was a second major immigration, this time of Ulster Presbyterian Irish (largely of Scots ancestry), the stock from which many notable later Americans derived, William and Henry James, Andrew Jackson, and Stephen Foster among them. (Foster's bittersweet, nostalgic songs, it is often pointed out, markedly reflect the influence of Thomas Moore's *Irish Melodies*, and in 1828 Jackson was hailed as the first Irish American president by Catholic and Protestant Irish alike.) The northern Irish settled mainly in the Southern Atlantic colonies and eventually moved, along with much of the earlier Irish population of the area, west into the Appalachian Mountains and heavily into the Southern and border states. The term "hillbilly," in fact, is thought to have been coined with reference to the Appalachian Ulster Irish, many of whose folk songs celebrated "King Billy" (William of Orange), the popular Protestant Irish hero whose forces defeated those of the Roman Catholic James II at the historic Battle of the Boyne in eastern Ulster in 1690.

These early Irish Americans constitute a people of notable folkloric importance, a primary influence on Southern and mountain culture. Their influence in the area of traditional music has been widely remarked by music historians. Standard Southern string and bluegrass numbers frequently represent variations on traditional Irish jigs, hornpipes, and reels, and bluegrass fiddling clearly harkens back to the Irish country music brought to America by these early settlers—as do the related dance forms. The American folk tune "Cotton Eyed

Irish Americans enjoy a ceili at the Garden of Eden, Bogan High School, Chicago, 1977. Photo Jonas Dovydenas. American Folklife Center.

Joe,” for instance, is a variation on the Irish tune “The Mountain Top,” and the Irish “Battle of the Boyne” became “Buffalo Gal.” The extent of this influence was commented on at the Grand Ole Opry’s sixtieth anniversary celebration by Ricky Skaggs, who had just returned from an Irish tour (McWhiney 1988:120–122). Such borrowing continued through the Civil War—“When Johnny Comes Marching Home Again” is a cheerful reworking of the mournful Irish folk song “Johnny I Hardly Knew Ye.” Still later, the Irish, a significant portion of the U.S. frontier troops, transformed the lively Irish jig “Garryowen” into the stirring march that became the Seventh Cavalry theme.

Most often when the term “Irish American” is used, it is with the American Irish Catholic population in mind, the descendants of Irish immigrants who came in great waves to America especially during the potato famine of the mid-19th century (two million arrived between 1840 and 1860). Irish American culture is also typically thought of in terms of its urban expression—associated with Boston, Philadelphia, Chicago, and New York in particular (26 percent of New York’s population in 1850 had been born in Ireland). The American Irish population has always been much more dispersed than that; early on, New Orleans was an Irish port of entry second only to Boston, and canal, mine, and railroad work particularly led a great many to the Midwest and West (“In eighteen hundred and forty-one/I put me corduroy breeches on/I put me corduroy breeches on/To work upon the railway” went one American Irish worksong). Still, the major cultural focus has, in fact, historically been urban in character.

The typical immigrant’s agricultural experience in Ireland had often been unpleasant, associated with tenant farming or sharecropping on rather meager plots. As a result, the Irish often tended not to be drawn to farming as a way of life in America. The inclination of so many Irish to cluster in Northeastern cities can also be ascribed to a kind of sea mystique; many were loath to settle very far from the ocean, a great reminder of home for these North Atlantic island people. Gathering at the oceanside (New York’s shore at Far Rockaway, for example, was known as “the Irish Riviera”) was a kind of folkcultural imperative that went beyond the obvious recreational considerations. Saltwater’s healing qualities were highly touted by the Irish—the virtues of eating kelp and periwinkles, for instance—as were the agricultural virtues of seaweed. Families often brought seaweed back to the city from the beaches for use as fertilizer in their urban gardens, a carryover from the farming tradition in Ireland.

The significance of the enormous Irish Catholic influx into the United States was not lost on the native WASP (White Anglo-Saxon Protestant) population, whose reaction was decidedly negative and sometimes even violent. (The designation “Scotch-Irish” gained currency at the turn of the century in the United States as a code word whereby Protestant Irish could identify themselves as non-Catholic.) The burning of an Ursuline convent in Charleston, Massachusetts, in 1834, the later Philadelphia and Louisville anti-Irish riots, and attempts to set Lowell and Lawrence, Massachusetts, Irish Catholic neighborhoods afire in the 1850s were the most visible and dramatic expressions of WASP American anti-Irish bigotry. For a long time, tales of these events, as well as of the potato famine itself and the notorious “No Irish need apply” notices that accompanied newspaper job ads in the 19th century, were part of this ethnic group’s oral tradition. They reminded younger Irish Americans of where they had come from, tending to make them cognizant

of each step in the group's remarkable political and social ascendancy (John F. Kennedy and Grace Kelly being the culture's particular exemplars in that regard).

On the other hand, the Irish adapted extraordinarily well to American life. Speaking English as their first or at least second language as a rule—those who spoke Irish abandoned it perforce early on—and not being notably “foreign” in appearance were advantages. Their exemplary service and high casualties in the American Civil War helped a great deal. (In fact, the most compelling images we have of that war were recorded by an Irish American photographer, Matthew Brady, and the most renowned American sculptural works of the same era—statues of Lincoln, Farragut, Sherman, and others—were those of the Irish-born Augustus Saint-Gaudens.) Mainstream American culture was eventually somewhat taken by “Irish charm,” a process helped along by the extensive Irish American stage and music-hall presence epitomized by George M. Cohan. During the same period, two Irish Americans, Mack Sennett and Hal Roach, were creating American silent-screen comedy virtually by themselves.

A certain Irishness eventually became part of the popular culture—reflected over the years in songs like “I’ll Take You Home Again Kathleen,” “Peg O’ My Heart,” and “When Irish Eyes Are Smiling,” in parish-life movies of the 1940s like *Going My Way* and *The Bells of St. Mary’s*, or the long-popular Sunday “Jigs and Maggie” comic strip, *Bringing up Father*. Even the once abundant “Pat and Mike” jokes were generally rather benign, not intended as ethnic slurs. And as early as the late 19th century, Currier and Ives issued a series of Irish landscapes among their otherwise exclusively American ones, an indication of how much an element of Americana the Irish had already become.

But the American Irish also resisted assimilation. Their early experience of prejudice made them somewhat guarded and determined to look out for themselves. They maintained a kind of folk network whereby new arrivals were assisted in finding positions on the police and fire departments, trolley lines, and in the railroad yards and post offices of the major cities. It was a network that typically began with young single women coming to the United States (700,000 between 1885 and 1925 alone) to work as domestic servants, establishing living quarters, and then sending money home to bring their brothers, sisters, and cousins over. From this base, Irish Americans made it their business to master American city politics in a way no other ethnic group was able to do, to the point that they became synonymous with the urban political “machine” and the era of the big-city bosses and legendary mayors, most of whom were folk heroes in Irish American neighborhoods—James M. Curley in Boston, “Honest John” Kelly and Jimmy Walker in New York, Richard J. Daley in Chicago, Tom Pendergast in Kansas City, and so on. From there, they moved to the national political stage, and by 1961, a watershed year, the Irish American presence in national politics was so extensive that members of this ethnic group occupied the presidency itself as well as the posts of attorney general, Senate majority leader, House majority leader, and Democratic national chairman. Even into the early 1990s, the House majority leader, Tom Foley, was an Irish American and the Senate leader, George Mitchell, was the grandson of an Irish immigrant on his father’s side.

As noted, Irish Americans invested an enormous part of their cultural energies in the traditional Catholic Church. The Irish Catholic parish was a mainstay of their ethnic identity. The parish structure complemented, and was to some extent continuous with, the neighborhood-based Irish political structure in the cities. The Catholic Church in

America, once the great Irish immigration of the 1800s was accomplished, became an essentially Irish American institution. The Irish took great pride in that fact, as well as in the educational system they were instrumental in building, one that soon ranged from quality parish schools to first-class universities nationwide. Much of the American Irish cultural identity derived from the group's having in common an elaborate, ornate, highly ritualized, and hierarchical religious life, one that differentiated them radically from the Protestant mainstream culture. (Protestant Irish Americans, by contrast, tended to be quickly assimilated.)

A good deal of Irish American folk culture, too, stemmed from the community bonds, the group ties forged and reinforced by a body of shared cultural-religious references—a complex system that included holy days, indulgences, confession, fasting, and what, to outsiders at least, was a female deity. The rigorous and puritanical Catholic school system provided a tradition of “war stories,” usually based on Irish Catholicism’s rather severe sexual prohibitions. Perhaps the best known of such tales is that the nuns would prohibit girls from wearing skirts with patent leather shoes lest the shiny black surface might serve to mirror their underwear. Another is that the nuns would circulate among “dancing” couples at grade- and high-school dances insisting that the pairs leave “room for the Holy Ghost” between them. Some contemporary stand-up comics—notably, George Carlin—still use such material based on their experiences in an Irish Catholic school environment.

Part of the considerable Irish presence in sports derived from the Catholic connection, too—University of Notre Dame football, from its earliest days, has served as a focal point of Irish American sports legend (though due to Notre Dames image as a megapower of almost professional status, some of that allegiance has fallen to another Irish Catholic institution, Boston College). The religious connection resonated in various ways locally, too. In Chicago, for instance, the allegiance of Irish Americans for a long time was to the White Sox, founded by Charles Comiskey, one of their own, as against the “Protestant” Cubs founded by a WASP, Phillip K. Wrigley. But the American Irish presence in sports has been remarkable even aside from the Catholic context. They, along with German Americans, dominated the early days of American baseball history; it has been pointed out that the Mudville nine roster in “Casey at the Bat” (1888), for example, is a markedly Irish one: “Casey,” “Cooney,” “Flynn,” “Jimmy Blake” (McCaffrey 1992:26–27).

And Irish Americans at one time dominated boxing in all weight classes, almost to the degree African Americans have in the late 20th century. John L. Sullivan, the first great Irish American folk hero, won his heavyweight bare-knuckle title from the Irishman Paddy Ryan, fought his most famous defense against the Irish American Jake Kilrain, and ultimately lost the title to the Irish American Jim Corbett. Two other epic moments in Irish American boxing lore, both rehearsed endlessly in neighborhood bars for decades, were the Dempsey-Tunney “long count” bout (though both fighters were Irish Americans, Tunney, being Catholic, was the ethnic favorite here) and the first Billy Conn-Joe Louis fight. Louis had won the title from the Irish American Jimmy Braddock, and Conn appeared to be taking it back into Irish American hands as he had Louis badly beaten for twelve rounds. But those rounds would mark the final end of the Irish heavyweight glory days: Conn walked into a Louis left hook in the thirteenth, and the lights went out.

Something of the 19th-century WASP anti-Irish caricature can be seen (though in a less mean spirited form) in a contemporary American ethnic joke like the following: "What is an Irish seven-course meal?" Answer: "A potato and a six-pack." Implicit in the joke, of course, is the image of the Irish as drunken and devoid of cultural sophistication. It leaves out only a third element of the stereotype—that of the Irish as endlessly combative ("the fighting Irish"). It must be acknowledged that Irish Americans have sometimes nurtured these stereotypes themselves, allowing, for instance, St. Patrick's Day, for the most part a quiet religious holiday in Ireland, to become an Irish American festival associated with alcoholic excess and embarrassing schlock such as green beer, "Kiss-Me-I'm-Irish" buttons, and "Top o' the mornin'" T-shirts. Another example of the same sort of self-parody is the pugnacious imp, clay pipe in mouth, who decorates the Notre Dame marching band's bass drum.

Irish American cuisine is rather limited compared with that of some other American ethnic groups. Corned beef and cabbage is an Irish American creation, one unknown in Ireland itself, where corned beef is unheard of or occurs only as an unappetizing canned item akin to Spam. Corned beef and cabbage probably began as an Irish American variation on the common Irish meal made up of cabbage, boiled bacon, and potatoes. So-called "Irish stew" is likewise an Irish American creation, one substituting beef for lamb and employing potatoes to a degree the Irish do not in this dish. A predilection for oatmeal and for oats generally as the grain of choice was also traditionally characteristic of Irish American cooking. Daily consumption of many cups of strong tea was the rule in households for the first generation or two, but coffee generally supplanted it after that. Perhaps most notable among traditions carried over from Ireland, the closest thing to Irish American "soul food," is Irish soda bread. A simple, hardcrusted and delicious bread, it is made from buttermilk, raisins, baking soda, and flour (and sometimes caraway seeds). Irish grandmothers and mothers have traditionally shown their daughters how to make this bread (it is thought to be not easily transmittable via written recipe), and it is not uncommon for it to have survived three and four generations in a family. Irish American clubs in some cities still sponsor sodabread competitions.

Another way in which the American Irish have attempted to resist being entirely absorbed into American mass culture is through the employment of traditional Irish names in naming their children. Bridget, Eileen, Nora, Maureen, Deirdre, Cathleen, and Mary-Margaret, for instance, have been common for girls; Sean, Dennis, Patrick, Kevin, Brian, and so forth for boys. But these distinctly Irish names have been taken over by the American culture at large in many cases. Back in the 1960s, the name "Kevin," for example, was virtually a guarantee of its bearer's Irishness, not so in the 1990s. Irish Americans in recent years have sometimes gone to the unmistakably Irish name "Brendan" to mark their sons' heritage, but even that name has begun to be used more broadly and figures in time to lose its ethnic specificity, too.

Irving, Washington (1783–1859)

The most popular American author of the pre-Civil War era. Irving was born in New York City, the son of a Scottish father and an English mother. As a youth, he was an avid reader and a competent writer. Indeed, he was so skilled that he of-

Washington Irving. Engraving by James S.King (1852–1925). Library of Congress.

ten wrote compositions for his classmates in exchange for their help in solving his arithmetic problems, the latter a task that he detested. He was an adventurous youth, at fifteen exploring the Sleepy Hollow region that became the scene of one of his best-known stories. Two years later, he sailed up the Hudson River on his own voyage of discovery. Irving studied law in college, although he never seriously practiced that profession. At age nineteen, using the pen name Jonathan Oldstyle, he began writing newspaper letters, and two years later, in ill health, he began a two-year trip to Europe. After his return, with his brother William Irving and James Kirke Paulding, Irving started the periodical *Salmagundi*, modeled after Addison and Steele's *Spectator* and

Goldsmith's *Citizen of the World*. Some scholars believe that Irving's contributions to *Salmagundi* contain the germs of almost everything he did afterward.

In 1809 Irving's fiancée, Matilda Hoffman, died at age eighteen. Irving outlived her by fifty years, remaining a bachelor and reportedly carrying her Bible with him wherever he traveled. The year 1809 was also significant in Irving's life because his masterpiece, "Diedrich Knickerbocker's" *History of New York*, appeared that year. Ten years later, *The Sketch Book* (1819) appeared, containing "Rip Van Winkle" and "The Legend of Sleepy Hollow," his two most famous stories. And in 1822, *Bracebridge Hall* was published, followed two years later by *Tales of a Traveller*. Like *The Sketch Book*, these volumes contain short stories, essays, and sketches, many suggestive of the *Spectators* contents. These important books were all written while Irving was living in Europe, where he had moved in 1815. During his stay overseas, he lived in England and Spain, serving as secretary of the American legations in London and Madrid. By the time he returned to America in 1832, Irving had completed the major portions of his life's literary work.

Although Irving made extensive use of folklore in several of his major works, his concerted effort at collecting folklore was slight, consisting solely of noting popular sayings and beliefs wherever he traveled. He had some familiarity with American storytelling habits, but when creating fictional tales he relied as much on German, English, and Spanish folklore as on American traditions. For example, both "Rip Van Winkle" and "The Legend of Sleepy Hollow" are set in America, but their plots are largely derived from German sources. The former story was taken from narratives about Peter Klaus, and the latter was based on headless-horseman tales found in Johann Karl August Musaeus' *Volksmährchen der Deutschen* (German Folktales). Nevertheless, Irving was more than just a copier of narratives printed by others (although in his day he was accused of plagiarism); instead, he utilized his creative genius to make these tales his own.

The most important literary influence on Irving's use of folklore was Sir Walter Scott, whom Irving met in 1817 and who had impressed a generation of readers and authors both with his formal studies and collections of folklore and with his use of folklore in his fiction. Irving was one of Scott's earliest and most popular disciples. He was also acquainted with German folklorist Karl Bottiger, who often advised him on folklore topics. Irving's occasional use of Native American folklore in his writings has been overlooked by some critics but overestimated by others.

Italian Americans

Immigrants from Italy and their descendants; inheritors of Old World traditions who maintained and transformed their customary regional practices in the New World. Some Italian Americans see themselves as descendants of Romans and the Italians of the Renaissance. However, Italian immigrants brought to America their own folk traditions—rich customs that varied from north to south, province to province, and village to village. The immigrant journey was an odyssey of change and adaptation. Villagers moved beyond their regionalism to identify themselves in the United States first as Italians, then later as Italian Americans. Their traditional practices represent that cultural odyssey. Folk crafts and architecture, foods, wines, and stories, along with customary veneration of saints and other festivals, are prime markers of Italian American identity.

Italians have been in America since the time of Columbus. In the 16th, 17th, and 18th centuries, under Spanish or French companies, they sailed to the Western Hemisphere as adventurers, navigators, and cartographers. They came as fur traders, trappers, priests, and soldiers wandering the American wilderness. Alfonso and Enrico Tonti, at the end of the 1690s, were explorers who accompanied LaSalle. Enrico was known as “Iron Fist,” for the legend that arose about the iron prosthesis that replaced the hand he lost during an expedition

on the American continent. He was the second governor of a fort that eventually became the city of Detroit. Filippo Mazzei, a doctor, was a friend of Thomas Jefferson. Folk narratives observe his political influence on Jefferson and the American Revolution. These early Italians, while influential, were few in number and came as isolated individuals. Mass migrations did not begin until the 19th century. Between 1820—date of the first official American Census to count immigrants—and 1880, almost 50,000 Italians entered the United States. The peak period was between 1880 and 1920. More than four million Italians entered, more than any other European group except Germans, who came at about the same time.

Until 1880 almost all immigrants were from the richer, industrialized northern Italian provinces—Liguria, Lombardy, and Piedmont—attracted, for the most part, by the opportunities in the West. Among the immigrants were skilled craftsmen, small businessmen, as well as farmers, who brought their folk beliefs and customs and adapted

them to the new environment. While they came as individuals and families, in general there were not enough of them to support a Little Italy, a whole Italian quarter maintained by internal institutions. The merchants, tailors, lawyers, doctors, and so on arrived in the Eastern United States at a later date. Nonetheless, Italians imprinted their legacy on the West in such obvious industries as food and wine and left their marks on the landscape. Some came to the state of Washington and, using their village planting and harvesting techniques, cultivated a strain of onion renowned today as the Walla Walla sweet. Folk stories identify the local legendary character Pete Pieri as the Italian who brought the parent strain of the sweet onion from Corsica. Italians also came to Colorado, Utah, Wyoming, and Nevada to work as miners and charcoal burners. Some were involved in the formation of the miners' unions and joined the confrontations between laborers and owners. Since mining work was seasonal, Italian immigrants and their families survived by producing much of their food on their land, except for staple items like coffee and salt. They modified the uniform wheat and oat fields with Italian-style vegetable, spice, and fruit gardens that included zucchini, broccoli, garlic, oregano, and basil as well as peach, plum, apricot, and walnut orchards. They dotted the High Desert landscape with outbuildings behind the main house—chicken coops, rabbit hutches, goat and hog pens—to raise animals that they slaughtered and cured according to Old World recipes. They enacted other folk traditions by building canning sheds to preserve the vegetables they grew in conformity with ancient practice. They built outdoor domed brick ovens for baking bread like the ones found in Alpine Mountains.

Some immigrants went on to California to work as longshoremen and fishermen in the maritime industry or to purchase land near San Francisco to plant vegetables and vineyards. Originally, Italians ran these truck gardens and vineyards in the traditional way as family enterprises. On their property, some built finely crafted stone houses based upon the symmetrical three-part villas of northern Italy. Eventually, some of the farms and wineries grew to become large corporations, like Del Monte, Italian Swiss Colony, and Gallo Brothers, and realized the American Dream of success.

Other immigrants who went to the West ruptured the physical and occupational stereotypes surrounding Italian immigrants. Here were pioneers who became cowboys in Paradise Valley, Nevada, buckaroos who wore goatskin chaparajos and silver-mounted spurs. On quarter horses, they herded cows and carried sixty-five-foot rawhide ropes to lasso the animals. They spoke Italian at home, Shoshone with Native Americans, and English with other ranchers. They started out by building mud-and-willow prairie cabins to house their growing families. Eventually, they bought ranches and lived the immigrant dream of owning their own land. They became entrepreneurs and transformed themselves into the most vivid symbol of the American West, the cowboy.

After 1880, 80 percent of the immigrants were from the poorer, agrarian regions of south Italy—the *Mezzogiorno*: Abruzzo-Molise, Campania, Apulia, Lucania, Calabria, Sardinia, and Sicily. Almost all were *contadini* (peasants). While a few had owned land, the majority were sharecroppers and day laborers who saw themselves as no more than beasts, like mules or bison. They cursed the land that sentenced them and their families to live on the edge of starvation. What pushed more than 15,000 immigrants a day to America some years was the culmination of natural and social calamities in south Italy that smothered the peasant's will to continue *la miseria*—the unbearable pain of poverty and virtual serfdom that had been their legacy for hundreds of years. Excessive taxation

continued, as did the abuses by wealthy landowners and capricious local governments. In the end, it was the collapse of vineyards and silk crops, and the cholera epidemic of the 1880s, that finally drove many to emigrate.

More than 90 percent of Italians came in chain migrations, beginning with single males. One villager would find a job, then send back for family members or *paesani* (fellow villagers), who joined him for the work. Usually, single men came “as birds of passage,” living in inexpensive boarding houses, hoping to save enough money to return to Italy to buy and farm land and to reap the prosperity of ownership. Only after the first decade of the 20th century did intact families in great numbers make the journey. Italian immigrants then settled in Little Italies in large American cities, close to kin or *comareznnd compare* (friends through godparenting), *paesani*, and others from the same southern region. Approximately 70 percent of Italian immigrants settled in the Northeast, 16 percent in the Midwest, 10 percent in the West, and 4 percent in the South. In the 1990s, almost 90 percent of Italian Americans live in metropolitan areas.

South Italians carried their own regional traditions to the New World. *Campanilismo* is the term defining that ethos. It means that all of the important things in life lie within the sound of the village church bell. In burgeoning American cities like New York, Philadelphia, and Boston, immigrants transplanted their villages to urban neighborhoods, and *Campanilismo* thrived. The newly arrived joined settled *paesani* in congested flats, row houses, or tenements. They found work mostly as unskilled laborers in the expanding manufacturing, railroad, and coal industries in the East.

In Detroit men boarded crowded streetcars for the long ride to the Dodge assembly plant or the Ford Rouge plant. To pass the time, they joked and played the village game of *morra*, an intense contest requiring lightning reflexes and aggressive confidence. As two men stand face to face, each throws down one arm and extends any number of fingers, then guesses and yells in Italian the sum total of digits extended by both players. It is a game of strategy, and the best players display an esteemed trait in peasant culture—composure in the face of pressure. During hot summer evenings, women would sit on stoops in Chicago, Brooklyn, and elsewhere to gossip in familiar local dialects and share remedies for *malocchio* (the evil eye), the pervasive Mediterranean belief in the power of envy to control human destiny. For calendar holidays like Christmas and Easter, local Italian food merchants, like Giglio’s in Detroit and Termini’s in south Philadelphia, helped maintain the food practices of the Italian American community against impersonal commercial transitions. Familiar village foods, like *baccala* (cod), *prosdutto* and *capocollo* (ham), *soppressata* (sausage)—all *roba buona* (fresh food)—would be displayed with *cassata* and *sfogliatelle* (Sicilian and Neapolitan pastries). The neighborhood’s *Campanilismo* helped Italian Americans survive the upheaval of immigration and begin the process of acculturation.

While there are obvious deficiencies in seeing the village as the world, there are also many strengths. What sustained these immigrants as they uprooted themselves from the land, and cut the cords binding them to family, was their folklore. Oral traditions guided them through the trials of immigration as it had through transitions in the village. Folk stories—fairy tales as well as humorous anecdotes about priests, pretentious townfolk, and ignorant stepmothers—entertained and at the same time instructed the listeners, both children and adults, in how to deal with the dread of loss and the pain of rejection, how to summon the courage to confront fear, deception, and cruelty, all of these being universal

Old and New World experiences. The stories encoded the collective wisdom of the community and provided keys to solving the problems of daily living.

The story of "Little Peter," for example, was a popular one in Italian American communities. This tale is an example of a characteristic European narrative form—the *Märchen* (fairy tale). It has retained in the United States the stylistic and thematic features of the Italian original. This story represents the transplantation of an Old World tradition in the American context. Under various names, "Little Peter" is a folktale found all over the world, part of a cycle of narratives that involves a child encountering an ogre. The young boy Peter grows up impoverished in a household with only one parent—a common experience, as many mothers died in childbirth and fathers perished in accidents or were away working in another country. The story reflects the community's code for survival: respect and spontaneity. The plot turns on Little Peter's failure to listen to his mother. In the forest, he is trapped by a witch and thrust into a sack to serve as her dinner later that evening. Peter's quick wit, however, allows him to outsmart the witch and fill the sack with rocks. When the witch returns home, she and her husband gleefully empty the sack of stones into a boiling pot. The sudden splash of water causes the flames to leap to the witches' clothing and eventually consume them. Peter, who has been peeping down the chimney all the while, is elated. He takes the chest of gold from their house, returns to his family, and, like a respectful son, shares the wealth with his mother and siblings. The tale dramatizes for the audience the qualities that allowed Peter to deal successfully with a threatening situation, overcome his poverty, and live happily ever after.

In addition to the fairy tales, Italian Americans generated stories to combat stereotypes of themselves. Films have frequently portrayed American criminals as being Italian, and some newspapers and journals have depicted Italians as criminals and anarchists. Some epithets endure, such as "wop" and "guinea"; a cycle of "dago jokes" and numskull stories continues to circulate. One common figure is the "spaghetti bender," who offends others by emitting the strong scent of garlic or by consuming traditional holiday delicacies such as roasted goat's head and chicken-feet soup.

In opposition, Italian Americans tell stories about the culinary incompetence of traditional adversaries, such as the Irish in the East and the Mormons in the West. These stories deride the folly of substituting catsup for genuine tomato sauce and of determining when pasta is cooked by throwing a fork full of noodles against the wall. These anecdotes show that those who ridicule Old World village foods lack the culinary sophistication to produce dishes that excite the palate in dramatic textures, aromas, and tastes. In an ironic twist, pizza has "Italianized" Americans who have incorporated it into their national food repertoire. This peasant Italian food represents the ultimate assimilation of an ethnic tradition. Eating with hands from a communal dish, always on the edge of violating table etiquette—pulling too much hot melted cheese into strands that stretch like rubber—creates instant informality, affinity, and fun. Americans tend to include pizza affectionately in a range of social situations: as a main course in a casual dinner, as a way to get to know someone informally, as a way to celebrate important events. Even pasta has become an American institution. The late-20th-century popular trend to eat healthy foods has focused on pasta as a premier source of nutrition.

Another aspect of Italian American life is the public veneration of saints in festivals. St. Joseph's Day, a feast that originated in Sicily as a way to feed the poor, enacts in the New World the basic peasant theme of reciprocity, to render a gift for a favor. A

supplicant will petition the saint for a miraculous cure or for the solution to an overwhelming problem. In exchange the petitioner promises to build an altar of food as an expression of gratitude. If the petition has been answered, then on St. Joseph's Day, March 18, the supplicant displays in his or her home, after weeks of preparation, an altar containing an astounding abundance of meatless products. It is a fusion of Italian and American cookery—braided Easter breads, frittate (omelets), and *cannoli* (custard pastries), vying with non-Italian snacks like cherry winks, snarkles, and peanut butter cookies. In some cases, the host feeds 500 or more people. The veneration of saints in homemade altars renews ties with the past, with Italian American society, and now with the larger Catholic parish. In some communities, St. Joseph's Day altars have been adopted by other ethnic groups, who incorporate their own traditional foods in its display.

The most prominent and official Italian American festival is the Columbus Day celebration. Columbus Day is an icon for Italian Americans. It is both a national holiday honoring Christopher Columbus as an American hero as well as an Italian American festival celebrating Italian rather than village or regional identity. Many celebrations follow the tradition established by Italian immigrants of the past. In the morning is a Mass eulogizing the Italian navigator and his discovery of the Western Hemisphere for millions of Europeans. Then follows a parade of Italian American fraternal organizations and sodalities behind a float carrying a statue of Columbus. The speeches at the parade's destination, usually at an important civic location, follow the laying of a wreath at the monument by prominent Italians and political leaders. The festivities and the dinner afterward have helped bond the Italian American community and visibly proclaim their contribution to American society.

As Italian Americans assimilate into the middle class, much of their folk identity disappears. Whether, as some scholars argue, American ethnicity for those of European ancestry is in a twilight phase or whether ethnic identity is continually reinvented in consensual forms is an interesting academic question. There is a more personal issue, however. For Italian Americans, what remains after they have abandoned language, food, neighborhood, and religious traditions is a faint stirring in the heart of a world based on village and neighborhood culture. It is a view of life unfolding most humanely in the web of close relationships in the family and community, a web where people develop and mature not in the pri-vate space of solitude but along public lines in daily connections with others.

Ives, Burl (1909–1995)

Folksinger, actor. The son of Illinois tenant farmers, Ives learned traditional ballads from his grandmother, played banjo in high school, and built a repertoire of American song in the 1930s on an extended tramp throughout North America. Settling in New York City in 1937, he did stage and radio work until 1940, when CBS gave him his own show and the sobriquet “The Wayfaring Stranger.” From this show and his work in the Broadway folk cavalcade *Sing Out, Sweet Land* (1944), Ives became the best-known exponent of American folksong until the advent of the folksong revival in the 1950s and 1960s. With lively arrangements of such old-time numbers as “The Foggy Foggy Dew,” “The Big Rocky Candy Mountain,” and his signature tune, “BlueTail

Burl Ives in 1955. Photo Carl Van Vechten. Library of Congress.

Fly,” he fulfilled what he later identified as his life’s purpose—to promote the “shared heritage” of “native American folk music.”

Ives also achieved success as an actor and a country music singer. He won an Oscar for his work in *The Big Country* (1958), although he is better remembered for his screen portrayal of Big Daddy in *CatonaHot Tin Roof* (1958), a role he had created on Broadway in what critic Walter Kerr called “Rabelaisian contribution.” His country career peaked in 1962, with three songs topping the country charts, and “Funny Way of Laughin” earning a Grammy. Ives’ dedication to traditional song was also evident in his editing of several songbooks, including the popular *BurlIves Songbook* (1953).

He died on April 14, 1995, Good Friday, at the age of eighty-five.

Jack Tales

A cycle of long, fictional oral prose narratives focusing on the episodic adventures of a “youngest-best” teenage trickster-hero named Jack as he negotiates an ultimately successful quest for maturity and prosperity. A typical Jack tale begins with the unlikely hero leaving home either to escape mistreatment or “to seek his fortune.” Because he is either kind to a stranger or simply lucky, Jack acquires a magic object, supernatural ally, or supranormal skill that, when combined with his persistence, native wit, courage, creative imagination, ability to deceive, and propensity for attracting good luck, helps him perform a series (usually three) of seemingly impossible tasks or tests and conquer a formidable opponent. Having been rewarded with material wealth and, often, a beautiful wife, Jack returns to his home as an adult with elevated status in the community.

Jack tales originate from an international inventory of traditional narrative types and motifs, with American texts deriving generally from European stories about an ordinary young man—named Hans in Germany, Jock or Jake in Scotland, and Jack in England and Ireland—behaving heroically. In these stories, Jack is usually either a generic name for the protagonist or a boy characterized as a dependent, immature numskull. But in America, Jack became a cunning, self-reliant, occasionally amoral trickster, especially as he was conceptualized in Appalachia.

While early collectors uncovered Jack tales throughout the Eastern United States, including several from African Americans, the cycle eventually settled in Appalachia (especially in eastern Kentucky, southwestern Virginia, and north-western North Carolina), becoming consistent with that region’s folk-cultural worldview. Stories from the rich repertoire of the Hicks-Harmon families of Watauga and Avery Counties, North Carolina, were collected by Isabel Gordon Carter in 1923 and by Richard Chase in the 1930s and 1940s. Chase’s texts, which appeared in *The Jack Tales* (1943), *The Grandfather Tales* (1948), and *American Folk Tales and Songs* (1956), were actually composites, however, collated from several different performances and contaminated with Chase’s editorial changes and creations: words deleted and substituted, episodes added from other sources, and tides altered. Leonard Roberts, on the other hand, was a responsible folklorist who began collecting Jack tales in the mid-1940s in his native Kentucky, many of them from the Couch family in Harlan and Leslie Counties. In the early 1940s, James Taylor Adams and James M.Hylton recorded twenty Jack tales in Wise County, Virginia, as part of the Works Progress Administration’s (WPA) Virginia

Writers' Project, including several from Gaines Kilgore, that area's most active storyteller.

Chase's books were quite popular and have clearly influenced the repertoires of such contemporary narrators as Ray and Stanley Hicks, Maud Long, Marshall Ward, Frank Proffitt Jr., and Orville Hicks. But, in a sense, this borrowing from printed sources has always been a part of the folk process. Many orally performed texts are remarkably close to those in the Grimm brothers' collection, so it seems reasonable to assume that the ancestors of Appalachian performers—the Hickses, Harmons, Kilgores, and Couches—may have been familiar with the popular *Nursery and Household Tales*, which was first published in 1812 and went through numerous subsequent editions.

Jackalope

Mythical beast of the Great Plains and Rocky Mountains combining a jackrabbit's body with deer spike antlers or antelope horns. The jackalope is a favorite subject for picture postcards and, in its mounted state, as a taxidermist's joke, it is often found on barroom, filling station, or cafe walls in the Mountain-Plains region.

The origins of the American jackalope tradition are obscure, although much of the initial activity seems to have centered in Wyoming. The National Jackalope Society, based in Sheridan, sells jackalope hunting licenses and bumper stickers. Douglas, which boasts a large jackalope statue, bills itself as the "Home of the Jackalope," largely because two local taxidermists, Doug and Ralph Herrick, began to make and sell jackalopes in the 1930s. One of the earliest reports of a mounted jackalope is from a store in Buffalo, Wyoming, in the early 1920s. Legend credits the first sighting of a jackalope to mountain man Roy Ball, back in 1829.

The American jackalope is not unique; tales of horned rabbits have been collected in Africa, Mexico, and Central America, where a Mayan legend recounts how the god Chinax felt pity for the rabbit, who had been created with horns but had lost them to the trickster deer. In compensation the god stretched the rabbit's ears so that it could hear its enemies coming and enlarged its hind legs so that it could outrun them.

In Europe the *wolpertinger*, said to have been among the animals in Hannibal's menagerie, has long been a staple of Bavarian folklore. This creature, purportedly a member of the marten family, often has a rabbit or a weasel body with hog tusks, bird fore feet and rabbit hind feet, hawk wings, fox tail, deer antlers, and a coxcomb in the forehead. Saliva from the *wolpertinger* is said to stimulate hair growth, while impotence can be cured by sipping nectar through a *wolpertinger's* shankbone, then urinating across a stream against the current. Similar in appearance to the *wolpertinger*, the French *dahu* is often the prey in a practical joke, similar to an American snipe hunt, in which a credulous youth is taken into the woods on a winter night with a lantern, a sack, and a baton while his companions ostensibly go off to drive the *dahu* toward him but in reality repair to the nearest tavern.

Jackalopes are said to be extremely shy, but when stirred to anger they will charge viciously (at speeds in excess of 65 miles per hour) and can be brought down only with a buffalo gun. The warrior rabbit of Nebraska and South Dakota has pheasant wings and tail, in addition to horns. In the Southwest, the beast is often termed an "antelabbit," while in the North Woods it is called the "Jack-pine Jackelope." Jackalopes can mimic the human voice, early reports mentioning a French accent. They usually sing at night during thunderstorms, often echoing the songs of night-herding cowboys. Jackalopes mate only during flashes of lightning, and their milk, like patent medicine, is said to cure a host of afflictions.

Despite its fabulous nature, there is a basis in fact for the jackalope. A viral infection, Shope's papillomas, causes warty skin growths on cottontail rabbits. These growths,

physiologically similar to the outer sheath of the horn of a pronghorn antelope, sometimes resemble horns.

Jackson, George Pullen (1874–1953)

Collector and scholar of religious folksong. Professor of German at Vanderbilt University, Jackson discovered a rich body of music sung throughout the South and preserved in songbooks. He became the first major scholar to describe, classify, and trace the origins of this vast repertoire, originally in *White Spirituals in the Southern Uplands* ([1933] 1965), a study of shape-note hymnody.

His most controversial assertion—expressed in *White and Negro Spirituals* (1943) and elsewhere—opposed the prevailing theory of African origins by stating that “Negro spirituals” derived directly from “White spirituals” transmitted to African Americans primarily through camp meetings and revivals. Jackson’s reliance on printed texts, his emphasis on melody and lyric to the exclusion of contextual factors as well as rhythm and vocal embellishment, and his reluctance to concede any substantial African influence have since been vigorously attacked as erroneous, even racist, most scholars in the late 20th century preferring a theory of syncretism, hybridization, and exchange.

Born in New England and reared in the South, Jackson came to the study of religious folksong through attending and participating in singing conventions and mining old hymnals, which resulted in three collections: *SpiritualFolk-Songs of Early America* (1937), *Down-East Spirituals* (1942), and *Another Sheaf of White Spirituals* (1952).

Jacksons research demonstrated origins of spirituals in British and American religious verse and in secular folk tunes; traced diffusion from New England to the South; established the vital roies of evangelism, revivalism, singing schools, and the camp meeting; demonstrated common origins by grouping tunes into what he called “tune families”; and created a typology of folk hymns, revival spirituals, and religious ballads. He was also an active organizer of singing events and an early advocate for introducing American folk music in public schools.

Jackson, Mary Magdalene (Garland; “Aunt Molly”) (1880–1960)

Union activist and folksinger. During the 1930s, Jackson was an important advocate for the unionization of the Appalachian coalfields. Her appearances at labor rallies featured original protest songs that were closely tied to the melodic shape and balladic form of traditional Appalachian music.

Molly Jackson, the daughter of coal miner, preacher, and union activist Oliver Perry Garland and Deborah (Robinson) Garland, was born in Clay County, Kentucky, in 1880. The family, of Scotch-Irish and Cherokee lineage, stretched back seven generations in Clay County. As described by Molly:

They cut down trees and built their own log cabins, they cleared their own land, they built their own fences, and split their own rails, they built their own church houses, and their schools out of logs, they raised their own corn, that fattened their own hogs, they caught possums and coons with their own dogs, they owned the stuff that they worked and raised—I still say them were the good old days (Greenway [1953] 1977:253).

As a five-year-old child, Molly was already engaged in caring for her younger siblings and assisting her father on picket lines and at union meetings. Molly’s mother died of tuberculosis in 1886, and eleven months later her father married Sarah Lucas with whom he had an additional eleven children, including well-known union activists Sarah Elizabeth Ogan Gunning (1910–1983) and Jim Garland (1905–1978).

At the age of fourteen, Molly married Jim Stewart, a coal miner, and she bore two children while training as a midwife and working as a nurse in a Clay County Hospital. In 1912 her husband’s poor health required a move to Florida, but five years later Stewart died in a mining rockslide accident. Returning to Kentucky, Molly married another miner, Bill Jackson, and moved to Harlan County, where she worked as a midwife, delivering 884 babies by her own reckoning.

During the Depression years Aunt Molly Jackson, as she became popularly known, totally dedicated herself to labor organization on behalf of the National Miners’ Union. In this cause, she gave speeches and performed her powerful protest songs such as “I Am a Union Woman” (1931), “Kentucky Miner’s Wife” (1932), and “Dreadful Memories” (1935), which was also claimed by her half-sister Sarah. “Poor Miner’s Farewell,” written three months after the death of her brother Richard in a mining accident, was widely disseminated through inclusion in the *Red Song Book* published in 1932 by Workers Library Publishers.

Jackson’s activity caused her to be blacklisted by the mine operators in 1931, and subsequently she was compelled to divorce her husband so that he could continue to work in the mines. That same year, The National Committee for the Defense of Political Prisoners sent a delegation (including authors Theodore Dreiser and John dos Passos) to Kentucky to focus attention on the poverty and starvation in the coal camps. Influenced both by the hearings and the advice of folklorist Mary Elizabeth Barnicle, Aunt Molly

decided to extend her efforts outside the Appalachian region. In December 1931, accompanied by Jim Garland and Sarah Ogan, she traveled to New York City and made her first public appearance in front of an audience of 21,000 at the Coliseum.

Aunt Molly spent the next five years traveling on behalf of labor, despite serious injuries sustained in a bus accident in Ohio. In 1936 she settled in New York City with her final husband, Gustavos Stamos. She died on August 31, 1960, in Sacramento, California, where she was buried.

Aunt Molly Jackson's use of folksong as a political weapon compelled her to tread that fine line separating tradition from innovation. Her songs were always modeled on folk sources, but the composition was dictated by utilitarian function rather than folkloric context. Jackson's own definition of folksong, as she wrote it, provides the best description of her role as a traditional singer in the modern world. "This is what a folk song really is the folks composes there own songs about there own lifes an there home folks that live around them" (Greenway [1953] 1977:8).

James, Jesse Woodson (1847–1882)

Civil War guerilla and postwar robber who has frequently been cast as an American Robin Hood. Born into a staunch proslavery family in rural northwestern Missouri, James was raised amidst the border conflict between Union and Confederate forces. In 1864—soon after the torture of his stepfather and the jailing of his mother and sister by the local militia—Jesse James followed his older brother Frank (1843–1915) into the ranks of “Bloody Bill” Anderson’s irregular cavalry. Strife continued after the Civil War as Missouri’s Radical Republican government denied amnesty to persons who had acted under Confederate orders.

Jesse James in 1864. Library of Congress.

Although precise dates and motives are disputed, the James brothers became linked with bank robberies as early as 1866. They carried a price on their heads after the 1869 plunder of a Gallatin, Missouri, bank in which an unresisting cashier, Captain Sheets, was murdered—presumably for his part in the wartime death of Bill Anderson. Over the next dozen years, the Jameses and a gang of pistol-wielding, hard-riding ex-guerillas were implicated in bank and train robberies not only in Missouri, but throughout the Midwest. Their 1876 attack on the bank in Northfield, Minnesota, proved disastrous. While Frank and Jesse escaped, a posse killed and captured several gang members.

Thereafter the James brothers were largely in hiding, although numerous robberies were attributed to them. On April 3, 1882, living under the name of Mr. Howard in St. Joseph, Missouri, Jesse was fatally shot in the back of the head by a cousin, Robert Ford. Missouri's Governor Crittendon, under political pressure for harboring an outlaw, had conspired with Ford and quickly granted him amnesty.

Several ballads soon circulated, the most popular of which recounted notable robberies, lauded Jesse's courage, pitied his family, and condemned Robert Ford as "the dirty little coward who shot Mr. Howard." By 1882 the James gang's sixteen years at large had already generated considerable legendry, news stories, and imaginative popular "histories." A torrent of largely fictitious "dime novels" followed.

While detractors labeled Jesse a criminal continuing his wartime pursuits out of pure meanness, more numerous defenders dubbed him an avenger of cruelties inflicted by Missouri's militia and bankers. The oral tradition from Jesse's home territory typically presented the outlaw as a bold and gallant Robin Hood. He gives money to a poor widow so that she can save her home from a banker who plans to foreclose; after the payment, Jesse steals the money back. Always deferent to women, Jesse is also the devout leader of a Baptist choir. An artist with pistols, he monitors his pursuers in disguise, then shoes his horse backward to confuse them. Ubiquitous stories even claim that Jesse James did not die at all. Several pretenders to his identity sustained this notion into the mid-20th century.

Since the 1883 production of J.J. McCluskey's *The Bandit King*, the Robin Hood version has been reprised often on stage and in films, perhaps the most notable of which, *Jesse James* (1939), cast Tyrone Power as the Missouri outlaw. Meanwhile, the oft-recorded "The Ballad of Jesse James" persists in the repertoires of old-time country musicians.

James, Thelma Grey (1899–1988)

Teacher, collector, and archivist of urban folk traditions. Born and raised in a Quaker family in Detroit, Michigan, James joined folklorist Emelyn Elizabedi Gardner in 1923 as a junior lecturer in the English Department at the Colleges of the City of Detroit, later to become Wayne State University. James had received her B.A. in 1920 and her M.A. in 1923 from the University of Michigan. She took graduate courses there and at the University of Chicago in the historic-geographic method of folklore scholarship. She was president of the Michigan Folklore Society in 1949–1950 and of the American Folklore Society in 1950–1951. She was elected a Fellow of the American Folklore Society in 1961. She retired from Wayne State University in 1967 after forty-four years of teaching.

James and Gardner, both involved in the settlement-house movement, founded the Wayne State University (WSU) Folklore Archive in 1939. They conducted folklore-collecting projects in the city with students until Gardner's retirement in 1941. James continued collecting projects, supervising student collectors, and archiving urban, ethnic, and occupational traditions until her retirement. Her pioneering recognition of the diversity of urban traditions emerges in an early report to her department chair in which she wrote that she recorded an old-time fiddler, a roof shingler and a singer of Albanian-Macedonian folksongs on Edison wire recordings in one spring term. Although she did not publish many articles about her fieldwork research, her legacy lives on in the WSU Folklore Archive and in publications by her students, such as Susie Hoogasian-Villa's *100 Armenian Tales and Their Folkloristic Relevance* in 1966 and Harriet M.Pawlowska's *Merrily We Sing: 105 Polish Folksongs* in 1983.

Jameson, R.D. (1895–1959)

Teacher, scholar, administrator. Raymond Deloy Jameson (who published under his initials and was known to his friends as Jim) was born in Tennessee and reared by his widowed mother in Ohio. He earned bachelor's and master's degrees at the University of Wisconsin, worked briefly as a newspaperman, and subsequently enjoyed a colorful academic career that spanned the globe. He taught literature, philology, and history in the United States as well as in Europe and Asia, most notably at the University of Peking (1925–1938), where he founded and directed the Orthological Institute of China, devoted to English-language instruction. Returning to the United States in 1938, Jameson joined the staff of the Library of Congress, serving as consultant in comparative literature and as administrator of the Consultant Service. During and after World War II, he was historical officer of the American Red Cross in the Southwest Pacific region, quartered in Australia and later in the Philippines (1942–1948). In his last years, Jameson settled into a relatively quiet life as professor of English at Highlands University in Las Vegas, New Mexico, where he taught until his death shortly before he was scheduled to retire. His widow, Dorothy, donated his papers to the University of California.

Jameson's best-known contributions to folkloristics are in the work of his later years. At Highlands he initiated and supervised an ambitious student collecting project (unfinished at the time of his death) of Hispanic materials from northern New Mexico; he served as book review editor of *Western Folklore* in the five years before his death; and, perhaps most significantly, he contributed dozens of articles, both signed and unsigned, to the *Funk and Wagnalls Standard Dictionary of Folklore, Mythology, and Legend* (1949), including the long surveys "Chinese Folklore," "Romany Folklore," and "Phallism," as well as shorter pieces on subjects ranging from "Adultery" through "Yü Huang." His definition of "Folklore" is among the notorious twenty-one in that same compendium. Two years before his death, he was invited to participate in the Summer Folklore Institute at Indiana University. After his death, he was honored with a memorial issue of *Western Folklore*. Portions of his students' New Mexico collectanea have been published post-humously by the University of California Press (cf. Robe 1977).

Jansen, William Hugh (1914–1979)

Folklorist. A native of Stamford, Connecticut (B.A., Wesleyan University, 1935), and holder of the third-oldest American doctorate in folklore (Indiana University, 1949), Jansen taught in the English Department at the University of Kentucky from 1949 to 1979; he retired one month before his death.

Jansen became an internationally recognized folklorist largely from his work on cultural stereotyping and through the publication of his article on what he termed the “esoteric-exoteric factor” in folklore (Jansen 1959). He also lectured widely abroad, and his other research documented the historical existence of legendary figures—one the subject of a famous Turkish legend, and another the subject of Jansen’s doctoral dissertation, published in 1977 as *Abraham “Oregon” Smith: Pioneer, Folk Hero, and Tale-Teller*.

Late in his career, Jansen was recognized for having contributed earlier seminal ideas to the “new folkloristics”—concerning oral folklore, the role of performer and performer-audience relationships, and their imperative correlations with genre, context, and function.

Jansen published fifty articles and served as editor of four state and regional folklore journals. He was a Fellow of the American Folklore Society, and he served as general editor of the society’s Bibliographical and Special Series and twice as its vice president. Jansen was a Fulbright Lecturer, a Ford Foundation Fellow, a Fellow of the National Endowment for the Humanities, a member of the International Society for Folk Narrative Research, and a delegate to the American Council of Learned Societies.

Japanese Americans

American-born descendants of Japanese contract laborers (“sojourners”) and immigrants from Japan. Japanese Americans are self-identified by the following terms: the *issei* (from *ichi-*, one or first) are the Japanese immigrants, who, because of government restrictions on Asian immigration, were usually not allowed to become U.S. citizens; the *nisei*, or “second people,” are their children, born in the United States and possessing citizenship; the *sansei* are the third generation; and the *yonsei* are the fourth. The *kibei* (*ki* from *kaeru*, to return; *bei* from *beikoku*, America) are those who were born in the United States and are thus citizens of this country, but were taken back to Japan when their families’ work contracts were finished; they returned to the United States, often after years of Japanese schooling, in many cases to marry.

Folklore of the *issei* was parallel to that of most immigrants: They retained much of their medicinal lore, ghost stories, food customs, and festivals as living reminders of the country they had left behind. This function was especially important for the Japanese because of the significance of belonging to several interactive sets of insider (*uchi*) relationships: family, clan, village, occupation, prefecture, and country. For the *issei*, their folklore—along with popular and elite genres like music, dance, calligraphy, arts, and language—provided a sense of cultural belonging in a strange and forbidding land. The *nisei* generation was given language instruction, but for them the world of folklore was split into at least two segments: Japanese at home and American in public. The *nisei* thus carried on some of the traditions of their parents, and spoke the dialect they heard at home, but many of the regional and occupational beliefs and customs simply did not fit the new cultural environment. The *sansei* and *yonsei* grew up as Americans with almost no acquaintance with Japanese language (except for names of foods and body parts) and with an even smaller set of traditional observances in their lives.

Just as many of the upwardly mobile *nisei* had taken up classical arts like flower arranging, the tea ceremony, *okoto* music, classical dance (*minyo*), and the singing of classical poetry (*shigin*) during the 1930s and through the relocation years of World War II, the *sansei* and *yonsei* are more recently obtaining formal language training in Japanese. On the surface, it would seem that living Japanese traditions have been replaced with American custom and a self-conscious maintenance of elite arts (parallel to the piano, violin, and dance lessons of their European American neighbors).

But in fact—as is often the case with ethnic folklore—the larger range of traditions has been replaced by a more limited but intensified selection of community expressions. Traditional foods constitute one of these genres: *Sukiyaki* (thinly sliced beef simmered in an open pan along with vegetables, *sake*, sugar, mushrooms, and tofu); *teriyaki* (grilled marinated meats); and *tempura* (vegetables and seafood dipped in batter and deep fried) were not traditional dishes in Japan, where only the wealthy could afford such meats and delicacies. But the ability to cook and offer these foods, especially at important events like weddings, funerals, and festivals, has become an important traditional expression for Japanese Americans. As well, the playing of the *taiko* (a large drum used at festival

dances), has become extremely popular among Japanese Americans in Hawaii and on the mainland, and in many Japanese American communities in the United States there are more young people playing the *taiko* than there are in comparable communities in Japan.

Probably nothing typifies the sense of Japanese American community expression better than *obon*, or *bon-odori* (the *bon* dance; the *o*—prefix is honorific). Celebrated in Japan since the 7th century A.D., *obon* brings the spirits of departed ancestors together with their living families for several days of feasting and dancing. Usually held in the parking lot of a Buddhist church or in a blocked-off city street, the *bon-odori* features dances from different parts of Japan performed by Japanese Americans of all faiths wearing kimonos. Many participants practice the steps for months in advance, but anyone is welcome to join in the dancing during the festival. Traditional foods are sold around the periphery of the dancing (or in the nearby Buddhist church), and demonstrations of *taiko* drumming are given during intermissions. In Japan, *obon* brings people from all over the country back to their home villages and neighborhoods; in America the festival brings Japanese Americans together from various neighborhoods in a celebration of ethnic community.

Probably nothing illustrates the retention of the Japanese sense of *uchi* (insider) custom better than the celebration of *oshogatsu*, New Year. Traditional families rise early on New Year's morning and eat a special fish-based soup called *ozoni*, then spend the rest of the day entertaining close friends and family members with traditional foods (sushi, teriyaki chicken, tempura shrimp).

Funerals provide still another opportunity for the exercise of traditions that bind families together with their larger community: Friends and relatives give *koden*, a note of condolence with a sum of money enclosed (the closer the relationship, the larger the amount). The family of the deceased person notes the name of each donor and the amount given; cards of thanks are sent to all donors, and when someone in any of those families dies, one is obligated to send in a *koden* of the same size. The Japanese custom of *omiyage*, bringing a gift when visiting someone, is widely practiced by Japanese Americans, as is the custom of removing one's shoes when entering a house (a custom based on funerary beliefs in Japan but now functioning as a gesture of polite behavior in the United States).

These traditions, selective as they may be, are accompanied by other expressive forms that are more in the nature of hobbies (many are learned from instruction books, not from the living contexts in which one lives), which nonetheless provide models of Japanese attitudes about number, arrangement, color, and pattern: *origami* (paper folding), *temari* (winding silk threads into decorative balls with complex patterns), *bunka shishu* (embroidery done from one side of the cloth), doll making, sand painting, and flower arranging. All of these arts require the individual to subordinate his or her own talents to the demands of the craft, which does carry certain recognizable traditional features, often from ancient times.

As with all immigrant cultures, the Japanese Americans practice a mix of the old and the modern, traditional and pop, imported and American. The genres of folklore that have been maintained have been intensified (for most, but probably not for all) as a way of experiencing and celebrating cultural identity in a land of diversity.

Jazz

Twentieth-century musical form, native to North America, characterized by the use of Western band instruments, improvisation, blues harmony, “swinging” rhythm, and other instrumental and vocal practices. Jazz has rich African American musical and oral roots but was also shaped by other traditions, and it has assimilated and adapted to musical cultures around the world since 1917. In the late 20th century, jazz is an esteemed “classical” music, taught in conservatories and presented in concert halls for all ethnic groups, but it retains its importance in African American culture as an expression of spirituality, virtuosity, oral skill, and communal solidarity.

The term “jazz” is obscure in origin. Most commonly it is said to derive from an Afro-Caribbean word meaning “to speed up,” but it has also been said to come from jasmine, a performer named Jazbo or Chas. Brown, or the French *chasser* (to hunt or chase). The common spelling in 1910s New Orleans, “jass,” suggests to some “ass” or sexual intercourse. The first printed reference to “jazz” music was in the *San Francisco Bulletin* in 1913. In New Orleans at this time, however, it was usually called “ragtime,” and well after 1920 many musicians (such as Eddie Condon and Miles Davis) resisted the term “jazz” and associated their music directly with other accepted musical styles.

The music developed most distinctly as an instrumental counterpart of the Mississippi Delta blues after about 1880. Brass bands between New Orleans and Memphis accommodated the harmonies, rhythms, and timbral effects of vocal blues to the limitations of their instruments, making such effects part of their performance styles. The 1886 International Cotton Exposition in New Orleans may have served as the first gathering point for White and Black regional bands that used these new effects. (The White bandleader Jack Laine insisted that he was playing “ragtime” or jazz by that time.) Bands relied on traditional European march and dance music for much of their presentations, but new creative possibilities coalesced into a distinct style. In the plantation regions upriver, unschooled adult’s and children’s bands such as Kid Ory’s Woodland Band probably nurtured the style with firsthand reference to rural blues and church song, while in New Orleans, musicians with a wide variety of backgrounds and educations performed in a growing array of urban settings. White and Black rural migrants swelled the population of New Orleans and other Southern cities, creating a greater demand for dance halls, parks, lawn parties, clubs and secret associations, saloons, brothels, and wedding and meeting facilities—and for music in those locales.

Similar conditions existed in other Southern cities, but in New Orleans, rich musical traditions, the sheer size of the Black migrant population, and highly developed street and club life created the most vibrant early jazz style and the largest corps of musicians. Jazz built bridges between the Creoles of color in the Vieux Carré (such as pianist-leader Jelly Roll Morton) and rural African American migrants uptown (such as trumpeter Louis Armstrong) at a time when Jim Crow laws were classifying members of both groups as second-class citizens. They were generally poor, and jazz served as a language, profession, and medium that drew them together; even Sicilian immigrants found an

interest in jazz. In these groups, older “musicianers” such as the Black Latino Lorenzo “Papa” Tio took in students, initiating the apprenticeship tradition in jazz. Some formal institutions, such as the Jones Colored Waifs’ Home (attended by Louis Armstrong), also fed this culture. Anglo-Saxon and Irish Catholic musicians, however, remained apart, often expressing a conventional racist disdain for the music of those who often competed with them for unskilled jobs. These Whites developed their own version of swinging ragtime, which came to be called “Dixieland.”

Early jazz was both a traditional and a modern product. Kid, or “spasm,” bands kept the music rooted in children’s folklore. Unlike rural blues, jazz had few associations with spirit religion or *vodun*, but it otherwise retained the role blues had held in the Delta juke joint, as a concomitant of food, dance, gambling, family activities, and nocturnal vice. Few jazz players before 1920 learned to read or write music, preserving aural and visual cues for composition, rehearsal, and performance. In other ways, jazz was a product of the urbanization of Black culture. Jazz in general was part of a male-centered urban sporting life in New Orleans. Women were usually confined to piano playing and singing, perhaps in conformity to the sex roles of Victorian musical culture, and would long play a marginal role in jazz. From the start, male jazz musicians mixed playing with side work, sports such as baseball, nightlife, parading, street advertising, and occasionally such activity as gambling, narcotics, and pimping (although only pianists like Fess Manetta worked regularly in Storyville, the city’s red-light district, from 1897 to 1918).

After 1917, jazz rapidly expanded its fame and geographical reach. Restless New Orleans musicians spread post-ragtime music nationwide. Despite their deep attachments to urban folklife, New Orleans musicians were compelled for economic reasons to tour, both on existing vaudeville, minstrel, and medicine-show circuits and on self-arranged trips. Bassist Bill Johnson moved to Los Angeles in 1909, and others soon followed; by 1915 New Orleans musicians were working regularly in Chicago, St. Louis, Houston, and other cities. With these residencies, and the release in 1917 of the first jazz records by the White Original Dixieland Jazz Band (ODJB), ragtime players nationwide (many already toying with blues techniques) responded to the public’s enthusiasm and pursued jazz. As the great migration of Southern African Americans commenced during World War I, jazz followed the path of the Illinois Central Railroad from New Orleans to Chicago.

In the 1920s, jazz was one of the first and greatest examples of mass-media folk tradition. Within a few years, recordings spread the music across the world. Instrumental blues musicians gained bookings in every part of the United States, particularly on the coasts, and soon gained invitations to play for aficionados in the hotels of Shanghai, Bombay, Cairo, Paris, and Rio. In 1922 a Soviet musician formed the First Eccentric Orchestra of Russia with Lenin’s official approval. Among Whites in Europe and the Americas, Europeanized forms of jazz caught the fancy of youth, whether they were enjoying prosperity (as in America) or fleeing economic ruin in “decadent” protest (as in Weimar Germany). Many future jazz musicians learned their first tunes and styles from records, often before receiving formal instrument training.

The bursting new African American ghettos in Northern cities, especially Harlem and south Chicago, provided even more sizable urban folk settings for jazz. Traditional Black elites in these communities attacked both jazz and the blues as sinful and unsophisticated, but even most of these critics by the late 1920s came to perceive jazz as a staple of the ghetto’s leisure culture. Northern cities had many music-education facilities and outlets

for the nationwide entertainment industry, which produced both a need for highly trained musicians and public expectations for polished entertainment. Therefore, such New Orleans nonreaders as Louis Armstrong and Kid Ory were compelled in the North to learn music reading and visit classical-instrument teachers. Written jazz arrangements (which nevertheless allowed for solo improvisations) became standard by 1930.

Despite this modernizing trend, much of jazz's folk status persisted. The Northern dance hall played much the same social role as the Delta juke joint. Musicians, while more professional-minded, remained young men with passions for urban nightlife, group fraternizing, and "hard" living. They also preserved much of the Southern performer's folk identity. Musicians' superstitions drew upon both Southern traditions and the lore of show business. Pianists played at rent parties, gatherings that charged admission and helped tenants with their bills (as New Orleans fish fries had done before). Musicians played for weddings, funerals, and other social functions, and touring bands sometimes doubled as semipro baseball teams. New dance halls such as Chicago's Savoy accommodated thousands of customers, where the juke-joint milieu was perpetuated and urbanized; courtship, dancing, and sartorial display were altered accordingly. Musicians also engaged in this exciting milieu of sexual adventure, backstage gambling, and fancy clothing. Outsiders were intrigued by the creative slang of jazz players. Jazz jargon, like 1930s "jive," adapted rural African Americanisms to the city. Such idiosyncratic players as tenor saxophonist Lester Young were virtuosi with jargon as well, using it as an extension of their musical creativity. In general, though, despite the claims of White observers, verbal creativity in jazz was limited and carefully tailored to professional needs.

The earliest White jazz musicians partook in much of this culture as well. After 1920 a few Dixieland players from New Orleans, as well as dozens of Whites across America who heard jazz recordings and touring groups, gravitated to Harlem, south Chicago, and south-central Los Angeles to gain professional apprenticeship with Black players. These apprentices formed the core of the "hot" White players of the 1920s (to be disdistinguished from "sweet" dance-band musicians who disdained the bluesjazz style), including cornetist Bix Beiderbecke, drummer Dave Tough, and saxophonist Bud Freeman. Relations between White and Black players were often cordial, but tensions arose as Whites consistently captured steadier and more lucrative musical employment. As a result, White players' involvement in the culture of the ghetto was usually short lived.

Beginning in the 1930s, jazz became both a nationally popular music and the locus of increasingly defined subcultures. The Depression forced many out of the business, while remaining players became more professionalized. Still, the persistence of Black dance halls and the aggressive preservation of jazz nightclubs by aficionados (especially in New York City) ensured that the now celebrated 1920s milieu and musicians' cohort would be maintained. As before, young African Americans with talent apprenticed in big bands and then graduated into solo and leader roles. Only a few benefited from the limited integration of major White swing bands by such progressive leaders as Benny Goodman, Artie Shaw, and Charlie Barnet. The musicians' union's recording ban (1942–1944), the military draft during World War II, and new club employment restrictions decreased the always meager opportunities of Black players.

At the time, though, Black jazz was reaching a pinnacle of harmonic and rhythmic sophistication. The resulting "bebop" movement of the 1940s and 1950s was a major

musical revolution, but it also heightened the public perception of jazz musicians as angry, alienated outsiders who shunned public approval. The barbed comments and irreverent stage antics of such beboppers as Dizzy Gillespie were informed by political militancy, while others (such as Charlie Parker) were perhaps more bedeviled by such personal problems as drug addiction. Many Whites in dance bands emulated bebop's disdain for "squares" and cultivated unorthodox clothing, drug use, and language. While the affectation of the most demonstratively "alienated" players made a deep impression on the Beat writers and other dissatisfied Americans of the 1950s, paving the way for the crucial union of music and social protest in the 1960s, it rarely reflected the artistic vitality of the "hard bop" era. Only the effort of saxophonist John Coltrane to ally his music with pan-Africanist poetics and spirituality signaled a renewed social commitment by African American jazz musicians, which intensified in the 1960s and 1970s with the coming of the Black Power and Black Arts movements. White musicians became even more remote from the jazz-Black ghetto cultural axis during these years of cultural separatism. Only since the 1970s, as jazz became almost entirely a music patronized by concertgoing elites and performed by professionals, have White players shared a common professional culture with the most successful African American musicians.

Jazz is perhaps the most fully developed and diversified American folk music. Its cultural identities and functions are as complex as the 20th-century society in which it has grown and diversified. The study of the folklore of jazz and of jazz as folklore is in its infancy, but early work by Peter Tamony, Peter Spencer, Neil Leonard, and others suggests paths for future research. Existing scholarship, however, demonstrates that the content, timbre, and structure of jazz music and performance, the organization of the musicians' profession and pedagogy, the social functions of jazz performance, and the extramusical practices of musicians and their admirers are all fascinating and important aspects of American folklore of the 20th century.

Jefferson, Blind Lemon (1893–1929)

Texas singer and guitarist who became the first country blues artist to gain widespread fame as a recording artist. Even in the modern era, Jefferson is, next to Robert Johnson, the most widely recognized name in classic country blues. The 100 or so recordings he made between 1925 and 1929 form an impressive repertoire of traditional and creative song, and Jefferson's colorful life has spawned legends as popular as his songs.

In fact, there are surprisingly few solid historical facts about Jefferson's life and career. He was born near Wortham, Texas, some 60 miles south of Dallas; the 1900 Census for the area lists him as "Lemmon B. Jefferson" and gives a birth date of September 24, 1893—some years earlier than legend has it. It has been generally assumed that he was born blind, but later musicians who knew him suggested he had some degree of sight; certainly his original songs are full of impressive visual images. He received his early vocal training by singing gospel music in local churches, but was soon "busking" at towns on most of the local H and TC railroad that ran north and south, and to Dallas. Contemporaries remember him in the red-light district of Dallas as a "big loud songster" with a tin cup wired on the neck of his guitar. Like many such songsters, he knew and performed a wide variety of songs other than just blues: He later even recorded a variant of the Child ballad "Three Nights Drunk," as well as gambling ballads like "Jack of Diamonds" and 19th-century pop songs like "Begging Back." For a time he traveled with Huddie Ledbetter (Lead Belly), exchanging songs and guitar styles.

In 1925 a friend put him in touch with talent scout Mayo Williams, who worked for Paramount Records. Produced by a Wisconsin chair company, Paramount was one of the cheaper record companies who used inferior shellac and had spotty distribution. It was, nonetheless, one of the companies most receptive to blues singers, and in 1926 Paramount recorded Jefferson doing "Got the Blues" and "Long Lonesome Blues." Released on the same disc, these songs became the first real commercial hits for country blues—so much so that the company wore out the metal stampers for the disc and had Jefferson remake them. Its success meant that Jefferson would have a welcome in the studios for the rest of his life, but also that he would be expected to record mostly blues songs from his vast repertoire.

In the next few years, he recorded definitive versions of many songs that would become blues standards: "See That My Grave's Kept Clean" (1927), "Black Snake Moan" (1927), "Match Box Blues" (1927), "Corinna Blues" (1926), and "Easy Rider Blues" (1927). His surprisingly high voice and his odd, "broke-time" guitar figures forged a distinctive style that soon was known across the South.

Jefferson's professional career is sparsely documented. Reports suggest he traveled around a great deal, into the Mississippi Delta, into Memphis and Nashville, and even into the remote West Virginia coal camps. His death came in the winter of 1929–1930 when, after playing at a house party in Chicago, he somehow got lost and froze to death in the snow. A fellow Paramount artist, pianist Will Ezell, brought the body back to Wortham for burial.

Jersey Devil

A monstrous creature of southern New Jersey, subject of a legend dating from the early 18th century. After more than 250 years in oral circulation, the legend of the “Jersey Devil” has many variations, and not everyone agrees how he looks or behaves.

Most accounts begin with a woman named Jane Leeds, who lived with her husband, Daniel, at the edge of a great swamp near the Mullica River in present-day Atlantic County. Some folks say that she was strange and different; some even said she was a witch. In any event, it is generally agreed that she had twelve children. Understandably, Jane Leeds was tired of cooking and cleaning and child care. Then one day she learned that she was pregnant with her thirteenth child.

In a moment of weakness, according to one account, that night while she was saying her bedtime prayers, she prayed: “Lord, I hope this one’s not a child. Let this one be a Devil!” We now know, at least from legends, that this was a mistake, because on that terrible winter’s night in February of 1735, when Mother Leed’s thirteenth child was born, something awful happened. They say that at first when the child was born, it seemed like a perfectly healthy and normal infant boy with a chubby little baby face and blue eyes. But in less than half an hour, the child grew quickly into a creature the size, some say, of two full-grown men. It had the hairy torso of a powerful man, but in the place of the baby face was the head of a horse with two giant horns growing out of either side. And growing out of its back were two giant, leathery, bat-like wings. In place of human legs, it had the legs and feet of a goat. Most accounts agree that it also had a long serpentine tail.

Most frightening of all, the “Devil” had powerful, hairy arms. At the end of each arm were paws, and at end of each paw were long, bony claws. Each claw was razor sharp. With a single swipe of his right paw, he slit the throat of the midwife in attendance, who collapsed in a pool of blood. The creature let out a blood-curdling scream and flew up the chimney and escaped into the Pine Barrens, where, according to legend, he has terrified the citizens of south Jersey ever since.

The Jersey Devil remained an obscure regional legend through most of the 18th and 19th centuries, until 1909 when a series of purported “Devil” sightings inspired a Philadelphia businessman to stage a hoax. He painted a kangaroo green, attached fake wings to the helpless creature, and had it exhibited to the public.

The recent history of the Jersey Devil is more in the realm of popular culture than folklore. As people lost their dread of the legendary creature, they started putting his image on T-shirts, postcards, buttons, menus, and so on. There are even Jersey Devil cocktails sold in south Jersey bars.

Jewish Americans

An American ethnic and religious group, consisting primarily of immigrants fleeing persecution and economic hardship in Europe. Smaller numbers of Jews arrived in America from virtually every country of the world. Jews came with the first European explorers to the New World, and the earliest settlements in America were of Sephardic (Spanish-speaking) Jews after the mass expulsion from Spain in 1492. The Jewish population remained insignificant until the mid-1880s influx of Jews from Germany who established communities in major urban centers. The largest cohort arrived with the mass immigrations from eastern Europe between 1880 and 1920; two million souls in all, primarily impoverished Yiddish speakers from the Russian Pale of Settlement (a Jewish "reservation" in which Jews of the Russian Empire were imprisoned unless granted special permission to live outside).

The dispersion of Jews after the conquest of their ancestral homeland, Israel, by the Roman Empire in 70 C.E. (Common Era, the Jewish equivalent of the Christian A.D., avoiding the confession of faith couched in the term Anno Domini, meaning "Year of Our Lord"), has created a unique cultural phenomenon: a cohesive ethnic group with a shared core culture, tradition, ancestors, history, religion, and language overlaid with the culture, customs, and languages of their host communities. In addition, traditional Jewish culture and religion are inseparable. Jewish law (*halakhah*) is all encompassing, regulating both personal and communal behavior.

The breakdown of traditional Jewish life for the majority of the world's Jews began in the late 18th century with the Enlightenment and the Industrial Revolution in Europe and was accelerated by three pivotal events: the existence of the largest Jewish community in a secular, pluralistic United States; the existence of the second-largest Jewish community in the secular, anti-religious Soviet Union; and the destruction of six million Jews, and many traditional communities, by Germany and its allies during World War II.

This largest Jewish concentration in the United States is characterized, in part, by a heterogeneity that makes it difficult even to define. Whereas Jewish law defines a Jew as a person born of a Jewish mother or one who converts according to that law, many Americans of Jewish descent do not identify themselves as Jews, whereas many of Jewish patriliney do so, and such descent is recognized by the Reform branch of Judaism. Problems of identity such as these make it difficult to determine who the Jewish folk are, and, thus, what is American Jewish folklore.

A 1990 study concluded that there are 5.5 million Americans who identify themselves as Jewish by religion or cultural identity. Of this core population, 76 percent identify by religion, 20 percent by culture, and 3 percent by choice (converts). Seventy-five percent live in urban areas and, as a group, are much more highly educated than the general population and have a lower birthrate. The largest concentration is in the Northeast. Thirty-one percent are married to non-Jews, and Jews constitute about 2 percent of the total American population (*American Jewish Yearbook* 1992).

The heterogeneity and rapid assimilation of American Jewry produced a folklore whose characteristics mirror both this diversity and the interfaces of Jewish culture with life in America. As in other ethnic communities, traditional forms, which most nearly preserve the lore of the old country, can be found in the older Jewish enclaves in the Northeast, especially the greater New York City area. Within the Orthodox and Hasidic communities, such as Williamsburg in Brooklyn and Boro Park in Queens, cultural conservatism and the preservation of Old World culture and language are intertwined with religious belief and serve to fend off the encroachments of a sometimes alluring secular world. Much as the Amish have preserved their German and rural culture as an act of faith, the ultra-Orthodox attempt to preserve their Yiddish and *shtetl* (Jewish trading town of eastern Europe) culture within America's largest urban amalgam. It is in these insular communities that traditional eastern European folk traditions are most zealously guarded and are adapted to protect against the pull of assimilation.

Within traditional Judaism itself, the relationship between the formal religion and the folk religion has been defined by the terms *halakhah* (law), *hagadah* (lore), and *minhag* (custom). This relationship functioned to establish the dynamic interplay among the three elements within a traditional society, one that accepted the primacy of *halakhah* over any external law and in which faith in God was a given. Some modern American forms of Judaism, however, accept neither *halakhah* nor faith in God as tenets; the distinction between formal and folk religion, then, has become more confused, and what lies outside the boundaries of accepted belief and practice has become more controversial.

As complex and changing as the identity of American Jewry is, there is a rich and variegated Jewish culture in America, dynamic and vital, which displays extreme conservatism at the same time it has inspired some of the most radical social, political, and artistic movements in America. A survey of several areas demonstrates the variety of Jewish folkloric expression in the contemporary United States.

Language. The three primary Jewish languages are Yiddish, spoken by the Jews of eastern Europe; Judeo-Spanish (the use of the colloquial term "Ladino" is controversial among scholars), spoken by the Jews of Iberian descent in the countries of their dispersion following the expulsion from Spain and Portugal in 1492; and Hebrew, the holy tongue of Jewish tradition and the language of ancient and modern Israel. Although German was the native language of the Jews who emigrated from Germany between 1840 and 1860, Yiddish was the *mama loshn* (mother tongue) of the majority of the two million migrants to America who arrived during the Great Im-

At a Jewish wedding reception, the guests dance. Chicago, 1977. Photo Jonas Dovydenas. American Folklife Center.

migration of 1880–1920. During the forty years after the end of the immigration wave, an entire Jewish culture was created, primarily in New York City but in some other cities with large Jewish concentrations as well, including schools, newspapers, musical groups, publishing houses and theaters. With the passing of the first generation, Yiddish serves in the 1990s as the vernacular of the Hasidic communities. As the main immigrant language, however, it continues to serve as an important sentimental link to the fading ethnic culture, in jokes, anecdotes, songs, and the revival of klezmer (small band) music. Yiddish words and phrases have found their way into American English, primarily through the popularity of Jewish comedians such as Milton Berle, Henny Youngman, Jerry Lewis, George Burns, the Marx brothers, and Billy Crystal, many of whom began their careers in the Borscht Belt, the Jewish hotels and resorts in the Catskill Mountains of New York state, which served as the primary vacation getaway for New York City Jews and the training ground for Jewish American actors, singers, and comedians.

Judeo-Spanish serves a similar sentimental link for the small number of Sephardic Jews in America, 50,000–60,000 of whom arrived during the Great Immigration, although it, too, is spoken by very few. With the increasing significance of Israel as a symbolic, cultural, and educational center for American Jews, Hebrew is growing in currency as a second language, and instruction in spoken Hebrew has grown tremendously in the final decades of the 20th century.

Rites of Passage. Ceremonies marking Jewish rites of passage are rich grounds for folkloric expression and have been transformed by the American experience, especially the movement for women's rights. On the eighth day after birth, the male child is

circumcised in the *brit milah* (or *bris*) ceremony. Some American Jews have instituted a *simkhat bat* (joy of the daughter) ceremony as an equivalent for female children. As this celebration has no rabbinic precedent, it provides opportunities for creative expression.

Since its initiation in 1922 by the Reconstructionist movement (a liberal offshoot of Conservative Judaism), the bat mitzvah ceremony for girls has mirrored the traditional bar mitzvah ceremony for boys. Whereas the traditional bar mitzvah celebrated the thirteen-year-old's entry into legal adulthood and the rights and responsibilities of ritual majority, including the beginning of a lifetime of Jewish learning, the modern bar mitzvah among non-Orthodox Jews often marks the end of Jewish learning, and perhaps the last time the child will engage in formal Jewish study or even enter a synagogue. It has become an often elaborate, materialistic affair, where the gifts received have become the center of focus, and in some cases the reception revolves around a "theme," such as the Wild West, baseball, or a Hawaiian Luau. Such syncretisms mark a particular modern American influence.

Holidays. The most striking change in the folklore of Jewish holidays is the elevation of Hanukkah from a relatively minor historical holiday to a major holiday, mostly as a result of its temporal proximity to, and competition with, the American Christmas. Likewise, certain traditionally more important festivals, such as *Shvu'ot* (Feast of Weeks), have faded in importance. A recent survey indicated that Passover was one of the most widely observed holidays among Jews in America, with secular Jews often emphasizing its theme of universal liberation from oppression. The centerpiece of Passover, the seder meal, lends itself to the creation of family folklore and traditions. Family seder committees have even been formed to help organize the complex arrangements necessary to bring scattered extended families together. Many Jews who cease to attend synagogue on other occasions will continue to attend the High Holidays, Rosh Hashanah (New Year) and Yom Kippur (Day of Atonement), and tickets must be purchased to ensure that the otherwise empty sanctuary is not overwhelmed. Folkloric innovation can also be seen in the feminist revival and reinvention of the Rosh Khodesh (New Moon) ceremony.

Foodways. As in other American ethnic communities, foods from the old country often serve an important role in ethnic identification. Among Jews, foods have a special status, both because of dietary laws (*kashrut*) and the important role of festive meals in the observance of Jewish holidays. The decrease in the observance of the laws of *kashrut* among American Jews has further decreased the continuity of traditional cuisine, and those who do "keep kosher" are not limited to "Jewish" dishes in order to adhere to the law. Among the majority of American Jews, eastern European dishes maintain a ceremonial prominence. Yet, with assimilation, traditional Jewish cuisine has taken on a significance that limits it to specific dishes associated with specific occasions. Some foods, such as bagels with cream cheese and lox, have become stereotypical Jewish foods, even though this particular combination held no special significance in the Old World. Many foods, such as bagels and sweet kosher wine, have become staples of non-Jewish Americans, many of whom are unaware of their Jewish origins. A breakfast sandwich with bacon and egg on a bagel is served by a popular fast-food chain, and Mogen David kosher wine is known by many poor urban dwellers as "Mad Dog Twenty Twenty."

Folklore Genres. The realities of modern American life and mass culture have affected Jewish folklore just as they have affected all immigrant and ethnic lore in the New

World. Traditional oral genres, such as the folktale, legend, riddle, and proverb, have been supplanted by the quintessentially American genre, the joke. In fact, the influence of the Borscht Belt comedians on American mass entertainment has had an enduring impact on American culture as a whole. The stand-up comics, once mostly Jewish, have surged in popularity, and there is not an hour of the day that they cannot be seen doing their “schtick” (act) on television. A number of these comedians, including Jerry Seinfeld, Paul Reiser, and Jackie Mason, have developed television situation comedies that have a distinctly Jewish flavor and continue to influence American entertainment and attitudes. Whereas Mason’s show emphasized Jewish stereotypes, Seinfeld and Reiser rarely allude to the Jewish underpinnings of their comedy in their shows.

As with other ethnic groups, there exists a large corpus of “Jewish jokes,” told by Jews about other Jews and by non-Jews about Jews. Many derogatory stereotypes abound in both, particularly stinginess, the negative characteristics of complaining, frigidity, materialism of the “Jewish American Princess” (JAP), and the overprotectiveness of the “Jewish Mother.” More traditional genres persist primarily in the ritual setting; however, there have been a number of revivals of eastern European Jewish folklore, including Yiddish and klezmer music. But the influence of modern Israel is more pervasive, and Israeli folksong and dance have become staples within Jewish community centers and youth groups.

It is not from the particular native lore of immigrant Jews that a persisting American Jewish folklore will develop, but in the adaptation of Jewish law, lore, and custom to the realities of a pluralistic and assimilating popular culture. Smaller, more traditional, and separate communities will continue to exist, preserving much of the Old World culture in their attempt to stave off the outside world. Because many Orthodox Jews have fused the Jewish culture of premodern eastern Europe with the practice of Jewish law, the force of this culture will endure long after the influence of the Old World culture in other ethnic communities has attenuated. Yet, it is in the interstice between the maintenance of a distinct culture and identity and participation in the wider American culture that most contemporary Jewish lore is generated.

John Edwards Memorial Foundation

Folk music archive and research center. John Edwards (1932–1960) was an Australian record collector who developed a passionate interest in American country music of what he called the Golden Age (1924–1939). He not only amassed a respectable collection of 78-rpm recordings, but also carried on correspondence with many old-time artists and published numerous biographical and discographical articles in American, English, and Australian fan magazines. He was killed in an auto accident on Christmas Eve, 1960. He had left a will instructing that his collection—records and all related materials—be used for the “furtherance of serious study, recognition, appreciation, and preservation of genuine country or hillbilly music...” and designated his friend, American record collector Gene Earle, as executor. Earle and other of Edwards’ American correspondents, Archie Green, D.K.Wilgus, Fred Hoepfner, and Ed Kahn, formed a nonprofit corporation in California—the John Edwards Memorial Foundation (JEMF)—and found a congenial host at the University of California at Los Angeles in the person of Wayland D.Hand, chairman of the Folklore and Mythology Center there.

From 1964 to 1988, the JEMF devoted itself to the preservation and study of country music and related forms of folk-derived musical genres, including blues, Cajun, gospel, western, and various ethnic musics. The foundation’s activities included publishing a regular journal, the *JEMF Quarterly*; issuing an occasional special series of bibliographic, discographic, and historical pamphlets; reprinting important articles from scholarly publications; and issuing extensively documented LP sound recordings. Over the years, the JEMF built up a major collection of sound recordings, journals, songbooks, documents, and other ephemera relating to those various musical traditions. In 1988 the JEMF collection was sold to the University of North Carolina at Chapel Hill, where, as the John Edwards Memorial Collection (JEMC), it was incorporated into the Southern Folklife Collection in the Manuscripts Department of the Academic Affairs Library. The JEMF was reorganized as the John Edwards Memorial Forum, with primary purposes to raise funds in support of the JEMC and to support, however possible, the study of traditional, folk, and vernacular music.

Johnny Appleseed

Nickname of John Chapman, legendary planter of apple trees. Chapman was a historical figure (1774–1845) who established apple orchards in the early 19th century from his native Massachusetts westward through Pennsylvania, Ohio, and Indiana. He was eccentric for his time, following the visionary teachings of the Swedish philosopher Emanuel Swedenborg and choosing an ascetic life that denied materialism and promoted altruism. His odd lifestyle no doubt generated controversial commentary among the other frontier people. He cared little for his own appearance, dressing in frayed or even tattered clothes; he pierced his flesh as testimony to his spirituality; he argued for humane treatment of all animals; and he spoke about mystical things.

His potential for appeal to modern sensibility has been obscured by two 20th-century treatments. In the first place, his story was exaggerated and distorted by writers of children's books between World Wars I and II, who presented him as a quaint and funny fellow and touted him as "Johnny Appleseed," a genuine American tall-tale hero. In the second, Richard M. Dorson countered that tendency for unrealistic and saccharine writing about American tall-tale characters in general by dismissing those treatments of Johnny Appleseed as purely contrived "fakelore," of the same ilk as the fictions created about Annie Christmas or Paul Bunyan.

Although undoubtedly influenced by both the ersatz literary treatments and Johnny Appleseed's fakelore notoriety, stories about John Chapman do have a continuing role in some local oral traditions, where people can still point to remnants of original Chapman orchards. Some local traditions also attribute more than apple orchards to Chapman. Stands of "native" hemp, or cannabis, are alleged to have been planted by Johnny along with his apple seeds. State historical markers and several local festivals honor John Chapman as "Johnny Appleseed," a pioneer hero. In 1966, as the first issue of the American Folklore Series, a 5-cent U.S. commemorative postage stamp was issued depicting Johnny Appleseed.

Johnson, Clifton (1865–1940)

Author, illustrator, photographer, and folklore collector. Johnson was born near Hadley, Massachusetts, the son of a small farmer; he left school at age fifteen to work in a bookstore in Northampton. There he acquired a great love for books and pictures, and he decided to be an artist. He spent several winters studying at the Art Students' League in New York City, supporting himself by drawing and writing. By 1885 he had developed a small market for his illustrations, whereupon he returned to the family farm at Hadley, his home for the rest of his life. Five years later, in 1890, he bought a camera and started taking photographs as an aid to his drawing. He showed some photos to a publisher, meaning to suggest the subject matter of drawings he wished to sell, but to Johnson's surprise the publisher bought the photographs. This convinced him that he should write books as a means of selling his photographs, and eventually he wrote, edited, or illustrated more than 100 volumes.

Johnson's titles include *The New England Country*, *The Farmer's Boy*, a ten-volume American highways and byways series, two county histories (*Historic Hampshire* and *Camden County*), and a book of reminiscences of the Civil War collected from former soldiers on both sides, titled *Battleground Adventures in the Civil War*. Most of his publications contain some examples of folklore, but of most significance to folklorists are his series of fairy-tale books named for American trees (*The Oak Tree Fairy Book*, *The Birch Tree Fairy Book*, and so forth); *Mother Goose Rhymes My Children Love Best*, which contains otherwise unreported rhymes evidently taken from New England folk tradition; *The Country School in New England*, *Old-Time Schools and School-Books* ([1904] 1963); and *What They Say in New England* ([1896] 1963). The latter book is important as a pioneer collection of Anglo American sayings, signs, beliefs, rhymes, songs, folktales, and legends.

Clifton Johnson was no theorist or analyst, but rather a knowledgeable writer who, apparently, developed rapport with a wide variety of people. From them he garnered much important material, and he reported it accurately and without "improvements." For that reason, his data are still useful and his works are still worthwhile sources.

Johnson, Guy Benton (1901–1991)

Sociologist and folklorist. Born in Texas, Johnson studied sociology at the University of Chicago before attending the University of North Carolina at Chapel Hill. He spent his first year of doctoral work editing Howard W. Odum's massive collection of African American folksongs. The result was the joint publication by Odum and Johnson of two important early studies of African American secular song (Johnson and Odum 1925, 1926).

In 1929 Johnson published the first full-length study of an American folksong, *John Henry: Tracking Down a Negro Legend*. He continued his studies of African American folk culture at St. Helena Island, South Carolina, and published *Folk Culture on St. Helena Island* in 1930. The book is an early study of the gullah dialect, and Johnson also investigated the origin of the African American spiritual.

After contributing these important works of collection and scholarship to the field of folklore, Johnson returned to his earlier interest in race relations. In 1939 his research contributed to Gunnar Myrdal's study of African Americans, *An American Dilemma*, and from 1944 to 1947 he served as the Southern Regional Council's first executive director. After his retirement from the sociology faculty at the University of North Carolina at Chapel Hill, Johnson and his wife, Guion Griffis Johnson, published a history of the university's Institute for Research in Social Science (Johnson and Johnson 1980).

Johnson considered himself a sociologist rather than a folklorist, but he made important contributions to the field, largely because of his musical knowledge and his interest in African American folksongs as cultural products.

Johnson, Robert (1911–1938)

Mississippi Delta blues artist. Possibly America's finest blues poet, Johnson is the best known, if least understood, practitioner of down-home blues. Under the tutelage of various lesser-known musicians, he mastered his local tradition, eventually blossoming into one of the preeminent regional guitar stylists. According to his contemporaries, he possessed a "phonographic" memory that allowed him to re-create the musical phrases and songs he heard on the radio and on phonograph recordings or from other local performers. Influenced by various recording artists, particularly Lonnie Johnson, he expanded the local tradition, creating an innovative personal style. Adept at synthesis, he could cover other artists' songs, but he also possessed the ability to transpose musical phrases or techniques associated with instruments such as the piano to the guitar.

Credited with instrumental innovations—the use of a repeated bass figure as a rhythmic foundation and the turnaround, or "get back," a rhythmic melodic phrase that seamlessly bridges blues verses—Johnson was fiercely jealous of his techniques, and he tried to keep them from other musicians. Nevertheless, these techniques were quickly absorbed into tradition as were many of his compositions. In 1936 and 1937, he recorded twenty-nine songs, including "I Believe I'll Dust My Broom" and "Sweet Home Chicago," both of which showcase his guitar innovations and remain favorites of his traditional audience.

Like his guitar playing, Johnson's songs have the modern feel of single poetic units. Johnson traveled much of the country, ranging from Texas to New York, St. Louis, and Canada. Initially typecast as a naive country musician, he was a musical genius determined to make records. Unfortunately, well-meaning critics, writing for blues-revival audiences, have fostered an image of him as a loner or outsider whose skills derive from supernatural sources rather than from his community traditions and his own artistic vision. These romantic stereotypes helped sell reissues of his recordings in the 1960s and in 1990, but they have also clouded our understanding of Johnson's life and work. In 1994 Robert Johnson's face appeared on a 29-cent U.S. post-age stamp, but minus a cigarette that appears in the photo from which the stamp design was derived.

Johnson, Tommy (1896–1956)

Mississippi blues singer and guitarist. Born into a large family near Terry, Mississippi, about 20 miles south of the city of Jackson, Johnson grew up in nearby Crystal Springs. As a teenager, he began learning guitar and African American folksongs from older family members. Before World War I, he began making extended trips northward to Mississippi's Delta region to work on plantations and perform music. There he encountered and learned blues music from such established musicians as Charlie Patton and Willie Brown. His brother, Reverend LeDell Johnson, stated that Tommy claimed to have learned how to play the guitar well by making a pact with the devil. He returned to Crystal Springs and taught blues to his three brothers and other local musicians. For much of the 1920s he participated in the blues activity of Crystal Springs, Jackson, and the Delta, also making frequent trips southward to Tylertown and to Bogalusa and New Orleans, Louisiana. Married four times, he never sustained a stable family life, maintaining the same pattern of rambling and making up to his death. He made commercial recordings of his blues in two sessions for Victor Records in 1928 in Memphis and one session for Paramount Records at the end of 1929 in Grafton, Wisconsin. He was addicted to alcohol, which he consumed in truly legendary fashion all of his adult life, frequently in the form of cooking fuel, shoe polish, hair tonic, or rubbing alcohol. Johnson died of a massive heart attack at the end of an engagement playing music at a house party in Crystal Springs.

Only seventeen recordings by Johnson survive. All but one are blues, and most of these adhere closely to the standard twelve-bar, three-line blues form. They are heavily indebted to a shared tradition of lyric, melodic, and instrumental phrases and ideas, with many correspondences to the phrases and ideas of other blues performers in the local traditions in which Johnson participated. His recordings include three blues performed in alternate takes, another pair recorded almost two years apart, and a song, "Alcohol and Jake Blues," that extends the theme of an earlier recording, "Canned Heat Blues." Both of these latter pieces were personal in nature and dealt with his drinking habits. Most of his other blues dealt with themes of rambling and unstable relationships with women. Because of their heavy reliance on traditional elements and the existence of several alternative versions, Johnson's blues serve as an excellent example of folk processes at work in composition and performance. His seventeen recordings, along with those of his mentors, associates, and many disciples, demonstrate that he varied his pieces considerably during performance.

Johnson interacted with the top level of Mississippi blues artists in the 1920s and 1930s, including Charlie Patton, Willie Brown, Ishman Bracey, Charlie McCoy, Rubin Lacy, and Walter Vincson. The strong influence of his music can be heard in subsequent recordings by Vincson, Willie Lofton, Shirley Griffith, K.C. Douglas, Babe Stovall, Roosevelt Holts, Houston Stackhouse, Boogie Bill Webb, and a host of others, all of whom learned directly from Johnson. Many others learned songs from his commercial records. One of his songs, "Big Road Blues," has been especially widely performed over

the years since Johnson recorded it in 1928, while the popular blues-rock group Canned Heat took its name in the 1960s from another of Johnson's blues.

Jokes

Humorous oral narratives. The narrative joke—also called the jocular folktale, humorous folktale, humorous anecdote, merry tale, farcical tale, jest, and *Schwank*—is simple in form, earthy in content, ancient in origin, ubiquitous in distribution, and endless in variety. Varieties of narrative jokes include tall tales, catch tales, humorous animal tales, jokes about married couples, jokes about drunks and lazy people, stories about the wise and the foolish, jokes about the clergy and religious figures, jokes about professional or occupational groups, and jokes about contemporary pastimes.

The catch tale or hoax story, such as “The Golden Arm” (Type 366, “The Man from the Gallows”), generally is told as a true story, but it ends abruptly and humorously by tricking the audience with a punch line or by forcing a listener to ask the storyteller a question that elicits a foolish answer. Many kinds of jokes are swapped within joking sessions; however, the catch tale is most effective when it appears spontaneously in a nonjoking context—that is, within the framework of ordinary conversation. The shaggy-dog story—“a nonsensical joke that employs in the punch line a psychological non sequitur, a punning variation of a familiar saying, or a hoax to trick the listener who expects conventional wit or humor” (Brunvand 1963:44)—is an example of the catch tale since it tricks the audience.

Droll folktales in which animals talk and behave like human beings are historically and geographically widespread and survive as children’s entertainment in storybooks and cartoons, but in the contemporary oral tradition animal tales generally take the form of off-color jokes rather than children’s tales. Stock characters from ancient Indo-European folklore, such as the parrot, and favorite themes of international folktales, such as the Trickster animal, also persist in oral jokes. Breaking a taboo is a common theme in some modern animal jokes, and animals often do things in jokelore that people refrain from doing. American males often project in the behavior of animals deepseated fears of castration, quick orgasms, disparity in the size of male and female organs, and insatiable females.

Jokes about married couples deal with seduction and adultery; competition between husband and wife; sexual anxieties; sexually unresponsive husbands and wives; wives outwitting their husbands; retorts between husband and wife; wives who withhold intercourse from their husbands to get their way; and the unfaithful, vain, obstinate, mean, or lazy wife. A classical tale of married couples still found in North American oral tradition is “The Taming of the Shrew” (type 901), which, in a joke called “That’s Once!” has been reported in well over 300 versions from around twenty-five countries and goes back to at least the Middle Ages.

Stories about the foolish collected in North America sometimes are general numskull tales dealing with absurd ignorance or absurd misunderstandings and are not about any particular place or group; however, more often these tales attribute absurd ignorance or other unfavorable qualities to some specific ethnic or regional group. Such tales are popular nearly everywhere. In England numskull tales are told about the Wise Men of

Gotham; in Denmark, about the Fools of Molbo; and in Germany, about the Citizens of Schilda. In North America, the same or very similar numskull jokes may also be told about Little Morons, Irishmen, Blacks, Poles, Jews, Italians, Puerto Ricans, or any ethnic, racial, religious, or regional group. Although many of the numskull tales collected in North America are reworkings of older material, settlement history and location help determine the butt of these tales. For example, absurd ignorance is attributed to Kentuckians in Indiana, Buckeyes or Hoosiers in Kentucky, Aggies (students at Texas A&M University) or Mexicans in Texas, Okies in California, Cajuns in Louisiana, and Newfies in Canada.

In the North American oral tradition, humorous tales of the wise are not as popular as tales of the foolish, though they were common in medieval exempla, Renaissance jestbooks, and Oriental literary collections. Oral humorous tales of the wise often are brief narratives about local characters. Although these anecdotes frequently are attached to real people and have realistic settings, they are versions of common traditional tales told in other locations about other characters. As a character type in rural areas, the farmer sometimes is portrayed as a clever deceiver; however, the folk don't always distinguish clearly between the wise and the foolish, for in folklore the Trickster sometimes is a clever deceiver and other times is a numskull. In modern jokes, the Trickster often does things that most people refrain from doing. These tales frequently serve a cathartic function, providing a socially approved outlet for social repressions.

In contemporary jokes, drunkenness and laziness often are attributed to ethnic, minority groups—drunkenness to Irishmen and laziness to Blacks, for example; however, often these negative traits are not attributed to any particular group. Most jokes about drunks incorporate motifs of absurd misunderstandings: Similar sounding words are mistaken for each other, or one thing is mistaken for another. Apparently, attributing ignorance to drunks is a way of rationalizing foolish behavior. Humorous tales dealing with extreme laziness are widespread and extremely old—popular themes in literary collections of jokes.

Although religious jokes are popular in North American oral tradition, they are by no means a modern invention. In medieval satire, hypocritical and lecherous priests, monks, and friars were stock characters. In the late 20th century, priests and nuns who fail to uphold their vows of poverty, obedience, and chastity remain the butt of similar jokes. With the advent of Protestantism in Europe, the preacher assumed the role of the amorous priest in humorous folktales. Modern North American humorous tales still deal with the preacher's lust for women, but they also deal with his desire for worldly pleasures, including money, liquor, and fried chicken. Likewise, widespread stereotypic traits attributed to Jews—for example, a preoccupation with money, business, professionalism and pro-Semitism—are found in modern jokes about rabbis and Jews.

In the 1970s, a whole cycle of sick-Jesus jokes developed, mostly in the form of short riddle jokes. Some longer religious narrative jokes about Jesus are varieties of the modern sick joke, which is faddish and sometimes topical. People who appreciate religious jokes are not necessarily agnostics and atheists. On the contrary, they may be religious people who tell tales about God or Jesus to relieve them of the pressure of a too ideal model.

Jokes about professional and occupational groups reflect an age-old tendency of the folk to mock certain trades and professions. Lawyers and physicians, as well as clergymen, have been the subject of satirical folk humor since the Middle Ages and

continue to be popular figures in contemporary jokelore. A very general motif in some tales about physicians is “Repartee concernmg doctors and patients”; however, many of the jokes about physicians also are forms of contemporary sick humor, and some follow the good news—bad news format.

The female schoolteacher in North American jokelore is a symbol of female dominance as well as a model of moral authority. A dominant figure in the classroom, the schoolmarm is envisioned by schoolboys as also a dominant figure in the bedroom. In schoolboy fantasy, as reflected in jokes, the schoolmarm is the subject of sexual desire and conquest, frequently by a stock character, Little Johnny. More precocious than his schoolmates, Johnny possesses sexual knowledge far beyond what is normal for his age. Sometimes he speaks profanely in inappropriate contexts, but the humor in most of the jokes is based on punning or other wordplay, such as trick names. Usually learned and recited in adolescence, jokes about schoolteachers serve important psychological functions for young males. For instance, they reduce their fear about sex since Johnny always gets the best of a woman considered sexually dominant. Jokes about female schoolteachers also reduce adolescent male hostilities toward the oppressive moral authority of adults since an authority figure, the schoolmarm, is presented as not so very moral.

Other authority figures mocked in jokes are politicians. In political humor, no political party or figure is safe. The folk tell jokes, usually topical, about Republicans and Democrats, about Richard Nixon and John F. Kennedy, about George Wallace and Jesse Jackson, about Dan Quayle and Ross Perot, and about Newt Gingrich and Bill Clinton. Generally, as a class, politicians are distrusted in contemporary jokelore.

Many North American jokes, then, concern sex, ethnicity, religion, and politics and tend to reveal threats, concerns, and anxieties of those who pass them along. North Americans are competitive in play as well as in work, and jokes about contemporary pastimes constitute another class of contemporary jokelore. Humorous tales about golfers, for example, are common and offer relief from pressures brought about by competition on the golf course. There are jokes about novice golfers, women golfers, and golf widows as well as jokes about clerics and religious figures on the golf course, numskulls on the golf course, and frustrations on the golf course. There are even shaggy-dog tales about golf. Jokes about the callous golfer who thinks only of his game are especially popular.

Many narrative jokes told in North America are familiar forms of international humorous folktales, though here they are modified by time, locale, folk tradition, and the individual joke tellers. Jokes about the traveling salesman and the farmer’s daughter, for example, are contemporary descendants of old pastourelles that dealt with the seduction of a shepherdess by a roving knight. The traveling salesman is but a contemporary name for the potential interloper, a threat to conjugal rights.

What’s more, the influence of popular culture on modern jokelore gives a certain uniformity to the form, content, and theme of humorous folktales throughout North American oral tradition. North Americans live in the midst of a prevailing popular culture spread by the mass media, which influences jokes, just as, more generally, popular culture nourishes, and is nourished by, the folklore. The influence of popular culture on joke telling is not a recent development, though, as formerly jokes were preserved in jestbooks and chapbooks. In the late 20th century, electronic media, including e-mail, as

well as an expanded print media spread a much larger variety of jokes, including bawdy material once taboo in mainstream popular culture but fairly common now on the Internet and in popular collections of humor and slick magazines that are readily available in drugstores, supermarkets, and shopping-mall bookstores.

Though all kinds of jokes have been assimilated into popular culture, the narrative joke remains one of the most collectible forms of folk literature in North America. Jokes remain popular because they touch on every aspect of human life, may pop up spontaneously at any time in almost any social context, and are short, thus fitting very well into the fast pace of contemporary urban folklife.

Jones, Hathaway (1870–1937)

Raconteur of tall tales. Born in Roseburg, Oregon, Jones was the son of William Samson Jones and Elizabeth (Epperson) Jones. His parents and grandparents were Oregon Trail pioneers of the 1850s who settled in the Umpqua Valley. William and Elizabeth Jones divorced in 1883. In 1890 Hathaway joined his father at his gold claim at Battle Bar deep in the canyon of the Rogue River. With little education, Jones became a contract mail carrier. He picked up mail at Dothan on the West Fork of Cow Creek and traveled by mule team over fifty miles of mountainous trail to Illahe and Agness on the Rogue River. The mail then began a forty-mile journey by boat to the southwest coast of Oregon. Jones continued in this enterprise for forty-two years.

During his solitary treks through the mountains, Jones developed a rich repertoire of tall tales. His stories included three cycles: stories about his grandfather Ike (a wise old man of the woods), stories about his father, Samson (who possessed phenomenal strength), and stories about himself. In his tales about falling rocks, fantastic snow drifts, gigantic rattlesnakes, fierce panthers, and flying bears, Jones came to terms with the existential threats that lurked on all sides. Jones spun traditional tales, and in several cases he drew upon a motif or an event in a story he had heard from someone else and relocated the tale in the Rogue River wilderness. In 1937 his mule threw Jones over a cliff to his death.

More than fifty of Jones' tales survive, and many are yet told in the wild country of southwestern Oregon. Arthur Dorn began writing down the repertoire when he settled in Agness in the mid-1930s. Dorn worked for the WPA (Works Progress Administration) Oregon Folklore Project. Jones' tales appeared in Nancy Wilson Ross' *Farthest Reach* (1941) and in a 1946 article by Jean Muir in the *Saturday Evening Post*. Stephen Dow Beckham first heard the tales in the 1940s, and between 1965 and 1973 he collected many from informants residing in southwestern Oregon. The Jones stories are one of the largest collections from a single teller of tall tales in the United States.

Jones, John Luther (“Casey”) (1863–1900)

Railroad engineer, ballad hero. Jones, a Welsh American reared in Cayce, Kentucky, signed his name “Cayce Jones” on most documents, to distinguish himself from the legion of other Welsh American Joneses who also took to railroading as an occupation in the middle of the 19th century. The name was, however, pronounced “Casey,” and according to some sources it was newspapermen who changed the spelling to make it consistent with the pronunciation.

In 1888 Jones entered the employ of the Illinois Central (IC) Railroad, and two years later he took over as engineer of the most prestigious run of the railroad: the IC’s Cannonball Express, fast passenger train from Chicago to New Orleans. Jones brought with him his distinctive six-chime train whistle (in those days engineers could install whatever type of whistle they wanted), so indeed, as the ballads told,

The switchman knew by the engine’s moans
That the man at the throtde
was Casey Jones.

On Sunday, April 29, 1900, Jones and his fireman, Sim Webb, were due to take charge of the Cannonball in Memphis at a departure time of 11:35 P.M., southbound to Canton, Mississippi. However, the train was 95 minutes late, and Jones, who always had a reputation as a “fast roller,” highballed southward, apparently determined to make up lost time. He was nearly back on schedule when his train approached Vaughan, 175 miles south of Memphis. There, because of an unusual combination of circumstances, the caboose of a southbound freight extended past the siding switch and was on the main line in Jones’ way. Jones was going too fast to stop. His fireman, Webb, yelled a warning, and Jones told him to jump, while he applied the brakes. Webb did jump, sustaining only slight injuries, but Jones died as his engine plowed into the caboose of the other train.

In 1909 two vaudevillians, T. Lawrence Seibert and Eddie Newton, published a pop song, “Casey Jones (The Brave Engineer),” that quickly became a national hit. The ultimate source of Seibert and Newton’s material remains uncertain, but the evidence suggests that they had heard some fragmentary songs or ballads that were composed and sung about Jones by African American railroad workers shortly after the accident. (There are references to songs about Jones as early as 1908, when a complete ballad was published in *Railroad Man’s Magazine*.) Hillbilly and blues recordings in the 1920s, as well as field collections from the 1910s and 1920s, suggest that such “pre-Seibert-Newton” versions circulated fairly widely in the decade following the accident; some of them were evidently based on still earlier songs about hobos and railroaders.

Jones, Louis Clark (1908–1990)

Folklorist noted for his work on murder tales, ghost stories, and folk art, and as founder of the Cooperstown graduate programs, the first American graduate training program emphasizing material culture. Born June 28, 1908, in Albany, New York, Jones graduated from Hamilton College in 1930 and received his doctorate from Columbia University in 1941. His dissertation was published the following year as *Clubs of the Georgian Rakes*. Jones started his career as a teacher at Long Island University in 1931. Later he taught at Syracuse University and at the State College for Teachers in Albany. In 1947 Jones became director of the New York State Historical Association and the Farmer's Museum, a post he retained until his retirement in 1972.

Jones' early folklore interests centered on murder and ghostlore, and he published important work in both areas. His 1936 article "The Berlin Murder Case" traced the story behind a New York murder ballad, and his 1944 "The Ghosts of New York: An Analytical Study" was a groundbreaking examination of the ghostlore of the Empire State. Although Jones never lost interest in either subject, his later works on these topics, such as *Things That Go Bump in the Night* (1959), were in a popular rather than an academic vein.

After 1950 Jones' turned his scholarly sights on American folk art; two of his publications on this subject are *American Folk Art* (1952), coauthored with Marshall Davidson; and *New-Found Folk Art of the Young Republic* (1960), coauthored with his wife, Agnes Halsey Jones. In 1982 Syracuse University Press published *Three Eyes on the Past: Exploring New York Folklife*, a collection of his writings dealing with history, folklore, and material culture.

Jones was much more than just a library scholar; he was also an avid collector of folk art. Largely due to his efforts, the Fenimore House Collection at the New York State Historical Association became one of the outstanding collections in America. He was also largely responsible for establishing the Cooperstown Graduate Programs in 1964. Here a group of thirty students could obtain M.A. degrees in museology or American folk culture. This program was generally recognized as meeting a need for professionalism in both the museum field and American folklife studies. Unfortunately, the American folk-culture program was phased out in 1979, though the museology program continues.

Jones was a Fellow of the American Folklore Society. After a long illness, he died in Haverford, Pennsylvania, on November 25, 1990.

Jones, Louis Marshall (“Grandpa”) (1913–)

Singer, banjoist, comedian, longtime member of Grand Ole Opry radio show and Country Music Hall of Fame. A major figure in country music since the 1940s, he is generally credited with keeping alive interest in the five-string banjo and the older frailing playing style in the 1940s and 1950s, and he has been one of the few modern country singers with a keen appreciation of the music’s traditional roots.

Jones was born in Niagra, Kentucky, on the Ohio River and grew up hearing the old ballads of his mother and the fiddle tunes of his father. In 1929 he started a radio show in Akron, Ohio, billing himself as “The Young Singer of Old Songs” and featuring his ability to imitate the then popular yodels of Jimmie Rodgers. After a stint on the radio show *Lum and Abner* (as a musician), he began working with Kentucky ballad singer Bradley Kincaid, who became his most important musical mentor. During the mid-1930s, he performed with Kincaid over station WBZ in Boston, finding that rural New Englanders liked their ballads and old songs as much as Southerners did. It was Kincaid who gave Jones his sobriquet “Grandpa”; though Jones was only twenty-two years old, his grouchiness on the early morning show reminded Kincaid of an old man. The familiar Grandpa Jones costume—hightopped boots, fake mustache, and suspenders—was created with help from vaudeville comic Bert Swor.

In 1937 Jones struck out on his own, going first to the powerful station WWVA in Wheeling, West Virginia, and later to the even stronger WLW in Cincinnati. Following Kincaid’s lead, Jones issued his own songbooks and offered a varied program of traditional ballads, old-time songs, current country favorites, gospel songs, and even recitations. In his spare time, he learned how to play the clawhammer banjo from Cousin Emmy (Cynthia May Carver), then a popular radio star from south-central Kentucky.

At WLW Jones met three of the most influential musicians in country music history: Alton and Rabon Delmore (songwriters who pioneered close-harmony singing) and Merle Travis (the young guitar player who parlayed western Kentucky choking style into the most popular modern method). Though their tenure at WLW was interrupted by the draft and wartime restrictions, the four influenced one another in countless ways. One endeavor was their organizing of a gospel quartet, the Brown’s Ferry Four, which helped popularize classics by writers like Albert Brumley and Cleavant Derricks. Another was their work for King Records, which would emerge after the war as the nation’s leading independent company and the one most devoted to vernacular music. Two of Jones’ most important songs, “Mountain Dew” and “Rattler,” both derived from traditional sources, were recorded on King in 1947, and these won him his national reputation.

After marrying Ramona Riggins, Jones moved to Nashville and began working on the Grand Ole Opry in 1946. Though later jobs at Richmond, Virginia, and Washington DC, intervened, Jones soon became a fixture on the Opry and later (1969) joined the cast of the television show *Hee Hatu*. In 1978 he was elected to the Country Music Hall of Fame, and in later years he became one of the leading spokesmen for traditional music in the increasingly commercial Nashville community.

Juke Joint

Small-scale commercial establishment where patrons eat, drink, gamble, and dance to the homemade music of local and itinerant artists. The term is derived from the word “juke,” “jook,” or “joog,” which, among coastal Georgia and South Carolina’s gullah African Americans means wild or disorderly. In *Blues off the Record*, British blues historian Paul Oliver described typical country juke he found in the South in the late 1950s and early 1960s in this way: “Generally they are wood, patched and remade on their balloon frames, but covered sometimes with tar paper and imitation tiles stamped on sheets of roofing felt” (Oliver 1988:45). Alcohol, usually homemade, was an important element of juke joints, especially before modern zoning and licensing laws curbed folk-distilling activities.

Alice Walker’s well-known novel *The Color Purple* (1982), much of which takes place in a juke joint named Harpo’s after its builder-owner, gives a good sense of the atmosphere of a typical Southern juke joint. As her description indicates, they were built in the backwoods for a reason: “What you building? I ast. Jukejoint, he say. Way back here? No further back than any of the others....Jukejoint sposed to be back in the woods, say Harpo. Nobody be bothered by the loud music. The dancing. The fights. I wain say the killings. Harpo say and the police don’t know where to look.”

Some scholars have suggested that the term “juke” can ultimately be traced to the West African word *dzugu*, meaning wicked or evil. This connotation is substantiated by folklorist Zora Neale Hurston’s descriptions of community attitudes toward juke joints in north Florida in the 1930s, and by comments made by many blues artists about the atmosphere in which they learned and played their music. Hurston defined a “jook” as “...a fun house. Where they sing, dance, gamble, love and compose ‘blues’ songs incidentally” (Hurston 1935:63). Paul Oliver has pointed out that like “barrel house,” the term “juke joint” often simply meant a brothel.

While the term is primarily applied to Black establishments, it is also common for Whites to speak of “going jukin’” in referring to bar hopping, especially in the Deep South. The origins of all-Black juke joints lie in the off-road whiskey-distilling shacks of the Reconstruction era; their Golden Age seems to have been from Prohibition through the 1930s; and while they are much rarer since the civil rights era, Birney Imes’

Jitterbugging in a juke joint on Saturday night. Near Clarksdale, Mississippi, 1939. Photo Marion Post Wolcott. Library of Congress.

photographic essays from Mississippi in the late 1980s indicate that they are still a significant aspect of rural Southern Black life (Imes 1990).

The word “juke” has entered common American speech as part of “jukebox,” the folk name for coin-operated phonographs that play recordings the customers select. The first documented jukebox was featured at the Palais Royal Saloon in San Francisco in 1899. It was an Edison electric phonograph equipped with four coin slots and extra speakers. These early machines were not called jukeboxes, however, and the term did not come into popular use until the late 1930s, when “race” and swing music achieved a wide audience.

Juke joints have played an important part in Black folk culture in that they provided the situation and context for the creation and dissemination of the down-home blues, a major Black folk music and one of the cornerstones of American popular music. Several factors are relevant to this context. First, improvisation (and thus individual creativity) was encouraged in juke joints’ settings. Events and personalities from the local scene

were incorporated into lyrics of already existing couplets and songs. Also, performers were in constant interaction with the patrons. That, along with the practice of “cutting heads,” or competing for audiences’ attention and loyalty, kept the level of musical and theatrical skill high; one held the stage or gave up. Furthermore, juke joints usually operated on a two-level talent basis: There were traveling musicians who could sustain more or less professional careers because of the extensive circuit of juke joints, and there were local musicians who, while they did not travel, could stay in touch with the best musicians, and with new styles and repertoires, by playing with, or warming up for, those “on the circuit.”

When the great migration of Blacks to Northern urban centers took place, beginning in the 1930s and accelerating in the late 1940s, the Southern milieu of the “down-home” juke joints was recapitulated in the small steamy bars of such urban settings as Chicago’s South Side, Detroit’s Hastings Street, and Toledo’s Canton Avenue. In this context, the juke joint began to function as an idea and an ideal, with the atmosphere of the bars both generating and relieving pangs of nostalgia for the juke joints and other positive aspects of the rural Southern setting more than six million Blacks had recently left behind. Next to the Black church, the juke joint, both as an actual locale and as a cultural symbol, has probably served as the most fertile ground for the creation and maintenance of African American folk culture.

Juneteenth

June 19; a holiday commemorating the emancipation of the slaves. Juneteenth began on June 19, 1865, when General Gordon Granger landed at Galveston, Texas, with a regiment of Union Army soldiers and read General Order No. 3, which began with these two memorable sentences: “The people of Texas are informed that in accordance with a Proclamation from the Executive of the United States, all slaves are free. This involves an absolute equality of rights and rights of property between former masters and slaves, and the connection heretofore existing between them becomes that between employer and free laborer.”

Juneteenth, which was originally celebrated in east Texas, western Louisiana, and southwestern Arkansas, began its expansion beyond these three states soon after its initial celebrations. In the 1800s, a significant number of former slaves, driven by the collapse of Reconstruction, carried the cultural baggage of Juneteenth along with their meager possessions when they began to migrate out of this tri-state area into the Western territories that would eventually become the new states of Oklahoma, Kansas, and Colorado. The second Western mass migration of African Americans from the three original Juneteenth-celebrating states, into Arizona, California, and Washington, was triggered by their flight from the Great Depression of the 1930s and their attraction to good-paying jobs during the World War II era of the early and middle 1940s.

Political actions spawned by the civil rights movement also played a major role in the revitalization and renewed geographical spread of Juneteenth celebrations. In 1979 the Texas state legislature passed House Bill 1016 making Juneteenth the first and only Emancipation celebration to be accorded official state recognition. The bill, which was approved on June 7, 1979, and became a part of Texas law on January 1, 1980, reads in part:

“The...19th day of June...of each year, and every day on which an election is held throughout the state, are declared legal holidays, on which all the public offices of the state may be closed and shall be considered and treated as Sunday for all purposes regarding the presenting for payment or acceptance and of protesting for giving notice of the dishonor of bills of exchange, bank checks and promissory notes placed by the law upon the footing of bills of exchange. The 19th day of June is designated “Emancipation Day in Texas” in honor of the emancipation of the slaves in Texas on June 19, 1865.

Since Governor William P. Clements signed this historic bill into law, Juneteenth observances have spread into all regions of the United States, including such nontraditional cities as Washington, DC; Buffalo, New York; Milwaukee, Wisconsin; and Minneapolis, Minnesota.

K

Kirkland, Edwin Capers (1903–1972)

Folksong collector, teacher, and bibliographer. For many years, Kirkland's reputation rested on a monumental bibliography of the folklore of India, which he compiled during several tours of duty there as a cultural officer and consul. During the 1980s, however, after Kirkland's sudden death at the University of Florida, a considerable collection of Soudiern folksongs gathered by him and his wife, Mary, in the 1930s came to light. Many of these songs had been recorded on disc, with no real help or encouragement from the Library of Congress or other major philanthropic organizations, making the Kirklans pioneers in Southern field recordings. Kirkland was also far-sighted enough to perceive the interplay between commercial mass media and traditional song, and his unpublished collection "Knoxville Folk Songs" showed a sophisticated perception of traditional song in an urban society.

Coming to the University of Tennessee from Northwestern in 1931, Kirkland did most of his collecting between 1935 and 1939. He and his wife traveled with their disc cutter to remote areas of Tennessee, the Carolinas, Kentucky, and north Georgia, in addition to collecting in Knoxville and even within the university community. In the fall of 1946, he moved to the University of Florida, where he worked with Alton C. Morris and helped establish the Florida Folk Festival in White Springs. In the 1960s, he and his wife traveled widely in Europe and the Far East; with the encouragement of Richard M. Dorson, Kirkland compiled his bibliography of the folklore of India, which was published in 1968.

Kittredge, George Lyman (1860–1941)

Harvard University English professor and folklorist, a dominant force (arguably *the* dominant personality) in the humanities in America from the turn of the century to World War II. From an old New England family, Kittredge grew up in Barnstable, Massachusetts, and never lost his ties to Cape Cod. He exercised his great literary and linguistic gifts as an undergraduate at Harvard and graduated, summa cum laude with the equivalent of a major in Latin and Greek, in 1882. He taught Latin at Phillips Exeter Academy from 1883 until he moved to Harvard in 1888, except for a honeymoon-study year (1886–1887) in Germany. Kittredge retired from Harvard in 1936, two years short of the fifty years' service of his great mentor, Francis James Child.

In 1904 Kittredge was president both of the Modern Language Association of America and of the American Folklore Society (AFS); he served as first vice president of the AFS from 1911 to 1918 and as assistant or associate editor of the *Journal of American Folklore (JAF)* from 1909 to 1940. He edited several important literary and philological series, and the list of his honors (honorary degrees, distinguished lecture series, and the like), especially in later life, is long.

At Harvard Kittredge is especially remembered as the demanding teacher of "English 2: Shakespeare"; his brilliance, wit, and eccentricities were reflected in college legends and anecdotes. Some are still known among undergraduates, though usually with "this white-bearded old professor" unnamed. Perhaps the best and most representative is Kittredge's purported answer to the impertinent question why he had never taken the Ph.D. degree: "Who would have examined me?" (But see Whiting 1972:xxxix—xxxii on the institutional background of this anecdote.)

Kittredge's bibliography of 383 items includes books edited by him, various reprints, and juvenilia; even so, the list of substantial titles seemed superhuman in its time, the range including English language and literature, especially Chaucer, Malory, and Shakespeare; ballads and folklore; witchcraft; the Greek and Latin classics; Americana, especially concerning settlers of Massachusetts; Old and Middle French; biographical sketches; humor; and more. For folklorists the most obviously important items are Kittredge's work on the final volume of Child's *The English and Scottish Popular Ballads* (1898), his stimulating introductory essay for a one-volume edition of Child (1904), and other ballad articles and collections (such as those that appeared in *JAF* from 1907 to 1926), but he was also instrumental in encouraging many field collectors—notably, John and Alan Lomax. Two of Kittredge's famous books were, in his time, considered to appertain to folklore: *The Old Farmer and His Almanack* (1904) and *Witchcraft in Old and New England* (1929). Kittredge's approach to the Middle English romances also comprised comparative study of popular story-material, ritual, and custom; in addition to articles and notes, there are his substantial monograph on *Arthur and Gorlagon* (1903) and the masterpiece on *Sir Gawain and the Green Knight* (1916).

Klezmer Music

Instrumental music played by east European Jews for weddings. The term “klezmer” (plural, *klezmerim*) is a Yiddish term based on the Hebrew words *keley zemer*, which mean “musical instruments.” The Yiddish term referred to a musician who was a member of a professional or semiprofessional class whose origins can be traced back at least to the 16th century. Such Jewish instrumentalists, although primarily occupied with providing music for the various stages of Jewish weddings, were often knowledgeable in, and influenced by, non-Jewish east European musical traditions as well. Although it is probable that most early klezmer musicians were musically illiterate, transcriptions of klezmer melodies were published at the beginning of the 18th century.

Originally, klezmer music was played primarily on violins and other stringed instruments as well as on flutes, drums, and a type of cymbalom, called *tsimbl* in Yiddish. While it is difficult to determine the precise nature of klezmer music before the 20th century, vivid literary depiction of *klezmerim* can be found in stories by such authors as Sholom Aleichem, Y.L.Perets, and Anton Chekov that focus on klezmer violinists. Some measure of the klezmer violinist’s capability may be judged from the rapid development of a great number of outstanding Jewish violinists from the beginning of the 20th century, once Jews began to be admitted to Western conservatories. Although initially primarily string music, klezmer was decisively affected by the development of the clarinet at the beginning of the 19th century and by the addition of brass band instruments toward the end of that century. By the beginning of the 20th century, the most important instrumentalist in klezmer ensembles had become the clarinet virtuoso.

Klezmer music reached the United States around the turn of the 20th century with the influx of Jewish immigrants from eastern Europe. In the United States, *klezmerim* continued to provide music for Jewish weddings as well as for non-Jewish social occasions, primarily in New York City and Philadelphia, where sizable immigrant Jewish communities developed. As in Europe, these Jewish musicians were known for their flexibility and improvisational skills. In addition to the social events for which *klezmerim* had played for centuries, new opportunities arose for these musicians in the United States, primarily from about 1913 to the 1940s. Increased demand for klezmer music was fostered by the development of the American Yiddish theater, the recording industry, and ethnic radio programs. However, these media required musicians who had the ability to read music. As a result, those who were capable of playing only the old eastern European repertory were relegated to a secondary status.

While klezmer music continued to be played, its most popular and respected instrumentalists disdained the term “klezmer.” Ironically, in the heyday of American klezmer music, the term became pejorative, referring specifically to those illiterate, “second-rate” musicians who were not able to adjust to the new American influences, particularly jazz. However, musically literate Jewish musicians were able to find employment in the orchestras of the Yiddish theater, which often included klezmer music as a nostalgic element in its productions. In addition, hundreds of recordings of klezmer

music were made for ethnic consumption. The designated audience, while primarily Jewish, also included Greek, Polish, and Ukrainian communities. Often klezmer recordings were released in both Jewish and non-Jewish editions, with tune titles in the language of the targeted community. A third haven for klezmer music and musicians was the ethnic radio programming of station WEVD in New York City, where the largest Jewish community resided. This station was owned by the leading Yiddish daily, *Forverts*, and featured klezmer music not only as program material, but also in its commercials.

From early on, a curious symbiosis existed between klezmer and jazz music. Harry Kandel's 1926 recording, "Jakie Jazz 'Em up," attests to the extent that traditional klezmer ensembles absorbed the rhythms and modalities of the American popular music of the period. Perhaps even more surprising is the Original Dixieland Jazz Band's recording of "Palestina," which consciously imitated klezmer. Klezmer nuances can also be discerned in the music of Benny Goodman. Although Goodman was not a product of klezmer himself, his big band, ca. 1938, featured trumpeter Ziggy Elman, who exploited his klezmer background in several solos, most memorably in the classic "And the Angels Sing." More recently, Don Byron, a professional jazz musician, has distinguished himself as an outstanding klezmer clarinetist, and the Klezmatics, a progressive klezmer ensemble, have drawn on modern jazz elements in creating an innovative style of contemporary klezmer.

Although many outstanding musicians played klezmer music, several deserve particular mention. Two leading orchestra leaders dominated the early recordings. Beginning in 1917, Harry Kandel, a clarinetist centered in Philadelphia, made numerous recordings for Victor. His counterpart for Columbia was Abe Schwartz, a violinist and composer for the Yiddish theater whose klezmer recordings featured the two most important and influential klezmer clarinetists, Naftule Brandwine (1889–1963) and Dave Tarras (1897–1989). Brandwine, was an outstanding virtuoso and improviser whose eccentricities made him the subject of many legends. However, he was soon replaced in his role as premier klezmer clarinetist by the more musically literate, versatile, and reliable Tarras. The latter was able to weather the influences of a variety of popular American musical trends, including jazz and swing music, whose popularity affected the musical demands of the klezmer audience. As a result, Tarras was able to extend his career into the 1960s. In 1984 he was honored with a National Heritage Folklife Award by the NEA (National Endowment for the Arts).

By the 1940s, as the American Jewish community became increasingly acculturated, interest in klezmer music had waned. Toward the end of the 1940s, the arrival of Hasidic survivors of the Holocaust provided a slight lift. Nevertheless, klezmer music was all but moribund by the 1960s: A token klezmer tune might still be played at a typical bar mitzvah or wedding or crop up in the arrangements for a recording of Yiddish theater hits by Theodore Bikel. Only in the early 1970s was there a revival of interest in klezmer music. Sometime after a series of recordings by Argentina-born Israeli clarinetist Giora Feidman, a small number of musicians in California and New York City began to actively pursue their interest in klezmer music. Most of these musicians were products of the folk- and edinic-music revival. Interest was fostered by exposure to collections of classic 78-rpm recordings of klezmer music at the Judah Magnes Museum in Berkeley, California, and at the Yivo Institute for Jewish Research in New York City. Klezmer

enthusiasts in New York were particularly fortunate in locating Dave Tarras, who became a mentor for young klezmer musicians. By the early 1980s, several klezmer groups had formed. These included the Klez morim of California, Kapelye in New York City, the Klezmer Conservatory Band of Boston, and an ensemble that featured duets by *tsimbl* player Walter Zev Feldman and Tarras' protégé, Andy Statman, on clarinet. All of these groups were to make influential recordings that stimulated interest in klezmer music throughout the United States. It is important to note that several of these groups included non-Jewish musicians who were attracted to the music for its own sake. However, most of the early participants in the klezmer revival were probably also motivated by the opportunity that the music provided for expressing identity with Yiddish culture. By the 1990s, klezmer music had established itself as a part of popular American culture. Dozens of klezmer bands were active in various parts of the United States. Several of the leading bands had appeared in, or provided music for, such Hollywood movies as *The Chosen*. A number of anthologies of classic 78-rpm recordings had been released, as well as numerous recordings by contemporary klezmer ensembles. In addition, beginning in 1985, Yivo, under the direction of Henry Sapoznik, sponsored an annual Yiddish folk-arts program, "Klez Camp," where Yiddish, klezmer music, and dance were taught and enjoyed.

Knortz, Karl (1841–1918)

German American folklorist. One of the most prolific scholars of 19th-century America, Knortz, though little known today, was the first person to write a book devoted to the entire spectrum of American folklore. The reasons for this situation were that he wrote most of his numerous publications in German, that most were published in Germany, that he always remained closer to his German colleagues than to American scholars, and that he was a solar mythologist, a theoretical school that never enjoyed great popularity in the United States.

A native of Prussia, Knortz migrated to the United States in 1863; during the next fifty-five years, he wrote books and articles on folklore, literature, education, and German American relations. Unlike most solar mythologists, Knortz was an avid fieldworker who collected material for his several books during many years spent as a secondary-school teacher and minister in Michigan, Wisconsin, Ohio, Indiana, New York, and Pennsylvania. Knortz's two major aims were to foster ethnic pride among his fellow German Americans and to make American literature better known and appreciated in his homeland. His two most important books to folklorists are *Nachklänge Germanischen Glaubens und Brauche in Amerika: Ein Beitrag zur Volkskunde* (Reminiscences of German Beliefs and Customs in America: A Contribution to Folklore) (1903) and *Zur Amerikanischer Volkskunde* (American Folklore) (1905). The former is one of the best early works on ethnic folklore, and the latter is the first volume purporting to cover the entire field of American folklore.

Knortz's work is in many ways creative and innovative, but as a solarist he was conventional. Myths, in this interpretation, originated in a prescientific era when the only explanations of natural phenomena available were poetic fantasies in which various natural forces were represented as living beings. Over time the original meanings of these tales were lost, and they became generally accepted as factual. Therefore, when people saw or experienced different natural phenomena they were reminded of its corresponding story. Although many solar myths were known in only one society, others (like the Prometheus story) were the property of all civilized people. Although oral tradition helped spread such myths, their widespread occurrence was also due to the efforts of literary artists like Aeschylus and Goethe. In this sense, Knortz was aware that print did not always have an adverse effect on spoken narratives, a view not accepted by most scholars of his day but later widely recognized.

Knott, Sarah Gertrude (1895–1984)

Founder and program director of the National Folk Festival. Trained in drama, and with no academic grounding in folklore, Knott pursued her lifetime goal to introduce the folk performing arts to the widest American audience. After several years of almost single-handed and often frustrating effort, she staged the first National Folk Festival in 1934 in St. Louis, Missouri. This was followed by annual festivals cosponsored by local groups in more than a dozen other American cities until, in 1971, the national event settled down at the Wolf Trap Farm near Washington, DC. Knott personally produced and staged each festival until her retirement in 1971; thereafter, until her death, she served as consultant to state and community folk-arts programs for the national Folk Festival Association and similar organizations. Over the years, her festivals have become the standard for many similar events throughout the country.

Knott had a vision of national gatherings of peer- rather than producer-selected performers keeping true to their own traditions in an age of standardization and mass audience appeals. Her goal was a better understanding and appreciation of America's diverse ethnic, geographic, and occupational groups through the preservation and perpetuation of their inherited cultural legacies.

Her efforts were much criticized by academic folklorists. They particularly objected to her insistence that only through the medium of regional and national festivals (big shows with large audiences) could the country's traditional legacies survive, and to her failure to see the inconsistency between her "standards of authenticity" and the artificiality of "big show" performances in large auditoriums.

Knott's last years were spent in the preparation of a definitive history and rationale for folk festivals, a work that was never completed to her satisfaction.

Knox, George (1862–1892)

Northern Maine lumberjack and trickster reputed to have sold his soul to the devil for magical powers. According to some older informants, Knox had joined a circus as a youth and returned with a bag of tricks to play on his more gullible fellow woodworkers. Often mentioned is his book of tricks, transmuted by the superstitious into a “black book” of devilish contents.

The greater part of the Knox traditions revolves about a Faustian theme. Thirty years of power for thirty dollars was the deal, and then the devil collected his due (no informant was aware that, according to the records, Knox died at age thirty of tuberculosis). This portion of the tradition is the strongest and is replete with black dogs, sacrifices of black cats at crossroads at midnight, and the swearing of oaths of fealty to the “evil one.”

Another sizable body of tradition is work oriented, celebrating great feats of strength and tremendous amounts of work accomplished, this often with enchanted lumbering tools. A common tale has Knox sitting on a stump while his ax is industriously chopping down trees. All of this was very secretive; and should someone touch the famous ax, Knox would know and immediately change its handle.

Throughout both segments of the Knox tradition, Knox emerges as a man to be feared and avoided. It was said that Knox always slept alone in the lumber camps, although the general space- and money-saving practice was to have two to a bunk. The reason given was simple: No one wanted to sleep in the same bed with a man of Knox’s evil reputation.

The localization of the Knox traditions and their present-day vitality appear related to two circumstances: first, that this region is a stable, long-settled rural area with no immigration; and second, the great majority of the population belongs to conservative Protestant religions in which the devil has not as yet become an abstraction.

Köngäs-Maranda, Elli (1932–1982)

Folklorist, anthropologist, and poet. Born and raised in a small village in northern Finland, Köngäs-Maranda earned a Ph.D. in folklore at Indiana University in 1963; her dissertation concerned Finnish American verbal traditions. From 1970 until her death, she taught in Canada, first at the University of British Columbia, Vancouver, and thereafter at Laval University in Quebec. She also spent long periods conducting fieldwork among the Lau of Malaita in the Solomon Islands and as a guest lecturer at European universities. In 1978 she was elected a Fellow of the American Folklore Society, one of many honors that she received.

A recurrent theme in Köngäs-Maranda's work is folklore in the contexts of migration and exile. Another is women—as folklore carriers or as scholars. A third is structural analysis; throughout her career, Köngäs-Maranda attempted to locate constant structures among diverse folkloric expressions. While often rigorously formalized, her structural analyses also have poetic force. Several of them are devoted to riddles communicated among Lau women or among Finns in North America. Köngäs-Maranda believed that structural analysis was worth little if the materials were not situated in people's lives.

On many issues, Köngäs-Maranda was a pioneer, and folklorists have not always known how to evaluate her contributions. Yet, her theoretical insights and unusual career continue to capture imaginations, not least among women. The Women's Section of the American Folklore Society annually awards the Elli Köngäs-Maranda Prize for Contributions to the Study of Women and Folklore.

Korean Americans

Immigrants from Korea and their descendants living in the United States. The first Korean immigrants arrived in Hawaii in 1903 to work on plantations. Because of immigration laws, few Koreans immigrated to the United States until 1965. After 1965 and the easing of immigration restrictions, a wave of Korean immigration began, and by 1977 more than 30,000 Koreans per year were immigrating to the United States. In the 1990s, Hawaii and California continue to have the largest concentration of Korean Americans, and Los Angeles and New York City are the urban centers that have the highest numbers of Korean American households. Among Korean Americans, immigrants who come to the United States as adults are referred to as “first generation,” those who come during childhood as “one-point-five” generation, and those who were born in the United States as “second generation.” Large numbers of second-generation Korean Americans are having children, and a significant “third generation” is quickly emerging.

In Los Angeles, the Korean American community is centered around Koreatown. While Korean Americans are not the main residents of this area, this section of the city has a remarkable concentration of Korean American—owned businesses that cater to a mainly Korean American clientele. The signage is written in the Korean alphabet (*hangul*), and the use of space is reminiscent of shopping areas in South Korea. The development of the “swap meet,” an amalgamation of privately owned vending booths under one roof is remarkably similar to the Korean markets, the best known of which are *Namdaemun shijang* and *Tongdaemun shijang*, both in Seoul. Koreatown represents a reinterpretation of the traditional Korean business space into the American urban environment. The political associations, parties, and alliances of Koreatown are also reminiscent of neighborhood politics in the large Korean cities, suggesting that political culture among first- and one-point-five-generation Korean Americans is closely linked to that of South Korea.

Korean-language print and broadcast media help Korean Americans maintain a sense of common ethnic heritage and reinforce the use of the Korean language. Many second-generation Korean Americans have learned the Korean language since childhood. In Korean American households, one often hears first-generation parents speaking Korean to their second-generation children, who reply to their parents in English. Many Korean American children attend supplementary language classes on weekends to bolster their language skills. At the university level, there has been a significant increase in the

*Transmitting a Korean tradition,
Myung Chul Choi teaches a martial-
arts class. Silver Spring, Maryland,
1982. Photo Lucy Long. American
Folklife Center.*

numbers of Korean American students in Korean language, literature, and culture courses.

Churches and other religiously affiliated organizations play a major role in the Korean American community. Many Korean Americans are members of various denominations of the Protestant Church; as in Korea, the church and church organizations are a main focus of social activity. The churches often provide support services for recent immigrants, offer both English- and Korean-language classes, and have various social groups, such as teen groups, senior citizens' groups, and study groups. These groups bolster the development of a church-centered Korean American identity.

Shamanism, one of the best-known elements of Korean religious expression, can also be found in the Korean American communities. Primarily women, shamans often hold rituals to ensure good luck, to help ease the way for a departed spirit, and to discover the cause of chronic illnesses. Elements of shamanism have also carried over into some evangelical Protestant churches with the emergence of the "deaconess," who holds prayer sessions in individual households. Household rituals, designed to placate various spirits and directly linked to Korean shamanism, are practiced by some first-generation Korean Americans. Fortune-telling, geomancy, and matchmaking are also actively practiced by some members of the Korean American communities.

Life-cycle rituals based on Korean traditions are commonly practiced by Korean Americans. Perhaps the most frequently performed of these rituals are the *baekil*

ceremony 100 days after a child's birth and the *hwangap* (a celebration held on a person's sixtieth birthday, marking the completion of one full life cycle). Weddings in the Korean American community frequently combine elements from the "traditional" Korean wedding festival, such as dress, and the "Western" wedding ceremony. At times, two ceremonies are held, one Korean and one Western. Among calendrical festivals, Korean Americans are most likely to celebrate *Ch'useok* (the Harvest Moon festival), which is a chance for the extended family to gather. While in Korea, families travel to their *kohyang* (ancestral village) at *Ctiuseok*, this is not possible for most Korean Americans. *Chesa* (ancestor-worship rituals) are usually performed during the celebration of *Ch'useok*. The celebration of *chesa* throughout the year is common among first-generation Korean Americans, but less so among the second generation.

Foodways are perhaps the most evident of the Korean American cultural expressions to non-Korean-Americans. One can find Korean restaurants in many American cities serving Korean barbecue (*bulgoki* or *kalbi*). *Kimch'i* (pickled cabbage) is also available in most urban grocery stores, as are ramen noodles. In many urban areas, one finds Korean-cooking classes, often taught at community centers and often attended by one-point-five- and second-generation Korean Americans eager to learn how to prepare Korean foods. Foods used in ancestor-worship rituals, such as *tt'ok* (rice cake), are readily available in areas such as Koreatown.

Revolving credit associations, known as *kye*, are common in areas where the Korean American population is large. Mostly popular among first-generation Korean Americans, these associations offer the members an opportunity to borrow money interest free from the other association members. Each member pays a certain amount into a general pot every month. Members then take turns borrowing the pooled financial resources of the group. In this manner, many recent Korean American immigrants are able to acquire the capital necessary to establish small businesses. Misunderstandings over the source of this capital have led to tensions in some urban areas between Korean Americans and other groups unaware of the *kye*.

In the late 20th century, as a significant population of second-generation Korean Americans reach adulthood, a burgeoning interest in both Korean culture and the expression of an independent Korean American culture has become evident. At universities, Korean American student associations are common. Besides Korean and Korean American history, these groups often study Korean culture, including expressions such as drumming (*p'ungmul*) and mask dance drama (*t'alch'um*). The riots in Los Angeles in 1992 resulted in massive losses among Korean American merchants. Many second-generation Korean Americans saw the riots as an attack on their community, with a resultant flowering of interest among Korean Americans on Korean and Korean American culture and identity.

Korean War

America's first military loss, often dubbed "the Forgotten War" by its veterans and historians. The Korean War barely influenced cultural traditions; thus, folklore of the war is minimal. Rather than preserve the war's heritage, most Americans preferred to cling to traditions from more glorious military precedents such as the World Wars. Military cadence chants, which refer to previous wars, often omit the Korean War, skipping from World War II to Vietnam.

The major popular-culture monument to the Korean War, the movie and television series entitled *M*A*S*H**, portrays many of the basic folklore themes and situations of the Korean War, such as Rosie's Bar and the interaction of Korean civilians and merchants with soldiers.

Not even officially a war—termed a police action by politicians—the Korean conflict was the first test in the chilling Cold War. Common soldiers suffered anger, frustration, and despair at the stalemate resulting from the containment tactics and no-win policy as political and military leadership disagreed about how to conduct the conflict. Feeling betrayed by their leaders and abandoned by Americans, soldiers in Korea established their own culture to cope with their situation.

In July 1950, novice American troops naively believed that the enemy would immediately retreat when it heard the United States was fighting. Instead, North Korean troops advanced, shocking soldiers who were not physically or emotionally prepared for combat. The Korean hills and the monsoon heat and humidity overwhelmed soldiers.

Soldiers in Korea sang lyrics describing their feelings about the military, the enemy, and service in Korea. One machine gunner's ditty revealed the gloom Korean soldiers felt: "The last time I saw Taejon it was not bright and gay. /Today I'm going to Taejon and blow the place away." Other songs eulogized comrades ("There Are No Fighter Pilots Down in Hell") and expressed frustration with commanders ("Give Me Operations"). The popular Korean War song "Itazuke Tower" resurfaced in the Vietnam War as "Phan Rang Tower."

Parodies of songs, such as the British Indian Army's "Bless 'Em All," revealed the comradery of soldiers stuck in the cold and terror of Chosin Reservoir:

Bless 'em all, bless 'em all.
 The Commies, the U.S. and all:
 Those slant-eyed Chink soldiers
 Struck Hagaru-ru
 And now know the meaning of U.S.M.C.
 But we're saying goodbye to them all.
 We're Harry's police force on call.

Along the main line of resistance, rumors spread about the potential dangers of guerilla attacks, suicidal ambushes, fake surrenders, and enemy soldiers hiding in refugee columns. Soldiers repeated stories of “human wave” attacks by Chinese fanatics and of collaboration by American prisoners of war. Other rumors described the Communists’ treatment of prisoners, whom gossip accurately portrayed as suffering cruel torture, interrogation, and brainwashing. United Nations soldiers also worried about Communist agents being purposefully captured as prisoners to spark prison riots. Other rumors concerned Communists taking over the U.S. government. Germ warfare, which the Communists claimed the allies were waging, joined the folk culture of the war through tall tales, cartoons of mutant insects, and displays, including a mouse rigged with a parachute by American prisoners. Rumors about impending peace were always rampant.

Korean soldiers created terminology to cope with their often miserable conditions. During the severe winters of subzero temperatures in the Korean hills, they joked about living in the “Ice Bowl.” Faced by overwhelming forces, many troops fled under fire. The term “bugout” designated units who readily retreated, especially the Twenty-Fourth Regiment, which gained a reputation for cowardice in the early stages of the war. Soldiers called the Korean conflict the “yo-yo war” because it never seemed to end, and prominent entrenchments were nicknamed after movie stars or other culturally recognizable names: Jane Russell, T-Bone, Old Baldy, and Porkchop Hills. M*A*S*H* was an acronym for mobile hospitals, and code names for military campaigns (such as Operation Killer) entered the wartime vocabulary.

“R&R” the eagerly anticipated morale-boosting break from the front for rest and recuperation in Tokyo, became known later in the war as “I&I” (intercourse and intoxication) because of the excesses in which jaded soldiers engaged. The “big R,” or rotation home, gained by accruing monthly points according to combat duty, created customs that carried staying alive until soldiers had enough points to go home. Lownumber men covered for high-point men in dangerous combat, expecting new men to do the same for them in the future.

The *won* (Korean currency), as well as the black market, also entered war lore. Other symbols associated with the Korean War included military C rations, Lucky Strike cigarettes, napalm, and military bunkers. The First Cavalry wore yellow scarves traditionally associated with the cavalry and also representative of the soldiers’ wish to return home to loved ones. Soldiers erected signs crudely lettered with mileage to distant home cities and carried homemade regimental signs. They displayed captured Chinese horns and burp guns as well as identifying emblems such as the Garry Owen crest. Folk gestures aided Korean War prisoners who, when photographed for Communist propaganda, gestured with the “Devil’s Horns” to protest their incarceration without their captors understanding the code.

Anti-Truman sentiments prevailed in Korea and America, protesting the continuation of the war and President Harry Truman’s dismissal of General Douglas MacArthur for wanting to extend the war to China. Near Hoengsong, Marines designed a sign declaring, “Massacre Valley—Scene of Harry S Truman’s Police Action. Nice Going Harry.” In America, “Punch Harry in the Nose” clubs organized and “Oust President Truman” bumper stickers appeared on cars.

Conflict between the Korean population and the American forces resulted in the Americans using disparaging terms such as “gook” for Koreans. Koreans believed that

the spirits of their ancestors followed them, and they exorcised evil spirits by jumping in front of army vehicles. Some GI's, disgusted by what they viewed as the Korean's primitive lifestyle, encouraged their comrades to hit civilians on purpose.

South Korean troops incorporated GI English into their vocabularies. During what they termed their "Civil War," traditional Korean folktales, depicting the God of War and fierce warriors saving Seoul from invasion, proliferated. New themes stressed anti-Chinese folklore and the gallantry and sacrifices of wartime.

As possibilities of armistice neared, American GI's, trying to save every life possible, constructed signs warning, "Drive carefully! The man you hit might be your replacement." The July 27, 1953, truce without victory, however, divided Korea and left such permanent symbols of war folklore as Freedom House, Bridge of No Return, Propaganda Village, and tombstone-like markers, designating the demilitarized zone (DMZ). Speculation about soldiers missing in action and captives who refused repatriation continue to circulate more than forty years later.

Annually, forces of the U.S., the Eighth Army and the Republic of Korea engage in "Team Spirit," military exercises preparing for possible future invasion. Koreans ritually plant trees every April to reforest their battle-scarred hills. The tensions between the governments in Seoul and Pyongyang keep Cold War attitudes simmering and perpetuate rumors of invaders digging tunnels from the North underneath the DMZ.

Korson, George (1899–1967)

Collector of coal-mining folklore. Born into a poor working-class Jewish family in the Ukraine, Korson grew up in Wilkes-Barre, Pennsylvania, where he became a newspaperman and later a folklorist with a national reputation for his pioneer work collecting the stories and songs of coal miners.

Korson took up the study of mining folklore—both in the eastern Pennsylvania anthracite fields in the 1920s and 1930s and in the bituminous fields of the South and Midwest in the 1940s—while he worked as a reporter in Pottsville and Allentown, Pennsylvania, in New Jersey, and as chief editor of Red Cross publications. Korson's books assumed that coalmining folklore should be presented in the holistic context of a community's way of life.

During forty-three years of full-time journalistic employment, Korson wrote five definitive books on coal-mining folklore, as well as many articles; started the Library of Congress archive of miners' songs and ballads; founded and directed the Pennsylvania Folk Festival; and helped launch the National Folk Festival. He was awarded a Guggenheim Fellowship in 1957, a University of Chicago Folklore Prize in 1961, and was elected a Fellow of the American Folklore Society in 1960.

Though Korson was keenly aware of the problems of American miners in terms of wages and working conditions, politically he was a liberal-centrist reformer rather than a radical revolutionary. Basically, he believed that strong labor unions were socially desirable to balance the excesses of capitalism.

Korson, Rae Rosenblatt (1901–1990)

Head of the Archive of Folk Song at the Library of Congress from 1956 to 1969. Born in Morristown, New Jersey, she attended the New Jersey College of Law. She married George Korson in 1926 and took an interest in his folksong research. Both Korsons were caught up in the urban folk consciousness and proletarian renaissance of the 1930s. She began her career at the library in 1941, serving as an assistant to archive heads Benjamin A. Botkin and Duncan Emrich. When Korson became head in 1956, she focused on preserving and organizing the folksong collection. Although her predecessors had been concerned with fieldwork and collecting, Korson directed her efforts toward the orderly processing of the growing collection. As head she developed successful administrative strategies to effectively handle the library staff and officials as well as the collectors, scholars, and performers who used the archive.

Rae Korson helped in the preparation of so many theses, manuscripts, and books on folk music that at one point Austin E. Fife, former president of the American Folklore Society, said that every notable work in the field of folksong since 1944 had some acknowledgment of her help.

During the folksong revival of the 1950s and 1960s, she tactfully balanced the conflicting agendas of political activists associated with that movement and the conservative Library of Congress. In 1970 she received an honorary doctorate of humanities degree from Kings College in Wilkes-Barre, Pennsylvania, for overseeing the organization of her late husband's papers on coal-mining folklore.

Krappe, Alexander Haggerty (1894–1947)

One of the most prolific American folklorists of the early 20th century. Krappe always seemed more European than American in his scholarly work. Born in Dorchester, Massachusetts, he took most of his secondary and undergraduate education in England, Ireland, and Germany, although his graduate training was in the United States, at the Universities of Iowa and Chicago. After receiving his doctorate at age twenty-five, he taught for the next twenty-eight years at a large number of schools, including the Universities of Michigan, Indiana, and Minnesota. Krappe's rather abrasive personality undoubtedly contributed to his frequent job changes, but his obvious intellectual abilities made it possible for him to acquire other positions. An erudite scholar, Krappe was fluent in a variety of languages, including German, Italian, French, Spanish, and Finnish. His areas of expertise were also broad-ranging, including classical literature, anthropology, economics, military and religious history, Provençal literature, Oriental folklore, and European folklore and mythology. At his death, he left manuscripts for books on social anthropology, the origin of the epic, and a translation of the Grimm brothers' *Kinder- und Hausmärchen*.

Krappe's first published book was *The Legend of Roderick, Last of the Visigoth Kings, and the Ermanarich Cycle* (1923), but the volume by which he is best remembered in folklore circles is *The Science of Folklore* (1930), a useful survey of the major genres of international folk tradition. However, in this work Krappe argued that there was no genuine American folklore, merely borrowings from European folklore that soon died out in this country. He further maintained that folksong "originated anonymously, among unlettered folk in times past" and that it "remained in currency...as a rule for centuries." Yet, in the same book, Krappe ignored his own definition when he called "My Old Kentucky Home" a folksong, apparently under the mistaken impression that it was composed by some unknown Blacks. This 1853 Stephen Foster composition is a popular song that has always been passed on primarily through the mass media, not in folk tradition. Furthermore, the song was not even a century, much less centuries, old in 1930. Even at that time, Krappe's arguments on the point must have seemed unnecessarily rigid and dated.

Kurath, Gertrude Prokosch (1903–1992)

Self-identified as an “ethnochoreologist.” Kurath was an independent scholar who received foundation support for some of her work. Her first major article about a non-Western dance culture appeared in the *Journal of American Folklore* in 1946. Kurath encouraged others in the fields of folklore, anthropology, dance, and music to conduct research and publish on dance. She served as dance editor of the journal *Ethnomusicology* from 1956 to 1971.

She drew upon her B.A. and M.A. from Bryn Mawr College in history of art and archaeology, studies of several dance forms, music, and her working relationship with anthropologist William Fenton to observe and analyze dances of the Iroquois in her self-styled research. In a seminal article, “Panorama of Dance Ethnology,” in *Current Anthropology* in 1960, she synthesized categories for collecting dance data.

Kurath pursued fieldwork among Indian groups in Mexico, the United States, and Canada. She examined popular and sacred dances of African Americans, immigrants, and temporary residents in Michigan. Much of her work focused on the relationship between dance and music. She may have been the first dance scholar to credit her major informant as her coauthor (in *Music and Dance of the Tewa Pueblos*, 1970). Kurath has numerous books, articles, dictionary and encyclopedia entries, reviews of books and records, an Ethnic Folkways Record, dance performances, and dance-drama and pageant productions to her credit (see her bibliography in *Ethnomusicology* 14:114–128, 1970).

Kwanzaa

African American holiday, beginning on December 26, the day after Christmas, and concluding on New Year's Day. Kwanzaa is a Swahili word that means "first fruits of the harvest." In 1966, forty years after Carter G. Woodson, the founder of the Association for the Study of Afro-American Life and History, conceived and celebrated the first National Negro History Week, Maulana "Ron" Karenga, a graduate student at UCLA and an active member of the political and cultural Black nationalist group US, created and led the initial observance of Kwanzaa, as another celebration of African Americans' rich African cultural roots and supportive family and group ties.

Each of the seven days of Kwanzaa is marked by the lighting of a candle and the reflection upon one of the *Nguzo Saba*, the cultural principles that African Americans should live by. These seven red, black, and green candles, which are called *Mishumae saba*, are placed in a *Kinara*, a candelabrum, which symbolizes the African continent and the peoples of Africa. The order in which they are ceremonially lit is as follows: on the first day, the candle of *Umoja* (unity); on the second day, the candle of *Kujichagulia* (self-determination); on the third day, the candle of *Ujima* (collective work and responsibility); on the fourth day, the candle of *Ujamaa* (cooperative economics); on the fifth day, the candle of *Nia* (purpose); on the sixth day, the candle of *Kuumba* (creativity); and on the seventh day, the candle of *Imani* (faith).

The altar on which the *Kinara* stands is usually also adorned with a *mazao*, a collection of fruits and vegetables that symbolizes the product of group unity; a *mkeka*, a straw mat that symbolizes respect for tradition; and a *vibunzi*, an ear of corn that symbolizes each child in the family observing the celebration.

Rituals observed during Kwanzaa include the giving and receiving of *Zawadi*, simple handmade gifts that reinforce the value of education and the significance of African culture; and the drinking and pouring of libations to the past, present, and future of African Americans from a *Kikombe cha umoja*, a communal cup. On December 31, the day before the celebration ends, the *Kwanzaa Karamu*, the feast of African unity, is held, which features traditional dishes from Africa and the African diaspora communities of the Caribbean and North and South America. Karenga devised the following five-part program to culminate this feast: (1) *Kukaribisha*, the welcoming of the important guest and elders gathered for the celebration; (2) *Kukumbuka*, the remembering of some cultural theme or principle by a celebrant; (3) *Kuchunguza tena na kutoa ahadi tena*, the reassessment and recommitment of the African American struggle in a short speech by a distinguished guest speaker; (4) *Kushangilia*, communal rejoicing that includes *Tamshi la tambiko*, the offering of a libation statement; *Kikombe cha umoja*, drinking from the unity cup; *Kutoa majina*, the calling of the names of family ancestors and African American heroes; and *Ngoma*, the beating and dancing to drums; and (5) *Tamshi la tutaonana*, the issuing of a farewell statement. Variations of this ritual are observed diroughout the United States and Canada.

L

La Llorona

A ghostly female figure, the subject of many legends and *casos* (first-person experience narratives) among Mexican Americans throughout the Southwest and other areas of the United States, as well as Mexico and other Hispanic countries. *La Llorona* haunts waterways like canals, creeks, and rivers, wailing loudly as she searches for the spirits of her children.

Similar beliefs and legends may be found in many countries, but for the Mexican American community, *La Llorona's* origins lie in Mexico. Tradition has it that an upper-class Spaniard and an Indian peasant maiden fall in love. The man's family refuses to allow him to marry her, so without the blessings of the church, they establish a household and have children. His parents finally persuade him to marry an upper-class Spanish woman to keep the family heritage alive. When he informs the Indian mother, she becomes distraught, and in her anger and desire to punish the Spaniard, she kills their children by drowning them. She is executed, and when she arrives at Heaven's gates, she is told that she must find the spirits of the children she has killed. Thus, she returns and must spend her future searching for her children's spirits along various types of waterways.

The legend takes many specific forms. One version identifies the Spaniard as Hernan Cortés, who led the conquest of the Aztecs. The Indian maiden, known as La Malinche, not only bore Cortés' children but also aided in the conquest by serving as a translator for the Spaniards. She is looked upon as a betrayer of her people, a theme emphasized by many of the more militant Chicanos.

The legend is popular throughout the Southwest and wherever Mexican Americans gather. In one popular form, *La Llorona* is the siren who tempts men who are out drinking and otherwise looking for ways to violate the social norms of the group. They follow her, only to discover when they get close and she turns on them that she has long, sharp fingernails or the face of a horse. The terrified men flee for their lives and swear never to violate these social norms again.

Many first-person experience narratives are told about personal experiences with *La Llorona*. Often these take the form of one hearing a loud wailing at night and seeing *La Llorona*, dressed in white, moving along a creek, river, or canal. Such stories are often used by parents to persuade young people not to go out at night.

A collection (Hawes 1968) of *La Llorona* legends and first-person narratives gathered at a reform school for girls in Los Angeles County, California, portrays the ghost woman

as one who has murdered her children and takes the role as a dangerous siren, as a mourning woman, or as a woman dangerous to children. The theme of loss—loss of children, loss of beauty, loss of life—and the theme of mutilation are predominant in these narratives.

The *La Llorona* legend continues to thrive in the Mexican American community in the Southwest, particularly in rural areas.

A band and clowns prepare for Labor Day celebrations. Silverton, Colorado, 1940. Photo Russell Lee. Library of Congress.

Labor Day

National and state holiday observed annually on the first Monday in September. Peter J. McGuire of the Brotherhood of Carpenters and Joiners reputedly proposed the idea for Labor Day at a meeting of the the New York Central Labor Union in May 1882. He suggested scheduling a day to honor organized labor in late summer or early fall. Coming in the most pleasant season of the year, this date would also provide needed respite from the work routine since it fell halfway between Independence Day and Thanksgiving. The first observance of Labor Day, occurring later that year in New York City, featured a workers' parade, picnic, concert, and bombastic oratory. Within two years, other Northeastern cities had added their observances. In 1887 Oregon became the first state officially to endorse Labor Day, and Congress approved it as a federal holiday in 1894.

During early observances, unions used Labor Day to dramatize particular grievances through speeches, parades, and labor songs, many of which adapted the folk idiom. Once such concerns had been addressed, the sharply political tone of the holiday diminished. Observances throughout the United States, though, continue to involve some speech making and parades, and Labor Day remains the traditional starting date for presidential campaigns.

Viewed as marking the end of summer, Labor Day has become distinctly recreational. Community picnics, block parties, and family trips to beaches or resorts now characterize this holiday. Moreover, county and state fairs, religious festivals, and family reunions may be scheduled with Labor Day in mind to take advantage of its three-day weekend.

Lacourcière, Luc (1910-1989)

Collector of French Canadian folklore and founder of the Archives de Folklore of Laval University, Quebec, Canada. After studies at Laval University, Lacourcière met the “father of Canadian Folklore Studies,” Marius Barbeau, who introduced him to the discipline, trained him, and influenced his appointment in 1944 to the first chair of folklore at Laval University and the creation of the first Folklore Department in Canada.

Between 1942 and 1972, Lacourcière made extensive field collections in eastern Quebec and the three Maritime Provinces of Nova Scotia, New Brunswick, and Prince Edward Island, gathering thousands of folktales and folksongs. He was, however, deeply involved, too, in the teaching of French Canadian literature; his literary and folkloristic interests led him to found two major series, the literary *Nenuphar* (1944) and the *Archives de Folklore* (1946), Volume 25 of which appeared in 1991.

Lacourcière’s publications were chiefly in the form of articles in journals or books; his major work, the “Analytical Catalogue of French Folktales in North America,” based on historic-geographic principles, was unpublished at his death. Lacourcière devoted his time to teaching, editorial work, and thesis supervision, directing almost 100 M.A. and Ph.D. dissertations, many in folklore, and teaching most of the outstanding Quebec and Franco—American folklorists of the period.

Lacourcière was awarded fellowships by the Carnegie (1939–1940), Guggenheim (1943–1944), and Rockefeller (1956–1957) Foundations; elected a Fellow of the American Folklore Society (1973); made a Companion of the Order of Canada (1970); and, upon its founding in 1976, was made an honorary president of the Folklore Studies Association of Canada.

Larkin, Margaret (1899–1967)

Collector and singer of cowboy songs. Larkin was also a poet, a journalist, a playwright and writer of nonfiction, a trade-union activist, a student of the kibbutz movement in Israel, and a forerunner in the growth of the urban folk revival. Born in Las Vegas, New Mexico, Larkin was reared among cowboy singers and tellers of tales as well as among carriers of Hispanic lore. She attended the University of Kansas, where she earned recognition as a poet, and by 1925 was a member of the “intellectual middle class” arts movement in Santa Fe, where her award-winning play *El Cristo* was published.

Larkin’s passion for journalism took her to the East Coast in the late 1920s, and in 1929 while working as press agent for striking textile workers in Gastonia, North Carolina, she met Ella Mae Wiggins, the gifted writer of textile protest “ballets.” The murder of Wiggins three weeks after their meeting drove Larkin deep into radical activity. She took her knowledge of Wiggins to New York City, where she wrote articles about Wiggins and her songs, and gave concerts singing those songs. The improvement of working-class life as promised by Communism appealed to her, and in the 1930s she became a leader of the intellectual Left.

Larkin had developed a reputation as a singer of cowboy songs, and when her friend from Santa Fe days Lynn Riggs needed additional songs for his play *Green Grow the Lilacs*, he turned to her. She later became a member of the road troupe, singing cowboy songs during interludes. Larkin compiled her songs into *Singing Cowboy: A Book of Western Songs* ([1931] 1963). Her texts were printed as she had learned them; they were not edited to conform to the Lomax texts, and she wrote realistic and extensive explanatory notes about cowboys and their songs, stressing that cowboy songs were not worksongs and that it was merely a “happy accident” when a song fit the gait of a horse.

Larkin’s first husband was Liston M.Oak, a member of the Communist Party and editor of *Soviet Russia Today*. They shared a belief in the power of drama and became founding members of the Theatre Union, the nation’s first professional theater organization dedicated as a voice for the working class. Political differences among board members killed the organization in 1937, along with the marriage of Larkin and Oak; however, she had become acquainted with another member of the Theatre Union, playwright Albert Maltz. They were married in 1941 and moved to Hollywood, where Maltz became an award-winning screenwriter. In 1947 Maltz gained notoriety as one of the Hollywood Ten (a group of screen-writers cited for contempt of Congress and blacklisted), and eventually he served ten months in jail.

After his release, the family moved to Cuernavaca, Mexico, and a few years later Larkin’s book about a bizarre murder plot in Mexico was published under the title *Seven Shares in a Gold Mine* (1959). She also worked as a free-lance sociological researcher and writer, which earned her the position as editorial assistant to Oscar Lewis in preparing *La Vida* (1966). Larkin’s last book, *The Hand of Mordecai* (1966), recounted life on a kibbutz. She died in Mexico City on May 8, 1967.

Lawyers

Members of the legal profession, among whom and about whom traditions circulate. Owing in part to media exposure, lawyers have an increasingly public profile. Possibly in response to broadening social and political discussions about the legal profession and its apparent elitism, nonlawyers tell vituperative jokes about lawyers. Although members of the Bar are aware of these jokes, and some may also tell them, attorneys also share occupational lore through their own narrating. This occupational lore includes narratives about federal judges, gender bias, and the foibles of practicing law.

Lawyer jokes and riddles are in wide oral and written circulation, likening lawyers to rats, sharks, and toxic waste. Lawyers are purported to be greedy, to lack compassion, or to possess other inhumane characteristics. One joke in oral circulation directly comments on this lack of positive virtues: A pope upon dying and arriving in heaven is distressed to learn that not only is his heavenly housing for all eternity a mere 4,000-square-foot home, but that the commanding edifice on the hill is for a lawyer. St. Peter tells the protesting pope, "Hey, this is heaven after all! We've got plenty of popes, but we only got one lawyer."

Members of the American Bar Association are aware of the negative images portrayed in lawyer jokes. From discussions during continuing-education classes to informal gatherings, some lawyers debate how to counter the negative images. Following a murderous assault on a San Francisco law office, the president of the California State Bar Association even attempted to find support for legislation giving stiff penalties for repeating lawyer jokes. Significantly, lawyers report that these negative jokes are told directly to them by nonlawyers, unlike other jokes vilifying members of particular ethnic or racial groups. One Los Angeles-based attorney said that before her famous athlete-celebrity client even met her for the first time, the client elicited her answer to the riddle, "What's black and brown and looks good on a lawyer?" (Answer: a rottweiler [Variant: a doberman]).

Attorney-judicial relations may range from fractious to collusive, at least as expressed in attorneys' own traditional lore. There are lawyers' jokes that portray federal judges as capricious, willful, and excessively controlling in their courtrooms. In one joke, even God is portrayed as "liking to play federal judge." Attorneys narrate firsthand experiences and friend-of-a-friend narratives about particular individual federal judges; one judge is reputed to have said to an attorney who dared question his ruling: "This is not Burger King. We do not do it your way" On the other hand, criminal lawyers are reputed to have arranged a secret code with certain judges. As one lawyer describes the esoteric signal, a criminal lawyer can alert a judge he needs a continuance because he has not been paid by saying, "I'm sorry, your honor, my witness Mr. Green has not appeared." (Similar codes are used by the medical profession for coded communications in hospitals.)

Attorneys share information through personal-experience narrating as they make the transition from fresh graduates to seasoned lawyers. One rule of thumb is this:

If the facts aren't on your side, pound on the law.

If the law's not on your side, pound on the facts.
 If neither the facts nor the law are on your side, pound on the table.

Insurance lawyers deride the stereotypical dress of criminal lawyers (such as diamond pinkie rings) and plaintiff lawyers denigrate the rich lifestyle of the defense. Female attorneys help prepare younger female associates with accounts of their experiences before particular judges, including the judge who yells at female attorneys for wearing open-toed shoes. Some attorneys believe that by sharing these narratives that turn on issues of gender they are beginning to affect attorney-client relationships.

Lawyer-to-lawyer narrating grows because of the nature of the profession and its training. The opportunity for narrating exists because hours are spent waiting in court or at group depositions. In addition, lawyers have learned the importance of narrating to make a case to a jury (see Schragger 1986) as well as to add to their competitive stance vis-à-vis other attorneys. As one practicing lawyer commented, "Lawyers tell stories to other lawyers to enhance their case, their position."

Leach, MacEdward (1892–1967)

Scholar, folklore collector, and teacher. Leach, who sometimes gave his birth date as 1896, was born near Bridgeport, Illinois, and educated at the University of Illinois. Originally a medievalist with a master's degree from Johns Hopkins and a doctorate from the University of Pennsylvania, he edited standard editions of the romances *Amis and Amiloun* and *Paris and Vienne*, teaching and writing in medieval studies all of his life.

His fame, however, came as a folklorist at the University of Pennsylvania, where he spent his entire career. Fostered in the study of folklore by Americanist Cornelius Weygandt and his friend ethnologist Frank Speck, Leach developed courses within the Department of English that eventually became the doctoral program in folklore and folklife. He was known as a spellbinding lecturer, encouraging many of his graduate students to become scholars. Folklorists Roger Abrahams, Horace P.Beck, Tristram Potter Coffin, John Greenway, Kenneth Goldstein, G.Malcolm Laws, and a host more were started on their way by Leach.

In his role as secretary-treasurer (1943–1960) and then president (1961–1962) of the American Folklore Society, Leach almost single-handedly nurtured that organization from near collapse to vigor, encouraging local societies as a foundation for the national one, inaugurating the Bibliographical and Special Series to generate revenue, and giving his time whenever and wherever needed.

An avid folklore collector, he did fieldwork, often with Horace Beck, most notably in Virginia, Labrador, and Jamaica. He was twice married, the first time to Alice Mary Doan (Maria Leach), who edited the *Standard Dictionary of Folklore, Mythology, and Legend* (1949), and the second time to Nancy Rafetto.

*Huddie (“Lead Belly”) Ledbetter,
about 1942. Photo Berenice Abbott.
American Folklife Center.*

Ledbetter, Huddie (“Lead Belly”) (1888–1949)

Probably the best-known Black folksinger in modern American culture. Though many people refer to him as a blues singer, Ledbetter was, in fact, far more than that: He was a traditional songster with a huge repertoire of all kinds of pieces, a pioneering figure in the introduction of folk music to the American public. His colorful life and career have attracted media attention since the mid-1930s, and though he died in 1949, his music and songs have endured better than those of any other traditional performer and have won him honors such as election to the Rock and Roll Hall of Fame. Critics often refer to him as “America’s Greatest Black Folksinger,” a title few seem to be willing to challenge; certainly, many music fans who cannot name one other blues or folk singer know the name Lead Belly (a nickname given to him by a prison chaplain).

Ledbetter, according to the Census reports, was born on January 15, 1888, on the Jeter plantation near the Caddo Lake area north of Shreveport, Louisiana. This area, right on the Louisiana—Texas line, was then the home of a large rural Black population that included his family, who were sharecroppers; later Ledbetter would recall playing at rural dances where “there would be no White man around for twenty miles.” The music he grew up with included old fiddle tunes, play-party games, ballads, field hollers, church songs, and old vaudeville and popular songs; some of these, like “Ha Ha Thisaway,” later became staples in his repertoire. Though his first instrument was a “windjammer” (a small accordion), by 1903 he had acquired a guitar and was plying his trade at dances and in local string bands.

In 1904, when he turned sixteen, he made his way to the notorious red-light district of Fannin Street in nearby Shreveport. There he heard jazz and blues and watched the piano players in the bordellos with fascination; he later admitted that he eagerly sought to adapt the left-hand piano runs to his guitar style. He learned more music during years of wandering between 1906 and 1908, absorbing the rich musical brew that was spawning ragtime, jazz, and blues. In 1908 he married Aletha Henderson and moved to the Dallas area. There two important things happened: He heard and bought his first twelve-string guitar (the instrument he would make famous), and he met the legendary bluesman Blind Lemon Jefferson. Though Jefferson was actually Ledbetter’s junior by five years, he had had more experience as a full-time musician, and he taught Ledbetter much about the blues itself. Around the Deep Ellum district of Dallas, the two performed until about 1915.

Returning to Harrison County, Texas, Ledbetter began a series of encounters with the law that would alter his life and almost destroy his performing career. In 1915 he was sent to the chain gang on an assault charge, but he escaped and moved to Bowie County under the alias of Walter Boyd. There, in 1917, he was convicted of killing a cousin and wound up at the Sugarland Prison farm in south Texas. By now he was gaining a reputation as a singer and a hard worker in the prisons, a favorite of trustees and guards; he learned and sang songs like “The Midnight Special,” and he began to create topical

songs about local people and events. When Texas Governor Pat Neff visited the prison, Ledbetter asked to be among the ones to entertain him, and he composed a song to the governor, asking to be pardoned; surprisingly, Neff did so, signing the papers on January 16, 1925. For the next five years, Ledbetter stayed around the Shreveport area, but in 1930 he was convicted again of assault—knifing a prominent local White citizen. This time he was sentenced to a six-to-ten-year term in Angola, arguably the worst prison in America.

It was there, in 1933, that he encountered collector John Lomax and sang for his recording machine songs like “The Western Cowboy” and “Irene,” the latter one he had learned from his uncle. A year later, at a second visit, Ledbetter decided to try his pardon-song technique again and recorded a plea to Louisiana Governor O.K. Allen. Though Lomax did leave the disc at the governor’s office, and though Ledbetter assumed it had had its effect, when he was released in 1934, it was because of a Depression-related pardon program called “double—good time,” not because of the song. He took a job driving for Lomax and helping him as he collected songs in prisons; along the way, he developed a good sense of what a traditional song was and added to his own considerable fund of such songs. (One was “Rock Island Line,” which Huddie picked up in an Arkansas camp.)

Lomax took Ledbetter with him to New York City in January 1935, and the result was a sensational round of newspaper stories, newsreels, radio shows, recordings, college concerts, and even a publicity-heavy marriage to a childhood sweetheart from Shreveport, Martha Promise. For the first time, the general American public was being introduced to the concept of a genuine traditional singer. For three months, money and offers poured in, but complex tensions led to an estrangement between Lomax and Ledbetter, and finally the latter returned to Shreveport.

A year later, Ledbetter returned to New York City to try to make it on his own. He found his audience not in the African American fans of the Apollo Theater, but in the young White social activists of the various political and labor movements. Though he felt strongly only about civil rights songs, Lead Belly produced songs on a number of topics, the best of which were “Bourgeois Blues” and “We’re in the Same Boat, Brother.” His success with radio shows in New York City led to a sojourn in Hollywood, where he tried out for a role in the film version of *Green Pastures* and produced his best commercial recordings, for Capitol. The later 1940s saw more touring, a series of recordings for the Folkways label, and the development of his apartment into a headquarters for the folk movement. Martha’s niece Tiny began managing him and, for the first time trying to straighten out his affairs; things were looking up when, in 1949, Huddie was diagnosed with amyotrophic lateral sclerosis (Lou Gehrig’s disease). It progressed rapidly, and on December 6, 1949, he died in Bellevue Hospital in New York City. His body was returned to Mooringsport for burial, and a plaque marks his resting place at the rural Shiloh Baptist Church.

Lee, Hector H. (1908–1992)

Collector and scholar of Western folk narrative. Born in Texas but reared in southwestern Utah, as a child Lee heard Mor-mon pioneer and Paiute stories that eventually sparked his interest in regional folklore. Primarily a college administrator at Chico and Sonoma State Colleges in California throughout his career, Lee published a major study of Mormon legend and several collections of California tales; he also popularized folklore studies in the West as a well-known lecturer, interview subject, and raconteur.

After studies at the Universities of Utah and California, Berkeley, Lee became the first recipient of a doctorate in American civilization at the University of New Mexico with a dissertation later published as *The Three Nephites: Their Substance and Significance in Folklore* (1949). Returning to the University of Utah to teach English and folklore, in 1944 Lee obtained a Rockefeller Foundation grant to establish the Utah Humanities Research Foundation, a folklore archive, and the quarterly journal *Utah Humanities Review* (1947–1949), which featured Western literature and folklore and later evolved into the literary and critical journal *Western Humanities Review*.

Lee's most significant work is represented by his research on Mormon lore. Drawing on his own collecting and the work done by his contemporaries Wayland D. Hand and Austin E. and Alta S. Fife, Lee showed that Mormon folklore reflects the changing circumstances, experiences, and identity of people of Mormon culture and that the Three Nephite legends illustrate the adaptation of old traditions to the new West.

After settling in California in 1947, Lee published four collections: *Tales of California* (1974), *The Bodega War* (1988), *Tales of the Redwood Empire* (1962), and *Heroes, Villains, and Ghosts* (1984). He also hosted television and radio shows and was active in the California Folklore Society, serving as its president from 1973 to 1975.

Stephanie Sherman

Legend

A monoepisodic, localized, and historicized traditional narrative told as believable in a conversational mode. Psychologically, legend is a symbolic representation of folk belief and reflects the collective experiences and values of the group to whose tradition it belongs. Thematically, legends often deal with the supernatural or odier remarkable phenomena. These events typically are said to occur in a specific place and time with named characters.

Characterizing the legend genre was begun by Jacob Grimm, who observed that “the folktale is more poetic, the legend is more historical.” The view of the legend as historically true informed the majority of legend scholarship throughout the 19th and

early 20th centuries. Most studies of legend focused on attempts to isolate the historical kernel of the narrative. Consequently, studies of legend concentrated primarily on the text, ignoring important aspects of the genre, such as the manner of performance.

Legend is characteristically a highly localized narrative. Legend accounts have also been characterized as highly oikotypified. Carl Wilhelm von Sydow introduced the concept of oikotypes (or "ecotypes") to explain differences between similar folk expressions collected from separate tradition group. Through oikotypification, tradition participants change a narrative to fit their needs, adapting it to the cultural and geographical environment in which it is told. The internal reality of the legend account often mimics the external reality of the tradition participants, both culturally and geographically. Because legend narrators wish their accounts to be believable, they are further inclined to situate the account in the immediate geographical area. Thus, a legend told in one area about events closely linked to a specific place can be found in other areas closely linked to entirely different places. For example, one variant of "The Vanishing Hitchhiker" begins: "A traveling man who lived in Spartanburg was on his way home one night..." while another begins: "This friend was driving up Hearst Avenue one night..." (Brunvand 1981:25-26).

The use of historically verifiable personal names, or the reference to people known to the tradition participants, is another characteristic of legend. The inclusion of known individuals in the stories further contributed to the early characterization of the genre as "historical." However, identical stories with different named individuals appear in disparate traditions. Just as place names and topographical features of a story are varied to fit the tradition participants' physical environment, so, too, are proper names and historical referents varied to fit the tradition participants' historical environment. For example, Maurice Alley told the legend of "Buying the Wind" as follows: "Paris Keller was the captain of a vessel, and he got out one day and got becalmed. He was going to the west'ard and wasn't no wind. And he wanted some wind, so he threwed a quarter overboard. He wanted to buy a quarter s worth. He said he wished it would blow so hard she wouldn't lug a nail in a paulpost.... So he said it commenced to blow; it blowed till it blowed the sails off her..." (Dorson 1964:32-33). Richard M. Dorson reports similar variants of the legend that relate how George Beal, Captain Belmore, Nick Bryant, Cam Crowley, and Malcolm Lowell buy the wind in a similar fashion. These examples confirm the tendency of legend-tellers to attribute their accounts to individuals known to the tradition participants. In a study of medieval legends and their modern analogs, Shirley Marchalonis shows how legends extant in the Middle Ages have been updated to fit contemporary times. This process of variation can be labeled "historicization." Therefore, one can propose a modification of the Grimms' earliest characterization of the legend. The legend is not historical narrative, but rather *historicized* narrative.

Much of the believability of the legend resides in the close link between the daily reality of the tradition participants and that found in the legend. In a buried-treasure legend from the Texas Gulf Coast, the narrator uses a familiar setting for the action: "...up here on the Tres Palacios River, there was an old trading post..." (Mullen 1978:97). This descriptive setting stands in stark contrast to the folktale in which the inner reality of the tale usually bears little or no resemblance to the outer reality of the tale-teller and the audience. Often, phrases such as "This actually happened to a fellow I

know..." contribute to the presentation of the legend as a believable account, while the well-known "Once upon a time..." opening is used in the folktale.

Legend also derives believability from the folk beliefs of the tradition participants. Scholars proposed a subgenre of legend, the "belief legend," as a means for categorizing legends that primarily made use of folk belief, but since legend itself is a believable narrative, it by default reflects folk belief. Consequently, *all* legends can be said to fit the category "belief legend," thus presumably rendering the added appellation "belief" unnecessary. Legend taps already established belief and thereby reinforces those beliefs. Just as legend relies on folk belief, so, too, does folk belief rely on legend. The following account illustrates this close interrelationship: "I was loading ice, threw the hatches off, and one of them flipped over on the deck. My brother came down and told me to never let that happen again, that that damn boat was going to sink. The next night it did. Where he got it from I don't know; that was the first I heard of it" (Mullen 1978:4). This legend incorporates reference to the belief among fishermen of the Texas coast that turning hatch covers upside down leads to calamity. As the complex forces at work in society change people's beliefs and values, the changes become reflected in the legends. If the legend fails to adapt to its new cultural, historical, or geographical environment, it loses its viability in tradition and is no longer told.

An important characteristic of legend is its narrative form—legend tells a story. For an account to be considered a legend, it must include a temporal junction: *X then Y*. The above example of "Buying the Wind" illustrates this point: "And he wanted some wind, so [Temporal Junction] he threw a quarter overboard." The narrative form sets legend apart from other nonnarrative folk genres and helps distinguish it from simple nonnarrative statements of folk belief such as "If you throw money overboard you can buy some wind."

A legend does not typically include multiple episodes; instead, it relates a single event. Scholars have attempted to provide a structural description of legend narrative without great success. W.F.H. Nicolaisen's structural scheme is perhaps the most successful of the suggested systems, because it allows for great variation and attempts to describe only the most general aspects of legend structure. At the very least, legend can be said to have three structural components. The first of these, the "orientation," sets the stage for the action. The second component, the "complicating action," recounts the event. The third component, the "result," relates what happened as a result of the complicating action. Using this map, one can describe a variant of "The Vanishing Hitchhiker" as follows: "Someone Miss Packard knew, unfortunately, I cannot remember the person's name, was driving on a deserted road towards Holbrook on a cold, rainy night [Orientation]. As she was driving, she saw a figure on the side of the road, soaking wet trying to thumb a ride. She felt sorry for the person, stopped the car, and a young man sat down in the front seat [Complicating Action]. After a long period of silence he said, 'Jesus is coming again.' She turned to look at him, and he was gone [Result]" (Brunvand 1981:39). Often, the complicating action or result of a legend includes an unexpected or supernatural event.

Despite the brevity of the monoepisodic legend account, the legend form is extremely elastic. Legend can be contracted or expanded depending on the requirements of the performative setting. Legend can include numerous allied motifs, detailed description, nuanced actions, and intricate dialogues—or, a legend can be presented in a nearly skeletal form, exhibiting great economy of expression. Because of legend's narrative

elasticity as well as the extreme localization and historicization of the accounts, scholars have encountered difficulties in developing useful type indexes of legend collections.

Legend is closely allied to rumor. Rumor, like legend, is performed as a believable account. It, too, is highly localized and closely linked to a particular historical period. The notable difference between rumor and legend is that rumor is not always a narrative. The designation "rumor" can also refer to nonnarrative expressions of folk belief. Therefore, the term "rumor" does not describe a specific genre, but rather a hyperactive transmissionary state. If a legend is repeated frequently within a short time period in a circumscribed area, it can be called a "rumor." Even after the disappearance of the "rumor," the potential for the legend to be told remains.

Study of legend-telling events reveals that legend is more closely linked to "joke" than to "folktale." While folktales are generally told by a single narrator who uses opening and closing formulas to signal the beginning and end of the performance, legends are characteristically told conversationally. Often, jokes appear alongside legends in these settings. This proximity between jokes and legends during performance has led Linda Dégh to dub the two forms "symbiotic." In the conversational performance of legend, the beginning and the end of the story are rarely clearly defined. Furthermore, participants other than the main narrator interject their own variants into the performance. Legend-telling events often progress in fits and starts, with the position of primary narrator frequently shifting. Often legend arises in the conversational setting as a means for making a point or substantiating a claim, leading to the conclusion that legend may serve various rhetorical purposes.

One of the main areas of study for legend scholars has revolved around the distinction between "memorates" and "fabulates." Von Sydow proposed that firsthand accounts of supernatural events were qualitatively different from accounts in which the narrator was at a greater distance from the narrated events. He labeled firsthand narratives "memorates" and called narratives that placed the narrator at more than two transmissional links from the narrated events "fabulates." According to this theory, memorates could become fabulates when they became part of the tradition of a folk group and lost their firsthand narration. However, field recordings reveal that tradition participants often eliminate transmissional links between themselves and the reported events. Depending on the situation, a narrator can perform a legend as a memorate even though he or she may originally have heard it as a fabulate. Thus, the memorate-fabulate distinction ultimately fails. Narrators are motivated to eliminate numerous transmissionary links in their accounts to bolster the believability of their stories. A story that begins: "A friend of a friend of a friend told me that his friend..." has virtually no believability. Since narrators are inclined to reduce the number of transmissionary links between themselves and the narrated events, legend cannot be characterized by the proximity of the narrator to the narrated events.

The reasons people tell legends are linked to psychological factors. Legends organize complex environmental and cultural forces, tap beliefs, and express fears and values common to the tradition participants (see Crane 1977). Telling legends allows people an opportunity to explore their outer reality through the symbolically constructed inner reality of the legend as well as the opportunity to express both anxieties and aspirations. The values and beliefs of the teller and the audience inform the legend account and allow for a narrative negotiation of their concerns.

Contemporary legends have come under close scrutiny particularly among scholars interested in psychology. These legends are often referred to as “modern urban legends.” While this term suggests that these legends are different from other legends, because they are both “modern” and “urban,” actually many modern legends have counterparts in traditions from the 19th century and before. This suggests that all legends, at some point, were “modern” (see Marchalonis 1976). Therefore, it may be more accurate to refer to these legends as “contemporary.” The label “urban,” although traditional among folklorists, seems likewise misplaced. Legend narrators adapt their stories to their historical, geographical, and cultural environments. Thus, a story that is set in an urban center by one narrator can often be set in a rural setting by another narrator. There is nothing exclusively “urban” about these contemporary legends.

Legend Trip

A ritual; teenagers hear a legend about uncanny events said to occur at a particular spot, then visit the site to test the legend. Widespread in many parts of the United States, such trips focus on “spooky” places such as a bridge, an abandoned house, or a remote church or graveyard.

Many types of legend trips are common in the United States. Often a baby is said to have died or been murdered, frequently at a bridge, and its ghost is said to cry at certain times. Or a person—man or woman—was decapitated in an accident, and a ghosdy light lingers at the site of the tragedy. Near Maco, North Carolina, generations of teens have come to witness a mysterious light along a railroad track, said to be a headless brakeman looking for his lost head (Walser 1980:50–52). In many places, a headless horseman—or now a headless motorcyclist or little old lady in a VW—rides over back roads at night. In certain graveyards, a monument or statue may carry a curse, so that those who touch or sit on it will soon suffer death or misfortune; if vandalized, the stone will magically heal itself.

Roads used for parking may collect such legends, particularly about a parent figure, crazed or disfigured in some way, who will try to interrupt couples’ lovemaking and attempt to murder them or scare them away (Samuelson 1979). In some cases, a mystery animal like a werewolf or goat-man is believed to appear to visitors (Harling 1971), or a strange force is said to pull cars uphill or off railroad tracks (Glazer in Bennett and Smith 1989:165–177). Such legends do not keep teens away from the legendary spots but, paradoxically, function as dares that excite repeated visits to invoke danger.

The visit is usually made by automobile, and illegal drinking, recreational drug use, and sexual experimentation are integral parts of the “trip” (Ellis 1983). Legend trips typically have a three-part structure. First, as the site is often remote from the teens’ home neighborhoods, the group will spend time on the way there sharing “origin legends” about why the site is haunted and “proof legends” about spooky things that supposedly happened on previous visits. During these storytelling sessions, participants may add other migra-tory legends popular among teens: “The Hook,” “The Babysitter and the Man Upstairs,” and the like (Hall in Dégh 1980:225–257).

Second, on arrival, members of the group will dare each other to act out the part of the legend said to put them into danger. Sometimes this may involve no more than turning off the car motor or leaving the security of the vehicle, but many traditions involve further ritual actions. These may include honking the car horn or blinking its lights a certain number of times, calling out the entity’s name, sitting on a “cursed” grave marker or stone seat, or walking around a monument backward. In some cases, the tradition may include a dramatic ordeal, such as standing inside a railroad tunnel as a train rushes through. The trip often climaxes when something unexpected happens—a noise, a sudden wind, even a prearranged hoax by friends of one of the group—and the visit often ends with a panicked retreat to the car.

Finally, the group members share their various perceptions of what has happened, and in retrospect the visit may inspire personal-experience narratives that enter tradition as additional “proof legends.” Even negative accounts of visits may inspire further visits, but in general the tradition generates a “suspension of disbelief” necessary to create the right mood for future trips.

This ritual is similar to an older British tradition of visiting holy wells and ancient stone monuments on certain dates such as May Day. A number of historical sources note that such visits were characterized by drinking, lovemaking, and brawls (Bord and Bord 1985:56, 75). In modern times, many legends have been collected from youthful British informants, describing visits to sites where the devil (or an evil ghost) could be raised by performing rituals like running around a tomb or megalith or calling out the entity’s name. As in American lore, many monuments carry a curse: Anyone who moves or damages them will suffer harm, and the stone will magically move back (Grinsell 1976:64–65). Here, too, such legends seem to have encouraged, not discouraged, ritual visits.

In recent times, evidence left by legend trips has been taken by some American law-enforcement agents as evidence for dangerous cults. Some trips may climax in a party around a bonfire with singing and dancing, and such trips often lead to acts of vandalism, ranging from spray-painted obscene or “satanic” graffiti to destruction of stone crosses and gravestones. In some instances, road-killed animals have been hung in trees as “sacrifices,” and groups of teens may frighten each other or adults by dressing in black robes and jumping out in front of cars. Such activities, misunderstood by police, may cause local panics, and some teens may prolong the sensation through hoaxes or by actually performing improvised rites of “devil worship” at legend-trip sites (Ellis, in Richardson, Best, and Bromley 1991:279–295).

Studies of legend-trip participants, however, suggest that the ritual is seen mainly as a form of entertainment, and, in fact, the events narrated and experienced have trivial impact on adolescents’ belief systems. Teens are attracted to many other forms of play behavior involving role playing: seances, Halloween costuming and visits to institutional haunted houses, and imaginative games like the Ouija board and Dungeons and Dragons (see Fine 1983). Despite its alarming and frequently damaging aftermath, the legend trip is best understood as part of the “ritual of rebellion” that is a normal part of most adolescents’ culture.

Lesbians

The community of homosexual women whose folk traditions serve to isolate them from the larger community and to encourage cohesion within their group. The folk traditions of lesbians may be examined against the backdrop of the American lesbian movement. This movement has three stages: 1950–1967 was the butch-femme era; 1968–1974 the transitional era; and 1975 into the 1990s is the lesbian-feminist era. The collected folklore falls into three major categories: verbal traditions, customary traditions, and material traditions.

With the development of the lesbian movement in the 1950s, homosexual women became more visible to one another in the lesbian and gay bars. Folk speech was one product of that visibility. The terms “butch” and “femme” refer to lesbian roles predominately in the White working-class subculture. These roles represent the possibilities of what it means to be a woman. Joan Nestle, an archivist, author, and a femme who came out in the 1950s defines butch-femme relationships as “an erotic partnership serving both as a conspicuous flag of rebellion and an intimate exploration of women’s sexuality” (Nestle 1987:101). An array of variations occurs in folk speech: “butch,” for example, gave rise to “soft butch” (a less severe image), “baby butch” (a new lesbian), and “outbutched” (drawing attention to one’s self). The terms “dyke” and “queer” are examples of folk speech that during the butchfemme era were derogatory, but in the lesbian-feminist movement have been reclaimed as terms of pride. One example of a new term coming into circulation is “festi-virgin” (one who attends a women’s music festival for the first time). Folk speech also identifies those persons outside the lesbian community, as “straights,” “hets,” and “breeders,” for example.

Expressions in circulation in the 1990s include “dykes for days” (seeing a lot of dykes in unexpected places such as the grocery store), and “she goes to my church” (she’s a lesbian). Expressions also include initialized terms such as “d.p.” (dyke potential).

Word play displays the lesbian communities’ verbal humor. Examples include “no homo” (said when the other party did not answer the phone), “gaily forward” (used when giving directions), and “straightening up” (when cleaning the house, to get rid of anything that reveals one’s lesbian identity).

During the butch-femme era, one fascinating area of folk speech emerged in the form of naming. A group of butches would give one another masculine names such as “Bob.” Butches used these names only when they were in a group by themselves, refusing to use the masculine names in other settings, including at home. This restriction was a caution against revealing one’s lesbianism. A masculine name from the group was a sign of affection and signaled acceptance. A group could have only one of each name, so there never could be two “Bobs.” All names were short and simple. Using “brother” instead of a name was acceptable. Femmes never received folk names. As a stigmatized minority, lesbians feel special about themselves when using folk speech as they possess something no other minority or majority group possesses. As an insulator from outsiders, the

specialized vocabulary is reflective of community mores, reflecting a desire to maintain secrecy

Coming-out stories of lesbians are often repeated and requested as personal-experience narratives. Coming-out stories reveal one's lesbianism. These narratives are told primarily to other lesbians, often when they are becoming acquainted. Each lesbian has an initial coming-out story, and more follow as she continually declares her lesbian identity to an increasingly wider circle of people. Lesbians often request another's coming-out story, and retelling of coming-out stories reinforces a lesbian's identity.

Festivals are one type of customary folklore celebrated by lesbians. Festivals are especially important as they mark the beginning of the lesbian-feminist era. The Michigan Womyn's Music Festival ("womyn" being a folk spelling used to erase the masculine reference) was the first in 1975, and it continues annually. This occasion marks the first time in history that a large group of lesbians were visible to one another. Thousands of lesbians attended the festival, which featured camping, womyn's music, workshops, and other forms of entertainment. Lesbians from different segments of the population had the chance to meet and compare ideas. Folklore abounds during festivals; they have recently instituted rituals—for example, a conception ritual in which a lesbian is artificially inseminated. Vendors name their booths in womyn-identified language, such as the "womb" (health tent). Festivals like the Michigan one range from the East to the West Coasts.

The three most widely practiced customary celebrations among lesbians are anniversaries, bondings, and baby showers. Lesbians celebrate their relationship on one or two days per year. The most common anniversary marker is the day a couple first made love. A second marker is the day a couple met. Anniversary celebrations are usually quiet, with a dinner at home or in a restaurant where the partners exchange gifts.

Lesbians celebrate bondings as a way to unite couples in the eyes of the lesbian community. The bonding is based on "womyn's spirituality," a spirituality embraced by many lesbians. Guests bring presents, and after the ceremony a potdinner follows with womyn's music and dancing. With more lesbians having babies, baby showers became common celebrations, and lesbians, like all parents, send birth announcements when their babies are born.

Costumes clearly follow the lesbian movement, with each era having a distinct costume type. Costumes fall into three major categories according to one's role: butch, femme, and what is often termed "just me." The latter phrase refers to lesbians who do not follow a stereotyped role and who simply dress as they personally wish.

The original butch-femme costumes were popular in the 1950s and 1960s. Women then wore these costumes only to gay and lesbian bars and to private parties. The butch proudly wore a man's suit, socks, and shoes, while the femme did not wear a costume but wore what a heterosexual woman would wear at the time. One common belief at the time was that a woman could be arrested for cross-dressing if she did not wear at least three pieces of women's clothing. As a result, women would leave home in their everyday clothes and stop near the bar or party to dress. Such a law does not seem to be on record and may be regarded as a form of urban legend. Other items completed the costume, including a pinky ring, a watch worn low on the wrist and turned face down, a large belt buckle worn on the side, and one clip-on earring.

Costume, thus, was what one wore as well as *how* one wore it. Cigarettes were also a feature of the costume, with the butches smoking Marlboros and Winstons; some menthols were considered “too femme.” Only gruff lesbians or “diesel dykes” smoked unfiltered cigarettes such as Camels.

During the transition era of the lesbian movement, costume underwent many changes. Butches softened their appearance, and one common costume was jeans, a flannel shirt, bib overalls, and hiking boots. Lesbians referred to this look as “dressed down.” Femmes, however, made little change in their costume traditions, except to follow the ever-changing fashions worn by heterosexuals.

With the lesbian-feminist era came further costume changes. The once distinctive butch and femme costumes then became similar and androgynous. Some lesbians wore T-shirts boasting “I Got This Way from Kissing Girls,” and extremely baggy pants or “parachute pants” were new choices. Variety in costume became the hallmark of the lesbian-feminist era. Jewelry had always been popular, but now there was a large selection of lesbian-feminist jewelry made by lesbians, such as a “labrys,” which looks like a double-headed axe, worn to symbolize one’s lesbian identity. The androgynous look signals the increasing acceptance of lesbians into American society, a goal of the lesbian-feminist political era.

As lesbians became more visible to the public through the political process, they modified their costumes to resemble more closely mainstream and middle-class values, but avoided female markers such as high heels and makeup while maintaining marks of membership, especially in jewelry. It may be that the shift to mainstream exemplifies the acceptance of lesbians by American society

Lesbian folklore changed during the three eras of the lesbian movement, although some changes did not coincide with the specific eras themselves. As time progressed, lesbian folklore became less like “defensive masquerading” and more like “pride in self.” Lesbian folklore exists for the most part within the community; in fact, much of it is meaningless outside of this context. Thus, members of the lesbian community have found a method to mark themselves as belonging to a group that encourages group cohesion.

Life History

A written account of a person's life based on spoken conversations and interviews. This genre has had an awkward history in the discipline of folklore. For many years, folklorists saw storytellers as the bearers of tradition they did not own. Among other folklore texts, life histories were regarded as a collective representation of a group rather than a personal possession of individuals. When folklorists realized that the ballad singer or storyteller was recognized by his or her own community and very much aware of his or her role in the culture, they began to ask questions about the individual lives and the influences on lives, in order to help explain the role of the legend or ballad in the folk group. Thus, the life of the "performer" became important in collecting and evaluating the text (and became a required appendix to all studies). Thus, the study of folklore evolved from studying only the text to integrating the person's life history into the text as well.

A life history may be defined in many ways: It could be told as an oral text or narrative, responding to a prepared questionnaire and interviewer; it could be the product of an intensive analytic conversation between folklorist and informant; or it could come close to spontaneous narration, with the folklorist trying to minimize his or her influence on the natural context and to allow the informant free expression. It may be argued that life history is all three; it starts off as a question-and-answer session, then, as the folklorist feeds questions, conversation follows. The narrator continues to add to the narrative, which is then processed through inspiration and becomes self-reflective. As folklorists recognize this reflexive construction of a life, new interest in this genre has arisen.

As most scholars of life history agree, the success of the interview process then depends on the personalities of the folklorist and the informant, on the framing of questions and the listening to the answers. The folklorist needs to be a sophisticated listener, understanding that memory is selective and that the teller of the life history is a different person than he or she was thirty, twenty, or even three years ago. Often the individual may not realize or want to realize these differences. The life history becomes a curious fiction fused with fact, as people make order out of their memories as they account for who they are in the present. Life histories, then, have much to offer, as they allow the interviewer to go beyond mere facts. The goal of a life history is not to chronicle every last detail, but to affirm the identity of the informant in the act of the telling; what the informant thinks of himself or herself, and why he or she continues to sing ballads, quilt, or use folk medicine to heal others contributes to a broader biographical pattern that transcends any specific culture.

Linscott, Eloise Hubbard (1897–1978)

Collector of New England folksongs, ballads, folk dances, and folk music whose anthology, *Folk Songs of Old New England*, has as its core repertoire the music traditions of her own family. Published to enthusiastic reviews in the heyday of New England ballad studies, Linscott's book stands out for the lively treatment of its contents and its useful organization. At a time when the Child ballad took center stage in serious publications of Anglo American traditional folksongs, Linscott divided her collection into four sections with items ordered alphabetically within each: "Singing Games"; "The Country Dance"; "Sea Chanteys and Fo'castle Songs"; and "Ballads, Folk Songs, and Ditties"—an ordering that met her "sole purpose to preserve the music that abounds in New England." Linscott provided more than 160 tunes, for she wanted "a songbook you can take to the piano when the family gather round and sing." But as an insider to the tradition, she also wanted her descriptions of the singing and dancing to bring the music alive. She hoped to honor the music of her ancestors and at the same time keep it going.

A good singer and musician herself, Linscott knew the music intimately, and her documentary instincts mirrored that of her contemporaries among ballad scholars. Her book contains social information that is lacking in the great majority of prior traditional-music publications. She gives detailed directions for playing a singing game or calling a dance; descriptions of singing style; headnotes on the item's history; and background information on the artists. Linscott took courage from the advice of Phillips Barry. He "was my guide," she once explained. "I had no idea of what I was doing until I met him. To me it was just my family music, nothing of great significance." Apparently, Barry found her closeness to the tradition to be an advantage. "Phillips Barry told me that because I didn't have a professionally trained ear, I could hear things others didn't."

Linscott began collecting because she "couldn't find our songs in any music books." She was a natural fieldworker. On a typical field trip, she "would go to a dance. I would learn the dance that's their favorite by watching and dancing. If it was a good fiddler, I would ask the fiddler to play the tune off the dance floor. I never took anything down the first time. At our family's summer camp there was a woman, 76 years old, I'd write down what she sang and to make it more natural, I'd write down mine, too. It is necessary to realize that folk music cannot be tampered with," she emphasized. "It must be recorded from each individual as accurately as possible." Phillips Barry died before she completed her manuscript, "so I asked his friend, James Carpenter," then teaching at Harvard University, "to write an introduction." Carpenter was an expert in sailor-song traditions, and his essay maintains Linscott's standard of informality.

As so often happens with the publication of scarce material, Linscott's book "jogged many a memory, and [I was] led a merry way to a rich Harvest of Yankee music." She continued collecting, prevailing upon the Library of Congress for the loan of "half-way decent recording equipment." The resulting fieldwork yielded a generous return, including Shaker music, Portuguese music, and Indian songs and dances. Frustrated at her failure to interest publishers in a second volume, she began lecturing at regional music societies, women's clubs, and arts organizations. She would bring informants, and all would dress in colonial or native garb for their performances. She organized two large New England festivals, the first at the Boston Arena and the other at the Boston Garden,

at which she proudly presented her favorite artists. “I brought Arthur Walden and Princess Metosanya, the Wampanoag Tribe’s last royal princess—all traditional music.” She believed that “it was the first time anything like that was shown in New England.”

Born in Taunton, Massachusetts, on the next to the last day of 1897 to a local physician and his wife, Hubbard graduated from Wellesley College in 1920, married businessman Charles Linscott, and moved to Needham, Massachusetts, where she lived until her death in 1978. She described lifelong family evenings when her father would tell Bible stories and then everyone would sing. “My family ran a camp in New Hampshire for forty years,” she said. “We often had dances there, and most of the musicians knew a lot of fiddle tunes and dances.” Once she started collecting, she said, “people were always very interested in letting me hear their songs.”

Having given up her hope of publishing a sequel, Linscott settled for establishing her claim in a brief summary of her unpublished data in the preface to the second edition of *Folk Songs of Old New England*. In addition to her Indian materials, Linscott was particularly proud of having collected from Carrie Grover of Gorham, Maine, “what she didn’t sing she played on her fiddle from a repertoire of more than 400 songs,” she wrote. Linscott bequeathed her collection to the Archive of Folk Culture at the Library of Congress.

Linda Morley

Editor’s Note

Quoted material not from Linscott’s book is from the author’s 1973 interview with the subject.

Local-Character Anecdote

A brief, usually humorous, narrative describing the odd behavior of an eccentric person well known in his or her community. The local-character anecdote may vary from a lengthy story about an episode in the life of the local character—in which case it borders on the genre of the local legend—to a brief description of a single action that implies a mutual understanding on the part of teller and audience.

Though the term “local-character anecdote” has occasionally been used to describe narratives of the history and behavior of prominent, successful individuals, it is probably best reserved for stories about eccentric, possibly disruptive, individuals who regularly violate community norms of appearance, way of life, and behavior. In contrast to other narrative categories, the term centers not on the ontological status of the narrative—as do “legend,” “memorate,” or “personal-experience narrative”—but on the narrative’s central

subject. The anecdotes may, therefore, vary greatly in length, amount of detail and exposition, type of framing devices, and amount of personal commentary by the narrator.

The local character was first defined by Richard M. Dorson on the basis of character traits: low cunning, effrontery, chicanery, verbal cleverness, offbeat talent, shiftlessness, parsimony, degeneracy, stubbornness, stupidity, or gullibility (Dorson 1964:23). Sandra K.D.Stahl has added “grossness” of appearance or behavior (Stahl 1975:286), so it is apparent that narratives of local characters revolve around excess, whether of behavior, living conditions, or appearance, and around conflict between the main character and the community in which he or she lives.

More remarkable, perhaps, is the common occurrence of repetition and reinforcement in these narratives. It is rare for a local character to be defined by only one of these characteristics; more frequently, the character has two or more, often a physical characteristic reinforced by a behavioral one, so that the subject may be unbelievably filthy *and* an enormous eater, may be physically deformed *and* a consummate liar, may dress in castoffs *and* invent bizarre contraptions. These contrastive replications serve to underscore the character’s marginal status by simultaneously objectifying his or her physical being while describing behavior that confronts social norms.

The narratives themselves have a clear functionality, whatever the relationship between teller and audience. If told to outsiders, the narrative is likely to be framed by statements critical of the local character that clearly identify the narrator as upholder of community norms, the local character as outsider or deviant (Mullen 1988). Yet, the narratives are also likely to be prefaced by an explanation of the causes of the deviant behavior; local characters are frequently described as having undergone massive physical or psychological trauma through war, accident, disease, or birth defect. In this way, the community may seek to apologize for or rationalize its marginalization of the local character by identifying external causes for the character’s behavior.

If told within the community shared by narrator and subject, the local-character anecdote serves to reinforce the shared values of the participants, at the same time continuing to marginalize the local character. In fact, the anecdotes may often be trimmed to the briefest of descriptors so that an anecdote might be as attenuated as “You won’t believe what Lefty did this time—carried home all the boards from the outhouse we tore down.” Another common opening frame uses an encompassing “it” (“Lefty really did it this time” or “Lefty did it again”) to objectify the character further in terms of a set of repetitive behaviors marked by social deviance. In fact, the community may even refer to these capsule anecdotes—which, of course, imply a shared knowledge of the character’s background, habits, living and working conditions, and particular set of eccentricities—by the character’s name: “Have you heard the latest ‘Lefty’?” The local character then becomes, in effect, his or her own set of narratives; to the community, he or she may seem to live in anecdote more clearly than in real life.

Local-character anecdotes bear close resemblance to narratives of trickster figures who confront community standards; the local character’s freedom constitutes an implicit critique that reveals simultaneously the value-laden basis of those standards and the potential consequences of departing from them. As trickster, the local character challenges and disrupts by demonstrating the rigidity and artificiality of social norms and by suggesting the possibility of violating them; in this sense, the local character not only

proves a mischievous and entertaining source of disruption, but also demonstrates exactly the community's rules for behavior and the interrelationships among those rules.

These functional interpretations are at the center of the scholarship on local-character anecdotes. Where Patrick B. Mullen (1988) uses theories derived from the sociology of deviance and labeling theory to describe the boundaries drawn between local characters and members of their communities, Diane Tye sees the anecdotes as allowing residents to clarify their "group of shared values" (Tye 1982:47), adding that the narratives are "not only cathartic for residents but...reify other guidelines of expected social behavior" (Tye 1987:106). Further, local characters through narrative may act as "agents of social control," guarding against those who may seek inappropriately to advance themselves at the expense of their neighbors (Tye 1987:107).

More subtly, narratives of local characters may, according to Tye (1989), mediate oppositions within the community: individualism versus conformity, homogeneity versus heterogeneity, hospitality versus distrust of outsiders, fear of deviance versus concern for the less fortunate. At the same time, the anecdotes may also provide reassurance for residents that the community is concerned for everyone and will care for them if misfortune occurs.

As Tye (1982) also points out, local characters are capable of recognizing, building upon, and exploiting their status through role-playing, storytelling, stylized performance, or cooperation with other members of the community, who may in turn create performative grounds where the local character can interact with—and possibly embarrass—outsiders. Communities frequently beset with visitors—tourists, salespeople, travelers—may thus use a local character as an ironic symbol of themselves to make fun of the outsider's assumption that everyone in the community behaves in this way.

In structure, the local-character anecdote usually proceeds, as Stahl has said, "from a normal stance to an abnormal extreme stance through the direct channel of one-tracked, almost surreal 'logic'" (Stahl 1975:290). The narrative carries the listener from everyday activity to the unpredictable or bizarre; the local character sets out to buy a loaf of bread but winds up buying cat food for a circus lion. This narrative pattern, then, suggests the escalating consequences of deviation from established patterns of behavior.

Similarly, many local characters have a body of narrative assigned them from sources in other genres (Peck 1992). A local character ("the Champion") known for his lying abilities may have attributed to him the well-established folktale (Tale Type 1920B) in which an acquaintance asks him to tell a lie but is told that there isn't time because a relative is injured, ill, or dead. When the instigator later passes the Champion's house, he sees the healthy relative sitting on the porch with the Champion. In this instance, the local character becomes a center of accretion for local legends and for more widely distributed tales. This process may be especially noticeable after the death or departure of the local character, who may gain with time a quasi-legendary status. The narratives may also focus and concentrate thematic elements so that the local character becomes progressively less eccentric and more purposeful in confronting authority, reinforcing local customs, or gulling outsiders.

In American narrative communities, the local character may be further marginalized by membership in a minority or ethnic group, by gender or age or physical handicap, by education or economic status. The narrative treatment of such persons may then combine

with stereotyping to reflect the boundary-making power of narrative and its capacity to isolate as well as to incorporate.

Loggers

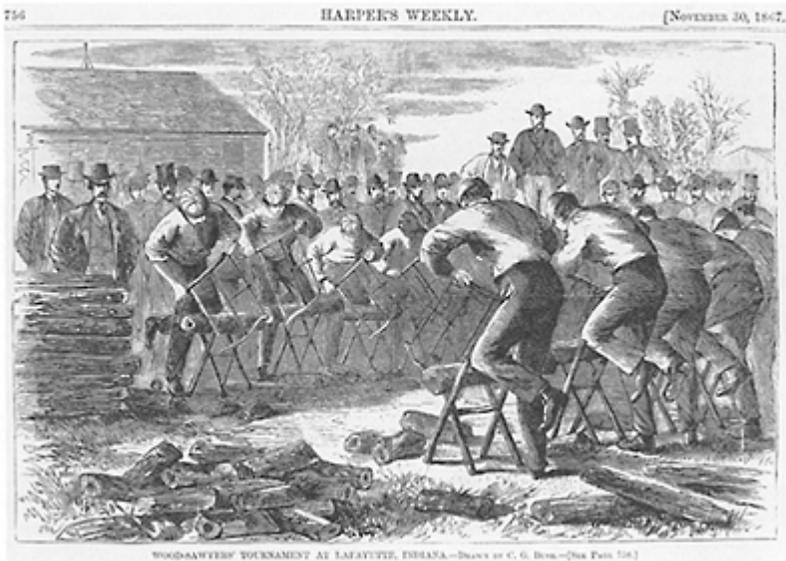

Or “lumberjacks,” hewers of forest trees, men engaged in lumbering. Logger folklore, shaped by both the social structure and experiences of industrial labor and the uncontrollable forces of the natural world, includes the full range of oral narrative and musical traditions; the ritualistic behavior of customs; and the tangible expressions of work-related material culture. Historically, American logger folklore has occurred in rural contexts dominated by skilled male laborers working seasonally under dangerous conditions. Logging has followed a resource-dependent and market-driven migrating frontier of timber production, starting in the 18th-century maritime states and moving over two centuries to the Upper Midwest, the Deep South, and finally the Pacific Northwest. Lumbering continues in all regions, although the Northwest logging subculture remains the most concentrated social base for occupational traditions.

Three things have profoundly shaped everyday logger life and, by extension, the content and performance of logger folklore. First, the labor force has always been ethnically diverse and discontinuous: Canadian Francophone loggers joined Irish descendants in the Northeast and the Midwest; African Americans joined Whites in the Deep South; and repeated infusions of Scandinavians poured into the woods of the Midwest and the Northwest. Second, the changing social context of work has led to an increasingly fragmented sense of sociability, as isolated, all-male logging camps evolved into company towns characterized by the domestic order of married employees, which in turn became the dispersed commuter-oriented subculture of the late 20th century. Moreover, divisions exist between union-oriented loggers who work for corporate giants such as Weyerhaeuser and those who work for small, independent, contract loggers whose entrepreneurial activities are often run by family members. Third, logging as commodity production in the outdoor world of forest environments leads to a profession that is inherently dangerous and difficult, as workers must adjust to changing conditions of weather, terrain, and ecosystem. Combined with workers’ reactions to popular imagery of the American logger (for example, the public persona of Paul Bunyan), these three factors have shaped occupational traditions that stress the nature of shared work experience and identity and the distinctiveness of logging as a means of employment.

The greatest proportion of logger folklore is verbal in nature and decidedly colorful and poetic in style. Loggers have developed one of the richest occupational jargons known. Names exist for virtually all aspects of the job. People who worked in the woods prior to 1900 usually called themselves “shantyboys,” “woodsmen,” “loggers,” and “lumbermen”; the use of the term “lumberjack” is more recent, with its popularity derived primarily from turn-of-the-century literary and journalistic accounts of the industry. Woodworkers in the Northwest in the 1990s usually call themselves loggers and, to a lesser extent among themselves, “timberbeasts” or “brush apes.” Naming of work technology, job tides, job situations, or specific individuals is often crude, masculine, associated directly or metaphorically with flora and fauna, and occasionally derived from an older lingua franca, such as Chinook jargon. Before the demise of

camps, nicknames were universal (“Roughhouse Dixon,” “Pig-face Joe”). A “bullbuck” is the boss of men who cut trees; a “nosebag” is a lunch bucket; “corks” are boots with spikes in the soles to give secure footing on slippery logs; “Skookum” is Chinook jargon for big, strong, good. Expressions also abound: “Ground so steep even the ants wear cork shoes.” Knowledge of this esoteric language is considered crucial for acceptance into the occupational group.

Storytelling has served important functions among loggers, from entertainment, to education, to the expression of worker ideology. In the Northwest, stories are commonly told while “logging,” a traditional category of conversational talk in which workers review the history, humor, and business of logging. Personal-experience stories of “close calls” on the job serve to remind workers of the constant perils of the profession, while other narratives detail the heroic feats of loggers who solve work problems through tenacity, brute strength, or ingenuity. Paul Bunyan has, in fact, probably never been a common subject of logger tales, although the Bunyanesque image is pervasive in statues, parades, and community festivals. “Lies” are a category of often humorous stories that are either greatly exaggerated or wholly fictitious sometimes include traditional motifs from tall tales; examples include hunting anecdotes; pranks played on government personnel sent to monitor loggers’ activities; and Scandinavian-dialect stories. Tales of the legendary Bigfoot are sometimes considered “lies” since they involve jokes or pranks played on other loggers or

Sawyers' tournament at Lafayette, Indiana. Engraving, after a drawing by C.G. Bush. Harper's Weekly, 30 November 1867. Library of Congress.

outsiders (occasionally involving the practice of fabricating large footprints); however, many serious stories of encounters with this hairy, simian-like monster also are told by workers in more private contexts and reflect their concern with the mysteries of wild, forested areas.

Studies and well-annotated collections of logger songs and ballads are legion. While loggers had no tradition of singing during work, there is anecdotal evidence of their leisuretime singing activities, especially in the isolated camps of the Northeast and the Midwest prior to World War I. Of the dozens of songs recorded by folklorists, many appear to be anonymous and traditional, derived from the Irish-influenced song tradition of Maritime Canada; still other songs, as documented by Edward Ives, were written by specific individuals, such as Joe Scott and Larry Gorman, who worked in the Northeastern woods. Stylistically, such music was sung in a loud, hard voice by a single individual, unaccompanied by instruments, and had a declamando ending (a spoken last line). Many of the best singers were said to be of Irish descent, whose repertoires included traditional British broadside and Native American ballads as well as logging-related songs. Thematically, the occupational songs focused on the dramatic events of lumbering, such as accidental drownings on river drives ("The Jam on Gerry's Rock," "Peter Emberly"); nights on the town ("The Green Mountain Boys"); or the general nature of woodwork and camp life ("A Shantyman's Life").

In the late 20th century, the legacy of logger song making as entertainment has practically vanished, a victim of radios, literacy, and the demise of logging camps in favor of private homes. Songs that address the same themes are still written by loggers, but they are released as commercial productions. The expression of sentiment is now likely to be found in written poetry that appears in trade journals and privately printed publications. Older workers in particular have taken the jargon, legends, and customs of the industry to make nostalgic, humorous, or political statements on the realities of everyday life for loggers past and present.

It can be argued that among the customs of logging, the process of learning technical work skills is traditional in the apprentice-like fashion in which new workers watch, imitate, and ask questions of more experienced loggers. Included in this process are the kinds of beliefs and warnings one might expect in a dangerous occupation (such as cold hands or feet the night before work are a sign of death or injury). Other work-site customs include initiation rites, such as sending greenhorns in search of imaginary tools (a "sky hook," a "cable stretcher"). Pranks are commonly played on all members of a work crew, the loggers constantly testing and reinforcing their solidarity and using humor to lessen the tensions of a difficult occupation. One custom occurs in front of entire logging communities and even tourists and resembles the ritualistic events of American rodeos. The "log show" is an occupational festival, featuring parades, foods, music, charity auctions, and especially playful competitions based on the work skills and athleticism of local loggers.

Logger folklore also includes material expressions of work culture. The most conspicuous aspect of Northwest logger identity is their distinctive traditional attire, worn both at work and at various public occasions. No logger is complete without striped "hickory" shirt, "staggered" pants (which have the hems cut off for safety reasons), suspenders, and "cork" shoes. Additionally, dioramas of work settings using finely crafted wood or metal models, and large chainsaw carvings of wood figures have become

increasingly popular. Both of these examples of folk art demonstrate technical knowledge and a feeling for form and beauty according to logger aesthetics, expressed through the creator's skills and creativity as derived from work experience.

On an everyday level, participation in the seriousness and humor of logger song making, storytelling, and customs has helped bind together individuals who must work a dangerous job under adverse conditions. Folklore also plays a significant role in negotiating logger identity and ideology, as it articulates traditional occupational values of hard work, independence, and creativity. Logger traditions demand acknowledgement of the importance and distinctiveness of woodwork apart from all other means of employment. With the ascendancy of environmental concerns since the 1960s and 1970s and the activities of loggers under increased public scrutiny, these traditions have assumed a more political role, as songs, customs, and poetry are used with more frequency in public forums to present a positive image of loggers to the outside world, and consequently change public opinion of their controversial profession.

Significant archival collections of logger lore include the Northeast Archives of Folklore and Oral History at the University of Maine, Orono, and the Randall V. Mills Archive of Northwest Folklore at the University of Oregon.

Lomax, John Avery (1867–1948)

American folksong collector and compiler of popular collections of folksongs. Born in Goodman, Mississippi, in 1867, Lomax was the youngest of seven children of James Avery Lomax, a farmer, and Susan (Frances) Copper Lomax, both natives of Georgia. In 1869 the family moved west by wagon, establishing a farm on the Bosque River in central Texas.

Lomax sometimes portrayed himself as a Westerner, sometimes a Southerner, and he sometimes stressed his childhood on his father's small ranch on the Chisholm Trail. He asserted that he was the offspring of "the upper crust of the 'po' white trash", traditionally held in contempt by the aristocracy of the Old South and by their Negro slaves." He grew up singing the camp-meeting hymns of Southern Methodists and listening to cowboy stories and songs.

An avid reader, at age twenty Lomax was able to pursue higher education at a nearby Methodist institution, Granbury College, after selling his pet pony to help pay for his education. He could afford only the one-year program Granbury offered; it is not clear, however, that he wanted to stay longer. Granbury offered courses from grade school through college stressing recitation and rote learning; its rigid rules, Lomax recalled, made the college students feel "just as if they were first graders." Weatherford College, another Methodist institution, regarded Lomax's year at Granbury as adequate preparation for a teaching position. He taught there for six years but remained eager for a broader education and a wider view of the world. In 1895, at the age of twenty-eight, he fulfilled his dream of enrolling at the University of Texas in Austin, where he completed his B.A. in two years.

Lomax struggled to fulfill his scholarly ambitions as he coped with the need to earn a living. Despite his academic achievements, he had to postpone advanced academic training and look for work. Lomax cultivated a wide range of contacts at the University of Texas, and he landed a position as a secretary to the president of the university, which included responsibilities as registrar and steward of men's dormitories. After six years at this position, in 1903 Lomax accepted an appointment as instructor at Texas Agricultural and Mechanical College, where President David F. Houston recognized him as a gifted teacher and promising scholar. Houston helped arrange for Lomax to study at Harvard University for a year and provided that he would receive a third of his salary while on leave. In 1907 Lomax earned an M.A. in English.

While at Harvard, studying with Barrett Wendell and George Lyman Kittredge, Lomax discovered that these men, unlike the educated elite of Texas, valued the indigenous folklore of his native state. They were impressed with the cowboy songs that Lomax had been writing down since childhood, and they arranged for him to receive three summer Sheldon Fellowships from Harvard so he could travel throughout the Western cattle country collecting songs. Lomax wrote letters to editors of newspapers throughout the West announcing his desire to preserve and publish cowboy songs. The

extensive correspondence brought him into contact with numerous carriers of cowboy tradition and with first-person accounts of cowboy life and singing.

Lomax's *Cowboy Songs and Other Frontier Ballads* ([1910] 1986) was a path-breaking book that quickly became part of Western lore as it helped spread the oral tradition and led to new variations of familiar songs. The book contributed to the shaping of a national mythos surrounding the cowboy and to the view that Americans had a distinctive national folklore. Former President Theodore Roosevelt, in his Preface, and Barrett Wendell, in his Introduction, added their prestige to Lomax's argument that cowboys represented endangered American values of mobility, freedom, and individualism. They saw in cowboy songs a recapitulation on American soil of processes that had earlier created English ballads.

Lomax tried to make his cowboy materials fit the academic definition of the ballad: a song telling a story, produced by a homogeneous group, without authorship or date, passed on by word of mouth, and impersonal in tone. But it was difficult to make this definition fit, and it became increasingly so as his interests turned to African American song. The dominant assumption was that ballads were no longer being created and that the only ones in America were survivals from elsewhere. Lomax's argument that the term "ballad" could be applied to living materials was a radical attempt to stretch the term.

The critical success of *Cowboy Songs* did not ease Lomax's economic insecurity—nor did his appearances as a popular lecturer and performer of cowboy songs. The presentation of his ideas and research before academic audiences, and his term as president of the American Folklore Society, failed to gain him a university position. Lomax, who had married Bess Bauman Brown of Austin, Texas, in 1904, was still struggling in 1910 to make a living and to support his four children, Shirley, John Avery, Alan, and Bess. The little security he enjoyed ended in 1917, when, in a politically inspired attack on the Austin campus, Texas Governor James E. Ferguson fired Lomax and others at the university. Lomax's Eastern connections once again saved him, and Barrett Wendell Jr. obtained a job for him as a bond salesman in Chicago. In 1919 Lomax returned to the University of Texas as secretary of the exstudent's association. He left in 1925 to become the director of the Bond Department at the Republic Bank in Dallas. Although far removed from folksong collecting, he kept in contact with scholars and amateurs who shared his interest in American folksong.

In 1932 the collapsing American economy cost Lomax his job. Ironically, in the midst of the Great Depression Lomax was able to resume collecting songs and to publish a series of important collections. With a contract from the Macmillan Company, and assistance from the Library of Congress and the American Council of Learned Societies, Lomax returned to the field in 1932, often assisted by his son Alan, on collecting trips that concentrated on the music of Southern Blacks. More than 10,000 recordings of the songs he had collected were deposited in the Library of Congress Archive of American Folk-Song. Drawing on this material, John and Alan Lomax edited *American Ballads and Folksongs* (1934), *Our Singing Country* (1941), and *Folk Song U.S.A.* (1947).

Cultural tensions and contradictions that characterize Lomax's work contributed to both its strength and its weaknesses. Lomax increasingly argued for the creative contribution of African Americans to American folksong, but he could not fully accept the democratic and egalitarian implications of his argument that great art came from the lowest rungs of the social ladder. He used the popular media and the latest technology to

collect and disseminate what he had collected, yet he saw himself racing against media and technology as he searched for isolated groups that maintained their lore in “pure” form.

John Lomax was a Romantic nationalist who maintained that American folklore was the creative response of diverse American folk groups to their New World experience, not a vanishing remnant of Old World traditions. Implicitly, Lomax contended that anything that changed African Americans’ place in Southern culture would destroy their folklore. Yet, in studying Black folklore, he was choosing to cherish material many White Southerners and Northerners did not value, and in the process of studying this material he pointed the way toward new directions in American folkloristics.

In 1935 John Lomax arranged for the African American folksinger Huddie Ledbetter (Lead Belly) to tour Northeastern cities. This effort took place within a racist context that patronized Lead Belly. Nevertheless, the tour contributed to the folksong revival in New York City, and eventually throughout the nation. Lomax provided an account of Lead Belly’s life, a description of the tour, a revealing discussion of his relationship with Lead Belly, and a collection of songs in *Negro Songs as Sung by Lead Belly* (1936).

When in 1936 at nearly age seventy Lomax became the national folklore editor of the Federal Writers’ Project (FWP), his view of the world and folklore was well established and clearly stated in the manual given to FWP workers. The manual dismissed folklorists who valued “only what can be traced back to a past for which they have a nostalgia.” Instead, it praised folklorists who assume that “creative activity is still functioning.” Although the European origins of American culture could not be denied, the FWP, he wrote, was “interested in the mutations and developments wrought by transfer to a new and pioneer land.” Lomax insisted that the FWP valued “a recital of the woes of Clementine and her forty-niner parent above those of the Lady Claire.” He was determined to collect what he thought of as a distinctive American lore before it was too late. Although national FWP officials shared some of Lomax’s positions, they tried to reconcile Romantic nationalism with American pluralism and with modernity in ways he could not.

The American folksong collections that John and Alan Lomax edited together took a new approach to the American folksong tradition. Earlier collections had usually focused on a single genre or a single region, often a single genre within a particular region. The very title of the Lomaxes’ first collection, *American Ballads and Folksongs*, reflects the Lomaxes’ effort to take a broader view. This collection also reflects John Lomax’s Romantic nationalism and his belief that folklore was associated with uneducated and isolated groups. By the time *Our Singing Country* and *Folk Song U.S.A.* appeared, the Lomaxes felt confident that they no longer needed the word “ballad” in their titles. The latter volumes emphasize a functionalist and pluralist approach to American folksong.

Initial scholarly assessments of John Lomax’s work stressed the inadequate documentation of sources and the composite texts. Questions about Lomax’s methodology are, however, increasingly placed in the larger context of his contribution as a field collector and popularizer. His Southern background, his assumptions about race, his impact on popular culture, and his view of modernity are key areas of inquiry for folklorists and cultural historians who recognize the magnitude of his contribution to folklore studies and his impact on popular attitudes toward American folksong.

Lomax's first wife, who died in 1931, did not live to see the publication of the folksong collections that her husband and son compiled. In 1934 Lomax married Ruby Terrill, a professor of classical languages and dean of women at the University of Texas. While visiting Greenville, Mississippi, in 1948, Lomax died of a cerebral hemorrhage. He was buried in Austin, Texas.

Loomis, C.Grant (1901–1963)

Folklorist and professor of German. Loomis' scholarly concerns varied from the study of popular tradition in literary works to Western American tradition, particularly parodies of folklore. Grant Loomis, as he preferred to be called, was editor of *Western Folklore* from 1949 to 1952 and associate editor for the following ten years. He contributed numerous articles and notes to the journal during that time. He was also associate secretary of the Modern Language Association of America (1952) and was active in many other learned societies.

From 1926 to 1928, Loomis studied in Munich with Professor Max Foerster. His experiences in Germany apparently determined his decision to enter academic life. On his return to the United States, he entered Harvard University and received his Ph.D. in 1933. His dissertation, *Old English Saints' Lives* was written under the direction of George Lyman Kittredge, another teacher who influenced him greatly. Loomis' book *White Magic: An Introduction to the Folklore of Christian Legend*, further developing his dissertation topic, was published in 1948.

Loomis taught German language and literature at Tufts College, Harvard, Radcliffe, and the University of California at Berkeley, where he chaired the German Department from 1957 to 1962. Although he never taught folklore, the field was an important part of his life, and he was a staunch supporter of the California Folklore Society from its beginning in 1941.

He retired as chairman of the German Department in 1962, and he was looking forward to spending more time on his own work. In January 1963, he wrote to Wayland D. Hand, "Two book-length subjects, namely, American Wordplay and Never Say Die, euphemisms for avoidance of that word, are still awaiting attention. I hope I can see to finish them." But Loomis died unexpectedly of a heart problem in March of that year.

Lord, Albert Bates (1912–1991)

Slavicist, folklorist, comparatist, and collector of South Slavic oral poetry; co-originator (with Milman Parry) of the oral-formulaic theory. Initially Parry's research assistant in their fieldwork with oral epic singers in the former Yugoslavia from 1933, Lord transformed what had been a laboratory exercise—employing the South Slavic analogy to confirm Homeric oral tradition—into a multidisciplinary field that now treats more than 130 ancient, medieval, and modern traditions. Trained in a variety of areas (A.B. classics, Harvard, 1934; M.A. and Ph.D. comparative literature, Harvard, 1936 and 1949), he focused on South Slavic, ancient and Byzantine Greek, Old English, Old French, Russian, Latvian, Albanian, central Asian, Finnish, and Biblical studies. Through his innovative scholarship, the direction that Parry had mapped out developed far beyond the original conception, taking on an identity as one of the major 20th-century movements in folklore, literature, and anthropology.

In 1949 Lord completed the doctoral dissertation that was to become *The Singer of Tales* eleven years later. In it, he fully elaborated the dynamics of the recurrent phrase, or *formula*, which he defined as “a group of words which is regularly employed under the same metrical conditions to express a given essential idea” (Lord 1960:30), and narrative typescenes, or *themes*, “groups of ideas regularly used in telling a tale in the formulaic style of traditional song” (Lord 1960:68). He also described *story-patterns*, or tale types, like the Odysseus story known not only in South Slavic but also in Albanian, Turkish, Russian, and other traditions.

The basis for Lord's far-reaching scholarship lay principally in his and Parry's fieldwork in the former Yugoslavia, begun in the years 1933–1935 and continued by Lord in 1950–1951 and later. These collecting expeditions have yielded the ongoing series *Serbo-croatian Heroic Songs*, none more important than Lord and David Bynum's edition and translation of *The Wedding of Smailagic Meho* (1974), dictated to Parry and Lord in 1935 by the unlettered master-singer Avdo Medjedovic and totaling 12,311 lines, about the length of the Homeric *Odyssey*.

In addition to these major, seminal works, Lord contributed more than seventy articles in a wide variety of areas, selectively sampled in his *Epic Singers and Oral Tradition* (1991) and exhaustively listed in a 1992 obituary in the *Journal of American Folklore*.

Lovers' Leaps

Widespread subject of local legends, found in many states with remarkably similar plots. Typically, two Indian lovers, often from different tribes, are prevented from marrying because of tribal enmity or taboo; in despair or defiance, one or both commit suicide by jumping off a precipice. Variations occur; at Blowing Rock, North Carolina, for example, the lovers are returned to the ledge by a strong updraft from the undercut cliff, demonstrating the "Great Spirit's" intervention. Charles Skinner lists well-known lovers' leaps associated with such stories, distributed from New England to the Far West. Louise Pound found four such leap sites in Nebraska, a state she admitted is "pretty flat."

Lovers'-leap legends are also common in Europe, and Pound cites two possible Greek prototypes: the story of Sappho, who, spurned by Phaon, leapt to her death from the Leucadian rock (the subject of four *Spectator* essays by Joseph Addison in 18th-century England); and the tragedy of Hero and Leander as treated in Virgil's *Georgics*. Another likely literary influence is Shakespeare's *Romeo and Juliet*, dramatizing the tragic end of "star-crossed" lovers from feuding families.

Pound conjectures that such legends in the United States began with a conspicuous promontory: "In someone's imagination it became the site of a suicidal leap, and it was given a name that expressed this idea. Next, some local author accounted for the naming by attaching to it a romantic story of the past—the past of our region is Indian—and narrated it in verse or prose. The 'legend'...eventually was generally accepted as of Indian tradition" (Pound [1959] 1976:86).

The evolution of "Sautee and Nacoochee," one of Georgia's best-known local legends, is substantially documented in print (see Burrison 1990). It confirms Pound's suspicion of literary origins, but in this case the leap off Mount Yonah is a later addition (1869) by writer George W. Williams, who grew up in that area of White County and who also borrowed the Indian lovers' names from local creeks. Consistent with the earlier version (1854) presented by George White is the mound erected to mark their burial. Williams' account inspired a narrative poem, a school play, and "A Cantata of the Cherokees for Mixed Voices," which, in turn, contributed to the oral tradition.

These tales could be dismissed as romantic Victorian fantasies, but Francis de Caro suggests they may serve the psychological function of assuaging White guilt by "self-destructing" the Native American population. While they are "fakelore" in the sense of purporting to be authentic Indian narratives, many have achieved oral currency and are important symbols of a locale's identity, sometimes exploited for tourism.

Lullaby

A song used to lull an infant or toddler to sleep, typically while rocking the child in one's arms or in a cradle or carrier. Apparently a near-universal song type, lullabies are accordingly found in the New World among both Native Americans and more recent arrivals of African, Asian, or European descent. At their simplest, such songs may merely consist of wordless humming or nonsense syllables (the English term "lullaby," and, through it, the verb "to lull," derive from one popular European instance of the latter). More elaborate pieces fulfilling this function can be broadly divided between those items that, in content and usage, are specifically intended for, or identified as, lullabies; and the quite various songs idiosyncratically put to this use by individual singers. Among the better-known English-language examples of the former are "Rockabye Baby," "All the Pretty Horses," "Sleep, Baby, Sleep," "Hush, Little Baby, Don't Say a Word (The Mockingbird Song)," "Go Tell Aunt Rhody," and "Bye, Baby Bunting." The second category may include virtually any song or song type, though certain items employed after this fashion may, through repeated usage, become associated primarily with the lulling of children. Such has been the case, for instance, with "Two Babes in the Wood," a sentimental ballad originating on 16th-century broadsides.

As befits their function, lullabies are typically sung softly, often in an undertone or whisper, with little expression but considerable repetition. Aside from humming or vocables, their texts tend to emphasize phonemic or formal patterns regarded as restful or soothing (hence the prevalence in English-language lullabies of perfect rhymes, regular meters, alliteration, parallel syntax, and so forth), qualities also pertaining to tunes, tempos, and time signatures; predictably, such highly subjective factors vary considerably from culture to culture. Typically, however, those songs employed primarily as lullabies tend to dwell on a relative few conventional themes, an area that, somewhat surprisingly, seems to exhibit far less cross-cultural variation. So the singer may proffer various bribes or rewards for good behavior or sleep, or, conversely, issue threats or warnings, facetious or otherwise, should the child fail to comply. The song may describe the tranquility of the household or of the world as a whole, or the benign or beneficent activities of other family members (from the inverse perspective, some lullabies lament the mother's hard lot or complain of the father's abuse or neglect), or it might extol the child's appearance or person, predicting a glorious future. Sleep itself may be personified or described as a fabulous, never-never land (this last is balanced by the bogies sometimes enlisted in threats).

Curiously, many if not most lullabies also incorporate seemingly incongruous images of isolation, disorder, violence, or death, exemplified by that best-known of all American cradle songs:

Rockabye baby, in the treetop,
 When the wind blows the cradle will rock.
 When the bough breaks the cradle will fall,
 And down will come baby, cradle and all.

Folklorists have advanced various complementary hypotheses for these ostensibly inappropriate elements, which, after all, are clearly more meaningful for singers than their largely nonverbal auditors (the same can be said, of course, for the lullaby's more benevolent images). According to these interpretations, such figures may vicariously vent the latent hostilities or more general postpartum depression experienced by new mothers, or ease the separation strain eventuated by their infants' growing independence. Or they may more literally reflect conditions in traditional societies characterized by high rates of infant mortality or similar hazards and tragedies. Even under less stressful conditions, this seeming contradiction in the lullaby worldview suggests a fundamental dilemma in parenting—parents' desire, on the one hand, to protect and nurture their children, tempered by their knowledge, on the other, that the world that awaits their young is hardly the stuff of bedtime stories.

Directed in the first place to the needs of children, lullabies thus simultaneously address the practical and the emotional demands of parenting, a versatility probably explaining this genre's remarkably wide provenance and equally remarkable persistence. In fact, while the contemporary urban American context has witnessed the demise of most forms of traditional song, the lullaby, like other songs associated with children and childrearing, has not only survived but thrived, with no signs of falling dormant in the foreseeable future.

Lunsford, Bascom Lamar (1882–1973)

Folk musician, folklorist, organizer and director of the Asheville, North Carolina, Mountain Dance and Folk Festival. Known as “the Squire of South Turkey Creek,” Lunsford grew up assimilating the folk traditions of his native Buncombe County in western North Carolina. Folklore became a passion for Lunsford, and he spent his life collecting and performing the folksongs and dances of the southern Appalachians. Committed to allaying the “hillbilly” stereotype of mountain people by celebrating the richness of Appalachian culture, Lunsford insisted on performing and presenting only what he considered to be authentic folk arts. In 1928 he brought together dozens of local musicians and dancers to compete for prizes as part of an Asheville civic pageant. Lunsford’s festival, the earliest of its kind, was resoundingly successful, and has continued, serving as a model for subsequent folk-cultural display events.

An accomplished fiddler, banjoist, and singer, Lunsford contributed to several folksong collections, recording 303 tunes for Columbia University in 1935, and 317 for the Library of Congress in 1949. He also made a few commercial records, including his famous “Mountain Dew” for Brunswick in 1928 that was popularized in the 1930s by his friends Lulu Belle and Scotty Wiseman.

J.W. Love.*

Although Lunsford has been criticized for his tendencies toward self-promotion, his authoritarian management of the festival, his fondness for team-precision clog dancing, and his neglect of African American, topical, and bawdy folksongs, he will be remembered for helping validate the identities of Appalachians by preserving, revitalizing, and generating widespread appreciation for their traditional culture.

Luomala, Katherine (1907–1992)

A leading authority on Hawaiian and other Oceanic folklore and myth. A Minnesota Finn rather than the Polynesian aristocrat her name and work suggest, Luomala used her field research in then-little-known Gilbert Islands (now Kiribati), Micronesia, to earn a Ph.D. in anthropology at the University of California, Berkeley, in 1933 from Martha Beckwith, Robert Lowie, and Albert Kroeber. Her dissertation was a comparative analysis of how the mythical figure of Maui developed into a demigod. Following fieldwork among the Diegueno in California and the Navaho in the Southwest, she produced her most famous comparative essay, *Oceanic, American, and African Myths of Snaring the Sun* (1940), showing the complexity between diffusion and independent invention of quite similar motifs.

After wartime work in Japanese relocation camps in the United States, Luomala found her *metierrn* 1946 combining teaching at the University of Hawaii with extensive field research and publication for the Bernice P. Bishop Museum in Honolulu. Her full-length studies of the trickster Maui, of the fairy-like Menehune, and of other Polynesian myths and chants soon became the basic sourcebooks on these subjects. She displayed the breadth of her interests in ethnobotanical and faunal studies of the Gilbert Islands and Canton Island in the Phoenix Group and, in 1984, a decade after her retirement, in the definitive book on *Hula Ki'i: Hawaiian Puppetry*. A small, intense, blonde, muumuu-clad personage, she had virtually total recall of an immense body of lore known to very few other scholars. Foreshadowing “performance orientation,” she stressed the multiple meanings and functions of “oral narrative” (a term she preferred over “folklore”), always presenting the texts richly contextualized and thus bringing that lore alive for readers everywhere.

Lyric Song

Folksong type that emphasizes emotional reaction to a significant experience, object, or idea rather than the constituent parts of the experience, object, or idea itself. Other types of folksong express emotion but subordinate it to the telling of a story (as do ballads) or to the depicting of a topic's salient features. Songs that concentrate most of their rhetoric and imagery on accentuating feeling and on evoking an affective response constitute a distinct type in Anglo American tradition, as they do in the traditions of most cultures.

To facilitate this discussion, it is helpful to divide lyric songs into two types: sacred and secular. Sacred songs in Anglo American tradition are in large part indebted for their status as folksongs to a phenomenon known as the camp meeting. Emerging in concert with the revivals of fundamental religious fervor that periodically struck 19th-century America, most dramatically in the South, camp meetings attracted large numbers of participants from the vicinity of their outdoor meeting grounds to gather and worship in a style characterized by spontaneous, demonstrative outpourings of spiritual expression. Singing played a dominant role in the events conducted over the course of the often two- and three-day-long meetings; many of the songs were already well-known hymns from earlier Protestant movements—Wesleyanism, for instance—but as time passed more and more were made for camp meetings themselves by amateur and even professional composers. Soon books of sacred songs compiled especially for camp-meeting devotees (their tunes drawn in a distinctive “shape-note” style) began to appear; the popularity of the songbooks in turn increased the popularity of the meetings themselves and the opportunity they afforded to worship in a more personal, more ecstatic way than that encouraged in the formal services of denominational religions. Many of these “White spirituals” became traditional, sung again and again not only in camp meetings (and later “singing conventions”) but in everyday home settings as well; of course, some of the sacred songs that entered oral tradition followed other generic models, such as the ballad, but many were of the lyric type.

More common in the Anglo American folksong repertoire than sacred lyric songs were secular lyric songs. Keeping in mind that sacred songs deal with relationships between human beings and their deity, we can divide secular songs into two further logical types: those that treat relationships between their human subjects and society (homeland, political and economic conditions, friends and relatives) and those that treat relationships between individual men and women—in short, love songs. Lyric songs of the first sort address such topics as one's distress at a forced departure from home, despair at lack of employment and consequent poverty, or deadened grieving for friends and family lost forever. Sometimes the reasons are one's own shortcomings, as in this North Carolina example:

If I had 'a' listened to what mama said
 I wouldn't 'a' been here today
 A-lying around this old jail house
 A-weeping my life away.

Sometimes blame could be laid elsewhere, as in a Canadian example that shows heavy influence from Old World Irish songs of emigration:

Dear Newfoundland with your fisheries failing
 Your sons and daughters must leave each fall,
 Forced by poverty and cruel taxation
 To the shores of Boston, a home for all.
 Although with friends I feel sad at parting
 My aged parents on the pier will stand
 To bid farewell to their sons and daughters
 Who now must leave your dear Newfoundland.

It is the second type of secular lyric, though, the type that deals with interpersonal relationships, that is the most popular in tradition and that folklorists normally think of as epitomizing the genre. These are invariably love songs that treat romantic relationships between men and women. That the lyric muse favors this topic is not too surprising, since the type's chief trait is its emotional quality, and a love relationship (with death running a close second) is the human experience most likely to arouse emotions to their highest pitch for expression in song. Moreover, of the two most intense human emotions, joy and sorrow, the lyric song far prefers the latter, and so, in the worldview espoused by the genre, love affairs, while they have their moments of rapture, are invariably causes for grief and despair. Indeed, even the sacred songs, which rejoice and wax ecstatic over the self's eventual union with his or her heavenly family, expend almost as much of their energy on the suffering endemic to the human earthly condition, as "Christian's Hope" illustrates:

We have our troubles here below,
 We're trav'ling through this world of woe
 To that bright world where loved ones go,
 Where all is peace and love.

And a lyric song's emotional content was evidently matched by its effect on singers and listeners: George Pullen Jackson wrote in his *White Spirituals in the Southern Uplands* that "Christians Hope" moved its performers so profoundly that "the third stanza is seldom heard. The singers are in sobs and tears before they get to it" (Jackson [1933] 1965).

While the foregrounding of feeling virtually defines the lyric song in the minds of many folklorists, the type exhibits other conventions as well. For example, the point of view in lyric songs is almost always that of the first person. This would seem apposite, since, after all, emotions are interior, subjective, and requiring of great empathy on the singer's part to communicate effectively in performance. The pronominal usage is thus important for rhetorical, psychological, and artistic reasons:

The pain of love, I know full well,
 No heart can think, no tongue can tell;
 But I'll tell you now in a few short lines
 Love is worse than sickness ten thousand times.

Lyric love songs use almost exclusively the first-person singular; sacred lyric songs will often employ the plural “we,” but in general the individual “speaker” seems to dominate there as well:

I am a poor wayfaring stranger
While trav’ling thro’ this world of woe,
Yet there’s no sickness, toil nor danger,
In that bright world to which I go.

Another characteristic shared by many lyric songs is a lack of concreteness, which apparently suggests the relative universality of the experiences depicted. In another traditional Anglo American folksong genre, the ballad, protagonists customarily enjoy names, particular social personae, distinct physical settings, certain actions to perform and motives for performing them that, while to a certain extent stylized and often formulaic as is common in folklore, do situate and specify the story of each song, differentiating it from other songs. Lyric songs, in contrast, constitute an extremely homogeneous body: The personnel, their actions, settings, character traits, motives, and so on are frequently the same from song to song. The protagonists seldom have names; in love songs, for example, they are usually just “young girls,” “maidens,” “young men.” Most of the time, their personae are not those of soldier, merchant’s daughter, or lumberman but the far more generalized victim and deceiver. Protagonists act in only one way as well, especially in lyric love songs; the world portrayed is monotonic and virtually predetermined so that there are few options in a life plan apparently long since laid out by higher powers:

So hard is the fortune of all woman-kind!
They’re always controlled and they’re always confined,
while
Young men are false, oh they are so deceiving,
Young men are false and they seldom prove true.

The case is similar with the religious songs, in which protagonists are identified as sinners, or pilgrims, or travelers, and so forth with but single motives and destinies: to be freed from the torments of this world and to join the heavenly family:

Oh who will come and go with me?
I’m on my journey home;
I’m bound fair Canaan’s land to see
I’m on my journey home.

A further trait of lyric folksongs, once again especially prominent in songs of love relationships, is their employment of formulaic stanzas in demonstrably different songs. Some scholars have dubbed such verses “commonplaces,” others “floating stanzas”; apparently they encapsulate so well the ideas they are meant to convey that they cannot be improved upon and so are reused freely from song to song. Again and again, then, we find in lyric songs the image of the litde dove flying from pine to pine, of the broken-hearted maiden’s wish to be buried with marble stones at head and feet, of the false lover’s letter all “twisted and twined.” These images, moreover, are carried by very

similar wording so that they are formulaic not only conceptually but also verbally, as in the ubiquitous query:

Oh, who will shoe your pretty little feet,
 And who will glove your hands,
 And who will kiss your red-rose cheeks
 When I'm in a far-off land?

A further distinctive property of the lyric song is its way of interrelating significant images or, to use a more technical term, its "semiotic." While the ballad, as a contrasting example, relates images to each other chronologically and causally in tell-ing a story, the lyric song's semiotic is based on a thematic principle: Different images resonate with each other in connoting the same abstract concept, such as *movement* or *rest*. Take, for example, the following camp-meeting song:

We have our troubles here below,
 We're traveling through this world of woe,
 To that bright world where loved ones go,
 Where all is peace and love.
 We're fettered and chained up in clay,
 While in this body here we stay;
 By faith we know a world above,
 Where all is peace and love.
 I feel no way like getting tired,
 I'm trusting in his holy word,
 To guide my weary feet above,
 Where all is peace and love.

The unifying theme of freedom from a bondage of the most trying sort is unmistakable, as are the dual emotions of despair of this life's conditions, bliss at the next's.

Secular lyric songs work the same way, though in lyric songs that address general social misfortune, departure from one's terrestrial home—whether because of emigration, imprisonment, or death—is a cause for lament, not for celebration as in sacred songs. In secular songs, themes of exclusion, of confinement, of isolation and their ilk dominate rather than themes of inclusion, of liberation, and of communality. This thematic preference is best seen in love songs, since they are exceptionally rich in imagery: Not only humans, but human artifacts and indeed even nature's flora and fauna represent the same abstract concepts, such as augmentation and diminishment, plenitude and loss, longevity and impermanence, and so forth:

Young girls, take warning, take warning from me;
 Don't put your dependence in a green growing tree.
 For the leaves they will wither, the roots they will die;
 The young boys will leave you, 'cause one has left I.
 They will hug you, they will kiss you, they will tell you
 more lies
 Than cross ties on the railroads and stars in the skies.
 I once had a lover as dear as mv life.

And oft did he promise for to make me his wife.
 I left my poor daddy against his commands,
 I left my poor mother a-wringing her hands.
 And now I'm unhappy, I am sick on my bed;
 My husband's off gambling; Lord, I wish I was dead.
 I'm going away to Georgia, I am going away to roam,
 I'm going away to Georgia for to make it my home.

The lyric song of secular persuasion characterized so far in this essay reflected for the most part the ethos of an agrarian culture with communities that were small in size and homogeneous in population; that learned, stored, and transmitted songs orally; that accepted a view of the world as essentially static and deterministic; and that suffered economies not much advanced beyond subsistence level. But folksong collectors have also found in domestic singing repertoires secular lyric songs that exhibit what might be called a postagrarian sensibility. Such songs emerge in significant quantities after the Civil War and are just one branch of what we call "parlor songs," since their aesthetic suggests the "parlor" of the upwardly mobile bourgeoisie rather than the kitchen or field row of the laboring man and woman as the most apposite setting for their performance:

In the little rosewood casket
 Resting here upon the stand
 Is a package of old letters
 Written by a lover's hand.
 You may go and bring them, sister,
 And set down here upon my bed
 And take gently to your bosom
 My poor aching, throbbing head.
 You have brought them? Thank you, sister.
 You may read them o'er to me.
 I have often tried to read them,
 But for tears I could not see.
 When I'm resting in my coffin
 And my shroud around me's wound
 And my narrow bed is ready
 In the pleasant churchyard ground.
 Take this package of old letters;
 Strew them all around my heart.
 But this little ring he gave me
 From my finger never part.
 I must say farewell my sister;
 Place my hands upon my breast.
 I am dying. Kiss me, sister.
 I am going home to rest.

The most obvious mark of distinctiveness in such lyric songs of the parlor variety as "Little Rosewood Casket" is the more genteel ambience of the world portrayed and the

song's more refined phrasing. The composers (many of whom, like the makers of sacred songs, are known to us, since oftentimes their compositions first appeared in some copyrighted commercial form, like sheet music, before passing into folk tradition) were clearly more educated in approved styles of formal song poetics. To the academic observer, the emotional content of parlor songs seems filtered through a somewhat self-conscious, artificial, romanticized sensibility, one that has a dying woman in a most unlikely way ask her sister to "take gently to your bosom/ My poor aching, throbbing head" and refer to her burial place as a "pleasant churchyard ground," while her death posture is the exaggeratedly polite hands-crossed-over-breast. One feels intuitively that there is less genuine sorrow here than there is the proper appearance of sorrowfulness.

Despite what seems to the outsider clear differences in prosody and perception, domestic and community singers accepted parlor songs into their repertoires—and the singers' families and neighbors and workmates into their hearts—with as much sincerity and passion as they had adopted lyric songs encapsulating preindustrial values and worldview. And we must acknowledge the continuities between older style and newer style that gain the parlor ditties found in tradition their status as lyric songs in the first place: their privileging of feeling over action and description, their preference for first-person point of view, their lack of journalistic detail, their special type of thematically unified structure. Indeed, parlor lyric songs often exhibit the *same* imagery and associated themes their older agrarian relatives did, as the "going home to rest" closing line of "Little Rosewood Casket," which could have been lifted directly from a camp-meeting spiritual, attests.

M

Macon, David Harrison (“Uncle Dave”) (1870–1952)

One of the pioneers of commercial country music, and a founding member of Nashville’s Grand Ole Opry, Uncle Dave Macon described himself merely as a “banjoist and songster.” He was, however, far more than that. He was one of the crucial links between the rural Southern traditional music of the 19th century and the more modern music of the radio and the phonograph. With the possible exception of the Carter Family, he managed to preserve more old songs and picking styles than any other early performer. His exuberant banjo playing, his boisterous singing, and his wonderfully ornate jokes and tales made him a figure of legend in his own right. “Uncle Dave might not have been the best banjo player, or the best singer, but he sure was the best something” ran one familiar joke about him, reflecting on the power of his personality and the influence of his style.

Though casual observers often describe Macon’s banjo playing as “frailing,” more serious students of the banjo have isolated sixteen separate styles on his records, including a variety of up-picking and two-finger styles. His repertoire—or that part of it preserved on records and by folksong collectors—numbers more than 200 songs, ranging from Native American ballads to 19th-century sentimental fare, from gospel tunes to minstrel-show walkabouts. Recent research has shown that he shared many lyrics and comic pieces with African American singers from the middle Tennessee area.

Macon was born at the hamlet of Smart Station, near McMinnville, Warren County, Tennessee. As a boy, he absorbed many of the songs of the area, but his real fascination with banjo playing came in 1884, when his family moved to Nashville, where they operated a hotel. There Macon was exposed to the many vaudeville and minstrel troupes who boarded in the hotel while playing the town’s theaters; many of them featured banjo-playing comedians with intricate picking methods, and Macon was fascinated. By the time he was fourteen years old, his mother had bought him his first banjo. His interest in vaudeville was abruptly cut short, however, when his father was murdered on the streets of Nashville and the family was forced to return to rural Cannon County.

For the next thirty-five years, Macon worked a farm, raised a family, and ran a mule-drawn freight line. He continued to learn songs, some from traditional sources, others from Tin Pan Alley sheet music his sisters played for him. About 1923, when his freight line was rendered obsolete by Henry Ford’s new trucks, he signed a contract with the Loew’s Theater chain and took to the stage. His comic songs like “Keep My Skillet Good

and Greasy,” “Chewing Gum,” and “Hill Billie Blues” endeared him to audiences, and in the fall of 1925, when Nashville’s radio station WSM opened, he became one of its first regulars. A few months later the station started a regular *Barn Dance* show—a program that would eventually become the Grand Ole Opry—and Macon soon became a mainstay of the show.

Though he was over fifty when he began performing professionally, Macon often worked with younger musicians who were able to match his own musicianship: fiddler Sid Harkreader, instrumentalists Sam and Kirk McGee, singers Alton and Rabon Delmore. From 1924 until 1938, he recorded more than 180 songs for every major record company; these included topical songs like “The Bible’s True” (about the Scopes trial), “Rockabout My Sara Jane” (learned from Black roustabouts on the Cumberland River), “Buddy Won’t You Roll Down the Line” (an old pro-labor song), “Late Last Night” (a traditional Appalachian piece), and “The Death of John Henry” (not the familiar song, but a blues ballad probably of black origin). About a third of the Macon repertoire was gospel music, as exemplified by his unofficial theme song, “How Beautiful Heaven Must Be.”

In his later years, Macon traveled to Hollywood to make a film, *Grand Ole Opry* (1940), appeared on network radio, and even did local television. He continued to appear on the Opry, even with its electric guitars and modern singers, until a few weeks before his death. He left no real protégé to carry on his music, though David “Stringbean” Akeman inherited his banjo and many of his songs. Many of his old records have remained in print on LP into modern times, and festivals like the annual Uncle Dave Macon Days celebration in Murfreesboro, Tennessee, have become forums for younger musicians who wish to celebrate his music.

Magarac, Joe

Folk hero; the most famous figure in steelworker lore. The last name means “donkey” in Serbo-Croatian. After almost fifty years of scholarly debate on the subject (focusing especially on the ambivalent ethnic elements in the story), it seems possible, from the work of folklorists Richard M. Dorson and Hyman Richman, historian Clifford Reutter and others, that Joe Magarac was a creation not of folk process, but of a professional writer, Owen Francis, in 1931. At least two sources, however, English-literature scholar George Carver and journalist-folklorist George Swetnam, suggest an independent origin of the Magarac legend earlier in the 20th century, within local southwestern Pennsylvania folk tradition.

In the comic-heroic tales related to the Francis story, Magarac is a large, but still human-size immigrant laborer of “solid steel,” who was born in an industrial site (an ore mountain, a slag pile, a furnace). He lives at a mill-town boarding house, eats huge quantities of food, especially cabbage, and works twenty-four hours a day. His exploits are based on his great strength, but he is simple and pure of heart. He dies by melting himself down in a Bessemer furnace. In the George Carver stories, Magarac is a supernatural—“as large as occasions demand”—who appears only when needed in order to rescue a worker from a sudden life-threatening disaster on the job.

In any case, it is clear that the proliferation and perpetuation of stories and songs about Magarac can be attributed primarily to eager folklorists and other writers in the 1940s, such as Jacob Evanson and Benjamin A. Botkin, along with steel-company propaganda. Yet, odd things can happen on the way to tradition. In the wrenching process of the steel industry’s precipitous decline and restructuring in southwestern Pennsylvania and across the industrial Northeast, the persona of Joe Magarac as the super-strong, proud steel laborer has become immensely important to displaced workers, whose self-esteem and sense of identity have been severely challenged. The 1980s, for example, saw the staging of a mixed-media production titled *Magarac (A Steel Saga)* in the steel town of Lackawanna, New York (near Buffalo). Residents of Monongahela Valley mill towns continue to talk of erecting a Joe Magarac statue. In 1991 the union-supported Tri-State Conference on Steel established an annual Joe Magarac Award to recognize efforts to promote reindustrialization in southwestern Pennsylvania.

The perhaps “fakelore” hero Joe Magarac may or may not ever have represented folk tradition during the heyday of the steel industry, but the legacy of Joe Magarac the popular icon has gained new significance for former steelworkers as steel’s dominance wanes.

Maritime Folklore

Traditional cultural expressions of maritime people; includes the lore of groups such as seafarers, fishers, marine pilots, longshoremen, boatbuilders, and seafood processors, whose work takes place on (or relates to work on) bodies of water; and communities located near oceans, bays, rivers, bayous, and lakes, whose residents have a strong cultural or economic relationship with the water. Maritime folklore encompasses a wide range of genres, including custom and belief, weatherlore, ritual, legend, narrative, language, jargon, and song, as well as folklife forms such as technical skill, festival, foodways, and material culture. While certain traditions are widespread and found in many North American maritime communities, there are numerous variants within genres, reflecting particular local, regional, occupational, historical, and ethnic contexts.

The sea can be unpredictable, unforgiving, and fraught with hazards. To guard against such perils, seafarers have long invoked traditional taboos or avoidance behaviors, which function to assuage the psychological stresses of difficult work in a potentially dangerous environment. Adherence to such beliefs shows respect for the traditions of generations past and also serves to relieve anxiety about the many risks and unknowns inherent in living and working at sea. Modern electronic gear reduces some of the unknowns by helping mariners navigate around shoals, locate seafood resources, anticipate the weather, and communicate with one another. The widespread use of such devices has considerably altered the contexts within which older, traditional taboos and customs were most vigorously maintained (although technology itself has inspired new jargon and systems of conventions). Still, in the second half of the 20th century, folklorists have encountered numerous examples of traditional beliefs from people in a wide range of North American maritime communities.

Historically, some of the most widespread superstitions had to do with women and members of the clergy, both of whom were thought to be unlucky passengers aboard ship. While this attitude has softened in many areas, there are lingering feelings of ambivalence toward women or clergymen boarding vessels in certain maritime communities. Another superstition of long standing concerns the harming of sea birds. To kill an albatross is to court disaster, such as befell the Dutch training ship *Kobenhavn*, which disappeared without a trace in the South Atlantic in 1928. As noted in the *New York Times* on August 21, 1938, ten years after the tragedy, the vanishing of the new, steel-hulled ship with modern radio equipment and auxiliary engines was made more poignant by reports that one of the cadets had captured an albatross shortly before departure.

In many regions, putting to sea on Friday is considered bad luck, as is having an umbrella or black suitcase aboard a boat, turning the hatch cover upside down, changing a boat's name, or whistling on board. Fishermen in various regions avoid certain words and foods. Along the Northwest Coast, for example, serving pea soup aboard some fishing boats would be quite a serious blunder. On some fishing vessels out of Florida and Texas, the word "alligator" is taboo, while on a traditional Chesapeake Bay vessel

one would avoid black walnuts. Likewise, a traditional fisherman in Florida would not tolerate a speck of green paint on his workboat, while a Chesapeake waterman would shun anything blue on his.

Customs practiced to bring good luck are not as prevalent as avoidance behaviors. Placing a coin beneath the mast of a vessel is one tradition widely employed for good luck. At one West Coast shipyard until well into the 1950s, workers followed a long-standing custom of ensuring a new boat's success by passing around the whiskey bottle during three important stages of construction: at the laying of the keel, after fastening the final plank (called the "whiskey plank"), and again at the launching. In many regions, when launching a new boat it is customary for a woman, often the wife of the builder or owner, to break a bottle of champagne over the bow. In California's San Pedro fishing community, a boat is considered especially lucky if the champagne bottle doesn't break until the third swing over the bow. Some communities call upon a priest to bless the new boat as well. Should trouble arise at the launching—the vessel runs aground or sustains damage—that boat's future is called into question. While a launching ceremony occurs only once during the vessel's lifetime, other ceremonies for luck and success are held at regular intervals. For example, many maritime communities sponsor an annual Blessing of the Fleet. Part ritual and part festival, the ceremony consists of fishermen parading their decorated boats before a clergyman, who confers a blessing upon each for a safe and successful fishing season.

A few ceremonies are conducted at sea, notably those performed when passengers or crew cross certain lines of latitude or longitude for the first time. On the day a ship crosses the equator, one of the ship's company appears attired as King Neptune, before whom the uninitiated, or "pollywogs," must stand and respond to questions. The novices are then treated to the ministrations of a wicked-looking barber, before running the gauntlet between seasoned seamen and, finally, being drenched with water. At ceremony's end, the pollywogs are declared sons of Neptune, or "shellbacks." A similar rite is held when crossing the international date line (180° longitude), at which sailors become members of the Order of the Golden Dragon. One joins the Order of the Bluenose when such a ceremony is held for crossing the Arctic Circle. These ceremonies are conducted aboard U.S. Navy and Coast Guard ships, as well as merchant and some cruise ships.

Because the lives of maritime people are so intimately connected to nature, many have sharpened their abilities to predict weather based on the appearance of the sky, clouds, wind direction, and changes in atmospheric pressure. Observations about the weather that are widely known and shared among members of the group become weatherlore. Some of the best-known examples of maritime weatherlore have been fashioned into ditties such as "Mackerel skies and mares' tails make tall ships carry short sails" and "Red sky at night, sailor's delight; red sky in the morning, sailor's warning." To many mariners, a circle around the moon portends bad weather, while sun dogs (bright, rainbow-like spots on either side of the sun) foretell a weather change. Fishing people can also read the weather in the behavior of local birds, as well as in the creatures they harvest. In Chesapeake Bay, for example, some watermen believe that blue crabs turn especially mean before a storm, biting everything in sight.

Maritime folklore is rich in legends about events at sea and waterborne villains and heroes. One of the best-known legends among North American and European seamen

concerns the Flying Dutchman, condemned to sail forever for having invoked the wrath of God by swearing he would make harbor despite a howling gale. The Flying Dutchman's phantom ship haunts the waters around the Cape of Good Hope, and many seamen believe that anyone who sets eyes on her will subsequently be in a shipwreck or be struck blind. Other maritime legends involve mermaids who tempt mariners to their deaths, plundering pirates, shipwrecks and buried treasure, how individuals met their fate at sea, and modern-day sea monsters such as Chessie in the Chesapeake Bay and Champ of Lake Champlain, both seemingly benign creatures that surface periodically.

Members of various maritime occupational groups often tell stories about their own experiences on the water. These personal-experience narratives typically concern close calls with danger when skill and luck saved the day, enormous harvests of fish landed in the past, brushes with the law, and the like. Told time and again, such narratives become highly structured; when performed in various contexts, they serve to express occupational identity and such values as hard work, courage, specialized knowledge, and competence.

Maritime occupations spawned a multitude of specialized terms and phrases that newcomers had to master, for their own successful performance of duties and, in some circumstances, for the ultimate safety of the entire crew. Each part of the vessel, rig, and gear was named, and commands concerning their manipulation had to be understood and swiftly obeyed. As in many other occupations, greenhorns were tested by the seasoned crew and sent on spurious missions, among them to fetch the key to the keelson; to get some red oil for the port light and green for the starboard light; to tell Charley Noble to report to the first mate (Charley Noble is the name for the galley stovepipe); to go down and shine the golden rivet in the shaft alley; to keep a lookout for the mail buoy; or to go below and retrieve a bucket of steam.

Contemporary American English is replete with terms and phrases whose origins lie in the lore of maritime occupations. When confronted with a dilemma in which all alternatives are equally unappealing, a person may say he or she is "between the devil and the deep blue sea." To the crew aboard a wooden sailing ship, this expression described the circumstances of a crewman, hanging from a bosun's chair over the side of the ship, caulking a seam. The "devil" was the outermost seam of the deck planking, where the deck met the ship's side planking. To caulk a seam in the side planking, a man would be sent over "between the devil and the deep blue sea" to do so.

Another common phrase that has nautical origins is "to be taken aback." (When a square-rigged ship was caught by a shift of wind from ahead, the sails would be pressed back flat against the mast, curtailing forward movement.) Quarrelsome individuals are sometimes said to be "at loggerheads." (A "loggerhead" was a knob of iron on a long rod that, when heated, was used to melt pitch or tar for caulking; it was also used as a weapon. A "loggerhead" was also the single large bitt in the stern of a whaleboat, around which the harpoon line was made fast when the whale was harpooned.) Someone wishing to hear the latest "scuttlebutt" is likely unaware that the "scuttlebutt" was the water cask aboard a vessel. As crew members waited their turn for a drink, talk of various kinds, including rumors and gossip, would ensue. Today, to take something to "the bitter end," means forging on to the very limit. Aboard ship, the "bitter end" was the inboard end of the anchor cable attached to the windlass bitts. When the anchor had been let out to the bitter end, there was no more cable available.

Maritime songs were once an important part of the occupational culture of American seafarers. During the heyday of merchant sail and whaling in the 19th century, sailors sang chanteys (worksongs) and fo'c'sle songs, so called because they were sung in leisure time, often in or near the crew's quarters in the forecabin of the ship. Typically, variants of English, Irish, and Scottish ballads, the fo'c'sle songs expressed such subjects as the harshness and loneliness of life at sea, heroes of famous naval engagements, and notorious ships and captains. In contrast, chanteys were sung aboard ship to establish a rhythm for coordinating heavy hoisting work such as furling the sails, raising the anchor, or manning the pumps. When auxiliary steam replaced manpower on the capstans, halyards, and such, the chantey tradition diminished as well.

Two maritime worksong traditions, however, persisted well into the 20th century among African American workers in certain mid-Atlantic fisheries. Crew members employed in the menhaden fishery to haul by hand the heavy, fish-laden purse seines typically sang call-and-response-style worksongs to synchronize their efforts. Meanwhile, in the seafood-processing houses of Chesapeake Bay, workers often turned to singing gospel songs to help relieve the tedium of shucking oysters or picking crabmeat.

Work in American maritime settings has produced rich material-culture traditions as well, the most significant of which are traditional boats. The pirogue of Louisiana, the Columbia River gill-net skiff, Northwest Coast canoes, the Maine lobster boat, the New Jersey garvey and Sea Bright skiff, the Chesapeake skipjack, and the Florida sponge boat are just a few examples of regional boat designs that reflect local water and weather conditions, building materials, intended uses, and cultural norms. Often constructed locally by builders who have had no formal training and who work without plans, vernacular watercraft represent the tremendous diversity of North American maritime material-culture traditions.

Marxist Approach

Seeks social and economic patterns that relate to folk-cultural production. A Marxist approach to data presentation and analysis has played a role in the social sciences since the late 19th century; folklorists, however, were more concerned with humanistic than social or political interpretation of data. This directed them away from application of the highly sociopolitical approach that Marxism engendered until fairly recently.

Marxist approaches to the social sciences use as a basis the writings of Karl Marx and Friedrich Engels. Marx's philosophy relates a society's mode of production to its economy and thus to its social structure and culture. The economic base, therefore, is the underlying principle exerting a primary influence on the political, social, and cultural features of a given social group. In capitalist societies, according to this interpretation, the contradictory relationship between labor and capital ultimately becomes restrictive economically, forcing the landless proletariat to rise up, then to dominate. Marx believed that the overthrow of capitalist society by the revolutionary working class would ultimately yield a classless society.

By understanding how culture affects group and individual consciousness, the Marxist scholar also seeks to understand more about the tendency to rebel against ideological manipulation and the resulting development of alternatives to current norms in Western society (Zipes 1984:334). The use of the Marxist approach in the various social-science disciplines and in different countries, each with unique social and historical structures, created a spectrum of interpretive theoretical variations.

The development and use of Marxist ideology in all of the social-science disciplines has been considerably stronger in Europe than in the United States. In Europe there has historically been a keen sense of nationalism and a more developed social-democratic labor movement—thus, greater identification with the Marxist ideology. In the United States, the term “Marxist” has been applied more loosely, referring often simply to a radical or critical approach influenced only generally by Marxist concepts.

The influence of Marxist ideology on American folklore studies has been affected by European folklore research and scholarship in disciplines that folklorists draw from for their theoretical constructs, especially sociology, anthropology, and history. The greatest influence in folklore came from German scholars beginning in the 1920s. There was a resurgence of influence from Europe in the 1960s and 1970s. Yet, even during periods when political radicalism strongly affected the culture and the academic disciplines, when classical Marxism was being applied to research, folklorists tended to remain less committed to these intellectual currents than to other interpretive approaches.

Folk-literature and folk-music studies have been most frequently influenced by Marxist ideas. Loosely defined Marxist principles have been applied by American scholars such as Charles Seeger, Carl Boggs, and Tim Patterson to analyses of traditional musical culture. Jack Zipes has applied the philosophy in his book *Breaking the Magic Spell: Radical Theories of Folk and Fairy Tales* (1979). These scholars and others have each drawn from several European interpreters of Marxist ideology who played an

important role in anthropological, sociological, and historical scholarship, especially Antonio Gramsci, Georg Lukács, Walter Benjamin, and Herbert Marcuse.

Mason, Otis Tufton (1838–1908)

Anthropologist and museum curator. After graduating from Columbia College in Washington, DC, in 1861, Mason became principal of the institution's preparatory school, where he taught a variety of subjects and by 1884 held the title of professor of anthropology. In that year he became curator of ethnology at the Smithsonian Institution, a position he kept until his death. Advocating the centralization of ethnological research, Mason wrote the constitution for the Anthropological Society of Washington, forerunner of the American Anthropological Association. In 1891 he was the third president of the American Folklore Society.

Stressing classification of artifacts, Mason developed exhibits at the Smithsonian Institution that demonstrated human "invention" by assembling objects from diverse cultures that exemplified what he perceived as evolutionary sequences. Basing his findings upon the museum's collections rather than primary fieldwork, he wrote several studies of human inventiveness and of American Indian material culture. His publications emphasized production techniques, the details of which dominated most of his work. During his last decade, Mason's research interests shifted to Southeast Asia, especially Malaysia.

Challenged by Franz Boas' criticisms of his approach to displaying artifacts, Mason moved toward a culture-area focus in the exhibits he arranged for the 1893 Chicago World's Fair. However, he never abandoned an object-centered, evolutionary perspective. In fact, he believed that material objects most effectively demonstrated humanity's progress from savagery to civilization and was attracted to the arts of Southeast Asia because they seemed to represent a stage between the "savage" cultures of America, which had dominated his previous research, and the eastern Mediterranean forerunners of modern European civilizations.

Mass Media and Folklore

The dynamic relationship between the communication content, genres, and styles of traditional folk cultures and those of communication conducted through print and electronic media. Folklore resembles mass communication in that both rely upon conventional formulas for their verbal and visual “narratives,” but whereas most folklore communication takes place face to face, mass communication is “mediated” through a channel that permits (almost requires) anonymity between the producers and a mass audience and provides for none of the usual feedback mechanisms possible in face-to-face communication. People tend to express traditional values through folklore, while mass-mediated culture (as a commercial culture) seeks novelty at the same time that it renders novel materials through conventional formulas.

We find folklore in the mass media, as well as mass-media elements in folklore. This dialectical relationship reflects the fact that folklore and mass-mediated culture share the paradox of being simultaneously dynamic and conservative cultural forms.

The makers of mass-media texts frequently appropriate the content, genres, and style of folklore communication toward commercial ends. Folklore may be the basis for what one folklorist has called “folklore,” that is, the use of folklore to induce in the advertising audience the desire to consume the advertised product or service. Print and electronic advertising, for example, frequently invoke familiar folk ideas, characters, and narratives, such as giants (Green Giant vegetables), elves (Keebler crackers and cookies), and magical charms (from cereals to cleaning products). Cartoonists and the creators of comic strips often rely upon the audience’s familiarity with folklore. Political cartoons sometimes depend upon folk beliefs or folk sayings for their meaning. Gary Larson’s singleframe *Far Side* cartoons feature folk beliefs about snakes and other animals and often play upon familiar folk legends (for example, “The Hooked Hand”) and narratives (such as Grimms’ fairy tales). Bill Watterson’s *Calvin and Hobbes* comic strip, featuring a boy and the stuffed tiger (Hobbes) that becomes alive only for him, draws heavily upon the folklore of children.

The print media bring folklore into other sorts of mass public discourse. Journalists are as likely as anyone to use proverbs, folk beliefs, and folk-narrative conventions to make sense of an unfolding story. Columnists such as Ann Landers (syndicated) and Herb Caen (*San Francisco Chronicle*) frequently pass on legends as actual events. Weekly tabloid newspapers (such as *The National Enquirer*), known for their sensationalism, regularly adopt legends as newsworthy stories. Writers of more serious fiction also appropriate folklore for their own authorial purposes, from the everyday conversational genres (jokes, proverbs, teases) to the more elaborate narratives, such as Thomas Pynchon’s use of the alligators-in-the-sewers legend in his novel *V* (1963).

Television and theatrical film narratives frequently tap folklore for familiar motifs and stories. The writers of situation comedies make use of legends, superstitions, jokes, pranks, proverbs, and other genres of folklore experienced in everyday life. NBC’s highly successful *Cheers*, for example, built an entire episode around a snipe hunt.

The theatrical film *Her Alibi* (1989) used “The Poisoned Cat” urban legend as a plot device, and the genre of horror films has long drawn upon folk legends. The series of “slasher films” (from *Friday the 13th* [1980] and its sequels through *Nightmare on Elm*

Street [1985] and its numerous sequels) may be seen simply as cinematic versions of adolescent urban legends (“The Hooked Hand,” “The Babysitter and the Man Upstairs”). The most fully realized example of film’s appropriation of folklore is the 1992 film *Candyman*, in which two graduate students in search of urban legends come across a supernatural murderer who embodies the legend of “Bloody Mary.” That film also incorporates the legend (with roots as old as Chaucer) of the boy castrated in a public bathroom while his worried mother waits outside.

The appropriation of content, genre, and style by one cultural realm from another also flows the other way. People often appropriate elements of mass-mediated communication in their folk cultures. Children, for example, will adopt dramatic roles and costumes (Batman, the Simpsons, Teenage Mutant Ninja Turtles, fairy princesses) from television and film narratives into their own free, imaginative play. Children create parody versions of television commercials and jingles, and at least one troop of Boy Scouts encourages the adolescents to create parody commercials as campfire skits. A few folklorists have even observed children inventing in their free play living versions of the Nintendo games they play on television screens.

Adults are just as likely to appropriate mass-mediated texts into their folklore. Joke cycles, for example, may include fictional characters or actual actors from the mass media. Mass-media events can also provide the occasion for a folk celebration, from the weekly gathering to watch Monday Night Football to the special parties held to watch the last episode of *M*A*S*H** or *Cheers*. Several scholars have addressed the phenomenon of the daytime-serial (the “soap opera”) viewer who seems to include the television characters in his or her everyday world of conversations, personal-experience narrating, and so on. Film and television are such pervasive elements in modern American culture that their narratives weave constantly through the narratives of everyday life.

Criticism arising out of modern cultural studies encourages the view that there is a dynamic, dialectical relationship between the mass media and folklore in modern society. Whereas some scholars worry that the mass media, especially television, work to homogenize culture and to destroy more “authentic” folklore, most media critics attribute great power to audiences to resist the effects of mass-mediated content and forms. Audience-response theory (reader-response theory in literary criticism, viewer-response theory in television and film criticism) looks for the active role audiences take in making and negotiating the meanings of a mass-mediated text. Folklore makes up a great deal of the commonsense, taken-for-granted repertoire of meanings audiences have at their disposal for interpreting, accepting, and even resisting the messages of mass-mediated texts.

Material Culture

A term used to designate the interconnection of tangible, human—made forms as an indicator of cultural ideas and traditions. “Material culture” points to patterns among types of human construction such as craft, industry, art, architecture, dress, food, agriculture, settlement, medicine, and furnishing. Although the study of objects and object types is important to material-culture study, the special emphasis in material-culture study is on the way that a material-environment is formed or cultural ideas and traditions are expressed in material form and construction activities. Material culture often refers to social relations among people mediated by objects and, therefore, involves connections to intellectual and social systems in cultures. With the addition of the modifier “folk,” the term “material folk culture” is sometimes used to draw specific attention to constructions that are traditionally part of community life, whereas “folk technical culture” or “folk technics” will appear to refer to traditional construction skills known among members of a cultural group. “Material aspects of culture” occasionally appears to designate an analytical category of traditions that is distinct from “verbal” and “social” traditions.

History of Material-Culture Studies in American Folkloristics

The use of material culture in relation to the study of folk traditions dates to the 19th century, when anthropologists/ archaeologists divided the data gathered on the world’s tribal groups into “intellectual” (oral and written), “social” (human behavior and structure such as kinship and ritual), and “material” (products of work from human hands). This division influenced later folkloristic division of data into “verbal,” “social,” and “material.” British anthropologist A.Lane-Fox Pitt-Rivers as early as 1875 urged the study of material culture as the “outward signs and symbols of particular ideas in the mind.” Of special concern to many Victorian anthropologists was the comparison of technology that could help show an evolutionary sequence for the rise of modern civilization from the primitive to the industrial.

Other anthropologists/archaeologists used the idea of material culture to show diffusion from one culture area to another. In separate publications around the turn of the century, Waldemar Bogoras, for instance, made a case for the migration of American Indians from North Pacific Asia to the American Northwest by using folklore and material culture. That a society could represent a distinctive material culture also suggested that tangible forms could designate differences and boundaries among cultural areas or groups.

Nineteenth-century leaders of the American Folklore Society often came from anthropological museums and had an interest in using material as well as oral evidence to show the evolution and diffusion of folk customs and beliefs. They pointed to the way that objects were integral parts of rituals or reflected beliefs held by a group. Presidents of the American Folklore Society such as Otis T. Mason at the Smithsonian Institution wrote about, and mounted exhibitions on, the evolution of invention, and Stewart Culin at the University of Pennsylvania Museum collected gaming and religious objects to show the connection of modern-day play with earlier religious rites. Folklore became separated from material culture in the early 20th century when anthropologists taking over the *Journal of American Folklore* defined the subject matter of folklore narrowly as oral tradition.

In the 1930s, as folklorists began to reestablish their field within academe and draw on German and Scandinavian scholarship in addition to building on British folklore work, material culture worked back into the definition of folkloristic inquiry. Martha Warren Beckwith, who occupied America's first chair of folklore at Vassar College, made a case in *Folklore in America* (1931) for an American folkloristic contribution that explores the "material arts" to study all traditional expression. She pointed out the American situation of possessing a varied mixture of regional, ethnic, and occupational groups (in addition to the aboriginal tribes favored by anthropologists) that have related oral as well as material traditions. Particular interest in connecting oral, social, and material traditions into one study came from Pennsylvania-German scholars who drew on the German *Volkskunde*, or

“folklife,” movement to interpret the “total culture,” giving priority to material and social expressions in everyday life. Alfred L. Shoemaker, a founder of the Pennsylvania Folklife Society in 1924 and professor at Franklin and Marshall College in America’s first Department of Folklore, was especially instrumental in promoting “folk culture” and “material culture” as appropriate terms for the study of America’s regional-ethnic diversity.

During the 1960s, the growth of American folklife museums and the establishment of a graduate academic program at Cooperstown, New York, in American folk culture (sponsored by the State University of New York and the New York State Historical Association) furthered research in material culture as a folkloristic concept. In major publications such as *Pattern in the Material Folk Culture of the Eastern United States* (1968), by Henry Glassie, and *Forms upon the Frontier* (1969), edited by Austin E. and Alta S. Fife and Henry Glassie, material culture emerged as a special folkloristic concern for longstanding traditions in lasting tangible forms. Building on the ethnological base of material-culture studies, folklorists added perspectives from history, geography, and folklore, especially applied to stable forms such as houses and barns, to bring out the development of regional-ethnic cultures. In later works such as Michael Owen Jones’ *The Hand Made Object and Its Maker* (1975) and Simon J. Bronner’s *Grasping Things* (1986), folklorists urged the understanding of aesthetic processes and community psychology in the formation of material culture and, therefore, began focusing on art and craft used by individuals negotiating between tradition and creativity.

By the 1980s, every American graduate program in folklore included material culture in its curriculum, and museums offered numerous exhibitions highlighting traditional material culture. During this period, the journal *Pioneer America* changed its name to *Material Culture* under folkloristic editorship, and the *Journal of American Folklore* featured a number of material-culture studies. In several conferences and anthologies devoted to material-culture studies generally (such as *Material Culture Studies in America* [1982], edited by Thomas Schlereth, and *Material Culture Studies: A Symposium* [1985]), edited by Simon J. Bronner), folklorists contributed significantly to theoretical formulations of material culture in several disciplines.

Characterizations of American Material Culture

A variety of perspectives can be discerned in American studies that identify base concepts of American material culture. Drawing on early American historical experience, one view points to contrasts between American Indian, Northern European, and African influences on the American landscape. According to this perspective, in colonial New England and Virginia different material-culture systems came into conflict when English settlers confronted Native Americans. Observers noted that the English system was built on the formation of lines and rectangles; that of many Indian tribes, on a circular basis. English architecture built on a rectangular foundation and human control over the

landscape, its conception of time and age was linear, and its settlements were permanent and arranged on a grid with private properties. Indian settlements were mobile and often arranged in circular patterns, their conception of time and age was often cyclical, and tribal architecture was based less on human dominance than on a relationship with nature. Both groups practiced agriculture, and much of the cultural borrowing that occurred between the groups seems to have been in food processes, including to-bacco, corn, and maple syrup. Following this model, a view takes form of enslaved Africans in the American South largely acculturating to European American material systems, while strong signs of ethnic maintenance are evident in house interiors, crafts, dress, and foodways. Many critics of this view point out that American Indian, European, and African material cultures were more diverse than the racial alignment of “Red, White, and Black” suggests. This model implies that the European American westward movement fostered a material culture based on the clearing of the forested wilderness and a reliance on wood as the primary component of construction. This movement helped shape a new national identity, assimilate immigrant groups into the aesthetics of a pioneer American society, and encourage the removal of American Indians. According to this view, the first permanent European settlements in the American experience effectively determined the future course of material-culture development.

Another way that American material culture has been represented is by viewing the movement of material culture historically from American ports of entry into the interior. Glassie, for example, posited four main “cultural hearths” on the Eastern seaboard that influenced the formation of “material folk culture regions.” The New England hearth, with its strong English stamp, spread north to New Hampshire and Maine and west across New York and Michigan. The Chesapeake—Tidewater hearth influenced the movement of material culture across Maryland and Virginia into the Upland South. The Lowland South hearth featured a strong African influence and worked its way through South Carolina and Georgia into the Deep South. The last hearth to form was in Pennsylvania, where Palatine Germans, Swiss Anabaptists, English Quakers, French Huguenots, and Scots-Irish people influenced the formation of a plural society and a strong inland Pennsylvania-German culture subregion that spread into the Midwest. Because migration patterns did not uniformly move west, a problem occurs in extending this model into the trans-Mississippi and Far West. In addition, many material forms such as quilts and fences may diverge from regional patterns.

The connection among architecture, foods, and crafts in some settlements marked by an ethnic population or geographic location has led to the mapping of material-culture subregions. Material culture has been used to make an argument, for example, for folk regions such as the Mormon Culture Region (Utah and parts of Idaho, Nevada, and Arizona), the Southwest Culture Region (New Mexico, Arizona, and parts of Texas, Nevada, and Colorado), the Ozark Culture Region (Arkansas, Missouri, and part of Illinois), and “Cajun Country” (Louisiana and part of Texas). These regions are usually based on ethnic populations adapting to a landscape with the construction of regionally distinctive material forms.

Another perspective (ethnography) concentrates less on broad historical-geographic patterns than on contemporary observations of localized behavior and communication in a variety of social settings. Using this approach, some authorities have characterized American material culture as heterogeneous, changeful, individualistic, and subject to a

variety of social forces, including gender, age, and class in addition to region and ethnicity. This modernistic view of American material culture includes suburban developments, college campuses, summer camps, and city neighborhoods as occasional settings for shared traditions of dress, food, and craft. Children, women, and workers, among other social networks, can form material folk cultures that may be localized to a specific community, organization, or even an individual and can change readily. Studies have focused, for instance, on the created material culture of Freemasons, Boy Scouts, and corporate offices.

In this ethnographic view, Americans inherit or choose identities that they can enact in different settings with reference to an appropriate material culture. They recognize ways of presenting themselves, ways of “doing things” (praxis), to communicate certain values or adapt to social situations and physical settings. Often at issue in such studies is the degree of control humans have over their creations. Some studies question whether traditional forms have symbolic meanings that affect or reflect behavior. An example is whether the emphasis on the rectangle in American material culture in a social setting such as a classroom affects the kind of teaching and participation that takes place. In decisions such as decorating a front yard with consumable items, residents may be indicating their personal control in mass culture by creating designs through arrangement.

Goals of American Material-Culture Study

Using the concept of material culture in folklore studies forces an assessment of physical evidence as well as social and intellectual forces on the formation of cultural traditions. Some scholars have called for mapping American material folk culture by showing the interrelation of traditional material forms in a comprehensive “folk atlas” similar to those available for the countries of Europe. A step toward this goal was the publication of *This Remarkable Continent* (1982), sponsored by the Society for the North American Cultural Survey. Proponents of such an atlas argue that it provides a graphic tool for interpreting the movements and regions that characterize the formation of cultures in the New World. They point out that artifacts in a study of material culture provide lasting, tangible evidence that can be compared and located in space and time. Much of the work to establish typologies of material traditions has been intended to aid this comparativist effort.

Another goal established early in the use of “material culture” has been to identify mental and behavioral processes through ethnographic observation. By studying individuals and groups engaged in constructive activities, scholars intend to identify the reasoning that influences the shape of the human-built environment. Often at issue is the negotiation within cultures between tradition and creativity present in the enhancement of design and technology. This concern has led to considerable effort to identify the symbolic uses and social functions of material constructions by community “actors” performing within specific cultural scenes. The effort has been to explain the shape of the forms with reference to the activities and contexts that led to their formation, use, enhancement, and replacement. Some applications of these interpretations are used to enhance working environments and social therapies.

Material folk culture also has a significant historical role in the evaluation of American everyday life. Material culture is often tied to everyday uses and points to familiar structures. Traditional architectural forms, in particular, remain stable over time and variable over space, thus suggesting a cultural history that marks significant social change when basic structures change. Folklorists and historians, for example, have examined the great impact of railroad transportation in the 19th century on settlement patterns and material culture of the West. Material folk culture also offers historical evidence for groups marginalized in historical scholarship or without a substantial documentary record, including many ethnic groups. Material culture documents the special experiences of such groups within the American scene. Historical explanation is also possible for the confrontation and combination of ideas communicated through material symbols. The historical perception of a division between Northern and Southern material culture can be viewed in an assessment of American sectionalism, or the historical importance of “log cabin” origins as a symbol of national unity in political campaigns can be interpreted.

Although goals of using the concept of “material culture” vary, the idea that traditions are apparent in tangible forms undergirds most approaches to the subject. Material-culture study is an international movement, with American studies contributing to transnational and cross-cultural research. Yet, distinguishing the field in the United States are some special conditions, such as social and geographical diversity, dramatic migrations, and cross-fertilizations, and a relatively recent history as a formerly colonized nation that has experienced cultural transformations of industrialization, incorporation, and urbanization.

McCoy, Minnie (“Memphis Minnie”) (1897?–1973)

Vocalist and guitar player widely celebrated as the greatest female singer of country blues. She also composed, played, and sang country, urban, Chicago, and postwar blues on 212 issued sides recorded from 1929 to 1959; she was the winner of the top female vocalist award in the first *Blues Unlimited* readers’ poll (1973) and an acknowledged influence on musicians as diverse as Chuck Berry and the Jefferson Airplane.

Born Minnie Douglas in Algiers, Louisiana, she moved with her family in 1904 to Walls, Mississippi (near Memphis, Tennessee), acquired her first guitar in 1905, and left the family farm to perform in Memphis soon after. She toured the South with a Ringling Brothers show during World War I, met “Kansas Joe” McCoy in the 1920s, and first recorded with him for Columbia in New York in 1929 (the year they married).

Like the “down-home” bluesmen, Memphis Minnie composed much of her own material and performed not just on stage and in nightclubs, but also at home, at picnics, for house parties, and on the street. A consummate guitarist, she was a finger-picker with the speed and agility of the country flat-pickers. One of a handful of female performers who expressed sexual themes in the male-dominated world of blues performance, Memphis Minnie—like the classic blues singers—sang openly of the rough realities of life as a working-class Black female. The lyric content of her compositions includes humor and heartbreak, barnyard and kitchen metaphors, voodoo and eroticism, and several masterpieces such as the prototypical “Bumble Bee” (1929) in the venerable blues tradition of sexual double entendre.

Ruth E. Andersen

McTell, Blind Willie (1901–1959)

Georgia blues musician, significant both for his distinctive voice and his innovative guitar work. Born almost totally blind in Thomson, Georgia, on May 5, 1901, McTell learned guitar from his mother when he was thirteen years old. Shortly thereafter he ran away from home to work in various carnival, minstrel, and medicine shows, though not always as a musician. From 1926 on, he hoboed along the East Coast, earning a meager living playing guitar and singing. McTell’s recording career lasted from 1927 to 1956, unusually long for a country blues artist of the time. This extensive recording activity was justified because McTell was extremely versatile.

Most of McTell’s recordings featured his high, plaintive, nasal vocals and his masterful twelve-string guitar; he was one of the few real masters of that instrument. Some of his notable recordings were “Atlanta Strut,” a ragtime dance with imitative, impressionistic guitar breaks and a spoken narrative; “Death Cell Blues,” noteworthy for its outstanding lyrics; the ballad “Chainey and Delia,” and “Broke Down Engine Blues,”

a number in which McTell uses the twelve-string guitar both to provide a rhythmic base and to answer the vocal. His material ran the gamut from the pre-blues songster tradition to the best of lyrical blues.

Following a recording session in 1950, McTell drifted into obscurity. In 1956 he resurfaced for a final album, after which he left music permanently. In 1957 he was pastor of Atlanta's Mt. Zion Baptist Church. Two years later, on August 19, 1959, he died of a cerebral hemorrhage at the Milledgeville State Hospital.

Medical Professionals

Occupational category consisting of doctors, nurses, paramedics, and others whose professions involve health care. The folklore of these groups, who often refer to themselves as “healthcare professionals,” includes slang, jargon-based word play, joking, occupational sayings, mnemonics, folk stereotypes of patients and colleagues, stories, skits, and other festive behaviors. Parallels to much of this material can be found outside the healing professions, but the content of the medical material reflects the work experiences of those who provide health care. Although medical professionals use traditional patterns to create new folklore, much circulates nationally. Some items, such as certain sayings and stereotypes, are more than fifty years old. Overlap exists between the folklore of different subgroups within the healing professions, but the folklore of each varies according to their different training, responsibilities, and position within the hierarchy.

The specialized language of health-care workers is the foundation on which all other genres rest. In addition to formal scientific and technical terminology, medical language includes informal clipped forms, acronyms, and slang usages. Word play based on all of these forms occurs during casual conversations. For instance, medical workers sometimes refer to “Amphoterrible” instead of the toxic drug “Amphotericin B,” and the common laboratory abbreviation “WNL,” “within normal limits,” is said to stand for “we never looked.” The suffix “-oma,” meaning tumor, may be combined with the word “horrendous,” to form “horrendioma,” meaning “an unusually sad or mistake-ridden case.” Although these examples are traditional, medical workers use similar techniques to create new jokes, often making pointed comments in the process.

Mnemonics are another form of humorous verbal lore that circulates among medical professionals. These fanciful, often bawdy verbal devices are used as aids in memorizing anatomical structures and other necessary medical and scientific information. Medical students, for example, recall structures in the chest by remembering “the five birds of the thoracic cage”—the esophagus, the azygous, the hemizygous, the vagus, and the thoracic duct (“four geese and a duck”). Although the use of mnemonics peaks during the preclinical years, when many students create their own, some are used later to remember elements of proper diagnosis or clinical practice.

Numerous proverbial sayings communicate aspects of medical culture and belief. For example, the saying, “When you hear hoof beats, look for horses, not zebras,” reminds students and physicians alike that a patient’s symptoms are more likely caused by common illnesses than rare. Another saying, “See one [procedure], do one, teach one” (sometimes parodied as “See one, do one, kill one”), emphasizes the need for medical students to learn quickly from their teachers so that they, in turn, can teach others.

Much of the folklore of health-care professionals revolves around traditional images of different kinds of patients. Patients are stereotyped on the basis of characteristics such as lifestyle, personality, hygiene, mental status, and the perceived seriousness of their illnesses. Among the terms applied to patients are “crock,” an old term for a presumed

hypochondriac; “turkey,” a marginally sick patient; “vegetable” and “gork,” both applied to hopelessly comatose patients; “gomer,” a senile, and debilitated elderly patient—the term is sometimes said to be an acronym for “Get Out of My Emergency Room,”—and “dirtball,” a dirty, often homeless elderly alcoholic male (the term is most common in Veterans Administration and other public hospitals.) The hostility evident in such characterizations reflects not only a sense of moral and social superiority, but also the difficulties and frustrations of dealing with patients who cannot benefit from, or may not even need, the attention they receive, or who refuse to take adequate care of themselves. Overburdened health-care workers often feel that the large amounts of time they must devote to these patients prevent them from giving better care to others.

Other stereotypes deal with the health-care worker’s own colleagues, evaluating them in terms of their “typical” personalities and presumed degree of professional competence. Intensive-care and emergency-room nurses, for instance, are said to be tough, as are surgical nurses, who must withstand the reputed abrasiveness of surgeons. Internists consider surgeons to be ignorant technicians and are themselves said to be “compulsive,” “uptight,” and “indecisive” because of their emphasis on diagnostic details and propensity to order tests. The well-known saying, “The internist knows everything and does nothing, the surgeon knows nothing and does everything, the psychiatrist knows nothing and does nothing, and the pathologist knows everything and does everything—but a day too late,” expresses many of these stereotypes and hints at the feelings of inadequacy doctors experience when they cannot help their patients.

Narratives about patients, both in the form of serious case histories and informal stories, play an important part in the working lives of health-care professionals. The case histories, that are orally presented on rounds and written in patients’ charts, follow a stylized structure that includes some formulaic elements. Very different narrative patterns shape the stories doctors and nurses tell about their patients in other settings. These stories follow standard American conventions for personal-experience narratives and may include imitations of patients as well as other dramatic devices. Most such stories are humorous and, influenced by the folklore of patient stereotypes, focus on the individual’s personal idiosyncrasies rather than his or her medical problems.

Experiences in which the normal routine is disrupted form the grist for many narratives. Stories about particularly arduous or otherwise unusual nights on call are common, as are those concerning encounters with members of other departments. Many young doctors tell “first day on night call” stories, which often end with the frightened new graduate responding to an emergency by yelling, “Call a doctor.” Medical students tell accounts about pranks played with cadavers during their anatomy course. In most cases, the lifespan of personal-experience narratives in medicine is relatively brief. New events, new patients, and thus new stories constantly replace the old.

Other forms of storytelling found in medicine include oral historical narratives, especially accounts told to students and residents by older doctors about how much harder it was when they were residents, and anecdotes about the “grand old men” of medicine. Stories often coalesce around particularly memorable colleagues—for example, a surgeon known for his outspoken nature and operating-room antics. In teaching contexts, occasional apocryphal stories about the fatal consequences of mistakes are told as cautionary tales for doctors-in-training.

Medical life is punctuated by numerous traditional events, ranging from the daily battery of meetings and ritualized rounds doctors and nurses make on their patients to intermittent events such as going-away parties for staff and long-term hospital patients or seasonal celebrations such as Christmas or graduation parties. Dinners given in June, the end of the medical-training year, sometimes include mock award ceremonies during which members of the community receive facetious honors or symbolic gifts—for example, a ball and chain given to the incoming chief resident. In many places, medical students or residents put on satiric skits poking fun at the foibles of the individuals at the medical center and of the health professions in general. Such skits, which draw on all other genres of medical folklore, allow the students and (vicariously) the audience to air their grievances in a safe setting while creating a sense of community among groups between which there is normally some friction.

Among the most noticeable characteristics of medical folklore are its cynical outlook and black humor. Although popularized by television shows such as *St. Elsewhere* and by Samuel Shem's cult novel *The House of God* (1979), which is based largely on hospital folklore, this humor remains controversial, even among health-care professionals, who object to the way it dehumanizes patients.

But medical humor must be judged within the context in which it is created. Taking care of patients is stressful under the best of conditions. Health-care workers constantly deal with hostile patients and encounter tragic situations that they cannot resolve. Mistakes, sometimes fatal, are easy to make, and even minor procedures cause patients pain. These problems are aggravated by the conditions of overwork and lack of sleep that plague many medical professionals.

Like other occupational groups whose work involves danger, humor is one way in which health-care workers deal with the stresses caused by their jobs. The bravado of medical humor serves as a defense mechanism, a way of denying the anxieties, insecurities, and emotional pain felt by its users. Although they sometimes overstep the bounds of propriety, medical professionals use their humor to handle feelings that might otherwise undermine the equanimity and objectivity they need in order to function.

Medicine, Folk

Medical beliefs and practices derived primarily through oral-traditional processes rather than from printed texts or formal academic or clinical training. Because folk medicine—also known as traditional, vernacular, or community medicine—exists outside the “official” medical establishment and the regulatory system that governs nurses, pharmacists, physicians, and other licensed health-care professionals, it has often been marginalized, equated with quackery, or simply dismissed as a curious anachronism—a vestige of an earlier and simpler time. Yet, as folklorists, anthropologists, ethnobotanists, medical specialists, and researchers in other fields have documented, folk medicine is both widespread and active in contemporary America, representing one of many options in a complex and highly diversified health-care system.

One distinctive characteristic of folk medicine is its multiplicity of forms, almost all of which can be subsumed into three main categories: household medicine (home remedies), herbalism and other forms of naturopathic healing, and magical medicine.

Of the three, home remedies are the most recent in origin and the simplest to prepare and use, requiring little specialized knowledge or expertise. Made from ingredients commonly found in the kitchen cabinet, the refrigerator, or the garage, they are for many people the option of first choice for minor ailments and injuries. Some household prescriptions take the form of generalized wisdom, as in the familiar proverb “Feed a cold, starve a fever,” while others offer specific practical advice, such as gargling with salt water to ease the irritation of a sore throat, drinking whiskey mixed with sugar or honey as a cough suppressant, putting moistened tobacco on a bee sting or insect bite to reduce pain and inflammation, or pouring kerosene on a cut to prevent infection.

Older and more complex than home remedies are naturopathic cures derived from animals, minerals, and plants. Plant-based preventatives and cures, known collectively as herbalism, have played an especially prominent role in American folk medicine. Herbalism was an integral part of Native American healing systems long before the first European settlers arrived with their own rich naturopathic traditions, and it continues to flourish in many parts of the country, both independently and as a constituent of larger magico-religious systems.

The botanical pharmacopoeia is extensive and varied, furnishing the ingredients for salves, poultices, teas, and other decoctions used to treat a host of illnesses and injuries, ranging from colds and coughs to heart disease, diabetes, and cancer. A particular plant, such as aloe (*Aloe vera*), may serve a single function, in this instance as a burn ointment, or a plant may have multiple functions, as in the case of sassafras (*Sassafras albidum*), which is made into a tea and taken internally as a blood purifier or a spring tonic; as a cure for colds, flu, and fevers; as a means of breaking out measles or chicken pox; and as a heart remedy.

While sassafras tea can be made with relative ease simply by boiling the roots in water, the preparation of a number of other medicinal plants such as poke (*Phytolacca americana*) requires specialized knowledge and skill. Indigenous to the Eastern United States, poke has long been used for medicinal purposes, its specific functions dictated by the season at which it is harvested and the part of the plant from which the medication is extracted. The berries, for example, furnish a juice that is reputed to be effective in

treating boils and sores. The leaves, when harvested early in the seasonal cycle, provide the chief ingredient in what is commonly referred to as “poke salad,” a popular spring tonic and blood purifier. The root itself has traditionally been used to treat stomach cramps and other intestinal problems.

Just as a particular plant may serve a variety of medicinal functions, so, too, might a particular illness be amenable to a multiplicity of treatments. In a recent study of rheumatism cures used by a prominent Appalachian herbalist, for example, two Duke University botanists, John Crellin and Jane Philpott, identified twenty-three different plant ingredients, including the bark of Bowman’s root, the cucumber tree, and the yellow poplar; the bark or leaves of the apple, bay, and beech tree; the bark or berries of the prickly ash; the roots of black cohosh, button snakeroot, devil’s shoestring, gentian, Indian hemp, joe-pye-weed, Sampson snakeroot, and sassafras; poke root or berries; tops and roots of Queen Anne’s lace; angelico root or leaves; ratsvein leaves; skullcap leaves and stem; and hydrangea bark, leaves, and root. Similar findings have been reported for various other illnesses, both in contemporary field studies and in older regional collections such as Wayland D.Hand’s *Popular Beliefs and Superstitions* volumes of the *Frank C. Brown Collection of North Carolina Folklore* (1961–1964), Ray Browne’s *Popular Beliefs and Practices from Alabama* (1958), Harry Hyatt’s *Folklore from Adams County, Illinois* (1935), and Vance Randolph’s *Ozark Superstitions* (1947).

While the herbalists still actively practicing such cures may treat hundreds or even thousands of people a year, the tradition has been gradually declining as the once plentiful stocks of indigenous plants needed to sustain it have diminished and reliance on over-the-counter drugs, health foods, and the like has increased. But another ancient form of folk medicine, based on principles of homeopathic and contagious magic, remains strong. Magical medicine—though sometimes aided by home remedies or herbal treatments—depends for its efficacy not on *materia medica* (substances believed to have medicinal properties) but on verbal charms, ritualized actions, and other practices involving the diagnosis, removal, transference, deflection, or infliction of disease by supernatural means.

According to folk-medical belief, certain ailments can be cured by verbal magic alone, as evidenced by the well-known remedy for styes that advises the sufferer to recite the words “Sty, sty, in my eye, go to someone passing by.” More typical, however, are cures in which the verbal charms are accompanied by ritual procedures. In the magico-religious tradition known as “talking out fire,” for example, the healer recites, in words that appear garbled and incomprehensible to the patient and anyone else who might be present, a charm that summons divine powers to the aid of the sufferer, as in this recently collected example:

There came three angels from the West,
 Three angels of the best, Three angels of God.
 Go away fire and come frost.
 In the name of the Father, Son, and Holy Ghost.

While reciting the charm, the healer blows on the burned area, passes a hand above the surface, or makes direct contact with the wound—gestures that are all based on

homeopathic or contagious principles and intended to alleviate pain as well as to reduce scarring.

Similar combinations of charms and rituals are also used to stop the flow of blood from a wound (“bloodstopping”), to cure “thrush” or “thrash” mouth in children, and to “talk off” warts—a malady for which there are numerous other magical cures as well. One simple expedient, based on homeo-

pathic magic, is to tie knots in a piece of string with the number of knots corresponding to the number of warts to be disposed of, and then to throw the string into running water or bury it in a damp place so that the string (and, by symbolic extension, the warts) will decompose quickly. An alternative strategy, based on contagious magic, is to symbolically transfer the warts to another person through an intermediary object such as a coin, which is rubbed on the affected areas and thrown into the road on the assumption that whoever picks up the coin will get the warts as well. Sometimes the receptor is a tree rather than a person. In a practice called “nailing,” for example, the wart is pricked with a nail, which is then driven into a tree. An alternative is to rub a piece of cloth or some other material on the wart, then bore a hole in the tree, and insert a wooden plug.

“Plugging,” the term commonly used for this practice, may also be combined with a procedure called “measuring” to effect cures for other kinds or problems, such as asthma in children. First, the child stands against a tree or doorjamb while someone draws a line to mark his or her height. Then a hole is bored at exactly that point, and a lock of the

child's hair is stuffed into the hole and plugged, the expectation being that when the child grows taller than the mark the asthma will disappear.

When the illness to be treated is believed to have an unnatural origin, a more complex system of countermagic must be employed to combat it. Those who believe, for example, that certain individuals possess an evil eye—the power to inflict serious physical and psychological harm on another through an intense stare—typically arm themselves with eye-shaped amulets and horn-like charms to symbolically deflect or pierce the invasive eye of the so-called “overlooker” or “fascinator.” If, despite these precautions, someone falls victim to the influence of the evil eye, other magical procedures may be used, including blessings and benedictions intended to cancel out the eye's pernicious effects plus various diagnostic and curative rituals performed by someone in the family or community whose powers are commensurate with those of the overlooker.

In cultures in which the evil eye is only one of many supernaturally induced afflictions, the folk-medical response system is especially complex. Participants in such traditions must be careful, for example, about how they dispose of nail parings, hair clippings, items of clothing, or anything else that has been in contact with them lest these materials come into the possession of someone who wishes to do them harm or gain power over them. Even these cautionary measures provide no defense against illnesses inflicted through homeopathic rituals in which a doll or a piece of knotted string is used as a symbolic surrogate for the intended victim. Further complicating the process of diagnosis and treatment is the fact that the symptoms of unnatural illness—lassitude, depression, numbness, skin rash, and the like—are also indicators of many natural illnesses. If these symptoms persist even after treatment with home remedies, herbal cures, over-the-counter medications, or drugs prescribed by a physician, the usual recourse is to enlist the aid of an occult practitioner.

As the foregoing discussion suggests, folk-medical practitioners do not conform to a single prototype. Rather, they are an extremely heterogeneous group that includes men and women of all ages, occupations, classes, and cultures. Some of them dispense medical advice or treatment so infrequently, to such a small number of people, that they have no distinct identity as healers; others are so well known for their medical expertise that people within and outside the community consult them on a regular basis. Some see themselves as agents of a divine power conferred at birth or passed to them at a later stage of life by a tradition bearer who sees in them the spiritual strength and humanistic concern needed to receive the gift; others are believed to have been born evil or to have obtained their powers through sorcery or witchcraft. Some are specialists, practicing a single cure, such as stopping blood, or a single tradition, such as herbalism; others participate actively in all three major branches of folk medicine.

Essential to any meaningful study of folk-medical practitioners is an awareness of their varying roles in the communities to which they belong. In the Cajun culture of southwestern Louisiana, for example, the principal folk practitioners are called “traiteurs,” a term that is commonly applied to three very different types of people: magico-religious healers; individuals who dispense home remedies, patent medicines, and herbal cures; and specialists in the occult tradition known in that part of the country as “hoodoo.”

Among the Pennsylvania Germans, folk healers are differentiated into two major groups: “powwows,” who practice an occult tradition known in German dialect as

brauche, and herbalists. In practice, however, the boundaries between the two are often blurred because the herbalist's natural cures are often accompanied by verbal charms, and the powwow's magical formulas are frequently complemented by the use of herbs or other naturopathic remedies.

Divisions are more sharply drawn in the ethnomedical system known as *curanderismo*, widely practiced by Mexican Americans in the Southwestern United States. As the name suggests, the central figure in this cultural tradition is the *curandero* (a healer reputed to draw his powers from both the natural world and the spiritual world), but other types of practitioners may also be consulted. These include herbalists, midwives, folk chiropractors, and other benevolent healers as well as sorcerers or witches known as *brujos*.

The same kind of diversity can be seen as well in other ethnomedical systems such as root working or root medicine, a predominantly African American tradition concentrated in the rural South and in many inner city neighborhoods of the Northeast. Participants in this tradition may consult different types of practitioners depending on whether a particular illness is diagnosed as physical or spiritual, natural or unnatural. If symptoms indicate a physical problem resulting from natural causes, the patient's initial response will usually be self-treatment with home remedies or a consultation with an herbalist. If the problem is perceived to stem from some spiritual failing in the patient, he or she may consult with a minister or some other respected religious figure who acts in the capacity of spiritual adviser or family counselor. If, on the other hand, there is some reason to suspect unnatural causation, a root doctor will in all likelihood be called upon to verify that diagnosis, cast counterspells against the rival conjurer, and administer whatever potions might be needed to restore the victim's health.

It is important to keep in mind that in these and other culturally based systems, folk beliefs and practices have by no means displaced official medicine. Rather, they coexist with it, as well as with other forms of alternative medicine such as chiropractic, osteopathy, and acupuncture. The reasons for this phenomenon are numerous and complex.

One factor, certainly, is the scarcity of medical doctors in many parts of the country—particularly in rural areas where the population is too small or too scattered to support a private practice and where the closest hospital or clinic may be located in the next county. It is not surprising, then, that under these circumstances, people would rely on traditional remedies or turn to folk practitioners, many of whom are both accessible and willing to offer advice or treatment on short notice, often in their own homes.

Even when professional medical care is available, many people cannot afford it—a problem that becomes more pronounced with each new increase in the cost of health insurance, hospital treatment, prescription drugs, and everything else connected with the official health-care system. By contrast, a community herbalist will typically charge only enough to cover expenses, and most magico-religious healers adhere to a rigorous taboo system that prohibits any kind of payment or even any expression of thanks on the grounds that their gift comes not from themselves but from God.

Because such practitioners are often members of the patient's own family or community and usually perform their treatments in the familiar environs of the home or workplace, their interactions with patients are also likely to be more informal and less stressful than those that occur in a clinical setting, where the patient may have to wait

several hours in a crowded office for a brief consultation with a physician whose caseload often precludes the kind of personal attention offered by his or her folk counterparts.

Moreover, there are certain illnesses for which the sufferer will consult only a folk practitioner because they do not exist in the disease taxonomies of the official medical system. Participants in the *curanderismo* tradition, for example, routinely consult physicians for broken bones, pneumonia, and other natural illnesses, but not for problems such as *mal de ojo* (evil eye) or *mal puesto* (sorcery), which only a cultural insider can fully understand and treat.

While the prominence of folk medicine in individual and community health-care systems can be easily documented, questions about the efficacy of particular treatments and procedures are more difficult to answer because the proof required by participants in folk-medical tradition is very different from that demanded by medical researchers. For members of the former group, the efficacy of a home remedy, an herbal cure, or a magical procedure can be verified through anecdotal or experiential evidence alone. For those in the scientific medical community, on the other hand, no valid conclusions can be drawn without exhaustive laboratory experimentation and rigorously controlled clinical trials.

Sometimes, scientific research corroborates folk belief, as in the case of foxglove (*Digitalis purpurea*), which was prescribed as a heart tonic by community herbalists long before pharmacological studies confirmed its cardiotoxic properties. Conversely, some long-standing folk remedies, such as ingesting turpentine for kidney problems, have been shown to pose serious health risks even when taken infrequently and in moderate dosages. For still other remedies, the medical evidence is inconclusive. Sassafras, for example, has been popular as a spring tonic and blood purifier since colonial times, but laboratory experiments have suggested that the plant's main active ingredient, safrole, is a potential carcinogen.

Even more problematic are magico-religious beliefs and practices, which participants in the tradition accept on faith but which are rarely amenable to laboratory or clinical testing. People who have had the fire talked out of a burn, for example, typically attest to the efficacy of the cure by saying that it immediately alleviated the pain they were experiencing and prevented scarring, but testing these claims scientifically is a difficult task because there is no way to quantify pain, to determine whether the burn was severe enough to produce scars if left untreated, or to control for other variables by establishing experimental and control groups.

Whether medical science confirms or condemns a particular folk-medical practice is ultimately less important than whether the patient has faith in the practitioner and the treatment. As long as the latter two conditions prevail, folk medicine will continue to flourish—not as a substitute for mainstream medicine but as one important constituent in a complex, multidimensional health-care system.

Memorate

A personal-experience narrative about an encounter with the supranormal. In an effort to establish discrete categories for oral prose narratives, Swedish folklorist Carl W. von Sydow suggested the term “memorate” to refer to single-episodic narratives about a supranormal event, told by the actual person who experienced the event (von Sydow [1934] 1948).

Memorates are not fictive accounts but are allegedly true reports of an actual experience that the narrator had. Von Sydow recognized that folk belief may lie at the core of both memorates and legends, but in terms of tradition the two narrative forms were not related. He sought in his taxonomy to distinguish these apparently nontraditional and oftentimes spontaneous narratives from what folklorists at the time considered to be true legends. He insisted that a memorate was not a form of legend because it lacked two essential qualities: It was neither traditional (that is, it did not circulate by word of mouth because by definition it could be told only by the person who had the experience), nor did it possess poetic characteristics (that is, it lacked the stylistic qualities and alterations that appear in traditional legends). If a memorate sparks enough interest among the folk and is repeated by different people, this nontraditional narrative form may become, in von Sydow’s taxonomy, a memorial legend. On the whole, however, memorates, he argued, offer passing interest to the folklorist simply because they provide voice to experiences that the folk find engaging.

Since von Sydow’s seminal work, folklorists have made considerable effort to exploring the subtleties of this narrative form and to expand upon von Sydow’s original ideas. Many folklorists now view memorates as spontaneous narratives growing out of a noteworthy experience happening in an otherwise routine, day-to-day existence. Folklorists distinguish several types of memorates: those that are based on recognized legend motifs or known legends; those that reveal a folk belief or folk custom or folk attitude; and those that lack legend motifs and belief elements but contain other motifs found in other traditional narrative forms such as the tall tale or the historical legend. Moreover, the term “memorate” may also refer to second- and third-hand accounts of the original narrative if the narration suggests fidelity to the primary account.

Memorates, like supernatural or belief legends, recount encounters with supernatural signs, ghosts, and other mystical beings. The motif of a ghost that returns to haunt the place of an accident or the site of a great tragedy appears frequently in American memorates and legends. Revenants returning from the dead to right wrongs or to provide warnings of impending danger to the living are also very popular core motifs. When narrators tell these stories, they reflect current legend traditions, or at the least, they may be lingering, interesting stories about past beliefs.

Memorates that present encounters with psychic experiences are easily collected. Even in America’s technocratic society, dreams portend warnings and charms bring good luck. Experiences with both provide the bases for many memorates. People offer detailed, realistic accounts about a miraculous cure they brought about by performing appropriate

religious rituals, such as praying novenas, lighting votive candles, or publishing special prayers in the local newspaper. These stories not only validate existing beliefs, but also promote the rituals. Perhaps some folk superstitions and beliefs persist because their effectiveness is confirmed by memorates.

The third kind of memorate centers on such themes as extraordinary skill and strengths. A narrator presents a realistic depiction of an extraordinary experience in which the narrator either saw or demonstrated tremendous personal stamina or outstanding physical strength and cunning. These memorates avoid the outrageous, comic exaggeration found in traditional boasts, but they may be influenced by content and narrative structure of the tall tale and boast. Richard M. Dorson, in his *Bloodstoppers and Bearwalkers*, refers to the men who narrate this kind of story as sagamen (Dorson 1952:249–272).

Memorates did not receive much attention from American folklorists until the publication of an English translation of von Sydow's work. But as simple as the memorate might first appear, it has elicited extensive debate, and von Sydow's original notions about it have been challenged on a number of fronts. For example, von Sydow considered both form and content when he defined the memorate—its form is that of a first-person narrative and its content deals with a specific supranormal event allegedly experienced by the narrator.

Folklorists now question the stipulation that the memorate must be told by the person who actually experienced the happening. Some identify as memorates supranormal experience stories that are told second- and thirdhand if the narrators acknowledge that they personally know the person who experienced the event and credit that person with the experience. Thus, some scholars consider memorates stories of supranormal encounters that have an opening formula such as "My uncle, who never lies, told me this happened to him" or "A friend of my aunt told me this happened to her." This suggests that the 'I'-narrator may actually refer to the narrator or may merely function as a rhetorical technique intended to give immediacy, vigor, and a unique validity to the narrative and its contents. Finally, some critics suggest that earlier collectors in their diligence to publish legend texts did not hesitate to transform memorates into third-person legend form.

The supranormal content of personal narratives naturally suggests a relationship among memorates, legend, and folk belief. Folklorists have become interested in understanding the progression from folk belief to protomemorate, to memorate, to belief legend. One theory suggests that the memorate is a personal narrative about a preexisting folk belief maintained within the folk group, and, through repeated tellings, it provides the foundation for a fabulate or a legend text. In other situations, the memorate, with its emphatic reference to a personal experience, functions as an authoritative and convincing narrative expression of a folk belief, having a revitalizing effect on a belief that has begun to lose its currency because of doubts.

For the most part, folklorists have generally rejected von Sydow's suggestion that the memorate is a relatively insignificant narrative form. Moreover, folklorists are moving away from the impulse to place narrative forms, especially legends, into rigidly segregated categories and are beginning to appreciate the fluidity of oral forms and how readily the same narrative can flow from one telling and genre into a different genre at another telling. In the hands of skilled and unskilled narrators alike, the memorate may

easily become a fabulate, and a legend may become a memorate. The socio-narrative conduits and contexts through which belief accounts pass permit variations that encourage poetic creativity and narrative license. With increasing interest in modern legend narratives and the personal-experience narrative in particular, folklorists continue to explore the nature of the memorate and refine their understanding of its relationship to other narrative genres and its place in the study of folk narrative.

Mercer, Henry Chapman (1856–1930)

Scholar of folklore and material culture, museologist, and ceramic-tile maker. Born into a family of some means, Mercer grew up in Doylestown, Pennsylvania, and later returned there, founding the Moravian Pottery and Tile Works and funding and building the Bucks County Historical Museum.

Formally educated in private schools, Mercer graduated from Harvard University in 1879 and was certified to practice law in 1881. His growing interests in ethnology and archaeology, however, checked a career in law, and his publication of *The Lenape Stone* in 1885 established him as a scholar in those fields. Although he explored caves from his native Bucks County to the Yucatan searching for insights into Paleo-Indian culture in America, by 1896 Mercer had turned his attention to the folk culture of his native Pennsylvania and had begun to study the artifacts of everyday life in America. Beginning with the publication of *Tools of the Nation Maker* in 1897, Mercer went on to write more than thirty books and articles on American material folk culture. In his works, he examined not only the tools of the past, but also houses and the origins of their design and construction. In the last thirty years of his life, Mercer amassed a vast collection of artifacts, which he housed in the museum that he erected in Doylestown.

Perhaps the best-known decorative-tile maker of his day, Mercer was also a proponent of the Arts and Crafts Movement of the late 19th century. His greatest significance, however, lies in the role that he played as an early scholar of material folk culture. Mercer was a pioneer in the field, but his achievements have only recently been recognized for their important contribution to the study of traditional artifacts in the United States. Described by Warren Roberts as a “remarkable scholar,” Mercer deserves a place beside other eminent students of American folklife.

Merchant Seamen

Workers employed in the seagoing transport of cargo or passengers. Often simply referred to as “sailors,” merchant seamen are those maritime workers employed in private-sector, commercial shipping—the merchant marine—and are divided into licensed and unlicensed personnel, officers, and crew, respectively. Crews traditionally are multiethnic in composition, depending upon the vessel’s nationality, and were frequently separated in earlier periods along ethnic lines into watches (work shifts) and departments (deck, engine, stewards). The folklore of the merchant seaman deals both with the experience common to all ratings in the merchant marine and with boundary maintenance between groups of different rating. The designation “sailor” itself is often claimed to be the rightful epithet and heritage of the unlicensed, deck sailor.

Merchant seamen have a long history predating the world’s navies and other forms of industrial or collective labor. Although merchant seafaring persists today amid newer, faster, and cheaper modes of transport, its great romantic era was the 19th century, the so-called Age of Sail. In the transition from sail to steam propulsion in the latter part of the century, organizational and structural change in this industry effected change in the folklore and traditions. The deck sailor was displaced by an engine department, and the worksongs of sailors that accompanied the routines of handling lines and sail have disappeared along with the sailing ship.

While sailors are notorious for storytelling, the best-documented folklore of the merchant seaman are the songs or chanteys, both fo’c’sle songs and halyard chanteys. Fo’c’sle songs are the songs associated with the sailor’s leisure time in the crews quarters, known as the fo’c’sle. (A contraction of “forecastle,” the fo’c’sle was traditionally located in the forward portion of the vessel under the bow, while officers resided aft.) Halyard chanteys, or simply chanteys, on the other hand, are songs that aided in the performance of work routine—halyard referring to lines for “hauling the yards,” the horizontal beams on a square-rigged vessel to which the sails were tied or “bent.” Short-haul and long-haul chanteys were apportioned to lighter and heavier tasks, respectively.

Technical nomenclature of merchant shipping is elaborate and provides a source for word lore. Many popular expressions ashore can be traced to sailors and the technology of seafaring. To “pay the devil,” for instance, or to be “between the devil and the deep blue sea” refers to a dreaded and devilish maintenance task aboard leaky wooden vessels in which “paying” meant caulking and the “devil” was the outboard seam between planking just above the keel. To tell a “yarn” or simply “to yarn” as a common expression for garrulous storytelling may also have had its origins among seamen, who would spend leisure hours winding “rope-yarns” for stowage and telling stories.

Yarn spinning or storytelling is perhaps the most ubiquitous category of maritime folklore, but while we know much about the recurrent themes of storytelling—the sailor’s last ship, his adventures in foreign ports, lost ships, spectral ships, bully captains, and bucko mates—the study of narrative has focused on only a few well-known folktales and legend types, such as the Flying Dutchman, and the tall tale as a narrative form.

In addition to verbal folklore, merchant seafaring has evolved traditions of material culture. Ship models, notably ship-in-bottle models, woodcarvings, and decorative uses

of rope and twine, known as “fancy rope work,” are leisure activities among seamen as well as maritime enthusiasts with little or no experience of seafaring.

Finally, merchant seafaring produced an extensive folklore of custom and belief. Danish folklorist Henning Henningsen (1961) made a historical and comparative study of one elaborate, customary shipboard practice known as “crossing the line.” Ships’ crews performed this custom for the initiation of novice seamen into the craft and brotherhood of seafaring. It took place on crossing the equator and involved a cast of characters in a mock court setting, over which a costumed figure representing Neptune, the god of the sea from classical mythology, presided.

The preponderance of superstitions, as with yarns, may be the landsman’s most tenacious stereotype of the sailor. If superstition may be defined as apparently irrational belief, the conditions of uncertainty and vulnerability that have always attended seafaring, particularly as concerns weather, help explain the existence of this body of tradition. The life of the common sailor was constantly at the mercy of the weather and frequently that of strict and abusive officers. Superstition may have provided some degree of control and counsel concerning these forces, even as the term raises complicated questions about the psychology and rhetoric of belief. More simply, however, many superstitions of the sea may be categorized in terms of luck and, as such, have persisted into the modern era of seafaring. During World War II, for instance, sailors would designate certain vessels of the merchant marine as lucky or unlucky depending upon how well and whether or not they succeeded in making their destinations when sailing through treacherous waters.

Although the United States continues to have a merchant marine and merchant seamen, several factors have significantly reduced the population and changed the composition of the merchant marine. These include high casualties from World War II; the Cold War expulsion of merchant seamen from an industry that was radicalized during the 1930s; the increased role of government during World War II in the training, licensing, and certifying of a new cohort of merchant seaman; alternative modes for transporting cargoes and passengers; and technological developments that have greatly reduced manning requirements. Some of these factors have affected shipping globally, but other seafaring nations have generally fared better than the United States in maintaining a merchant marine in which traditions of the sea persist and adapt to new conditions and cohorts.

Metafolklore

Folklore about folklore, a word coined by Alan Dundes on the analogy of the term “metalanguage,” or linguistic statements about language. Dundes suggested that metafolklore and “oral literary criticism” (informants’ commentary upon their own folklore) offer ways to elicit the meanings of folklore items directly from the folk themselves.

Metafolklore may occur within one genre—for example, a proverb about proverbs or a joke about joke telling—or it may cross genre lines, as in the following example of a metafolkloristic joke that alludes both to the “knock, knock” joke cycle and to a familiar proverb:

Knock
 Who’s there?
 Opportunity. (The proverb is “Opportunity knocks
 but once.)

Another American metafolkloristic joke parodies the traditional traveling-salesman story in which the salesman is usually invited to sleep with the farmer’s daughter. In this variation, he is told instead to sleep with the farmer’s *son*, to which the salesman responds, “Oh my God, I must be in the wrong joke.” The punch line both comments on the nature of the traveling-salesman joke cycle and draws attention to the theme of homosexuality rather than heterosexuality in this variation.

Mexican Americans

Those whose ancestry can be traced to Mexico or to Spain through Mexico. Theirs is the most studied folklore of any ethnic group in the United States. Mexican-American history and folk traditions differ significantly from those of Puerto Ricans, Latin Americans, and other Hispanic groups in the United States. Mexican American folklore makes clear the great intracultural diversity found among Mexican Americans in the American Southwest, as well as those of Mexican descent who have settled in such areas as Florida, New York,

*The J.L. Lopez Orchestra plays at a dance. Peñasco, New Mexico, 1943.
Photo John Collier. Library of Congress.*

Michigan, and Illinois. Although they share many traditions, there is significant diversity.

The ancestors of many of today's Mexican Americans occupied the Southwest—Texas, New Mexico, Arizona, southern Colorado, and California—long before it became a part of the United States in 1848, with the Treaty of Guadalupe Hidalgo. They came from many different parts of Mexico, and their ancestors came from various parts of Spain and mingled with a number of diverse indigenous peoples. Recent immigrants have traditions significantly different from those whose ancestors have lived in the region for

centuries. Those living in urban areas have traditions significantly different from those living in rural areas, emphasizing the fact that folklore reflects the values and concerns of those who share it.

The folk architecture and traditional foodways in south and west Texas demonstrate convincingly that Mexican Americans in west Texas have much more in common culturally and historically with Mexican Americans in New Mexico than they do with those in south Texas.

Those of Spanish Mexican ancestry in the Southwest and beyond refer to themselves in a number of different ways, depending upon a number of factors, including region, social class, and historic background. Those in the wealthier classes tend to call themselves Spanish or Hispanic, and sometimes Latinos, while those in the working class often refer to themselves (among themselves) as *mejicanos*, to differentiate themselves from the Anglos or other ethnic groups. When they go into Mexico, they tend to call themselves *mejico-americanos* to differentiate themselves from Mexican citizens. Mexican Americans in south Texas commonly refer to themselves as *tejanos*, while those in New Mexico and southern Colorado call themselves *hispanos*, and those in California call themselves *californios*. In more recent times, a small percentage (8 percent– 10 percent) of Mexican Americans refer to themselves as *chicanos*, a term rejected by many others, particularly those in the working class. The term “chicano” is used mostly by those who are political or social activists or those involved in higher education. Mexican Americans have a number of neutral and pejorative labels for Anglos, including *gabachos*, *americanos*, and *gringos*, the latter being the most pejorative of the more common terms. There are also terms of varying degrees of severity used to label those who are seen as acculturated—*Inglesados* (Englishized), *engabachados*, *vendidos* (those who have sold out), or *agringados* (*gringo*-ized).

Although folk traditions have changed significantly among Mexican Americans since the mid-18th century, a wide variety of folklore genres continue to be important, some more than others. Studies of Mexican American folklore, beginning in the late 19th century, reflect the interests of scholars as much as the actual richness of types of folklore known among the people. A wide range of genres has been studied: folk narratives, folk music, folk speech, folk medicine, folk arts and crafts, customs and beliefs, architecture, foodways, costume, and folk games and play, among others. Generally speaking, material culture has received less attention than other types, except in New Mexico. Likewise, certain areas of the Southwest have received more scholarly attention than others, most often the result of whether or not scholars interested in folklore lived and worked in the area.

Some Mexican Americans are monolingual Spanish speak-ers; some are fluently bilingual in English and Spanish, while others are monolingual English speakers. Consequently, Mexican American folklore may be transmitted in Spanish, in Tex-Mex (the regional dialect of Spanish), in English, or in a combination of these.

Among the verbal arts, such genres as folk speech and naming, proverbs, riddles, and folk poetry may be found in almost every community of Mexican Americans throughout the Southwest and beyond. A wide variety of folk-narrative types remain viable wherever Mexican Americans are found. These differ from group to group, as one would expect.

Most Mexican Americans are strongly Roman Catholic, and religious legends related to various saints continue to be important. *La Virgen de Guadalupe* is the subject of a

variety of narrative types, including the story of her appearance to Juan Diego as well as numerous more personal narratives about individuals' experiences with her. Among the many other saints who are the subject of local legends are Santo Niño de Atocha, San Juan, and San Antonio. In addition, many legends circulate about such folk saints (those treated as saints by the people but who have not been canonized by the church) as Don Pedrito Jaramillo and El Niño Fidencio, folk healers of considerable reputation in south Texas and beyond.

Supernatural legends and personal-experience narratives about witches are common. Stories about *La Lechuza* (a woman with an owl's face or one who takes on the form of an owl) are common in many areas, as are stories about *La Llorona*, the weeping woman searching for the souls of her children—a punishment for having drowned them after their father betrayed her. *Pata de gallo* stories, about the devil appearing at a dance and severely disfiguring a young lady who disobeyed her parents and slipped off to the dance, are well known in many regions. Stories about vanishing hitchhikers and ghosts of young women appearing at dances or other places are also fairly common.

Some older legends about folk heroes of earlier epochs continue to be told in certain areas; these include stories about Gregorio Cortez in south Texas, Joaquin Murieta in California, and Pancho Villa in New Mexico and west Texas. One also finds legends about lost treasures in many rural areas of the Southwest.

Perhaps the most ubiquitous forms of folk narratives are the *casos*, *historias*, *tallas*, and jokes. *Casos* are short, first-person-experience narratives (like cases-in-point) used to illustrate or validate a wide variety of beliefs. *Historias* are “true” stories about local events of interest. *Tallas* are jests that are used to poke fun at someone present at the telling. The term comes from the verb *tallar*, meaning “to rub or chafe.” Mexican Americans enjoy a wide variety of jokes, including ethnic jokes, dirty jokes (*chistes colorados*), *agringado* jokes (which reprove those thought to be too anglicized), and many other types.

A recent survey in south Texas reveals a broad variety of folk narratives popular among *vaqueros* (cowboys) in the region. Storytelling in this group is called *hechando mentiras* (telling lies), and these stories cover such topics as horses and horse training, *vaquero* skills, local tragedies (including work-related deaths and serious injuries), and stories about encounters with ghosts, mystery lights, and lost treasures.

While folk music is still found in some areas, in most communities it has been replaced by popular music, which has become widely available on radio, television, and via cassettes and records. Modern *conjunto* music, which evolved from an earlier folk-music form, may be heard on many Spanish-language radio stations wherever there are significant populations of Mexican Americans. Likewise, the *corrido* (folk ballad) became a popular form of recorded and broadcast music, although some still sing the old ballads from earlier periods. Earlier forms, like the *verso* or *copla* (a short, lyrical stanza) and the *décima* (a ten-line stanza), once very common throughout the Southwest, have virtually disappeared.

In the area of customary folklore, the traditions of folk medicine, folk beliefs of various types, rites of passage, and rites of intensification (celebrations) continue to be important in the lives of many. Folk games can still be found in many rural areas, especially among children—games like spinning tops and playing marbles.

Folk medicine continues to be important to many Mexican Americans. Recent scientific surveys in south Texas reveal that about 90 percent of the Mexican American families in that area continue to rely on herbal remedies, and in some communities as many as 29 percent of the women report having used the services of *parteras* (lay midwives). *Curanderos (as)* (the healers par excellence in the culture, who have a *don de Dios*, or gift from God, to heal, particularly cases of witchcraft) can still be found in most larger cities and in many smaller communities where there are high percentages of Mexican Americans.

The rites of passage important among Mexican Americans everywhere include baptisms and the *compadrazgo* (ritual co-parenthood) relationships, the *quinceañera* for young women (a coming-of-age ceremony and celebration at age fifteen), wedding celebrations, and funeral rites. While most of these events require formal Catholic ceremonies, folk beliefs and practices and some specific traditional activities are almost invariably associated with them.

A broad variety of rites of intensification in the form of celebrations in which Mexican Americans celebrate their *mexicanidad*, or Mexicanness, can be found throughout the Southwest and beyond. The most common are *el cinco de mayo* (May 5) and *el diezyséis de septiembre* (September 16) celebrations. Many who celebrate *el cinco de mayo* are not aware that they are celebrating the victory of the Mexican *campesinos* over the French troops at the Battle of Puebla. A broad variety of other Mexican American celebrations include *charreadas* (the Mexican form of the rodeo) and other local activities celebrating local events important to Mexican Americans living in the area.

As to material culture, many folk arts and crafts traditions remain popular. While folk architecture is not produced in most areas, that of earlier eras is still present. For example, while *jacales* are still being built in many parts of Mexico, they have not been constructed in Texas and other parts of the Southwest for several decades. And while adobes are still made and adobe houses are still being built in west Texas and New Mexico, the earlier forms of stone and *sillar* (caliche block) houses once common in south Texas have not been constructed since the late 1800s.

Folk arts and crafts traditions that have continued among Mexican Americans include paper-flower making, piñata making, quilt making, instrument making (particularly of *vihuelas* and *bajo sextos*—instruments important in *conjunto* music or *mariachi* music), saddle making, boot making, and a number of *vaquero* folk-arts traditions, including making objects of rawhide and horsehair—quirts, bridle reins, ropes of various kinds, *chicotes* (cattle whips), hackamores, and so on.

The *vaquero's* occupation is an excellent example of a folk occupation. One learns the necessary skills—riding, working cattle, roping, branding, and such—by observation and practice over a long period of time. *Vaqueros* hold great respect for those who have mastered these skills, and young *vaqueros* understand that it will take years for them to master them. These skills have been modified over the centuries by new technologies.

Religious folk art continues to play an important role in most areas. The religious folk art found in most Mexican American cemeteries includes handmade decorations, gravemarkers with a number of traditional epitaphs, and a variety of different images of saints, particularly the Virgin of Guadalupe. Likewise, one can find *nichos* or *grutas* (handmade yard shrines) in working-class neighborhoods throughout the Southwest.

Home altars can also be found in many working-class homes, although this tradition is much more common among older women than younger ones.

Roadside crosses, documented as early as the 1820s along the Rio Grande, are still found in south and west Texas, as well as in various areas of New Mexico. These *crucitas* are used to mark the place where someone has died, where the spirit departed the body. Families erect these crosses and return to them on a regular basis to conduct private rituals in memory of the departed.

A number of religious folk-art traditions can be found in such areas as New Mexico, where they have existed for centuries. The *santeros* (*santos* makers) developed a rich tradition of making religious objects, documented by scholars and preserved in several museums in New Mexico. The *retablos* (paintings) and *bultos* (hand-carved statues) have been influenced in recent years by the marketing of these objects to outsiders, mostly tourists, who are not part of the older tradition.

Secular yard art can be found in many working-class Mexican American *barrios* (neighborhoods) in rural areas as well as larger cities. This yard art includes a variety of manners of decorating with plants (including planters made from castoff automobile or truck tires) and clay figurines.

Public folk art can be found in many communities, particularly in the larger cities. The low-rider tradition of remodeling older automobiles (including the installation of hydraulically operated shock absorbers to make them jump up and down) and decorating the cars with a number of traditional artistic designs continues. Two traditions recently brought to the United States from Mexico include the painting of large murals on public buildings and the making of park benches and other public art objects of cement. Both traditions can be found in such larger cities with large Mexican American populations as San Antonio.

Traditional foodways remain popular throughout the Mexican American population. They vary from region to region, and many have been adopted by such popular-culture institutions as fast-food restaurants. Tamales, tacos, tortillas, and pinto beans in a number of forms are common throughout the Mexican American community, both urban and rural. *Tamaladas* (gatherings where women make tamales) are more common in rural areas. *Fajitas* (a dish made of skirt steak), *tripitas* (a dish made of beef intestines), and *pan de campo* (camp bread) remain popular folk foods in south Texas. *Barbacoa de cabeza* (barbecued beef head), *cabrito* (barbecued kid goat), or *cabrito en su sangre* (a kid goat cut up and cooked in its own blood) are common in many rural areas of the Southwest. A dish made of the internal edible parts of *cabritos* (kid goats) is called *machitos* in south Texas, *burriñate* (or *buruñate*) in west Texas, and *burrañate* in New Mexico. One can find a number of traditional pastries (including *buñuelos* and *bizcochos*) served at weddings and other celebrations.

Mexican American folklore will continue to adapt to the changing circumstances in which its bearers find themselves, and these traditions will continue to play an important role in the lives of Mexican Americans.

Middle Atlantic Region

Label used by analysts largely to identify the area between the South and New England influenced by cultural migrations through Philadelphia, New York, and Chesapeake ports of entry. Some refer to the area as the "Midland." Its historical influence on the development of American culture has been great since central paths of migration through the Middle Atlantic states of New York, Maryland, Delaware, New Jersey, and Pennsylvania influenced the formation of Midwest and Upland South traditions. Yet, as cultural geographers such as Wilbur Zelinsky have noted, it is the least conspicuous of America's regions, either to outsiders or its inhabitants. Examining the regional names that enterprises use to identify themselves, for example, Zelinsky found that Harrisburg, Pennsylvania, was the only metropolis in which inhabitants significantly used the Middle Atlantic label.

Several factors account for the vagueness of the region. European development of the Middle Atlantic area largely occurred a generation or more after other regions of the South and New England. The seaboard area had more of an urban character than regions to the north and south. It also contained far more inner diversity of religions and ethnic groups than the other regions. In addition to Finns and Swedes in the Delaware Valley, and Dutch in the Hudson Valley who began colonies that turned out to be unsuccessful in the area, English, Welsh, Scots-Irish, Cornish, French, Africans, and Germans entered the varied Middle Atlantic landscape. New York state presents a special problem because of its strong connection to New England (Zelinsky categorized it as a separate "New England Extended" Region), but with a noticeable difference because of Dutch place names and architecture along with strong Irish and some German influence. The most distinctive cultural formation in the Middle Atlantic states is probably the Pennsylvania-German area of settlement extending from central Pennsylvania into western Maryland and Virginia, referred to as the Pennsylvania Culture Region, because it persisted with a shared ethnicity and agricultural base.

The Pennsylvania Culture Region is at the heart of the "Midland" speech area identified by linguistic geographer Hans Kurath in 1949. Cultural geographer Terry Jordan in 1985 also used the Midland label to describe the preponderance of log buildings stretching from Pennsylvania into the Midwest and Upland South. In addition, Henry Glassie in 1968 described a distinctive material culture located in southeastern Pennsylvania and made the claim that it was the most important of all material folk culture regions, because both North and South were influenced by practices that had their New World source in the Pennsylvania Culture Region. He noted that the mix of British traditions in the Delaware Valley and Chesapeake along with the special German influence in south-central Pennsylvania fostered Middle Atlantic material-culture forms such as the "Middle Atlantic farmhouse." This common house contained a symmetrical exterior reminiscent of British Georgian design along with interior features taken largely from German house plans. The distribution of the house extended well beyond the Pennsylvania core to Maryland, New Jersey, western Pennsylvania, Virginia, and West Virginia. Another point of cultural intersection that influenced the formation of a Middle Atlantic material culture is in foodways, where versions of "mush" and "pot pie" characteristic of the Midland represent combinations of German and British traditions.

Some observers have offered that the Middle Atlantic's lack of visibility ironically owes to the Midland contribution to many cultural patterns considered national or "general American." Zelinsky speculates that its very success in projecting its image upon the remainder of the country rendered the source area less conspicuous. Few cultural organizations are devoted to the Middle Atlantic Region, although the Pennsylvania German Society covers Maryland, New Jersey, Ohio, and Virginia in addition to its central Pennsylvania home base. The contents of state folklore journals in New Jersey, New York, and Pennsylvania frequently cover traditions extending over state boundaries, but, significantly to the cultural formation of the region, the largest circulation is claimed by *Pennsylvania Folklife*. The Middle Atlantic Folklife Association, which sponsored the first "Middle States Folklore Conference" in Harrisburg in 1967, and continues to hold annual meetings, represents separate professional state efforts in Pennsylvania, New York, Delaware, Maryland, Virginia, and West Virginia. Although not constituting a "vernacular" region representing cultural self-perception, the Middle Atlantic has an impact on scholarship as an analytical term to describe cultural formations between New England and the South extending west, north, and south from Pennsylvania.

Midwest

Distinguished from surrounding regions—the Great Lakes, the Middle Atlantic, the South, the Great Plains—by a blend of folk cultures brought together through historical settlement patterns. The folk culture of the Midwestern states—including primarily Indiana, Illinois, Iowa, and Missouri—developed as a consequence of waves of migration into these middle states from the major folk-cultural source areas in New England, the Middle Atlantic, the Upland South, and the Lowland South.

The Midwest contains elements of these earlier folk cultures in its material culture and its folk traditions; the influences can be found as a patchwork that often extends outside the Midwest region. Ohio, with its predominantly Middle Atlantic, or Pennsylvania German, folk culture, could be included in the region. The southern parts of the states of Michigan, Wisconsin, and Minnesota, which are predominantly influenced by New England folk traditions, are often included. Also, the Ozark areas of Kentucky and Arkansas could be included. The journal *Midwest Folklore* (formerly *Hoosier Folklore*) often included commentary on material from these areas, and from areas as distant as Nebraska and Kansas. However, Indiana and the three Midwestern states to its west share some common features.

Geographically, the Midwest is Interior Lowland Topography. The inhabitants of the region also share the Midland speech dialect, and they share features of the Midwest Material Culture Region identified by folklorist Henry Glassie. The folk cultures of the North, the Middle Atlantic, and the South overlap and mingle throughout the Midwest region and also extend beyond it. The settlement process involved constant migration, adaptation to changes in technology and popular culture, and adaptation to new waves of immigration. The Pennsylvania bank barn, as one example, found most often in Ohio, can be found with decreasing frequency to the west as far as Wisconsin and Nebraska. As another example, folkways of the Upland South, such as English and Scots-Irish ballads, found their way into the southern half of the Midwestern states of Ohio, Indiana, Illinois, and Missouri.

Some areas within the Midwest have retained the features of just one of the source areas, and some areas retain unique folk cultures from other sources than the four major Anglo American source areas. Features of Native American folk culture, such as the foodways and folk medicine of the Ojibwa and Potawatomi tribes, have persisted into the 20th century. So have features of 18th-century French folk culture. In Illinois and Missouri, for example, French settlers of Norman-Canadian background built log houses with vertical posts. German immigration into the Midwestern states, beginning in the 1850s, produced many communities in the Midwest that have retained folk-cultural features of their homeland.

Traditions of the Amish in Ohio, in the Amana Colony in Iowa, and among Mennonites in Minnesota confirm the continued development of elements of German folk culture in the Midwest. In addition, immigrant communities from many other parts of the world—Poland, Lithuania, Mexico, Southeast Asia—have kept alive folk traditions

in urban areas like Chicago, where they have established their own distinctive cultural matrices. These separate folk traditions have persisted within the mainstream of Midwestern folklore, just as Ozark folklore remains as a distinctive region in the southern half of the Midwest states, and just as occupational folklore (railroad lore, mining lore, factory lore, river lore, lumberjack lore) continues within it.

New England folk culture begins to appear in the Midwest with land grants to veterans of the War of 1812. The material traits of this migration can be seen through the northern Midwest: Yankee barns, Greek Revival house types, the saltbox

Fleischhauer. American Folklife
Center.*

house, and the temple-form house. New England foodways (including stoneware and pottery), furniture, toolmaking, and stonecarving can be found through the Midwest states. Covered bridges constructed on the Yankee-barn model appear from Indiana to Iowa. The Yankee folk tradition merged in central Indiana and Illinois with folk traditions from Pennsylvania Germans. The Cumberland Road from Baltimore to Vandalia, Illinois, and the Wilderness Trail, from Philadelphia to Boonesboro, Kentucky, opened up the Midwest to Middle Atlantic pioneers; features of their material culture and folk traditions influenced the Midwest states from north to south.

Some Middle Atlantic traditions (folk art such as *frakturs* and folk tools such as yarn reels) have continental European origins, while others (Conestoga wagons, Sgraffito pottery decoration) are newer composite forms. The stone or log houses of Rhine Valley origin, and Georgian-type cabins of British origin, were supplanted by the Pennsylvania German house types. These distinctive houses, often with central chimney and semiunderground cellars, made their way into the Midwest, as did the Pennsylvania bank barn, which had a stone cellar and an earthen bank or ramp to allow vehicles to be drawn to the second level. In the 1850s, homestead opportunities attracted waves of European, mostly German, immigrants, and the Central Illinois Railway encouraged a landoffice boom in Illinois. At the same time, steamboats on the Ohio and Mississippi rivers provided Southern markets for the farm products of two million Midwestern farmers.

These developments also furthered migration of Southern Upland and Lowland settlers into the Midwest. The Southern Upland settlers, following the Wilderness Trail to Boonesboro from Virginia and the Carolinas, continued into southern parts of the Midwest states. Settlers from the Lowland South and Appalachia populated the distinctive Ozark Culture Region, with the "Little Egypt" area of Cairo, Illinois, as one focal point and the Arkansas-Missouri border as another. The folk architecture of Southern settlers included log buildings and buildings without stone foundations. These constructions, along with the one-story Hall-and-Parlor house and the two-story Southern I-frame house, appear in the Southern parts of the Midwest states. Machinery, log construction, transverse or single-crib barns, and other elements of Southern material folk culture can be found in the Midwest states as far east as Southern Ohio. Elements of Southern folksongs and folktales can be found with them.

While these distinctive folk traditions from the North, Middle Atlantic, and the South may be present in specific locales in the Midwest, collections of Midwest folklore have tended to identify specific folk traditions within their local context. Modern researchers in folklore in the Midwest have increasingly examined new forms of folk culture as traditional genres of folklore are displaced by popular culture and by social or technological changes. The traditional legends were developed in the 1820s around the exploits of native character types; the Yankee peddler, the Mississippi keelboatman, and the ringtail roarer remained into the 20th century, while the more transient figures of Revolutionary War veteran and "old salt" Atlantic sailor did not typify the Midwest region or occupations. The image of Mike Fink came to represent the folk-hero quality of the Midwestern boatman on the Mississippi, Missouri, and Ohio, just as Davy Crockett represented the heroic folk type of the hunter to woodsman of the new West.

Mark Twain recognized the importance of these heroes to the folk culture of the Midwest when he incorporated setpieces of river lore in his works. He also captured the superstitions and domestic folklore that Eastern settlers had brought together in a new

formulation. In *Tom Sawyer* and in *Huckleberry Finn*, the household superstitions, animal lore, witch lore, and supernatural lore from the Midwest region offered 19th-century readers a new awareness of the transformations wrought by the frontier experience. Twain's treatment included superstitions later recorded by folklorists from both sides of the Mississippi River. These collections, from the early 20th century, offered a compendium of Midwest folk beliefs, a summary of wisdom accorded to American household gods. There were beliefs and sayings that offered the Midwesterner insights into the factors that could influence the conditions of his life—the weather, the condition of livestock and harvest, the comings and goings of neighbors, the uncertainties of courtship and child rearing, the mysteries of death and the supernatural.

The folklore of the Midwest shows a culture rich in awareness of the potential for signs and omens in everyday life. The spirit world manifested itself in ghost stories, witch lore, and various forms of divination. The extent of awareness by informants of conditions allowing for good luck and bad luck may serve as an indication of a passive acceptance of the operation of nonmaterial influences in the world. The extent of references to conjuration and "hoodoo" indicates an even wider belief in the operation of magic and the supernatural. While such beliefs were undoubtedly more widespread in the Deep South, particularly among African American "power doctors," they are also found in the Midwest.

In the Upper Midwest (Michigan, Wisconsin, Minnesota), such Southern influences are harder to find. The supernatural lore of French Canadian *loup-garou* tales, or the Chippewa Wenebojo and Windigo tales, are more common themes than stories of conjure doctors and witchcraft. The heroes of the Upper Midwest are daring figures from the lumber camps, the Upper Peninsula of Michigan mining camps, and the ore boats of the Great Lakes. Also, unique ethnic influences have produced traditions of folk humor, such as the Scandinavian Ole and Lena jokes, which are rarely found south of the Great Lakes region.

After the development of university studies in folklore, and the development of folklore journals in Indiana and Missouri, efforts began to find examples of folkways beyond the traditional genres. Folklorists found material in factories as well as farms, and in cities as well as rural communities. In the countryside of southern Indiana and Illinois, attention was now paid to a variety of entertainment forms and occupational activities. The camp meetings and minstrel shows of the 19th century were gone, with only the Toby shows surviving as a final remnant. The threshing bees and communal farming activities were no longer necessary with the advent of modern technology in farming. The lore of the steamboat, the railroad, and the mining camp likewise began to wane. With traditional folktales and folksongs now in the memories of individuals rather than alive among whole communities, collecting efforts required much more attention to context. Efforts to record the narrative explanations and procedures in traditional activities like cane making, folksong transmission, or storytelling are more important than ever in the collection of Midwestern folklore.

The folklore of the factory, the office, the school, and the mall have become more important in recent years. The features of modern Midwestern life still allow opportunities for serious collectors in a variety of areas: urban legends, joke lore, children's lore, hunting and fishing lore, and more.

Midwifery

The practice of assisting women during childbirth, generally considered the province of female midwives and a traditional art rather than a modern science. The earlier, primary meaning of midwife is “a woman by whose means the delivery is effected” and later “a woman who is *with* the mother at the birth” (Oxford English Dictionary [*OED*]). During the transition from midwife-managed to physician-managed childbirth, male surgeons or accoucheurs were sometimes known as men-midwives. Once persecuted as witches, female midwives came to be demeaned by the male-dominated medical profession as “old wives”—ignorant, superstitious, and incompetent folk practitioners who endangered their “patients.” Midwifery’s decline in the United States dates from the 1920s, when the majority of reported births began to be attended by doctors and increasingly took place in a hospital rather than at home.

In preindustrial European society, female healer-midwives played a major role in traditional health systems and a virtually exclusive one in childbirth. Both came under ecclesiastical scrutiny as witchcraft based on alliance with the devil. The medieval Catholic Church’s witch-hunting manual, *Malleus Maleficarum* (*The Hammer of Witches*, first of many editions, 1486), devotes Question XI, Part I, to “witch midwives,” who “in Various Ways Kill the Child Conceived in the Womb, and Procure an Abortion; or...Offer New-Born Children to Devils,” and proclaims: “No one does more harm to the Catholic Faith than midwives,” who are accused of a range of reproductive-system crimes. In the 16th century, the Church began licensing midwives as part of its stand against popular belief in magic and an effort both to improve medical practice and to make money (Oakley 1976:26).

Until the late 1700s, childbirth in America was a social event attended by female midwives, relatives, and friends; by the 1920s it had become generally a medical event managed by male obstetricians. Trained in England to regard midwifery as part of science, early American physicians imported “new obstetrics,” and after the American Revolution, upper-class, urban American women and very gradually others turned to male physicians for delivery. Throughout the 1800s, doctors characterized female midwives as backward and worse, while the term “meddlesome midwifery” was used to indicate excessive medical intervention. Midwives who once had enjoyed considerable status came to be degraded as unskilled, domestic workers, although some still held high social positions locally in the early 20th century, when physicians began active lobbying to curtail or eliminate them while public-health officials argued for their regulation. Greater centralization of maternity care in hospitals and increasing acceptance of childbirth as a pathological process requiring obstetrical management rather than a natural process with female attendants “standing by” meant that many states banned midwifery or so regulated it that traditional practitioners could not meet the new requirements.

Professional midwifery started in the United States during the 1920s. New York City’s Maternity Center Association began in 1918, considered starting the first nurse-

midwifery training program in 1923, and established it in 1932. Kentucky native Mary Breckinridge, a professional nurse and British-trained midwife, worked with granny midwives in rural areas of her home state, where in 1925 she started the Frontier Nursing Service to show the efficacy of trained nurse-midwives. In 1928 its staff launched the Kentucky State Association of Midwives, later the American Association of Nurse-Midwives. The American College of Nurse-Midwives was founded in 1955, but the College of Obstetricians and Gynecologists did not recognize certified nurse-midwives, registered nurses with additional midwifery training, as primary childbirth attendants until 1971.

Lay midwifery, sometimes also called “empirical” or “nonnurse,” encompasses both licensed and unlicensed midwives who practice legally and illegally according to various state’s laws. Margaret Reid (1989) traces contemporary lay midwifery in the United States to the West Coast counterculture movement in the 1960s. Although differing from traditional midwives who are more often rural, ethnic or religious minority women whose children are grown, these predominantly White, middle-class women with young children share with granny midwives, Hispanic *parteras*, and other folk practitioners the informal training through apprenticeship, sense of “calling” or vocation, and greater reliance on herbal remedies and noninstrumental techniques. They are also similar to traditional midwives because they share cultural values and epistemological understandings about childbirth with the women they attend.

Ethnographic and biographical accounts of midwives, their practice, and their clientele need more systematic investigation to delineate fully the role of midwife. Recruitment and training, status within their community and/or among its women, relationships with other health-care practitioners, and the perception and evaluation of competence must be considered as well as the social status and personal circumstance of those who choose or are constrained to seek midwives’ services. Conceptual frameworks for the full range of ritual and physical techniques employed should also be determined.

Contemporary American pregnancy and childbirth may be viewed as a yearlong rite of passage involving a range of participants and “ritual specialists,” according to Robbie E. Davis-Floyd. She distinguishes two contrasting models of childbirth: the technocratic and the wholistic (1992:160–161). The former is male centered, objectified, and doctor directed; the latter, female centered, integrative, organic, and relatively noninterventionist. The midwife acts as nurturer, skillful guide, and assistant, while responsibility for the birthing is the mother’s.

The performance of midwifery, the birth event itself, is seldom fully documented. Brigitte Jordan gives an exemplary account of a Mayan midwife’s supervision of delivery (1993:31–41). Everyone in the birth setting participates in “doing a birth,” assisting in physical tasks and engaging in speech that ranges from everyday conversation to “stories” about childbirth and death and “birth talk” specifically addressed to the parturient woman. This complex of birth speech figures in an important meaning of gossip or godsiblingship, the talk and interaction of all of those in attendance at childbirth. Performed midwifery may thus be interpreted as a powerful language or mythology.

Military Folklore

Traditions of members of the armed services. Like any folk group, people in the military use lore to indoctrinate rookies; to censure inappropriate behavior; to explain the irrational, and to define members of the group (whether the group be the platoon, the company, the division, even the branch of the service) from nonmembers. Also, like other groups of workers, military units invent their own language. When freshmen, or “plebes,” at the U.S. Naval Academy in Annapolis, Maryland, finish their summer basic training, they trade in their “dixie cups” (sailor hats) for “covers” (officer hats) and begin the toughest year in their careers, a year in which “flamers” “ream them out” in front of their peers for minor infractions. Those who receive the harshest abuse are the “shit screens”; those who ingratiate themselves with upperclassmen, the “smacks.”

In World War II, a pilot would rev up his “coffee grinder” (plane engine) and, with permission of the “madhouse” (control tower), take off toward his target, where he would either “hang out the laundry” (drop parachutists), drop a few “eggs” (bombs), or make a “split S” (combat maneuver) and then hightail it from the “junior prom” (hot mission), “flak happy” (suffering from combat fatigue), hoping to get home without a “panting virgin” or a “ruptured duck” (injured plane).

One cannot be a full member of a group without speaking the group’s language, and the highly formalized speech of drill instructors, in which every insult and every command has been practiced and polished on preceding recruits, begins the initiation. Although the skills taught in basic training change with the introduction of new weapons and new combat techniques, one learns the proper relation to authority largely from traditional material: through the stories of what happened to previous recruits who failed to take orders, through the sometimes brutal boot-camp games designed to test one’s mental as well as physical strength, and through the marching chants performed on the parade field. Such chants, cadence calls, or “jodies,” as they are referred to by the Army and the Marine Corps, celebrate the need to repudiate the pleasures associated with one’s former civilian past and to embrace a martial future (or, more literally, to leave your girl and love your rifle):

Cindy, Cindy, Cindy Lou
Love my rifle more than you.

You used to be my beauty queen,
Now I love my M-16.

Used to go to the county fair,
Now I don’t take you anywhere.

Send me off to Vietnam
Goin' to get me some Viet Cong.

With my knife or with my gun
Either way it's just as fun.

Not only does lore inculcate the values of a military identity, it also serves those in wartime as a preparation for combat. Before going into battle, warriors of all cultures perform rituals (maybe only as simple as a prayer or a cheer). In Vietnam, one unit filled a porcelain toilet bowl with beer, or liquor when they had it, from which, one by one, soldiers sipped their libation before heading out of camp. In Vietnam, troops decorated helmets with political, religious, and personal slogans, carried tokens as good luck charms, fashioned in-country patches, and transformed planes and helicopters into ferocious animals and friendly mascots, or, like their World War II predecessors, adorned them with cheesecake pictures.

While folk practices instill military values, some also provide a way of safely subverting the chain of command. Veteran sailors (or “shellbacks”) crossing the equator summon King Neptune from his royal depths in order to initiate, through a series of humiliating rituals, the “pollywogs,” as they are called—those on board making their maiden crossing of the equator (especially fresh officers). Such “crossing the line” ceremonies, performed on board ships since the 1600s, ritualistically subvert military hierarchy by installing for a day at least a new command: the costumed sailor as King Neptune, his cross-dressing buddy as Queen Aphrodite, and their royal baby (generally the fattest sailor on board dressed in a diaper). Not nearly as elaborate, yet thematically similar, anecdotes that celebrate the ways in which a crusty chief petty officer teaches arrogant inexperienced lieutenants a lesson circulate widely among enlisted troops.

To explain the irrational or the uncanny, soldiers tell stories of miraculous occurrences, of bullets deflected by Bibles and dogtags, and every war produces its share of angel-helper stories. Typically, an older soldier helps a younger struggling soldier, one too tired or too wounded to keep up with his fellow retreating buddies. Upon waking the next morning, eager to thank his rescuer, the young soldier finds that the one who helped him back to friendly lines never existed or was someone who had himself died in combat months or years before. Phantom soldiers fight in every war. The spirits of downed pilots repeat their distress calls on the anniversary of their death. In one Vietnam account, an army combat soldier fights valorously until one day when he sees himself in VC (Viet Cong) clothing stalking through the bushes. Such radical ambivalence marks the end of his tour of duty.

Members of all branches of the military exchange shorttimer calendars, pictures of either a patriotic or a bawdy image intricately divided into 365 shapes that the short-timer progressively colors, one each day until he returns home, the calendar completely filled in. Short-timer sayings (“He’s so short he could jump off a dime” and “He’s so short he could wipe an ant’s ass”) and superstitions about the inadvisability of fighting alongside one with less than a month to serve proliferate during times of war.

The Vietnam War, more than any other, produced a constellation of lore associated with the return home. An account often told to sum up the returning vet, his sacrifices unacknowledged, his heroism unhailed by an American population fed up with the war, is the spat-upon story. The war-weary soldier, many accounts claim, taxis into the gate, deplanes, and walks across the tarmac, but instead of hearing the cheers and bands that welcomed his predecessors, he walks through a crowd of jeering people, one of whom spits on him. Although the account defies reality (How many troop transport planes flew into commercial airports?), it is always told seriously. This story epitomized for many the terrible irony of the Vietnam War, but the story predates that war. It was told about Korean War vets whose pain and hardship seemed to many stateside to have been for little. The story penetrated popular culture as well. In the 1950s film *Shock Corridor*, a journalist going undercover in an insane asylum tells a first-person version of this story in order to ensure his disguise as a shell-shocked Korean vet.

Stories of unappreciative civilians spitting on veterans; of soldiers returning home from Vietnam early, only to be shot by their fathers suspecting them to be intruders; of extraordinary draft-evasion attempts that failed; of crazed combat soldiers fashioning necklaces of severed enemy ears—these stories and many more constitute the legendary repertoire of Vietnam.

Miners

Workers who extract minerals from the earth. As an occupational group, miners in America—both the coal miners east of the Mississippi and the hard-rock metals miners of the Western states—have historically been faced by conditions of uncertainty and antagonism both above and below ground. Within the mines themselves, the history of American mining has been punctuated regularly by deaths and injuries due to cave-ins, fires, and floods, and miners have gone to work each day never knowing when the ore body or coal seam was going to bottom out and end their employment. On the surface, miners have frequently done battle with management in the form of industrial action designed to bring about improvements in working conditions. Finally, the health of the industry as a whole, and thus the welfare and future of its workers, has historically depended on the frequently unpredictable vicissitudes of market forces and metals prices. Faced with these conditions, miners through their folklife expressions have traditionally sought ways to imaginatively control their unpredictable work environments, to commemorate the dead and criticize management antagonists, to celebrate their skills and identities as miners, and to achieve and maintain a strong sense of solidarity and mutual purpose.

A large body of folk beliefs, much of it having its origins in European mining traditions, has traditionally governed behavior within the mines in an attempt either to assure safety and success or to forestall accident and failure. These beliefs usually take the form of omens—signs that predict that disaster is in the offing—or ritual behaviors that are followed in order to either help bring about favorable outcomes or prevent unfavorable ones. Thus, Upper Michigan miner Jim Hodge told folklorist Richard M. Dorson in 1946 that he was once rebuked because he “walked in the Negaunee mine once a-whistling,” that women were never allowed down the mine, and that “to kill a rat in the mine is worse than murder” because they “know ahead when ground is breaking; they can hear it.” In 1989 north Idaho mining man Bill Bondurant described that, prior to a rockburst, “when the rock was working a little bit, you could hear ping, ping, ping; they said that the tommy knockers—trolls—were warning you to get out of there.” He also noted that “there used to be a superstition that you’d lose the vein if a woman looked on the vein, but that’s—since women have worked in the mines—well, that superstition is pretty well forgotten.”

Largely due to the efforts of folklorist George Korson (1899–1967), modern scholars have available to them a large body of coal miners’ folksongs from the late 19th and early 20th centuries. Taken together, these songs provide a glimpse from the miners’ perspective of what their lives were like in the days when coal was still mined primarily with pick and shovel. It was not uncommon for mine disasters to be commemorated in folksong, and the songs both preserved the memory of the fallen miners and served as a communal reminder of the tenuous nature of work underground. In 1869, for example, 110 workers died in a fire in the Avondale coal mine in Pennsylvania, a tragedy that was quickly captured in a broadside ballad called “The Avondale Mine Disaster,” which

Korson collected in the 1920s. Its thrust is both historic and elegiac, as two sample verses show:

On the sixth day of September,
Eighteen hundred and sixty-nine,
Those miners all then got a call,
To go work in the mine;
But little did they think that day
That death would gloom the vale
Before they would return again from
The mines of Avondale.

*Down the mines at the Pittsburgh Coal Company,
engineers survey and plot each days work.
Pennsylvania, 1942. Photo John Collier. Library of
Congress.*

Now to conclude, and make an end,
Their number I'll pen down—
One hundred and ten of brave stout men
Were smothered underground:

They're in their graves till the last day,
 Their widows may bewail,
 And the orphans' cries they rend the skies
 All round through Avondale!

While mining is still dangerous work, the impulse to remember the fallen in ballads has largely died out in the late 20th century. When ninety-one miners died in a fire in the Sunshine silver mine in Kellogg, Idaho, in 1972, they were commemorated in the form of a monument sculpted by a former miner who had once worked in that mine.

While fully recognizing that their work is dangerous and debilitating, miners have frequently blamed mine owners and management for the high toll that their work has exacted in death and injury. Miners have traditionally seen owners as exploitative antagonists anyway, given at various times and places to blacklisting union miners and requiring that workers live in company houses, shop at company stores, and follow other such restrictive practices. Biting stories circulated about prominent and self-important owners like Marcus Daly, the copper magnate of Butte, Montana, who (so the story went) died and entered heaven only to have God turn to his right and sarcastically say, "Come, Jesus, get up and give Marcus your seat." Korson collected many strike songs from the balladeering 19th and early 20th centuries, as well as ballads describing and assessing the activities of radical labor groups like Pennsylvania's Molly Maguires. Widely shared union-oriented "laborlore," in folklorist Archie Green's term, seems less common in the latter part of the 20th century, or at least it is not as well represented in folklorists' collections.

Not all of miners' folklore, however, has been geared toward coping with death, contingency, and confrontation. An equally strong strain of miners' folklore has focused on celebrating their skills and occupational identity, demonstrating a great deal of pride and faith in themselves and their work. In Western mining camps, hand-drilling contests were for many years a high point of communal Fourth of July celebrations, even after machine drills had taken over the task of boring holes in rock to accept dynamite charges. Korson collected many examples of ballads praising the hard work and indomitable spirit of the coal miner, such as "The Miner Lad":

Nay, don't despise the miner lad,
 Who burrows like the mole;
 Buried alive, from morn to night,
 To delve for household coal—
 Nay, miner lad, ne'er blush for it,
 Though black thy face be as the pit!

As honorable thy calling is
 As that of hero lords;
 They owe to the noor miner lad

The ore that steels their swords—
 And perils too, as fierce as theirs
 In limb and life, the miner shares!

Despite (or, indeed, because of) the difficult conditions under which they have worked, miners have traditionally maintained a sense of communal strength, purpose, and commitment, perhaps related to the traditional attitude that north Idaho mining man Bob Anderson has characterized by saying “Yeah, hope springs eternal, especially in the mining. It’s always one foot to a million dollars—the next foot.”

Within the workplace, miners have traditionally used several linguistic means to express and maintain a sense of group identity and solidarity. For example, it is common practice in the mining industry for miners to know and refer to each other almost exclusively through nicknames, such as the colleagues about whom Bill Bondurant and Bob Anderson reminisced: Milk Bottle, Rooster-Goose, Screaming Gene, Biffo, Dum-Dum, Little Man, and Red Fred. (Anderson said that many of the names inscribed on the Sunshine miners’ memorial are meaningless to him because they are the fallen miners’ full names, not their nicknames; he never knew them by their full names.) Such names bind the workers in a mine into a club of sorts, a close-knit fraternity that is separate from the larger world and within which one’s most meaningful social identity lies. Beyond the confines of individual mines or communities, miners as a group also share an occupational vocabulary, a set of terms describing their workplace and equipment that outsiders will not understand and that also serves to create and reinforce group cohesion. To an Eastern coal miner, for example, the fine particles resulting from drilling are “bug dust,” while waste material is “gob.” This vocabulary may have regional variations: The “cage” that carries miners down the shaft in Eastern coal mines is just as likely to be called a “skip” in the Western mountains. Still, this vocabulary is another means through which miners create and proclaim a sense of identity.

Above ground, miners’ folklife has also tended to focus on communal situations and gatherings in which talk and song came easily. Korson has written of how ballads were a common part of life in taverns, stores, and other foci of community life in Pennsylvania’s coal country. On the Western mining frontier, the saloon was usually one of the first buildings erected, and it quickly became the undisputed social center of the town. By geological necessity, mining has been carried out largely in remote mountainous areas; physically isolated, struggling daily with recalcitrant rock and profitminded management, miners have perhaps more than other occupational groups been drawn together into mutually supportive communities, and their folklore has consistently reflected this orientation. While mining areas are no longer as isolated as they once were, and while the industry is in decline in many areas of the country, miners continue to feel and express the pride, cohesiveness, and traditional attitudes that have characterized them from the beginning.

Minstrel Shows

An entertainment form in which White male performers blackened their faces in imitation of Negroes to perform what were presented as Black dialect, songs, dances, and jokes. Minstrel shows were popular in America throughout the 19th century and into the early 20th century. While rooted in European music and theater, minstrelsy represented a conscious move in America toward an indigenous entertainment form.

Although minstrelsy enjoyed its greatest popularity during the 19th century, blackface entertainment, which originated in Europe, was performed in America during the early republic period, although American Black life and culture were not used as stage material until the early 1820s. Increasing numbers of performers with cork-blackened faces soon followed, traveling and, initially, performing “Negro” songs and dances during theater interludes or in circuses. One of the most famous, and earliest, of these performers was Thomas D. Rice, who, after observing an elderly Black man dance and sing, adopted the moves and the song, modified both, and created a new act, which premiered in 1828, that featured the song and dance “Jim Crow.” By the early 1940s, individual blackface performers began to band together to form minstrel shows.

Opinions differ as to which troupe performed the first minstrel show, although much evidence points toward the February 1843 performance of four blackface performers, Billy Whitlock, Frank Pelham, Dan Emmett, and Frank Brower, who appeared as the Virginia Minstrels. Christy’s Minstrels, though, is credited with finding the “ideal minstrel blend” when it combined the rowdiness of the Virginia Minstrels with the sentimentality of Stephen Foster’s songs (Toll 1974:38). By the mid-1850s, the three-part minstrel show had evolved and continued to be predominant thereafter. The first part featured the entire minstrel company placed in a semicircle, with the interlocutor, or the straight man, in the center, and flanked by the comic end men, Tambo and Bones. The first part included serious and comic songs, dance, and humor and usually ended with a stump speech, an oration delivered to the audience in Black dialect and filled with malapropisms. The second part, the olio, resembled a variety show and also included a stump speech. The final act was a one-act skit, usually farce and parody.

Minstrelsy had a great and lasting effect on White America’s perception of Blacks. One of its earliest appeals was that it offered Whites what they believed were accurate portrayals of Southern Black slaves, with images such as “huge eyes and gaping mouths,” shabby and ill-fitting clothes, unique dialect, constant fidgeting, frenzied and eccentric movements in response to music, and an inability to control themselves (Toll 1974:34–36). In contrast to this “foolish” image, the sentimental songs written by Stephen Foster, many of which were performed by minstrel troupes, provided another stereotype of the happy, loyal plantation “darker,” such as Old Darky or Old Auntie. Additionally, while earlier portrayals of Blacks demonstrated some variety, later and more successful minstrelsy presented specific stereotypes of Blacks that became firmly entrenched as fact in White consciousness. Blacks were portrayed as intellectually and physically inferior through derogatory characterizations, represented by the happy, carefree, ignorant

Southern Black, such as Jim Crow, or the falsely egocentric dandy, such as Zip Coon or Dandy Jim.

Black minstrel troupes appeared occasionally before the Civil War and continued to grow in number and popularity after the end of the war. While Black performers introduced new material to minstrelsy, they generally retained the traditional standards, which often included “blacking up,” because they relied on the acceptance of White audiences. One of the earliest and best-known Black minstrels was Master Juba, a dancer who was famous for his rendition of an Irish jig.

The rising popularity of these authentic Black performers as well as the increasing success of other entertainment forms after the Civil War threatened the hold minstrelsy had on the stage. Minstrel troupes responded by expanding in size, traveling extensively, expanding the parts of the show, getting rid of the vulgarity, and even moving away from concentration on Black imitation. Minstrelsy, thus, remained popular through the turn of the century, as is evidenced by the success of Al Jolson, an American blackface entertainer who starred in *The jazz Singer*, the first full-length film with synchronized sound. Even after its general popularity began to wane, Minstrelsy still drew audiences in rural areas and small towns. It was also used by the WPA (Works Progress Administration), in the 1930s to uplift spirits by providing comedy and laughter to Depression-era Americans, and it was utilized for the same reasons by the USO through World War II. Increasing racial consciousness and the civil rights movement were largely responsible for the virtual demise of minstrelsy by mid-century, although instances of it still appeared as late as the 1970s.

Mnemonic Devices

Verbal or visual formulas or actions used as aids in memorizing and recalling dates, numbers, grammatical rules, formulas, work-related knowledge, or other information considered important but difficult to remember. The term “mnemonic” is derived from the ancient Greek word *mnemonikos*, “of or pertaining to memory,” and is related to the name of Mnemosyne, the ancient Greek goddess of memory. Used extensively by preliterate cultures, mnemonics remain common today in educational, scientific, and occupational settings, as well as in everyday life.

Some mnemonic devices involve actions taken to modify an object, which then represents the information to be recalled. The common method of keeping a tally by writing four lines crossed by a fifth is such a device, as is tying a string around one’s finger as a reminder.

Some mnemonic systems, including many popularized through books and magazine articles, are based on visualization techniques. For example, in order to remember a new acquaintance’s name, one visualizes an image derived from the sound of the person’s name. These methods are not strictly traditional, but rather have roots in ancient Greek memory systems.

Most modern mnemonic devices are verbal. Many take the form of short rhymes, phrases, and even songs. For example, many children are introduced to the alphabet through the “ABC Song,” memorize the rhyme “Thirty days hath September,” and learn the spelling rule “i before e except after c.” Numerous traditional rhymes, such as “Rain before seven, clear by eleven” and “Year of snow, fruit will grow,” were once used by farmers and sailors to remember agricultural and weather-related knowledge and often incorporated folk beliefs. Even advertising slogans and jingles function as implicit mnemonic devices that keep the name of the product or business in the mind of the hearer.

Verbal mnemonics may also consist of alphabetical or numerical lists of related information. For instance, the “ABC’s of emergency care” (airway, breathing, circulation) help doctors, nurses, and paramedics recall the proper order of treatment priorities in their patients. Another medical mnemonic, “the four f’s of gall bladder disease” (fat, female, forty, and flatulent), lists characteristics typical of patients with this ailment.

Mnemonics based on various letter-number codes are common. Telephone number mnemonics, for example, consist of short words or phrases created from the letters associated with the appropriate numbers on the telephone dial. Businesses often create telephone mnemonics in which the meaning of the mnemonic word or phrase recalls the nature of the merchandise or services offered.

Many verbal mnemonics take the form of acrostics, sentences in which the initial letters of each word match the first letter of each bit of information to be remembered. For instance, the mnemonics “On old Olympus towering tops, a Finn and German viewed some hops” and “Oh, oh, oh, to taste, touch, and feel a girl’s vagina so heavenly,” both in

circulation among medical students, represent the names and order of the cranial nerves: olfactory, optic, oculomotor, trochlear, trigeminal, abducens, facial, acoustic, glossopharyngeal, vagal, spinal accessory, and hypoglossal. The use of shorter, acronym-like words and phrases is also common. For example, in physics, the name “Roy G.Biv” represents the order of colors of the spectrum: red, orange, yellow, green, blue, indigo, and violet). Many acrostic mnemonics are bawdy and reflect the predominantly male composition of the groups during the time they were created.

Whatever the form of the mnemonic, its underlying technique remains the same. The mnemonic attempts to create within the mind of its user a gestalt, a unified mental construct consisting of both the mnemonic and the information for which it stands. When one remembers the mnemonic, one remembers at the same time the material it encodes. Some mnemonics build image or word patterns linked semantically or through similarity of sound to the information they represent. Others, however, create an association that is purely arbitrary. These mnemonics must be decoded by the user. In either case, stylistic devices such as rhyme, meter, and music may be used to reinforce the linkage of the mnemonic and its referents, making both easier to memorize.

The arbitrary relationship of many mnemonics to the material they represent is the inherent weakness of the genre and the reason for the ambivalence often felt about the more elaborate, fanciful devices. Many people learn them enthusiastically and even create their own, but others find the mnemonics themselves difficult to remember and, therefore, of little value. Although the sexual imagery of the bawdy mnemonics makes them easier to recall than most, many people find that they retain the mnemonic itself far longer than the material it is designed to help them remember.

Mojo

Amulet, charm object, and more often the belief-practice system of voodoo as known by a significant portion of modernday African Americans. Scholars and members of the folk community use numerous terms to refer to mojo. The latter group especially, refer to mojo the following terms: “hoodoo,” “voodoo,” “witchcraft,” “conjuraton,” “fixing,” “tricking,” and “root working.” Similarly, occult practitioners may be called “hoodoo doctors,” “mojo doctors,” “voodoo doctors,” “witch doctors,” “conjure doctors,” or “root doctors.” While the basic belief core of this system has a definite African origin, the etymology of the term “mojo” is uncertain. Norman Whitten (1962) even asserts that the word “mojo” has a North Carolina birth.

The system of mojo tends to encompass almost every facet and institution of African American life. If the husband of an occult believer strays from the path of fidelity, the wife attributes this behavior to mojo (either the magical object or the supernatural system). Likewise, people who are ill and who do not show progress after being treated with scientific medicine are under the influence of root working. Persons involved in games of chance and gambling seek the advice of, and direction from, the renowned mojo doctor. Moreover, the defendant who wants to influence the outcome of his trial wears his mojo (charm) into the courtroom. Mojo especially permeates the blues tradition. Sam “Lightning” Hopkins sings in one of his popular songs:

I’m going to Louisiana to buy me a Mojo hand
 I’m going to Louisiana to buy me a Mojo hand
 I’m going to *fix* my woman so she can’t have no other
 man.

Although earlier researchers thought that the mojo tradition was specifically a Southern Black phenomenon, later scholars have dispelled that concept. In fact, folklorists now acknowledge that African Americans who migrated from the rural South into the urbanized cities of the United States carried with them their mojo beliefs, practices, and stories. Practitioners in the urban North continue to cure supernatural illnesses and gain occult revenge for ill deeds in traditional ways, but with adaptive modifications. Also, nomenclature for the mojo doctor has changed to avoid possible conflicts with the law. The hoodoo doctor of the South has become a “psychic,” a “spiritualist,” or a “reader” who is much more commercial than his counterpart.

Monroe, Bill (1911–)

Singer, mandolinist, and principal creator of bluegrass music. The youngest of eight children in a poor farming family near Rosine in west-central Kentucky, Monroe was raised in a musical household. Formative musical contacts in his youth included his uncle Pendleton Vandiver (with whom he lived as a teenager following his parents' deaths and about whom he later composed one of his most popular songs, "Uncle Pen") and the influential local Black musician Arnold Shultz.

In the early 1930s, Monroe joined several brothers at industrial work in northern Indiana. Soon he began performing with them as mandolinist, singer, and dancer. In 1935 he and older brother Charlie became full-time entertainers. As the Monroe Brothers, they performed on radio in the Carolinas between 1936 and 1938 and placed sixty songs, many of them traditional, on best-selling RCA Victor Bluebird records. By 1938, when he formed his own band, the Blue Grass Boys (named after his home state), Monroe was recognized within the field of country music (then called "hillbilly music") as an innovative mandolinist and powerful vocalist. In 1939 Monroe joined the cast of the Grand Ole Opry, the long-running live radio jamboree at WSM in Nashville, Tennessee. He has been there ever since.

Monroe aimed at preserving and modernizing the old-time traditional music of the rural Upland South. He developed a repertoire that combined the old and the new in instrumental dance and display tunes, secular songs, and religious quartets. During the 1940s through his personal appearances, broadcasts, and recordings (for Victor and Columbia), he popularized his repertoire with a band sound based on earlier Southeastern string-band traditions. Soon other musicians, particularly in Appalachia, were copying him. At first Monroe resented such copying, but by the mid-1960s, following the development of a festival movement that celebrated his musical history, he had accepted the idea that he was "The Daddy of Bluegrass Music" and became comfortable with his role as patriarch and teacher. Monroe's own annual bluegrass festivals, held every June since 1967 at his country-music park in Bean Blossom, Indiana, are widely attended events. Among his many honors are the National Endowment for the Arts' National Heritage Fellowship Award, election into the Country Music Association's Hall of Fame, and the NARAS Lifetime Achievement Award.

Over his career, Monroe has performed and recorded hundreds of folksongs and tunes, helping spread and maintain the traditions in which he has played a significant part. He has also contributed his own compositions, both instrumental and vocal, to oral tradition. And by leading the way in inventing techniques for playing fiddle tunes and blues on an instrument previously utilized for classical and Italian popular musics, he has shaped the development of the mandolin as an instrument used in American folk traditions.

Monsters

Fabulous beings often compounded of elements from various human or animal forms. Monsters are found in a gray area between zoology and folklore, sometimes called “cryptozoology” (the science of hidden animals), a term coined by the Belgian zoologist Bernard Heuvelmans. Author of key books on the subject, Heuvelmans spent a lifetime collecting and analyzing reports of these creatures that may or may not exist.

Another approach to the subject of monsters is “Fortean,” a word coined from the name of the American writer Charles Hoy Fort (1874–1932), who collected and circulated accounts of strange phenomena and experiences, curiosities, mysteries, prodigies, and portents. Just about anything is subject to Fortean investigation: showers of frogs, toenail painters, wild kangaroos in Wisconsin, appearances of the Virgin Mary, crop circles, feral children, and so on. The key element of the Fortean approach is open-mindedness: Strange phenomena are neither uncritically embraced nor automatically dismissed.

In North America, as in the rest of the world, the two basic types of monsters are terrestrial and aquatic. There are dozens of land-based creatures, including the Skunk Ape of the Everglades and Momo the Missouri Monster. A few of them are said to have the ability to fly. In New Jersey, for example, we find periodic reports of the Jersey Devil, an unusual creature with large bat-like wings. And scattered reports from such disparate places as Washington, Texas, and West Virginia have described Mothman, a strange gray winged creature.

Though the idea is regarded with skepticism by the scientific community, some monsters are said to be extraterrestrial visitors. Ever since the 1950s, there have been persistent reports of “little green men” from outer space. Also associated with unidentified flying objects (UFOs) are stories of alleged encounters with men in black, who wear black suits, black hats, and sunglasses.

Of all of the terrestrial monsters, few have had as many reported sightings as the Sasquach, or Bigfoot. The creature has been described as a humanoid about 6 feet tall, almost 3 feet wide, and weighing about 300 pounds. It is said to be covered from head to foot with dark-brown, silver-tipped hair. It was sighted in the early 20th century in Alberta and British Columbia, but more recently it has been spotted south of the Canadian border in Washington, Oregon, and northern California.

Many North American aquatic monsters have affectionate nicknames: Ogopogo, the lake monster of Okanagan Lake in New York; Igopogo of Lake Simcoe near Toronto; Manipogo of Lake Manitoba; Chessie, the Chesapeake Bay sea serpent; Slimy Slim or Sharlie of Payette Lake in Idaho; and Whitey, the White River Monster of Arkansas.

Perhaps the most celebrated aquatic creature is Champ, the monster of Lake Champlain, a lake 125 miles long and 435 square miles in area, between eastern New York State and western Vermont. Most of the reports describe a creature that emerges briefly from the water with several humps on its back and a long snake-like neck supporting a small head. In some ways, Lake Champlain is an excellent piace for an

unknown animal because of its large size. It is also strikingly deep, reaching 400 feet at its greatest depth. Worldwide, most freshwater-monster reports tend to come from deep, cold-water lakes like this one.

The spirit of open-mindedness governs the International Society of Cryptozoology (ISC), an organization dedicated to the investigation of “all matters related to animals of unexpected form or size, or unexpected occurrence in time or space.” Because of the board of the ICS is made up of Ph.D. biologists from respectable academic institutions, their work cannot be readily dismissed. Their goal, quite reasonably, is to attempt to make the inventory of the world’s fauna as complete as possible.

Predictably, cryptozoologists have come under heavy criticism from the scientific-rationalistic camp. They have been criticized for straining to find plausible justification for hundreds of would-be animals. Much of the debate centers upon evaluating reports of firsthand sightings. The critics claim that the believers have a tendency to modify supernatural encounters with demons into secular sightings of undiscovered animals. Sorting out the competing claims in this complicated material is difficult and challenging.

Mooney, James (1861–1921)

Collector and student of American Indian folklore. Mooney started his career as a schoolteacher and later worked as a reporter for a Richmond, Indiana, paper, but since childhood his main interest was the American Indian, and he eagerly sought out every available publication on the subject. In 1885 while visiting Washington, DC, Mooney met John Wesley Powell, who was so impressed with the young man's knowledge that he immediately hired him. Mooney remained with the Bureau of American Ethnology until his death in 1921, dividing his time between library and field researches, the latter being carried out primarily among the Cherokee and the Sioux.

Mooney was interested in the Indians not just as informants, but also as people, and many of his efforts were aimed at improving their lives. For example, he helped bring attention to the alarmingly high death rate of North Carolina Cherokees, and he was instrumental in introducing measures to remedy the situation. His best-known publication, *The Ghost-Dance Religion and the Sioux Outbreak of 1890* ([1896] 1965), also revealed his empathy with the tribesmen. Rather than treat the new religion as a curious oddity, he considered the ghost-dance movement essentially similar to other efforts at cultural revivalism found throughout the world. Wovoka was nothing more than an Indian Joan of Arc.

Although the study is valuable, it does have several flaws. Mooney never really considered the ghost-dance movement of 1870 and its connection with the events of twenty years later. Furthermore, he paid too little attention to the importance of Indian beliefs concerning the return of the dead in starting both ghost-dance movements. Moreover, he overlooked many of the cultural factors giving rise to the ghostdance religion, focusing only on poverty, oppression, and social dissatisfaction.

The Ghost-Dance Religion has folkloristic importance, but Mooney's most significant folklore volume is *Myths of the Cherokees* ([1900] 1982). This huge collection was recorded between 1887 and 1890 from nine informants. Despite the title, not all of the 126 items are myths, but Mooney thought that all amply made the case that Blacks borrowed tales from the American Indian. He argued that this exchange occurred as a result of miscegenation and the enforced contact of slavery in many Southern colonies, where Indians were kept in servitude and worked side by side with Blacks until the time of the American Revolution. The problem with this line of reasoning is that it upholds the view that Indians borrowed tales from Blacks just as forcefully as the other way around.

Despite entering the dispute about origins (which continued into the second half of the 20th century), Mooney was not primarily a theoretician. His forte was collecting, and he knew it; his collections, however, were always characterized by an ability to see the Indian point of view.

Morgan, Gib (1842–1909)

Oil driller known as a Münchhausen-like teller of tall tales concerning his adventures working in the oil fields. Containing large doses of exaggeration, Morgan's humorous tales are similar in spirit to those told about the mythical Paul Bunyan and Pecos Bill.

Morgan was born in 1842 in Callensburg, Pennsylvania. In 1859, when Morgan was seventeen years old, the first oil well in the United States was drilled in nearby Titusville. After serving in the Union Army during the Civil War, Morgan got work in the rapidly expanding Pennsylvania oil industry and later wandered the oil fields of the Eastern United States as an itinerant oil driller. He retired in 1892 and, except for occasional visits to family and friends, lived in branches of the National Home for Disabled Soldiers in Indiana, Illinois, and Tennessee from 1894 until his death in 1909. Morgan's stories are tall tales in which he chronicles his fantastic exploits. Although some deal with his prowess as a hunter, farmer, or fisher, most are about his work in the oil fields and require some technical knowledge on the part of the listener. In one story, Morgan claimed to have drilled a well whose oil rig was so big that it had to be hinged to allow the moon to pass. Because it took tool dressers fourteen days to get to the top, he built bunkhouses a day's climb apart on the side of the derrick. Some tales concern Morgan's adventures drilling for oil in South America. There he found his pet, Strickie the Snake, a boa constrictor so long that Morgan used him as a drilling cable. Another group of stories describes Morgan's exploits in the Fiji Islands, where he had been sent by a British syndicate. While drilling there, Morgan encountered layers of buttermilk, champagne, and sweet cream, but not the essence of peppermint he had been hired to find. He almost made a fortune making ice cream out of the cream, but, by the time he had a factory set up, the cream had soured. In Fiji, Morgan also met Big Toolie, a tool dresser so tall he was able to grease the crown pulleys at the top of the derrick without lifting a foot off the ground.

Many of Morgan's stories are recastings of traditional tales and motifs. His stories are clearly fantastic, although they rely on exaggeration rather than on their hero's claim to supernatural abilities, as sometimes happens in tales about Davy Crockett or other American folk heroes. Morgan's stories reflect the boom-or-bust culture of the early oil industry in America in which the outside was often close to the norm. His narrative persona is linked to the folk stereotype of the oil driller, the man who supervised the rest of the crew and who was known for his pride in his technical skills, his bravado, and his indifference to the risks of his job. Although Morgan frequently satirized individuals of whom he disapproved, his tales have more in common generically with the traditional tall tale than with other forms of occupational narrative in which themes of conflict between supervisor and subordinate are prominent.

During his lifetime, Morgan was well known as a raconteur. He often held court at a local hotel bar or saloon, telling tales while his audience bought him drinks. His stories were fluid, adaptable, and seemingly spontaneous. He is said to never have told the same story the same way twice. Morgan's fame was at its highest during the years before

World War I. After his death, many of the tales told by and about Morgan became attached to Paul Bunyan, a figure well known in the oil fields as well as the forests.

Mormon Folklore

One of the richest bodies of religious lore to develop in the United States. The Mormon saga began in the spring of 1820 in Palmyra, New York, when young Joseph Smith, the son of a local farmer, prayed earnestly to discover which of the many churches contending for his membership he should join. According to Smith, God and his son, Jesus Christ, appeared in answer to these prayers and told him he should join no church because all churches then on Earth had lost the essence of the gospel once preached by Christ. In subsequent years, Smith received further visitations from heavenly beings, brought forth a new body of scriptures, and in 1830, under divine direction, “restored” to the Earth the pristine organization originally established by Christ—named the Church of Jesus Christ of Latter-Day Saints, to distinguish it from the early church, but soon nicknamed the Mormon Church by outsiders and insiders alike because of its identification with Smith’s new scriptural offering, the Book of Mormon.

“The Joseph Smith Story,” canonized and told again and again by an ever-growing number of followers, has to the present day served as the principal charter validating the divine origin of the Mormon Church, but a large body of unofficial, or folk, narratives has also developed and circulated orally among church members, serving equally important functions. These narratives, belonging to the membership at large, will be told on any occasion when a point needs to be emphasized or proven. Thus, the narratives are recounted in Sunday-school classes, in fireside chats, in family circles, in casual gatherings of friends, in carpools as people drive to and from work, and at work itself—in short, in any situation in which Mormons rub shoulders with one another and talk about their lives. Some of the stories are full-blown third-person legends; others are accounts of personal experiences. But all of them are socially based, reveal deep-seated Mormon attitudes and beliefs, and fill significant needs in the lives of both storytellers and their audiences.

The stories cover the full range of Mormon experience, but most can be grouped into three broad categories: (1) those that tie contemporary Mormons to the dramatic events of their collective past; (2) those that testify to the truthfulness of the church’s teachings and persuade church members to dedicate themselves fully to the Mormon cause; and (3) those that provide relief through humor from the strictures of an authoritarian theological system.

The Early Church

From the very day Smith made known his remarkable revelation, he and his followers found themselves in conflict with their neighbors and with mainstream America. Their

insistence that only the gospel they preached would open the road to salvation, their tendency to establish political and economic control wherever they settled, their attempts to establish a theocratic state, and, later, their practice of polygamy so aroused the hostility of their countrymen that they drove the Latter-Day Saints from New York to Ohio to Missouri and, finally, to Illinois, where in 1844 Joseph Smith paid a martyr's price for his visions of the kingdom of God restored. Two years later, Smith's successor, Brigham Young, led the Mormons to a hoped-for place of peace and refuge in the mountains and deserts of territorial Utah. There they struggled to overcome an unfriendly natural environment, colonized the Great Basin, sent out missionaries to gather in the elect, and set themselves single-mindedly to the task of "building up" a new Zion in preparation for the second coming of the Savior.

Out of this cauldron of struggle and conflict were forged many of the stories Mormons still tell, stories that inculcate in both tellers and listeners a great sense of appreciation for the sacrifices of their forebears and a determination to face present difficulties with courage equal to that of their ancestors.

One such story, typical of many others, tells of a pioneer wagon train caught in a winter storm in Wyoming while trying to reach Utah. With the temperature dropping below zero, one woman huddled next to a little girl as they slept, only to discover in the morning that the girl had frozen to death during the night. The woman's hair had frozen to the girl's stiff body and had to be cut free before the woman could get up. The woman's family kept the scissors used to cut the hair and passed them down from one generation to the next—just as they have passed down the story of the event—to remind family members of sacrifices once made on their behalf and to persuade them to honor their valiant heritage. Similar stories have been circulated in numerous other families. They tell of persecutions, of hardships endured on the trek west, of encounters with Indians, and, in the face of droughts and grasshopper plagues, of attempts to make their new desert home "blossom like the rose."

The stories tell also of the practice of polygamy, which once again put Mormons on a collision course with established society. Initiated by the early 1840s but not exercised openly until the 1850s, the practice of polygamy, or "plural marriage," as the Mormons called it, brought the wrath of Victorian America upon the entire Mormon community and resulted in a series of federal antipolygamy laws. A spate of mainly humorous stories details acts of trickery engaged in by Mormons as they outwitted the callous federal marshals attempting to incarcerate them for "unlawful cohabitation." For example, one good patriarch, summoned to appear before a local magistrate to explain his polygamous activities, asked his wives to wait for him at the cemetery on the outskirts of town. Asked by the judge where his wives were, the man answered truthfully, "In the cemetery, every one." Assuming that the wives were deceased, the judge let the man go. He then stopped by the cemetery, picked up his wives, and returned safely home.

Other stories focus on the heartbreak experienced by plural wives, who had to share their husbands with other women. One poignant and typical account tells of a man about to take a second wife. He, his first wife, and his wife-to-be traveled to town by horse and wagon to have the marriage ceremony performed:

On the way there the man slept with his first wife in the wagon, and his little fiance slept on the ground under the wagon. But on the way back, the

wives reversed positions. The second wife slept with the husband in the wagon, and the first wife slept under them.

The practice of polygamy was officially discontinued by the church in 1890, but stories like this one linger on, engendering among some contemporary Mormon women feelings of sympathy for the pain suffered by their sisters of yesteryear.

The Contemporary Church

As time passed, the world depicted by the stories changed markedly. The horse gave way to the automobile, the rural village to the urban center, and the country lane to the freeway. But one constant remained, tying earlier and contemporary Mormons together—the belief that in times of need God intervenes in the lives of his people. Thus, Mormon folklore, from the beginning, is replete with accounts of miraculous healings, remarkable conversions, rescues from disasters, and the receipt of spiritual guidance.

These themes are often manifest in accounts that comprise one of the best-known legend cycles in American folklore—the legend of the Three Nephites. The Book of Mormon tells of a people who left Jerusalem 600 years before Christ and made their way under God’s direction to the New World. Later, following His birth and ministry in the Holy Land, Christ visited this New World people (called Nephites after one of their early leaders), established his church among them after the pattern of the church in Jerusalem, once again chose twelve disciples, and, as he had done with John the Beloved, allowed three of these disciples to “tarry in the flesh,” until his second coming to bring people to him. Throughout the Mormon West, stories have circulated telling of the visits of one or more of these ancient disciples, who appear to people in spiritual or physical distress, give assistance, and then miraculously disappear—the remarkable disappearance testifying to the spiritual nature of the visitor. The following story is typical:

A family consisting of parents and three children were on their way to [a church] conference. They lived on a desert, and it was a hot, dusty ride of two hundred miles to the tabernacle. On the way home the car broke down on a lonely road, which was even more deserted because it was Sunday. The children were hot and hungry, and the poor father could not find the trouble. Just then, two men in white came walking down the road and offered to help. Telling the man to get in his car and start the motor, they lifted the hood. To the family’s surprise the car started, and after kissing his wife and hugging his children for joy, he went out to thank the men. They had disappeared.

Whether the assistance given people comes from the Three Nephites or by other means, contemporary Mormon stories of divine intervention tend to cluster around three major themes: missionary efforts, genealogical research, and temple activity. All three themes

are closely related. Though Mormons believe that salvation, or exaltation, in the kingdom of God is available only to those who embrace their gospel and participate in its saving ordinances, they also believe that because God is just, he will provide every individual an opportunity to accept or reject this gospel. Hence, Mormons engage in vigorous missionary efforts, attempting to take the restored gospel to “every kindred, tongue, and people.” In spite of these efforts, Mormons know that many will have died without ever hearing the message of salvation. So they seek out the names of their dead ancestors and then, in sacred temples, vicariously perform for them saving ordinances like baptism and marriage that must be performed “in the flesh.” Those who have been denied an opportunity to hear the gospel in this life will, Mormons believe, have that opportunity in the hereafter. If they accept, and if necessary ordinances have been performed on their behalf by the living, then they will have equal claim on the kingdom with those who have accepted the gospel in this life. In this way, God proves himself no respecter of persons, providing all who have lived the opportunity to accept the gospel of Christ.

Story after story circulating among Mormons reinforces these beliefs and encourages adherence to them. Stories from the mission fields tell of miraculous conversions and of missionaries being saved from angry mobs, starvation, natural disasters, and the dangers of the modern world. The Three Nephites, for example, help missionaries preach at street meetings, calm angry mobs, bring food to hungry missionaries, and pull some of them from flaming pileups on Los Angeles freeways.

Genealogical narratives tell of researchers being led to necessary sources after they have themselves exhausted every possibility. An old man brings a newspaper from another country containing names a researcher has been seeking; a book is accidentally knocked from a library shelf and falls open to a page containing missing information; a man is instructed by a stranger to visit a cemetery where he finds missing family names; another man is instructed to visit a pawnshop, where he finds his genealogical data in a Bible.

Genealogical research culminates in vicarious temple ordinance activity. And once again stories reflecting and supporting this activity abound. In many of these, as in the following account, the people for whom the ordinances are performed participate in the action of the narrative, thus adding further credence and emotional impact to the story:

This man and woman were going through the temple doing work for the dead, and they got out to Salt Lake, and they had kids. And at the last minute the baby-sitter didn't come, and so they had to take their kids to the temple with them. And they were standing outside the temple waiting to get in, and they didn't know what they were going to do with their kids. There was no one around there they could leave them with, and they didn't know what they were going to do with them. While they were standing there, this strange man and woman came up to them and introduced themselves and said they would tend their kids while they went through the temple. The man and woman tended their kids, and the couple went in and did work for the dead, and that couple tending their kids turned out to be the couple they did the work for. When they came out of the temple, the man and woman were no longer there.

Humor in the Church

Though deeply committed to the theological system that governs their behavior, some Mormons chafe a bit under the need always to yield their own desires to those in authority over them. They cope with this pressure through the saving grace of humor. One cycle of stories providing this relief has gained special prominence. The stories tell of J. Golden Kimball, a crusty old church authority, who had spent his youth on the Idaho frontier and, though he became a church leader, had never succeeded in leaving the language of shepherders and cowboys far behind, peppering his sermons with a liberal sprinkling of “damns” and “hells.” It was not his swearing, however, that caught the fancy of fellow Mormons—most people raised on the frontier had acquired that habit without Kimball’s help; it was his irreverence for the stuffy and the pompous. In story after story, Kimball is juxtaposed alongside a higher and more dour church authority than himself and, in every instance, knocks the props from under him. In one account, for example, Kimball and one of these higher authorities were discussing a church member who was having trouble with the Word of Wisdom (the church health code that forbids the use of alcohol or tobacco). The authority, puffed up in self-righteousness, exclaimed, “Why, I’d rather commit adultery than break the Word of Wisdom.” Kimball peered at his companion for a moment over the tops of his wire-rimmed glasses and then screeched in his high-pitched voice, “Wouldn’t we all, brother? Wouldn’t we all?” Church members who delight in such stories are not trying to overthrow the hierarchical structure of the church; they are simply finding relief through humor from pressures that might otherwise be their undoing.

A second cycle of humorous anecdotes fills another need. The main figure in these stories is not one of the church’s central authorities but the local lay leader—the bishop (comparable to pastor) or the Relief Society president (head of the women’s auxiliary). Because leadership positions rotate within Mormon wards (congregation), church members know that if they keep their noses relatively clean they may be asked to fill the positions tomorrow they poke fun at today. Hence, there is much less anticlerical bite in these anecdotes than in similar stories from other churches. The narratives reveal instead great sympathy for people struggling to fill positions they did not seek. The humor arises more from the circumstances of being Mormon than it does from the antics of any religious leader. It reminds tellers and listeners alike of their human frailties and eases tensions by allowing them to laugh at themselves. Consider, for example, the story of a bishop who must commit himself to an ideal while pragmatically learning to function in the real world:

A bishop who was conducting a church building fund in his ward preached a sermon from the pulpit one time about being blessed for contributing to the building fund. After his sermon, a member came up to him and said, “Bishop, that was a damned fine sermon.” The bishop replied, “Brodier, you had better watch the swearing.” The member continued, “Yes sir, Bishop, that was such a damned fine sermon that I gave an extra \$650 for the building fund.” The bishop paused, then said, “Yes, brother, it takes a hell of a lot of money to build a church.”

As do most people, Mormons negotiate their way through life by telling stories. Through narratives like those recounted above, they link themselves to, and gain a sense of continuity with, their past; they reaffirm their allegiance to the principles of their gospel and are inspired to live in accordance with them; and when the pressures of day-to-day Mormon living at times become burdensome, they find the means to carry on through humor.

Because religious folklore arises from people's most deeply felt needs, the study of that lore will take us about as close to other human hearts as we are likely to come. This certainly is the case with Mormons, but the attempt to fathom those hearts through the study of Mormon folklore has only just begun. Much study is needed of those stories recounting acts of quiet dedication to duty and service to others; though less dramatic than supernatural tales, these neglected stories are far more pervasive. Likewise, the rich field of Mormon rituals—those repetitive, socializing, patterned activities that turn people into Mormons—is virtually untouched.

Researchers must also turn their attention to new geographic areas. Because of the church's origin in the Eastern United States and its important role in settling the West, we tend to think of Mormonism as an American religion. But the success of the missionary system has transformed the church into a worldwide organization. Of its nearly nine million members, half live outside the United States. In fact, the percapita percentage of Mormons in Chile is higher than it is in the United States. The 103,000 Japanese Mormons probably do not identify very strongly with the church's pioneer past, and the 22,000 Nigerian Mormons may have rarely heard of the Three Nephites. Yet, Mormons from all corners of the world hold to the revelations of Joseph Smith and to the principles he taught. The task for future research will be to discover how these core beliefs are played out in strikingly different cultures and to illuminate the role of folklore in that process.

Moser, Artus M. (1894–1992)

Ballad and folktale collector. A native of Swannanoa, North Carolina, Moser first served as an informant for University of Tennessee folklorist Edwin C. Kirkland, to whose influential collection he contributed several ballads. After teaching for a time at Knoxville, he moved on to a series of educational positions in western North Carolina, where he continued to contact, and collect from, local singers and storytellers. Using a portable recording machine borrowed from an Asheville doctor, he made more than 100 field recordings during the late 1930s and early 1940s, including ballads, folksongs, and fiddle tunes. He also recorded a full text of “Jack and the Heifer Hide” from Maud Long, a descendant of the famous Harmon-Hicks families, perhaps the first sound recording of an Appalachian Jack tale.

In 1945 he gave a well-received talk at the University of North Carolina at Chapel Hill, using his recordings as examples, and he was encouraged to bring them to the attention of Duncan Emrich of the Library of Congress. Emrich loaned Moser a more sophisticated portable disk recorder and commissioned him to contact and re-record his informants. The resulting field trip, which occupied the summer and fall of 1946, led to several hundred recordings being added to the Library’s Archive of American Folk Song. Moser recorded Maud Long and Asheville revivalist Bascom Lamar Lunsford, along with many other local singers and musicians.

Moser also attended the 1946 Renfro Valley Folk Festival in east Kentucky, where he collected material from participants. Among others, he met Jean Ritchie, whom he recorded for the first time. Many of Moser’s disks were issued by the Library of Congress, first as 78-rpm singles then as parts of LP albums illustrating Appalachian folksongs and ballads. Moser was also influential in directing the Library of Congress to Maud Long’s folktale repertoire, which she recorded soon after while residing in Washington, DC.

In 1955 Kenneth S. Goldstein recorded Moser’s own folksong performances, which were later released on a Folkways LP. During his long retirement, Moser became an accomplished landscape painter; his daughters Joan and Irene Moser also became active in the local folk preservation movement. His papers and recordings are kept in the Moser Family Archives, open by application to his family.

Moser was typical of many Appalachian educators who worked independently to record their culture’s folksong and folktale traditions. He received little support from grants or institutions, and he published nothing in the way of formal folklore research; hence, he is little known. Nevertheless, he was a pioneer in using sound recordings to document both text and texture of the performing traditions he contacted.

Mummers

Costumed participants in informal house-to-house visits at Christmastime in Newfoundland (rarely, elsewhere in the New World) or in a massive parade held every New Year's Day in Philadelphia. Origins of both rituals are obscure. Either one may have possibly developed, across the centuries, out of mumming in the British sense of the term: folk plays at winter-solstice time, often performed in house-to-house visits. In America, British mummers' plays sometimes appear in "folk revival" settings. At Pennsylvania State University, for example, the winter holiday party for families of English Department faculty often includes a play in which St. George battles the Turkish Knight, is revived by the doctor, and slays the dragon.

The Newfoundland custom, also known as "mumming" or "janneying," resembles "belsnickling," which was more widely practiced in German American communities through the early 20th century. With local variations, it normally involves a group of adults disguising their appearances and voices. A resident who invites mummers to enter asks ritualized questions about their identities, then requests a musical performance and/or offers food and drink. Symbolically, the custom renders strangers less threatening: Apparent outsiders to the community reveal themselves as insiders after all.

Symbolism appropriate to a large and ethnically diverse city, rather than to isolated villages, appears in the Mummers' Parade, sponsored by Philadelphia since 1900 after two centuries as neighborhood-based, smaller parades. Tens of thousands of marchers spend all year raising ideas and money to construct elaborate costumes—costumes, not floats, for a mummer proves individual prowess by walking the twelvehour parade route and doing a dance routine as part of a comic club (mostly Irish), a fancy club (mostly Italian), or a string band or a brigade (some with names proclaiming ethnicity, like the Ukrainian American String Band). Each year, each mummers' club enacts a different theme, such as a flower garden, a jailbreak, a carwash, or the Persian Gulf War. Many themes include stereotyped portrayals of ethnic groups other than the club's own. In 1993, for example, three of the top four brigade prizes went to "Singapore Swing," "Nonsense on the Nile," and "Moscow Nights," parodies, respectively, of Chinese, Egyptians, and Russians.

Transplanted folklore, especially large-scale festivals and rituals, survives insofar as immigrants redefine community concerns in reference to their New World situation. British folk drama did not remain relevant. American mummers in the late 20th century actively practice two folk traditions that have continued to grow, to change with the times, and to remain meaningful to generation after generation of Newfoundland neighbors in disguise and mummers proudly strutting up Philadelphia's Broad Street.

Musick, Ruth Ann (1897–1974)

Collector of West Virginia folklore. Musick was an English professor at Fairmont State College known for documenting ghostlore and immigrant legends in the coalfields of the state. She wrote a weekly column, “The Old Folks Say,” for the *Fairmont Times—West Virginian* from 1948 to 1954, and she founded the *West Virginia Folklore Journal* in 1951.

Musick received her doctorate in English and creative writing from the University of Iowa, but most of her academic career was devoted to collecting and preserving West Virginia folklore. She began collecting in 1946 with an emphasis on ballads and folksongs but gradually shifted to folktale and legend.

She received her formal folklore training in a summer Folklore Institute program directed by Stith Thompson at Indiana University. She published many articles and three books of her West Virginia materials: *Ballads, Folk Songs, and Folk Tales from West Virginia* (1960), *The Telltale Lilac Bush* (1965), and *Green Hills of Magic* (1970). An additional book of ghost legends drawn from her collection, *Coffin Hollow and Other Ghost Tales* (1977), was issued after her death.

Musick’s books, though popular with general audiences and hence in print since their publication, drew little scholarly attention. This is partly a result of her reliance on written student sources for her materials, and consequently the literary quality of many tales she presented. Even so, she ranks with John Harrington Cox, William Chappell, and Patrick Gainer as indispensable sources of West Virginia state folklore.

Myth

Traditional prose narrative that enables people to discuss preternatural topics. This definition of myth is useful if two conditions are met: First, one must dismiss the current popular notion that a myth is a false belief; and second, one must accept the idea that the creation and transmission of traditional myths is, or was, an attempt to deal with, but not necessarily explain, the unknown.

“Myth” may be one of the most misused words in the language. This stems from Christianity’s attempts to discredit competing ancient pantheons, labeling others’ beliefs “false mythologies” and calling Christian beliefs “the true religion.” The idea of myth-as-false-belief has carried over into secular use and now refers to something a number of people assert as fact that can be shown, usually by reference to scientific analyses, to be false, as in newspaper or magazine articles with titles like “Myths about Cancer” or “Myths about AIDS” that discuss people’s incorrect beliefs.

The concept that myth is false belief is further supported by the attitude that people who lived a long time

Images from classical mythology inform American urban architecture. In Washington, DC, this statue of Neptune faces the Capitol. Photo J.W.Love. Courtesy of the photographer.

ago used myth to “explain” natural phenomena, as in the sun being a fiery chariot pulled through the sky; in fact, some basic mythology books end stories with the comment “...and that is how the Greeks explained the passage of the sun through the sky.” Because we are dealing with people we believe to have been not as advanced as we are—“primitive” people, as we often call them—we are willing to believe that they could have thought that these stories explained natural phenomena. But it is highly unlikely that myths were meant to *explain* anything; it is more likely that they were metaphors—concrete images used to stand for abstract things. The passage of the sun was unexplainable to the ancient Greeks, in astronomical terms, so they used a poetic device to refer to that passage.

If we accept the possibility that myth operates similarly to metaphor, the definition of myth as traditional prose narrative used to discuss preternatural topics begins to clarify its

relationship to other areas of folklore. A myth is traditional because it is handed down through the generations, and it is a prose narrative because it tells a complete story. The words “traditional” and “narrative” connect myth with the other major folk narratives, folktale and legend, but the key words in this definition are *preternatural* and *discuss*. Something that is preternatural exists within a natural system but cannot be explained by any method available within that same system; it therefore appears to be beyond, or different from, the natural.

In the myth of the fiery chariot, for example, people observed a natural phenomenon but could not explain what it was or how it did what it did. They could observe its warmth and its sky-spanning movement; therefore, they related it to fire, also warm, and to a chariot, something in which they traveled long distances. However, because the phenomenon was observable, the Greeks had to talk about it (even if only to their children), and the myth of the fiery chariot allowed them to discuss a phenomenon that they could observe but not explain. We now have the astrophysical, meteorological, and astronomical knowledge to explain the sun’s warmth and its apparent passage across the sky.

On a more complex level, the passage of the seasons occasioned narratives in which emotional states were equated with what were for the ancients preternatural phenomenon. In both the Greek (Demeter and Persephone) and the Norse (Freya and her husband) myths, for example, winter occurs because two people who love each other—mother and daughter or husband and wife—are separated. The separation causes the woman (a fertility figure in each case) such sadness that plants stop growing and the weather gets colder; reunion causes warm weather to return and plants to resume their growth. The equation of fulfilled love with spring, and loneliness with winter, creates a metaphor in which emotional states are logically equated with their respective seasons of fecundity or dormancy. Again, the passage of the seasons is a natural, not a preternatural, event for most people today and needs no metaphor by which it may be discussed.

This same definition of myth as a narrative that allows people to discuss preternatural topics can also be applied to narratives that discuss some of what we still consider abstract or philosophical concepts. The problem of disorder (some might say evil) in society has confronted humanity from a very early time. The Scandinavians blamed Loki—half-giant, after all, and therefore at least partly aligned with the forces of chaos—for much of the disorder in Asgard; the Greeks blamed Pandora, whose curiosity led her to open the fatal box. We, today, have made less headway in this area than we have in the area of natural phenomena; we, too, have a variety of “theories” about the causes of evil/disorder/chaos. These theories can be genetic (children can inherit criminal tendencies from parents), sociological (a child who grows up deprived is more likely to become a criminal than one who does not), religious (“the devil made me do it”), situational (the people a person spends time with can lead him or her into trouble), psychological (only insane people commit serious crimes like murder), and popular cultural (violence on television promotes violence in the culture), to name but a few. What most of these theories have in common, and what all of the traditional mythological accounts have in common, is that disorder (chaos) or evil comes from outside; the ancients did not then, and we do not now, like to think that evil is an inherent part of the human condition, and so we create myths or theories to discuss and perhaps account for “where [externally] it comes from.”

Myth, then, is metaphor, and it “works” like that other great repository of metaphor, poetry, allowing the user to relate two different items, one often concrete and the other often abstract, or one familiar and local and the other unfamiliar and remote, so that the concrete or familiar-local one helps us understand the abstract or unfamiliar-remote one.

N

Namelore

Names themselves and the traditions surrounding them. Names abound, and most names have their lore. For instance, there probably are well over two million unofficial place names in the United States. These informal names that do not appear on maps truly are folk names, names that people in any region know and use daily. In every region, there are imaginative narratives explaining the origins of most of these folk names as well as many of the 2.5 million official place names in the United States. These fanciful accounts of place naming are legends—stories that natives often believe but that may or may not be factual. Usually, even if these stories had some kernel of truth at their inception, through years of retelling versions have arisen. To the folk who pass them on, placename legends serve as part of their folk history.

More than any other variety of namelore, place-name legends have been studied by folklorists. Like place-name histories, place-name legends attribute the origins of place names to personal names (sometimes spelled backward), random selection from books (especially the Bible), changes or mistakes made by the post office or others, and incidents, especially those involving supposed utterances of Native Americans, foreigners, and drunks. Tensed, Idaho, supposedly was named for the Desmet mission spelled backward, but, according to local legends, either the post office changed the “m” to an “n” or the telegrapher who wired the name to the post office made a mistake. Incident names include Butcherknife Creek (Oregon) and Bad Axe (Michigan), allegedly named for a knife and broken ax found in those places.

Local pronunciations of place names not only furnish examples of folk speech, but often also inspire place-name legends, such as those about Hymera, Indiana, named for the classical city, Himera. Hymera is pronounced HIGH MARY by some residents, and three legends are based on this pronunciation. One tale says that the postmaster, John Badders, named the town for his unusually tall adopted daughter, nicknamed “High Mary.” Another story states that a woman named Mary worked in the post office, and neighbors passing or entering the post office would wave and call, “Hi, Mary!” More recently, it is said that High Mary was a local prostitute who charged high prices. Alum Creek (Ohio), according to local legend, was named for its bitter water, though actually the name comes from the local pronunciation of Elm, which rhymes with “bellum.” Although place-name legends may not be accurate in the details they preserve, they reveal other kinds of information. Often they provide an impression of the people who live in a region and use its names, whatever the origin of the names might be; and legends, of course, reveal what the names mean to the folk.

Much neglected by folklorists are place-name jokes—humorous accounts of the origin of names. Lacking contextual information, one can't be certain that stories about the origin of names actually are believed by the folk. Unlike placename legends, place-name jokes aren't taken seriously by people who pass them along. Accounts of the naming of such places as Perth Amboy, New Jersey, and Sheboygan, Wisconsin, for example, may be jokes. Perth Amboy supposedly received its name when an Indian chief saw the earl of Perth, a Scot, wearing his kilt and remarked, "Perth am girl." "No, Perth am boy," answered the earl. Sheboygan allegedly was named when an Indian with many sons but no daughters announced at the birth of another son, "She boy again." A joke involving Native Americans about the naming of Indianapolis goes: "Do you know how Indianapolis got its name? Well, there was an Indian who put some apples in his teepee for safekeeping. One day he went hunting buffalo, and while he was gone another Indian came by and stole the apples from the teepee. The Indian who did this left the first Indian appleless." Such humorous anecdotes have been reported as legends by collectors who have not determined whether the informant or anyone else in the community believes the tale.

Another kind of informal name is the nickname, which may be applied to anything—including people, pets, guns, houses, and vehicles as well as places. Nicknames often are important for the qualities they attribute to, and the attitudes they reflect about, that which they name. Place nicknames, for example, may influence, among other things, the economic development of a community. Terre Haute, Indiana, received the spontaneous nickname "Sin City" because of its history of gambling and prostitution, and the local Chamber of Commerce has attempted unsuccessfully to combat this negative image with a synthetic nickname, "Pride City." Similarly, "The Big Apple," meaning "something special, out of the ordinary, world class," in the "Empire State" (New York) also was revived by the New York Convention and Visitors' Bureau as the nickname of New York City in 1971 to combat a negative image of the city's violence and bankruptcy. Other nicknames, such as "The City of Brotherly Love" (Philadelphia) in the "Quaker State," project positive images of states and cities. Somewhat related to derogatory nicknames are *blason populaire* and slurring adjectives that incorporate ethnic and place names. Chicken soup is called "Jewish penicillin," and an old work shirt is called a "Puerto Rico Pendleton," for instance.

Place and personal names in other genres—tales, ballads, rhymes, proverbs, sayings, and beliefs—also provide a field of investigation for the folklorist. The ubiquitous "Jack," for example, appears in proverbs, rhymes, and ballads as well as in innumerable English and American "Jack tales," though in ballads Jack usually is a sailor or a servant. In proverbs we find, "All work and no play makes Jack a dull boy," or, more recently, a pun on the name: "All work and no play makes jack [money]."

Some of the most intriguing examples of namelore are found in name magic. According to a proverb, "Speak of the devil, and he will appear"; however, in folk belief naming the devil to his face, as in some versions of the ballad "Riddles Wisely Expounded" (Child 1), causes him to disappear in a blazing flame. Likewise, in the familiar tale "Rumpelstiltskin" (Aarne-Thompson (AT) tale type 500, "The Name of the Helper"), naming the supernatural creature to his face causes him to fall into a rage and tear himself in two. Discovery of the name gives one power over the supernatural creature (motif C432.1).

The magic power of names is common in American folk beliefs, especially those clustering around the main stages of the human life cycle. Thus, to name a child or tell a child's proposed name before it is born is bad luck. If a family has all male children and wants a female, naming the last male "Adam" will assure that the next child will be female. Generally, it is bad luck to name a child after someone who is living; a child should be named after someone who has died, although not for someone who has died tragically or who has died young. If a child is named after a living person, the angel of death may err when seeking the older person and instead take the younger person with the same name. Changing the name of an ill child, though, will confuse the angel of death and spare the child. On the other hand, it is also held in American folklore that a child will have bad luck or even die if his or her name is changed. Although this has changed some since the 1970s, it has been customary in American culture for a married woman to take her husband's last name, but in folk belief it is bad luck for a woman not to change her name when she marries. It is also bad luck for a woman to marry a man whose last name begins with the same initial as hers: "Change the name, not the letter/Marry for worse, not for better."

Names arise whenever there is a recurrent relationship between human beings or between human beings and other animals or other things, and lore arises in the same situations; consequently, though neglected, namelore is a rich field of study for the American folklorist.

National Council for the Traditional Arts (NCTA)

A nonprofit organization devoted to the public presentation of the folk arts, especially folk-music performance, with headquarters in Silver Spring, Maryland. The NCTA performs a broad range of services and support for traditional artists. Its officers conceptualize programs, identify artists, and publicize their availability to presenters. They produce and make available recordings for distribution as well as for radio and television broadcast.

The organization started in 1933 as the National Folk Festival Association and produced the first multiethnic folk festival in the nation in 1934 in St. Louis, Missouri. The first National Folk Festival was managed by Sarah Gertrude Knott, who sought expert advice to identify high quality in folk performance.

The public presentation of folklore at festivals was just getting started in the 1930s. The initial festival struggled financially and moved from city to city on an annual basis, but the organizers were dealing consciously with finding the best traditional performers. The National Folk Festival is still organized annually, has been held in twenty-two cities, and moves to a new city every three years.

Since 1972 the organization has been a cooperating association of the National Park Service, helping parks present tribal, folk, and community arts. In 1976 Joseph T. Wilson was recruited as the new executive director of the organization. Under Wilson's leadership, the name was changed to the NCTA, which reflected the desire of the board of directors to broaden its mission.

Thus, the NCTA embarked in 1979 on a program to take folk artists from particular communities on tour to places beyond their normal performance locales. The idea was to create new ways of touring folk artists. For example, the first tours were organized along cultural, ethnic, or occupational themes. In 1979, with the assistance of Mick Moloney of Philadelphia, the NCTA put together a tour of Irish performers called the "Green Fields of America." The NCTA also did an Appalachian tour and a French American tour of performing arts from Louisiana, New England, and French Missouri. There was a Swedish American tour, an Ozark tour, and a cowboy tour.

Some tours have been organized around particular musical instruments. For example, "Masters of the Steel String Guitar" featured six different styles Americans use to play the guitar: blues, Hawaiian, slack key, Dobro, Appalachian, and jazz. Another tour, "Masters of the Folk Violin," showed an equally varied menu of styles: Cape Breton, Appalachian, Texas long bow, Cajun, jazz, and Irish. Other tours in this series include "Masters of the Banjo" and "America's Master Storytellers."

These tours have differed from standard tours in that the NCTA chose not to promote well-known artists. Performers have been chosen instead because they are excellent representatives of particular cultures or musical styles. Audiences are presented with an illustrated booklet that gives some of the history and current context of the art form. An

emcee who is knowledgeable about the art form interviews the performers or interprets them to the audience.

In its ongoing efforts to bring traditional music to new performance venues, the NCTA has explored cosponsorship of concerts with a wide variety of community-based presenters such as municipal governments, community colleges, rodeos, ethnic groups, and civil rights organizations.

National Folk Festival

An annual North American event of performing arts and crafts sponsored by the National Council for the Traditional Arts (NCTA) of Silver Spring, Maryland. Performance sites change every three years.

The first National Folk Festival was held in St. Louis, Missouri, in 1934. The idea had originated with Sarah Gertrude Knott, and she served as director of the festival. Major M.J. Pickering was business manager. The term “folk festival” had been used before, but those earlier events had presented single cultures. The festival Knott and Pickering started presented Anglo, Indian, Black, Hispanic, Asian, European, and immigrant culture, as well as regional culture.

Their festival was the first to solicit the help of folklorists, ethnomusicologists, and other serious fieldworkers in presenting performance by authentic folk performers. With this assistance, they originated many of the common techniques used by hundreds of later festivals: crafts displays and demonstrations, comparative workshops, multiple staging, worklore workshops and demonstrations, as well as public discussions by cultural specialists.

The second National Folk Festival was held in Chattanooga, Tennessee, in 1935, and was remarkably like the first one. It was especially rich in central South religious and stringband music. Folklorist George Korson brought a contingent of anthracite coal miners from eastern Pennsylvania.

But there were major differences in scale when the third National was held in Dallas in June 1936. This festival was part of the exposition celebrating the Texas centennial, and it was bigger—six stages instead of one or two, eight days rather than five. It presented bluesmen, Cajun bands, string bands, shape-note singers, Indians, and many ethnic groups.

The National Folk Festival has continued in a nearly unbroken annual chain to present these interactions of folk artists, folklorists, and audiences. The fourth National was held in Chicago in 1937. After that, the National moved to Washington, DC, where it was held from 1938 to 1941. In 1942 it was held in both New York City and Washington, DC.

Festivals in other Eastern and Midwestern urban centers followed until 1971, when the National settled into an elevenyear run at Wolf Trap Farm Park in Vienna, Virginia, near Washington, DC. The National enjoyed this sylvan setting from 1971 through 1982, when the board of directors decided to move on with a basic scheme of rotating on a

three-year cycle, with the idea of leaving festivals in place that will continue on their own as local events.

A change in structure came with the 1987–1989 Nationals in Lowell, Massachusetts. Earlier festivals had been sponsored by the NCTA and a single local sponsor. The Lowell festivals emphasized that a local festival would continue from the outset and were cosponsored by the Lowell National Historical Park, the City of Lowell, and the private Regatta Festival Committee. The NCTA was in charge of the programming, but most members were from Lowell. Held downtown on five stages and with parades through the city, these events attracted audiences that ranged from 127,000 to 186,000, the largest in the history of the organization, at a time when most other folk events were losing audiences. The Nationals that have followed in Johnstown, Pennsylvania, and Chattanooga, Tennessee, also have multiple sponsors that include private and governmental bodies and have been large-scale events.

This oldest of multi-ethnic festivals has been staged in twenty cities. It is notable among North American festivals for seeking out folk virtuosos who are authentic carriers of folk or tribal traditions and preferring these originals to interpretations or revival of folk performance.

National Heritage Fellows

Exemplary practitioners of a wide variety of visual and performing folk arts recognized for their achievements by the National Endowment for the Arts (NEA). Approximately twelve National Heritage Fellows are named each year. They come from every region of the United States and represent a remarkable diversity of ethnic, religious, linguistic, and occupational groups.

The program began in 1982; by 1994 there were more than 175 Fellows. A few, like Riley “B.B.” King (rhythm and blues musician), Earl Scruggs (bluegrass banjo player), and Arthel “Doc” Watson (Appalachian guitarist and singer), were already well known before being named National Heritage Fellows. But since the Fellows embody particular, locally meaningful traditions, most of them are known mainly within their regional or ethnic groups. Bua Xou Mua, for instance, is a Hmong shaman, dancer, and musician in Portland, Oregon; Mabel Murphy is a quilter from Fulton, Missouri; Ethel Kvalheim a Norwegian *rosemal* painter from Stoughton, Wisconsin; and Valerio Longoria is an accordionist from San Antonio, Texas. There are weavers, like Eppie Archuleta of Alamosa, Colorado; and Jennie Thlunaut of Haines, Alaska; potters, like Helen Cordero of Cochiti Pueblo, New Mexico; and Burlon Craig of Vale, North Carolina; and bobbin-lace makers, like Sonia Domsch of Atwood, Kansas, and Sister Rosalia Haberl of Hankinson, North Dakota. Several National Heritage Fellows are storytellers—Ray Hicks, a Jack tale teller from Banner Elk, North Carolina, and Cleofes Vigil, teller of Hispanic stories, from San Cristóbal, New Mexico, are two. The youngest Fellow to date (1993) is Michael Flatley, an Irish American step dancer selected in 1988 when he was only thirty years old.

The startling diversity of musicians—reflecting the diversity of folk music in America—is hard to communicate other than by enumeration; on one instrument alone, the violin or fiddle, there were eleven different traditional styles represented by 1993; including Howard Armstrong (African American), Kenny Baker (bluegrass), Dewey Balfa (Cajun), Joseph Cormier (Cape Breton), Clyde Davenport (Cumberland), Canray Fontenot (Black Creole), Tommy Jarrell (Appalachian), Simon St. Pierre (French American), Kenny Sidle (Anglo American). Performers of traditional ethnic music, like Nikitas Tsimouris (Greek bagpipe player), Khamvong Insixiangmai (Laotian American singer), and Richard Hagopian (Armenian American *oud* musician), conserve in America outstanding musical traditions that are threatened in their homelands.

The National Endowment for the Arts selects National Heritage Fellows from nominations made by American citizens. Nominations consist of an essay or cover letter describing the artist’s career and life, the traditionality of his or her art, its community basis, and other related aspects such as artistic quality and significance. Nominations are accompanied by sample documentation of the artist’s performance (audio or video tape recordings) or material art (slides or photos). Letters of support—often from scholars knowledgeable about the particular tradition—are usually solicited by the nominator. A national panel of experts reviews the nominations and makes its recommendations to the

presidentially appointed National Council on the Arts. The National Council, in turn, passes its own recommendations to the chair of the National Endowment for the Arts, who makes the final decision. In September, each year's new Fellows are brought to Washington, DC, to receive \$5,000 fellowships and to take part in a special recognition ceremony and a concert and display of their work.

Needlework

The creation and adornment of items with the use of a needle. Needlework can be divided into two categories: utilitarian, or “plain,” needlework consisting of all items necessary for daily survival such as clothing, undergarments, household linens, and bedcoverings; and nonutilitarian, or “fancy,” needlework, which is purely decorative and created for enjoyment or display within the home.

Needlework was the core of the early American household. It was done primarily by women, either alone or in a group, and it represented one of their few accepted outlets for creative expression. Since little written history focused on the lives and experiences of women, needlework became a “writing” of sorts, through which women told their personal stories. Throughout American history, a strong connection existed between women’s lives and their needlework; as their roles in society changed, so did their needlework.

To the earliest settlers, needlework signified the very survival of the family. After all, members of the family were dependent on the woman of the house to weave the fabric, spin and dye the yarn, sew clothes and blankets, knit stockings and scarves—all by hand—to keep them warm and clothed. Few examples of this early plain needlework survive because the pieces were so valuable that they were used until they literally wore out. Even then, the scraps were saved to make pieced quilts.

Examples of decorative needlework have survived more often because they were not meant for everyday use, but for display. They were often framed or, as in the case of “best” quilts, they were folded and put away and rarely brought out of storage. Skill in decorative needlework showcased a woman’s talent and her eligibility for marriage. These skills were passed down from mother to daughter, and later were taught at girls’ academies. A young woman would first learn the basic, plain stitches necessary for overseeing a household, then steadily progress to more difficult stitches. But no matter how adept she became at decorative stitchery, she could never forget her

first lessons in plain needlework because someday her household would depend on them.

The earliest examples of needlework in America closely resemble English traditions, both in design and technique. English settlers brought their needlework with them to the New World in an attempt to retain some of the culture of the homeland they were leaving behind. In Europe, needlework had been a domestic art as far back as the Renaissance, when it was first added to a girl's basic education.

Crewelwork is embroidery of a two-ply worsted wool yarn, called "crewel," on linen. In early America, such embroidery closely resembled traditional English crewelwork, which dated back to the 1500s. Common motifs include vines, flowers, leaping stags, and

the tree of life. American women copied these designs from the original crewelwork they brought with them from England or referred to current European pattern books. While crewel yarn was first imported from London to Boston, the colonists soon began to spin and dye the yarn on their own. Yarns dyed with natural earth tones, such as greens and rusts, contrasted well against the natural linen background. Another variation featured yarns of all shades of indigo blues.

Crewelwork was used to decorate many things, from curtains to petticoats, but was most common on bed “furniture,” the heavy cloths hung around the bed to provide extra warmth in drafty colonial homes. Elaborate crewelwork designs showed respect for this important item in their homes and the desire of the women to beautify their surroundings.

Canvaswork was another form of early American needlework in the English tradition. Canvaswork is embroidery stitches of thin wool or silk yarn worked with a needle over the entire surface of a canvas background. Each stitch covered only one thread of the canvas, which at that time was more than fifty threads per inch—today’s needlepoint material has only about twenty threads per inch. The tight tiny stitches allowed the worker to achieve both a durable textile and intricate details.

Canvaswork was used for seat covers, book covers, fire screens, and pincushions. Large scenes showing men and women partaking of outdoor leisure activities were also popular. These scenes, which often took more than a year to complete, were sometimes referred to as tapestrywork because of their similarity to European tapestries. One version popular in the Boston area in the mid-18th century was called the “Fishing Lady.” In the scene, an elegantly dressed woman sits beside a stream, gracefully holding a fishing pole. Examples of this scene are thought to have all been done by students of one Boston needlework-design teacher. Sometimes all canvaswork scenes are referred to as “Fishing Lady,” even if the lady herself is not depicted.

By the end of the 18th century, the European look of crewel-and canvaswork was going out of style as America began to define itself. An American style was beginning to appear in needlework—simpler, more creative, less structured, and not married to an ideal technical perfection from which European needlework rarely strayed.

The early years of the 19th century saw the rise of girls’ academies, to which all families that could, sent their daughters. These academies taught young girls important feminine skills such as deportment, dancing, and especially needlework. A finished needlework piece, or “accomplishment,” acted as a final exam or diploma and was proudly displayed in the family home as a testament to both the girl’s talent and the refinement of the household.

Samplers were one of the most common needlework projects done in academies. In a practical sense, samplers are a record of stitches to which a woman can refer back should she ever forget a stitch. During the time of the academies, however, samplers became purely decorative. In Europe samplers tended to be long and thin, with records of stitches in rows. In America, they become shorter and wider, with fanciful borders and text added.

Samplers were usually done in silk thread on a natural linen background, although occasionally a colored background was used. Young girls between the ages of five and nine would begin with simple alphabet samplers. As their skills improved, they would move on to more difficult ones. Between the ages of twelve and eighteen is when girls would usually complete elaborate samplers, which included houses, landscapes, borders,

and lengthy text. Texts were often biblical passages or proverbs proclaiming feminine virtues and the benefits of industriousness and piety. All samplers would in-

Embroidery by Anna Bilynski, using traditional Ukrainian motifs. Chicago, 1977. Photo Carl Fleischhauer. American Folklife Center.

clude the name and age of the girl and the date of its completion. A girl might expect to complete two to three samplers during her tenure at an academy.

Once a girl had mastered the sampler, she would move on to more difficult work, called silk-on-silk pictorial embroidery. This included scenes created entirely of silk embroidery on a silk background and represented the most advanced schoolgirl work. Designs were first sketched on the background. Then the entire surface was embroidered,

leaving space for faces, arms, and sometimes skies that were later painted with watercolor for a natural effect.

Perhaps the most popular silk-on-silk pictorial was the mourning scene. Mourning scenes followed a common design of bereaved mourners in Empire dress standing around a tombstone or an urn on which the deceased's name and age and any other vital information has been written. A willow tree, a common symbol of death, was often included in these pictures as well.

Other typical motifs included classical or patriotic scenes, biblical stories, and printwork, which involved embroidery of black and grey silk on a white background so the look of a print engraving could be achieved. The girl who could successfully execute a fine piece of printwork was truly skilled and was held in great esteem both in the school and in her community. Printwork was tedious and time consuming, more popular in England but also done in America.

As the 19th century progressed, educational reform began to affect needlework's role in the American woman's life. While girls' academies still flourished, the emphasis now turned to true academic study, and needlework instruction fell behind. Soon, needlework skills ceased to be such a definitive indication of a girl's eligibility for marriage. But while the fine quality of stitchery declined, needlework itself found new significance in the Victorian woman's household.

To the Victorians, home was a special sanctuary. It was the sole responsibility of the woman of the house to create an environment in which good citizens could be raised. Her needlework, or fancywork as it was called, allowed her to decorate and accessorize each room, thereby creating a happy home environment.

Fancywork was created for every room and every purpose. Not restricted to wool or silk thread, the Victorians made use of beads, ribbons, sequins, and lace. Pillows and bookmarks alike were garnished with stitches. An embroidered lambrequin might be used to cover the harsh edge of a mantle, while a cross-stitched motto, such as "Lead Us Not into Temptation," hung in the hallway to instill proper moral tone.

Berlin work, a fad started in Germany, became popular in the mid-19th century. Berlin work is embroidery of wool yarn on canvas. It differs from the canvaswork of the 18th century in that the canvas is of a wider mesh so the stitches were not as delicate, and in it the Victorian aesthetic of bold patterns and bright colors is particularly evident. Preprinted designs on graph paper showed women exactly where the stitches should go and what colors should be used. This let even those women who had not benefited from an academy education create beautiful pieces. Thousands of designs were available from which to choose, among them bouquets of flowers, political portraits such as Washington or Lincoln, and bucolic country scenes.

Late-century needlework included trends such as crazywork, a style that mirrored the Victorians' love for asymmetry. Initially composed of patches of irregular shapes and various sizes in fabrics such as silk, satin, and velvet, crazywork was further embellished with embroidery, applique, and even paint. It was thought to be a result of the strong Eastern influence in America attributable most likely to the Japanese screens, cracked glaze pottery, and other artifacts exhibited at the Philadelphia Centennial Exposition in 1876. Small examples of crazywork include slippers, footstool covers, and even something called a "crazy cushion," which young girls would pass among themselves so

each could add a patch. Large examples of crazywork include crazy quilts, which were made throughout the country.

Because of the rise of women's magazines in the second half of the 19th century, such as *Godey's Ladies Book* and later the *Ladies' Home Journal*, needlework was now accessible to a much wider audience. The Victorian era in America was really the first time needlework crossed both class and regional boundaries. Until this time, decorative needlework had been done mostly by women of means who could afford both leisure time and the necessary materials. The Industrial Revolution brought about an increased wealth to the middle class as well as more affordable materials. This meant that more people could participate in needlework.

Much of early American needlework was concentrated in New England and Mid-Atlantic areas. This was due in part to the North's climate being more conducive to long hours indoors, and to the rural nature of the South, where communication was slower and home schooling the norm for a longer period of time. Improvements in transportation and communication, as well as subscriptions to national periodicals, however, brought the country's population closer together. Women from all over, even pioneer women, could keep abreast of the latest needlework trends.

The mass appeal of needlework would begin to decline as the 20th century neared. Increased educational and work opportunities for women took them away from the home in larger numbers. Technological advances such as the sewing machine made social calls with needlework in tow—a popular convention during the 19th century—impossible. Soon it ceased being a social activity. Affordable manufactured clothing and household linens also eliminated the need for women to make these items themselves.

Needlework continued as a hobby. Immigration in the early 20th century brought ethnic groups who established their own needlework traditions in their communities just as the early English settlers had done. Although needlework as a social activity for the majority of American women stopped, the needlework done by women throughout the previous centuries of American history represents the largest and most important contribution by women to American decorative arts.

New Deal and Folk Culture

Federal government programs designed to provide employment during the 1930s, creating the first national effort to document and present American folk culture and arts. As a reaction to the desperate economic circumstances of the Great Depression in the United States during the 1930s, President Franklin D. Roosevelt established his “New Deal” for the people, which created many work projects that documented and preserved the folk heritage of the nation and set a precedent for public folklore.

The years of the New Deal comprised a revolutionary era in American thinking. An unprecedented rise in nationalism during the 1930s was coupled with a search for the values that made America great. At the same time, there arose an antiintellectual movement as the “common man” was pitted against the scholar. The desperate circumstances of the American economy during the 1930s fostered a watershed in intellectual thinking that set the stage for the first experiment in government-sponsored documentation of American heritage and folk culture.

This new interest in American folklore was felt along the entire political spectrum and created a folk revival. The political Right championed a nationalist agenda that extolled the virtues of all things American. Among progressive circles, the Congress of American Writers in 1935 called for literature that was based on folklore and myth to “create an intuitive sense of community among all Americans” and to replace the “proletarian” literature of the past. Among the Communist Left, the impulse toward grass-roots expression within American heritage led to the establishment of the American Music League, formed in 1936 to “collect, study, and popularize American folk music and its traditions.” The Roosevelt administration seized upon this infatuation with folk culture and used it to garner support for its program of economic and social self-help, the New Deal. The New Deal embraced the concept of cultural diversity and advocated the value of the common man, two impulses that brought folk culture to the forefront of the American imagination. Nearly all programs of the New Deal administration were influenced by this tidal wave of interest in American folk culture. A notable example is the body of documentary photographs that were taken for the Farm Security Administration (FSA) that captured vividly life during the Great Depression. However, folklore would find its most powerful outlet within the arts programs of the Works Progress Administration (WPA), collectively known as “Federal One.”

In an effort to overcome economic and political disaster, Roosevelt, through the WPA arts programs, would seize upon folk culture as the obvious channel to recover a glorious, multifaceted heritage and instill national loyalty. In a 1938 speech, he expressed his feeling that cultural unity could be achieved by using folklore, which “has the elements from which to weave a culture.” The theme of “unity through diversity” would become a guiding principle for the New Deal administrators, especially those involved in the WPA Federal One programs.

Federal One consisted of four projects: the Federal Music Project (FMP), the Federal Arts Project (FAP), the Federal Theater Project (FTP), and the Federal Writers’ Project (FWP). All four were developed and shaped with the help of folklorists. Herbert Halpert worked for the Federal Theater Project and conducted extensive fieldwork under its auspices. Holger Cahill, a noted authority on American folk art, was

The Folk Music Project, Works Progress Administration. Sidney Robertson, supervisor of fieldworkers, sits by the window, against the partition. University of California, Berkeley, California, 1938. American Folklife Center, Cowell Collection (WPA).

named as the director of the Federal Arts Project in 1935. Under his guidance, the FAP created a national program of civic art that provided public murals and sculpture in cities across the nation. Cahill also conceived of and produced the Index of American Design. The Index, with more than 20,000 watercolor drawings of folk and popular material culture, continues to serve as an invaluable tool in American folk studies.

Ethnomusicologist Charles Seeger was instrumental in emphasizing traditional American music through his work with the Federal Music Project. In an address to the teachers of the FMP on March 21, 1939, Seeger berated the project for lagging behind the other three arts projects in “interpreting America to Americans.” He went on to state that “the oral tradition is usually supposed to be dead. On the contrary, America has one of the most vigorous collections of folk music of the day.” His early exhortations would bring folk music into the curriculum of the FMP.

Of the four Federal One projects, the Federal Writers’ Project was undeniably the most significant to the history of folk studies in America. Created in August 1935, the FWP proposed to put unemployed writers to work, collaborating on publications that would benefit the American people. During its seven-year tenure, the FWP would employ

more than 6,500 writers who would produce more than 276 books, 701 pamphlets and 340 “issuances.” Most important, the FWP created special work units for folklore, social and ethnic studies, and life histories. All three units demanded that workers conduct fieldwork and document the folk culture and heritage of the nation.

The lasting value of the Federal Writers’ Project to the field of folklore is less in the production of the American Guide Series and other publications, but in the raw data that was collected in every state of the nation. This fieldwork yielded information on the folklife and traditions of a myriad of cultural groups and regional cultures in the United States. Many folklorists made lasting contributions as employees of the FWP, including Zora Neale Hurston, Herbert Halpert, Alan Lomax, and Stetson Kennedy among others, but a few key people were responsible for the scope and direction of the folklife collection that was accomplished through the Federal Writers’ Project.

Morton Royce, as director of the social and ethnic studies unit of the FWP, supervised workers in collecting immigrant and occupational narratives in an interdisciplinary approach to the study of culture. This unit responded to the public’s new fascination with America’s multicultural roots and published booklets on the ethnic cultures to be found in each state and major city. New Deal historian Ann Banks has suggested that Royce was largely responsible for changing the notion of American culture as a melting pot, into a view of America as a mosaic—each culture retaining a distinct identity, yet contributing to the whole.

The FWP life-histories unit was directed by Southern writer W.T.Couch. As director of the University of North Carolina Press, Couch actively solicited manuscripts that included direct expressions of Southern folk culture, such as songs, tales, idiom, and the like. In his own book, *Culture in the South* (1934), he shaped his commentary around the traditional Southern values that pervaded everyday life in the region. Couch may have had a lasting effect upon the writers working in his unit in that he insisted upon documentary truth, letting people speak for themselves. In 1936 Sterling Brown was appointed national editor of Negro affairs for the FWP. As such, he was in charge of directing the collection of narratives and life histories from ex-slaves living in Georgia, Florida, South Carolina, and Virginia. This unprecedented research has given us hundreds of firsthand accounts of the institution of American slavery and has provided folklorists with valuable data for contemporary studies.

Also in 1936, John Lomax, at the time serving as curator of the Archive of American Folk Song at the Library of Congress, was appointed as the first national adviser on folklore and folkways for the FWP. Lomax brought to the FWP his combined interests in the rural South, the Negro, and folksong. He worked in cooperation with Brown to establish the Slave Narrative Project and encouraged the collection of folksongs from across the United States.

Lomax resigned as head of the FWP folklore unit in October 1937, but his impact was both lasting and profound. He established the initial interview approach and instructions to fieldworkers (cautioning against editing and using dialect spellings), and he left a legacy of solid work with Southern and rural materials.

At the fiftieth anniversary of the American Folklore Society, held December 27–30, 1937, at Yale University, Federal Writers’ Project Director Henry G.Alsberg sought the support of the society to create a permanent folklore unit of the FWP. After presenting his

case, Alsberg believed that all he had achieved was a lukewarm resolution that the FWP materials could be put to much better use by professional folklorists.

When Benjamin A. Botkin took over as director of the FWP folklore unit in May 1938, a significant rapprochement occurred. The appointment of Botkin, an academically trained folklorist, brought the academy and the American Folklore Society (AFS) into a dialogue and acceptance of the folklore work of the Federal Writers' Project. Stith Thompson, in his AFS presidential address that year, admitted that the FWP material might prove to be useful, and the society as a whole was relieved to see a "professional" take over.

It was Botkin who, in addition to directing his own unit, had the foresight to forge a fortuitous alliance within the various programs and projects of the New Deal. He established the Joint Committee on the Folk Arts, which brought interested professionals and lay persons together from all four Federal One programs, as well as other government-sponsored initiatives.

Botkin, through his New Deal position, redefined the concept of folklore to embrace previously discounted sources (urban, printed, recorded) and proposed the concept of folklore as "living lore." Botkin himself was influenced by sociologist Howard W. Odum; he would take Odum's notion of society as a biological entity and expand it to develop his own ideas concerning folk culture as a renewable, changeable resource—a functional approach to folk culture. This approach was outlined and defined in Botkin's new FWP handbook, *Instructions to Fieldworkers*, which was given to all folklore-unit supervisors in 1939. Fieldworkers were told to "look everywhere for material," and Botkin emphasized occupational and ethnic materials. He explained and set limits for the parameters of folklore collection to hundreds of FWP employees and subsequently influenced an entire generation of folklorists through this first government-sponsored folklore program. In doing so, he brought his own popular, public perspective to the field of folklore.

Perhaps the most revolutionary notion Botkin proposed was his commitment to help "the folk understand their lore and regain possession of it." Ultimately, Botkin, the humanitarian, was calling for an "applied folklore," in which folklore materials could be used to create understanding and improve the condition of human society. In this thinking, Botkin was a consummate New Dealer—dedicated to bringing about social, political, and economic change through his folklore work with the government.

In addition to the government-sponsored projects of the New Deal, other trends were influencing the course of folk culture and folk studies during the 1930s. Protest as a distinct genre grew out of the Great Depression and was linked with the struggle for labor rights and economic recovery and an emerging struggle for racial equality. Among other impulses, the folk tradition of group singing and ballad making was incorporated into the struggle with the advent of topical songs composed to address specific issues. On a national scale, "folksinging" was now viewed as a universal tool to move people to action. Folklore collectors such as Lawrence Gellert and Alan Lomax were collecting and publishing traditional African American songs that reflected the struggle for freedom, while artists such as Woody Guthrie, Lee Hayes, and Huddie Ledbetter (Lead Belly) were first coming to prominence.

Whether working for the government or struggling from an independent position, folklorists during the New Deal brought their desire for sweeping social and economic

reform into the realm of folk-cultural studies. The New Deal era was a time when applied folklore was used as a tool for national recovery and when the public interest in American heritage fueled an unprecedented experiment in government programs to document and preserve the folklore and culture of all Americans. As such, the New Deal was an unparalleled forerunner of the public folklife programs that would emerge in the 1970s.

New England

Connecticut, Rhode Island, Massachusetts, New Hampshire, Vermont, and Maine, states diverse in their peoples but similar in topography, occupations, customs, and traditions. As a primary region of European contact, New England, like its folklore, can be characterized as multicultural since settlement. The cooperation of indigenous peoples in passing on essential knowledge of the land and its resources eased settlement. The English settlers processed maple sap, added pumpkin, cranberries, and corn meal gruel to their diets, and, along with the French trappers farther north, adopted Native American woods lore and folk cures. Of numerous traditions handed down since contact, some, like the clambake, entrenched themselves regionally. A few, most notably Thanksgiving Day with its attendant foodways, became the custom of the land.

Expansion of settlement led the English along waterways to superior mill sites discovered by hunters, trappers, Indian captives, and early surveyors, and gradually forced the native populations to more remote reservations in northern New Hampshire, Maine, Canada, and interior Connecticut and Vermont, marginalizing for generations those who continued living among White settlers. In the wake of the 1960s civil rights movement, significant numbers of native peoples who had nurtured their heritage through an active network of traditional populations, both on and offtribal lands, shed their anonymity and today preserve and promote many aspects of native tradition both publicly and privately. Wampanoag, for example, tell of Mashaup, the creator giant, who arose one dawn from Cape Cod, his preferred resting place (he could stretch full length, his feet at Providence, hips on Chatham, and head near Sandwich). Mashaups sodden, sand-filled slip pers so angered him that he flung them out to sea where they formed the islands of Martha's Vineyard and Nantucket. New England's tribes, including the Passamaquoddy, Abenaki, Wampanoag, Narragansett, Micmac, and Pequod, are rich in such timeless lore.

In the popular imagination, however, New England is die home of the Yankee, an image based on the official history of the founding of our nation. Obscure in origin, the word "Yankee" applies, in New England, to those English who trace their roots to the Great Migration of the 1630s. Widespread identification of New England as Yankee country arises from the popularity of the Yankee character, that comical schemer and country bumpkin of mid-19th-century theatricals. Quick on the uptake, in storytelling tradition the classic Yankee avoids straight answers; he is a trickster given to wryly innocent verbal putdowns showcasing Yankee shrewdness and the outsider's (or city-slicker's) naiveté. A tourist asks: "Have you lived here your whole life?" The Yankee drawls, "Nawht yet!" "Yankee" also implies trickery, the Yankee trader wily enough to sell wooden nutmegs to unsuspecting housewives; or frugality, as in the proverbial expressions, "Tight as the bark of a tree" and "String too short to be saved." It would not be far fetched to place L.L.Bean's ascent from supplier of sturdy gear and duds for the hunter-trapper to Madison Avenue darling into the Yankee-trader tradition.

The rocky farmlands and seacoasts of New England became a region of villages, towns, and farms, settlements defined by the occupations of their citizens—Cape Cod

cranberry growing, New Hampshire and Vermont maple sugaring, Maine lobstering, Rhode Island deep-sea fishing, and Connecticut tobacco farming.

Maritime tradition is tenacious—fishing, lobstering, and boatbuilding being vital to seacoast economy. The whaling tradition of 19th-century Nantucket and New Bedford, Massachusetts, has an extensive folklore. Whaler's scrimshaw, the intricate whalebone carvings of lovers' tokens or whales' teeth incised with marine motifs, are valuable collector's items. Contemporary scrimshanders engrave and ink common animal-bone or polymer substitutes. The high drama of disaster at sea, an all too common feature of maritime history, and the rigors of the sailor's life are well documented in folksong and story and in such mocking ditties as: "Boston, Boston/What do you have to boast on?/Tall steeples, foolish people/And a coast that ships get lost on."

The most prominent aspect of New England government is the town meeting, traditionally occurring the first Tuesday in March. At these open, democratic meetings, townsfolk debate and then vote upon important issues on the town warrant such as taxes, roads, and law enforcement. In the past, a poduck supper and dance followed. In the 1990s, most towns with this form of government conduct general business one evening and school business on another.

Another important political tradition is Election Day, a significant holiday for the Puritan, but even more so for New England's African Americans. In the colonial era, Blacks could assemble freely to elect a Black governor who would serve as the authority for the community that elected him. First in

Massachusetts, and eventually throughout New England, their celebrations included colorful processions, the forerunner to the patriotic parades now a fixture of American holidays nationwide.

Seventeenth- and 18th-century New England is noteworthy for distinctive traditions of gravestone carving reflecting religious beliefs of the early settlers. The unique winged death's head and, following the Great Awakening's lyrical evangelical piety, the cherub soul image, symbolize the transport of the deceased to eternal glory in heaven. Period epitaphs, straightforward messages scattered among New England's graveyards, deliver their comforting words or stark warnings to the living who gaze thereon. Classic is: "Death, the debt to nature due/Which I have paid as so must you." More recently, John Benson, representing the sixth generation of the Benson family, Newport, Rhode Island, stonemasons, designed and fashioned President John F. Kennedy's New England—slate graveside in Arlington National Cemetery in Washington, DC.

Shaping the architecture and landscape of New England, the I-type house is ubiquitous across the Northeast, due in part to the late-20th-century vigorous historic-preservation movement. The extended farmhouse, its outbuildings attractively appended, epitomizes the old regional children's saying, "Big house, litde house, back house, barn." White or red clapboard houses, sheds, and barns dot the New England countryside, organize its countless village commons, and crowd its towns and urban neighborhoods. There exists a body of folklore around house, barn, and meeting house raisings, all communitywide events. An example is this partially parodic stanza sung at a 19th-century Connecticut barn raising to the tune of a familiar hymn: "If God to build the house deny,/ The builders work in vain./Unless the Lord doth shingle it/ It will blow down again."

With the Industrial Revolution came waves of Quebecois, Irish, Italian, Cape Verdean, Russian, Polish, Greek, and Scandinavian immigrants who provided cheap labor to the burgeoning mill manufactories, somewhat mitigating Yankee influence. With these workers came their values and traditions, along with ethnic social clubs, churches, networks, and neighborhood enclaves. Large communities of Hispanic and Asian immigrants, recently resettled in its metropolitan centers, further diversify New England's population. The stardom of the railroad inaugurated numerous items of folklore, including this spirited Massachusetts train riddle from the turn of the 20th century: "Corn stalks twist your hair/Mortar and pestle pound you/Fiery dragons carry you off/Great cart wheels surround you."

The regionwide popularity of dancing, once the culmination of virtually all social gatherings of any size, has dwindled. Neighborhoods and communities held contra dances, generally hiring Yankee and Francophone musicians whose repertoire of English, French Canadian, Irish, and Scottish dance tunes included "St. Anne's Reel" from Quebecois tradition, "Portland Fancy" derived from an Irish reel, and "Soldier's Joy" from the Yankee repertoire. A post-World War II revival of country music and dance traditions, primarily among college-educated newcomers and stabilized by the participation of some old-timers who grew up in the tradition, continues as a popular pastime. In remote rural New England, the barn dance, a meeting ground for young and old of varied ethnicities, thrived until the 1960s, and a few linger even in the 1990s. The

music, dance, and foodways of Cape Breton, Scandinavia, Ireland, Asia, and Latin America, among other places, enjoy currency in the active ethnic clubs of New England's cities.

Among popular traditions from the region's immigrants is the annual Blessing of the Fleet in Catholic fishing communities like New Bedford and Marblehead, Massachusetts. An activity once enjoyed by insiders and their local neighbors has become such a popular tourist attraction that it has spawned updated copycat practices like the blessing of a motorcycle fleet in northern New Hampshire. Numerous public processions honor a host of revered Catholic saints on their respective feast days and, among Southeast Asians at their late-winter New Year's celebrations, a fierce, yet benevolent, dragon god dances through the streets of New England's Chinatowns in brilliant red and gold to the raucous accompaniment of Chinese drummers.

A number of social customs continue according to an agricultural calendar: sheepshearings in the spring, agricultural fairs with horse and oxen pulls and timber rolling in the summer, apple and cranberry picking in the fall. All over New England, but especially in New Hampshire and Vermont, late winter's "sugaring off" commences with the tapping of the maples: The sap boils down into various grades of syrup, maple cream, sugar, and candy Accompanying "sugar-on-snow," a taffy-like treat of thickened maple syrup poured on clean, dry snow and rolled on a fork, are pickles "to cut the sweet" and donuts "to cut the sour."

Two traditional New England meals are the boiled dinner and the bean supper. For the first, pot roast (often corned beef), carrots, potatoes, cabbage, and turnips stew at a simmer for hours. The bean supper, its Saturday night niche promising the cook the relative ease of a Sunday cold lunch, includes frankfurters, steamed molasses brown bread, and beans baked slowly in a pottery crock, the squat bean pot itself a regional icon. Among French Americans, pork pie heads the list of holiday dishes, and, as for baked beans and brown bread, ancestral recipes are family treasures.

Summertime "chowdah" contests attract great crowds who sample myriad variations of the milk-based broth with onions, potatoes, salt pork, and clams. Labor-intensive annual family or community clambakes feature clams, lobsters, and corn on the cob layered with rock weed harvested from local shorelines and steamed in pits atop heated stones. These and other traditional gatherings provide appropriate settings for performances of local music, songs, stories, recitations, and dancing.

The 1888 founding of the American Folklore Society in Cambridge, Massachusetts, marked the formal beginning of the academic study of folklore in the United States. A regional organization for folklore studies, Folklorists in New England (FINE), was founded in Boston in 1980.

Newell, William Wells (1839–1907)

Founder of the American Folklore Society. Newell was never president of the AFS, but in several respects he was the organization's most important member. Born in Cambridge, Massachusetts, into one of New England's most affluent families, Newell was named after an ancestor, Reverend William Wells, an English Unitarian minister who sided with the colonists in the Revolutionary War and was forced to move to America. The family's money enabled Newell to obtain an excellent education in private schools and at Harvard College. After graduating from Harvard Divinity School, he spent a brief stint as pastor of a church in Germantown, Pennsylvania, but soon decided that the ministerial life was not for him. He returned to Harvard to obtain a Master of Arts degree in philosophy, then opened a private school in New York that he operated for several years. After his father's death in 1883, he received an inheritance that enabled him to live the remaining twenty-four years of his life as a private scholar.

Although Newell became justly famous in folklore circles, he published relatively little—only four books—on folklore topics. His most important folklore study was his first, *Games and Songs of American Children* ([1883] 1963). This still-useful book achieved many firsts: It was the earliest collection of children's folklore that was systematically compiled and was one of the first large-scale presentations of the games and game songs of English-speaking children. It was also the first annotated comparative study of such data, and it demonstrated that this material belonged to an international tradition. The book, however, is marred by its funerary spirit, a result of Newell's belief that this material would soon be extinct. This assumption also led him to collect the material as "memory culture" from adults rather than from children, who were active bearers of the traditions.

Besides his initial folklore volume, Newell published three books on Arthurian legend, but his significance in folklore's history is largely due to his role as founder and guiding force behind the American Folklore Society during its first two decades. He proposed the initial meeting, held at University Hall, Harvard University on January 4, 1888, at which the society was established, and he served as secretary of the new organization (1888–1906) and editor of the *Journal of American Folklore* (1888–1899). He also sought to make the American Folklore Society a professional society that held rigorous scholarly standards. He thought the field of anthropology offered the best means of achieving this goal, and he thus actively pursued an alliance with Franz Boas of Columbia University in New York City. Newell's efforts in this regard led to Boas exercising great influence in the society's affairs for the first fifty years of its existence. While this assured that the society upheld high scholarly standards, it also inhibited the idea of folklore having importance aside from anthropology.

Niles, John Jacob (1892–1980)

Balladeer, collector, and composer. As both a composer of art song and a collector-arranger of traditional material, Niles performed and published original songs, arrangements of folk music, and songs that were newly composed in the style of folk music. These “songs in the style of folk music,” including “Black Is the Color,” “I Wonder as I Wander,” and “Go ‘Way from My Window,” transformed a core element of traditional music into original song through compositional craft.

Twelve years after his birth in Louisville, Kentucky, Niles moved to rural Jefferson County, where he began collecting and writing music. By 1907 he had completed his first song, “Go ‘Way from My Window,” which was based on a line of text collected from an African American worker on his father’s farm.

In 1909 Niles graduated from DuPont Manual Training High School in Louisville, and began working for the Burroughs Adding Machine Company. In 1917 he enlisted in the aviation section of the Army Signal Corps, serving during World War I as a reconnaissance pilot.

Following the war, Niles studied music at the Schola Cantorum in Paris, the Université de Lyon, and the Cincinnati Conservatory. In 1925 he moved to New York City, where he completed two collections of wartime songs—*Singing Soldiers* (1927) and *Songs My Mother Never Taught Me* (1929)—and also began publishing collections of traditional music, including *Impressions of a Negro Camp Meeting* (1925) and *Seven Kentucky Mountain Songs* (1928).

In 1925 Niles met photographer Doris Ulmann, and between 1928 and 1933 the couple made four trips through the southern Appalachian Mountains to photograph performers and collect music. Many of the ballads recorded during these trips were later published in Niles’ *Ballad Book* ([1960] 1970).

During that same period, Niles also initiated a performance career with contralto Marion Kerby. The duo toured throughout the United States and Europe performing Niles’ original compositions in addition to his folk arrangements of Appalachian and African American material. By 1933 Niles was concertizing as a solo act and accompanying himself on his original “dulcimers,” which more closely resembled eightstring lutes.

After briefly serving as music director at the John C. Campbell Folk School in Brasstown, North Carolina, Niles married journalist Rena Lipetz in 1936 and settled in rural Clark County, Kentucky. At the zenith of his popularity now, Niles was presenting at least fifty concerts annually and recording for RCA’s Red Seal label, for Folkways Records, and for Tradition.

Although he maintained an active concert career until 1978, Niles increasingly focused his attention on original composition, completing more than 100 art songs and extended works, such as an oratorio, *Lamentation* (1950), and the *Niles-Merton Song Cycle* (1967–1970). He died at his farm in 1980 and was buried at St. Hubert’s Church in Clark County, Kentucky.

Niles collected, arranged, published, and performed traditional material, but he also composed and performed his own songs modeled on folk music. As Niles was both collector and composer, preserver and creator, it was inevitable that these vocations would overlap and create controversy. His adaptation and extension of tradition created confusion and acrimony because folklorists assumed that Niles had plagiarized folk material—while Niles heard his original songs plagiarized by performers who assumed they were folksong.

Northwest Coast and Alaska

Washington, Oregon, Alaska, and the northern parts of California and Idaho, the area commonly called the Pacific Northwest, a region long regarded as distinct by both residents and outsiders. Physiographically diverse, the area is characterized by a wealth of natural resources, located in environments marked by climatic extremes (aridity east of the Cascade Mountains and considerable moisture west, with arctic conditions prevailing in Alaska). The region was first inhabited by Native Americans 10,000 years ago, with nonnative settlement established relatively recently, in the early 19th century. Since then, the texture of the cultural landscape has included an ethnic mosaic of Latino-Americans concentrated in farming areas east of the Cascades, Asian Americans, and African Americans in urban centers, and Euro-Americans throughout; Native Americans continue to live on and off numerous reservations around the region.

Folklore in the Northwest generally includes any of the oral, customary, and material traditions shared by people who live in the area. However, the most distinctive aspects of Northwest regional lore are those traditions that reveal the intimate links between the region's physical environment and historical context and the resulting sociocultural milieu. As a subsection of the American West, historically subject to the same social forces that precipitated its creation as a political entity (such as colonialism and conflict with native peoples and rapid exploitation of natural resources), the Northwest shares in much of the Western mythos that pervades American popular culture, with Alaska assuming the role of the nation's last "frontier." Therefore, it is not surprising that Northwest regional lore is characterized by expressions of native cultures, the experience of pioneer settlement, and people's close interrelationship with the natural environment.

Native Americans of the Northwest come from six distinct culture areas: Plateau, Great Basin, California, Subarctic, Arctic, and Northwest Coast. The oral literature and material culture of these diverse groups has been well documented by anthropologists and folklorists, perhaps more so than any other area of North America. Such cultures generally recognized at least two types of narrative: myths, which could be told only in the sacred season of winter and featured a world prior to human existence; and historical tales, which featured the present world, with people and supernatural entities. Myths commonly focused on the exploits of specific animal characters that had many human qualities, such as transformers who were serious, purposeful beings that changed the natural landscape and brought culture to the world in preparation of people's arrival. More common were humorous stories of buffoon-like tricksters (often in the form of Raven, Bluejay, or Coyote) who embodied the less admirable qualities of greed, lechery, and conceit but yet, through their power and cunning, still brought incidental benefits to people. Historical tales often portrayed encounters between human and supernatural worlds, often with powerful and malevolent beings such as cannibal ogresses or wild man-like "bushmen." All forms of native oral literature followed specific conventions of plot, motif, repetition, and formula, yet also existed in traditional storytelling contexts

wherein each tale could be re-created anew as a dramatic performance, complete with gestures, voice inflections, pauses, stylized speech for individual characters,

*Native Americans fish for salmon.

Congress.*

songs, and interaction between the raconteur and audience.

Native material culture was closely linked to the subjects and themes of oral literature and religious belief. The art of the Northwest Coast is particularly notable, taking such forms as the painting of wood surfaces, the decorative features of basketry, intricately woven textiles such as Tlingit Chilkat blankets, or sculptures of argillite, bone, silver, and wood that included “totem” poles and articulating ceremonial masks. The Subarctic and Plateau are known for their beadwork embroidery of skins with colorful floral designs, while the Arctic features small carvings of ivory figurines.

The wide variety of nonnative ethnic groups that came to the Northwest brought traditions from their homelands. Scandinavians came in great numbers, working as loggers, fishermen, and farmers. Both Swedes and Norwegians brought their recipes for *lutefisk* (dried cod soaked in a lye solution). Norwegians crafted Hardanger fiddles (with elaborate decoration and four extra strings); Swedes continued to begin the Christmas season on December 13, St. Lucia Day, a celebration based on oldcountry legends; and Finns continued to use saunas for ritual cleansing and healing. Together, many Scandinavians celebrate a *Skandia Midsommerfest* and dance around a flower-bedecked pole to the music of fiddles and accordions, or gather to march in Seattle's annual parade for *Syttende Mai* (May 17), Norwegian Constitution Day. Asian American traditions include festive celebrations of the New Year and the elaborate storycloths and embroidered squares of recent Laotian Hmong refugees. Greeks manage coffeehouses and restaurants in the Puget Sound area; Basques are shepherders in southeastern Oregon; fishermen of European and Native American descent celebrate Russian Orthodox-influenced weddings and Christmases in Alaska, and Latinos relate stories of nocturnal encounters with the legendary *La Llorona*, a ghosly weeping woman searching for her dead children.

More significant to the study of regional folklore are the distinctive words, actions, and objects that have been shaped by the shared experiences of Northwest life. Northwest oral traditions include a profusion of names, jargons, and expressions wherein pronunciation and understanding conspicuously indicate one's identity as resident or outsider. While many will guess that Webfoots are Oregonians, Sourdoughs are seasoned Alaskans, and bunchgrassers are people who live on the arid side of the Cascades, fewer people are privy to the complex occupational jargons of logging and ranching, or the fact that "side-hill salmon" are, in fact, deer poached out of season, or that "skookum" means strong, big, or fast, according to Chinook jargon, the region's frontier lingua franca. Proverbial expressions aptly describe the local landscape or weather: "Land so poor the jackrabbits have to carry their lunches," or "Fog so thick you could seine a salmon in it." One might recognize that local place names are based on landscape features, historical events, or Chinook jargon, but an outsider might easily mispronounce Puyallup, Willamette, Sequim, or Kwigillingok. Jokes indicate one's familiarity with the sense of humor generated from regional realities, as when western Oregonians remark that ten people fell off their bikes last year and drowned. While folk music of the region largely derives from elsewhere in the country, there are local folksongs that reflect the same sense of humor, such as parodies of the hymn "Beulah Land" that poke fun at the Oregon country's abundant rainfall or of "The Old Settler," who finally gets accustomed to a life amidst "acres of clams."

Folklorists have also documented the tales of, and by, several noted liars, such as Len Henry of northern Idaho and Hathaway Jones and Reub Long of Oregon. These "windies" often employ outrageous falsehoods and traditional motifs from American tall tales to exaggerate the region's natural landscape or frontier heritage, such as the one about an eastern Oregonian who is knocked unconscious by a single desert raindrop and had to have six buckets of sand thrown in his face to bring him around. Even more telling of the Northwest's character are local legends that make concise symbolic statements about regional experience. Heroic rides on horseback to reach a distant doctor, rude Indians that break into homesteader's cabins to steal and eat uncooked foods, cougars that

follow children home from school—all reflect attitudes toward the physical isolation of frontier life. The region's legacy of racial prejudice and fear is evinced through stories of tunnels used to smuggle Asian workers after the Chinese Exclusion Act of 1882. Uncertainty about the region's wilderness mysteries has helped foster many stories of the legendary Bigfoot, while anxiety over the unpredictable nature of volcanic activity has facilitated accounts of a prophetic "vanishing hitchhiker" who warns of impending eruptions of Mt. St. Helens. And narratives that portray people's close calls with forest fires, grizzly bears, and "flying by the seat of your pants" air travel all make very personal statements about the ways in which the natural world continues to dominate modern everyday life in the rural Northwest.

The customary folklore of the Northwest includes a wide range of traditional practices ranging from the beliefs (superstitions) that loggers and fishermen have pertaining to good or ill fortune in the workplace, to the traditional techniques of local hunters and trappers, to the gestures and sign language employed by workers in noisy sawmills. Much more prominent, however, are many regional or community festivals. Such structured, regularly scheduled events include local powwows where Indian and some nonnative people participate in traditional dancing, singing, and feasting (notably salmon and fry bread) in celebration of tribal persistence and modern panIndian identity. Rendezvous, in which costumed mountain men and Indian artisans reenact the region's historical legacy of the frontier fur trade, have become increasingly popular. Even Alaska's Iditarod, a 1,049-mile dogsled race, can be seen as a springtime festival that traditionalizes the "Alaskan spirit" in an attempt to promote modern Alaskan identity and a sense of belonging. Other festivals stem from the dominance of local occupations that exploit the region's natural resources. Lumbering and ranching areas often sponsor log shows and rodeos that feature playful competitions based on the work skills and athleticism of loggers and cowboys ("buckaroos").

Not surprisingly, the material folk culture of the Northwest is dominated by the natural abundance of wood. Until the 1930s, log construction of rural houses, barns, and outbuildings was not uncommon and drew largely upon the traditional forms and construction techniques of the Eastern and Midwestern portions of the country. Perhaps the most distinctive aspects of Northwest folk architecture are the raised caches for food storage in Alaska the widespread "Rocky Mountain log cabin" (with its roof projecting over the gable-end door), and the rather large number of buildings, built by immigrants and based on European models, most notably Finnish log houses, barns, and saunas. Even the more arid sections of the Northwest have many remaining log barns, while some ranches of eastern Oregon still use willow corrals with juniper posts. Also to be considered are distinctive mailbox supports that use old logging, ranching, farming, and fishing equipment to make practical yet aesthetic statements of locality and occupation.

Wood also predominates in traditional arts and crafts, whether it be practical boat construction (the McKenzie River drift boats in Oregon, or the flat-bottom skiffs in Alaska), or the tangible expression of regional aesthetics in carvings of narrative tableaux for Western frontier or logging scenes, or the larger chainsaw carvings of local animals. Also notable is the fine metalwork exhibited in the crafted implements of ranching (custom branding irons, spurs, and bits) or the leatherwork in saddles. Among traditional Northwest foodways, there are innumerable recipes for the preparation and preservation of salmon and shellfish, and for venison, berries, and local edible plants.

As folklorist Suzi Jones has argued, the regionalization of folklore is, in many respects, a rhetorical strategy, a means of making various forms of cultural expression appropriate for a specific audience to make a persuasive statement about regional identity. Such may be the case for the Northwest, the far corner of America, which has long been imagined as distinct, a part of, yet separate from, the classic American West. Euro-American newcomers rationalized pioneer hardships and ethnic conflict in order to claim their place in the nation's farthest "promised land," from the earliest settlers of the 19th century to the separatists of tomorrow—the back-to-the-landers on ecotopian communes, the survivalists and White supremacists, and the many "Lower-Forty-Eight" refugees who seek an alternative way of life homesteading in the Alaskan bush. Regional folklore of the Northwest certainly does comment on the diversity of its cultural landscape, but, more significant, it speaks directly and symbolically to the people's image of themselves: willing to endure the isolation and hardships of a continued "frontier" experience and able to thrive in a natural-resource utopia, where fishermen and farmers, loggers and buckaroos successfully elude the problems of industrial urban life that so dominates other areas of America.

With the exception of Native American traditions, relatively few book-length studies of Northwest folklore have been published, and folklorists have left Alaska virtually untouched. However, the journal *Northwest Folklore* (1965–1969, 1985–) contains numerous informative articles, and at least two textbooks—Jan Harold Brunvand's *The Study of American Folklore* "Len"; and Barre Toelken's *The Dynamics of Folklore* (1979) are infused with examples of Northwest lore. The Randall V. Mills Archives of Northwest Folklore at the University of Oregon remains the largest repository for information on regional traditions.

Nuclear Lore

Folklore of the Atomic Age. The development, use, and proliferation of nuclear weapons fundamentally and irrevocably altered American culture and thought. Advancements in nuclear technology since the 1940s have symbolized military superiority and the promise of a techno-utopian future, but also have fueled fears of global annihilation and evoked widespread fatalism about the future of humanity. The feelings and fears associated with the nuclear era have precipitated various types of folklore, including religious and secular beliefs, legends, songs, folk art, jokes, and speech forms.

Since the dropping of atomic bombs on Hiroshima and Nagasaki in August 1945, the most widespread and persistent folklore associated with nuclear weapons reflects die belief that their use will bring about the end of the world. The folklore about nuclear apocalypse has flourished in both American religious and secular cultures.

Since the 1940s, religious apocalyptists have interpreted the invention of nuclear weapons and the prospect of nuclear war as a fulfillment of divine prophecies, and they have readily incorporated the idea of nuclear holocaust into vernacular religious cosmologies. Premillennialist Christians, for example, frequently regard the symbolic and cryptic language of the Book of Revelation as a prophetic description of a foreordained nuclear apocalypse. The biblical passage “The heavens shall pass away with a great noise, and the elements shall be disintegrated with intense heat; the earth also, and all its works, shall be burned up” (II Peter 3:10) is commonly interpreted as a description of nuclear holocaust. Such beliefs have mythologized and sanctified the threat of nuclear annihilation, by regarding it as a meaningful part of a foreordained, supernatural plan for humanity. In 1991 some premillennialists, watching for the “signs” of imminent doomsday, interpreted the war in the Persian Gulf as the beginning of an “end times” scenario, foretold in the Bible, that would culminate in a nuclear conflagration.

Roman Catholic popular belief during the nuclear era has included prophecies about imminent nuclear apocalypse, often communicated through apparitions of the Virgin Mary. For instance, the “third secret of Fatima,” conveyed during a Marian apparition in 1917, is commonly believed to predict nuclear holocaust. A related popular belief is that nuclear annihilation may be averted by the conversion of Russia to Catholicism.

Numerous other religious groups maintain beliefs about nuclear apocalypse, and similar ideas are expressed in New Age prophecies as well as beliefs about the predictions of Nostradamus and Edgar Cayce. Beliefs about the existence of unidentified flying objects (UFOs), which emerged in the 1950s, also seem directly related to nuclear apocalyptic fears. Often characterized by expectations of worldly destruction and salvation, early UFO beliefs frequently assert that extraterrestrials would intervene and save humanity (or a chosen people) from nuclear holocaust.

Unlike religious beliefs about nuclear apocalypse, which promise the salvation of the faithful and a redemptive millennial realm to replace a world destroyed, secular beliefs about nuclear holocaust rarely express such hopes. Popular beliefs and narratives that arose during the Cold War era are often explicitly fatalistic, implying that humanity could not reverse its inevitable path to nuclear destruction. The physicists who worked on the development of the atomic bomb, for instance, were portrayed in narratives as evil geniuses who would ultimately destroy the world because of their obsessive pursuit of

power and forbidden knowledge, similar to the legendary Faust character. Speech forms, neologisms, and euphemisms associated with nuclear weapons also seem to reflect feelings of powerlessness and fatalism.

Individual helplessness concerning the uncontrollable destructive power of nuclear weapons is expressed through assorted beliefs about nuclear technology, such as the “Doomsday Button,” a red button that supposedly existed in the White House and the Kremlin and that, when pushed, would destroy the world. Even the common use of the expression “the bomb,” when referring to the multitude of nuclear warheads that exist, seems to reflect popular perceptions of nuclear weapons as a single, massive, omnipresent force of destruction. Other forms of nuclear lore include beliefs about government secrets concerning the harmful effects of radiation on humans and animals, and the attribution of bizarre weather patterns and natural disasters, such as hurricanes, floods, and unusual heat waves, to nuclear testing.

Jokes about nuclear war and technology are relatively scarce, but those that exist tend to express a sense of ironic inevitability about nuclear doomsday. (What do you do if they drop the bomb? Answer: Hide under a table, put your head between your legs, and...kiss your ass goodbye!) A similar sense of gallows humor is expressed in the jokes, narratives, and speech forms created in the aftermath of the accident at the Three Mile Island Nuclear Power Plant near Harrisburg, Pennsylvania, in 1979. (Popular greetings among residents included, “My, you look radiant! and “You’re glowing today! [Milspaw 1981:60].) After the disaster, beliefs and rumors about the effects of exposure to radioactivity, such as sterility, genetically mutated offspring, and increased rates of infant mortality, spread rapidly, a reflection of the suspicion that authorities were withholding information, as well as uncertainty about the long-term effects of radiation.

The nuclear disaster that occurred in Chernobyl, Ukraine, in 1986 provoked similar beliefs and rumors, as well as jokes with ironic and macabre themes that expressed anxieties about uncontrollable nuclear technology. (What has feathers, glows in the dark, and cooks by itself? Answer: Chicken Kiev. What do you serve with Chicken Kiev? Answer: A black Russian. What’s the weather report from Kiev? Answer: Overcast and 10,000 degrees.)

Although fears of nuclear apocalypse have decreased since the end of the Cold War, 1990s nuclear lore continues to reflect anxieties about potential nuclear disasters, stemming not only from concerns about nuclear accidents, but also the magnitude and seeming uncontrollability of nuclear weapons and the possibility that such weapons will be developed and used by hostile nations or extremist organizations in the future. Such feelings and fears will no doubt continue to inspire an abundance of folklore in the years ahead.

Nye, Pearl R. (1872–1950)

Ohio Canal boat captain, singer, and songwriter. Nye, the fifteenth of eighteen children, was born in Chillicothe, Ohio, on the canal boat *Reform*, which ran between Akron and the Ohio River. Singing was a common emertainment for the Nye family and at canal gatherings, and as early as 1932 Captain Nye began corresponding with archives and libraries about his extensive canal-song collection, written by hand on sheets of yellow paper and pasted together to make long scrolls. In the autumn of 1936, John Lomax received information about him from an Akron journalist and visited him in Akron a week later. In June 1937 he recorded thirty-three of the Nye songs, and in November 1937 Alan and Elizabeth Lomax recorded an additional thirty-nine songs. During the next months, Nye wrote out hundreds of songs for the Library of Congress, and in May 1938 he sang at Constitution Hall and at a meeting of the American Folk Song Society in Philadelphia. In 1941 his songs were used in a Library of Congress series on the Erie Canal broadcast over NBC, and in 1946 Ohio State University recorded as many of his canal songs as he could recall. A pamphlet, *Scenes and Songs of the Ohio-Erie Canal*, based on these recordings, was published in 1952 (Thomas [1952] 1971).

Captain Nye knew many traditional songs learned from his singing family, but as he grew older and his memory failed, he depended more and more on his own compositions. Among his many compositions describing life on the Ohio Canal, he considered his masterpiece to be “The Old Canal,” a work consisting of almost 100 stanzas that named virtually every town, lock, store, and mill along the canal.

The Library of Congress collection of Nye songs includes twenty-three 12-inch discs recorded by the Lomaxes; a film, *Bard of the Ohio Canal*; and microfilm of hundreds of sheets of handwritten songs. Other manuscript materials are in the Ohio State Archaeological and Historical Society in Columbus. More than fifty songs recorded at Ohio State University in the 1940s were somehow lost a number of years ago. However, enough manuscripts and recordings remain to demonstrate that Nye’s collection was remarkable in its breadth and scope and preserves many of the traditional songs known on the Ohio Canal.

O

Occupational Folklore

Expressive culture of the workplace, with special emphasis upon informally learned narrative, skill, and ritual used to determine status and membership in the work group. The earliest investigations of occupational folklore arose from interest in tracing the derivation of words and songs used within particular trades, from seafaring and logging to mining and farming. Later studies expanded into specific traditional crafts, followed by an interest in increasingly industrialized, urban work groups. Contemporary research is devoted to holistic studies of informal work cultures approached as contested landscapes of power, gender, and ethnicity both internally and externally. Occupational folklorists continue to develop methods for negotiating public representations of occupational folklife to outsiders through a variety of presentational formats, from demonstrations of industrial craft to museum exhibitions of skill retention and destruction over time.

The listing of occupational terms and indigenous folksong gave way in American folklore studies to an increased sensitivity toward the way in which these forms reflected historical and cultural change within types of work. John Lomax and Nathan Howard "Jack" Thorp both concerned themselves with cowboy lore, in particular the ways in which the songs and stories of buckaroos reflected a vernacular idiom unique to the frontier. Thorp more than Lomax linked this interest in cowboy lore to its Mexican roots; he also felt no constraints in revising and reshaping the traditional forms he collected from ranchers and buckaroos. Thorp's work of 1908 and 1921 was reprinted and annotated by Austin E. and Alta S. Fife in *Songs of the Cowboys* (1966), while Lomax's *Cowboy Songs and Other Frontier Ballads* (1910) is widely available. Both Thorp and Lomax published in formats that extended the study of occupational folklore beyond the academy into the popular marketplace. They conducted fieldwork at a time when the great cattle drives continued from Southwestern ranches to railheads in Colorado and Montana.

The interest in uniquely American occupations also led regional collectors of folksong into the logging camps, mining regions, and farming areas to collect the indigenous songs and stories of work. Phillips Barry, Fannie Eckstorm, Mary Smyth, and others combed bunkhouses and boarding houses to identify locally recognized singers and storytellers. Although their published anthologies evinced comparative scholarship of some scope, their studies remain somewhat limited because of bowdlerization and the alteration of texts to appeal to local sensibilities. The regional collections also reveal comparative material of some interest between regions (the crosscut saw of the Northeast becomes the

“Swede-fiddle” or “misery-whip” of the West); however, these collections did not attempt to place their material in broader occupational contexts.

Following Lomax’s published collection in 1910, a young newspaperman in Pennsylvania, George Korson, became interested in the songs and stories of anthracite coal miners. He compiled material from the mining communities of Pennsylvania in *Songs and Ballads of the Anthracite Miner* (1927). Korson’s view was that the mine was an occupational, but, more importantly, an industrial, site where workers were isolated from contemporary American society, living in a semiprimitive state and exhibiting an active “folk imagination” that generated a tremendous body of folksong and other lore. As he continued his collecting and publishing of this material, Korson became aware of the unique forms taken by occupational folklore in an industrialized setting. His willingness to shift from a search for specific types of song and story among a peasant-like class of homogeneous workers in the mine patch gave way to an understanding of the complexity and diversity of industrial expression. His ability to make this transition places him in a unique position in American studies of occupational folklore. Korson maintained an interest in publicly presenting miners and their lore through folk festivals and through his recordings and publications at the Library of Congress’ Archive of American Folk-Song. He challenged festival organizers who sought to popularize and commercialize these expressive forms by demanding that the miners be presented as skilled workers who performed traditions from their com-

munities rather than as singers and storytellers who happened to be miners.

The impact of ideology on occupational folklore was most dramatically reflected in concepts of social responsibility found in the works of Benjamin A. Botkin and Archie Green. Botkin's experiences as an editor for the Federal Writers' Project in the 1930s led him to recognize the power inherent in publishing the stories and experiences of industrial labor. Botkin sought to present this lore to as many people as possible through books, articles, and dramatizations so that the strength and the pathos of the occupational experience could educate the general public regarding the realities (positive and negative) of American industrial life. Botkin published many "treasuries" of his collections, with the bulk of the occupational material appearing in *Sidewalks of America* (1954) and (with Alvin Harlow) *A Treasury of Railroad Folklore* (1953). Botkin's eclectic collections combined personal experience narratives of engineers, cab drivers, steelworkers and policemen with material clipped from newspapers and other published sources.

Archie Green's *Only a Miner: Studies in Recorded Coal Mining Songs* (1972), in the issues it raised and the background of its author, suggests a linkage to the impulses of Botkin and his contemporaries that continues to shape research in occupational folklore. A former shipwright and union activist in San Francisco, Green combined an interest in industrial craftsmanship with an insider's view of the world of work. His book chronicled the role played by recorded music as it is actually received and reinterpreted in mining communities. He illustrated how folklore both shapes and reflects an occupational worldview that is at once political, linked to work-related concepts of skill and shared knowledge, and in direct opposition to the occupational culture and worldview of owners and managers. Like Korson, Green fought for the accurate presentation of workers' skills and lore in public contexts; largely through his efforts, the Smithsonian Institution has included occupational folklore in the Working Americans section of the Festival of American Folklife since the late 1960s. Green provided a link between the craft traditions of organized labor and the academic study of occupational and labor lore that continues to exert a strong influence on those conducting research in the field. In *Only a Miner*, Green wrote that there is "...an observable blurring and overlap in the terms industrial, occupations, labor, or worker when combined with folklore. Hence, industrial lore may be an umbrella term broad enough to cover all job processes as well as urban living, unionism, radicalism, social reform, civil disobedience, and political action" (Green 1972).

Perhaps the most influential comparatist and scholar in the field of occupational folklore was Wayland D. Hand. In his article "American Occupational and Industrial Folklore: The Miner" (Hand 1969), Hand traced the study of mining traditions throughout the Western world and called for additional ethnological comparisons of occupational tradition. Hand's exhaustive comparative research and his initiation of an international dialogue about occupational tradition across cultures provide a potential for more global studies of work culture and its expressive dimensions.

In his treatment of the folklore of miners below and above ground, Hand dealt with a wide range of topics of current concern, including the role of occupational accident accounts in a trade and their relationship to beliefs, customs, and expectations. He also examined the naming and use of tools and skills, the development of clothing and occupational gear, pranks and initiations, jokes and legends, and the impact of occupational culture upon the wider community. Hand maintained in his work with

Western miners that in spite of technological change, occupational folklore would continue to form an important part of any work experience.

Although Hand and Green shaped and honed the concepts of occupational and industrial folklore that continue to demarcate the field, there are a number of other influences that directly or indirectly relate to the development of this specialty. These include investigations of political forces or movements that affect or reflect occupational culture, urban studies that include occupational culture in their investigations, studies of a cultural-historic and materialistic nature that focus on work within a specific culture (both folklife and ethnographic), investigations of specific expressive genres (narratives, customs, belief systems, and the like) within occupational settings, and approaches to occupational culture that attempt to apply their findings to specific problems or conflicts within the community and link occupational folklore to political or oppositional strategies for the amelioration of these conflicts.

The political dimension of occupational folklore has been most dramatically expressed in the protest songs and laments generated in the early days of American industrial labor organization. Korson documented the importance of disaster ballads and protest songs sung by men like Con Carbon and Ed Foley about the Avondale mine disaster, the Coal Creek rebellion, and the Ludlow massacre in Colorado. John Greenway provided the first broad survey of protest songs in his *American Folksongs of Protest* (1953). Greenway refuted the scholarly requirement that all folksongs must be traditional (that is, passed over at least two generations) and must have lost their identity as a consciously composed piece. He found that not only did many mining, lumbering, and agricultural communities recognize poets and songwriters, but these individuals captured cultural history and occupational experience in a compelling manner that resulted in the collective use of these forms over time as traditional documents linked to place.

During the 1950s and 1960s, labor and protest songs moved even further away from the local occupational community, yet their mass-audience impact through radio, television, and records was felt strongly during the civil rights struggles and the antiwar movement. Fully documented by R.Serge Denisoff and Richard Reuss, this era of protest music and folksong revival in urban industrial settings (termed the "proletarian renaissance" by Denisoff), revealed the adaptability of both labor protest tunes and texts to fit the struggles, frustrations, and social contexts of a new generation. This shift from a concentration on occupational folksong text to a closer examination of how that text is consumed by an audience reflects a thematic and a theoretical shift in the production and analysis of these materials.

Thematically the songs of the early days of labor organization (such as "Solidarity Forever" and "Hold the Fort for We Are Coming") are adapted to new audiences and new struggles; folklorists are beginning to appreciate how the material is consumed by wider audiences through the electronic media. As long as the material addresses itself to the beliefs and

*Miners' tools. Kern County,

Library of Congress, LC—USW3—
3328-D.*

cultural concerns of people who derive at least a portion of their social identity from their work, these songs must be considered a significant aspect of occupational folklore. A particular song or style of music—for example, a country-western song about an alienated drifter or angry workers who quit their jobs as a matter of principle for unfair treatment by the boss—can be used as a rhetorical device within the group to make oppositional statements about parallel sentiments or feelings. The seminal work of Américo Paredes and José Limón extends this social and cultural analysis of traditional songs and texts as they emerge from ethnic and class conflict on the Texas-Mexican border. The work of these scholars links the Mexican border ballad (*corrido*) and other cultural forms such as the collective term “chicano” not only to specific historical incidents between Anglos and Mexicanos—more important, they analyze how these expressive forms provide political and personal opportunities for active opposition to Anglo racism and violence toward Mexicanos.

In addition to the literature on labor protest songs and current approaches to urban folklore that relate directly to any consideration of occupational folklife, a body of materials that concerns historical and contemporary work processes and techniques has been generated by folklife scholars, both in the United States and Europe. The concept of “folklife” (German *Volkskunde*, Swedish *folkliv*) is more inclusive than “folklore,” embracing the material as well as the verbal and “intangible” elements of traditional expression. Articulated in early articles by Don Yoder and Warren Roberts, the folklife movement gained increased recognition in the work of Henry Glassie, particularly his empirical, cultural-geographic work on large patterns of material expression in the

Eastern United States and later in his more critical and reflexive *Passing the Time in Balleymenone* (1982). Glassie not only brings the fieldworker's eye and ear for felicitous detail, but also provides one of the more complete theoretical backgrounds to date (1995) for the relationships among culture, material expression, and worldview as these elements have been experienced over generations of crofters and peat cutters in Northern Ireland.

Other scholarly works in occupational folklore, such as Horace Beck's *Folklore and the Sea* (1973), Tristram Potter Coffin and Hennig Cohen's *Folklore from the Working Folk of America* (1973), Betty Messenger's *Picking up the Linen Threads* (1975), Edward Ives' *Joe Scott: Woodsman Songmaker* (1964)—as well as Ives' other fine biographies of worker-poets—and Patrick B. Mullen's *I Heard the Old Fisherman Say: Folklore of the Texas Gulf Coast* (1978), reflect the comparatist and scholarly treatment of occupational traditions begun by Hand. A more specific study of industrial folklore, completed by Bruce Nickerson in 1974, adapted current theoretical approaches toward folk craft and folk community to an industrial machine shop in New England. Nickerson's linkage of existing models of folklore that were based on the isolation and separation of a community from outside influence, as well as his sensitivity to the variety of expressive forms in the shop, makes his article "Is There a Folk in the Factory?" (*Journal of American Folklore* 1974 87:133–139) a milestone. Research in the Irish textile industry by Betty Messenger and Southern textile communities by Doug DeNatale and Allen Tullos, extend the work experience into broader political and social constructs of personal identity and collective notions of class.

In 1978 Robert H. Byington edited a special issue of *Western Folklore* titled "Working Americans: Contemporary Approaches to Occupational Folklife," which applied new theories of folklore as communication to the study of work culture. In that issue, Robert McCarl, Roger D. Abrahams, Jack Santino, Archie Green, and Byington illustrate the significance of studying "occupational folklife"—the entire range of expressive behavior in work settings, from the techniques required to succeed and survive on the job to the customs marking passage through the work culture and the verbal arts that provide a context for a range of experiences, both on and off the job.

The model of occupational folklife that forms the basis for that collection of essays was derived from fieldwork designed to produce public presentations of work at the Smithsonian's 1976 Festival of American Folklife. The participation of trade unionists and industrial craftspeople with folklorists in the development of the skills demonstrations and narrative workshops represented more than sixty trades, from meat cutting to firefighting, and from emergency-room technicians to air-traffic controllers. These presentations provided an intensity of meaning for large-scale study and presentation of occupational culture. At a time when de-industrialization, computerization, and robotics were causing massive changes in industry, and the constituencies of organized labor were shifting to adjust to a hostile political climate, this celebration of skill, custom, and verbal art in the contemporary workplace provided a glimpse into a historical plateau of American labor that may not recur.

Following the Smithsonian festival and the research that led to it, a number of folklorists published studies devoted to the analysis of occupational culture in a variety of settings. Jack Santino investigated the linkage of class, ethnicity, and organized labor among Pullman porters; Robert McCarl addressed issues of cultural change among urban firefighters; Maggie Holtzberg-Call documented the ethnohistory of hot-type printers;

Paula Johnson and Janet Gilmore portrayed the maritime trades on the eastern shore of Maryland and boatbuilding on the Oregon coast, respectively; and Alicia Gonzales and Suzanne Serrif used feminist and critical theory to analyze the relationships between work technique and changing social relationships within Mexicano culture. Although theoretically and methodologically distinct, all of these documentations of occupational folklife draw upon the ethnographer's goal of cultural holism, while at the same time seeking to portray both the verbal and the non-verbal aspects of patterned communication in the workplace. Contemporary scholars in occupational folklife have retained their attentiveness of work-group values and ethics, and it is within these stratified yet egalitarian social structures that they continue to operate.

The study of occupational folklore in the United States parallels the evolution of folklore methodology in general, from the desire of the early ballad collectors to rescue surviving ballads and songs, to the impact of European-inspired interest in skill and material expression, to the more recent interest in the intersection between work culture, class, ethnicity, and gender. Concurrent with these theoretical and academic interests, occupational folklorists—from Lomax to Green, Korson, and Hand—have maintained an awareness that public presentation of private cultural materials must be negotiated by the researcher with insiders. Public presentations of work culture from studies of firefighters and textile workers by Robert McCarl, museum presentations of slate- and woodworkers by Catherine Schwoefferman in New York state, and publicly supported exhibitions of transit workers developed by Steve Zeitlin and the organization City Lore in New York City—all such presentations attest to the continued importance of this collaborative posture. Contemporary cultural theories regarding the intersection of power and control inherent within the documentary process suggest that only through a more democratic, egalitarian relationship between folklorist and cultural representative will it be possible to continue the study and presentation of occupational folklore.

Key questions remain concerning the rapid transformation of work as global shifts of capital result in abrupt and sometimes disastrous changes in labor markets. The challenge—for workers, trade unionists, and folklorists—will be to measure these changes as they are reflected in the various human and oppositional forms that they will inevitably create.

Robert S. McCarl

Odum, Howard Washington (1884–1954)

Sociologist and collector of Southern folk songs. A native of Georgia, Odum was appointed founding chair of the Sociology Department at the University of North Carolina at Chapel Hill in 1920. Odum's "new regionalism" was an important philosophical influence on the intellectual climate of the postDepression South, and his seminal work, *Southern Regions of the United States* (1936), established his reputation as the leading Southern sociologist of his day.

Odum began collecting African American folksongs while pursuing a master's degree at the University of Mississippi. He subsequently earned Ph.D.s in psychology (Clark University, 1909), and sociology (Columbia University, 1910). In 1911 several issues of the *Journal of American Folklore* featured portions of his psychology dissertation, which is based on transcriptions of the songs he collected in Mississippi.

Odum believed that studies of folklore could increase understanding of African American culture and thus improve Soudiern race relations. Therefore, his two joint publications with student and colleague Guy Benton Johnson focus on folksongs as cultural products (Johnson and Odum 1925, 1926). Both books are landmark studies of African American secular song as well. Odum also published three "folk novels" based on the repertoire of one of his informants, a wandering laborer named John Wesley Gordon, Odum's "Black Ulysses."

Although Odum's national reputation was based on his influence as a sociologist, his contributions to folklore are equally important because of the number of African American folksongs he collected, his in-depth study of one African American informant, and his focus on the social and psychological function of song in a community.

Ohrlin, Glenn (1926–)

America's best-known traditional cowboy singer. Ohrlin was born in Minneapolis, Minnesota. His father, Burt, was a Swedish immigrant who moved to the Twin Cities to work as a house painter. His mother, Alma, was the daughter of Norwegian immigrants. Both parents knew Scandinavian and American songs, and they were their son's earliest source of material. His mother's family, particularly an aunt, Irene Eraker, provided him with several ballads, while his father's sister, Anna Molinder, taught him basic guitar techniques. Music was not Ohrlin's only interest; from early childhood, he wanted to be a rider, and he frequented stables and stockyards to be near horses. In 1940 the family moved to California, and two years later Ohrlin left home to work as a buckaroo in Nevada. In 1943 he started on the rodeo circuit, continuing until the early 1960s, despite suffering a broken back.

During World War II, Ohrlin spent time in Japan where he started learning flamenco guitar from a chicano soldier pal. To this day (1995), he performs a large number of Spanish songs because, he says, the cowboys seem to like them. Despite his growing musical accomplishments, it was the early 1960s before Ohrlin came to the attention of non-cowboy audiences. Then, in 1963, he met folklorist Archie Green, who soon introduced him to the folk-revival audience. Thereafter, Ohrlin appeared at numerous folk festivals and on a large number of commercial recordings. In 1973 he produced *The Hell-Bound Train: A Cowboy Songbook*, a collection of 100 of his favorite songs with extensive commentary by Ohrlin. While the book is an excellent compilation, it by no means covers the gamut of the author's repertoire, which includes traditional ballads, bawdy pieces, GI folksongs, hobo ditties, jukebox hits, and items from song folios and newspapers.

In 1954 Ohrlin moved to the Ozarks, establishing his Rafter O Ranch near Mountain View, Arkansas, a choice dictated largely by economics. Cheap land, low taxes, and free range all played a part in his decision. Ohrlin still performs at folk festivals, concerts, and at the nearby Ozark Folk Center. In addition to singing, he has become well known as a performer of cowboy poetry.

Oilworkers

Workers in the nation's petroleum industry. The jargon, stories, jokes, customs, and songs of oilworkers address the dangerous conditions and long hours of the job, the relative isolation of the work sites, and a strong sense of pride in work among this predominantly male occupational culture. This body of folklore also reflects the technological advancements and larger economic forces that have fundamentally transformed the nature of life and work for oilworkers during the 20th century.

For more than 130 years, American oilworkers have built derricks and tanks, drilled wells, monitored production, constructed pipelines, and refined crude oil, both in this country and abroad. Until the mid-1970s, the United States ranked as the world's leading producer of oil. The nation's petroleum industry dates from 1859, when Edwin L. Drake and his drilling crew struck oil near Titusville, Pennsylvania. Oil exploration and production expanded into New York, West Virginia, Ohio, Indiana, and across the Midwest and Southwest by the turn of the 20th century. During this period, John D. Rockefeller built Standard Oil Company, using technological innovation, bureaucratic management, and large-scale capitalization to achieve a virtual monopoly of the nation's oil-refining industry. Similarly, Gulf Oil Corporation, Phillips Petroleum Company, Sinclair Oil and Refining Corporation, and other major American conglomerates consolidated the holdings of smaller companies and vertically integrated their operations to engage in all phases of petroleum exploration, production, refining, and marketing.

Development of the internal combustion engine and the mass marketing of automobiles created a high demand for gasoline and made petroleum one of the world's major sources of power. After 1900 the center of the nation's petroleum industry shifted to Texas, Oklahoma, and California. The famous discoveries of oil at Spindletop, near Beaumont, Texas, in 1901, and near Henderson, Texas, in 1930, opened the rich

To drilla tuell, roughnecks use pipe wrenches to screw one piece of drillpipe into another. Kilgore, Texas, 1939. Photo Russell Lee. Library of Congress.

Gulf Coast and east Texas fields, attracting Eastern oil companies, land speculators, and masses of migratory oilworkers, and transforming the Southwest from a rural, agricultural region to an urbanized, industrial one.

Since the early days of the petroleum industry, workers have organized unions to fight for the adoption of an eight-hour workday, higher wages, and worker safety laws. The Oil Field, Gas Well, and Refinery Workers (OFGWRW) union and its successor, Oil Workers International Union (OWIU) have been the major oil unions. Landmark strikes in the labor history of oilworkers occurred at the Standard Oil Company's refinery in Bayonne, New Jersey (1914–1916), in the Gulf Coast oil fields of Texas and Louisiana (1917–1918), at the Mid-Continent Petroleum Corporation's refinery in Tulsa, Oklahoma (1938–1940), at several companies' refineries across the nation (1945–1946), and at the Shell Oil Company's refineries in the Southwest and California (1973).

Historically, production and pipeline workers in the nation's petroleum industry have been chiefly native-born White men and, to a lesser extent, northern and eastern European immigrants. Some Mexicans and African Americans did secure employment in oil-field work, especially during labor shortages and in more recent years. In contrast, refinery workers have constituted a more ethnically and racially diverse group. In the Northeast, they have been primarily of southern and eastern European stock, while rural Whites and Mexicans have predominated in Southwestern refineries. Except as secretaries and office staff, women did not generally work in the petroleum industry until

the 1970s, when affirmative action and equal-opportunity laws opened the way for their employment.

After World War II, the major petroleum companies expanded oil exploration and production in foreign countries, closing down some American fields. Beginning in the 1950s and accelerating in the 1960s, oilworkers lost jobs as the United States imported more foreign oil and the petroleum industry increasingly automated and mechanized its wells and refineries. In 1974 the then Soviet Union replaced the United States as the world's leading producer of petroleum, and two years later the United States slipped to third behind Saudi Arabia. The discovery of oil at Prudhoe Bay, Alaska, in 1967 and offshore drilling in the Gulf of Mexico and along the California coast created some new jobs in the industry, but in the 1990s the United States, the world's largest consumer of oil, remains heavily dependent on petroleum from the Middle East and other foreign countries.

Documentation of oil-field lore began shortly after the turn of the 20th century, when Clark S. Northrup of Cornell University published two brief articles on the language of oilworkers in the Pennsylvania, New York, and West Virginia fields (Northrup 1903–1904). Generally, however, folklorists and dialect scholars have concentrated on the more recently opened fields of Texas, Oklahoma, and California (Brooks 1928; Dignowity 1927; Pond 1932). During the 1920s and 1930s, John Lee Brooks, Hartman Dignowity, Frederick Pond, and others documented the stories and jargon of the petroleum industry in the Southwest and California (Brooks 1928; Dignowity 1927; Pond 1932). In the late 1940s, Lalia Phipps Boone, a graduate student at the University of Oklahoma, began a comprehensive study of the occupational language of Southwestern oilworkers that resulted in the publication of *The Petroleum Dictionary* (1952). In a 1969 Ph.D. dissertation titled *Lexicon of the Texas Oil Fields*, written at East Texas State University, Elizabeth K. Martin surveyed the changes that had occurred in Texas oil-field speech since Boone's study appeared.

Mody Boatright was the first scholar to systematically collect and analyze the occupational folklore of Southwestern oil-field workers. In 1945 he published his pioneering collection of tales, *Gib Morgan: Minstrel of the Oil Fields*. His classic study, *Folklore of the Oil Industry* (1963), contains lore about the search for oil, accounts of the popular stereotypes of the driller, geologist, and oil promoter, among others, as well as oil-field songs, tall tales, and anecdotes. Boatright's final book, *Tales from the Derrick Floor: A People's History of the Oil Industry* (1970), cowritten with William A. Owens, consists of transcriptions of oral-history interviews that the authors conducted with Texas oil pioneers during the 1950s. Between 1978 and 1985, Roger M. and Diana Davids Olien also recorded an extensive series of interviews that resulted in several books on the social history of the Texas oil industry (Olien and Olien 1982, 1986). The folklore of refinery workers has received little attention from scholars, although, in *America's Working Man: Work, Home, and Politics among Blue-Collar Property Owners* (1984), David Halle explores the importance of religion, ethnicity, and holidays among a New Jersey community of refinery workers and their families.

Between 1900 and 1945, rural Texans and Oklahomans left farms and ranches to find work in the region's oil fields and refineries, while drillers and laborers from Pennsylvania and West Virginia oil patches also flocked to newly opened fields of the Southwest. Migratory workers and their families followed oil booms from field to field in

search of economic opportunity and the relatively high wages of the petroleum industry. Oil-field work has traditionally attracted a diverse group of men, including cowboys, farmers, salesmen, and college students, because jobs generally paid better than most unskilled and semiskilled ones. In the Southwest, the largest of the oil fields employed thousands of production and pipeline workers, who worked in small crews monitoring wells and constructing vast networks of pump stations and pipelines that transported crude oil to refineries. Other oil-field workers, such as rig and tank builders and drillers, generally hired out to contractors rather than work directly for petroleum companies. Oil-field work was uncertain and generally short-term employment, as booms quickly turned to busts. Only production and pipeline workers remained after a well began pumping, while drillers, rig builders, and roughnecks (a member of a rotary drilling crew) scurried to the next boom or drifted into other lines of work. Traditional patterns of racism and ethnic discrimination generally blocked employment for African Americans and Mexicans in the petroleum industry, with skilled and semiskilled jobs reserved almost exclusively for White men.

Throughout its history, oil-field work has been characterized by hard, physically demanding labor, long hours, and harsh conditions at a relatively isolated work site. According to a 1920 Bureau of Labor Statistics report, 75 percent of drillers and production workers in the Southwest and California worked seven days a week, as did 33 percent of pipeliners and 25 percent of refinery workers. Oil-field work, as the expression goes, "teaches you to sweat in freezing weather," and roughnecks worked in rain, sleet, subzero temperatures, high winds, dust storms, and scorching heat. Jobs were also dangerous: Workers could be injured or killed by faulty equipment, open gear boxes and belt drives, a falling load of pipe, electrocution, gas blowouts, and well fires.

In contrast to oil-field work, refinery work was more settled, regimented, and industrialized. The largest refineries employed thousands of workers, who converted crude oil into gasoline, diesel fuel, heating oil, lubricating oils, petrochemicals, and other products. Refinery work was generally hot, dirty, and smelly, but its employees have ranked among the nation's highest-paid industrial laborers since the 1930s. Refineries were usually located within a 100 or so miles of oil fields, including major facilities at Pittsburgh; Cleveland; New York City; Baton Rouge, Louisiana; Hammond, Indiana; and Port Arthur, Texas. Bluegrass pioneers Charlie and Bill Monroe of Kentucky worked in an oil refinery in northwestern Indiana, as did masses of other White Southerners who migrated to Midwestern cities during the Great Depression and World War II. Eastern refinery workers were chiefly Poles, Slovaks, Irish, Germans, and Italians, and predominantly Roman Catholic. Churches served as the cultural and social centers of ethnic neighborhoods, in which working-class communities celebrated baptisms, weddings, ethnic festivals, and holidays (St. Patrick's Day, Columbus Day, and Pulaski Day), attended funerals, played bingo, and sent their children to parochial schools. Wartime expansion of the Gulf Coast petroleum industry opened refinery jobs to working-class Mexican men, but they still faced occupational discrimination and harassment from Anglo foremen and fellow workers. Companies chiefly relegated Mexicans to the unskilled, lowest-paying, and least desirable jobs in plants.

Historically, oilworkers have been one of the least organized groups of industrial workers in the United States. Although earlier unions appeared in the Eastern fields after the Civil War, the first national oilworkers' union, the International Brotherhood of Oil

and Gas Well Workers (OGWW) of the American Federation of Labor (AF of L), formed in Ohio and Indiana in 1899. During World War I, the AF of Laffiliated Oil Field, Gas Well, and Refinery Workers Union (OFGWRW), chartered in 1918, organized oilworkers in Kansas, Oklahoma, Texas, and California. Standard Oil Company, Gulf Oil Corporation, and other major petroleum companies refused to bargain collectively with oil unions and practiced antilabor tactics, such as hiring rural White Texans and Mexican immigrants to break strikes in the Southwest. Petroleum companies sponsored corporate welfare programs (pensions, sickness and accident compensation, medical benefits, and company unions) in order to defuse unionization and to generate worker loyalty. As late as 1933, less than one-tenth of the nation's one million oilworkers were organized. One of the greatest periods of union growth occurred between 1933 and 1934, spurred by a series of New Deal labor legislation. The Oil Workers International Union (OWIU), formed in 1936 as an affiliate of the Congress of Industrial Organizations (CIO), organized fields and refineries in the Southwest during the late 1930s. OWIU membership doubled between 1941 and 1946, encouraged by the pro-union policies of the National War Labor Board. In 1955 the OWIU merged with the Gas, Coke, and Chemical Union to form the Oil, Chemical, and Atomic Workers Union (OCAW), and since the 1960s the union has focused chiefly on worker safety and health issues in its organizing campaigns and national contracts.

Before World War II, living conditions in Southwestern oil-field camps and boomtowns were often primitive, uncomfortable, and unsanitary. Families lived in makeshift housing of all sorts, including shacks, tents, trailers, and abandoned railroad cars and buses. Single men sometimes slept in boardinghouses and company bunkhouses. Beginning in the 1920s, some of the major oil corporations provided workers and their families with company housing, which usually consisted of shotgun houses with outdoor toilets. Inadequate water supplies and improper sewage disposal caused outbreaks of dysentery, typhoid, and other diseases. Oil boomtowns were generally overcrowded and bustling places with a few stores, cafes, saloons, and hotels clustered along an unpaved main street. Other common types of boomtown businesses included hamburger stands, chili parlors, filling stations, dance halls, and brothels.

Local farmers and small-town residents frequently looked down upon and ostracized transient oilworkers and their families, calling them "oil-field trash." Participation in churches, social clubs, and school activities served as an important route for oil-working families to achieve the desired level of respectability. Religious denominations of Southwestern oil-field workers included Baptist, Methodist, Church of Christ, Lutheran, and Roman Catholic, and congregations sometimes built churches on land donated by oil companies. The high rate of mobility among oilworkers often meant a series of relocations, adjustments, and hardships, as families withdrew their children from school, packed up their household belongings, and traveled to the next job. In oil-field camps and boomtowns, social and kinship networks were not as strong as those in more settled areas because of the transient nature of oil work. Nevertheless, oil-field people developed close-knit communities, in which neighbors borrowed from one another, relied upon one another for child care, and contributed money or food goods to those families who suffered hard times, sickness, or a death. Oil-field families frequently socialized together at Saturday night house parties and Sunday afternoon barbecues where couples danced to music and drank homemade beer. Others found diversions in dance halls, beer joints, tent

shows, motion pictures shows, and company-sponsored baseball teams. Oil-field culture has greatly admired the values of aggressiveness and toughness symbolized in high school football, a sport that retains an enormous fan following in Texas. Workers also have demonstrated a strong loyalty to the state's college and professional teams, including the University of Texas Longhorns, the Dallas Cowboys, and the Houston Oilers.

Southwestern boomtowns offered workers plenty of amusements on which to spend their leisure time and hardearned money. Oil-field workers were notorious for their drinking, gambling, fighting, and generally rowdy behavior, but, in some ways, their legendary bouts of drinking on payday helped foster a sense of community and solidarity among them. Occupational custom, for instance, dictated that a roughneck who made a mistake on the job (known as a "boll weevil stunt") had to buy a round of drinks for his crew. But drinking was also often destructive to workers' health and family life, resulting in chronic alcoholism, broken marriages, and countless incidents of domestic abuse. After the repeal of Prohibition in 1933, the Southwestern oil boom spawned the creation of honky tonks and roadside beer joints located on the outskirts of small towns, where working-class patrons could drink, dance, and listen to country-western music. The region's oil-field culture also produced a handful of country music stars—such as Hank Cochran, Lefty Frizzell, George Jones, and Don Williams—who once worked, or whose fathers worked, as drillers and roughnecks.

Oil-field workers throughout United States possess a distinct occupational language consisting chiefly of technical terms and slang words. The argot of this almost exclusively male culture is peppered with obscene terms and sexual imagery, as in the terms "ass scratchers," "bastard file," "bull prick," "candy ass," "cow's cock," "mother fucker," "pecker neck," "suck ass," and "weed whore." Technological innovation in the petroleum industry has contributed to changes in occupational jargon and to competition between certain groups of workers. For example, as the superior technology of rotary drilling rigs (which employ a revolving drill bit attached to the end of a string of pipe) began after 1901 to replace the older cable-tool method of drilling (which operates by means of a suspended cable that repeatedly lifts and drops a drill bit) in the Southwest and California, the rivalry between rotary drillers and cable-tool drillers sparked a verbal contest of insults. Cable-tool drillers derided rotary drillers as "swivel necks," "chain breakers," and "rig runners," while rotary drillers responded by calling their rivals "jarheads," "rope chokers," and "yo-yo drillers."

Nicknames are also popular among oil-field workers as crew evaluations of a fellow worker. Nicknames, some of them obscene, usually reflect a man's physical appearance, behavior, specific job, work habits, or native city or state (Tiny, Fort Worth Red, Alabama Joe, Mope Pole Slim, Big Hole Bill). State rivalries between oilworkers led to the coining of a host of colorful nicknames as well. During the 19th century, Pennsylvanians referred to West Virginians as "snake-hunters" or later simply as "snakes." West Virginians returned the favor by lampooning Pennsylvanians as "starving owls" or "horse thieves." Other pejorative labels included "scissorbill" to denote Illinois drillers, "yellow hammer" for Ohioans, and "prune picker" for Californians.

Traditionally, occupational pranks and practical jokes have been a hallmark of oil-field workers. In the late 20th century, seasoned members of a drilling crew still might send an inexperienced man (known as a "boll weevil") to retrieve such fictional tools as

“pipe stretchers” or “left-handed monkey wrenches.” Roughnecks also perform a host of initiation rites to test the mettle of a new recruit, to demonstrate to him his ignorance of oil-field custom, and—if judged worthy by the other men—to ceremonially induct him into the crew. In one rite, known as “lifting,” crew members smear the genitals of an unsuspecting “boll weevil” with a sealing compound used in drilling. Another rite consists of tricking a blindfolded novice into destroying his own safety helmet with an axe. Jokes told by oil-field workers are often scatological and include stereotypical characters such as the roughneck, the driller, the farmer, and the prostitute. According to Jim Harris, contemporary oil-field jokes from the Llano Estacado region of TexasNew Mexico are frequently about Arabs, reflecting the importance of the Middle East in petroleum production (Harris 1982).

The tall tales and stories of the Southwestern oil fields indicate that skill, physical strength, and endurance are prized by workers. Gib Morgan, a cable-tool driller, is the bestknown oil-field hero in the Southwest. Morgan, who was born in 1842 in western Pennsylvania, followed the oil boom across the nation during the latter half of the 19th century. Along the way, he told stories of his hair-raising oil-field experiences, and eventually he himself became the protagonist in a family of tall tales once known to many drilling crews throughout the Southwest and California. Paul Bunyan, who came to represent rotary drillers, replaced Morgan as the chief oil-field hero sometime between 1910 and 1920. Tall tales about Bunyan, who was imported from the Northwest woods to the Southwestern oil fields, describe him as a rig builder, pipeliner, or tank builder. John Lee Brooks and other field collectors compiled only fragmentary accounts of Bunyan tales, however. Another oil worker superman, Kemp Morgan, a rotary driller whose sensitive nose allowed him to smell oil underground, appears to be the creation of writers rather than of drillers and roughnecks.

Folklorists and collectors have located only a handful of occupational songs from Southwestern oil-field workers. Mody Boatright collected the full texts of only two songs, an untitled one about a luckless roughneck and another about “The Dying Toolie” (also known as “On the Allegheny Shore”). “There was some singing in the oil fields and attempts were made to compose songs about oil field people and their work,” Boatright explained in *Folklore of the Oil Industry*, “but none of the efforts was of sufficient appeal to maintain more than brief and local distribution” (Boatright 1963:155). According to Boatright and Richard M. Dorson, the transient nature of the oilfield work force and its high rate of turnover disrupted any sort of tradition of occupational songs. Several oilworker songs have been preserved on commercial sound recordings, however. There are at least two oil-union songs in existence, although their composer was not himself an oilworker. In 1942 the OWIU commissioned the Almanac Singers, a folksong group of political radicals headquartered in New York City, to write and record two songs “combining union-building strategies with win-the-war sentiments” (Green 1993:210). Woody Guthrie, a member of the group and an Oklahoma native familiar with oil-field work, composed “Boomtown Bill” and “Keep That Oil a-Rolling” for the assignment. Guthrie also wrote another song, probably around this time, called “Boomtown Gallyhouse” about a pipeliner’s sexual adventures in a Borger, Texas, brothel. Several songs from the post-World War II era, most of them performed in a country-western style, capture the occupational jargon and nature of work in the Southwestern oil fields. In 1953, for instance, Ramblin’ Jimmie Dolan recorded a version of “Tool Pusher on a

Rotary Rig” for Capitol Records, while Jimmy Simpson cut “Oilfield Blues” for Republic Records. Former oilworker Alex Zanetis’ album *Oil Fields* (1964) contains a dozen songs about work and life in the Southwestern oil fields, including “Roughneck,” “Tool-Pusher,” and “Wildcats from San Antonio.”

Opossum

Small, omnivorous, tree-climbing American marsupial. When in 1608 Captain John Smith described the female opossum as having “a head like a Swine, and a Taile like a Rat, and...the bigness of a Cat,” further observing that “under her belly she hath a bagge where she lodgeth, carrieth, and suckleth her young,” his English audience must have dismissed the account as one more example of the captain’s renowned gift for hyperbole. But in this instance, Smith’s observations were not exaggerated: from its wide toothy grin to the tip of its scaly prehensile tale, the Virginia opossum (*Didelphis virginiana*) presents an unusual combination of physical and behavioral characteristics securing it a unique place in American folklore. Possessed of more teeth and less cranial capacity relative to its size than any other mammal, subject to a death-like trance when threatened, and adorned with a bifurcated penis in the male and a pouch and double uterus in the female, it is no wonder that the opossum is celebrated in narrative, song, and belief.

It was not only European explorers who marveled at the creature. The name “opossum” (usually shortened to “possum”) derives from the Algonquian *apasum*, meaning “bright beast,” referring to the striking silvery luster given its pelt by white guard hairs. Choctaw legend explains the size of the creature’s mouth as a permanent grimace of pain and embarrassment at having been duped by other animals into singeing the fur off its once-beautiful tail. Joel Chandler Harris drew on African American etiological narrative to offer a different explanation in Uncle Remus’ tale “Why Mr. Possum’s Tail Has No Hair” and also relates an account of the origin of “playing possum” in “Why Mr. Possum Loves Peace.”

Although the opossum is found in most regions of the continental United States, it is symbolically and folklorically most strongly associated with the Southeast, its original habitat. As with traditional esoteric and exoteric attitudes toward the South as a whole, a curious duality suffuses traditional attitudes toward the opossum, who is seen as both foolish and sagacious, vulnerable and persistent, aggressive and defensive, shiftless and resourceful. In Southern Anglo and African American song lyrics, “The possum is a cunning thing, he travels in the dark; Nothing at all disturbs his mind, till he hears old Ranger bark.” The naive yet penetrating wit portrayed in the newspaper cartoon character of Pogo Possum, Walt Kelly’s Huck Finn—like denizen of Okefenokee Swamp, effectively represents this complex set of cultural associations.

The vulnerability of the opossum to the forces of industrialization in the form of the automobile is a byword: At truck stops throughout the South, one can purchase novelty items purporting to be “canned roadkill” or “roadkill jerky,” with possum invariably listed as a predominating ingredient. In fact, the opossum is hunted and trapped for both its hide and its meat, although neither is considered of high value. As food, the opossum is treated in the manner of most small furbearers such as raccoon, groundhog, or muskrat: It is braised, roasted, or fricasseed, commonly accompanied by sweet potatoes.

Perhaps the oddest belief associated with the opossum is the once widespread notion that conception is achieved by the male ejaculating into the nostrils of the female, who

then sneezes the sperm into her pouch or vagina—a misimpression no doubt suggested by the bifurcate structure of the male organ, and the female's habit of nosing herself in the process of grooming. It has been suggested that this belief may have direct antecedents in a similar set of beliefs, dating at least from classical Greek natural history, concerning the oral gestation of bear cubs, who were believed to be born a formless mass from the female's mouth, then licked into shape.

Oral-Formulaic Approach

A major approach to the study of oral tradition and of works with roots in oral tradition that prescribes a specialized language or idiom as the basis of composition in performance. Also known as the Parry-Lord theory after its founders, this approach puts a premium on the utility of patterned phraseology (*formulas*), typical narrative scenes (*themes*), and largescale organization (*story-patterns*) in providing ready solutions to the performer's ongoing challenge of maintaining fluent, intelligible composition. In addition to applying the theory to living traditions, chiefly poetry, scholars have retrospectively analyzed ancient and medieval works to determine the extent of their dependence on such paradigms and, in some cases, their "oral" or "literary" character. With typical structures demonstrated in more than 130 separate language areas, the most pressing question has become how to interpret works composed in this specialized idiom.

The oral-formulaic theory began with Milman Parry's pioneering studies of the Homeric epics, the *Iliad* and the *Odyssey*, which reveal systematic patterning behind the recurrence of particular phrases, especially noun-epithet expressions like *podas ôkus Achilleus* ("swift-footed Achilles") and *thea glaukôpis Athênê* ("goddess bright-eyed Athena"). Instead of explaining the great epics as either conglomerate editions of smaller poems (according to the Analyst school) or as the personal and individual achievements of a single genius (the Unitarian school), Parry argued that a poetic diction as systematized as the language of the Homeric poems must be the legacy of generations of bards, who perfected the idiom over centuries. His fundamental insight was thus that the language of Homer was traditional.

The core of Parry's theoretical proposal was the formula, which he defined as "an expression regularly used, under the same metrical conditions, to express an essential idea" (Parry 1971:13), and which he eventually enlarged beyond the noun-epithet phrase to include any metrically determined unit of Homeric diction. Thus, recurrent expressions for speech-introduction (such as "And so he/she spoke"), for example, were shown to combine with recurrent names for mortals or gods to produce predictable—and, in terms of oral-formulaic theory, useful—hexameter lines.

For Parry, utility in formulaic diction derived from the participation of individual phrases in larger, generative *formu-laic systems*, groups of items fitting the same metrical slot that are also related by common semantic and syntactic features. While this aspect of the poetic idiom furnished the composing poet a flexibility in line-to-line construction, the simplicity of the diction was attributed to an overall *thrift*—"the degree in which [a formulaic system] is free of phrases which, having the same metrical value and expressing the same idea, could replace one another" (Parry 1971:276). Formulaic language was, therefore, understood as serving the poet's needs not only in providing ready solutions, but also in productively limiting compositional options.

This approach began as an analytical procedure to prove the traditional nature of ancient Greek texts. But Parry, under the influence of his mentor, Antoine Meillet, and of Matija Murko, a Slovenian academic familiar with South Slavic epic poetry from his own

fieldwork, soon added the criterion of *orality* as a necessary implication of the traditional character of verse making. In order to confirm his hypothesis of an oral tradition from which the Homeric poems stemmed, Parry and his assistant, Albert Lord, conducted a large-scale fieldwork expedition to the former Yugoslavia in the period 1933–1935 (continued by Lord in 1950–1951 and later) to study the living phenomenon of the South Slavic oral traditional epic at first hand. They recorded acoustically or by dictation more than a half-million lines of epic from preliterate *guslari* (bards; those who play the *gusle* [a single-stringed lute]), now deposited in the Milman Parry Collection of Oral Literature at Harvard University; Lord and David Bynum have published selective contents in the series *Serbo-Croatian Heroic Songs* (*SCHS*, 1953–).

Aside from a few shorter papers, Parry did not live to carry out the comparative analyses of Homer and South Slavic epic that he had envisioned. After Parry's death in 1935, Lord assumed responsibility for that planned enterprise and, in fact, moved well beyond the original analogy to make the oral-formulaic theory a truly multidisciplinary undertaking.

The most influential of Lord's writings, in many respects the touchstone for the entire field, is *The Singer of Tales*, completed as his dissertation in 1949 and published in 1960. This book uses the *guslar* in performance as a model for Homer, and also for Anglo-Saxon, Old French, and Byzantine Greek narrative poets. In addition to illustrating formulaic composition in the South Slavic songs, *Iliad* and *Odyssey*, *Song of Roland*, *Beowulf*, and *Digenis Akritas*, he also described narrative units called *themes*, or "groups of ideas regularly used in telling a tale in the formulaic style of traditional song" (Lord 1960:68). These included, for example, such typical actions as arming a hero, readying a horse, summoning guests to a wedding or battle, and so on. He also identified *story-pattern* that were coextensive with the work as a whole, the most familiar example being the Return Song, essentially the story of the *Odyssey*, that also appears in Turkish, Bulgarian, Albanian, Russian, medieval English, and other traditions (Lord 1960:99–123,242–259). At every level, the key concept is multiformity, the mutability of phraseological or narrative patterns within limits, as an aid to composition in performance.

Of Lord's later contributions, Volumes 3–4 (1974) of *SCHS* and *Epic Singers and Oral Tradition* (1991) stand out as exemplary. The first of these consisted of his translation and Bynum's edition of *The Wedding of Smailagic Meho*, a 12,311-line oral epic performed for Parry and Lord in 1935 by the preliterate singer Avdo Medjedovic of Bijelo Polje in Hercegovina. The latter volume is a collection of some of Lord's most wide-ranging and important essays, treating Homer, South Slavic, Finnish, Old English, Bulgarian, and central Asiatic epic.

In the wake of the publication of *The Singer of Tales*, the Parry-Lord theory underwent vigorous translation to Old English (Olsen 1986–1988), Middle English (Parks 1986), Old French (Duggan 1973), Hispanic (Webber 1986), American folk preaching (Rosenberg 1970), Biblical studies (Culley 1986), and scores of other areas; it also continued to expand in ancient Greek (Edwards 1986–1992). A history of the comparative methodology is available in John Miles Foley's *The Theory of Oral Composition* (1988); an annotated bibliography, in his *Oral-Formulaic Theory and Research* (1985), with updates in the journal *Oral Tradition*.

With formulas, themes, and story-patterns identified in traditions worldwide, new questions began to arise about the implications of oral-formulaic theory for interpretation, especially in relation to texts with extensive prior critical histories, such as the Homeric poems. One of the central tenets of the approach as originally stated held that a certain percentage of formulas and formulaic systems constituted proof of the ultimately oral provenance of a given text, independent of any supporting testimony for that claim. The reasoning proceeded from the criterion of utility: If a poet had regular recourse to ready-made diction and narrative patterns, then he or she was composing traditionally, and thus orally. Quantitative measurement of this sort did not take into account the inevitable differences among languages, traditions, or genres, nor did it consider the persistence of the formulaic idiom after the introduction of writing.

Indeed, as the oral-formulaic theory has expanded to more and more traditions, many of them still living, it has become increasingly apparent that an absolute dichotomy of oral versus written does not fit the evidence. Manuscript works that presumably represent freestanding compositions by individual authors still show extensive use of the formulaic language, and different rules govern the structure and texture of formulas and themes from one language to another, or even from one genre to another. Additionally, the issue of performance and all that it entails has come to the fore: Oral tradition presents many channels for communication (linguistic, paralinguistic, and nonlinguistic), only a limited number of which are reflected in what we conventionally reduce to a transcribed text.

Another area in which the theory has been modified is in response to the charge of mechanism—that is, the perception that formulas and themes imprison a verbal artist, restricting originality and diluting expressivity. Although based primarily on literary criteria, not all of them applicable to oral tradition, this objection has stimulated a reexamination of what is meant by the “essential ideas” of formulas and the “typical” content of themes. One proposed answer to the quandary consists of understanding the oral-formulaic idiom as a highly focused species of communication, one that encodes complex information in simple forms within the enabling event of performance and by institutionalized reference to the immanent tradition. By employing this special register of language, in other words, performer and audience (and later writer and reader, if properly prepared) communicate with greatly enhanced economy. Of course, the traditional language cannot accomplish all of the quotidian tasks normally assigned to a much more generalized register, but, as long as audience and reader are fluent in the traditional tongue, its dedicated function promotes a unique economy of expression and reception.

Organizational Folklore

Folklore about organizations or originating in organizational settings (especially the workplace), and folklore forms as instances of organizing. Organizational-folklore studies emerged in the late 1970s with the growing interest in modern and urban folklore and a broadening of the conception of folk groups to include office personnel and management. In addition, more folklorists found employment in government, discovering firsthand the value of organizational skills and the problems of bureaucracies. And many folklorists began to realize that the bulk of traditions in the organized workplace owe their existence to, and reflect, forces in the organization as a whole.

Urban legends include numerous beliefs and stories about government and big business. Jan Harold Brunvand notes that one of the first examples of urban folklore to be scrutinized for its origins and veracity was “The Wordy Memo.” From at least the 1940s to the present, various sources have reported that the Lord’s Prayer has 56 words, the 23rd Psalm 118 words, and Lincoln’s Gettysburg Address 266 words, but a recent U.S. government directive on pricing cabbage (or fruit) allegedly contains a daunting 26,911 words. Other accounts describe classic foul-ups in paper shuffling, obscure government offices with no current function, and massive military orders. Such stories charge inefficiency, wastefulness, mismanagement, or ineptitude. Even if unfounded in their specifics, the legends point to problems typical of bureaus and the bureaucratic model of organization. Confirmed instances of military suppliers charging outrageous prices for a hammer, a washer, or a toilet seat, and government warehouses glutted with equipment and spare parts, make the legends credible.

Some narratives about business organizations probably originate in actual experiences, according to Gary Alan Fine, who has examined successful lawsuits claiming contamination of bottles of Coca-Cola (and other products) with decomposed mice, putrid peanuts, and so on. Other stories, however, appear to be projections. One subtype of “The Kentucky Fried Rat” legend describes a woman eating fried chicken while watching television at home. Because of the extra crispy coating, it takes her a few bites to realize she is chewing on a rat; a disgruntled employee at the franchise cooked it as a prank. In another subtype, a young man’s date dies of strychnine poisoning that had killed the fried rat she unwittingly consumed; unsanitary conditions are to blame. Fine hypothesizes that these narratives “reflect some of the basic anxieties of our times” as America moves from a personalized economy to a bureaucratized, mass-consumption economy. “Because of the impersonality of large institutions,” Fine writes, “employees do not feel morally attached to their supervisors or to those served.” Rats and mice as contaminants are apt symbols of the decline of community and morality.

Several narrative types concern Third World products. Some report the horror of a customer trying on garments in a discount store and discovering a snake in the arm of an imported coat or sweater. Others allege that Mexican workers urinate into bottles of Corona beer shipped to the United States, giving the beer its bright yellow color and copious foam. Some contend that a finger has been found in a can of *menudo* (Mexican

tripe soup). Fine suggests that these accounts express Americans' anxiety over the (dangerous) invasion of foreign goods and the threat to U.S. industry by competitors abroad. (When the contamination rumors surfaced in 1987, Corona beer was the fastest-growing imported brew and quickly becoming a high-prestige product.)

Redemption rumors imply American corporate beneficence: Sending the pull tabs from aluminum cans, tags attached to tea bags, or empty cigarette packages to the corporation allegedly sponsoring the program will result in the purchase of a kidney dialysis machine for a child, an iron lung, a wheelchair, or other medical equipment for a needy person. Fine speculates that such rumors reveal more about the tellers than the organizations—that is, people may be seeking redemption from their own unhealthful habits.

Stories, rumors, and beliefs indicate ambivalence toward business: While some portray corporations as beneficent, others present the corporation as evil. In the late 1970s, rumors spread that Proctor and Gamble's logo (the profile of a man-in-the-moon figure facing left toward thirteen stars) contains satanic symbols, that the company supported demonic cults, and that the founder or a subsequent president had made a pact with the devil. Rumors circulating in the mid-1970s charged that Adolph Coors Company is a Nazi organization. Church's Fried Chicken supposedly is in league with the Ku Klux Klan and sprinkles its food with a substance that causes sterility in Black males. The deceptive corporation is another theme (allegedly Kool-Aid is carcinogenic, Pop Rocks explode, BubbleYum chewing gum is made from spiders' eggs).

Folklore surrounds particular companies. This may be due to the "Goliath effect" (Fine's term), which occurs when a company becomes the symbol for the industry or all business because it is large or familiar. Sometimes, however, a company trait or image lends itself to the generation of folklore. International Business Machines (IBM) Corporation became legendary for its strict dress code, anonymous committees making group decisions, and "strong" corporate culture. A persistent rumor asserts that "IBMers" gather to sing company songs; some people claim to possess or to have seen the songbook. One example of photocopylore purports to be a reprint from IBM Song Book Form No. 30-8798-0-8-12-53-P. It contains the words to "Hail to the IBM" and "Ever Onward." The first song salutes T.J. Watson (IBM's founder), for whom "our voices swell in admiration." The second also honors "our friend and guiding hand." It avows: "We're bound for the top to never fall! / Right here and now we thankfully/Pledge sincerest loyalty/ To the corporation that's the best of all!"

In addition to folklore about government, industry, and business, organizational folklore includes traditions generated within institutions. Like individuals everywhere, people in organizations engage in superstitious behavior, especially in times of stress. In November 1983, executives of Japanesebased TDK Corporation (one of the largest manufacturers of audio- and videotapes), asked a Buddhist priest to bless its U.S. headquarters after a run of misfortune (an armed robbery, the death of an employee's child, several automobile accidents, marital discord, and falling corporate profits). The priest sang, burned incense, and said prayers. "A blessing cannot hurt," observed one employee. "We can all gain from the experience—if nothing but a common unity."

During the recession in the early 1990s, many people carried talismans with them when making sales pitches and presentations. One banker who had recently joined a company in a Manhattan high rise insisted that he not be assigned an office on the

nineteenth floor or be given a phone number with nineteen in it. Adam Rose, vice president of a real estate firm, swapped phones with a colleague so he could have the extension 6789, a number that “has been good to me.” When he chaired Mark Cross and Company, George Wasserberger inadvertently arrived at an important meeting wearing one black and one brown shoe; the meeting proved quite successful. In the early 1990s, as president of Stotter Division of Graduate Plastics Company, he intentionally wore mismatched shoes to crucial meetings.

Others have avoided bad luck omens, such as the number thirteen. Brokers and traders noted that 1987, the year of the stock market crash, contained three Friday the Thirteenths (the most that can occur). Although not called superstitions, numerous beliefs and conventional wisdom ranging from what the firm’s financial goals should be to how marketing should be done become cherished assumptions on which executives base corporate strategies.

Certain stories cut across organizations and industries. In one, a high-status person breaks a company rule and is challenged by a subordinate (who may or may not be aware of the transgressors identity); the high-status person does or does not comply (and may react by either complimenting or firing the subordinate). For example, Thomas Watson Jr., the intimidating chairman of IBM’s board, wore the wrong clearance badge when embarking on a tour of a security area in the company. His entourage looked on in horror as the young, female supervisor barred his entrance (with trepidation, however, for she recognized him). Watson calmly waited until someone brought him the correct identification. As the story was told at Revlon, the head of the company refused to sign in in the morning like everyone else. Challenged by the new receptionist, Charles Revson inquired if she knew him. When she said no, he told her, “Well, when you pick up your final paycheck this afternoon, ask ‘em to tell ya.”

“The Rule-Breaking Story” is one of several types found in a wide variety of private and public organizations. Among others are “Is the Big Boss Human?” “How Will the Boss React to Mistakes?” “Can the Little Person Rise to the Top?” and “How Will the Organization Deal with Obstacles?” Positive versions of the stories portray the organization as uniquely good and enable employees to identify with it; negative versions depict the institution as unworthy of its employees. While some stories that are remarkably similar might have originated polygenetically (have multiple origins) because they treat universal concerns, many probably result from monogenesis (single origin) and diffusion through space and time.

Photocopylore proliferates; often the logo of one institution has been cut off, and the document copied onto the letterhead of another organization. Fake memos attributed to the Personnel Office set forth new rules, policies, or procedures. One describes a restroom trip policy involving an accounting and control system to avoid wasted time. Employees receive a limited number of trip credits each month to use the restrooms; these have been equipped with automatic flushing, tissue-roll retraction, and door-opening devices as well as surveillance cameras (to document unauthorized access). The memo concludes by noting that “the college remains strongly committed to finding technical solutions to management problems” and that “we believe our trusted employees will do the right thing when given no other choice!”

Another memo describes a work-force reduction plan, which includes a program called RAPE (Retire Aged Personnel Early). Employees may request a review of their

status prior to forced retirement in a phase called SCREW (Study of Capabilities of Retired Early Workers). "All employees who have been RAPE'd and SCREW'd may then apply for a final review" called SHAFT (Study of Higher Authority Following Termination). Employees may be RAPED'd once and SCREW'd twice but "get the SHAFT as many times as [near] the organization] deems appropriate." A popular photocopied item depicts a person with an enormous screw through the torso along with the words: "Work hard and you shall be rewarded." Much photocopylore focuses on stress points in organizational life and areas of strain occasioned by chafing rules, loss of control over individual freedom, the lack of recognition for personal achievement, and the uncertainties or inequities in promotion practices.

Some folklore originates in situations of ambiguity or from feelings of ambivalence. In the railroad, airline, and telephone industries, ambiguity arises from the fact that these occupations are services. Porters, flight attendants, and telephone operators perform in subordinate roles providing obvious or seemingly mundane services. They must work as a team, and they justifiably consider what they do to be important, but sometimes supervisors and the public alike underrate them. Employees must appear pleasant and helpful, no matter their true feelings. Strained relations, interpersonal conflict, and stress may result. According to Jack Santino, people express their dissatisfaction, their "oudaw emotions," through fictive narrative forms such as stories in which a telephone lineman throws a pie in the boss' face or an airline attendant dresses down a captain or spits out a snappy retort to an insulting passenger. The narratives identify and define situations of subordination and hostility and provide symbolic ways of coping with emotions.

Rituals, rites, celebrations, and ceremonials abound. Organizational rites of passage include ceremonies welcoming new employees, celebrations on being promoted, rituals honoring achievement, and ceremonial banquets for retirees. Other rites or rituals range from degradation to enhancement, renewal, conflict reduction, and integration. People celebrate holidays at work, sometimes even minor ones or each others' birthdays. Much can be inferred about "climate" (the tone and tenor of the workplace) from observing what forms and examples of folklore are present or absent.

Jargon, traditional expressions, and oft-used metaphors also reveal feelings, attitudes, values, and assumptions in an organization. Sports, military, and cowboy metaphors have quite different connotations from gardening, family, and music metaphors. Frequent use of such metaphors probably reflects organizational philosophy or leadership style and likely reinforces ways of thinking, behaving, and responding to people and events.

The concept of organizational folklore also includes many folklore forms and examples as instances of organizing. Festivals, parades, religious ceremonies, family reunions, and annual clambakes require organized effort if they are to occur and be judged satisfying. Most family outings, sandlot basebase games, impromptu picnics, and birthday parties are spontaneous organizations. They exemplify organizing in its fundament: people cooperating, channeling resources, and distributing roles and activities for a designated purpose. It scarcely matters that their goals are social and aesthetic rather than pragmatic. What does matter is that they tend to evoke feelings of enjoyment, meaningfulness, and fellowship, while too often the experience of formal organization results in the desire for such feelings and frustration in not having them. In sum, the study of organizational folklore can reveal much about traditional expressive behavior, particular organizations, and the nature of organization.

“The National Ouija Board: You Ask, Ouija Answers.” Washington, DC, 1920. Library of Congress.

Ouija

A board game and folk-magic artifact commonly used as a medium for divination and/or communication with discarnate entities. Ouija—a compound of the French and German words for “yes”—was invented in 1892 by American Elijah J. Bond. He sold his patent to William Fuld, “The Father of Ouija,” who popularized the product. Fuld sold the patent to the Parker Brothers company in 1966. The game equipment consists of a miniature table with a small window built into the top, and a board with the letters of the alphabet, the numbers zero through nine, and the words “yes” and “no” written on it. Participants rest their fingers on the miniature table, which moves around the board to spell out messages.

Although the Ouija board bears similarities to earlier divinatory devices, it was regarded as a harmless parlor game unrelated to the occult until Pearl Curran, a prominent figure during the World War I-era spiritualism revival, began touting Ouija as a tool for divining the future, finding lost objects, seeking daily advice, and contacting spirits. Soon thousands of Americans were using Ouija to check up on their loved ones fighting in Europe.

Ouija has slipped into association with older, marginalized folk-religious practices, such as dowsing, crystal gazing, and Tarot, engaged in by those not fully exposed to, or fully impressed by, America’s chief competing worldviews of scientific thought and orthodox Christianity. Tales of fantastic events and eerie sensations experienced by many who use Ouija boards are common in modern American folklore. Despite being repeatedly debunked by the efforts of the scientific community, and denounced as a tool of Satan by conservative Christians, Ouija remains popular among many (mostly young) Americans. In the midst of these controversies, Parker Brothers maintains that its product is merely a board game.

Serious occultists tend to regard Ouija as a toy that is too “commercial” for their purposes, and many spiritualists have turned to other methods of accessing disembodied beings. Rebellious Christian youth may make up the largest section of the Ouija board market. In some regions of the United States, as many as 50 percent of fundamentalist Christian youth have participated in, or at least observed, the practice of Ouija. Instead of turning to Satan, or becoming mentally deranged and violent—as their pastors warn that they might—these teenagers have frightening encounters with “evil forces” that reconfirm the conservative Christian cosmological notion that the devil and his demons are actual beings who work through such devices. After such experiences, Christian teens rarely tamper with Ouija again, and they gain a renewed commitment to their faith. For Ouija to continue to serve this beneficial function in Christian culture, it must remain marginalized and condemned by the very culture that it benefits.

Outlaw

An often ambiguous legendary figure whose actions, although outside of, or in opposition to, an established power structure's laws, are supported by an ardent constituency. The designations "outlaw" and "criminal" are sometimes synonymous in common speech, but not in American folklore. The Harpe brothers, who slaughtered settlers on the trans-Appalachian frontier; Indiana's Belle Gunness, who murdered immigrant Norwegian bachelors; North Carolinian Tom Dula, who killed his lover; and Milwaukee's Jeffrey Dahmer, who cannibalized his victims—all have been memorialized in folklore as unequivocally bad. Invoked as threatening figures to control unruly children, or in bloody legends, moralistic ballads, and dark humor, such people are presented, by virtue of their evil or demented actions, as enemies of any social order and obvious criminals.

America's most notable folk outlaws, however, are firmly rooted in, and advocates for, communities with long-standing grievances against the prevailing government. Reviled as criminals by the haves, they are just as forcefully celebrated as heroes by the have nots. Their heroic characterizations often bend reality toward ancient and widely dispersed folk-outlaw traditions.

Folk outlaws have flourished for centuries in stratified societies marked by injustice. European Americans of peasant descent, for example, sustained songs and stories of such Old World outlaws as Willie Brennan, Janosik, Marko Kraljevic, and Robin Hood. As Eric Hobsbawm demonstrates, their composite legend is exemplified most fully by Robin Hood, who is forced into outlawry by injustice, rights wrongs, takes from the rich to give to the poor, kills only in self-defense or for just revenge, never leaves his community, is admired and supported by his people, cannot be killed or captured by fair means, and is not the enemy of just authorities, but of local oppressors (Hobsbawm 1969).

While Robin Hood championed 12th-century Saxon peasants against Norman nobles, America's Robin Hoods had other friends, other foes, other contexts. Jesse James opposed banks and Yankee carpetbaggers in the name of Missouri hillfolk and ex-Confederates. Morris Slater (Railroad Bill) countered racist White bosses in Reconstruction Alabama. Gregorio Cortez defied Texas Rangers against the backdrop of early-20th-century Anglo-Mexican conflict. Pretty Boy Floyd sought vengeance against the banks that foreclosed on "Okie" farmers beset by Dust Bowl and Depression. As individual embodiments of collective resistance, these outlaws became the subjects of folksongs and stories celebrating, and sometimes exaggerating, their courage, marksmanship, humor, cleverness, and gallantry. Their initial local fame, earned at significant historical moments, became amplified through the news media and an array of commercial productions.

The career of John F. Deitz, like those of better-known American outlaws, epitomizes the combination of the Robin Hood pattern, a dramatic sociopolitical context, and the embellishments of journalists and entrepreneurs. A family man and pioneer farmer in northwestern Wisconsin, Deitz ran afoul of the law when he defied a large logging corporation by refusing to allow the sluicing of timber through a dam on his property.

From 1906 through 1910, Deitz repeatedly foiled armed posses sent from the county seat by lumber barons and their corrupt local officials. He justified his actions through speeches in nearby communities and letters to regional newspapers that combined fiery rhetoric with earthy humor often cast in verse:

There is a place of great renown
That is known by the name of Hayward town,
Where an evil gang of whiskey bloats
Holds graft by buying Indian votes.

To show what regard they have for the laws,
'Tis even claimed they vote the squaws;
And every squaw that they can hire
They dress her up in male attire.

Surrendering in 1910, after an attack on the farmstead endangered his family, Deitz was sentenced to prison.

There was, however, a prolonged public outcry. Beyond his local following, Deitz won wider attention by symbolizing the Progressive Era's commonfolk sentiment against the greed and might of "robber barons." On Sunday, October 16, 1910, the *New York Times* offered a lengthy illustrated story under the headline "Why Dietz, Oudaw, Defled a State and an Armed Posse." The *Times'* dramatic juxtaposition of the "Lumber Trust" and the "owner of a dam" was echoed in popular culture. Deitz's wounded daughter appeared at packed tent shows with lantern slides; a paperback, *The Defender of the Cameron Dam*, went through several editions; and a melodrama of the same name was "the most popular vehicle on the midwestern circuit." Deitz was eventually pardoned by Wisconsin's governor.

Although John F. Deitz is all but forgotten, folk outlaws have hardly vanished from American life. In the late 20th century, Leonard Peltier, an American Indian activist, resides in prison decades after a reservation gun battle with federal agents. Besides a compact disc of songs in his defense, Peltier is suggested by characters in Louise Erdrich's novel *Love Medicine* (1984) and in the film *Thunderheart* (1992). Vilified by the powers-that-be, Peltier is proclaimed a hero by many native peoples and their sympathizers.

Outsider Art

The visual-art products of individuals whose art training and social and economic circumstances lie clearly outside the mainstream art establishment. The term was coined in the 1970s by British scholar Roger Cardinal, who used it to describe the visual art created by inmates in mental institutions. Outsider art is created by self-taught individuals, often inspired by dreams, visions, or religious experiences. Outsider art, connected to neither academic systems of aesthetics nor folk traditions, is created typically to adorn the artist's personal environment and is often obsessive.

Since the late 1970s, outsider art has become particularly popular with gallery owners and art collectors and has been the subject of a number of museum exhibitions. Most of these exhibitions have focused on the work of artists from the Southeastern United States, many of them African American. Among the most recognized outsider artists are Howard Finster (Georgia), Sam Doyle (South Carolina), Moses Tolliver (Alabama), Mary T. Smith (Mississippi), Clyde Jones (North Carolina), Thornton Dial (Alabama), Z.B. Armstrong (Georgia), Charlie Lucas (Alabama), Bessie Harvey (Tennessee), and Royal Robertson (Louisiana).

In academic discourse, outsider art is also labeled visionary, self-taught, idiosyncratic, naive, primitive, found, grassroots, isolate, and folk. There have been continuing debates surrounding the use of the label "folk" to describe art that seems to have no traditional community grounding and surrounding the perceived pejorative connotations of some of the other labels.

Owen, Mary Alicia (1850–1935)

Ethnologist, folklorist, and writer. Born in St. Joseph, Missouri, Owen developed a lifelong interest in the folktales she heard in her youth from the African Americans, Native Americans, and other cultural groups in the St. Joseph area. She was educated in private schools and attended Vassar College in 1868–1869. On her return to St. Joseph, she began her writing career with columns on early settlers for the *St. Joseph Saturday Democrat* and later published short stories in *Century* magazine and *Overland Monthly*.

Continuing her collecting activities, Owen worked extensively among the Indian tribes across the Missouri River from St. Joseph, often spending several days at a time with them. Many years later, she wrote in a notebook, now with a collection of her artifacts in the Missouri State Museum in Jefferson City, “I dare say I was a hundred times among the Musquakie between 1881 and 1898.... I had much trouble getting my collection. We were always dodging those white idiots the government sent out. They seemed to think dancing was devil worship. Folklore and ethnology had not made much headway then.”

After reading Charles Godfrey Leland’s *Algonquin Legends of New England* (1884), Owen realized that she had heard some of the same stories in northwest Missouri and northeast Kansas. She sent him a selection of her tales, and Leland encouraged her to continue her work. At his suggestion, she attended the 1891 International Folklore Conference in London, where she presented a paper on “Missouri Negro Traditions,” which was enthusiastically received and resulted in the publication of her first book, *Old Rabbit the Voodoo and Other Sorcerers* ([1893] 1969). In preparing her book for publication, she depended on Leland for advice but resisted his pleas not to use dialect so that the tales would be comprehensible to English readers, believing it was important to render the language in which the tales were told as accurately as possible.

Continuing correspondence with the Folk-Lore Society of England about her work among the Native American tribes in the St. Joseph area led to the publication of her second book, *Folk-Lore of the Musquakie Indians of North America and Catalog of Musquakie Beadwork and other Objects in the Collection of the Folk-Lore Society* (1904). Owen was an honorary member of the Sac Indian tribe and of the Folk-Lore Society of England as well as a life member and councilor of the American Folklore Society and active in numerous other societies concerned with folklore research. When the Missouri FolkLore Society was established by H.M.Belden in 1906, she became a charter member. She served as president of the society from 1908 until her death in 1935, developed an active St. Joseph group of society members, and presented numerous papers on an eclectic range of subjects at society meetings. She was never able to get together the collection of African American and Native American tales promised Belden, but when his *Ballads and Songs Collected by the Missouri Folk-Lore Society* was finally published in 1940, it was dedicated to her in recognition of her many contributions to the society and her achievements as a folklorist. She was responsible for the collection of a body of tales and the documentation of folk practices that would have been lost without her pioneering efforts.

Ozarks

Eroded mountainous area in the south-central United States. Although most native Ozarkers will likely say there is total agreement on where the geographical boundaries of the Ozarks are, the reality is quite different. There is much disagreement on the region's boundaries, and any two "experts" are likely to provide different boundary lines. This situation results because there are many different means, including geographical, geological, political, and cultural, of determining where boundaries should be drawn. This has resulted in both an exclusive and an inclusive determination of just what land area to include in the Ozarks. If one takes the former tack, the Ozarks consists mainly of most of northern Arkansas and most of southern Missouri. Most scholars, however, consider the Ozarks a much broader area consisting of the above-named areas plus most of eastern Oklahoma, a portion of southeastern Kansas, and most of southwestern Illinois. If one accepts this formulation, it is possible to say that the Ozarks is bounded on every side, more or less, by a river. On the north is the Missouri; on the east, the Mississippi; on the south, the Arkansas; and on the west, the Neosho. Setting the boundary lines in this inclusive manner creates a region of more than 60,000 square miles, an area larger than the state of Arkansas.

A question frequently asked is, "Where does the name Ozark come from?" It is easy to answer, because no one really knows. There are a number of theories, mostly involving an anglicization of a French phrase. One argument maintains that "Ozark" is derived from a French phrase *bois aux arcs*, meaning "wood for bows." The thesis is that when the first Europeans, the French, came into the region now known as the Ozarks, they found the Indians had bows that were incredibly strong. These were made from the wood of the *bois d'arc tree*, also known as the Osage orange. Soon these Frenchmen began applying the term *bois aux arcs* to the entire region. If one takes the most inclusive definition of the region's boundaries, on a map the Ozarks looks somewhat like an arc. So, it is suggested, the phrase *bois aux arcs* was a pun as well. Over time it became shortened to *aux arcs* and then eventually to *Ozarks*.

A second theory about the origin of the name holds that it comes from a geology book published in 1776 by a German named Abraham Gootlob Werner (1750–1817). Among other things, Werner said that the world had two types of rock: aqueous rock formed by the action of water, and azoic rock formed by the action of fire. According to this hypothesis, when Europeans came into the Ozarks they found much azoic rock in the region. Because on a map the region resembled an arc, it became known as the *azoic arc*, later the *Qzarks*.

A third theory about the origin of the name—the one most people accept—says that it derives from a type of shorthand used by early French settlers. When traveling into a territory, frequently they would note in their journals where they were going by abbreviating long Indian tribal names. For example, they might refer to a hunting expedition as *aux Kans*, meaning that it was made into the territory of the Kansas Indians. According to this thesis, the terms *aux Arks* and *aux Os* referred to expeditions into the

territory of the Arkansas and Osage Indians—the region now known as the Ozarks—and the two terms were eventually anglicized to the present word.

While it is not known where the word Ozark originated, there is no doubt about when it first became widely used to refer to the region; that occurred in the early 19th century. In 1809 an English traveler named John Bradbury became the first person to use the name in print. Six years later, in 1815, government explorer Stephen H. Long was the first to use the term “Ozark Mountains” on a map; for that reason, he is generally credited by historians with making the name official. Yet, Henry Rowe Schoolcraft (1793–1864), “the Father of American Folklore Scholarship,” did more to popularize the name outside the region. In 1818–1819 he made a trip into the Missouri and Arkansas Ozarks in search of lead mines, and he kept a detailed diary of his journey. This manuscript, published in London in 1821, contains several references to the region as the Ozark Mountains. After the 1820s, people generally referred to the region simply as the Ozarks.

How can one characterize the culture of the Ozarks? First, the Ozarks is dominated by the culture of the Upland South, being influenced primarily by migration from eastern Tennessee, western North Carolina, eastern Kentucky, southwestern Virginia, and northern Alabama. The major period of movement from those areas into the Ozarks occurred from 1840 to 1860. There were several reasons why this migration occurred at this time, not the least being that the antebellum years were a time when Americans were moving west. In 1790 only 5 percent of the people in the United States lived west of the Appalachian Mountains; by 1850 that number increased to nearly 50 percent. People tend to migrate to places that look much like the place they left, and to those coming from southern Appalachia, the Ozarks was the first place they came to in their trek westward that looked much like the southern Appalachian Mountains they had left. Others came because family members who were in the Ozarks wrote and invited them. Finally, the offer of land grants to descendants of Revolutionary War and War of 1812 soldiers obviously lured many people to the Ozarks.

Although the southern Appalachian mountaineers have been the most influential cultural group in the Ozarks, it is inaccurate to think, as some do, of the Ozarks as Appalachia West. Numerous non-Appalachian cultural groups exist in the region, and there were three major waves of migration into the Ozarks that occurred before 1840. The first, that of the American Indian, began about 12,000 B.C. and continued until A.D. 1835. During that time, there are six periods of Indian migration into the Ozarks, beginning with the Paleo-Indian Period, which lasted from 12,000 B.C. to 8,000 B.C. These earliest tribesmen were roving hunters who sought game in the Missouri and Mississippi River Valleys. About 8,000 B.C. the Dalton Period began, distinguished not only by hunting but by the gathering and preparing of seeds, roots, and fruits for foods. This was followed by the Archaic Period, from approxi-

A man plays a mussel-shell fiddle: two hollowed-out boards, glued together. Lanagan, Missouri, 1930. Photo Vance Randolph. American Folklife Center.

mately 7,000 to 1,000 B.C. During this era, ground stone tools and a greater diversity of chipped tools appeared. Next came the Woodland Period, from 1,000 B.C. to A.D. 900. During this period, the Indians made potteiy from clay, crushed bone, or crushed limestone, and they constructed burial mounds. The bow and arrow came into common use, and pipes and ceremonial smoking became widespread. This period was followed by the Mississippian Period that lasted until 1700. Known as the era of the village farmer, this era of Indian occupation consisted of less nomadic, more settled village life. The final era of Indian history in the Ozarks is the Historic Period, from 1700 to 1835, the period of European contact. While most of the tribes who lived east of the Mississippi and traveled west spent some time in the Ozarks, when one speaks today of Ozark Indians one is generally speaking of the Osage, who came into the region about A.D. 800.

Despite the long period of Indian occupation, the Native Americans left little imprint on the cultural landscape of the Ozarks. Some place names, a few folk arts and crafts, and some pseudo-Indian legends constitute the sum of their cultural impact there.

The second major migration into the Ozarks was by Frenchmen in the early 18th century. These migrants, who established permanent settlements in the 1720s, were seeking lead mines and precious metals; they succeeded in the first quest but not in the second. Like the Indians before them, the French left little lasting imprint on Ozarks culture, their main long-term contribution being a number of place names. Not so the Germans, who began moving into the Ozarks in large numbers during the 1830s. Much of

this movement was facilitated by the German author Gottfried Duden, who wrote a popular book, *Bericht über eine Reise nach den westlichen Staaten Nordamerikas* (Report on a Journey to the Western States of North America) (1829), that painted an Edenic picture of life in the Missouri Ozarks. Unlike the French and the Indians, the Germans have been considerably influential on modern-day Ozarks culture, although their impact has been greater in Missouri than in other parts of the region. Place names, settlement patterns, agriculture, and religion constitute their major lasting contributions.

Another characteristic of Ozarks culture is that it is rural, far more so than the southern Appalachians, with which the Ozarks is frequently compared. This is not to suggest that there are no urban areas in the Ozarks—clearly there are, the Springfield and Joplin regions in Missouri being two examples; rather, it is to emphasize that the daily tenor of life in the Ozarks is rural. A final characteristic is that Ozarkers have a well-defined sense of place. While there may not be general agreement on exactly where the boundaries of the region lie, there is little doubt about who is and who isn't an Ozarker. One is an Ozarker only if one was born there (preferably his or her parents were also born there), and everyone else is someone "from off." This generally is more of a joking distinction than anything else, but there are some Ozarkers who take such matters very seriously.

Although in stereotype the Ozarks, along with the southern Appalachians, are viewed as *the* places where one encounters folklore, that assumption is both correct and partly wrong. It is correct in that the Ozarks does have much folklore, but it is wrong in that no single place or locale has a corner on folklore; *all* places have folklore, and all are thus fertile grounds for collecting folk traditions. Probably one reason the stereotype exists is because a great deal of folklore has been intentionally collected in the Ozarks since the late 19th century. Even so, the collecting has been spotty, with much more attention given to folksongs and ballads and to folk narratives than to other genres.

The vast majority of the collecting has been carried out by amateurs, hardly surprising since until after World War II there were no academically trained folklorists turned out by American universities. The best known of all Ozarks folklore collectors is Vance Randolph (1892–1980), who, beginning in the early 1920s and continuing until the 1950s, collected material used in approximately twenty books that covered a variety of folklore genres. Calling Randolph an amateur is not to denigrate the quality of his work. He was an amateur only in the sense that he had no formal training in folklore. His various publications are valuable, and were in keeping with scholarly standards at the time of his collecting. The first academically trained folklorist working in the Ozarks was Alexander Haggerty Krappe (1894–1947), who taught at a college in the Missouri Ozarks during the 1940s. Krappe, however, was mainly a theoretician and library scholar, not a fieldworker. In 1960 Herbert Halpert spent a year teaching at the University of Arkansas, Fayetteville, and was the first fieldoriented academic folklorist to spend time working in the Ozarks.

P

Paper Cutting

Traditional decorative and usually ephemeral cut-paper figures. Paper cutting is a minor folk art in the United States with a long background in foreign traditions. The art probably originated in Tang dynasty China about A.D. 900 (a date by which paper was surely invented), although some scholars date it as early as the Han dynasty (2nd to 3rd century B.C.).

Today Chinese people produce elaborate cut-paper figures as both patterns for other arts, such as embroidery, and especially as inexpensive, exquisite decorations for ordinary houses during festivals. Using a prepared stencil atop many layers of thin rice paper and a thin knife, folk artists cut many copies at once. The delicate cuttings are then painted, sometimes naturalistically, and are generally fastened to windows, though sometimes to walls or notecards, for a brief show of beauty in a dusty world.

Colloquially known as *chuang hua* (window flowers), they often depict lucky flowers such as the lotus or the peony; red flowers are favored for the Spring Festival (Chinese New Year), and blue or red ones for the annual Moon Festival in autumn. Other favorite subjects are birds or folktale characters like the Eight Immortals or the Rabbit who lives in the Moon.

Paper cutting as a folk art appeared in Europe by the 17th century, where it developed regionally into several distinctive styles. Early examples in German-speaking areas are *Kloisterarbeit* (elaborately cut and painted frames for religious pictures and dictums). In central Europe and North America, similar elaborate *Scherenschnitte* (scissors cuttings) were produced by folding the paper once for bilaterally symmetrical designs, or many times for radially symmetrical designs (snowflakes), and cutting with scissors. Eighteenth-century German examples from both Europe and North America show a continuation of paper cuttings' religious purposes, such as marriage or baptismal certificates (*Taufschein*). By the 19th century, *Scherenschnitte* was being used for love letters, valentines, patriotic sayings, and as Christmas decorations. Snowflakes were used as doilies and as fancy shelf paper.

Single cuts—silhouettes—of scenes or portraits enjoyed enormous popularity through the 19th century in Europe and America, and their execution as a paper-cutting art was part of every educated person's talents, and certainly part of every middle-class home's decoration.

An especially elaborate version of collage paper cutting called *wycinki* developed in Poland in the mid-19th century. The artist cut either a single figure such as a rooster or a peacock or an elaborate snowflake base, then applied layer after layer of brightly colored

paper feathers or flowers to the form, creating brilliant collages. While most were used as wall decorations for the ordinary home, many were particularly designed for Christmas.

Paper cutouts are the favored Christmas decoration for many Scandinavians, especially in Denmark, where at Christmas every windowpane, mantle, and Christmas tree may be covered with decorative red cutouts. Cut from heavy paper with a craft knife, they feature birds, Christmas trees, *nisse* (Christmas elves), candles, and, in Denmark especially, the ubiquitous woven paper hearts. Many are created from two identical cutouts that are fastened together at right angles to form three-dimensional figures. Children learn to make cutouts early in their lives and continue it well into adulthood.

Large paper banners with cutouts of skeletons are found among Mexican folk artists as decorations for the Day of the Dead on All Souls' Day and All Saints' Day in late October and early November. Generally two or more feet square, the *papel picado* is punched out of bright tissue paper with chisels of varying sizes. The artist draws a pattern, places it on the top sheet of a pile, then, working on a fabric-covered table, cuts as many as fifty at a time; some smaller pieces are still cut in the "old style" with scissors. The banners feature skeletal musicians, dancers, and animals cavorting against a paper grid within an elaborate floral frame. In some regions, religious themes of angels and crosses are preferred to the skeletons. During the festival, the banners decorate homes, shops, churches, and special home altars honoring the dead.

Elsewhere in the world, similar traditions of ephemeral decorations or patterns made from paper-like substances are also

*“Shakespeare.” Paper cutting,
14.5x10.5 cm. Ohio, probably 1860s.
Collection J.W.Love.*

found. There is a tradition of cut birchbark among Ojibwa and Chippewa women, who used the single-folded, symmetrical cutouts as a basis for beadwork designs or occasionally as toys and amusements for children. In all likelihood, similar cut patterns were used as the base for quilled or moosehair embroidery prior to the availability of glass beads. Frances Densmore also reported a tradition of birchbark biting, in which a design was bitten part way into a folded piece of birchbark (Densmore [1928] 1974). When the bark was opened, a symmetrical design—often geometric, but occasionally figural—appeared through a transparent layer of intact bark. These punchouts were used as windows, and the light pouring through them created a pleasant design. Other reported uses of paper and bark cutting among Native Americans include carefully worded reports of sorcery and cut-paper dolls among some Mexican people like the Otomi.

In North America, paper cutting continues as a folk art, as in Christmas snowflakes, children’s paper dolls and toys, painting stencils, and needlework patterns, specifically those for appliqué quilt designs. Furthermore, with the revival of interest in traditional

arts in the 20th century, many fine artists incorporated paper cutting techniques and patterns into their work. Folk-arts-revival artists reproduce and elaborate upon traditional designs, and laser technology has made massproduced cut-paper art readily available.

Parler, Mary Celestia (1905–1981)

Folklorist. Parler is recalled primarily as a longtime teacher of folklore at the University of Arkansas and as the second wife of noted Ozarks folklore collector Vance Randolph. A native of South Carolina, Parler did graduate work at the University of Wisconsin, earning her M.A. in English in 1925. Later she studied for her Ph.D. at the same school and came to the University of Arkansas in 1948, having completed all requirements for the degree but her dissertation. Although she never completed her degree, Parler did yeoman work in folklore during her long stay in Arkansas. A popular teacher, she taught literally thousands of students about folklore. In 1950 she helped found the Arkansas Folklore Society, serving as its secretary for a decade. She was also editor of *Arkansas Folklore*, the society's journal. Parler also did a great deal of field recording, and she established a large archive based on materials contributed by students in her classes.

In 1950 Parler met Randolph, and, although there was mutual attraction, they were not married until 1962. She contributed material to Randolph's books *The Devil's Pretty Daughter* (1955) and *Hot Spring and Hell* (1965), and she helped with the production of *Down in the Holler* (1953), a study of Ozarks folk speech. Parler published relatively little herself, her first effort of an academic nature being "Word-List from Wedgefield, South Carolina," appearing in 1930 in Volume 6 of *Diakct Notes*. One of her main folklore publication outlets was *Arkansas Folklore*, to which she contributed "Folklore from the Campus," ([1958] 1984), one of the earliest articles dealing with oral traditions that circulate among college students. Despite the inclusive tide, Parler's essay treats only three genres: proverbs, stories and anecdotes, and beliefs.

In 1954 Parler was featured on CBS-TV in a movie titled *The Search*. This embarrassingly bad film, which was released as *Folklore Research*, is a highly romanticized account of Parler's ballad collecting. In 1975 she retired from teaching, ill health forcing her and her husband to move to a Fayetteville, Arkansas, nursing home. After Randolph's death in 1980, she moved to South Carolina, where she passed away in September 1981.

Parody in Folklore

Verbal or visual art, usually humorous, that imitates and exaggerates features of another item already known to the audience. The parody may ridicule the target item itself and/or its genre, and thereby aspects of the official culture that it represents: established literature, religion, government, education, and the like. The parody item, like all folklore, transmutes into variant forms while being passed from individual to individual in unofficial contexts.

Parody is practiced by most, perhaps all, folk groups. However, American folklorists have so far made no overall statement concerning the concept's importance and implications. A theoretical path has been blazed by Mikhail Bakhtin, analyzing the writings of François Rabelais (d. 1553) in reference to his social context of festivals that mock authority. What Bakhtin wrote in the 1930s, about the vital function of parody in unofficial culture, was first published in the 1960s in what was then the Soviet Union (Bakhtin [1965] 1984. His ideas are just beginning to affect scholarship outside Russia. Papers on Bakhtinian topics first proliferated at the American Folklore Society meeting in 1980, for example, and at the Modern Language Association of America meeting in 1988.

Bakhtin analyzed parody performed by adults, during large-scale folk events like those sometimes staged in the United States—notably, in Philadelphia by mummers. Other parodic folklore created by American adults, although less often collected than that by children and adolescents, would include much Xeroxlore (Dundes and Pagter 1975), adaptations of popular songs (c.f. Burson 1980:311–312), tall tales (c.f. Hurston, [1935]: 106–111), and jokes that skew proverbs into punch lines like “People who live in grass houses shouldn’t stow thrones” or “I wouldn’t send a knight out on a dog like this” (Brunvand 1963:59–61).

Children, however, readily create parodies that folklorists readily collect, document, and publish. As an indication, consider which American folksong might be the most widely performed. “Happy Birthday to You,” always learned orally, probably is most often sung. But is it a folksong? It was composed and promptly copyrighted in the late 19th century; its text does not vary in transmission; it attracts parodies itself (“...You belong in a zoo...”). Instead, it may well be that the most actively known American folksong—one of anonymous origins, always transmitted orally within small groups who create textual variations—is a parody of “The Battle Hymn of the Republic.” In Grove City, Pennsylvania, in the late 1950s, it was sung thus:

Mine eyes have seen the glory
Of the burning of the school
We have tortured all the teachers
And have broken all the rules
The principals are after us

But we don’t give a...*HOOT*

Our gang goes marching on
 Glory, glory what's it to ya?
 Teacher hit me with a ruler
 I bopped her o'er the bean with a rotten tangerine
 And the juice came pouring down

Researchers in American folklore need not confront most of the problems that have overwhelmed European literary critics since the 17th century, when they began futile efforts to distinguish parody definitively from related terms such as satire, burlesque, irony, lampoon, and travesty—all potentially applicable to contemporary works (Paul Scarron's *Virgile Travesty* [1634]; Samuel Buder's *Hudibras* [1663]; Alexander Pope's *Rape of the Lock* [1712]) as well as to slightly earlier ones (Goliard songs in the 12th and 13th centuries, Geoffrey Chaucer's *Tale of Sir Thopas*'m the 14th century), and thence to some of the earliest literature in the Western classical tradition (the mock epic *Battle of the Frogs and Mice*; the plays of Aristophanes). Some American works, such as Mark Twain's *Connecticut Yankee in King Arthur's Court* (1989), bring elements of concurrent oral folklore to enrich parody that participates in the European literary tradition.

The American folk themselves, however, including college-educated folk, would be unlikely to use "parody" or another literary term in reference to their own creations. Thus, American folklorists have the opportunity and the mandate to collect data first, organize second, analyze third, and finally someday propose definitional boundaries based on what the folk do and say rather than on what scholars wish they would do or say.

Parry, Milman (1902–1935)

Classicist, comparatist, and collector of South Slavic oral epic poetry; co-originator (with Albert Bates Lord) of the oralformulaic theory. Parry began as a student of the Homeric *Iliad* and *Odyssey* (M.A., University of California, Berkeley, 1923; D.Litt., Université de Paris, 1928), who sought to demonstrate that these epics were the creation not of a single gifted individual but of a centuries-old tradition of verse making. Field expeditions to the former Yugoslavia, specifically to study and record the oral performances of preliterate epic singers (*guslari*), confirmed his further thesis that such a traditional poetry must also be orally composed and transmitted.

Parry's first crucial insight was that Homer's formulaic diction (for example, noun-epithet phrases like "rosy-fingered dawn" or "swift-footed Achilles") constituted a specialized, inherited variety of ancient Greek that served the generations of epic singers as a ready medium for tale-telling. Under the particular influence of Antoine Meillet, his mentor at Paris, and Matija Murko, a Slovenian ethnographer who spent his summers studying the *guslari*, Parry evolved a theory that the formula was the touchstone of not only traditional, but also oral, composition.

But Parry was not only a theorist, and it was typical of what he styled his "literary anthropology" that he saw the next step as a journey to what was then Yugoslavia to test his hypothesis in the living laboratory of still extant oral epic song. This fieldwork resulted in acoustic or dictated records of dozens of live performances by singers from various regions.

Parry's groundbreaking explanation of the special idiom of traditional oral epic provided a new and extremely powerful answer to the Homeric Question (Who was Homer? Did he exist? How were his works composed?), and at the same time it eventually gave rise to the interdisciplinary oral–formulaic theory, which has affected more than 130 separate language areas to date.

Parsons, Elsie Clews (1875–1941)

Anthropologist and folklorist. Parsons' early work was in sociology (Ph.D., Columbia University, 1899) with a focus on American family life and feminist issues. In 1912, when her interest shifted to anthropology and folklore, Parsons began making field trips to the Southwest, mainly to the Pueblo Indians. She also embarked on a study of Black narrative folklore in the Caribbean, Nova Scotia, and the Eastern and Southern United States. In 1915, as Leslie Spier, an anthropologist, said, Parsons "fell in" with Franz Boas, and the two worked closely together.

In 1930 Parsons began fieldwork in Mexico (publishing *Mitla, Town of the Souls* [1936]); and in 1940, in Ecuador (*Peguche* [1945]). She journeyed to Spain (1923), and to Egypt and Sudan (1926) in an attempt to find the point of origin for African American folktales. Parsons was a prolific publisher (twenty-eight books, four edited volumes, two translations, and well over 200 articles). Among her works in folklore were *Folk-Lore of the Sea Islands, South Carolina* (1923), *Folk-Lore of the Cape Verde Islands* (1923), *Taos Tales* (1940), and *Pueblo Indian Religion* (1939).

In 1919 Parsons served as president of the American Folklore Society; from 1923 to 1925, as the president of the American Ethnological Society; and in 1941, as the first woman president of the American Anthropological Association. Her support of these scholarly societies was also philanthropic. From 1917 to 1940, she underwrote the cost of publication for almost all of the *Memoirs of the American Folklore Society* and assumed the publication expenses for several issues of the *Journal of American Folklore*. Generous as she was, her fieldwork, publications, and encouragement of others were her main contributions to the field of folklore.

Passover

An annual weeklong Jewish holiday commemorating the deliverance of the Jews from bondage in Egypt, their Exodus into the desert, and the journey to the Promised Land—events that occurred more than 3,000 years ago. Passover signals the beginning of spring and a celebration of freedom. In the United States and elsewhere, it customarily combines sanctioned institutional beliefs and practices with folk traditions. The holiday begins with a Seder, a ritual meal, on the eve of the fourteenth of *Nisan* (a month in the Hebrew year, calculated by a lunar calendar, which explains its variation from a fixed secular date). The Seder has an ingrained continuity: According to the Torah, parents have a duty to tell the tale to children, and each Jew must feel as if he or she personally came out of Egypt.

Seder means “order,” and participants read from a prayer book, a Haggadah, meaning “telling.” The Haggadah contains a blend of instructions, legends, prayers, commentary, questions, and songs set in an order for following the ritual. Although Haggadahs vary in translation and tone, the sequence is constant. Thus, even if as many as five different versions are used at one table, readers recognize the portion of the text being read aloud by other participants.

The origins of Passover were two nature festivals that predate the Exodus. In ancient times, nomadic Jewish shepherds sacrificed a sheep or a goat during the spring lambing season. They smeared the animal’s blood on the tent posts to ward off misfortune and ensure good luck for the coming year. This festival, observed within family groups, was called Pesach, derived from “paschal offering.”

The agricultural Jews who lived in Palestine celebrated the cutting of the grain in the spring with a Festival of Matsos or unleavened bread. They first removed all of the fermented dough and old bread made with the *chometz* (leaven) of the preceding year’s crop. Then they cut the first new sheaf of grain, the omer, and a priest sacrificed it to God while the entire community attended. Agricultural groups also baked their freshly harvested grain into unleavened cakes eaten in a special ceremony to thank God for the harvest.

These early nature rituals eventually merged to symbolize the exodus of the Jewish people from Egypt—reinterpreting the Pesach sacrifice. The Egyptians suffered ten plagues when the pharaoh refused to release the Jews. For the tenth plague, when the angel of death slew the first-born of the Egyptians, the Jews marked their doors with the blood of the sacrificed animal so the angel would “pass over” their homes. The earlier meaning of the Festival of Matsos now came to symbolize the bread of affliction since the Jews did not have time for their bread to rise when fleeing Egypt.

The seder plate constitutes a table of ritual foods related to the deliverance from Egypt and brings the story of the Exodus into the present. The Pesach sacrifice reemerges as a roasted shankbone (or any roasted meat bone). In addition, a roasted egg (*chagigoh*) symbolizes a second animal sacrificed in Jerusalem. *Charoses* (a nut, cinnamon, wine, and apple mixture) symbolizes the mortar made by Jewish slaves for the pharaoh’s buildings in Egypt, and the hope of freedom. Bitter herbs or *moror* (usually horseradish)

symbolize the bitterness of the Jews' lives in Egypt. Greens (often parsley, lettuce, or watercress) dipped in salt water (for tears) represent the coming of spring and the hope of redemption. The table setting includes three pieces of matzo, which symbolize: (1) the unleavened bread the Jews took with them upon escaping Egypt; (2) the bread of poverty; and (3) the bread of the simple life in the desert. Participants drink four glasses of wine, which signify the fourfold promise of redemption given by God to the Jewish people: "I will bring you out; I will deliver you; I will redeem you; I will take you to me for a people" (Exodus 6:6-7). (The number "four" is a constant throughout the seder: four glasses of wine, four questions, four sons, four matriarchs of Israel, four promises, and four Pesach symbols.)

A festive meal is served during a break in the Seder. The weeklong prohibitions against leavened foods, and the family's notions of acceptability, determine the "rules" for what may be eaten. Many families serve an egg (a fertility and springtime symbol now often associated with Easter but whose ritual use is ancient) in a bowl with salt water as the first course.

Where the Haggadah lacks commentary, there are opportunities for the creation of folklore. Two examples are the traditions for welcoming Elijah, the prophet, and hiding the Afikomen, or dessert matzo. The table setting includes an empty wine glass that is not filled until the end of the meal for Elijah. (Many Jews refer to any extra chair or place set by accident as Elijah's.) After dinner, the door is opened for Elijah to enter. Families will often relate who Elijah is, and how he will return and announce the coming of the Messiah by visiting families on Passover and taking a sip of wine from the cup reserved for him. The children may be in charge of opening and closing the door and might be joshed about the level of wine diminishing.

The Afikomen must be eaten before the service commences following the meal. During the dinner, as courses are served and cleared, the children often steal this matzo hidden by the Seder leader and rehide it. The hiding and ransoming of the Afikomen follows family tradition, rather than any command in the Haggadah.

The Haggadah also does not proscribe additional prayers, but it is now customary in many families to say an extra prayer for oppressed Jews. The prayer may refer to the pogroms of Russia and Poland, the Holocaust, the Warsaw Ghetto uprising, the establishment of the state of Israel, or the plight of Jews anywhere in the world.

Passover is a metaphor for freedom and survival and serves as a source of ethnic identity. A home-centered festival, Passover, more than any other holiday, is enjoyed by both religious and secular Jews.

Patton, Charlie (Charley) (1891–1934)

Mississippi folksinger and guitarist. Of mixed Negro, White, and Indian ancestry, Patton was born in the Mississippi hill country between Vicksburg and Jackson. He was brought north to the Delta shortly after 1900 by his family, who settled on the large Dockery plantation east of the town of Cleveland, Mississippi. He began to learn guitar from neighbors near his birthplace, but he perfected his skills on Dockery's, learning to perform blues and a variety of other types of folksong from local musicians. By 1910 he was performing locally as a paid entertainer. His territory grew to encompass the entire Delta, and by the early 1920s he was the most popular blues performer from this region, a position he retained until his death. He performed all over the Delta, across the Mississippi River in Arkansas and Louisiana, and in places as far away as New Orleans, Memphis, St. Louis, and Chicago, making a substantial income as a working folk entertainer. He also served as a preacher from time to time. His music was equally popular with White and Black audiences.

Patton was married at least eight times and was known as a ladies' man, a braggart and a clown, and a frequenter of rowdy places, yet he was also highly admired for his musical talents, his charisma, and his ability to live well within a physical and social environment characterized by racial and economic oppression and limitation of opportunity. Patton made three recording sessions for Paramount Records in Richmond, Indiana (1929), and Grafton, Wisconsin (1929 and 1930), and one session for Vocalion Records in New York City three months before his death in 1934. He died of heart disease in the Delta town of Holly Ridge, where he had been living for approximately the last two years of his life.

Patton made fifty-six extant recordings under his own name, including alternate takes and rerecording of several pieces, and he played guitar on additional blues by his last wife, Bertha Lee, and fiddler Henry Sims. He was accompanied on second guitar by his longtime partner, Willie Brown, on four pieces, and on fiddle by Sims on several others. About two-thirds of his recorded repertoire consists of blues, but the remainder represents a large cross section of African American folksong. Within this group are ten spiritual recordings, including a sample of his preaching, folk ballads, ragtime tunes, and versions of popular songs. He sang in a heavy, rough voice and often played the guitar in slide style.

Patton's blues are his most famous and influential pieces. They draw musical and lyrical material both from the folkblues tradition and from Patton's fertile imagination, usually conveying a great sense of conviction, immediacy, and spontaneity. Most of his themes are about the standard blues subjects of man-woman relationships and travel, but they also include prison, violence, bootleg whiskey, and magic. Some of his most remarkable pieces are grounded in personal experience, in which he mentions local people and events, often in a critical manner. These include accounts of the 1927 Mississippi River flood, a dry spell two years later, two jailhouse experiences, his tribulations during a railroad strike in Chicago, and his expulsion by an overseer from Dockery's plantation.

Charlie Patton was probably the first regional role model of the successful blues entertainer in the Delta, a region that has become almost synonymous with the blues. He was multitalented, mobile, independent, outspoken, famous, and respected, by far the most influential Delta blues performer in his lifetime. Beyond the Delta blues tradition, his musical influence readily affected such diverse figures as Howlin' Wolf, a patriarch of electric Chicago blues; Roebuck "Pops" Staples, a creator of gospel "message" songs; and guitarist John Fahey, often credited as the progenitor of New Age music.

Pecos Bill

Fictitious cowboy character with superhuman abilities. Pecos Bill is often alleged to be a genuine folk hero of American cowboys, but both the character and his “saga” were actually created by a writer long after the heyday of open-range cattle raising. The widespread publicity given Pecos Bill occurred in popular culture and advertising rather than folk tradition. Thus, the character is clearly fakelore, not genuine folklore.

In 1923 Edward O’Reilly published the first known Pecos Bill stories, probably inspired by the logger character Paul Bunyan—whom he mentions, spelled as “Bunyon.” O’Reilly incorporated some actual Southwestern tall tales into his account, and he claimed to have heard old-timers tell such tales about Pecos Bill, but folklore researchers have never been able to validate this claim. Indeed, Nathan Howard “Jack” Thorp, author of one of the best books of cowboy reminiscences, wrote in his *Pardner of the Wind* (1945): “Cowboys never developed a mythical range rider on the order of Paul Bunyan of the lumber camp, but some of their tales were as tall as the mountains in whose shadows they worked cattle.”

O’Reilly wrote that Pecos Bill was born in Texas but fell out of the wagon when his family moved across the Pecos River and into New Mexico, where he was raised by coyotes. After a passing cowboy convinced the boy that he was human and not a “varmint,” Bill saddled a mountain lion, used a ten-foot ratdesnake for a quirt, and rode into a cow camp looking for work. Later he raised his horse, Widow-Maker, from a colt, feeding it a diet of nitroglycerin and dynamite; another time he rode an Oklahoma cyclone without a saddle until it rained out from under him.

Pecos Bill fell in love with Slue-Foot Sue when he saw her riding a catfish the size of a whale down the Rio Grande. But when Sue rode Widow-Maker on her wedding day, she was thrown, and the steel spring in her bustle caused her to bounce higher with each fall. After she bounced for three days and four nights, Bill was forced to draw his pistol and shoot her so she would not starve to death. After reporting several other such escapades and heroic feats, O’Reilly concluded that Pecos Bill died by laughing himself to death when he met a man from Boston “wearing a mail-order cow-boy outfit, and askin’ fool questions about the West.”

Scores of later writers repeated and elaborated upon O’Reilly’s stories, often in books written for children, and usually softening the harsher details of killing, drinking, smoking, and carousing in the original. Such details were added to the saga as that Widow-Maker had twenty-seven gaits—twenty-three forward and four in reverse. Some writers even extended Bill’s adventures to Australia and Argentina. Advertisers adopted the image of Pecos Bill as emblematic of the old wild West. An illustrated version printed on the back of a box of Kellogg’s Cocoa Krispies cereal stated, essentially truthfully, that “few folklore figures can match Pecos Bill’s fabulous feats.” His greatest fame came when Pecos Bill was featured in the 1948 Walt Disney film *Melody Time* (1948).

The only folklorist to publish Pecos Bill stories was Texan Mody Boatright in a 1934 book, but he readily credited O’Reilly’s article as his source. In 1951 New Mexico

folklorist Ernest W. Baughman surveyed older ranchers of the Estancia Valley (supposed “Pecos Bill Country”) and found that none of them had heard oral stories about Pecos Bill. Brent Ashabranner, in a 1952 article, stated what has never been disputed, that “Pecos Bill is a synthetic product, a character invented by O’Reilly for the purpose of unifying some miscellaneous tall tales around a central character.”

Peddler's Cry

The call, chant, or song of an itinerant merchant, tradesperson, market seller or street vendor. Also referred to as a "street cry." Unlike the lengthy and complex oral prose discourse or "spiel" of the pitchman, auctioneer, or medicine-show performer, the peddler's cry is generally short, metrical, and frequently rhymed. The crier may employ musical pitch, melody, ornamentation, and other forms of vocal embellishment.

Street criers draw upon a stock of traditional verbal and musical formulas that are often specific to their particular trade or mercantile occupation while developing individualistic repertoires and styles that they employ as a means of identification for themselves and their products and services. The primary function of the cry is to announce the appearance of a merchant or tradesperson and attract an audience of potential customers for the goods or services being offered. The advertisement and description of merchandise and proclamation of a selling price may constitute secondary functions. The following examples are from Texas:

Hot tamales floatin' in gravy,
 Suit ya taste and don't mean maybe
 Watermelons, watermelons,
 Fresh off the vine,
 Get your watermelons,
 A nickel or a dime (Hurley 1953:118, 122).

The peddler's cry constitutes the most overtly expressive component of an entire complex of traditional work techniques. As such its effects may be enhanced by the performer's manipulation of work implements and items of merchandise, gesture, and other traditional semiology, and the use of horns, bells, whistles, musical instruments, and other devices, as performance markers. Street criers may also be recognized by distinct costumes or the lavishly decorated wagons, barrows and stalls from which they ply their trade.

While the cries most commonly heard in the late 20th century are those employed by the vendors of hot dogs, beer, and peanuts in baseball stadiums and similar venues, they belong to a widespread and long-standing tradition of occupational folklife. The first peddlers in America were generally European immigrants who used their success in the trade to finance the later establishment of more permanent and stable business enterprises. Their street cries, derived initially from Old World models, may occasionally be found, with illustrations, among early American broadsides and chapbooks. (Bronner 1976:3; Wright 1927:232–233)

The cries of peddlers and street merchants are immortalized in the literary creations of William Langland and Shakespeare and have inspired the composers of folk, popular, and

classical music, from the anonymous creator of the famous Irish “Cockles and Mussels,” through the English composer Ralph Vaughan Williams, to George Gershwin, whose *Porgy and Bess* features a variety of African American street cries.

Peer, Ralph Sylvester (1892–1960)

Pioneer recording executive and music publisher whose work documented an array of vernacular music. Born in Kansas City, Missouri, Peer, by the age of eleven, developed a fascination with recordings. Upon graduation from high school, he began working for Columbia Phonograph Company, learning every facet of the business. In 1918 he moved over to the small Okeh label and soon became its director of recordings.

In 1920 he authorized the recording of Mamie Smith, a Black songstress popular in Harlem, singing “Crazy Blues.” This recording’s success began a trend that led to the realization that there was a huge untapped African American market hungry for its own music.

In 1923, eager to find other regional music that would sell on records, Peer initiated the practice of conducting regional expeditions, in which he could find local talent. On his initial field trip, to Atlanta, he discovered Fiddlin’ John Carson, the first of many hillbilly musicians that Peer recorded. In succeeding years, Peer combed the South, recording hundreds of rural artists, both Black and White, whose 78-rpm discs complement field recordings made by folklorists during these same years. A major difference is that Peer pushed for fresh material that he could copyright.

Peer eventually pioneered the recording of Latin American music, using the same formula he had worked out for vernacular music in the United States. Peer is largely responsible for the introduction of Latin American music to a northern audience.

Pennsylvania Culture Region

Label used by analysts to describe an area extending from a core in south-central Pennsylvania into western Maryland and Virginia, characterized by connected cultural traditions of Pennsylvania German foodways, religions, architecture, language, and settlement. The region formed from colonial settlement after others had been established in New England, Chesapeake, and the South. Although Pennsylvania German migration came through Philadelphia and the Delaware Valley in the late 17th century, it was inland toward Lancaster and Berks Counties that the cultural region took its distinctive form. The inland region's agricultural lifestyle, ethnic connections, and relative isolation (the area formed into self-sustaining mountain and valley communities) fostered the persistence of a marked regional consciousness, although it was not as well recognized in scholarship as Southern and New England areas. In addition to major influences from Switzerland and the Palatinate Rhineland, the Pennsylvania German settlers adapted customs from English Quakers and Scots-Irish neighbors to develop a New World ethnic-regional hybrid that continues into the present.

Folklorists since the 19th century, many associated with the Pennsylvania-German Society founded in 1891 (a separate Pennsylvania German Folklore Society began operation in 1936), identified the distinctiveness of the "Dutch Country" by describing the ways that oral and material traditions integrated into a regional folklife. Traditions among the Pennsylvania Germans such as hex-sign making, Harvest Home celebrations, Eileschpiggel trickster tale-telling, powwowing (healing), and Schwabian joke telling suggested that the central Pennsylvanians held a unique place in the American cultural landscape. Beginning in the 1940s, cultural geographers used linguistic folk traditions as evidence to definitively map the limits of the region. Although the number of Pennsylvania "Dutch" speakers declined after World War II to less than 100,000, the German dialect had a profound influence on the region's speech. In 1949 Hans Kurath identified a Midland English dialect covering central Pennsylvania, western Maryland, and Virginia between well-recognized Northern and Southern speech areas.

Wilbur Zelinsky found that social traditions such as religion and settlement pattern suggested tighter boundaries than those for speech, but ones nonetheless following the general regional shape of an oval in south-central Pennsylvania extending from Altoona to Allentown and a southwestern extension down the Shenandoah Valley of Virginia (see Zelinsky 1973, 1977). Religious membership in churches of German origin such as Brethren, Lutheran and Reformed, Mennonite, and Amish churches was more concentrated in this region than any other in the United States (another area with similar Pennsylvania German settlement and religious pattern is found in Ontario). Towns in the region usually had a central square or "diamond," dense distribution of houses close to the street, and spacious alleyways. Farmsteads surrounded the towns and typically featured Pennsylvania bank barns and houses that combined German asymmetrical interior plans with English symmetrical exteriors.

In contrast to the one-level English barns set on the ground in New England, Pennsylvania barns have two or three levels with an upper level cantilevered over the lower level on the barnyard side to form an overhang called the forebay. Joseph W. Glass used frequencies of the bank barn to give the most detailed map of the Pennsylvania Culture Region to date (Glass 1986). Subdividing the region according to core, domain, and sphere, based on the model for the Mormon Culture Region in the West, Glass traced the most intensive use of the Pennsylvania barn tradition approximately from Chambersburg to Lancaster, and an encircling domain that takes in much of western Maryland. The sphere of less regional intensity extends down into western Virginia and eastern West Virginia. Henry Glassie made the argument that this sphere is the basis of a wider Middle Atlantic material culture that extended well west and influenced cultural traditions in the Midwest.

Such approaches to finding sharp boundaries of the region focus on historical continuity, and especially architectural evidence. Recent folkloristic investigation into modern-day cultural practice has shown the changing character of the region and probably a fuzzier view of regional culture based more in consciousness than in landscape. While foods served in the region—including chow chow, pot pie, scrapple, and chicken corn soup—offer an image of a wide area of influence, the round of life based on Pennsylvania German customs has moved from the “core” toward southeastern Pennsylvania to the northern edge of the domain in Schuylkill, upper Dauphin, Berks, and Northumberland Counties, where community cohesion continues. Arguments rage over whether the commercial promotion of the Pennsylvania Culture Region, known popularly as the “Dutch Country” in Lancaster County, around the former core has led to the demise or conservation of cultural traditions there. Abundant festivals and exhibitions often allow for celebrations of Pennsylvania regional consciousness to compensate for the loss of Pennsylvania German folklife in daily existence. Indeed, America’s largest folk festival is the annual Kutztown Folk Festival devoted to promoting Pennsylvania German folkways, and *Pennsylvania Folklife* boasts the largest circulation for a regional folklife journal. Increasing urbanization and a diversifying mobile population have had a negative impact on maintaining a unified folk-regional integrity, although identification with regional folk customs, such as eating sauerkraut and pork on New Year’s Day, and regional folk humor remains strong. Neither Yankee nor Southern, the mix of Pennsylvania German and British traditions in the Pennsylvania Culture Region has had a lasting influence on the ways that people there talk, eat, work, and play.

See also Pennsylvania Germans (“Dutch”)

Pennsylvania Germans (“Dutch”)

Descendants of German-speaking immigrants from central Europe, especially the Palatinate Rhineland region of what is now southern Germany and Switzerland, who settled in southeast Pennsylvania from the late 17th to 18th centuries. The concentration of their settlements and the persistence of traditional community life inland helped foster the formation of a cultural region (often called the Pennsylvania Culture Region or, more familiarly, “Dutch Country”) that has been maintained to the present day. The core of Pennsylvania German influence lies in south-central Pennsylvania, while the domain covers parts of Maryland, Virginia, New Jersey, and Delaware. The cultural influence of this Mid-Atlantic domain extends into the South and the Midwest of the United States along paths of westward migration and into parts of Canada, particularly Ontario.

Dieses Buch Gehoeret Mir Catharina Kinnig Imiahr 1898 (*This book belongs to me, Catharina Kinnig, in theyear 1898*). Bookplate, pen and ink and watercolor 9.5 cm. Artist uni- on laidpaper, 17 x dentified. Library of Congress.

Pennsylvania Germans often refer to themselves as “Dutch” (not to be confused with immigrants from the Netherlands). The term probably derives from old English usage of *Deutsch* before there was a united German nation to include a wide array of settlers from

the mouth of the Rhine to its origins in Switzerland. It received reinforcement in the United States, since Dutch approximates *Deutsch* in the dialect used by German speakers from the Palatinate. Although American scholars in the late 19th century encouraged the change to Pennsylvania German, many "Dutchmen" resisted the change because they considered themselves a distinct American group, with sharp contrasts to mid-19th-century German immigrants, and, during the 20th century, to what most Americans considered a bellicose Germany. "Pennsylvania German" has received more widespread acceptance today, but "Dutch," a folk term with the connotation of endearment, is still widely used by people in Pennsylvania of Palatinate Rhineland ancestry to refer to themselves.

The early immigrants to Pennsylvania were a mixed lot that included Palatines, Swabians, Alsatians, Huguenots, Hessians, and Swiss. They mostly held affiliations with the main Protestant traditions of Lutheran and Reformed churches and were followed by a wave of Mennonite and Amish settlement. Often the distinction is made historically and culturally between the former group, or "church people" (sometimes called "fancy Dutch") and the latter, or "plain sects." The social-religious situation becomes complex in Pennsylvania because of founder William Penn's tradition of religious tolerance and cultural autonomy. Groups including German Schwenkfelders, Seventh Day Adventists, Dunkards, Scots-Irish Presbyterians, and English Quakers wielded influence on the cultural landscape of Pennsylvania. Some small groups that traveled across Pennsylvania, such as Pennsylvania German-speaking Gypsies and Yiddish-speaking Jews (Yiddish and Pennsylvania German are related since they share a source area in the Rhineland), also figure in the ethnic relations within the Pennsylvania Culture Region. In addition, several millennialist communities with German connections emerged in the Pennsylvania Culture Region, including the Ephrata Society and the Moravian Brethren. New religious movements formed in the pluralistic Pennsylvania Culture Region, including the United Brethren, Old Order River Brethren, Evangelical Association, and Churches of God (Winnebrennerian).

Religion also played a significant role historically in the formation of Pennsylvania German identity because of a renewed effort in many central Pennsylvania communities to stress Pennsylvania German ethnicity in response to Methodist revivalism during the early to mid-19th century. Another response of ethnic consciousness in the Pennsylvania Culture Region grew when some synods of the Lutheran and Reformed churches called for use of English over German in services. The church was a central institution in most Pennsylvania German communities and provided schooling (in German) as well as social and spiritual services.

Pennsylvania German settlements were typically concentrated in the inland mountains and river valleys, although some urban centers such as Allentown, Reading, Harrisburg, Lancaster, York, and Lebanon became significant Pennsylvania German cultural hubs. Historically, Pennsylvania Germans were associated with farming and artisan trades. Many Pennsylvania Germans identify themselves by the valleys and counties in which they settled. Some examples of Pennsylvania German valley societies are Mahantango, Hegin, Lykens, Oley, and Lehigh, while significant county combinations that form cultural distinctions made among Pennsylvania Germans are Berks and Lebanon, Dauphin and Schuylkill, Lancaster and York, Cumberland and Adams, and Lehigh and Bucks.

On American soil, Pennsylvania German settlers continued a cultural-unification process that began in the Old World. Although Pennsylvania German culture includes transplants of Old World traditions, it is essentially a new regional-ethnic hybrid that developed distinctively on American soil. This process is evident in the formation of the Pennsylvania German dialect, also called Pennsylvania Dutch or Pennsylvanisch. It is based on dialects from the Rhenish Palatinate with Swiss, French, and English influences. It also has subregional variations, particularly between eastern and western portions of the Pennsylvania Culture Region and between sectarian (Amish, Old Order Mennonite) and nonsectarian speakers. Use of the dialect, once the centerpiece of Pennsylvania German identity, has diminished in the region, although it continues to be taught and used in many plain sects and nonsectarian sections of the Pennsylvania Culture Region. Estimated at more than 300,000 in 1950, the number of active Pennsylvania German speakers in 1995 was usually given as less than 80,000. Many nonspeakers of Pennsylvania German in the region display what is known as Pennsylvania German English, familiarly called “a Dutchy” or “central Pennsylvania” accent—the use of phrases in the dialect and rhythms and grammatical formations based on Pennsylvania German patterns.

The number who claim Pennsylvania German ancestry runs into millions and has influenced the spread of many Pennsylvania German traditions into American culture. Among the most familiar traditions are foodways. Pennsylvania German foods, and names for foods, such as sauerkraut, smorgasbord, pretzels, scrapple (*pannhaas*), corn mush, hot bacon dressing, hot salad, chicken corn soup, chicken pot pie, funnelcakes, riwel soup, stuffed pig stomachs, *schnitz un gnepp*, and shoofly pies, continue to be popular. Some traditions are tied to holiday observations, such as the eating of *fastnacht cakes* (fried doughnuts), on Shrove Tuesday, and the consumption of pork and sauerkraut for good luck on New Year’s Day. Some localized foodways traditions are reminders of variations within Pennsylvania German culture. Pennsylvania German cuisine in Lebanon County, for example, is known for its liberal use of saffron in recipes for noodles, cheese, and bread.

Pennsylvania Germans are known for a number of folk arts, many of which have been revived. *Fraktur*, for example, refers to the art of illuminated manuscripts that flourished between 1750 and 1850 and continued in Amish society to the early 20th century. These manuscripts, typically rendered by a minister who doubled as a schoolteacher, often marked rites of passage such as birth and baptism and marriage. There is a relationship between the structure of the privately illuminated baptismal certificate and the public design of carved gravestones that marked the final rite of passage. Pennsylvania German painted furniture also displays many motifs and designs, such as tulips, hearts, distelfinks, and trees of life common in *fraktur*, as well as the favorite Pennsylvania German colors of red and green (now generally associated with Christmas). Other folk arts associated with Pennsylvania Germans include *Scherenschnitte* (scissors cuttings on paper), decorated earthenware (especially plates and bowls with graffito decoration), “hex sign” painting (colorful geometric designs inside circles used for barn decorations), and embroidered textiles (such as decorative “show towels” meant to be hung over doors).

The extent of Pennsylvania German culture has often been marked by the visible imprint of ethnic architecture on the landscape. Traditions of the Pennsylvania barn and the Pennsylvania house (or Middle Atlantic farmhouse) figure prominently. In contrast to the one-level English barns set on the ground in New England, the Pennsylvania settlers

built two-level bank, or forebay, barns (later developing into three levels). An upper level is cantilevered over the lower level on the barnyard side. The overhang is called the forebay (*der Vorschuss* or *der Vorbau* in dialect). On the side opposite the forebay, the barn may be built into a bank or have a ramp. The Pennsylvania German house with three or four rooms (sometimes called the Continental plan in American architectural typology) has German connections (particularly to the *Flurkuchenhaus* [hall-kitchen house]) but has its greatest expression in Pennsylvania. The oldest type is a three-room plan that has an entrance off to the right of the facade. The entrance leads into a long kitchen (*die Kich*) with a central fireplace. On the other side is a front room (*die Stupp* or *die Stube*), and behind it is a smaller sleeping chamber, storage room, or “safest room” (*die Kammer*). English fashion for the classic symmetrical twostory front, with two rooms on each side of a broad central hall, influenced the development of the Pennsylvania house. The house interior retained the Continental plan but adjusted the exterior to the symmetrical arrangement, although usually without stylish trim. Chimneys moved to the gable end, and the house was frequently built in brick and less commonly in frame in addition to the popular stucco and stone. Unlike the classic English plan, the Pennsylvania farmhouse lacked a hallway, and instead had two front doors for entrances. Settlers built the house into a bank with a subterranean cellar (used for cooking and storage of preserved food) and added long porches, sometimes on two levels, around the back. Particularly among many Amish and Old Order Mennonite farmers, the practice of house and barn raising continues according to Pennsylvania German traditions. They also build on to existing homes to create additional self-contained houses for the grandparents (*Grossdaadi Haus*), thus creating a string of different-sized plain white homes.

Beyond the Pennsylvania Culture Region, Pennsylvania German customs of the decorated Christmas tree and the Easter Rabbit have become popular throughout America. The popularity of Groundhog day, or Candlemas on February 2, when sighting of the groundhog’s shadow predicts the extent of winter, also owes to Pennsylvania German belief. Other holiday traditions associated with the Pennsylvania Germans are the outdoor decoration of trees with brightly colored eggs at Easter time, Harvest Home celebrations held during the fall in Lutheran and Reformed churches, and Belsnickeling (the Belsnickel is a frightening figure who rang bells, snapped whips, and threw nuts and candy at children) at Christmas. Christmas and New Year’s once featured many distinctive beliefs among the Pennsylvania Germans, including leaving food for the Crischtkindel (Christ Child), washing one’s face in Christmas dew, playing the role of Belsnickel by teenagers the day after Christmas, and “shooting in the New Year” and performing orally learned blessings at *Wunsching* parties on New Year’s Day. Some special customs identify religious subgroups in Pennsylvania German culture. Dunkards are known for foot washing and soups served at “Love Feast” celebrations and the Old Order River Brethren based in Lancaster County have a unique tradition among the plain sects of a bread-baking ritual during its Love Feast weekend celebration.

Pennsylvania Germans have a controversial healing tradition known as powwowing (also referred to as *Braucherei* in the dialect). Many Pennsylvania Germans denounce the practice, and the tradition is in decline, but oral-historical references to Pennsylvania German custom abound with special mention of powwowing practices. Don Yoder has commented that powwowing reflects a Pennsylvania German belief system of the “worldview of the unity of all things, heaven, earth, man, animal, and nature. Within this

unity there is a dualism between evil powers, concentrated in the Devil and his voluntary servitors the witches, and good powers, concentrated in God, the Trinity, the saints, and the powwower who is the channel for healing power from source to patient” (Yoder 1990:96). Powwowing in Pennsylvania German culture relies on words, charms, amulets, and physical manipulations applied by special healers to treat animals and humans. The charms contain Biblical and Christian references, printed sources (*The Long Lost Friend* [1819–1820] by John George Hohman is the most frequently mentioned text), and oral tradition. An example is this generally used charm:

*Die Wasser und dis Feuer,
Die Wasser und dis Feuer,
Die Wasser und dis Feuer,
Die ist eine grosse Dinge,
In dies grosses geheilige Land,
Unser yunge frau Maria,
Father, Son, and Holy Ghost, Amen*

(This water and this fire,
This water and this fire,
This water and this fire,
This is a big thing,
In this big holy land,
Our young lady Maria,
Father, Son, and Holy Ghost, Amen)

Among the beliefs associated with powwowing is the passage of healing power from woman to man and from man to woman. Reference will also be made to use of a printed blessing called a *Himmelsbrief* to protect the house and person from harm. Many Pennsylvania Germans, not necessarily powwowers, will have a collection of herbal and folk-medical remedies, such as the use of berries, mints, and onions to relieve colds.

The Pennsylvania German folksong tradition includes a form of spiritual that combines English and German and derives from Methodist (including Pennsylvania groups such as the Evangelical Association, Church of the United Brethren in Christ, and Church of God) camp-meeting singing in the Second Awakening after the Revolutionary War. Alfred L. Shoemaker and Don Yoder dubbed this combination of hymns of German Pietism with English-language revival songs of the American Methodists and Baptists that entered oral tradition the “Pennsylvania (Dutch) spiritual,” but Albert F. Buffington preferred the label of “Dutchified German spiritual” because of his linguistic analysis that the texts of the songs were neither Pennsylvania German nor Standard German. According to Buffington, the songs approximated the Pennsylvania High German (*Pennsylvaanisch Hochdeutsch*) used by Pennsylvania Germans in their churches and newspapers. In a field collection from the Mahantango Valley area (Boyer, Buffington, and Yoder [1951] 1964), the authors report that the favorite “Dutch” spiritual is “O How

Lovely:" *O wie lieblich, wie lieblich/Wie lieblich iss Yeesus!/Er iss mein Erleeser,/Mei Haer un mei Freund* (Oh how lovely, how lovely, /how lovely is Jesus!/He is my redeemer,/My Lord, and my Friend). Its first three verses follow an old German hymn about wise and foolish virgins, and then it shifts to campmeeting verses of "Oh sisters, be happy...It's Jesus in my soul" (*Oh Schtueschdre seid dir hallich...Siss Yeesus in der Seel*). Yoder hypothesizes that Pennsylvania was a seedbed of American spiritual song and a "transplanting point" where the White spiritual was shared with Blacks and German settlers, with the result that two new types of spiritual arose, the Black spiritual and the Pennsylvania (Dutch) spiritual.

Secular Pennsylvania German folksongs and rhymes, by most accounts, have not thrived as well in contemporary oral tradition as the Pennsylvania spiritual. Finger rhymes, "ABC rhymes," prayers, and lullabies sung in dialect to children figured prominently in the traditional Pennsylvania German childhood. One might chant *Kleiner Finger, Dummer Finger, Langer Finger, Laus Knecker, Haver Stecker* for the different fingers, or *A, B, C, Die Katz leit im Schnee, Der Schnee geht aweg, Die Katz leit im Dreck* for the letters of the alphabet. In the field collection by Boyer, Buffington, and Yoder, adult songs of work and play were reported, especially relating to farm life, courtship and marriage, *snitzingparties* (cutting of apples for making of apple butter), and tavern pastimes. Other secular songs that gained popularity were "Dutchified" versions of English songs such as "Oh, Susanna" and composed comic songs such as "*Die Ford Maschin*" about the shock of the sight of the Model T machines to rural Pennsylvania inhabitants.

The narrative tradition of Pennsylvania Germans is vibrant but has not been widely collected. Reverend Thomas R. Brendle and William S. Troxell were pioneering collectors who issued a representative collection in translation from oral sources (Brendle and Troxell 1944). Among the categories of narrative they found were Eileschpiggel trickster stories, hidden-treasure legends, Parre (preacher) stories, "Stupid Swabians" (also Hessian and "Dumb Dutch") jokes, and legends of the Elbedritsche. The Pennsylvania German Eileschpiggel has a connection to a European trickster figure but tends to be more lovable in Pennsylvania. He is a boastful, impish character who finds ways to outwit the devil. According to one story, for example, a dispute arose as to who was stronger. The devil, to show his strength, tore an immense tree up by its roots and threw it up into the air. Then came Eileschpiggel's turn. He climbed a tree, and the devil asked, "Why are you climbing a tree?" The reply was: "I don't care to waste time in pulling up one tree. I am going to bind the tops of several trees together and then I'll pull them all out at one time." The devil gave up. The hidden-treasure legends also might include pacts with the devil for "seven brothers" in order to receive a treasure. In various versions, the farmer—or tramp—brings seven suckling pigs, thereby outwitting the devil. The hiddentreasure legends often rely on the belief that buried treasure lies hidden under planks in old barns. A common motif is that a treasure seeker is supernaturally offered riches if he can keep totally silent during the dig, but at the moment he lays eyes on the treasure, he exclaims, "I'm rich," or some other outcry, and the money disappears.

Parre stories depict the preacher as a community folk hero possessing wit, sometimes strength, and an often unexpected earthiness or worldliness. The story is told about Reformed minister Isaac Stiehly who was hard pressed to say a kind word at the funeral of a thief. "Now," said the people, "Stiehly cannot say anything good about the dead."

But they were disappointed. He closed his sermon by saying, “*Er hat seine Familie gut besorgt. Er hat sie besorgt bei Tag und bei Nacht*” (He provided well for his family. He provided for them by day and night). Another common theme is the hunting prowess of preachers. Stories of preachers spying a deer or a fox out the window of the church, hunting it quickly, and resuming the sermon are legion. They are also known for repartee, such as the exchange with the famous preacher Moses (Mose) Dissinger, who replied when asked “What are you doing today?” “Today,” answered Mose, “I am going to do something the devil never did.” “What is that?” asked his friend. “Leave Allentown.”

The Stupid Swabian (Hessian or Dumb Dutch) is the Pennsylvania German version of numskull tales known widely in America and elsewhere. There’s the commonly heard story, for example, of the Swabians who were building a church in the valley. They cut the logs for the church on the top of a mountain nearby and began carrying them down into the valley. A traveler came along and told them that they could roll the logs down into the valley and he showed them how to do this. Thereupon the Swabians fetched the logs that they had already taken down into the valley, took them back to the top of the hill, and rolled all of them down. Hessian jokes refer to the failure of the Hessians during the Revolutionary War. The story is told about the Hessian commander who led soldiers into the Dutch Country. They came upon a large heap of barnyard manure and at the command of their officer fired upon it. “There is the enemy,” he had said when he commanded them to fire.

The Elbedritsche hunting legend and its enactment are the Pennsylvania German version of the snipe hunt. The Elbedritsche is described to young Pennsylvania German boys and girls as a mysterious creature who is caught in the woods with the aid of a sack. The initiate’s companions take the youngster to an isolated location and leave him or her with a bag and offer instructions on calling the Elbedritsche. Usually, the initiate is consoled by the explanation that the companions will drive the Elbedritsche toward him or her. Eventually, though, the initiate discovers that he or she is left “holding the bag.”

Many observers note that the continuity of Pennsylvania German culture has been disrupted by many factors in the 20th century, including increased mobility, urbanization, and development of the rural landscape (the construction of the Pennsylvania Turnpike and the growth of retail outlets are two frequently mentioned developments that affected the Dutch Country). As early as the mid-19th century, observers noted the loss of Pennsylvania German traditions, especially after compulsory education in English was legislated. Many Pennsylvania German children in the post—World War II baby boom generation noticeably broke ties with the dialect and traditional Pennsylvania German occupations and locations, although they may still maintain foodways and other customary traditions. Amish and Old Order Mennonite groups might maintain community integration characteristic of 19th-century Pennsylvania German life while at the same time developing some traditions that are distinct from the church people (for example, *Ordnung*, dress, quilting, and carriage making), but they, too, face pressures from modernization. They also must cope with state regulation that affects traditional practices such as midwifery, horse-and-buggy travel, and butchering, as well as the group’s separate social institutions in education, religion, and labor. Amish migration out of the Pennsylvania core into outlying sections in the Pennsylvania Culture Region and Ohio, Indiana, Missouri, Ontario, New York, and Iowa have in some cases reinvigorated Pennsylvania German culture.

Some contemporary locations for the transmission of narrative and singing traditions are the *Versammlung* (gathering) and the *Grundsau Lodch* (groundhog lodge). These social occasions gather Pennsylvania Germans to eat a dinner of traditional Pennsylvania German foods and hear speakers relate stories, particularly folk humor, in dialect. Singing in dialect typically occurs, and often a dialect play will be performed. Other institutions that help maintain the dialect and other traditions are “heritage” or “folk” services provided in dialect, often around the time of Harvest Home. Some churches provide suppers and picnics featuring traditional Pennsylvania German meals such as pig stomach, ham and dandelion salad, pork and sauerkraut, and *schnitz an gnepp*. During the summer, organized family reunions are important social occasions in Pennsylvania German areas. Some radio and television shows in dialect are available in central Pennsylvania, and a few newspapers carry dialect columns. Classes in dialect are offered at several historical societies and schools, and a small program in Pennsylvania German studies is available at Ursinus College (home of the Pennsylvania Folklife Society and the journal *Pennsylvania Folklife*). Several organizations have as their mission the preservation of Pennsylvania German culture, including the Pennsylvania German Society, the Pennsylvania German Cultural Heritage Center, and the Pennsylvania Dutch Folk Culture Society.

Part of the Pennsylvania German core area in Lancaster County has emerged as a major tourist area, and debate can be heard over the effect of this development on Pennsylvania German folk culture. Views of traditional Pennsylvania German practices such as craft, language, and farming are commonly presented to non-Pennsylvania Germans, and folklife plays a significant role in the public programming of this cultural tourism. Ironically, much of the farmland once essential to Pennsylvania German community life has given way to commercial development around Lancaster, although some scholars respond that the commercial development directs tourists into urban strips away from rural Amish communities. Some critics rail at the misrepresentation of Pennsylvania German life in tourist presentations, such as the conflation of Amish, Mennonite, Brethren, and nonsectarian cultures into a monolithic Pennsylvania German culture. A genre of misplaced “tourist belief” has emerged about Pennsylvania German traditions such as the ideas that “hex signs” warded away witches, that seven sours and seven sweets are standard on the Pennsylvania German table, and that Amishmen painted gates blue to show interested suitors that they had a daughter of marriageable age. Some defenders of cultural tourism, meanwhile, point out the growth of Pennsylvania German ethnic consciousness and spin-off efforts from tourism toward preservation as a result of educational and entertainment programs.

Interest in Pennsylvania German traditions, both outside and within the culture, has fostered an important legacy of folkloristic scholarship. The integration of oral, social, and material traditions within Pennsylvania German communities has attracted scholars to Pennsylvania folk culture. The importance of oral transmission and customary learning in the maintenance of Pennsylvania German life has raised scholarly questions about the traditional systems operating in the community in addition to historical and cultural questions of maintenance and adaptation over the 300 years Pennsylvania Germans have been settled in America. The special relation of community life to the integration of traditions among Pennsylvania Germans influenced the development of the folklife, or folk-cultural, approach championed by Pennsylvania German scholars. In the late 1940s,

Alfred L. Shoemaker, J. William Frey, and Don Yoder at Franklin and Marshall College in Lancaster, Pennsylvania, for example, founded the Pennsylvania Dutch Folk Culture Center and the journal *Pennsylvania Folklife*. They also initiated the Pennsylvania Dutch Folk Festival, later to become the Kutztown Folk Festival, held in Kutztown, Pennsylvania, America's largest folk festival. Shoemaker led the nation's first, albeit short-lived, department of folklore, at Franklin and Marshall and stressed a folk cultural approach with special emphasis on folk arts and material culture. Henry Chapman Mercer and the Landis brothers (Henry and George) established museums to preserve and present their collections of Pennsylvania German folk arts and practices (Mercer Museum and Landis Valley Museum, respectively). Reverend Thomas Brendle, a highly respected collector of folk belief, medicine, language, and narrative, had a museum established in his honor at Schaefferstown, Pennsylvania. Essays on the folklore and folklife of Pennsylvania Germans by W.J. Hoffman were featured in the first issues of the *Journal of American Folklore* (1888), and a book-length collection of "The Folklore of the Pennsylvania-German" by Reverend John Baer Stoudt appeared in 1915 as a supplement to the proceedings of the Pennsylvania German Society, founded in 1891. In addition to the folkloristic interest of *Pennsylvania Folklife* and the Pennsylvania Folklife Society in Pennsylvania German folk culture, a separate Pennsylvania German Folklore Society, with the active leadership of pioneer collectors such as Edwin Fogel and John Baer Stoudt, formed in 1935 and lasted until 1967 when it merged to form the reorganized Pennsylvania German Society (which publishes a book series and the journal *Der Reggebooge* [The Rainbow], edited for many years by Fred Weiser, and since 1992 by Don Yoder, with many features on folk arts and folklife). The special attention given to folklife and material culture in Pennsylvania greatly influenced the spread of these concerns in American folkloristic scholarship generally.

Performance Approach

An interdisciplinary perspective that conceives of folklore as artistic communication or performance and seeks to understand folklore through studies that situate it in social life and history. Also referred to as the contextual approach, the communication approach, and performance studies, the performance approach examines a range of aesthetically marked performances, including verbal art and material culture. It includes all of those genres, acts, events, and roles in which people assume responsibility for presentation to an audience. In performance, as Richard Bauman argues, the aesthetic dimension comes to the fore as performers accept responsibility not only for what they do, but also for how they do it. The audience of a performance maintains a dual focus, attending to what is said and done, and how it is accomplished (Bauman [1977] 1984:11) Thus, while performance clearly involves communication, it is an aesthetic mode of communication in which aesthetic features are foregrounded (Fine 1984:58–62).

Performances can be distinguished from other types of communication by textual, stylistic, and contextual features. For example, textual markers such as “Once upon a time...” or “Have you heard the one about...” signal that a fairy tale or a joke is about to be told. Distinctive intonations or rhythms, or other stylistic traits, as well as special contexts, such as a defined time, place, and audience, also identify performance as aesthetic communication. Dan Ben-Amos, one of the first to conceive of folklore from a performance approach, defines it as “social interaction via the art media” that “differs from other modes of speaking and gesturing” (BenAmos 1972:10–11). Certain metacommunicative devices, or signals that communicate *about* the communication, function to frame a performance and thus distinguish it from other modes of communication. These devices serve as keys or signals for performance and include, according to Bauman: (1) special codes, (2) figurative language, (3) parallelism, (4) special paralinguistic features, (5) special formulas, (6) appeal to tradition, and (7) disclaimer of performance (“I’m not a very good joke teller, but...”) (Bauman [1977] 1984:16–22).

In addition to approaching folklore as artistic communication, performance scholars insist on studying folklore in its social context, simultaneously emerging from and creating a particular social event. Many different and interacting variables influence performance events. The physical setting, such as season, time of day, and location, may stimulate expectations for the performance of certain genres, such as fictional stories or religious narratives. The psychological mood of the setting may further affect the types and styles of performances that emerge. In addition, the kinds of participants and their personalities, relationships, and goals influence the kinds of emerging performances (Fine 1984:62). As these factors change, different expectations for verbal-art performances emerge. These implicit or explicit expectations for performance can be thought of as “ground rules for performance” (Bauman [1977] 1984:28). Despite the existence of such rules for a performance event, particular performances often stretch or violate these rules, creating *emergent texts*, events, and social structures (Bauman [1977] 1984:40–45). In

addition to its focus on artistic communication situated in and influencing particular social events, the performance approach emphasizes that folklore is uniquely patterned within specific cultures and variable across cultures.

Scholars who work with a performance approach can be found in many disciplines, including communication, linguistics, folklore, anthropology, sociology, and theater. This multidisciplinary practice reflects the intellectual roots of the performance approach, which were stimulated by research in each of these fields. The emphasis of anthropologists such as Edward Sapir on recording vocal style and Bronislaw Malinowski on recording contextual features, plus the work of linguists of the Prague School in understanding the importance of individual usages of language, helped pave the way for folklorists to examine folklore as a performance in a social context (Fine 1984:25–34). For example, E.Ojo Arewa and Alan Dundes drew on Prague-School theorists Roman Jakobson and Petr Bogatyrev for the conceptual framework of their groundbreaking work, “Proverbs and the Ethnography of Speaking Folklore” (Arewa and Dundes 1964).

The performance approach first emerged as a systematic perspective in folklore studies in the early 1970s, as part of a larger postmodern intellectual movement that embraced the concept of performance as a new paradigm. Stimulated by the interdisciplinary ideas of Kenneth Burke, Erving Goffman, and Gregory Bateson, the social sciences were radically changed by analogies borrowed from the humanities, according to Clifford Geertz. Two of the most powerful analogies, based on drama and game, involved the notion of performance (Geertz 1980:168)

Burke’s dramaturgical philosophy stimulated comprehensive analytical approaches that took into account not only the work or act, but also the agent who creates or performs it, as well as the agency, the scene, and the purpose. Burke’s performance-oriented ideas influenced such folklorists as Brian Sutton-Smith, Bruce Rosenberg, Dell Hymes, and Roger D. Abrahams. Burke also influenced such well-known anthropologists as Victor Turner, James Peacock, and Clifford Geertz, as well as sociologist Goffman. Their works further stimulated a performance approach to the analysis of culture (Fine 1984:35).

In addition to the influence of the drama analogy, the game or play analogy contributed to the new performance paradigm. The most influential applications of the game analogy to the performance paradigm have come from Bateson and Goffman.

In order to explain how beings distinguish between different orders of messages, Bateson introduced the concepts of “frame” and “metacommunication” in his essay “A Theory of Play and Fantasy.” Noticing that both animals and humans use signals about signals, or metacommunication, to distinguish messages such as “this is play” from what otherwise might be interpreted as aggression, Bateson argued that such metacommunication serves as an interpretive frame. Such frames help define different orders of messages, such as fantasy, play, and dreams (Bateson 1972).

This concept of frame has provided a useful tool for distinguishing artistic verbal performance from other modes of communication. Much of folklorist Richard Bauman’s definition of performance draws on Bateson’s notion of frame, as does Barbara Babcock’s analysis of metanarration in folk stories (Fine 1984:35–36).

Another important stimulus to the study cultural performances has come from Goffman, who used both dramaturgical and game analogies. In *The Presentation of Self in Everyday Life* (1959), he showed how everyday work roles could be interpreted as

cultural performance. Ideas from this work, as well as from *Encounters and Interaction Ritual* influenced such writers as Hymes, Richard Schechner, Barbara KirshenblattGimblett, and Bauman. Goffman's *Frame Anafysis* (1974) has been especially crucial in shaping Bauman's definition of verbal art as performance (Fine 1984:35–36).

A major intellectual root of the performance approach comes from an area of linguistic anthropology known as the ethnography of speaking. During the early 1960s, Hymes called for an ethnographic study of speaking that would discover the patterns and functions of speaking within specific cultural contexts. He suggested a methodology for this study that begins by identifying a "speech community," or a group of people who share common language and rules for conduct-ing and interpreting speech activities. Within the context of a chosen speech community, the ethnographer describes speech behavior in terms of settings, participants, ends (goals), act sequence, key (tone), instrumentalities (communication channels), norms of interaction and interpretation, and genre (Hymes 1972:35–71). Hymes' work stimulated a number of performance-centered ethnographies within the fields of folklore, communication, and sociolinguistics.

The term "performance approach" should not suggest any simple formula or method for analyzing folklore. Rather, performance scholars in the 1990s recognize the complexity of such terms as text, performance, and context and the dangers of conceiving of them as static objects (Bauman and Briggs 1990:60). Accordingly, performance scholars are studying the processes by which performances are detached from one social situation (decentered or entextualized) and performed in another social situation (recentered, or recontextualized) (Bauman and Briggs: 1990:72–78). Such studies necessarily lead beyond the study of a performance in only one time and place to studies of a performance embedded in history. Thus, a given performance might bear traces of earlier performances, texts, and contexts. This historical emphasis promises to reveal additional insights about the relationship of performance to social life and other modes of communication.

Perrow, Eber Carle (1880–1968)

Professor of English and amateur folklorist known primarily for his collection of folksong texts from the Southeastern United States. Perrow was born in Tye Valley, Virginia, December 7, 1880, and was exposed at an early age to folklore from both Black and White sources. Receiving his B.A. (1903) and M.A. (1905) degrees from Trinity College, he went on to Harvard University, where he studied under George Lyman Kittredge. Perrow earned his Ph.D. from Harvard in 1908, taught briefly at the University of Missouri and elsewhere, and became head of the Department of English at the University of Louisville in 1911.

From his post at Louisville, Perrow compiled folksong materials, relying heavily on his students' contributions and his own memory for texts. Between 1912 and 1915, his "Songs and Rhymes from the South" (270 texts) was published in installments in the *Journal of American Folklore*. Perrow helped found the Kentucky Folklore Society in 1912 and, from 1916 to 1918, served as its third president. Soon after, following medical advice, he retired from the stress of academic involvements and spent his remaining years farming and surveying in the north Georgia foothills. He died at Talking Rock, Georgia, in 1968.

Influenced by the "communalist" theory of ballad origins advanced by Kittredge, Francis Barton Gummere, and others, Perrow demonstrated the existence of what he felt was spontaneous group folksong composition by citing religious revivals and community dances. His own collecting went beyond the literary tradition of English and Scottish popular balladry set forth by his teachers and encompassed a spectrum of lyric folksong, American native balladry, plantation rhymes, dance songs, antislavery songs, and mountain blues.

Perrow, like many others of his generation, tended to view Appalachia as a homogeneous culture just emerging from the 18th century. In his writing, he perpetuated certain cultural stereotypes such as mountaineers' "inborn antipathy toward organized authority." Nevertheless, his "Songs and Rhymes of the South" was one of the first published collections to demonstrate the potential richness of folk music in the Upland South, a richness that was soon after brought to national prominence by the collecting and publishing work of Olive Dame Campbell and Cecil Sharp.

Personal-Experience Story

A prose narrative relating a personal experience, usually told in the first person, and containing nontraditional content. Unlike most folklore, a personal-experience story is not passed down through time and space and kept alive through variation from one teller to another. Instead, the content of a personal-experience story is based on an actual event in the life of the storyteller. The story may become a repeated and polished item in the repertoire of the person who had the experience and created the story, but, in general, such stories do not enter tradition.

While the content of personal-experience stories is not traditional in the usual sense—that is, one cannot recognize in them known motifs or story plots—still the form, style, and function of such stories are consistent from one story to the next. Thus, one can argue that the genre itself is traditional. Further proof of the traditionality of the genre is found in the many clearly traditional genres that disguise themselves as personal-experience stories—such as tall tales, first-person jokes, and catch tales. Personal-experience stories are found in the oldest recorded literature, such as the ancient Sumerian epic of *Gilgamesh*, in which the hero reports his adventures as pointed narratives, each with a specific, single-episodic plot.

The hallmark of the personal-experience story is that it reports a single event, usually one that would not be considered supernatural. Folklorists use other terms to identify longer stories with a sequence of events, such as life histories, or stories that involve magic healing or the supernatural. Such stories are called memorates, and they usually reflect some traditional belief, even if the experience itself is a personal one. One function of memorates might be to reinforce the traditional beliefs at their base, as in the following (see Stahl 1975) story of seeing the northern lights (aurora borealis) shortly before the American entry into World War II: “Well, the last time that I’ve seen northern lights that were spectacular was just before World War Two. Course everybody says, you know, that anything phenomenal like that *portends* disaster, and all that sorta stuff. And everybody was wondering what terrible thing was going to happen.” (One function of the story could be to maintain the belief in such portents.)

More “secular” personal-experience stories usually serve one of three fairly specific functions: (1) to entertain, (2) to be a cautionary tale or to illustrate the results of certain behaviors, or (3) to present some aspect of the storyteller’s character and personal values. Often these functions overlap, as in one teller’s story of climbing up into the cupola of their barn while playing hide-and-seek and being unable to get down. The rest of the story in which she finally calls out to her brother and has him stretch across the missing rungs of the ladder so she can crawl over him to safety is entertaining, but it also cautions against rash behavior and reveals something about the teller’s character. Thus, it serves a didactic function.

Because of these three broad-based functions, personalexperience stories are found easily in a great variety of contexts—informal contexts, such as bars and coffee shops, family gatherings, work breaks, or parties, and more formal ones as well, such as in sermons, in classrooms, on television talk shows, or in political speeches. But personal-experience stories are not simply unstructured gossip or bragging. In form they are very much like anecdotes—short, single-episodic, often with a kind of punch line or dramatic

ending that makes them memorable. Unlike anecdotes, however, personal-experience stories are told by the very person who had the experience. The teller, then, is the one who creates the story, the one who turns an experience into a narrative.

A point of great theoretical interest to folklorists has to do with this process of creating the story. Most folk narratives, such as legends or fairy tales, are assumed to have had an original “creator,” an individual who first made up the story, although generally we can no longer trace the story back to find out who that originator was. With a personal experience story, on the other hand, we do know who made the story up, and we can ask some of the questions that so intrigue us about the process of literary creativity. Some researchers are eager to discover what makes an event “story-worthy.” Some want to know how different personalities affect the kind of story that grows out of an event. Some want to know how a story changes over time as the teller retells and polishes it. And some want to know which came first, the sense of event or experience or the narrative itself.

The study of the personal-experience story began in Europe with attention to the memorate and the “true story.” In American folklore research, one of the earliest scholars to recognize, collect, and publish personal-experience stories was Richard M. Dorson. In 1952 Dorson included a section on “Sagamen” in his book of Upper Peninsula folklore. Dorson recognized the similarity between these nontraditional, anecdotal stories and the tall tales and jocular tales he collected from his informants.

Since then American researchers have become increasingly interested in the personal-experience story and its close neighbors. Some efforts have been made to classify personalexperience stories by theme, as evidenced in books such as Eleanor Wachs’ *Crime Victim Stories* (1988). Some scholars, such as Richard Bauman, have offered detailed textual analysis and some fine insights into the wonderfully flexible storytelling style of individual performers. Some, such as this author, have been interested in examining how the cultural frame of reference is used by the teller and the listener to make the story personally meaningful.

Some of the possibilities for attending to the richness of cultural allusion, style, and creativity in the telling of personalexperience stories can be suggested more easily by including a segment of one narrative text. The story below, transcribed in part, was told by Larry Scheiber in 1974 in Huntington, Indiana, to the author and a number of friends. At the beginning of the story, we learn that Larry and his friend “Tiny Wires” had gone cat-fishing using a bucket of chicken blood as bait. They had set the bucket of leftover bait under the trailer that they were sharing that summer. Finally, the stench became so bad that they knew they had to get rid of it. The rotting blood had attracted flies, and the bucket was full of maggots. After a bribe of Mickey’s Malt, Larry agreed to drag the bucket out from under the trailer. They decide to throw the whole thing in the river. The story concludes:

There’s a bridge out there, one bridge past Broadway, just a little stony job, about three-foot-high railing. I said, “You drive across that and go *realslow*.” I said, ‘I’ll just heave the whole goddamn mess over the railing, and we’ll take off like a big-ass bird.’ So he’s driving real slow and I’m hangin’ out the window—this thing’s *heavy*, man! My ol’ Biceps isn’t all that big, ya know. I’m holdin onto that damn bucket. Wires says,

“OK, give ‘er hell!” So I get my arm underneath it [motions accompanying actions described]—so I [throwing motion]—uhh!—I threw it as hard as I could. Hell, it must’ve weighed sixty pounds! It made it right to the railing and jumped back. [Motion with hand straight up, and noise—apparent from motions that the contents of the bucket came down all over him] [Laughter and groans] Did you ever just drop a glass of water—see how it shoots up? Hell, I was hangin’ out the window or the whole car woulda been full. I’m not kiddin’ ya, it just buried me in maggots.

Larry finishes the story by recounting how Wires drove to a car wash and used the high-pressure water to try to get the maggots off his car—with Larry still hanging out the window. But the maggots stuck to the car and had to be removed with a putty knife. The best part of the story, according to Larry, was watching Wires try to get the maggots off with a putty knife. He closed with, “Oh God—it was hell! Every time I think of Tiny, I think of that goddamn bucket of maggots.”

Larry’s story, like so many personal-experience stories, not only instructs and entertains, but also forges a subtle bond between the teller and the listener. The teller reveals something about himself, while the listener learns something about the storyteller. Personal-experience stories serve a number of functions, but perhaps the most telling function is that they invite intimacy, a chance for the teller and the listener to know each other better.

Pictorial Tale

A narrative form in which the storyteller draws details of a picture representing narrative descriptions that lead to a surprising ending to the story as shown in the final drawing. In the late 20th century, the form is commonly collected as humorous tales or jokes told by adults to children or children to other children.

In one traditional pictorial tale found commonly in England and America, the figure of a bird is formed from the narrative description of an oval pond (forming the center of the bird's body), cattails at one end of the pond (the bird's tail), a house with one window (the bird's head), a path from the house to the pond (the bird's neck), and two Indians living in tents who came up two paths for water (the bird's feet). A variant commonly collected in the Southern United States describes two men working in a briar patch (forming the feet) who go for water and return (forming the tail), while a father and a son live in a house with a lookout. When the son investigates the noise made by the men, he returns to his father and says "Ain't nothing but a crane, pop." The drawing at this conclusion reveals the figure of a crane. Other animals, sometimes hunted or chased in the tales, are wildcats, ducks, or mice. Pictorial tales also lead to words or landscapes that close out a story. The diagrams are often drawn in the ground, or sketched on chalkboard or paper.

Many of the pictorial tales pose the question, "What's this?" to the details successively being added until the total picture is revealed. Related to this form are riddle jokes using pictorial clues that reveal a spoken answer other than what is expected from the drawing. Often the answer may seem offcolor to the child. An example is an Indian teepee to which is added a smokehole and the sun above. With the addition of an arc, the picture becomes: "My dad bending over the tub to wipe it out after he has taken a bath." The pictorial tale is distinguished from a "doodle" by the narrative sequencing found in the tale. The doodle shows a single boxed drawing that gives a clue as to its representation. A common example is two parallel vertical lines with semicircles on them. When the drawer asks, "What's this?" the answer is a bear climbing a tree or a giraffe's neck.

Many American Indian groups have a special form of the pictorial tale in which figures are drawn to represent symbols used in episodes of a story. The symbols are brought together at the conclusion in one encompassing picture. Among the Oglala Dakota, for example, the story of the traveling Indian Wic'o'Wic'aga was collected as a pictorial tale. In this story, he travels westward and sees seven fireplaces, and then comes to a valley in which he sees seven camps. He continues and sees a large camp with seven teepees on each of which is drawn a different picture. The one on the end has no picture, and Wic'o'Wic'aga is instructed to go to that one to find out about the rest of his journey. Inside he receives presents such as pipe, a bow and arrow, and a medicine bag. The final picture includes the figures that have previously been drawn and the concluding moral: "Just as he went through trials and tribulations and got gifts for his reward, so people say that those who endure hardship in a manly way will enjoy the privileges of a good man" (Beckwith 1930:339-442).

Piedmont Region

Or “Carolina Cotton Piedmont,” a region of the American Southeast. Geographically, the area extends from the central part of North Carolina through South Carolina into Georgia, and is bordered on the west by the Blue Ridge and to the east by the Sand Hills (remnant Cenozoic beaches). Physically, culturally, and linguistically blending into central North Carolina’s tobacco area and central Georgia’s Atlantan megalopolis, the region historically was the heart of textile production in the Southeast. In the late 20th century, the “Upstate,” as the region is also called, consists of rolling hills with pastures and small farms, linked by an expanding Interstate corridor extending from Charlotte, North Carolina, to Atlanta.

The earliest European settlers were Scots-Irish, some Germans, and British migrants from colonial areas farther north, along with some African American slaves. Their settlement pattern of small, independent “yeoman” farms contrasted with the English plantations along the coast, establishing a cultural and dialectical distinction that persists to this day. Following Reconstruction of the 1870s, the Piedmont sprouted numerous cotton mills, utilizing the area’s inexpensive water power, White labor, and raw materials. Consequently, mill-town residents gradually became a recognized folk group.

Simultaneously, stemming in part from the devastation of the Civil War, a system of tenant farming and sharecropping evolved, establishing a second category of landless Black and White farmers. Both of these groups interacted further with a developing small-town elite, created by old money saved from antebellum times and new capital generated by the mills and related enterprises. Through time, the traditions of these groups interwove, creating Carolina Piedmont folklife.

The ongoing social relationship between Anglo American and African American Upstate residents has been complex. While racism, paternalism, and segregation guaranteed that Blacks and Whites worshipped, learned, and lived separately, Black cooks fed their traditions to White households, Black “nurses” or nannies passed oral traditions on to their White charges, and White and Black tenant farmers often worked side by side. This social interaction followed unspoken but quite rigid rules, regulating not only marriage partners and occupational categories, but even forms of greeting and methods of home entry. For example, Whites would always address a Black (regardless of class) by first name or “Uncle” or “Aunt”; to retain their dignity indirectly, African Americans disclosed their first names to friends, leaving only initials by which Whites might address them.

Seen acutely in the political economy, segregation prevented African Americans from working in the textile industry, effectively restricting men to manual labor or some professions such as preaching, women to domestic duties and other professions such as teaching, or either gender to tenant farming. Black women, in effect, supported the stereotypical “Southern hospitality” and gentility of their White employers by washing and starching clothes, caring for children, and especially by preparing and serving formal dinners and teas. Desegregation in the area has opened minds and places, but traces of

these earlier attitudes may still be felt, as Blacks and Whites maintain informal social separation within a larger context of formal integration.

Besides African American and Anglo American social groups, others exist in the area both in reality and in stereotype. From the ubiquitous mill towns developed the mill workers, disparaged by both town and farm residents as “lint heads”; the latter resented these perceptions and formulated their own views of farmers and town dwellers. These groups and their positive and negative stereotypes persist. Some scholars have argued that the region’s yeoman farmers of the 18th century (with the addition of some former mill hands) have evolved into “rednecks.” Perceived by outsiders as somewhat coarse and conservative, rednecks see themselves as a step above the “White trash,” the trailer-dwelling lowest class, which everyone recognizes but in which very few acknowledge membership. As they interact, all of these social groups follow stereotypical, traditional patterns.

Attitudes shaped by the past explain and justify contemporary folklife and the groups that continue these customs. For example, people in the region describe the Upstate value system as consisting of family togetherness, Southern hospitality, religious conservatism, individuality, and a stereotypical slower pace of life. Many Anglo Americans (from urban elites to rural rednecks) also adhere to an idealistic image of the “old South,” emphasizing gentility and loyalty to the “lost cause” of the War for Southern Independence (also known facetiously as the War of Northern Aggression). These qualities in turn guide, influence, and explain Upstate folklife.

Verbal genres of contemporary folklife include what locals themselves describe as a slower pace of speaking and storytelling, particularly when contrasted with Northerners. Residents also express a general enjoyment of leisurely conversation, which often seeks first to elicit one’s family ties, place of origin, and religious background. Distinctive vocabulary words enliven conversations. Examples include stove “eyes” for burners or “buggies” for grocery carts; one “mashes” buttons and admits that he or she “might could” (may be able to) do something. Sentimental verses, copied from written sources or composed by the author, appear in local newspapers on important anniversaries for deceased loved ones, demonstrating the persistence of family cohesiveness beyond death. Stories of ancestral anecdotes preserve family history as well as entertainment at family reunions, while folktales and rhymes of landowners cheating tenants exemplify the region’s agricultural past. Ghost stories reflect interweavings of Scots-Irish and African traditions, while pranks and practical jokes solidify neighborhoods or cotton mill workers.

Additional oral traditions also reflect the centuries-old connections between Black and White beliefs. For example, some in both groups affirm the power of the moon to influence human events, such as determining the appropriate times for cutting hair or extracting teeth. The moon is also said to affect the growth of vegetables, for underground ones should be planted in the dark (waning) of the moon, while aboveground vegetables should be planted in the light of the moon. Charms (such as silver dimes around the neck or ankle) to ward off the “Booger Man” or general evil influences are acknowledged by a few African Americans, as are “root doctors,” those with an ability to cure by using supernatural and herbal remedies (such as “yellow root,” available in area flea markets). Other healers might possess the power to stop blood

(relying to some degree on Ezekiel 16:6) or to “talk fire out of burns” by reciting some other mystical words. A few such healers continue to practice.

Throughout contemporary Upstate social activities, hints of traditional values invigorate and underlie daily life. For example, Sunday afternoons after church remain the private domain of family gatherings, although the custom in the late 20th century is tempered by television. Friends continue to exemplify traditional Southern hospitality by assisting neighbors who are ill or bereaved by donating food to the family. Family reunions are frequently held during the midsummer slow time of traditional cotton farming (“lay-by time”), often staged at the “home place” or the country church where ancestors once lived or now lie. Church homecomings and annual revivals continue long-standing practices as well, tying family and faith with threads of sacred music and tastes of favorite foods.

The social context of foods enhances their symbolic meaning, further linking the past and the present with families and faith in an effective association. Whether at family reunions, political gatherings, or Sunday dinners, various forms of pork (often barbecued but sometimes rendered into “cracklings”—remnants of fried skin from melted fat) have been widely consumed by both Anglo Americans and African Americans. Grits, biscuits and gravy, black-eyed peas, and pinto beans had long been staples of working-class and tenant families, and many still love these foods, flavored as they are with nostalgia. Most Upstate families still mark the New Year with black-eyed peas and collard greens for their continued good fortune; the former represent change and the latter stand for greenbacks. Collard greens and okra may be purchased in stores, bought at roadside stands, or grown in home gardens. Peanuts are often boiled in saltwater, which softens them and alters their taste. Cornbread traditionally might be crumbled into milk or mixed with cracklings, but mostly today it is just eaten as bread. Piedmont sweets include scuppernongs and muscadines (wild grapes) as well as molasses. Washing all of this food down is sweetened iced tea, served with every afternoon and evening meal.

These traditional foods frequently appear at informal types of adult recreation, which also reflect hints of earlier, more rural times. For example, at country crossroads and at outdoor malls, merchants sell everything from boiled peanuts to clothes to automobile parts to farm animals. These ubiquitous flea markets are the direct descendants of informal swap meets at country stores or county fairs. Flea markets also reflect the region’s emphasis on individuality—one can sell anything, anywhere, anytime (except when this conflicts with religious conservatism; hence no Sunday alcohol sales in many communities). Upstate fairs might feature various “womanless” activities such as “beauty pageants,” in which local men dress in women’s costumes in mock ceremonies for charity. Hunting remains a popular and serious pastime; bumper stickers proclaim “when the tailgate drops the bullshit stops,” meaning that at the release of the dogs, talk ceases in order to appreciate the music of the hounds’ baying. Auto racing equals other professional, collegiate, and high-school team sports in popularity. Although illegal, cockfighting and moonshining occur but are said to take place “across the state line.”

In virtually all Piedmont residents’ backgrounds are ancestors who worked either as mill hands or tenant farmers. The textile industry remains a significant (but declining) employer in the Upstate, but paternalistic company control has been replaced by more impersonal companies. Practical jokes (to socially level new employees) have faded due to corporate professionalism, and the isolation of mill towns and their residents has been

shattered by mass communication, improved transportation, and better education. Likewise, the snowy fields of ripening cotton have virtually disappeared from the Upstate, but many middle-age and older residents, whether Anglo American or African American, male or female, will proudly relate tales of how much cotton each could pick in a day. Especially in the calculations of debits and credits at the end of the field season, racism guaranteed the continuation of class distinctions, as exemplified by the traditional folk rhyme: "Naught's a naught and a figger is a figger; all for the White man, none for the Nigger." No one wishes for those backbreaking, heat-intensive, and low-paying days to return.

While cotton has disappeared, the landscape still preserves Piedmont traditions, for vernacular architecture reflects elements of the past. Mill towns dot hillsides all over the region; landscaping and paint barely disguise the patterned buildings today owned primarily by retired couples in aging communities. Tenant houses, often overgrown with kudzu (a perennial creeping vine) but occasionally still occupied, also stand, frequently near the larger, ostentatious "big house" of the former (or current) landowner. Most Upstate residents feel an inexorable tug of nostalgia to the "home place," either an original dwelling, a modified improvement, or the traditional but now empty site. These families schedule annual reunions, linking their ancestral heritage, family unity, and physical point of "origin" by means of the smells, sights, and tastes of traditional foods.

Elements of material culture, too, continue earlier traditions while simultaneously representing innovations. In the past, for example, women would gather in the home of a friend to spend the day talking, eating, and quilting; older women fondly remember the first times, as young girls, when they were promoted from the yard with the children into the house with the adults. Responding to both art and necessity, quilters changed designs and shapes through time, and in the late 20th century their labors represent several threads to the past: as valuable antiques and as honored heirlooms. In contrast, the art of making baskets from wooden oak splits, which traditionally produced utilitarian objects from washtub-size cotton baskets to hand-size sewing baskets, has largely (but not completely) disappeared. Several regionally known pottery traditions, however, still produce items, though primarily for tourists and less for home and farm. In tombstone inscriptions, especially in older, segregated cemeteries, one may see permanently preserved indications of social inequities. Some markers, for example, were given by the White employers of faithful servants termed "Aunt" or "Uncle," reflecting the genuine care offset by paternalistic racism of the donors. Other old African American stones were formed of wet concrete, with the names of the deceased stenciled or lettered by hand.

The organization of space, the social groups that interact in it, the activities in which they engage, and the beliefs and values that explain that interaction and shape that space constitute the elements of Piedmont folklife that characterize the region today.

Plantlore

Traditions associated with the growth and use of plants. Traditional uses of plants in America vary both regionally and ethnically, but some general trends are discernible. Traditional categories of plants include edible-nonedible, useful-nonuseful (“weeds”), and beautiful-nonbeautiful. Overlapping these categories are customs relating to the care, use, and potential meaning (usually luckiness) associated with each.

Since the value of many plants is measured by their usefulness as food, the category edible-nonedible is frequently the first applied. Food plants may be a self-evident category, but considerable differences exist between regions and ethnicities on what is edible. Until the 1840s, tomatoes were considered poisonous by some Americans, and raw fruit was believed to be unhealthy for children; well into the 1940s, raw vegetables—unpickled cucumbers or uncooked cabbage—were considered by many to be dangerous. On the other hand, some plant foods were particularly auspicious (sauerkraut or black-eyed peas on New Year’s) or healthy, such as the common belief that dandelion greens were the best plants for making spring tonics.

Plants are also used as medicine, and some plants do have real medicinal value: digitalis (foxglove) as a heart tonic, rauzide (*rauwulfia*) as a blood pressure medication, and catnip as an antispasmodic are well documented. Other folk cures contain traces of important active ingredients: the Native American use of willow bark as a general pain killer rests on the presence of salicins (aspirin), and traditional herbal cures such as slippery elm bark or horehound as cough suppressants, aloe vera for burns, or jewelweed for poison ivy are documented. Some traditional medical cures are soothing but have modest pharmacological (though considerable psychological) value. Such cures as mint teas for colds, mustard, onion, or spice poultices for chest colds, or plantain leaves or lily petals soaked in whiskey as wound dressings fall into this category. Finally, there are cures of dubious value, such as the common American cure for anything, boneset tea, mostly noted for its terrible taste. The taste may have been its sole value, for many believed the worse the taste, the better the cure.

Beliefs and practices associated with plants form a major category in collections of traditional lore. Particularly important is the class of beliefs associated with planting customs. Among Euro-Americans, there are various days by which certain food plants must be planted in order to assure a successful crop: Potatoes must be planted by St. Patrick’s Day; peas, by Good Friday; corn, when oak leaves are as big as squirrel’s ears. Spring greens must be picked and eaten on Maundy Thursday to assure luck and health throughout the year. The prettiest flowers are those planted very early on the morning on May Day. Certain plants may not be planted near one another: Some Pennsylvania Germans would not plant the artemesias Wormwood and Southernwood (called “Old Man” and “Old Woman”) near each other in the garden because it was believed they would fight too much and neither would grow. Nor do potatoes and tomatoes go well together. Other plants, like beans and greens, are considered good companions. Marigolds get along with everyone. There is evidence that suggests some of these traditional practices work well for scientific reasons. Other traditions may be largely symbolic: Pennsylvania German gardeners traditionally planted a sedum they called “thunder weed” at the entrance to their gardens to protect against bad weather. These

same gardeners would often place a yucca plant (called “Our Lord’s Sword”) or rosemary (in honor of the Virgin Mary) at the center of their gardens. Chinese Americans continue the tradition of including peonies and peach trees, both exceptionally lucky plants, in their gardens.

Plants may also be unlucky or predict bad luck: Fruit trees blooming out of season are believed to predict a death; plants in a sick room are believed to steal oxygen from the ill person, especially at night, hence hindering recovery. Thanking someone for a gift of plant cutting or seeds will cause the plant to die. The gift of yellow flowers means money will follow, but a gift of sage is followed by a quarrel. Plants, especially flowers, have accrued symbolic meaning as well, so a gift of rosemary is for remembrance; rue, for sorrow; roses, for true love; and a four leafed clover, for luck. In America as in Europe, meaning is extended to the images of fertility and fruitfulness implied by certain plants. Flowers are virginal, not yet fruitful. Seeds are the potential for fertility and fruit. Hence brides throw away their bouquets of girlish flowers when they marry, and are in turn pelted with rice, grain, or birdseed, a wish for a fruitful life.

Probably the most interesting area of plantlore is that Ficino. While Cartesian science has supplanted Ficinian scirelated to magical practices and astrology. Based largely on Ptolemaic astronomy and documents attributed to Hermes Trismegistus (reputed to have been Moses’ teacher), the astrological significance of plants in both healing and luck was championed in the Renaissance by scholars such as Marsilio ence, there is nonetheless significant continuation of belief in the Renaissance systems of correspondences and homeopathic magic (the belief that like things affect each other). Planting by the signs, a tradition honored throughout North America, depends upon an intimate knowledge of the moon’s position and its effect on growth. On the simplest level, it means planting crops that bear above ground during the waxing of the moon, and planting those that bear below ground while the moon is waning. On a more sophisticated level, it means planting while the moon is in astrological signs that favor growth (earth, air, and water signs, each one appropriate for particular crops) and avoiding planting during the sterile, or fire, signs. No food crops should be planted in Virgo, for as a virgin she will not bear fruit, although it is an auspicious sign for planting flowers. Even more sophisticated is Ficino’s system of herbal medicine, aspects of which continue in American beliefs even in the late 20th century. Ficino recommended drinking, inhaling, or massaging concoctions of herbs associated with the sun as a cure for melancholy or herbs associated with Venus as love charms.

Plant shape also plays a significant role in magical use. Ginseng roots, with their human-like shapes, are attributed with profound homeopathic qualities. African Americans use a similarly shaped plant called Adam and Eve root as a part of the best love charms. Homeopathic thinking also extends to the use of water from the washing of menstrual rags in watering red flowers (an African American belief) or the prohibition against menstruating women from planting flowers or walking through the cucumber patch.

Play-Party

A social dance for adults performed without instrumental music. In general, the first American folklorists who discovered and described the play-party defined it as a uniquely Anglo American recreation that flourished as a part of the expanding Western frontier, probably because of the opposition of the religions of the frontier to instrumental music. Early folklorists noted that the play-party included “a crude set of rhymes,” and they assumed that it died with the passage of the historical-geographical conditions that created it, leaving few if any traces in Anglo American folk tradition.

Later field research and analysis indicated there were many local revivals of the play-party across America in places and times long after it was supposed to have died out; furthermore, instrumental accompaniments were frequently used in this later development of the genre, the poetry of the games was complex and well suited to the tunes and actions of the dances, and the play-party lives on in Anglo American folk games and music.

The play-party was first called to the attention of American folklorists in general by an article in the *Journal of American Folklore* in 1907 by George Lyman Kittredge who edited and annotated a collection of ballads and rhymes made in the mountains of Kentucky and submitted to him by Katherine Pettit. The article included six poems that were described simply as “play songs” and, as was typical of much folklore scholarship of the time, included only the words of the songs and no music or contextual information.

Most of the ballads in Pettit’s collection—at least most of the ones Kittredge included when he edited the material for publication—were well-known British traditional ballads also found in Francis James Child’s monumental five-volume compilation, *The English and Scottish Popular Ballads* ([1882–1898] 1965), but the six “play songs” were short, nonnarrative “rhymes” that clearly were designed to accompany dances or singing games. For example:

We are marching down to old Quebec,
Where the drums and the fifes are a-beating;
Americans, they have gained the day,
And the British are retreating.

The war’s all over and we’ll turn back,
Ne’er to be parted;
We’ll open the ring and take a couple in
So release the broken-hearted

Mrs. L.D.Ames' seminal 1911 article "The Missouri PlayParty," which was also published in the *Journal of American Folklore*, went far beyond Kittredge's listing and was the first widely disseminated folklore publication that actually described the play-party as play, discussed its history, social, performance contexts, and included transcriptions of the tunes of the playparties as well. Ames began with a statement that the Missouri play-party was at the height of its popularity "some thirty years ago" (approximately the late 1870s and early 1880s) but had almost completely died out; she continued with the significant

*Playing a swing game at a play-party.
McIntosh County, Oklahoma, 1940.
Photo Russell Lee. Library of
Congress.*

statement that the games were preplanned adult recreational dances, describing them as "a dance without the music of instruments." She began an ongoing controversy by noting that the words of the songs were "a very crude lot of rhymes—crude in sense and in form," and by claiming that the events were held as an alternative to dances because of the opposition of frontier religion. This was not so much, she wrote, because of

opposition to musical instruments per se on the part of churches and churchmen, but because “regular dances where the music was furnished by a ‘fiddle’ were held, for the most part, only in the homes of the rough element and were generally accompanied by drunkenness and fighting.”

Ames described the actual play itself in general terms: “The playing consisted in keeping step to the singing, and at the same time going through various movements: as swinging partners by one hand or both; advancing, retreating, and bowing; dancing in circles of four or eight; promenading singly or in pairs, sometimes hand in hand, sometimes with crossed hands; weaving back and forth between two rows of people going in opposite directions, and clasping right and left hands alternately with those they meet; etc.”

The next article in the *Journal of American Folklore* deal with the play-party (Hamilton 1914) took exception to Ames’ discussion of the passing of the play-party by claiming that “the play-party in northeast Missouri is anything but dead,” introducing evidence that “in a certain class of sixteen studying rhetoric here [the Kirksville, Missouri, Normal School] there is one student who knows all the songs but two in Mrs. Ames’ collection, and has heard them at play-parties,” and telling of a girl of twelve years of age who “has been to nine play-parties this year.” Hamilton included thirty-eight playparty texts apparently collected from her rhetoric class but concluded that “the indications are that in a few years the playparty in northern Missouri will be a thing of the past.”

In succeeding years, there was a continuing number of other regional reports and collections of play-party songs and dances published in folklore journals. The pioneering book of play-parties, Leah Jackson Wolford’s *The Play-Party in Indiana*, was published in 1916, but the single most widely distributed and widely accepted discussions of the genre were written by Benjamin A. Botkin. Botkin selected the playparty as the subject of his Ph.D. dissertation, published an article “The Play-Party in Oklahoma” in the Publications of the Texas Folklore Society Series in 1928, and expanded and developed his research into a book, *The American Play-Party Song* (1937). Botkin’s publications served to codify the conclusions of the early play-party scholars and to make them even more widely known. Botkin in general accepted and seconded the description and analyses of the play-party done before him but placed particular stress upon the idea that the words that accompanied the dance were “crude poetry of a crude people.”

By the mid-1940s, there were enough regional collections of play-party songs—often including music and descriptions of the dances—published or included in archives that Altha Lea McLendon was able to prepare and publish “A Finding List of Play-Party Games” referencing “302 versions and 315 variants” and demonstrating that play-party songs had been collected from Missouri, North Carolina, Connecticut, Idaho, Maine, Oklahoma, Indiana, Tennessee, Virginia, Georgia, South Carolina, Michigan, Ohio, Mississippi, Kentucky, Arkansas, Wisconsin, and Illinois (McLendon 1944). Her finding list quickly became the standard index to the playparty and seemed—in conjunction with Wolford and Botkin—the final word on the subject.

An essay by Keith Cunningham published in 1972 in the regional folklore journal *AFF* (Arizona Friends of Folklore) word reopened the subject of the play-party, included an analytical review of previous research, introduced evidence gathered from recent field research in Arizona, Illinois, and Missouri, and included an exhaustive structural analysis

of the games' poetics. Cunningham applied John Ciardi's scansion and explication system of poetry to a quatrain from the widely reported play-party song "Miller Boy" and concluded that the verse followed a consistent pattern, all components of which serve to accelerate the verse. There were two major and two minor stresses per line, with a varied but relatively large number of unaccented syllables, six alliterations, two assonantal rhymes, three approximate rhymes, and two syllabic end rhymes; there was also a minor fulcrum in each line and a major fulcrum between the third and fourth lines. The study concluded that the extremely complex verse of the poetry of "Miller Boy" was a direct reflection of, and very well suited to, the music and actions of the dance as it was played. Cunningham introduced field evidence indicating that there were many local revivals of the play-party across America in places and times long after the frontier had passed and when the play-party was supposed to have died out, and that instrumental accompaniments were frequently a part of the performance of these later examples of the genre. Also presented was evidence that the play-party lives on, not only in American popular culture, as Botkin noted, but also in Anglo American children's traditional games such as "Farmer in the Dell," "Go in and out the Window," "London Bridge," and "Ring Around the Rosey" and—the fact is not without irony—in the form of tunes such as "Turkey in the Straw," "Old Joe Clark," "Sally Goodin," and "Shoot the Buffalo," which have been a major element in the repertoires of many Anglo American fiddlers, banjo players, and other folk instrumentalists whose traditions made them their own.

Poetry, Folk

A form of symbolic communication, using rhyme and/or rhythm, usually directed to a group or community, often local in origin and invariably vernacular in language, intended for reading and/or recitation.

Many forms of folklore have poetic elements, but those most often termed “folk poetry” include children’s verses such as nursery and skipping rhymes, occupational verses such as peddler’s cries and military cadences, written short verses such as graffiti and autograph-book rhymes, and more extended, often narrative verses such as African American toasts, parodies, and cowboy poetry. Folksongs, though they may be composed of rhymed stanzas, are usually considered a separate category, because music is basic to them.

Many folk poets see rhyme as absolutely essential, but a few are comfortable with free or blank verse. Though rhythmic qualities are evident in folk poetry, few folk poets consciously employ rhythm in their verse. They and their audiences often appreciate rhyming structure because it makes a text more striking and memorable. Rhythm also helps to give poetry these qualities, but some recitations (orally, dramatically performed folk poems) involve other memorable structures as well, as does this nonsense piece, popular in Ontario in the early 1960s:

I come before you
to stand behind you
to tell you something
I know nothing about.

This Monday
being Good Friday,
there will be a ladies’ meeting
for men only.
Admission is free,
pay at the door,
pull up a chair
and sit on the floor.

The opposing parallels—before versus behind, something versus nothing, Monday versus Friday, ladies versus men, and so on—allow reciters to reconstruct the second element once they have recalled the first. So, this verses form contributes to its humorous and oxymoronic meaning, but also makes it difficult for a performer to forget.

Folk poetry's formal structures, however, are usually a minor consideration at best for folk poets and their audiences. Unlike fine art poetry, folk poetry is read and recited not because of its beautiful language, or because of its author's uniquely insightful sentiments and striking points of view, but because it expresses something the poet or presenter believes will be useful to the community or group to which it is directed. An autograph verse, for example, is not intended to be read as a work of art; it is simply an appropriate expression of one child's or adolescent's feelings toward another in a clever yet conventional mode. Thus, though some might confuse folk poetry with doggerel, or simply call it bad poetry, it must be evaluated in terms of its context instead of its aesthetic qualities.

Some folk poetry is communicated orally. For example, most children's rhymes and games are not written down until folklorists or other scholars record them; children circulate them by saying them to one another. Other examples, like nursery rhymes, may be transmitted both orally and in written form; parents may gather nursery rhymes from books to tell children orally, and children may retell them back to their parents or other children. Some folk poems are performed orally—at least on some occasions—but were originally composed in writing, such as the verses recited at wedding showers or anniversary celebrations to make fun of—and thus honor—a couple. Some folk poems are prepared for private family or small-group circulation and may be read or said, depending upon the circumstances—those composed to mark a birthday, for example, might be enclosed in a card or declaimed at a party—while others find publication in more public venues like local newspapers and histories, especially poems composed in celebration of a town or of an important figure. For example, some poems about amputee Terry Fox, whose 1980 attempt to run across Canada to raise funds for cancer research moved many people, were sent to his family; some were sent as well, or instead, to community and national newspapers.

Some folk poems require a written format to get their message across. The following example's subtleties—indeed, its point—would be lost if it were recited. The poem derives from the unique context of computerized word processing:

I have a spelling checker,
It came with my PC;
It plainly marks four my revue
Mistakes I cannot sea.
I've run this poem threw it
I'm sure your please too no,
Its letter perfect in it's weight,
My checker tolled me sew.

Similarly, graffiti verse is necessarily communicated in written form. The writer can remain anonymous, while creating a memorable message with an impact that depends upon its being present and available to anyone who may see it.

Most writers of folk poetry are moved to communicate in this form because it is an expression of personal or collective views in a form that can be memorable for others.

Thus, they avoid language that will exclude their readers. The more familiar the text and its contents are, the better a poem may be used to influence its audience. Thus, many folk poems are based on other rhymed or rhythmic forms, such as well known songs or biblical quotations. "A parable (in rhyme) for careless drivers," published in an Ontario weekly newspaper, parodies a familiar nursery rhyme. Its message is highly significant and, like that of most folk poetry, represents collective knowledge and wisdom:

10 little drivers, cruising down the line, one had a heavy foot and then there were nine;

9 little drivers, the hour was late, one dozed a moment and then there were eight;

8 little drivers, the evening felt like heaven, one showed off his driving skills and then there were seven;

7 little drivers, their lives were full of kicks, one bought a bottle and then there were six;

6 little drivers, impatient to arrive, one ran a stop sign and then there were five;

5 little drivers, wheeling near the shore, one viewed the scenery and then there were four;

4 little drivers, happy as could be, one passed upon a hill and then there were three;

3 little drivers were busy it was true, one neglected car repairs and then there were two;

2 little drivers, the day was nearly done, one did not dim his lights and then there was one;

1 little driver who is still alive today, by following the safety rules he hopes to stay that way! (Quoted in Greenhill 1989:145)

Familiar, vernacular language is the primary vehicle for folk poetry's expression because it is most likely to be accepted by the intended audience. Similarly, especially in the case of longer examples like the above, the audience pays attention to the message because it comes from a fellow community or group member. While remote others' actions may affect any individual's life, where folk poetry is used, one's fellows' evaluations are taken especially seriously. Thus, folk poets speak not as artists with special individualistic

knowledge, but as peers—coworkers, family members, and so on. Folk poetry’s local origins contribute to its significance and effectiveness.

Authorship—who originally created a folk poem—is fundamentally unimportant to some of its forms. For example, friends who recite a drinking toast before raising their beer glasses do not care who wrote it. But even though other folk poems’ authors are community or group members, known to their audiences, these creators notoriously deflect attention, and their texts, away from themselves. Their main aim is to communicate with others, though they may at the same time say a great deal about themselves.

It is not unusual for people to append their names to works that they did not write. By so doing, they do not claim to have originated these poems; instead they indicate its local presenter and advocate. By putting her or his name to a poem in a local newspaper, the presenter submits it to the community’s scrutiny as something she or he thinks is worth knowing, or knowing about. Thus, a poem like “The House by the Side of the Road” (Cunningham 1990:166–167) can be recited by a Navajo in the Southwestern United States, or presented by a local poetry collector in the Grand Valley, Ontario, newspaper; each presenter must put his name to the poem because he takes responsibility for its relevance.

The groups or communities to which folk poetry is directed are extremely diverse. They may be ethnic groups, rural communities, age groups, religious congregations, special populations like prisoners, friends, families, and so on. The poems often glorify that group, but they are always internally directed. Since agreed-upon, shared, collective sentiment is almost always folk poetry’s focus, we usually find conventional, traditional ideas expressed in folk poetry, rather than unconventional, innovative ones. For example, the late Pennsylvanian folk poet Roscoe Solley’s poem “The Bugs Won’t Let Me Be” discusses his encounters with the various diseases of old age. It begins:

When I was young I was sporty
I was happy, go lucky and free
Now that old age should be golden
The bugs won’t let me be.

I’m frequently seeing my doctor
And taking a lot of his drugs
But I just don’t seem to be able
To drive off those pesky old bugs.

The poet concludes:

Now all you good folks pay attention
For most of this story is true
So do what you can while you’re able
‘Cause those bugs’ll be coming for vou (quoted in

“Folk Poetry” 1993:90)

This poem’s topic is not controversial; instead it knits the audience together by presenting an elder’s viewpoint in a humorous way so that other seniors can relate to it, while younger people may both appreciate an elder’s perspective and perhaps foresee their own future.

Some folk poetry, like the above, may have implicitly argumentative elements. Solley may have composed his verse to counter what he saw as insufficient understanding, recognition, or valuing of elders’ positions; his poem teaches the listener about age and its consequences. Much folk poetry would never be written if its composers thought that prevailing opinions were with them—persuasion of others would then be unnecessary—or if there was no danger that prevailing opinions would ignore, forget, or dismiss their point of view. The relationship between folk poets and their audiences is crucial to much folk poetry’s creation and is the fulcrum for its performance.

When people who are not part of a community or group that uses folk poetry read it or hear it, however, it often becomes more controversial. For example, the images of women presented in much folk poetry could offend people who expect an authentic presentation of modern North American women’s experiences. Not all folk poetry by men shows women negatively, but this presentation is not uncommon, as in Texas prisoner Johnny Barone’s poem about his life experiences:

Once in jail he came to know,
 Of his wife and best friend Joe,
 She told his sons that he was dead,
 Married Joe and shared his bed (quoted in “Folk Poetry” 1993:45)

Barone’s poem makes his wife directly responsible for most of the evil in his life. However, other folk poets extol women’s conventional virtues, as in the verses many compose to nurses as a thank you after a hospital visit, which praise their nurturance, kindness, and so on. Realistic folk poetic portraits of women may be composed by female poets; though women are folk poets as frequently as men, they less often present their works in public.

In such a diverse genre as folk poetry, it is difficult to locate a series of specific common qualities. However, folk poetry is generally both symbolic and communicative. Its use usually indicates something about the message being conveyed. For example, in Ontario newspapers, when the same topic or issue is discussed in a letter to the editor and in a poem, the former will usually be contentious and critical, whereas the latter is almost invariably agreeable and positive. In fact, similar opinions may be expressed, but people are likely to choose the poetic form when they wish to invoke common cause, or to suggest that their opinion is shared and positive. Thus, folk poetry’s meaning is symbolic, going beyond what it literally says. Though folk poetry is used in only a few communal contexts, these locations and uses become inextricably linked with each poem’s actual

contents, making folk poetry's manifestations as infinitely variable as are its possible meanings.

Polish Americans

American ethnic group of immigrants from east Europe. Nine million Americans claim Polish descent, according to the 1990 U.S. Census. The vast majority of Polish Americans are descendants of two million landless peasant immigrants who became unskilled laborers for the New World's mines, mills, foundries, factories, and slaughterhouses. These representatives of the economic immigration of 1860–1929 arrived in greatest numbers during the opening decades of the 20th century. At mid-century, a second political immigration of 150,000 World War II refugees entered under the Displaced Persons Act of 1948–1954. These were a more educated, urban, nationally conscious group of circumstance-driven emigres. Recently, a third wave of highly educated, urban immigrants—currently estimated at 200,000—appeared in an increasing number of post-Solidarity exiles who, since the former Polish government's imposition of martial law in 1981, seek economic opportunity, career advancement, and status improvement in America.

The first two generations of the economic immigration built the communities and established the institutional structures for the perpetuation of Polish American cultural traditions. The recorded evidence of Polish American folklore derives primarily from these peasant immigrant generations. In the late 20th century, their subsequent generations, along with those of World War II and Solidarity groups, play the leading role in the modification and transformation of tradition in Polish America.

While dispersed throughout the nation, Polish Americans are concentrated in their original 19th-century settlement areas in the Mid-Atlantic, New England, and Upper Midwestern states. Their largest active population centers are in the metropolitan areas of Chicago, New York, Detroit, Buffalo, Pittsburgh, Philadelphia, and Milwaukee. Significant but smaller concentrations appear in Boston, Baltimore, Cleveland, Toledo, South Bend, Minneapolis, Los Angeles, and cities of coastal Connecticut and Northeastern New Jersey. Remnants of rural communities, often secondary settlement areas, can be found throughout the Northeastern American quadrant, most noticeably in the farmlands of the Connecticut River Valley of Massachusetts, and in the central portions of Wisconsin. The earliest rural settlements in Panna Maria, Texas (1854), Polonia, Wisconsin (1856), and Parisville, Michigan (1857) have in the 1990s Polish Americans in their fifth and sixth generations, while the more representative urban centers are characteristically in their third and fourth generations.

Polish Americans use the term "Polonia" to designate their organized community. An intricate interaction of superterritorial organizations such as the Polish American Congress, the Polish National Alliance, the Polish Roman Catholic Union, and the Polish Women's Alliance, combined with informal social networks, maintain a Polonia on both local and national levels. Characteristic behavioral norms that place high value on status competition reinforce individual involvement in Polonia's community life long after its predicted demise.

On the immediate local level, community life centers around family, parish, and neighborhood. In the major urban settlement areas, these foundational community centers can be located by the dominant presence of their characteristically ornate, magnificent Roman Catholic churches. Chicago has forty-three Polish parishes; Detroit has thirty. The earliest inner-city, ethnic parishes have declined in membership since the 1960s as the upwardly mobile third and fourth generations have moved to outer-city fringes and suburban neighborhoods, where they have become members of nonethnic territorial parishes, have intermarried with members of other Catholic groups, and have dispensed with the Polish language. Inner-city parishes, many of which now serve African American and Latin American populations, continue to fulfill both the liturgical needs of recent Polish-speaking immigrants as well as the symbolic needs of English-speaking Polish Americans in connection with rites of passage and calendrical customs.

A Polish presence in America from 1608 to 1854 had no demographic consequences yet contributed a legacy of myth and legend of great importance for ethnic traditions and symbols. Polish glassmakers and soap makers, among the first colonists at Jamestown, were enfranchised after staging America's first organized industrial strike in 1619. Polish American tradition also credits the Jamestown Poles with playing the first game of baseball in the New World.

This early period provides Polish America with its two most celebrated legendary heroes, Thaddeus Kosciuszko and Casimir Pulaski, the eminent, aristocratic generals in the War of Independence. Kosciuszko, the father of West Point and fervent champion of democratic ideals, has both a more luminous international reputation and a greater appeal to recent Polish immigrants as well as later, American-born generations. Pulaski, the father of the American cavalry, who gave his life on the Revolutionary battlefield and whose name is more easily spelled and pronounced, remains the more prominent ethnic and national figure. The United States has seven counties and twenty towns named for Pulaski, one of each for Kosciuszko. In 1911 the U.S. Congress established the national observance of October 11 in memory of Pulaski's sacrificial death; in 1986 the state of Illinois recognized Pulaski's birthday, March 4, as a legal holiday. Major cities of Polonia me-

*At the Polish Constitution Day Parade.

Dovydenas. American Folklife Center.*

morialize both Pulaski and Kosciuszko through statues, monuments, and names of streets, bridges, and schools. Both are common patrons of organizations and clubs. Portraits of the two Revolutionary heroes are standard fixtures in meeting halls and business establishments. As meaningful focal points for parades, celebrations, festivals, banquets, and balls, both equip Polonia with potent symbols for expressing a simultaneous sense of ethnic particularism and broad national identity.

Other military exiles arrived after partitioned Poland's unsuccessful, Kosciuszko-inspired insurrection against czarist Russia in 1794 and those of 1830, 1848, and 1863. Kosciuszko's 1797 triumphal return visit to his second country, along with the increasing frequency of American exposure to rebellious and aristocratic Polish emigres, led to the construction of the nation's first Polish stereotype in the early 19th century. The familiar freedom-loving Pole became a fixed image of American admiration for all that was noble, chivalrous, passionate, cultivated, and high minded. Throughout the 19th century, American popular fiction, poetry, and theater perpetuated this romantic image, based on the Pulaski-Kosciuszko prototype, expressing a Polish national ideal that essentially corresponded with the American "Spirit of 76." The popular romantic stereotype endured, to a lesser degree, into the 20th century, where it remains alive as recently as 1983, in the pages of James Michener's best-selling novel *Poland*.

A second American stereotype of the 20th century depends upon an image of the more familiar Polish American as a member of an urban, working-class, ethnic minority group. The primary vehicle for this stereotype is American folklore, particularly the ethnic riddle joke known as the "Polack" joke. The "Polack" in these jokes is characteristically poor, stupid, dirty, inept, and tasteless. Some of these joke texts show a familiarity with Polish

history and custom. Some refer to Polish American ethnographic realities such as personal and geographic names. Most conform to the parent universal numskull type. Unlike its variant numskull traditions that remain localized, directed at other locally prominent, working-class, minority groups, the “Polack” joke has persisted in American tradition on a national level. The exoteric ethnic-slur term “Polack” can be converted to esoteric use among Polish Americans in restricted social contexts. Exoteric usage often confuses the slur term with the Polish word *Polak*, the singular form for Polish male. Polish speakers hear a distinct phonemic difference in the first syllable of the two words (based on the distinction of a Polish open o and the English closed o) and do not accept the slur term as a substitute for the Polish word. Popular culture, particularly film, continues to employ the “Polack” joke, its stereotype, and its slur term to the frustrated displeasure of the members of Polonia.

Polish American oral traditions collected from the first and second generations of the economic immigrants show a characteristic tendency to preserve the memory of peasant agricultural folklife traditions in village Poland. Some of the texts deal with sorrow of immigration and have America as a referent. The principal collections, Harriet Pawlowska’s folksongs and Marion Moore Coleman’s folktales, represent traditional texts that have clear analogs in the ethnographic materials assembled in sixty-six volumes by Kolberg in 19th-century Poland. Polish American proverb collections show that some forms remain unaltered on both sides of the Atlantic, for example, *Gosc w dom, Bog w dom* (Guest in the home, God in the home). Others show changes and inventions that derive from a New World context. The Polish American proverb *Musial ale nie chcial* (He had to, but he did not want to) has a totally American meaning, rendering it incomprehensible and unproverbial to a European Pole. For Polish Americans, familiar with both the heroic stature of baseball star Stan Musial and the national media broadcasters’ inability to say “Musial” the Polish way (like English “Mooshaw”), the proverb’s meaning involves commentary on both the undesirability and the inevitability of either anglicizing or mispronouncing a difficult Polish surname.

Polish American oral tradition also contains many English-language narratives featuring a common Polish word, phrase, or cultural detail that can be understood and transmitted by Polish Americans with little or no knowledge of the mother tongue. Many of these take the form of the immigrant epic, a series of comic incidents in which the humor derives from the misunderstanding of a word in the home or host language. Others playfully focus on satirical or parodic comment on wedding and funeral customs. Still others deal with questions of identity, group conflict, and ethnic discrimination. One such narrative attributes the invention of the Volkswagen to a Polish guy in Detroit whose genius remains unrecognized in Europe and America. Western injustice is corrected only in Japan, where, the tale playfully claims, the Volkswagen has been named with the Polish words—and Japanese sounds—*Jaka Ta Mala Car* (“What a tiny car!”).

Polish American jokes sometimes follow the riddle-joke pattern but contain sufficient esoteric content to confine their transmission to insiders. “What’s the sound of a Polish grandfather clock?—tock, tock.” (Since “tock” is phonetically equivalent to Polish *tak*, the word for yes, its association with the word “grandfather” imparts an affirmative message about heritage to the ears of a Polish American.) Comparable oral traditions commonly appear in the narratives of the third and fourth generations.

Customs and rituals associated with the Catholic liturgical calendar and the life cycle remain popular among Polish Americans of all backgrounds. Those traditions dependent upon material culture for their production and performance show a practice pattern shifting from homemade, family-centered activity to a manufactured, commercialized, public sphere. This trend may be indicative of the increasing value of symbolic ethnicity for Polish Americans. The Easter customs associated with *swiecone*, the paraliturgical blessing of food baskets on Holy Saturday, also converts to elaborate parties and banquets. So, too, does the secular *Dyngus-Smigus Day* on the Monday after Easter, a gender-based ritual water dousing and reed switching, in which young males customarily sprinkle young females with water or perfume prior to, or alternatively to, switching them with reeds. On the following day, the girls reciprocate the favor. These events are often sponsored by either Polish American cultural and fraternal organizations or by entrepreneurs of Polish restaurants, specialty shops, and mass media. Public, commercial entertainment for such symbolic affairs also occasions revival and transmission of traditional village dance and the rural arts of *pisanki* (egg painting) and *wycinanki* (cut-paper designs).

Polish American Christmas customs feature the religious folksong (*koleda*) primarily in family and church contexts. Here too, organized community events aid the revival of ancient folklore—for example, the production of medieval Nativity plays as miniature puppet theatricals (*szopka*). Christmas Eve supper (*Wigilia*) involving ritual sharing of an unleavened bread wafer (*oplatek*) along with a fixed number of meadish dishes may become a public occasion replete with meat-filled traditional foods and orchestrated entertainment beyond the capacity of the family.

Life-cycle folkways manifest similar contemporary adaptation. The band leader or the church organist usually arranges and performs traditional singing at weddings and funerals. The customary meal and social gathering after the wedding (*poprawiny*) or funeral (*stypa*) now commonly falls under the care of restaurateurs and caterers. Ethnic foods prepared within the household show the lingering persistence of regional variation. Popular favorites include sausage (kielbasa), stuffed cabbage (*golabek*), dumpling (pierogi), crepe (*nalesnik*), duck's blood soup (*czarnina*), sauerkraut (*kapusta*), and jellyfilled pastry (*paczek*). Polish Americans in the 1990s can satisfy both their culinary tastes and their identificational needs through convenient purchases at the neighborhood store, the supermarket, or the expanding restaurant trade. A widespread Polish American custom of distributing the jelly doughnut to outsiders at the workplace on Shrove Tuesday, makes "Paczki Day" an eagerly anticipated event among the general American populace in the major urban settlement areas.

Polish American polka music hybridizes folk and popular traditions into a lively, subcultural entertainment complex sometimes labeled "polka culture" or "*Hupaj Siupaj* culture," from the nonsense words of a traditional Polish drinking song. The Polish American polka phenomenon emphasizes a participatory, dynamic song-and-dance experience, learned and perfected through personal imitation of friends, neighbors, and kin at weddings, picnics, festivals, and bars within the contexts of general frivolity, eating, drinking, and socializing. At special events, like "polkabratons," participants may wear handmade or commercial costumes with ethnically meaningful colors and designs, in addition to jackets, buttons, bumper stickers, posters, and other signs that proclaim ethnic identity in creative ways.

There are many different Polish American polka styles. An urban, Eastern style, dominant in the 1930s and 1940s, gave way to the now prevalent rural, Chicago style in the 1950s. Adherents of the Eastern style prefer fast-paced, highly orchestrated, fixed compositions of formally trained New York musicians. The Chicago style, originated after World War II by L'il Wally Jagiello, a self-taught, Chicago-born, child virtuoso, began as a revitalization of the Polish village polka. Its practitioners favor informality, improvisation, slower tempo, and vocals reliant upon Polish folksong. Soulful emotionalism and attachment to ethnic roots as much as their practicality for the dance, attract second- and third-generation musicians to this popular development. Recent variations of the nationally prevalent Chicago style incorporate the influences of rock, blues, and country-western music.

Polish Americans are likely to continue their superterritorial organizations well into the future. Their expressions of ethnicity can be expected to undergo continued adaptation, as well as unforeseen revival and revitalization as evidenced in the polka. Involvement of professional and commercial interests in the formerly private sphere lessens the folkloric dimension of folk life while it increases both the knowledge of ethnic content and the options for selective ethnic experience. As Polish American populations disperse along with upward mobility, the need to create self-identity through association with collective heritage may extend the domain of public ethnic celebration that depends upon the realities of folk tradition.

Politics and Folklore

The study of power and creativity at the grass roots, a rubric under which fall seven distinct but interrelated areas of folklore and folklife research. When folklorists use the term, they refer to the relationship between political life and folk expression in the following ways: (1) *the folklore of politics*, meaning the folklore that emerges from the political process and political conflict; (2) *the politics of folklore*, meaning the impact on people's lives and well-being as a result of their culture, their folklore, and their creation and dissemination of that culture; (3) *the politics of folkloristics*, meaning the political implications of the study of folklore; (4) *the politics of applied folklore policy*, meaning the political implications of government, corporate, and other nongovernmental policies regarding the implementation of folklore and cultural programming; (5) *political interpretations of folklore* by scholars; (6) *folk political organization and alternative social institutions*, meaning how power relationships among individuals and classes are expressed and negotiated informally in society or within smaller groups, and how small groups relate to the larger society; and (7) *political belief as folklore*, what may be called the study of ideology from a belief-centered perspective.

North American folklorists have paid the most attention to protest songs, political and ethnic jokes, folklore in the laservation. Some hotly political topics have not been discussed within the framework of politics and folklore, such as war, bor movement, Communism, and most recently cultural conslavery, genocide, and, to some extent, feminism, while other political issues of concern to folklorists elsewhere in the world have drawn less attention to North America—namely, nationalism, folklorismus, colonialism, Nazism, and revolution.

The Folklore of Politics

The Declaration of Independence states that “all men are created equal,” but human social institutions, from the nationstate to the family, have never really treated people that way. As a result, that inequity has produced conflict, and from that conflict has sprung creative expression, whether it is (to paraphrase German playwright and poet Bertolt Brecht) a mirror to reflect reality or a hammer to shape it.

Significant periods in American history have been shaped by their political folklore. Even before the establishment of the United States, social conflict was part of the weave of the North American continent. The Pueblo Revolt of 1680, the only successful major uprising by Native Americans, which ejected the Spanish from the area, began in northern New Mexico on August 10, 1680, a day chosen because it was the feast day of San Lorenzo, patron saint of Picurís Pueblo. The rebellion not only generated support among the Pueblo Indian villages through word of mouth, but also has been understood and commemorated through the telling of its legend to this day. Similarly, before the Civil War, the abolition movement spread through public speeches by orators such as

Frederick Douglass and others, and through orally circulated stories of atrocities against enslaved persons, underground and oppositional newspapers, and hand-circulated photographs depicting the horrors of slavery. In fact, some of the enslaved Africans in North America rebelled against slave owners by various forms of folk protest, including sabotage, work slowdowns and strikes, coded songs, the teaching of literacy, and literally survived by means of clandestine practices, including the shared knowledge of escape methods and routes. Many of these stories of the Underground Railroad, as the movement to help slaves escape became known, were collected orally in the years after the war by William Still, then the clerk of the Pennsylvania Anti-Slavery Society in Philadelphia (see Still [1872] 1970). Later, in the 1930s and 1940s, narratives of ex-slaves were collected as part of the Federal Writers' Project (FWP) of the Works Progress Administration (WPA), and an anthology, concentrating on the "human and imaginative aspects" of slavery was edited by Benjamin A. Botkin, head of the FWP Folklore Division (Botkin [1945] 1994).

The wars between the United States and the Native American nations in the 19th century had their own impact on Native American cultures and religious practices, but except for James Mooney, who collected narratives from survivors of the Cherokee Trail of Tears, the Wounded Knee massacre, and the Apache resistance, few folklorists conducted research on the human cost of the politics of Manifest Destiny.

Another aspect of American political history to attract attention was the labor movement of the early 20th century, which has been of special interest to folklorists because of the inclusion of music in labor organizing by the Industrial Workers of the World (IWW, or "Wobblies"), the United Mine Workers, and other unions. Strikes and demonstrations, in addition to their oppositional social organization and unique tactics (such as fasts and long marches by Cesar Chavez and the United Farm Workers), also included music, songbooks, banners, buttons, and other protest ephemera, and topical songs and poetry. Historian Philip S. Foner compiled *American Labor Songs of the Nineteenth Century* (1975), while folklorists George Korson and Archie Green collected union folklore (see Green 1993). Prominent artists to arise from labor struggles included Aunt Molly Jackson, Woody Guthrie, and groups such as the International Ladies Garment Workers' Union (ILGWU) Chorus. Notable texts from the labor movement include the songs "Which Side Are You On?" (from the mine workers); "Joe Hill"; "Solidarity Forever"; James Oppenheim's topical song "Bread and Roses," (whose title was inspired by a strike banner in Lowell, Massachusetts); and the topical poetry of Carlos Bulosan, whose poems were sometimes first printed on cannery workers' union leaflets in California.

Folklore of the Communist Party from 1920 to 1960 has received much more attention from folklorists than has the lore of any other American political party, despite its relatively small membership. Serge Denisoff and Richard A. Reuss provided overviews of the Almanac Singers, People's Songs, the development of *Sing Out!* magazine, and Communism in the labor movement, but they focused mostly on the programmatic nature of folklore policy in the party rather than the beliefs and expressions of everyday members and their response to party music and culture. Communist, and indeed Left culture in general in the mid-20th century, had a lasting impact on American musical culture, whether through the performances of Paul Robeson, Pete Seeger, or Phil Ochs, the collection and promotion of the blues by John and Alan Lomax, or the folksong

revival of the 1950s and 1960s. While the revival topical-song movement was smaller than the original movement in the earlier parts of the century, more lasting has been the impact of African American music on American and world music in general; the role of the blues, spirituals, and early rhythm and blues in the development of rock and contemporary popular, or mass, music around the world cannot be underestimated.

The civil rights movement provided a heyday for the blend of folklore and politics, as songs, marches, and creative protests incorporating the first American mass folk usage of civil disobedience were woven into the fabric of the movement. The Highlander Folk School in Tennessee, which had helped to train union organizers, became a veritable training ground for civil rights activists and musicians both, and such prominent folklorists-performers as Myles Horton, Bernice Johnson Reagon, and Guy and Candie Carawan, as well as scores of organizers for the Congress of Industrial Organizations (CIO) and the Student Non-Violent Coordinating Committee (SNCC), incorporated lessons both political and musical in their work for social justice. There and in the context of the civil rights movement, songs of spiritual origin were adapted for political and spiritual uses, including "We Shall Overcome" and "We Shall Not Be Moved," which have remained part of American political folklore through the end of the 20th century.

Much of American political life has remained unexamined by folklorists, and such broad themes as party politics, war, the suffrage and feminist movements, and race and class relations demand more research. Much of what has been done focuses on political texts, especially songs and jokes, and contextual information has been lacking. Prison lore, noted in American literature as early as Henry David Thoreau in "Civil Disobedience" and more recently examined by Bruce Jackson, and military folklore have received some attention, but more research into these areas is needed.

The Politics of Folklore

Folkloric expression itself can be a political act, even without a necessarily political interpretation. Folk protest can take the form of street theater, Luddite sabotage, or other kinds of creative protest, an excellent catalog of which can be found in Gene Sharp's *The Politics of Nonviolent Action* (1973). American folklorists, such as Susan Davis, have looked at carnivalesque protest forms such as parades, shivarees, and satirical burlesques. In addition to events, political attitudes can also be expressed through symbols and other displays, including flags, buttons, badges, posters, bumper stickers, signs, window decorations, and ceremonial foods. The arrangement and use as well as the content can affect the meaning.

The enforcement of folk justice, which can include such actions as vendettas and lynchings, is another topic that has drawn some interest, and William Lynwood Montell has done the most thorough job of putting such violence in its full context. Américo Paredes' understated *With His Pistol in His Hand* (1958) concerns the history and politics of a Texas ballad. Much occupational folklore, such as that documented by Archie Green and Robert McCarl, raises issues of unequal power and social exploitation, whether expressed through strikes, songs, or accident narratives. When and where all of these

forms are expressed—and where they are not, either forbidden or hidden—carries enormous weight in both their symbolic and their practical value.

Folklore emerging from social conflict is inherently political. Philosophically, the challenge for the field of folklore is to balance two sets of questions about folk protest and the folklore of social conflict and struggle: aesthetic questions, concerning form, structure, and expediency; and ethical questions, concerning what is just and moral.

The Politics of Folkloristics

The political beliefs of folklorists—that is, their personal ideologies—have shaped American folkloristics, as ideologies shape the formation and agenda of every discipline. Joel Chandler Harris used his Uncle Remus tales to promulgate his at best paternalistic (at worst racist) views of Southern plantation society, while Zora Neale Hurston took the opportunity in both scholarly and popular works to promote a more egalitarian view. In the late 20th century, whether Marxist (Communist, Socialist) or post-Enlightenment liberal (capitalist), in outlook, choices about what to study, the methodology of that study, and the outcomes and outlets for research are determined by political attitudes, often unarticulated. While James Mooney was traveling among Native American nations during the late 19th and 20th century, documenting religious practices that had been outlawed by the U.S. government and fighting with government agents to allow such traditional cultural practices to continue, Alice Fletcher and John Wesley Powell were promoting allotment and individual capitalism as paths to lead the Indians to Christianity and lobbying on behalf of such programs in Congress. Years later, the very different personal politics of Richard M. Dorson and Kenneth S. Goldstein, for example, resulted in academic departments at Indiana University and the University of Pennsylvania, respectively, with different orientations and different traditions for scholarly practice. Likewise, the ideological differences between Benjamin A. Botkin and Archie Green resulted in different blueprints for applied and public-sector folklore. Indeed, the kinds of choices made in the field in the 1990s, between “pure” and “applied” research, between academic and public-sector emphases, between detached and engaged investigation, reflect more than is acknowledged in a century-old debate about social action, which most prominently manifested itself in debates about popularization, advocacy, and anti-Communism. Late-20th-century folklorists are concerned with questions of multiculturalism and representation; they think about the kinds of critical questions that are raised in academic texts, exhibits, and public programs, as well as about those that are left unasked.

The Politics of Applied Folklore and Folklore Policy

Half of American folklore work takes place in the public sector, and the choices made concerning what programs and policies to develop are inevitably political. The Federal Writers' Project, begun in the 1930s as part of President Franklin D. Roosevelt's New Deal, was the first systematic government public-folklore program in America, though historically folklorists and social workers made attempts to wed folklore with the ideals of social betterment and a Romantic, Whitmanesque celebration of common genius, with mixed success. Lucy McKim Garrison, daughter-in-law of the abolitionist William Lloyd Garrison, collected and published slave songs in South Carolina; folklorist Heli Chatelain worked to improve conditions in Africa in the late 1800s; Stewart Culin advocated on behalf of Philadelphia's Chinese community; Olive Dame Campbell attempted to uplift Appalachian culture around the turn of the 20th century; and Jane Addams incorporated art and folk culture into her work with immigrants at Chicago's Hull House. Whether these well-intentioned activities were motivated by noblesse oblige, or by political commitment, or some combination of the two, they met with mixed success, arguably because they placed less faith in the ability of the people being "helped" to control their own culture and destiny. The tension between the programmatic and the collaborative nature of applied and public-sector work has been a dominant theme in American folkloristics for more than fifty years, particularly since the Nazi manipulation of folklore in the 1930s and 1940s made all such agendas suspect by association. David Whisnant's critique of early cultural programming in Appalachia in particular has brought issues of what he calls the "politics of culture" into the forefront of folklorists' consciousness, by investigating the often unintended impact of the Romantic impulses behind the discipline (Whisnant 1983).

The site where public- and applied-folklore work take place can determine some of the political considerations, as government offices and nongovernmental nonprofit groups will have different relationships with the political structures. The New Deal Federal Writers Project, the American Folklife Center—established in 1976 at the Library of Congress as a result of considerable lobbying and groundwork by folklorist Archie Green—and the Smithsonian Festival of American Folklife have been government, essentially political, programs with far-reaching impacts. On the other hand, urban nonprofit organizations, such as New York's City Lore and the Philadelphia Folklore Project, have used their independence to ask critical questions and investigate politicized topics that might be too risky for government agencies. That such groups, whether in the governmental or the nongovernmental sector, can help communities find funding and provide technical assistance for their cultural programming is but one example of the ways in which folklorists use political skills to facilitate cultural diversity and self-determination. These choices and strategies even within folklore agencies are, of course, political, since questions of inclusion, neglect, collaboration, reciprocity, empowerment, and social transformation are always at the fore.

Within the field, the paradigm of cultural conservation became dominant once public-sector folklore gained a foothold, though saving remnants of dying cultures has always been a part of American folklore's manifesto. Not just studying, but saving and protecting traditional cultures, be they immigrant, Native American, or occupational, has been a primary goal of public-sector folklorists from the outset. As folklorists develop an analysis of why such cultures traditionally fare poorly as they are swept up into the American mainstream, the work of cultural resistance becomes increasingly political. Yet, cultural conservation has been critiqued in two very significant ways.

First, as James Abrams, director of the Folklife Division of America's Industrial Heritage project (AIHP) in Johnstown, Pennsylvania, has commented, as public and state agencies interpret ethnic and occupational experience historically, folklorists rightly ask the question, Whose version of the story is being told, to what end, and to whose benefit? Are states and corporations retelling the history and conserving an interpretation of the past that legitimates, rather than critiques, social injustice and inequality?

Second, folklorists interested in dynamic and emergent culture and the experience of migration wonder whether a cultural-conservation paradigm (1) discriminates against those who adapt and change their cultural forms to fit new environments; and (2) ghettoizes traditional artists, preventing them from entering into debates over so-called mainstream culture on an equal footing and insisting that the only way they can obtain funding as artists is if they retain traditional, favored forms. Do cultural-conservation programs and blueprints favor long-term, settled, propertied residents of an area over migrant workers, recent immigrants, and, in the Northern states in particular, African Americans who came north during the Great Migration?

The cultural-conservation paradigm has, however, resulted in festival, museum, and archival documentation, as well as the promotion and funding of traditional arts through apprenticeships and other programs that have had long-lasting social, economic, psychological, and political impacts in a range of underserved communities.

This is not to imply that government policy is always beneficently envisioned or executed. The U.S. military, in the 1960s and 1970s during the war in Southeast Asia, employed folklore research as a means of counterinsurgency and pacifying the Vietnamese countryside, particularly the brilliant work of Major General Edward Lansdale, who had earlier used such techniques to combat insurgency in the Philippines (Fish 1989). Similarly, when the elected government of Chile was overthrown by a CIA-backed coup, the junta's torture and murder of popular topical folksinger Víctor Jara was carried out in a method so graphic—according to the legend that still circulates in communities of human rights activists throughout the hemisphere, including the United States—that it had to have had symbolic as well as practical significance. Policy decisions about, and uses of, folklore and culture can thus serve to protect life and human cultural diversity or destroy it.

Political Interpretations of Folklore

In addition to political decisions about research and policy, some folklorists engage in a political analysis of folkloric events and texts, some of which have more overt political content than others. These interpretations, often Marxist, feminist, or Weberian in orientation, have ranged from asserting that all folklore is inherently oppositional to the powers-that-be, to claiming that folklore is virtually ineffectual and palliative. Prior to 1970, most of the political analysis concentrated on the content of folklore and on relatively simple oppositions between the oppressor and oppressed. The advent in the mid-1970s of performance theory not only shifted the focus away from content and toward the full social context, but also added a degree of agency, individuality, and responsibility for performance that in most cases had not previously been accorded narrators and “informants.” Henry Glassie’s *Passing the Time in Ballymenone* (1982) is a complex example of political-song and folk-historical narrative in full ethnographic context.

In American folkloristics of the 1990s, several currents of political analysis predominate, borrowing from other disciplines and countries and exerting an influence even over seemingly nonpolitical interpretations in the field. Some folklorists have followed trends in literary theory, practicing a social analysis drawing from the Frankfurt school of Marxist analysis and combining it with the ideas of Frederic Jameson or Jürgen Habermas. In some cases, these cultural studies have minimized the role of class, the means of production, and native voice, in favor of the more postmodern literary approach of Michel Foucault, Jacques Derrida, and postmodern social-anthropological theory. Another line of inquiry has built upon the writings of Italian Communist Antonio Gramsci and incorporated that with the social-historical focus of Raymond Williams and E.P.Thompson. Complementing this latter approach are writings of Third World theorists and activists, notably Frantz Fanon, Amílcar Cabral, and Paulo Freire, who are interested in questions of culture, colonialism, and human liberation. In the United States, these approaches have been expanded upon particularly by African American writers, especially Cornel West and bell hooks in their essays on theology, anthropology, and literature. The work of literary critic Edward Said spans both literary theory and anticolonialism and is also important to current folklorists. In addition, the analysis of feminism, particularly in its attention to subjugated voices, coding strategies, and social history, has been influential within the field. African American and Latino scholars, particularly John W.Roberts, Gerald Davis, Patricia Turner, Manuel Peña, and José Limón, have synthesized folklore theory, American history, and African American and chicano studies to critique politically the past century of American folklore scholarship on issues of race and ethnicity and to address questions of conflict and inequality in both the larger society and the discipline (see Limón 1983).

Folk Political Organization and Alternative Social Institutions

Class and economic life are a central part of European folklife scholarship but are seldom discussed in American folkloristics. The study of power relations, whether in larger social structures or within family relationships, is a part of folklife studies, and the ways in which people organize themselves, decide to rebel, negotiate power, or subvert it are part of the strategies of everyday life. In some cases in American history, as elsewhere, groups have set up alternative social institutions—some withdrawing from the world, some confronting it—that are folk societies, albeit intentional ones. Religious settlements and cooperative communities, from New Harmony to The Farm, are an important part of American sectarian and political life. Whether their ideologies are far Left or far Right, they are commentaries on existing in the face of a larger dominant culture and are creative ways to dispense with aspects of the dominant culture that are unacceptable to adherents. On a smaller scale, people establish alternative social institutions that may affect fewer people (such as squatter settlements and subway concourse shantytowns) or concern a less all-encompassing aspect of everyday life (such as food co-ops or community or organic gardens). Along these lines, belief scholars have engaged in a critique of the medical establishment and the notion of religious homogeneity that can only be called political in its reassertion of individual self-knowledge and dignity in the face of overwhelming mass social institutions. This includes the study of alternative medicine and oppositional religious sects, such as acupuncture or *santeria*, respectively. Some of these alternative institutions become expressly political issues when they are outlawed by the dominant legal system.

Power structures within smaller groups and the political organization of small communities, be they neighborhoods, congregations, or families, are also subjects of interest for the folklorist. The prevalence, for example, of domestic violence as a means of maintaining physical and economic control within families is an important, if unacknowledged, part of American folklife, as is police brutality in city neighborhoods.

Alternative economic arrangements, such as bartering and under-the-table employment, are likewise part of the fabric of American society. Both bartering and the cash economy are means of undermining the state economic system; the former asserts independence from the knowledge of the government, while the latter can be a way for either the employer or the worker to get around official regulations, but all too often becomes an instrument of social exploitation.

Political Belief as Folklore

American folklorists have begun to examine political belief itself as an aspect of folklife that transcends genres, not unlike religious or health belief, from proverbs to

autobiographical narratives. Political beliefs include attitudes and understandings of power and justice issues and how they affect individuals and groups. Folklorist David Shuldiner has termed such personal analysis of political, economic, and social conditions “folk ideology” (Shuldiner 1991), but thus far there have been few ethnographic studies that investigate within a group or movement the range of the expression in such beliefs in their full context. Botkin, in his collection of edited narratives of former slaves (Botkin [1945] 1994), began the collection with excerpts from oral literature and popular belief, thus grounding the personal narratives that followed in the depiction of the wisdom and analysis of the narrators. Since folklore, unlike other disciplines, pays special attention to the words, expressions, and beliefs of the people being observed or studied, the study of belief reminds us that there can be no understanding of living people without asking.

Polka

A dance; a generic modifier for an entire musical complex. The word has been attributed variously to three Czech sources: *pulka* (half-step), perhaps because of the dance's footwork; *pole* (field), perhaps alluding to an outdoor village dance "floor"; and *polska* (Polish woman), perhaps in reference to the Bohemian adaptation of the Polish *krakowiak* dance-songs into polkas.

Performed by a couple executing a hop-step close-step pattern in 2/4 time, the dance emerged around 1830 in an appropriately eclectic Germanized Czech region near the Polish border. Although it draws upon earlier ethnically diverse forms, the polka's oft-printed origin legend, suffused with the era's Romantic nationalism, suggests that Anna Slezak, a Bohemian peasant girl in the village of Elbeteinetz, improvised a tune and steps one summer afternoon. The local schoolmaster noticed Slezak's invention, taught it to his students, and

Did they play a polka at the Polish Constitution Day Parade? Chicago, 1977. Photo jonas Dovydenas. American Folklife Center.

inadvertently started an international dance craze. By the mid-1830s, the polka had entered the genteel ballrooms of Prague; by the mid-1840s, it had been introduced to Vienna, Paris, and London by Czech brass bands and dancing masters; and by the mid-

19th century, the polka had conquered Europe's elite, swept the salons of urban America, and claimed the allegiance of rural dancers on both sides of the Atlantic.

After a few decades of popularity, the polka was gradually abandoned by upper-class American aficionados. It persisted, however, as a residual form among many rural Americans, and it never lost its power among northern and central European immigrants and their offspring. Indeed, "polka's" broader application as a generic term emerged in the early 20th century.

The international prominence of the polka was paralleled by the broad diffusion of such other central European dances as the waltz and the schottische. In the United States, these dances and the German accordion entered the repertoires of French, African, and Mexican Americans, thus contributing to the development of Cajun, zydeco, and *conjunto* styles. Meanwhile, the polka and related forms served as musical common denominators for many European newcomers, particularly those of Germanic, Scandinavian, and Slavic heritage. When second-generation ethnic band leaders began recording, performing over the radio, and touring in the 1920s, they sought increasingly broader audiences. Beyond a core ethnic repertoire, they played the favorites of their "foreign" neighbors, as well as Anglo American folk and popular tunes. The incipient genre's commercial promoters encouraged this "crossover" strategy.

The career of polka music's first "star," Hans Wilfahrt (1893–1961) is instructive. Wilfahrt began playing old country tunes at the age of fifteen for house dances south of New Ulm, Minnesota, in an enclave of ethnic German immigrants from Bohemia. His first recordings, made in Minneapolis in 1927, were mostly Czech and German polkas, waltzes, and schottisches, but they also included waltzes of Polish and Swedish origin. Wilfahrt's Okeh label sought a still wider pan-ethnic audience by marketing the band variously as Hans Wilfahrt's Concertina Orchestra, Hans Wilfahrts Kapelle, Česká Tanecni Hudba, Orkiestra Wiejska, L'Orchestre Chartier, and Orquesta De Concertina Juan Wilfahrt. By the mid-1930s, the band was known simply as Whoopee John Wilfahrt and His Orchestra, and all of its titles, whatever their origin, were issued in English. Whoopee John was no longer an esoteric ethnic musician; he was the noted leader of an American "polka band."

During the 1930s, the term "polka music" entered public and music-industry parlance in reference to a range of ethnically derived American dance traditions that all included some variation of the polka. The genre's popularity was boosted near the decade's end by a massive jukebox hit, "The Beer Barrel Polka." Written by a Czech, Jaromir Vejvoda (b. 1902), and originally titled "Skoda Lásky," the tune was also known in Germany as "Rosamunde." The initial American recording by Will Glahe's Musette Orchestra was soon "covered" by the Andrews Sisters, whose beckoning "Roll out the barrel, we'll have a barrel of fun" contributed mightily to polka music's enduring association with beer and celebration.

While their activities were curtailed by World War II, polka musicians prospered in its aftermath. More Americans had become acquainted with Europe's vernacular music.

America's polka musicians, meanwhile, had jammed with fellow servicemen in jazz and hillbilly bands. Frankie Yankovic (b. 1915) for example, expanded his Slovenian repertoire while he was in the Army by playing in various bands. His polka-style rendering of a hillbilly duet, "Just Because," became a million-seller for Columbia Records in 1948.

In the 1950s, rock and roll ended polka's flirtation with national prominence. The music, however, has continued to thrive and evolve as an ethnic-regional phenomenon. Yankovic's alpine Slovenian style, with its interweaving virtuoso accordions, claims followers in northern Ohio, in Milwaukee, on Minnesota's Iron Range, and in Western mining towns. Whoopee John's "oompah" sound, propelled by concertina and tuba, inspires the "Dutchman" music that dominates the rural Upper Midwest. Czech bands—combining brass, reeds, and accordions—are prominent in Nebraska and Texas. "Eastern-style" Polish bands from southern New England and the industrialized Middle Atlantic states persist with their tightly arranged, rapid instrumentals, but they have been overtaken by Chicago's "honky" and "push" sounds, which emphasize improvisation, surging rhythms, bilingual vocals, and rockinfluenced amplification.

Since the 1970s, these major styles, and other minor departures, have been supported by a loosely organized "polka industry" of record and video companies, radio stations, periodicals, dance halls, festivals, fan clubs, and associations. Their efforts, coupled with the accordion's resurgence in rock and country genres, have contributed to an increased awareness of polka music's prolonged and varied presence in American life. The American Society of Composers, Artists, and Performers (ASCAP) has awarded a polka Grammy since 1986. National and regional media offer occasional polka features, and folklorists have begun to include polka musicians in their public programs.

Scholarship remains scant, especially when compared with the efforts devoted to other forms of American folk and vernacular music. But a slow parade of discographies, reissued sound recordings, and writings has begun and is liable, like the music, to continue into the 21st century.

Popular Culture and Folklore

Relationships of mass-mediated culture (“popular”) and smallscale, unmediated artistic expression (“folklore”). Some scholars use the terms interchangeably, while others think the terms refer to materials that exist in polar opposition to each other. Still other scholars see the two concepts as different but continuous with each other. Both terms, however, indicate human activities that are stylized and expressive in nature.

Many definitions of folklore have tended to be enumerative, naming genres such as beliefs, customs, ballads, and proverbs as examples, thus assuming a self-evident inherent similarity among them. Sometimes such lists are tautological in that they repeat the modifier “folk” in the examples given; that is, folklore is said to be comprised of folksong, folk dance, and other *folk* genres. Generalizing from certain data and attempting to arrive at a consensus as to what constitutes these genres we speak of as folk, some scholars have suggested that folklore is that portion of a culture or society that is passed on orally or by imitation.

In 1972 Dan Ben-Amos defined folklore as artistic communication in small groups. In this formulation, the concept of “small group” replaces the “folk” termination, while the “lore” becomes identified as “artistic communication.” This communication need not necessarily be verbal, but it will be stylized and expressive, thus calling attention to itself. Stories told in conversations, for instance, are readily distinguished from the surrounding speech by any number of means, including body language and voice timbre, and often by the use of introductory formulas that signal that a specific genre of speech is about to be uttered. “Once upon a time” tells us to expect a fairy tale, while, “Have you heard the one about...” indicates that the teller is about to tell a joke. Even everyday conversational narratives about one’s own personal experiences are often introduced with the word “once.” The joke may be years, even centuries, old, but each telling is unique. The concept of “small groups” referred to requires that the genre be performed in company few enough in numbers and close enough in proximity to be able to affect the performance and to contribute to it.

Popular culture, on the other hand, has often been equated with the mass media: products of film, television, recordings, and print that are widely disseminated in society, or at least created with widespread dissemination in mind. Thus, when a friend tells us a joke, this is, by the above definition, a folk event. When we watch a comedian on television tell a joke—even the same joke—we have entered the realm of popular culture. We can have only indirect influence on the products of mass media, while we can have direct effects on small-scale, interpersonal communications. American scholars often distinguish folklore, or folk culture, from popular culture along many lines, including the communicative nature of the materials themselves: Are they mediated or unmediated? In other words, do we hear the story, or listen to the music, or see the dance directly? Can we join in, or are we merely watching a film, listening to a recording, or looking at a videotape?

Like the term “folklore,” the term “popular culture” is also used as the name of a scholarly discipline. Popular-culture studies is the scholarly investigation of expressive forms widely disseminated in society. These materials include, but are not restricted to, products of mass media such as television, film, print, and recording. Thus, popular-

culture studies may focus on media genres such as situation comedies, film noir, best-selling novels, or rap music. Other, nonmediated aspects of popular culture would include such things as clothing styles, fads, holidays and celebrations, amusement parks, both amateur and professional sports, and so forth. Ideally, the study of these or any other popular materials should be done holistically, viewing them both aesthetically and within the social and cultural contexts in which the materials are created, disseminated, interpreted, and used. In this way, the study of popular culture, like the study of folklore, involves the use of methodologies from both the humanities and the social sciences in the effort to interpret expressive cultural forms, specifically those that are widely disseminated in a group (that is, that are popular) as part of dynamic social intercourse.

Folklore and popular culture meet in the popular use of the mass media or mass-produced goods. Examples of this phenomenon are many and include scratch DJs, customized cars, self-embroidered articles of clothing, and so forth. In the United States, it seems to have fallen largely to folklorists to study this phenomenon, as well as other contemporary forms that, while not necessarily or entirely mass-mediated, are fully defensible as popular culture in that they are widely known and practiced. The study of contemporary holiday celebrations, for example, ideally should combine the study of folk traditions with an investigation of the festive uses of massmedia products (the ways certain films have become traditionally associated with holidays, for example).

Many of those who consider folklore as unmediated, small group, face-to-face expressive culture, and popular culture as large-scale, mass-mediated forms, view the two as antithetical. Simply put, they argue that folklore thrives where the mass media has not taken hold. Conversely, by this formulation, popular culture kills folklore; where once people entertained one another with storytelling, instead they now watch television. There is often felt to be a moral dimension here: Storytelling (or another genre of folklore) is seen as active and creative, while consuming mass-mediated forms is described as passive and numbing. Thus, the former is said to be superior to the latter. Other scholars might view the folk genres pejoratively, describing them as unsophisticated, primitive, or naive.

On the other hand, some scholars use the terms “folklore” and “popular culture” more or less interchangeably. Social historians, for instance, who have researched everyday life in medieval, late medieval, and early modern societies (frequently reconstructing popular rituals, festivals, and celebrations) generally prefer the term “popular culture” to that of “folk culture,” possibly owing to romantic associations of the concept of “folk” that the scholars consider as pejorative. In these cases, culture and society are more likely to be viewed in dichotomous terms, with allowances for overlap, between the courtly culture of the socially elite and the popular culture of the masses. Some popular-culturalists accept this view, maintaining that only after the Industrial Revolution and its attendant urbanization and the development of a middle class does it make sense to speak of a tripartite model of culture that includes folk, popular, and elite. In this formulation, the folk represent peasant society; a semiautonomous group that depends on a nation-state for at least part of its subsistence.

To a large extent, definitions indicate methodologies: the definitions one works with influence both what is studied and how it is studied. Janice Radway’s study of a group of women who read romance novels is an example of the application of social science and ethnographic techniques to an area that had been dominated by humanities approaches. In

the past, popular genre fiction such as romances would be studied as texts only, and found lacking in aesthetic merit as defined by Western European high-art critics. Radway (and other cultural studies scholars) expanded the area of study to transcend the written text and to include ethnographic considerations, such as who exactly was reading the novels, when, for what purposes, and what meanings and values did they derive from them? In order to determine such things, the readers were interviewed in order to ascertain their own perspective on, and understandings of, the materials. Instead of condemning a genre in which millions of people find something of value, Radway attempted to understand what aesthetic principles were at work and how readers of popular romances themselves understand the texts.

Radway's work and that of others has shown that people are not as passive as was once thought in their interactions with mass or popular forms. In addition, there are a great many areas of overlap between folk and popular culture. As terms that refer to social dynamics rather than things, the two feed off each other. The examples here are numerous, but two brief instances will suffice. Children's jump-rope rhymes, a folk genre, commonly use well-known celebrities, popular songs, and commercial jingles for their subject matter, while the converse is also true; many popular hit songs and commercial jingles are derived from the poetry and song of the streets. Another example would be the relationship of the so-called slasher or stalker films, such as *Nightmare on Elm Street*, and the modern legends in oral circulation that tell of similar horrific killings.

Celebrations of contemporary holidays, life passages, and other special occasions are an area in which many of the various aspects of culture are coterminous. The use of yellow ribbons publicly displayed during wartime is one such example. Holidays such as Halloween are good examples of contemporary phenomena that combine customary behaviors and traditions carried out on the personal level (for example, trick-or-treating, learning to carve a jack-o'-lantern). There is also a tremendous commercialization of contemporary holidays, including the marketing of cards, candies, and costumes; media products such as episodes of television programs with Halloween themes or specials such as *It's the Great Pumpkin, Charlie Brown*; church-sponsored events; and, in certain cases, condemnations by churches.

Both folklorists and popular-culture scholars study created, expressive, and artistic materials as their primary data, much as literary scholars take the novel or the sonnet as their primary data. In this way, they are both within the tradition of the humanities. However, the disciplines of folklore studies and popular-culture studies differ from traditional humanities studies in that they recognize the existence of alternative systems of aesthetics that guide the creation of popular materials and the evaluation of those materials by an audience. Albert Bates Lord, in his important work *The Singer of Tales* (1960), identified the ways singers of epics in eastern Europe learn their art orally and how they compose as they perform. He suggests that these performances and the poems themselves be judged according to the specific goals of the artists and the audiences and to an understanding of the problems unique to an oral poet. In other words, oral poetry is a different genre from written poetry. Each has its own aesthetic standards, and it is misguided to judge one by the standards of the other. Popular-culture scholars recognize this principle and extend it to the popular arts such as television programs, popular films, popular music, best-selling novels, and genre fiction such as mysteries or romances.

Each medium or genre has an audience that can and does make evaluations according to aesthetic criteria. These criteria are usually unarticulated, but they are no less real because of it. People regularly make choices as to which book to read or movie to see, and just as regularly evaluate the experience: This was a good thriller, this a great party song, and so forth. Because these aesthetic criteria are generally unarticulated, it is the task of the researcher to identify them through ethnographic methods such as interviews and participant observation, as well as humanities techniques such as textual analysis. The term “ethnography” refers to the cultural description of any event, producers, consumers, or users of the artifact, or members of the cultural group in question. After these insider (or native) perceptions and categories are documented, the researcher may undertake the scholarly analysis of the materials as components of a dynamic social and cultural field of behavior. These methods enable the scholar to situate the discussion of any aspect of folklore or popular culture within the larger context of the meanings and values of the society within which it exists; to determine, as Clifford Geertz has suggested, what we need to know in order to make sense of something (Geertz 1984).

Social-science methodologies enable the popular-culture scholar to root an expressive form in its social context and to uncover the aesthetic system upon which it is judged. Humanities approaches provide models for the appreciation of aesthetic forms and enable the scholar to apply theories of genre and make comparative analytical statements. As socialscience and humanities methodologies are combined in the study of artistic forms of expression that are broadly based in society, scholars can begin to provide an understanding of the social and cultural significance of these artistic forms, and begin to determine the aesthetic, social, commercial, and technological considerations that underlie their creation, distribution, and reception. Rather than attempting to determine ultimate worth or meaning according to an imposed value system, scholars have begun investigating the ways in which meaning is created and creativity evaluated. This requires ethnographic research. It is in the ethnographic study of the everyday uses of mass-cultural forms that folklore and popular culture merge.

Portuguese Americans

A diverse group, having emigrated not only from mainland Portugal, but also from its island possessions in the Atlantic. More than two-thirds of Portuguese Americans are of Azorean lineage; one-quarter are descendants of immigrants from Madeira, and the rest come variously from the European mainland, the Cape Verde Islands, Brazil, and Portuguese enclaves in China.

According to Portuguese American scholar Francis Rogers, two waves of Portuguese immigration have formed two separate Portuguese groups "living in close juxtaposition but not close harmony." Rogers stresses the differences between all arrivals prior to 1958 and those who have come later. In regard to Portuguese American folklore, however, there are more accurately *three* separate groups. The earliest arrivals (1820–1870) largely immigrated through the whaling trade to New England, Long Island, and, to a lesser degree, to the Hawaiian Islands and San Francisco. These men, embarking from Horta in the western Azores, were likely to have had as much as three years' indoctrination in American speech and custom aboard the whalers before landing in the United States. Some sent for women from the home islands, others married English-speaking Roman Catholics in their new country.

Living in smaller communities, often intermarrying, the early immigrants appear to have had more options to assimilate and prosper than the second wave (1870–1920), who took advantage of the development of scheduled steamship travel and likely employment in the New England textile industry to arrive as families, indeed, as whole communities. Steamship lines connected a different group of islands—the most easterly of the Azores, and Madeira—with the New England ports. This second, much larger, wave of Portuguese immigrants not only originated in the more heavily populated and economically poorer islands, but also settled into more enclaved communities in their new homeland.

The most recent arrivals (1958–) have benefited from better education in the homelands and report their goals for immigration as increased educational opportunities for their children and economic success for themselves. They are more likely to travel frequently between their new homes and their homeland, to take overt pride in their Portuguese-ness and to enter the American politics generally eschewed by older immigrants. In joining traditional Portuguese social and religious societies, they have infused these with contemporary versions of traditions as these are now practiced in the islands.

Of the three groups, immigrants of the second wave remain the principal repository of traditional practices. The earlier arrivals often identify with the societies that implement folkloric performances but are less frequently active members. The most recent arrivals are enthusiastic about their folklore but are likely to prefer the more polished contemporary performances of their homelands, which, in the late 20th century, are oriented to a growing Portuguese tourist industry.

As early as 1892, the folklore of Portuguese Americans was the subject of scholarly study. When Henry Lang recorded his observations for the *Journal of American Folklore* that year, the dominant group was the early wave of immigrants brought by the whaling industry. Lang acknowledged that a new and larger Portuguese population was arriving as he wrote, describing them as overtaxed and poverty-stricken workers escaping military service and depressed wages. Older members of the Portuguese American community, whom Lang characterized as wealthy and substantial, were thought to be fast losing their traditions. Superstitions based on fear of natural phenomena, particularly the frequent seismic activity in the islands, he supposed, would disappear rapidly in America because of a lack of natural causes and the “positive social medium.”

In fact, many surviving Azorean American traditions are based on such superstitions. Kept alive by adverse conditions in the American workplace, as well as natural disasters inherent in the farming and fishing that have been alternatives to factory work, traditional devotions to saints involved in Portuguese-specific miracles persist, as does the gesture of tweaking the earlobe between thumb and forefinger to indicate praise or good wishes. The Chama Rita (*chambritzta*) that Lang documented in 1892 is still danced, at least by older members of Portuguese American communities. In fact, in 1989, members of a local Portuguese Holy Ghost Society taught the *chambritzta* to the Connecticut-based cast of *Mystic Pizza*, a film about the coming of age of young Portuguese American women.

Most Portuguese Americans consider the *fado* of the Lisbon working class as an icon of their heritage, and some Portuguese American restaurants feature performers singing the sad and fatalistic songs as an attraction for their regular customers. Otherwise, noticeable differences in performance of Portuguese folk music and dance occur from one island or chain of islands to another, and these are reflected in the preferred music in various Portuguese American communities. An Azorean musician from Lowell, Massachusetts, characterized Madeiran music as “upbeat” and Azorean as slow and sad. But then, Azorean Americans claim a special state of mind called *soldad* (a longing, particularly for the other side of the ocean). In America, they say, they have *soldad* for their islands; in the Azores, they had *soldad* for the mainland that was their cultural home. Expressions of *soldad* for home and for loved ones is a pervading theme in Azorean song.

The *pezinho* (an Azorean serenade honoring benefactors of a feast) consists of extemporaneous verses, sometimes humorous, composed anew at each performance. Two or more singers take turns vying to do honor to the saint and to the benefactor, with lyrics specific to the situation and to the verses that have just been sung. In contemporary Lowell, and elsewhere in New England, Portuguese American singers use the *pezhino*, which they translate as “little feet,” to compose their own extemporaneous verses, often ribald or insulting, but always skillfully referring to the immediate situation.

Portuguese folktales appear to have disappeared from the Portuguese American traditional repertoire, but saints’ legends concerning divine intervention on behalf of Portuguese people are popular. Many of these are centuries old, like Queen Isabelas ability to cure the sick by placing her crown on the head of the afflicted; others are as contemporary as the story of an aged couple who survived a 1957 earthquake in Portugal because they held on to the Holy Ghost crown.

Personal narratives about overcoming hardships in America are told by older immigrants and their children. The value the Portuguese place on hard work and frugality

is often at the heart of these narratives. A factory worker in Lowell told of “hiring” her invalid mother as an assistant spinner, then doing the work of both so that her mother would receive a paycheck. Most narratives tell of families in which every ablebodied member works, contributing their wages toward the purchase of a house and the rapid payoff of the mortgage. Portuguese urban communities have earned a reputation for restoring blighted neighborhoods through their industrious occupancy.

In Portuguese American neighborhoods, social and benevolent organizations serve a variety of functions. For the men, they are a substitute for the wine cellars and gardens of their homeland: a male social space for evening and weekend recreation. For the women, they are a center of devotional life beyond the reach of the clergy. Because the Portuguese Roman Catholic Church has historically conspired with the government to strengthen its control over the peasantry, these secular societies, like the Portuguese Holy Ghost Society, have taken over the observances of saints’ days, including the organizing of processions and the building of altars to honor the saints.

Portuguese American feast days sponsored by these social organizations include the Feast of the Holy Ghost, an Azorean celebration based on legends involving Queen Isabela (not to be confused with the Spanish Isabella of Castile) and her *promessa* (promise) to the Holy Ghost that ended a famine; and the Madeiran Feasts of the Blessed Sacrament (Corpus Christi) and of Our Lady of Loreto. In New Bedford, Massachusetts, the San Miguelense (Azorean) community observes the Festa do Senhor da Pedra, celebrating a particular image of Christ seated on a rock. Also important in the Portuguese American calendar is the Feast of Our Lady of Fatima, commemorating the appearance of the Virgin to a group of peasant children in mainland Portugal. The Virgin’s message to the children—to pray for the conversion of the ungodly—has been understood by Portuguese Americans as referring to Communism, and they have chosen to express their American patriotism through devotion to Fatima.

Feasts (*festas*) are opportunities for non-Portuguese Americans to sample the national cuisine, including *massa cevada* (Portuguese sweet bread), *linguica* sausage baked in a roll, *chorizo* sausage cooked with pepper and tomato, and “Holy Ghost” soup (*sopas*), a rich beef and vegetable broth flavored with mint. Sweets include meringue cookies (called *suspiros*, or “sighs”) and *malassadas* (fried sweet-bread dough topped with sugar or honey). In Portuguese American homes, and in the increasing number of Portuguese restaurants engendered by the late-20th-century interest in ethnic foods, many variations on the peasant dish of salt cod and potatoes are favorite offerings, along with the ubiquitous pork with clams *a alentejana*.

Portuguese American Christmas is celebrated with roast pork marinated in white wine (or in some homes, flavored vinegar) or with marinated salt cod and vegetables. Traditionally minded Portuguese Americans often eschew Christmas trees in favor of a “manger”: A hilly landscape is constructed and covered with moss on which miniature figures are placed, all oriented toward the Holy Family occupying a stable at the pinnacle. Basins of water are artfully transformed into miniature lakes on which float flocks of miniature ducks. Herds of sheep and cows graze in fenced-off pastures. The manger in the Portuguese church in Lowell is large enough to hide the altar and require the removal of several rows of pews. Family mangers similarly dominate parlors; the moss covering is carefully stored and preserved from year to year.

The role of women in Portuguese American culture is central to the maintaining of these traditions. Women cook the feasts, construct and decorate the mangers, arrange the altars, and take responsibility for religious observances. (The Portuguese collusion between church and state often made it politically unwise for men to attend services.) In traditional Portuguese families, women did not work outside the home; they took care to behave modestly and to obey husband and father. In Portuguese American families, women have always worked outside the home. In the heyday of the textile industry, Portuguese women were surrounded by their peers, and decorum was maintained, but late-20th-century opportunities in education and a variety of workplaces have disturbed the equilibrium in traditional Portuguese American households. Younger women seek to escape the traditional domination of men even as they express concern over the possible loss of their ethnic heritage.

Postmodernism

A controversial term, both in the confusing range of its application and in its obvious trendiness. Some would charge that the term “postmodernism” has been invoked so widely and loosely as to render it useless as either a descriptive or an analytical category. In some of its more restricted meanings, however, the term provides a tag for certain qualities of late-20thcentury American culture that have no other good designation.

To sort out some of these meanings, one may usefully distinguish between postmodern *ism* and postmodern *ity* (Connor 1989:27). The former, which may appropriately be used in the plural, designates a whole array of cultural phenomena, especially in the arts, in which significant departures from modernist sensibilities or styles may be detected. Many of these shifts can be roughly dated to the 1960s, though attempts at periodization are open to debate. And, in fact, the very impulse to periodize is inconsistent with the postmodern sensibility, as, for that matter, are attempts at essentialist identifications of postmodernism’s “qualities.”

These dilemmas of definition notwithstanding, we may speak with some assurance about general properties shared by the various postmodernisms in the arts, in academic theory, and in mass-cultural forms. Foremost among these is a wholesale destabilization and fragmentation of cultural meaning, an insistence on the provisional status of historical understanding, and an acknowledgment that all representations of real-ity, from the most empirical to the most fantastic, are equally the result of textual construction. The various theoretical schools usually lumped together as “poststructuralism,” a term often and inappropriately equated with postmodernism, have in common this basic assumption that all meaning, all representation, and even human subjectivity itself are textual effects, or, to use different terms, are traces of an infinite play of signifiers.

The philosophical implications of these premises are obviously immense, and troubling to many. If no meaning is fixed and no representation of reality immune from deconstruction (the most common name for poststructuralism’s method of reading cultural texts “against themselves”), then moral judgment, coherent political action, and even personal identities can only be provisional and partial, always subject to repeal or displacement. On the other hand, for many of its theorists and its practitioners in the arts, postmodernism is inherently a liberating denial of the very possibility of absolute authority and a rejection of restrictive programs that appeal to some form of eternal truth. The tone and style of much self-conscious postmodern practice, particularly in the arts, are characterized by playfulness, surprising juxtapositions, and *not* violation of conventions (this could be said of early modernism), but reflexive citation of conventions so as to highlight their artifice.

The various postmodernisms that share these qualities can be thought of as manifestations or symptoms of an embracing cultural-historical moment that we might call postmodernity. Used in the singular, postmodernity refers to the whole complex of formations, institutions, and discourses that constitute our advanced consumer society. In a classic essay on the subject, Frederic Jameson uses postmodernity as the name for the

“cultural logic” of the current phase of the capitalist mode of production (Jameson 1984). This “late” capitalism is characterized by advanced consumer social relations, the commodification of virtually all spheres of material life, a global economic order dominated by multinational corporations, and a technological order devoted to the production and rapid exchange of information.

Jameson identifies the signature characteristic of this cultural logic as a subtly pervasive “depthlessness,” evident in such things as our collective fascination with detached, glossy surface images, the proliferation of flattened “historicist” images of past periods, and a pervasive but unfocused emotional register that might best be thought of as a blankly ironic stance toward all discourses.

Whatever version one fixes on, and whether one takes a positive or a negative position toward it, the phenomenon of postmodernism-postmodernity has some important implications for the study of contemporary American folklore. Although theorists of postmodernity have paid little attention to vernacular culture, their views on mass and elite cultural forms suggest the need to rethink the status of folk expression in the current historical context.

For one thing, the concept of postmodernity undercuts many received ideas about the relationship between mass and folk cultures. Under the regime of postmodernity, the old model according to which mass culture is seen simply as a threat to, and supplanter of, folk forms no longer suffices. A basic tenet of postmodern theory is that the old stratified categories—elite, popular, mass, folk—do not any longer make much sense. The boundaries between these domains are now so constantly violated that one is hard pressed to decide whether, for example, jokes exchanged through fiber-optic computer nets are properly thought of as existing in the social space of vernacular or mass communication. Analogous examples are the folkloric performances staged at folk festivals, the oral narratives generated by the growing numbers of professional storytellers, and the New Age therapeutic programs inspired by forms of tradition healing and folk ritual (Warshaver 1991).

Another feature of postmodernity relevant to folklorists is its rejection of the grand narratives of modernist culture—that is, the ostensibly universal explanatory narratives of science, economics, psychoanalysis, and the like (Lyotard [1979] 1984). In their place, postmodernity emphasizes the provisional stories of more immediate and localized application—in short, the sort of stories that have always been of most concern to folklorists. Sensitivity to the multiplicity and situational variability of cultural identities is a similar point of connection between theories of postmodernity and the late-20th-century concerns of many folklorists.

Folklore studies stand, then, in an ambiguous relationship to the postmodern. On the one hand, the denial of the specificity and separateness of the folk domain implied by postmodernity would seem to be a challenge to the field. On the other hand, theories of postmodernity give, in concept if not much in practice, a special prominence to the sorts of local, partial, immediate cultural forms and expressions that folklorists are trained to document and analyze. This sort of paradox, some would say, is itself indicative of the postmodern moment.

Pottery

The creation of useful and attractive vessels from fired clay. For thousands of years, the skilled hands of the potter have nurtured civilizations. From digging clays and grinding glazes, to

The pottery shop of Robert Ritchie (r.), Catawba County, North Carolina, ca. 1914. To the left rear is the groundhog kiln, at the back center is the log shop, and to the right is the pug mill for grinding the clay. Photo courtesy Clara Ritchie Wiggs.

throwing myriad forms on the wheel and firing them in their kilns, potters have sustained life in the most essential ways. Their jars and jugs, bowls and beanpots, churns and pitchers ensured that families would have sufficient foods to survive frozen winters or scorching droughts. And often, a graceful form, or a colorful glaze, or a rich texture would add an element of beauty to otherwise prosaic lives.

From Jamestown, Virginia, to Charlestown, Massachusetts, potters were among the earliest settlers. Through the late 18th century, their primary product was lead-glazed earthenware, a type of pottery that dates back to the ancient Near East. American potters

used lead in many forms—raw ore (galena), oxides (red lead and litharge), even Civil War bullets—generally combining it with water, clay, and a silica source (flint, sand) to produce a creamy mixture into which each pot was dipped. The glaze served to seal the porous earthenware clay body and ensure that each container was impermeable.

Many of the early potters came from mature ceramic traditions in Great Britain and later, the German regions of central Europe. However, they quickly found it necessary to produce plainer, more utilitarian wares; colonists had little time or money to spend on decorative effects when survival was often their key concern. The one exception was the German earthenware potters, who began arriving in the late 17th century and encountered relatively settled conditions along the Eastern seaboard. Notably in eastern Pennsylvania, the Shenandoah Valley of Virginia, and the Moravian communities of North Carolina, they produced an extraordinary body of sophisticated, brightly colored wares using multicolored slips (mixtures of clay, water, and other materials), *graffito* (decoration produced by scratching through a coating of slip to reveal the clay body beneath it), and molded forms.

By the late 18th century, potters and consumers alike were becoming aware that the lead glaze could be dangerously toxic, even lethal. Moreover, the earthenware clay body, which is fired to only about 1800°F, remains porous and easily breakable. Thus, between roughly the 1780s and 1830s, potters first in the North, and then later the South and Midwest, began switching over to stoneware clay and a series of new glazes. Unlike earthenware clays, which are widespread and occur near the Earth's surface, stoneware clays are a sedimentary type usually found in deep veins near rivers or bottom land. When fired to temperatures of 2300°F or more, they become extremely hard and vitreous—hence, very durable and easy to clean. All of the associated glazes are nontoxic.

The predominant glaze for this high-fired clay body was ordinary salt. Here there is no need to concoct a glaze solution. The potter simply sets his greenware (dried, unfired pottery) in the kiln, slowly raises it to full heat, and then introduces the salt through the firebox or the openings in the arch. The salt instantly vaporizes, and the sodium fluxes the surface of the pots, melting the silica in the clay and producing a hard, glassy coating. The salt glaze originated in Germany no later than the 15th century; it spread across Europe and reached England toward the end of the 17th century. Because large quantities of Continental and English stonewares were imported into America, it was not until the early 18th century that a native industry began to develop in the Mid-Atlantic region, based on the discovery of large stoneware clay deposits in New York and New Jersey. The salt glaze gradually spread north into New England (where potters had to import the new clay), south to Tennessee and North Carolina, and into the Midwest.

The characteristic Southern glaze for stoneware is the alkaline glaze, so-called because the flux—wood ashes or lime—contains alkaline compounds of calcium, sodium, and potassium. Having originated in China 2,000 years ago, it reappeared in the Carolinas—most likely, the Edgefield District of South Carolina—during the first quarter of the 19th century. It then spread south to Florida and west as far as Texas. Drawing on readily available materials, the potter combined his flux with water and some local silica source (clay, sand, feldspar, iron cinders, or crushed glass). The resulting glazes are characteristically dark brown or green and frequently flow down the sides of the pots in thick veins.

The third major stoneware glaze is Albany slip, a simple combination of water and a powdered clay mined near Albany, New York. Discovered in the early 19th century, it was widely used on the interiors of the Northern salt-glazed wares, particularly as the kilns became larger, preventing the salt fumes from getting inside the stacked pots. In the Midwest, potters applied it to the exteriors as well, creating a glossy, chocolate brown surface. Albany slip occurs sporadically in the South, where potters sometimes combined it with the salt glaze to produce a yellow-green hue known locally as frogskin.

The foregoing account only begins to suggest the intensely regional nature of American folk pottery. Migration patterns, local resources, and the needs and preferences of developing communities all combined to ensure that a deep sense of place was embedded in every pot. The potters themselves rarely signed their wares. They were craftsmen, not artists, and regarded the act of signing as an empty gesture, a waste of time in an already long and arduous process. Perhaps they also recognized that their “signatures” were there, even without their specific names, whether in a bulbous form, the hue of the glaze, or a neatly applied strap handle.

As practiced over the centuries, the craft of pottery was innately conservative, in that the knowledge and skills were transmitted through an informal oral tradition and on-the-job imitation with relatively slight change. Young men continued to follow their fathers’ methods—this was entirely a man’s world—because they were familiar, efficient, and right. Some young boys signed formal indentures of apprenticeship in which they pledged to faithfully serve until they reached a designated age. In turn, the master potter agreed to provide proper food, lodging, and apparel, and, most importantly, to teach “the art & mystery of a potter.” Outside urban areas or tight-knit groups like the Moravians, such contracts were rare. Most young men simply went to work for the family or a neighbor.

Training often began at a very early age. Boys helped dig the clays, operate the animal-powered pug mill to grind the clay, and wedged balls of clay for the wheel. They also ground the glazes, cut and dried wood for the kiln, and lugged the wares in and out of the shop through all phases of manufacture. All of these repetitive tasks provided superb training for the future potter, instructing him in the nature of clays and glazes and the operation of the kiln.

Having mastered the basics and grown into his early teenage years, the aspiring potter next turned to the wheel. There he received little formal instruction. Instead, he carefully watched others and then seized the opportunity to use the wheel when his mentor was elsewhere. He usually began by throwing (“turning” in the South) small “toys,” miniature forms perhaps 2 inches to 6 inches high. Fathers naturally encouraged this activity, occasionally constructing smaller wheels for their children to practice on. Gradually, the youths moved to full-size wares, and there, too, was a powerful underlying pattern to their progress. They began with simple, open forms like bowls, milk crocks, or flowerpots. Next came more complex and closed wares—jars, churns, or pitchers—that also required turned-out rims, flanges, and handles. Finally, the young man was ready to tackle a jug, a real challenge because of the difficulty of pulling up enough clay to close the shoulder and shape the narrow spout. As he learned the full repertoire of forms, he also moved on to larger sizes. A competent potter produced wares up to 5 gallons, but on occasion he might have to answer the call for jars holding 10 to 20 gallons.

Once he had mastered the essential skills, the young man might work for a number of years as a journeyman, throwing pots at other shops and helping fire (“burn” in the South) the kiln. This work extended his competence and exposed him to alternative techniques. Some never passed beyond this stage, but many others ultimately inherited, constructed, or purchased a shop of their own. Then, as “masters,” they set the cycle into motion once again by training their children or neighbors.

The folk potter’s business was very modest in scale. It included a log or frame shop containing the wheels, wedging benches (wooden surfaces on which the potter kneads the clay), a stove, and a storage area; a pug mill to grind the clay; a kiln; and one or two additional sheds for tasks like glazing. Each of these components was logically situated so that the clay moved efficiently and quickly from pug mill to wheel to glazing and drying area to kiln. There was little wasted motion.

Normally, the potter also farmed and worked at other crafts and occupations. Thus, pottery making was rarely a full-time business; it was a seasonal activity that dovetailed neatly with the natural cycle of planting and harvesting. The main period of demand was the fall, when people sought containers to put up their crops. Overall, output was quite small. According to the manufacturing census, the typical pottery shop in 19th-century North Carolina had a capital investment of about \$200, employed two workers (plus available children), operated nine months of the year, and turned out 6,000 gallons of pottery at 12.5 cents per gallons for a gross of \$750. In effect, pottery was a cash crop like corn or cotton or tobacco, one that provided the extra in-come to purchase what could not be grown or made at home.

If folk pottery is pervasively regional and conservative, it is also relentlessly utilitarian. As the statistics above reveal, it was valued for its usefulness (its capacity), not its appearance. The function of each pot was foremost—storing sauerkraut, making butter, watering chickens, even marking graves. Unquestionably, the preservation of food was critical. Jars, jugs, milk crocks (pans), and churns were essential and constituted more than half of the potter’s output. Without an ample supply of jars ranging from 0.5 to 5 gallons, a rural family found it a long, hard winter indeed.

Wares intended for food preparation are far less numerous and may be subdivided into two categories: general preparation (bowls, strainers, funnels) and cooking (dishes, bean pots). Potters continued making earthenware cooking vessels into the 20th century, because the porous, open, clay body better withstands thermal shock than does the tight, vitreous stoneware. Pots designed for food consumption—cups, mugs, plates, teapots, coffeepots, sugars and creamers—are less common than might be expected, largely because American households contained ample quantities of pewter, wood, and tin vessels, as well as imported ceramics. Perhaps the most common form of tableware was the pitcher, in part because it doubled as a storage vessel.

While the major forms were most closely connected to the local foodways, the potter also maintained a sideline of implements and horticultural wares. In the late 20th century, most of his ceramic tools have been superseded by more efficient forms or superior materials. There was a time, however, when his grease lamps and candlesticks, chamber pots and spittoons, birdhouses and chicken waterers, pipes and inkwells were widely used in the home, farm, and community. Flowerpots appear as early as the 17th century in Virginia and provided an often overlooked aesthetic dimension to everyday life. With the

growth of the tourist market in the late 19th century, potters began producing large quantities of vases, urns, and strawberry planters.

As potters mastered the technical aspects of their trade and learned what forms would sell, they also absorbed the hard realities of their world. Two criteria were foremost. First, each pot had to hold its stated capacity. Buyers paid by the gallon and wanted to be sure that when they spent a hard-earned 25 cents for a two-gallon jar, they were getting their full money's worth. Second, next to proper volume, a smooth, even, well-fired glaze was essential. If the glaze was too thin, uneven, or underfired, the pot was difficult to clean and likely to leak. Such work had no value in this pragmatic world.

Each new generation of folk potters, then, acquired the fundamental wisdom of their forebears: Their wares sold if they were useful. Fifty one-gallon jugs from the same kiln all fetched exactly the same price (provided none was defective). Granted, purchasers sometimes admired a well-turned form or a richly colored glaze, but they were rarely willing or able to pay a premium for such virtues. Thus, the potter knew that there was usually little point in adding superfluous decoration, in creating "art," when the jar or churn already did what it had to do. Aesthetic flourishes represented wasted motions, a squandering of time and labor, the potter's most valuable assets.

Still, there was beauty in this austere world. In varied, sometimes subtle ways, the potter found the means to go beyond necessity, to transcend the purely functional demands on his abilities. The most common form of decoration was simple incising. Before cutting a freshly thrown form off the wheel, the potter might use his fingernail, trimming chip, a cogwheel, even a fork or a comb to cut one or more bands or wavy lines in the neck, shoulder, or belly of the pot. The prime virtue of this technique was speed; one or more rotations of the wheel, and the job was done. Such rings helped accentuate the different sections of the pot, emphasizing its proportions. Much more rare is freehand pictorial incising of birds, fish, floral patterns, ships, homesteads, even humans. Sometimes cartoonish but often executed with remarkable skill, this technique required considerable time and is most common on the Northern stonewares before the mid-19th century.

Just as they drew, potters also painted. The low-fired earthenwares offered the greatest range of chromatic possibilities. Particularly in the German areas, the potters created multihued designs using the yellow-to-red earthenware clays, white clays, and a variety of metallic oxides that produced green (copper), brown to black (iron), and brown to purple (manganese). On stonewares made from Virginia to New England, potters brushed on all manner of flora and fauna with cobalt oxide. The deep blue stands out from the grey clay body and shines under the clear salt glaze. In the South, the dark and unpredictable alkaline glaze offered fewer decorative possibilities. However, during the mid-19th century, potters from the Edgefield District of South Carolina created a clear, lime-based glaze under which they painted swags, tassels, floral patterns and likenesses of roosters, snakes, pigs, and ladies in hoop skirts.

Clay is one of the most malleable substances, but only rarely did the potter turn sculptor and create three-dimensional ornamentation. In general, the earthenware potters did the bulk of the modeling, sometimes applying molded animals, flowers, and even human forms to their pitchers, coolers, bowls, and vases. They also molded whole pieces, such as tiles, picture frames, Bundt pans, toys, and bottles in the shape of fish, chickens, turtles, and other small animals. For the stoneware potters, the principal outlets for

sculpturing were flowerpots, gravemarkers, and face vessels, forms that were less restricted by function and allowed a greater sense of play. In general, elaborately decorated, one-of-a-kind pieces were made to commemorate specific events or for presentation to family and friends.

The great age of the folk potter was the 19th century, when his work was essential to communities across the country, but even by mid-century there were clear signs of change. Large stoneware factories appeared in Vermont, New York, New Jersey, Pennsylvania, and Ohio. With annual capacities measured in the hundreds of thousands of gallons, these businesses differed radically from that of the folk potter. The wares were increasingly cylindrical and standardized; they were mass produced along assembly-line methods. No longer did a single craftsman control the process and mark the product with his unique hand. Instead, different individuals specialized in clay preparation, throwing, decorating, glazing, firing, and sales. Finally, marketing was far more extensive and sophisticated, with elaborate advertising and long-range transportation via canal, rail, and river.

By the beginning of the 20th century, most of the folk potters had closed the doors of their shops for the last time. The temperance movement and Prohibition destroyed the demand for jugs; cheap metal and glass containers replaced the storage jar; commercial dairies and better refrigeration made churns and milk crocks obsolete; and in general, improved transportation and the growth of large markets ended the self-sufficient foodways earlier generations had known. In the South, however, the demand for the old utilitarian wares persisted through World War II. Particularly in North Carolina and Georgia, a number of the old clay clans found ways to respond to changing times. They did so by adapting new forms and glazes from other ceramic traditions; by turning smaller, more colorful wares that are made to be seen as well as used; by employing newer, more efficient technologies; and by marketing their wares to a new clientele: middle-class homeowners, tourists, and collectors.

In the 1990s, the largest concentration of folk potters occurs around Seagrove, North Carolina. Other groups may be found near Sanford, Vale, and Asheville, North Carolina, and Cleveland, Georgia; individual potters work throughout the Southeast (Sweezy 1984). These remaining folk potters are flourishing, because they have adopted new operating principles. Eclectic inspiration has gradually replaced the old regionalism; a willingness to innovate, the old conservatism; and a conscious artistry, the once pervasive utilitarianism. Still, many elements of earlier days remain. Most of the potters learned their skills at an early age working alongside family members or neighbors. They dig and process their own clays and retain many old forms and glazes. They remain primarily craftsmen—production potters who replicate large numbers of useful (if no longer necessary) forms at reasonable prices. Most important, the shops remain firmly under family control. In effect, they have developed a healthy new hybrid tradition, one that remains deeply rooted in the old folk tradition but is also infused with contemporary ceramic tastes and needs.

Pound, Louise (1872–1958)

Collector of folksongs and Nebraska folklore; ballad scholar. Pound, the daughter of Nebraska settlers, devoted her career to preserving her native state's folklore. After graduating from the University of Nebraska, Pound received a Ph.D. at the University of Heidelberg.

Returning to Lincoln as an English professor in 1900, Pound pioneered studies in philology and folklore. She introduced innovative studies of American speech, instead of continuing British-language scholarship, which linguists considered a more respectable scholarly field. Pound explored word origins, uses, and euphemisms. Deriving a methodology from her undergraduate biology courses, Pound stated that linguists should realize that language was constantly evolving. She was one of the first professors in the United States to teach American literature, and she also taught as a visiting professor during summer sessions at major institutions, including the Yale Linguistics Institute.

Unlike her colleagues, she promoted the collection and analysis of regional folklore, including Nebraska dialect, colloquialisms, and customs. Her *Folk-Song of Nebraska and the Central West: A Syllabus* (1915) was the first state collection of folksongs. In her most controversial work, *Poetic Origins and the Ballad* (1921), Pound refuted theories that ballads originated communally. She proved that ballads were individual compositions not communal improvisations, noting structure and historical derivation.

Working without sabbaticals and grants, Pound prolifically penned articles for diverse publications and earned international acclaim. She edited university publications at Nebraska and served on the advisory board of *Southern Folklore Quarterly*. Pound founded and edited *American Speech*. She was president of the American Folklore Society (1925–1927) and the American Dialect Society. In 1955 she was the first woman elected president of the Modern Language Association of America.

Considering teaching her most important work, Pound influenced such graduate students as Benjamin A. Botkin. She also was an accomplished athlete, being the first woman elected to the Nebraska Sports Hall of Fame. Her final work, *Nebraska Folklore* (1959), was published posthumously, and the July 1959 issue of *Western Folklore* was designated the Louise Pound Memorial Number.

Powwow

A contemporary intertribal Native American social dance based primarily on the dance styles of the Plains Indians. Earlier, the term was used by European Americans to denote any Native American ceremony, especially those believed to feature magic or sorcery. From the latter usage, the term was borrowed by the Pennsylvania Dutch as a euphemism for magical healing practices brought from Europe.

Like many other Algonquian words (for example, “squaw” and “papoose”), powwow has been used by non-Indians principally as a pejorative, humorous term. The original word, *pauwaw* or *po'wah* or *pow'waw*, was used in the Narragansett and Natick dialects to mean “one who uses divination” and probably referred to a native doctor. Since healing ceremonies featured dancing, singing, and the gathering of large groups, such an event became for early settlers a metaphor for any Indian ceremony, and it eventually was used to refer to any noisy gathering. In more recent times, probably since the early 1900s, Native Americans have taken back the word and have used it as a reference to the intertribal social dances that have become extremely popular across the United States and Canada among tribes who might have considered each other enemies in years past but who now have political, social, economic, and cultural interests in common.

Powwow music is provided by singers gathered around large drums in an indoor or outdoor arena. Each group of five to ten singers is called “a drum,” and each drum alternates with others in producing the variety of dance rhythms demanded by powwow tradition. Singing may be in English, in various Native American languages, and in chanted syllables without lexical meaning. Dances range from “round dances,” in which participants form large circles doing a side-step, to energetic “war dances,” to spectacular “grass dances,” “jingle dances,” “fancy dances,” and “shawl dances.”

Usually, the dancers form a large circle that moves sunwise (clockwise), whether the steps are done together by everyone (as in the round dance, the Owl Dance, or the Oklahoma Two-Step) or separately (as in the war dances). In a “war dance”—which has nothing to do with war—each person dances according to his or her own style, using steps and gestures picked up from watching other dancers over the years. Friends often dance near each other in small groups, but there is no attempt to match each other's movements. “Fancy dancers” dress in materials that exaggerate their movements: long feather bustles and shoulder pieces, feathered headdresses, and noisemakers that accentuate the rhythm (shell rattles, sleigh bells). “Traditional dancers” tend to dress more simply, and their motions more closely resemble the gestures and postures of hunters. While the male dancers use heavy foot movements, women usually portray

delicacy and grace by limiting arm movements and stooping and by using a very light foot movement that makes them seem to float.

Since the 1930s, many new powwow traditions have developed: rituals of the grand entry (which include the use of national and tribal flags as well as a staff of eagle feathers to commemorate all Native American people who have fallen in battle), rituals for recovering a feather dropped accidentally to the ground during the dancing (it can be retrieved only by a war veteran), customs about color, deportment, appropriate dress, “giveaways” (a public ceremony during which a family gives gifts to those assembled in the name of their relative who is being honored), as well as beliefs about the health of drums and the reintroduction into the powwow circle of dance “outfits” previously worn by deceased dancers. These and other customs growing out of intertribal associations over time have created a powwow society whose traditions have spread to tribes like the Hopi and the Navajo, who previously had no such customs. The contemporary powwow is a vivid example of folklore used selectively to foreground some older traditions by reincorporating them into modern contexts for cultural enjoyment and ethnic identity.

Prank

A play activity in which one party (the trickster) attempts to cause another party (the target) to believe in and act upon a fabrication, which is usually discredited soon afterward at a time chosen by the trickster. Practical jokes are based upon the creation or exploitation of a situation in which participants have differential access to information about what is going on. Thus, those involved in a practical joke are divided into two opposed groups: those who know what is going on, and those who have a false idea of what is going on. Both groups may consist of one or many people. Those in the know may include not only the trickster(s) who claim at least partial responsibility for constructing the situation that the target group is in, but sometimes also collusive spectators who watch the practical joke unfold but do not participate in its construction beyond agreeing to keep it hidden from the target.

The terms “practical joke” and “prank” are largely interchangeable. There is some evidence that the latter term is reserved for deceptions that are either relatively malicious and/ or less complex and less subtle, but this distinction is by no means hard and fast. “Hoax,” a closely related term, tends to denote relatively complex and large-scale fabrications, especially those that target larger groups of people in a more or less public context. “Hoax,” however, like the “confidence game,” includes deceits that go beyond the merely expressive and playful and cause material loss or harm to the victims. The term “jape” (a device to deceive or cheat) is largely obsolete, while “sell” (a planned deception) is confined to slang.

Practical jokes are associated with calendar events, notably April Fools’ Day, the Feast of the Holy Innocents (December 28)—in Catholic countries—and Halloween. Rites of passage are also popular excuses for pranks, especially birthdays and weddings. The hazing of initiation rites often includes practical jokes as well as more overt forms of physical horseplay and degradation of the initiate (Henningsen 1961).

At one end of the spectrum of practical jokes we may include simple acts of victimization such as goosing. College students are known for subjecting each other, their professors, and sometimes the general public to highly elaborate fabrications, including, for example, removing the contents of a dorm room into the quad. Many of these take place between traditional rivals, such as freshmen and seniors, the Harvard Lampoon versus the Harvard Crimson, or the rivalry between UCLA and USC. At MIT, “hacks” are practical jokes that combine publicity and ingenious uses of technology. Actors and radio and television announcers subject their fellows to pranks that test their composure while on stage or on the air, by, for example, modifying props or setting fire to an announcers copy. These pranks are out of the view of the audience but test the actor’s ability to remain in character.

The folklorist can rarely investigate practical jokes as they unfold without extensive immersion in the field community. Folklore archives and publications often contain prank recipes—generic instructions for particular practical jokes. Most often, data about this genre are found in personal narratives, folktales (lies), and occasionally legends. “The

Shaggy Dog Story” is not a narrative account of a practical joke, but is itself a practical joke in that it leads its audience to expect a punchline ending.

Many practical jokes are traditional, as indicated by the assignment of the motif numbers between J2300 and J2349 (“gullible fools”). Motif J2346 (Type 1296) refers to the fool’s errand: an apprentice, newcomer, or ignorant person is sent for an absurd, misleading, or nonexistent object, or on a ridiculous quest. Victims are sent for sky hooks, striped paint, left-handed tools, a device to stretch objects that are too small or a compressor for objects that are too large. Occupational fool’s errands exploit the newcomer’s ignorance of the jargon and tools of the trade: Novices in aviation search for a bucket of prop wash, while apprentice printers look for type lice and have their faces splashed with water. In a snipe hunt (Motif J2349.6*), the target is taken into the woods at night and is left holding a bag in which to catch the snipe, while the tricksters leave, allegedly to beat the prey toward him; instead they return home, leaving the dupe alone to work out what really happened. While the snipe hunt is known in virtually every part of the United States, the description of the prey varies: It may be described as a type of bird, a snake, or a small furry animal. In one version, the snipe is a type of deer with a distinctive call; the dupe is left kneeling and imitating the snipe call while holding the bag to catch it. Another traditional prank (J2349.8*) plays upon the target’s lust; he is taken to visit an allegedly sex-starved local woman (“the widow,” “the brakeman’s wife,” and the like), who is in on the joke; then accomplices playing the role of jealous husband or father chase him off with rifle shots.

Motif J2349.10*, convincing a newcomer of the existence of a wonderful animal, is closely related to the lie and the tall tale. The exotic flora and fauna of the New World that greeted European colonists, frontiersmen, and travelers gave rise to tall tales; to the uninitiated, the distinction between an amazing but true narrative, an exaggerated description, and a completely fictitious one would be difficult to discern. This characteristic of the New World leads to the common assertion that hoaxing is a typically American form of humor. Hoaxes have been attributed to well-known American historical and literary figures. John James Audubon, for instance, fooled a visiting naturalist with his description of the fictitious Devil Jack Diamond fish, whose scales were shaped like cut diamonds and were hard enough to resist rifle bullets; when dried, they could strike fire from steel. An English travel writer repeated the story, conferring on the fabulous fish the scientific name *litholepis adamantinus*. Fabrications of this sort were especially common in the colonial and frontier periods.

Outstanding practical jokers, who achieve fame beyond the confines of their particular folk group, may have apocryphal hoaxes attributed to them. The noted illustrator Hugh Troy (1906–1964) is one such; hoaxes attributed to him include starting a stream of bogus flypaper reports while in the Army, and posing as a workman with a group of conspirators to actually dig up a section of the pavement on Fifth Avenue.

In terms of their operation, practical jokes may be divided into three broad groups. The first method is to fabricate an event that is extraordinary enough to provoke the target to react. By reacting to, or acting upon, a fabrication, the targets reveal that they have been fooled. For example, the target is told that she has just won the lottery but that she must answer some revealing personal questions in order to claim the prize. The booby-trap method, on the other hand, requires that the target have no inkling that anything out of the ordinary is afoot; thus he walks into the trap and is left with some

messy predicament to cope with. Exploding cigars, grease in a toolbox, and assembling a car on a roof are all examples of this technique. The final category is represented by the fake pizza delivery; the trickster fools one party, often a business, to interact with a second party. This person, the trickster's real target, is put in the predicament of dealing with the deceived person.

Folklorists are interested in the social context of practical jokes—the relationships between tricksters and targets, and the ways in which practical-joking patterns reflect and contribute to the maintenance of social identities. But the question of whether practical jokes are benign or aggressive cannot be answered in general terms; this evaluation is made by those directly involved in each trick event, especially the victim. In deciding whether to treat the event as a joke and whether to judge the trickster's motives as friendly or hostile, the previous relationship between them is the most important deciding factor. Thus, practical jokes cannot be fully understood outside of their social contexts.

We can construct a consistent typology of practical jokes based upon the relationships between tricksters and targets. Based on this criterion, practical jokes fall into three categories: esoteric, exoteric, and initiatory. Esoteric jokes involve tricksters and targets who belong to the same personal group. While it is not necessary for the two parties to have identical status, the social gap between them is not great. Esoteric joking is often reciprocal (the victim today is likely to be the trickster tomorrow) and relatively benign—in the sense that the trickster will try to keep the joke within the boundaries of play and ensure that the victim will be able to laugh along when the joke is revealed. Jokers avoid topics that they believe the intended recipient will not find amusing; they typically own up to their fabrications; and they assist the victim in dealing with whatever consequences the joke has left behind. By the same token, victims of esoteric jokes will make efforts to laugh along, suppressing any negative feelings they may have about the prank. April Fools' Day jokes are in this category. Exoteric jokes, in contrast, are played on outsiders. They are not typically reciprocal, and jokers in these situations may take pains to conceal their identities from the victims even after the deception has concluded. Rather than making sure it is play, jokers are interested only with "getting away with" the joke—that is, not being caught. The targets' response to the news of their deception is relatively unimportant; sometimes an angry response is what is desired. These jokes, of which Halloween pranks and telephone pranks are good examples, take place across status and identity lines and are expressive of those lines.

Initiatory jokes are played on outsiders with the possible outcome of transforming them into insiders, where they are included in the ongoing cycle of reciprocal esoteric jokes. Alternatively, some newcomers are denied full membership in the in-group, and such people may become permanent targets of nonreciprocal, aggressive joking, which expresses and maintains their outsider status. Initiation pranks, like other forms of hazing, function as a kind of test; the initiate's response to this victimization may determine whether he or she is admitted to full insider status.

Practical jokes, both esoteric and exoteric, are often customized to fit the idiosyncracies of their targets. The joke enactment serves as an unfavorable comment on an alleged personality flaw of the victim. When someone annoys his fellow workers by boasting too much about a new car's gas mileage, they may exploit this point by surreptitiously adding gas to the tank, thus fooling the owner into boasting about absurd miles per gallon; they then reverse the procedure. Folk opinion holds that the target

would not have been fooled were it not for a defect of character (in this case, excessive pride in the new car); in other words, he contributed to his own victimization.

Prayer

The process of individuals petitioning, praising, or thanking someone in hopes of achieving a desired end. Individuals and groups often address prayers to a deity (God, Goddess, Great Spirit), but also can intend the words spoken to be noted predominantly by human listeners. Across space, time, and ideologies, these petitions have typically concerned egocentric ends, such as that the weather may suit our local needs, that we may conquer our enemies, and that we may have health and prosperity.

Common formula prayers include the “Serenity Prayer,” the “Lord’s Prayer” from the New Testament, the prayer-like Psalm 23 from the Old Testament, and the popular bedtime prayer “Now I lay me down to sleep.” Several parodies of these common texts exist, indicating a solid knowledge of the originals. For example:

God grant me the senility to forget the things I cannot
change....

and

The Ford is my auto, I shall not want another.
It maketh me to lie down in mud puddles....

A popular country-western song from 1993, “My Broken Heart,” toys with the basics of the bedtime prayer demonstrating its continued popularity:

Last night I prayed the Lord my soul to keep,
Then I cried myself to sleep....

Offering a prayer before eating is a common practice in some households. It is a way of expressing thanks for the food and for those who provided and prepared it. During this time of “saying grace,” “asking a blessing,” “returning thanks,” or “giving a blessing on the food,” family members can also pray for wants and needs. One California family, meaning to thank and praise God, holds hands while seated around the table and sings in round-fashion:

For health and strength and daily bread we praise thy name, oh Lord.

Some “blessings” contain comments directed more toward those sitting around the table than to any deity, such as the parody “Good bread, good meat/Good God, let’s eat.”

Some tales contain verse prayers that are integral to the story. The verse contained in these cantefables depicts the resolution of a conflict in which a subordinate, for the moment, achieves the upper hand. Individuals praying these prayers definitely hope that their words will have the greatest impact on those seated around the table. This tale collected in Pennsylvania—one variant of a widely known story—serves as a good example:

There was a little boy one time that had t' dig the potatoes, and he didn't like t' do it. So when the preacher come t' visit, they always had potatoes, an' it made him mad that he had'a dig potatoes fer the preacher t' eat. So they all set up t' the table, and his daddy asked him to say the blessing, so he said:

“Dear Lord above, send down a dove,
With teeth as sharp as razors,
To cut the throats of these damn goats
That eats my daddy's taters.”

Public prayer at gatherings aside from church is on the decline in the United States. Congress still invites Christian ministers to offer prayer, but public prayer at sporting events, concerts, or conventions is the exception; not the rule. However, the tendency to publicly invite a blessing from God still exists. One common pronouncement on any individual sneezing in public is still often “(God) bless you.”

Pregnancy and Birth

Culturally patterned medical and socio-religious beliefs practiced to regulate the birth cycle and ensure successful delivery. Early folklorists took a simple approach to pregnancy and birth. They collected beliefs about prenatal marking and dietary intake and gathered traditional practices associated with pregnancy, delivery, and early infancy. Marie Campbell's *Folks Do Get Born* (Campbell 1946) and material in Volume 6 of the *Frank C. Brown Collection of North Caroline Folklore* (Hand 1961) are representative of this approach. Such collections cataloged and preserved knowledge concerning beliefs and represent the bulk of folkloristic materials concerning pregnancy and birth. These works, however, often treated individual examples as isolated and unrelated and reflected earlier definitions of folk medicine, which was seen as resting "...between official, scientific medicine (the top layer) and primitive medicine (the bottom layer)" (Hufford 1988:229). This definition was cultural evolutionary in nature and represented an understanding of folk medicine as "...having developed from its crudest, most primitive form into its modern, Western, highly sophisticated state" (Hufford 1988:228). This approach obscured or ignored entirely the dynamic interrelationship between birthlore, societal attitudes, changes in medical knowledge and practice, and the role of women within the community.

Many writers in the fields of anthropology, folklore, sociology, women's studies, history, and professional medicine have attempted more comprehensive studies of pregnancy and birth. Some (see Hoffert 1989; Leavitt 1986; and Scholten 1985; Wertz and Wertz 1989) employed a tripartite categorization, presenting a chronological progression of the history from a time when birth was a social project through a period of transition when medical authority assumed influence, and culminating in an era when the medical profession consolidated its hold on the process of pregnancy and birth. This approach attempted to move beyond mere categorization and listing by addressing changes in practice in relation to changes in cultural attitude and belief as well as advances in medical science. This categorization, however, created an image of birth traditions as characteristic of only limited periods of history that faded out of practice in response to the pressure and development of modern obstetrics.

The folklore of pregnancy and birth does not reflect the earlier ideas of "primitive" medicine versus "official" medicine, nor does it characterize a period of American history before the advent of professional obstetrics. Instead, traditional practices of pregnancy and birth are still practiced alongside, and in conjunction with, standard obstetrical technique and care, although they are frequently practiced without the knowledge or consent of obstetricians. Likewise, the contemporary alternative-birth movement utilizes and employs many so-called traditional or folk medical approaches to pregnancy and birth in a highly structured atmosphere. The presence of midwives, family and community involvement, herbal remedies, "natural" birth, and the revival of birth chairs are characteristic of this. However, like other forms of alternative health practices and folk medicine, the alternative-birth movement and the use of traditional pregnancy

and delivery practices exist in tension with official attitudes and is often condemned as dangerous, primitive, and marginal.

There are three interrelated subjects of traditional beliefs and practices: conception, pregnancy, and delivery. Such practices and beliefs sought to ensure conception, guard against miscarriage or bring about abortion, protect the mother and child during gestation, determine the sex of the child, regulate diet and activity, and bring about a safe birth. The most detailed and rigorously employed practices were those that dealt with the actual approach to delivery and techniques to effect it.

Specific examples of traditional American beliefs associated with conception include these: that rubbing one's stomach against a pregnant woman's or ingesting large quantities of eggs would bring about conception; that vinegar-and-water douches would result in the birth of a boy, and eating salty food prior to conception would bring about the birth of a daughter; and that paint fumes, strenuous horseback riding, or drinking turpentine would produce an abortion, while swallowing fruit seeds would prevent miscarriage.

Many pregnancy practices are related to food taboos. These practices resulted from the "doctrine of maternal impression," the notion that certain foods would contaminate the milk supply, cause a difficult birth, bring about an abortion, grow a strong or a weak child, or "mark" a child with either a birthmark, a physical deformity, or an emotional disposition. Perhaps the best example of dietary practice during pregnancy is the widespread cultural symptom of pregnancy: cravings. The practice of "pica"—the desire for, and ingestion of, nonfood items—is a significant element of pregnancy folklore. Pica includes the eating of dirt or clay (a practice called geophagy), and/or the ingestion of laundry starch, matches, ice, or hair. Pica has a long association with pregnancy in the United States, with numerous examples and accounts in folklore materials and medical journals, as well as mention in popular American novels such as Toni Morrison's *Song of Solomon* and John Steinbeck's *The Grapes of Wrath*. The traditions associated with food intake during pregnancy, like other forms of pregnancy folklore, are widespread and are not culturally and ethnically specific. Mexican Americans, African Americans, those of European descent, Asian Americans, and others all have beliefs concerning various forms of food taboo and regulation as well as forms of pica during pregnancy.

Practices associated with delivery are concerned with ensuring a successful delivery for both mother and child and were the product of participation in neighboring women's births and the dissemination of knowledge from mother to daughter, from midwife to assistant, and from woman to woman. The practices are predicated on an understanding of birth as a natural consequence of nature, and they respond to and react to the event of birth. Delivery practices, therefore, serve to assist the mother as she delivers, intervening only in the event of difficulty or danger. Such practices include the choice of midwives and female members of the community as birth attendants, methods to alleviate the pain and apprehension associated with delivery, and, significantly, the use of birth chairs or an attendant's lap to assist in the preferred upright posture of delivery. Once delivery is completed other beliefs govern divining the future of the child based on the incidents and time of its birth. For example, in the United States it was traditionally believed that a child born with a caul would have some ability to foresee the future, a child born during a storm would have a stormy personality, or a child born with clenched fists would be greedy and selfish.

The folklore of pregnancy and birth in the United States incorporates many different ethnic and cultural approaches. The practices are cultural constructions—responding to the attitudes and beliefs within the context of society. As society changed its attitudes and beliefs, the practices and beliefs associated with pregnancy and birth likewise altered. All reflected a philosophy of birth as natural and were similar in their quality of responding to the event as opposed to manipulating or directing the process.

Printers, Journeymen

Highly regarded group of skilled tradesmen and tradeswomen identified by their typesetting and printing skills, observance of historical customs, long apprenticeships, initiation rites, and use of peculiar trade jargon. The heyday of the journeymen printer ended in the 1960s when the craft all but ceased to center around metal type. By the 1970s, computer-generated type had become the norm. The technological transition from the physical production of metal-cast type to the electronic world of computer-mediated type displaced countless journeymen printers from their trade.

Hot-metal printers (compositors, stonehands, linotype operators) were craftspeople, engaged in the physical composition of the printed word. Their occupation dated back to the mid-15th century when Johannes Gutenberg perfected the use of movable type. As wordsmiths, the printers' command of language made them unique among labor craftspeople. Membership in an intellectual craft was a point of pride. Many renowned writers began their careers as printers' apprentices—Walt Whitman, Mark Twain, Erskine Caldwell, Joel Chandler Harris, Sherwood Anderson, and Benjamin Franklin, among others. The latter is the personage most often cited by printers, proud of the literary lineage associated with their trade.

Printers customarily entered the trade by completing a six-year apprenticeship. Formally serving an apprenticeship qualified one to work at the printing trade as a journeyman. The apprenticeship served as a practical education. Horace Greeley was known to have said that "a Printer's case is a better education than a high school or college." An apprentice was expected to learn by doing. In addition to gaining technical knowledge under the wing of an experienced journeyman, the apprentice was indoctrinated into the social traditions and customs of the trade.

As is commonplace in occupational life, journeyman printers observed the custom of playing initiation pranks on gullible apprentices, also known as printer's devils. One such prank involved a search for "type lice." A seasoned journeyman instructed an unsuspecting apprentice to look for these nonexistent critters. The apprentice leaned over a galley of loosely composed type, into which water had been poured. Not seeing anything unusual, the apprentice attempted to get a closer look. Once his scrutinizing eye was inches away from the galley, the journeyman printer slapped the lines of type together, splashing water all over the apprentice's face. The prank has been adapted to the cold type world of late-20th-century printing. In place of type lice, apprentices have been asked to look for halftone dots.

Itinerant printers were known as tramp printers. A traveling card, issued by the International Typographical Union, was their only credential. Tramp printers found temporary work setting type throughout the United States and Canada until the 1960s, when a decline in union membership put an end to tramp printing. Tramp printers epitomized the journeyman printers' jointly held values of respectability, reciprocity, and independence.

Though the freedom of the traveling printer's life is ro-manticized in oral and written tradition, the working conditions of both the itinerant and the stationary printer were harsh—excessive heat, noise, and the presence of burning lead took their toll on printers. Stories abound about missing limbs, varicose veins, and tuberculosis.

Many phrases that have entered the mainstream of everyday speech have their source in printer's hot-metal terminology. For example, the phrase "out of sorts" derives from the printer's term for individual pieces of metal type, including those bought individually to supplement a font. A font is a family of type in one single size and style. The quantity of each letter varies with frequency of use. A font will come equipped with more A's than X's. Even so, a particular job might require more A's, in which case the printer could supplement his font by purchasing "sorts." If he came up short, he was literally out of sorts, not to mention at his wits' end.

Other hot-metal terms, such as leading (the metal slugs that form the space between lines of metal type) have survived the transition into the computer type age, even though leads no longer exist in the physical sense. Galleys no longer mean the brass or wooden trays that held lines of composed type; they are the paper proofs of those lines, printed. In printer's terms, "30" means the end. A 30-point slug was used at the bottom of a galley to indicate the end of an article. The only time one would see "30" in print was when a newspaper folded and it ran its last issue. For printers who worked in hot metal, the symbol "30" is coterminous with "the end." But for the increasing majority of typesetters working in a coldtype environment, "30" is just a number.

At one time, a newspaper editor had to rely on journeymen printers to read inked lines of cast type, as they lay upside down and backward in the galley. Now, editors key in their own copy, completely bypassing the composing room, where linotype operators once composed the copy.

In just two decades, the craft of setting type was transformed from an age-old handicraft to semiskilled labor. Just as printers attained mastery of their craft, computer technology made hands-on application of their skills superfluous.

Prison Folklore

Traditions of groups of people incarcerated for crimes. The folklore of prisons, like that of most residential communities determined by both setting and occupation (such as hospitals for the chronically ill, military bases, and cloistered religious institutions), is complex and multifaceted. We should probably speak of prison *folklores* rather than prison folklore.

All prisoners and staff bring to the prison community folklore from their noncriminal and noninstitutional lives: stories, toasts, foodways, medicine, speech, religious practices, and so forth. Some of this finds immediate and direct use and applicability within the prison situation; some may be adapted to fit; and some is of little or no use and appears only occasionally, if at all. Prisoners may, for example, maintain ethnic food preferences while in prison, but most will have far less opportunity to indulge those preferences than they did in the free world. On the other hand, nothing impedes maintenance and articulation of folk superstition and belief: Prison walls and fences do not influence the efficacy of charms or the accuracy of omens.

Some free-world genres exist longer or more vigorously in prison than in the free world. Because of brutality and maintenance of a 19th-century plantation system, Black convict worksongs survived in Southern prison farms well into the 1960s, long after they had disappeared outside. Because of the great amount of enforced free time in prisons and jails, Black toasts likewise survived behind the walls when they were all but extinct beyond them.

All prisoners have had experiences with police, courts, and jails (jails are city and county facilities where people serve short sentences, usually for misdemeanors, and await felony trials; prisons are where people serve state and federal felony sentences). Many prisoners have had extensive experience in criminal activity, other prisons, and in the parole system. Technical discussions of, and personal narratives about, these experiences are common in prisoner discourse.

Folklore indigenous to the prison itself—folkways and narratives told and learned within the institution—may exist in both staff and prisoner cultures, but most is specific to one or the other, and little of either travels to the free world. Both guards and prisoners, for example, may tell stories about notable prison characters or events, but neither prisoners nor guards are likely to tell the other stories in which the others' foolishness or cupidity is the point of the humor. Likewise, guards don't initiate prisoners in traditional methods of crowd control, and prisoners don't initiate guards in traditional methods of manufacturing and hiding bootleg alcohol.

Prisoners' language is rich in slang from the streets, from the world of crime, and from the prison community. All but the first-timers know most of the argot terms, but not all prisoners use them, and not all prisoners who use them use them all of the time. A Midwestern inmate who committed more than 150 armed robberies said, "I don't use slang. You want people to think I'm a crook?" Some argot terms carry multiple meanings; which meaning applies at any moment can only be inferred from the context.

The word “joint,” for example, can mean marijuana cigarette, penis, paraphernalia for injecting heroin, or the prison itself. To officials, “jacket” means a prisoner’s official records; to prisoners, it usually means a person’s reputation. If the warden says, “Smith has a fat jack-et,” he is saying that Smith’s file is thick, hence he has been arrested many times, in prison many times, or has been in the warden’s prison for a very long time. If a prisoner says, “Smith’s got a snitch jacket on him,” he is saying that Smith is known as an informer. “Jacket” is also an article of clothing worn on cool days, just like outside.

Slang is often particular to a prison system or an area, and to a specific point in time. Texas prisoners forced to do agricultural work had terms like “sideline” (working up one side of a row of crops), “flatweed” (working with a hoe), “catch up tight” (work closely together), and “don’t leave a comeback” (get everything out of a row in one pass so that it is not necessary to come through a second time). Prisoners are aware of their argot and of its restricted venue, as is indicated by this joke from Texas: A man got out of prison and went to the barbershop for his first free-world haircut. Well, when he sat down in the barber’s chair, the barber, after looking this fellow’s head over, asked him if he had been in prison. This fellow said “No, I haven’t. Why do you ask that?” The barber said, “No reason in particular. Just wondered.” The barber then asked this fellow how he wanted his hair cut. The fellow said, “Sideline the sides, flatweed the top, catch up tight, and don’t leave a comeback.”

Much folklore specific to prison has to do with ways of doing things or material for doing or making things provided for by other means in the community outside prison, which is to say, much prison folklore is adaptive and transient, done or used only when the free-world alternatives are not available. At one time, for example, Indiana inmates were permitted to purchase jars of instant coffee from the commissary but not allowed to own devices with which to heat the water. Tap water was tepid at best, so they fashioned a device they called a hotstick out of a foot or two of lamp wire with a male plug at one end and a short stripped loop of wire at the other. It would boil a cup-water in a few seconds, but there was a problem: The hotstick produced so much heat it would boil the water completely away in a few minutes, so if one were left untended it would blow the cellblock’s fuses or start a fire. When commercial water heaters were made available in the prison commissary, the hotsticks disappeared. Other adaptations are more complex. Staff can get alcoholic beverages in liquor stores; the only aspect of alcohol manufacture in staff folklore has to do with stories about inmates making it, getting caught having it, or behaving egregiously while intoxicated with it. Prisoners cannot get alcohol in liquor stores; their folklore consists not only of stories, but techniques: obtaining the makings (yeast, fruit), finding places for safe fermentation (it’s not just a matter of finding unused tubs, toilet bowls, or rubber boots for fermenting, but having those operations take place where guards won’t detect the pungent odor), and finding places to hide the product and drink it in safety.

Many prisoners have long experience with possessing and sometimes using weapons; being in prison changes the kinds of weapons used, but not the perceived need for them. Commercial knives are rarely found in prison, but substitutes can be made from many easily found objects. A 6-inch piece of stiff wire can pierce an eye or a throat. Knives are fashioned differently depending on the intended use. An all-purpose knife can be made from a hammered and filed spoon. Knives for slashing can be made in metal shops by shearing sheet steel at a diagonal; in prisons where license plates are made, this is

particularly easy. A double-edged razor blade with one edge melted into a toothbrush handle is good for slashing a face or cutting a throat. Knives for inflicting puncture wounds can be made from pitchfork tines or rattail files. Knives are shaped and sized differently if they are to be hidden in jacket linings, taped to a leg, carried in a pocket or up a sleeve.

There may be different ethnic and regional patterns in use of knives. A Texas warden said: "In my experience, Black convicts want knives that slash; the Latin convicts knives that puncture; and Whites go either way, depending where they grew up. The Blacks want to hurt or scare somebody so they use slashers; the Latins, they aren't interested in scaring. When they use a knife they want to kill you so they go after these long thin things that get between the ribs." A man who had done a good deal of felony time in New York prisons read that statement and said: "When that warden says 'Latins' he means Mexican Americans. Up here in the East, the Latins are Puerto Ricans and they're not stabbers, they're slashers. Blacks are the stabbers. And Whites—well, up here, Whites aren't into knives."

Prison folklore is rich in stories about local characters, escapes, stupid guards and clever convicts, and how it was in the old days. These tales are rarely migratory. Inmates in Texas told of "Bullin Jack O'Diamonds," the meanest guard on Central Farm, a man so mean he had to be chained down to die. "If he catch you," one inmate said, "a dark cloud would go over." One story has him telling Satan, "Stand aside, I'm gonna rule old Hell myself" Massachusetts inmates told of a stupid deputy warden nicknamed "Alligator" who "looked like a retired hit man." He decided inmates were abusing the pharmacy so he stopped all medication, no matter what the illness. One inmate had been receiving Doriden, a narcotic. He said he had to have his medication. The deputy refused. "But I've been getting heart palpitations," the inmate said. "Keep on taking those," Alligator said, "they're better for you than Doridens, believe me."

As in the free world, a good deal of prison folklore has to do with sexual roles and activities. Staff can leave the prison after their shift and engage in ordinary sexual activities. Prisoners are limited in partners, in opportunity, and they often suffer institutional punishments (isolation, loss of privileges, loss of good time) when officials catch them doing it. Prison sex parodies sex in the free world. In men's prisons, there are three primary roles, often designated by the argot terms "punks," "queens," and "studs." Studs are men who occupy the inserter role; punks and queens are insertees, but punks occupy that role only in prison while queens occupy that role wherever they are. Queens generally have much higher social status in the prison community than punks because punks are seen as accepting their sexual roles out of weakness while queens are "man enough to admit what they are." Sex in women's prison seems primarily grounded in continuing relationships; sex in men's prisons seems primarily focused on genital acts.

There are many jokes and anecdotes in prisons about prison sex roles, few of which travel outside. There is no point telling jokes about punks and queens and studs to people with no prison experience because those people don't know the difference between a punk and a queen, and by the time it is explained to them the momentum of the joke is gone. These are two typical sex-role jokes:

Jesse James was robbin' a passenger train. Jesse James taken up all the money. He say, "I'm gonna rob this train. I'm gonna fuck all the men."

This lady got up, said, "Mister Jesse James: you mean all the women." And there's this punk on there, and he got up and said, "Hey, lady, who robbin' this train, you or Mister Jesse James?" There was another captain, over on the Central [prison farm], every time you asked for a lay-in [time off because of sickness], you know, say "My head hurts," he said, "I do, too. Mine, too; me, too," you know. "I got a...my arm hurts, my leg hurts, my stomach hurts, I got a stomach ache," and he'll say, "Me, too." So one day a guy says, "I'm gonna get me a lay-in." So he said, "Captain, I want to lay-in." "What's wrong with you?" He said, "I got the claps in the ass." He start to say—he said, "Lay in!"

Some Black prisoners in all of the Southern agricultural prison systems sang worksongs during the years the prisons were segregated and the work routines brutal. Worksongs were used to cut and chop trees, work fields, and pick cotton. Some songs were like blues—individual and private. Others were communal. White and Latin inmates did not sing these songs, nor did they have any body of metrically functional songs of their own used in similar fashion. By mid-20th century, the only place in North America the songs could be found were Southern plantation-type prison farms. The songs and the style of utilizing them were the property of Black inmates exclusively, and they were in a clear tradition going back beyond the importation of the first slaves to the Virginia Colony in 1631. Some of those songs could be found in prisons across the Deep South; others were found only in one prison or one prison system. The Texas convict songs "Midnight Special," about a train near Darrington prison farm, and "Grizzly Bear," reportedly about a warden, didn't travel to prisons in Louisiana or Mississippi. Indeed, none of the agricultural folklore common in Southern prisons traveled to prisons in the industrial North and Far West, where that kind of work and those work conditions did not exist.

As in any large institution, members of the prison community form subcommunities that provide their primary social identification. In states with extensive free-world gang culture, such as Texas and California, gangs often become the basis for subcommunities within the prison community. Gang folkways—including rivalries—are maintained within the institution. Sometimes the subcommunities are based on origin. New York prisons, for example, have "courts," areas in the yard maintained by people from a certain neighborhood or part of the state. Men will hang around the court, cook food, tell stories, share resources, and protect one another from men in other courts. One man who had lived much of his life in Manhattan and then in Buffalo was a member of two courts until a group from one of the courts said to him, "You got to choose. You're either upstate or downstate. You can't be both."

Proffitt, Frank Noah (1913–1965)

Folk musician, instrument maker, folksong collector from northwestern North Carolina. Proffitt was perhaps best known as the source of the Kingston Trio's 1958 recording of the native American ballad "Tom Dooley," named by one scholar as "the best-known folksong in America."

When the New York-based folksong enthusiasts Anne and Frank Warner conducted fieldwork in Watauga County, North Carolina, in 1939, they collected several tunes from Proffitt, one of which was a ballad about the hanging in 1868 of a man named Tom Dula (pronounced "Dooley" in the Appalachian dialect) in nearby Wilkes County. Proffitt had learned the song from his father, Wiley, whose mother, Adeline Perdue, knew both Dula and his victim, Laura Foster. Proffitt's son, Frank, Jr., has written that his great-grandfather learned the song directly from Dula as he lingered about his jail cell shortly before the hanging. Frank Warner, himself a performer, dropped some verses, rearranged others, reshaped the melody, and sang the song for several years, recording it in 1950 for Elektra records. In 1947 the folklorist Alan Lomax published Warner's version of the ballad in *Folk Song U.S.A.*, crediting Warner, but not Proffitt. It was this text that was recorded in 1958 by the Kingston Trio. The song reached the top of the popular music "Hit Parade" and went on to sell over three million copies, playing a major role in the rediscovery and popularization of authentic American folk music during the late 1950s and early 1960s. In 1962, well after the period of its greatest popularity, arrangements were made for Proffitt to enjoy a share of the song's royalties.

Proffitt was born in Laurel Bloomery, Tennessee, his family moving shortly after his birth to the Beaver Dam section of Watauga County, a few miles away. He grew up immersed in folk traditions, learning folksongs from his father and aunt, Nancy Prather. The Warners sparked his interest in folk music further, and he became a dedicated student of Appalachian musical traditions, collecting what he called "the old songs from his people" from his neighbors and family. His family on his wife's side was indeed a rich source of folklore; she was

Bessie Hicks, the sister of the world-famous storyteller Ray Hicks. Proffitt's repertoire of folksongs was prodigious; he performed Child ballads (some quite rare), broadsides, and native American ballads; original pieces; religious tunes; and numerous lyrical songs in his soft, relaxed baritone voice, accompanying himself with guitar, dulcimer, or banjo played in a gentle thumb-lead, two-finger up-picking style. Having also learned instrument making from his father, Proffitt supplemented his often meager income from tobacco farming and part-time carpentry work with the sale of his homemade dulcimers and five-string, fretless wooden banjos.

During the last few years of his life, Proffitt became an ambassador of Appalachian folk music, performing at numerous colleges and universities, including the University of Chicago and the Newport and National Folk festivals, always minimizing his own abilities, preferring to direct attention to the traditions that he championed.

Proverbs

Concise traditional statements of apparent truths with currency among the folk. More elaborately stated, proverbs are short, generally known sentences of the folk that contain wisdom, truths, morals, and traditional views in a metaphorical, fixed, and memorizable form and that are handed down orally from generation to generation. Many scholars have attempted to formulate *the* proverb definition, ranging from abstract formulations based on symbolic logic to Archer Taylor's almost proverbial statement that "an incommunicable quality tells us this sentence is proverbial and that one is not" (Taylor [1913] 1985:3). Two major ingredients of what constitutes proverbiality should be part of any definition, but they cannot be ascertained from the proverb texts themselves: The aspects of traditionality and currency will always have to be established before a particular text can, in fact, be called a proverb. This situation is particularly acute when the question arises whether such new formulaic statements like "garbage in, garbage out" or "it takes two to tango" have reached a proverbial status in the United States. However, some definite "markers" are helpful in identifying short sentences of wisdom or common sense as folk proverbs. These markers are also instrumental in assuring the memorability and recognizability of the texts as traditional wisdom. In addition to their fixed (and often oppositional) structure, their relative shortness, and their use of metaphors, proverbs usually exhibit at least some, if not all, of the following poetic or stylistic features: alliteration: "Money makes the mare go"; rhyme: "Man proposes, God disposes"; parallelism: "Easy come, easy go"; ellipsis: "Out of sight, out of mind"; personification: "Misery loves company"; hyperbole: "It is easier for a camel to go through a needle's eye, than for a rich man to enter the kingdom of God" (Matthew 19:24); and paradox: "The nearer the church, the farther from God."

While proverbs per se are complete thoughts that can stand by themselves, there are such subgenres as proverbial expressions, proverbial comparisons, proverbial exaggerations, and twin (binary) formulas, which are but fragmentary metaphorical phrases that must be integrated into a sentence. Proverbial expressions are usually verbal phrases as, for example, "To pay through the nose" or "To put someone through the wringer." Proverbial comparisons can be divided into two major groups. The first follows the structure of "as X as Y"—for example, "as black as a crow" and "as white as a sheet." The second group is based on a verbal comparison with "like"—for example, "to grin like a Cheshire cat" and "to leak like a sieve." Proverbial exaggerations describe the extraordinary degree to which someone or something possesses a certain characteristic. Many of them are based on the structural pattern "so...(that)," clearly illustrated in such texts as "She is so thin you have to shake the sheets to find her" and "He is so narrow-minded that he can see dirough a keyhole with both eyes." Twin formulas, finally, are traditional word pairs that are molded together by alliteration and/or rhyme—for example, "slowly but surely" or "to go through thick and thin." None of these proverbial phrases ("phraseological units," as linguists call them) contains any complete thought or wisdom. They are proverbial in that they are traditional, metaphorical, and even more

frequently used than true proverbs. While they add color and expressiveness to oral and written communication, they cannot stand alone due to their fragmentary structure. Nevertheless, much of what is described about proverbs below, such as their origin and content, is also applicable to these subgenres.

Proverbs in actual use are verbal strategies for dealing with social situations. To understand the meaning of proverbs in actual speech acts, they must be viewed as part of the entire communicative performance. This is true for proverbs used in oral speech, but also in their frequent employment in literary works, the mass media, advertising, popular songs, cartoons, and the like. Only the analysis of the use and function of proverbs within particular contexts will determine their specific meanings. In fact, proverbs in collections are almost meaningless or dead, but they become significant and alive once they are employed as a strategic statement that carries the weight of traditional wisdom. Proverbs thus exhibit different semantic possibilities due to their various functions and situations. Yet, it is exactly this intangible nature of proverbs that leads to their continued and effective use in all modes of communication.

It is customary to group proverbs according to their content, some major groups being legal proverbs, medical proverbs, and weather proverbs. It should be noted, however, that while a text like "Make hay while the sun shines" is, indeed, a metaphorical proverb, such commonly heard sayings like "Red sky at night, sailor's delight" are merely superstitious weather signs couched in proverbial language. Other groups that are based just on content would include all of the proverbs dealing with the body, love, work, friendship, and death. Such groupings have their limitations, for while the proverb "Two heads are better than one" clearly deals with the body, it might actually serve as a metaphorical statement to express the fact that two people working together (pooling their intelligence) might be more successful than an individual doing things alone.

Based on structural and semiotic considerations, scholars have begun to group proverbs more systematically according to linguistic and logical types. This methodology has the advantage that proverbs of the same structure (like "Where there is X, there is Y") or of the same logical thought pattern (such as texts based on such oppositions as one:two or small:large) can be grouped and analyzed together. While they might have completely different metaphors, such proverbial signs express fundamental human thought patterns. Grigorii L'vovich Permiakov in Russia, Matti Kuusi in Finland, and Alan Dundes in the United States have been particularly interested in fitting all proverbs into a limited number of universal types. This research will facilitate the work of scholars interested in comparative and international paremiology (study of proverbs) and paremiography (collection of proverbs).

Much has been written about the origin of proverbs, some of which goes back as far as texts carved on Sumerian cuneiform tablets from 3000 B.C. Many proverbs still in use, like "Big fish eat little fish" and "A sound mind in a sound body," date back to Greek and Latin antiquity. Another major source of proverbs is ancient-wisdom literature contained in such religious works as the Talmud or the Bible, as, for example "Pride goes before the fall" (Solomon 16:18) or "It is better to give than to receive" (Aposdes 20:35). But the vernacular languages also developed their own proverbs, and the Anglo American world is rich in proverbs from the Middle Ages. Geoffrey Chaucer in particular used many early English proverbs in his works, and the same is true for William Shakespeare in the 16th century. All over Europe, the 16th and 17th centuries are considered the Golden Age of

the proverb. They permeate all written records, from literary works and religious treatises to folk narratives. This is also the time when major proverb collections were put together, as, for example, John Heywood, *A Dialogue Conteyning the Number in Effect of all the Prouerbes in the Englishe Tongue* (1549), George Herbert, *Outlandish Proverbs* (1640), and John Ray, *A Collection of English Proverbs* (1670).

Are proverbs still coined in such a modern technological society as the United States? Of course they are, and it might even be argued that modern-day America represents yet another “heyday” of the proverb. Proverbs are still “invented” by individuals, and if a particular statement exhibits at least one of the proverb markers mentioned above it might just catch on—it might gain currency in a family setting, a village, a city, a state, the entire nation, and eventually even the world. In a technological world connected globally by computer networks and the ever-present mass media of newspapers, radio, and television, short and witty utterances can become almost instantaneous quotations known throughout the land. The speed in which new and possible proverbial wisdom can be disseminated today is truly mind-boggling. While it might have taken decades in earlier times for a precise statement and its variants to become proverbial, this general currency might now be accomplished in a few days. Just think of a quip by a major public figure, an advertising slogan, a film or song title. Of course, the test of time still needs to be applied to such proverbial neologisms; the elements of traditionality and general currency must come into play in order for such a “pithy” statement to be considered as a bona fide proverb. One thing for sure, the time of “proverb making” is by no means over, and there are dozens of modern American proverbs to prove it.

The rich American proverb stock is to a large extent made up of classical, biblical, and English sayings, but besides the early English settlers many other groups of immigrants brought their own proverbs with them. Many of these texts were translated into English in due time, and thus there are plenty of Americanized foreign proverbs current in this nation of immigrants. These proverbs also continue to be in use in their original languages among the many ethnic groups in this country. The Spanish language in particular is gaining much ground in the Southwestern states due to their Mexican American population. French is still spoken in New Orleans, northern Vermont, and in the province of Quebec in Canada. There are also many Jewish citizens who speak Yiddish, a language that includes numerous metaphorical proverbs. The same is true for Chinese, German, Greek, Haitian, Irish, Italian, Polish, Russian, Scandinavian, Vietnamese, and many other immigrant minorities and their native proverbs. As cultural and ethnic diversity plays an ever greater role in American society, these foreign-language proverbs will continue to thrive, and some of them will also gain general currency in the form of American loan translations. Such a dual linguistic existence might

be seen in the German proverb *Kind nicht mit dem Bade ausschütten*” (Don’t throw the baby out with the bath water). German immigrants (especially the Pennsylvania Dutch) still cite this 16th-century proverb in German, while Americans in general have been using it in English translation since the early 20th century.

Very little is known about the indigenous proverbs of the Native Americans. In fact, anthropologists, folklorists, and linguists have repeatedly pointed out that they have hardly any proverbs at all, a unique phenomenon since proverbs are common throughout the world’s populations. It is known, however, that Native Americans do communicate

with metaphors, and some proverbs have been collected from the Crow Indians of Montana, the Kwakiutls of Vancouver Island, the Tsimshians of British Columbia, and the Tzotzils of southern Mexico. Among the few known authentic texts are “A deer, though toothless, may accomplish something,” “What will you eat when the snow is on the north side of the tree?” and “The road is still open, but it will close.” Further and concerted field research will surely bring to light additional texts of the neglected proverbial treasure of the Native American languages.

Much more information is available about African American proverbs. While some of them can be traced to African origins, others definitely have been coined in the United States. Joel Chandler Harris included a section of “Plantation Proverbs” in his classic book *Uncle Remus: His Songs and Sayings* (1881). Many of these texts, like “De proudness un a man don’t count w’en his head’s cold” and “Dem w’at eats kin say grace,” reflect the early slave existence of African Americans. But more modern texts also refer to social concerns of the Black population that lives in inner-city ghettos, as, for example, “What goes around comes around,” “Black is beautiful,” and “If you don’t know much, you can’t do much.”

It is obviously difficult to establish which English-language proverbs current in the United States were actually coined in this country. Each individual proverb would require its own researched history, but this has been done for only very few texts. Major and minor proverb collections that claim in their title that they contain “American” proverbs should, in fact, state that their registered texts represent proverbs *current* in the United States. The same is true for small regional collections of proverbs from various states. When such books use titles that speak of Michigan or Vermont proverbs, they actually mean that they contain proverbs that were collected in those states. For most texts, it would be very difficult or impossible to ascertain their specific origins. But there are some proverbs that are proven to be of American coinage, among them “It pays to advertise,” “Paddle your own canoe,” and the quintessential American proverb, “Different strokes for different folks.” The latter was coined in the early 1950s among the African American population in the South, and it can be considered to express the general worldview of most Americans. Here is a truly liberating proverb that for once does not tell people what or what not to do. This is freedom and democracy translated into proverbial wisdom, using most of the structural and poetic markers discussed above, and thus having had no problem at all gaining proverbial status.

The worldview of the colonial period and the early years of this nation was expressed in the many proverbs that Benjamin Franklin included in his *Poor Richard’s Almanacks* published between 1733 and 1758. The last issue of this popular publication included his famous essay entitled “The Way to Wealth” (1758), which in its few pages contains 105 proverbs culled from the almanacs. They add much traditional wisdom to this masterful treatise on virtue, prosperity, prudence, and, above all, economic common sense. Most of the proverbs had long been in use in England, but Franklin also included his own inventions that have over time become proverbial, such as “Industry pays debts, while despair increases them” and “There will be sleeping enough in the grave.” Many Americans believe that Franklin coined most of the proverbs in this essay, but nothing could be further from the truth. Not even the popular proverb “Early to bed, early to rise, makes a man healthy, wealthy, and wise” stems from him. Earlier variants date back to

the late 15th century, and the proverb in this precise wording was recorded for the first time in 1639 in England.

A century later, Ralph Waldo Emerson had a similarly high esteem for proverbial folk wisdom. This prolific American preacher, rhetorician, essayist, transcendentalist, philosopher, pragmatist, and humanist was also an early paremiologist of sorts. He included proverbs in all of his writings, at times also explaining more theoretically that they are the “language of experience,” that they express “practical wisdom,” that they teach “worldly prudence,” and that they are “metaphors of the human mind.” Many American literary figures shared this positive feeling about proverbs, integrating them with relative frequency in their novels, dramas, and poems. Some of the more “proverbial” authors are Edward Taylor, Cotton Mather, Henry David Thoreau, Herman Melville, Alice Cary, Emily Dickinson, Mark Twain, Rowland Robinson, William Faulkner, John O’Hara, Arthur Guiterman, W.H.Auden, Eudora Welty, and Susan Fromberg Schaeffer. Robert Frost’s famous poem “Mending Wall” (1914) includes one of America’s favorite proverbs, which often is thought to have been coined by Frost himself. But “Good fences make good neighbors” in this precise wording found its way into an early farmer’s almanac in 1850. Mention must also be made of Carl Sandburg’s long poem “Good Morning, America” (1928), which includes a whole section on proverbial language that begins with the proclamation “A code arrives; language; lingo; slang;/behold the proverbs of a people, a nation.”

Popular songs, from traditional folksongs and ballads to modern rock and roll and country-western hits, also do much to keep traditional proverbs alive or to disseminate new texts. Thus, the solidly American proverb “Root, hog, or die” appears at the end of each of the eight stanzas of an early-19th-century bull-whackers’ song with the same title. The same independent and pragmatic approach to life during the pioneer days is expressed in the “proverb song” titled “Paddle Your Own Canoe” (ca. 1871). Proverbs are also popular in the musicals of Gilbert and Sullivan, and there are many modern “hits” with proverbial titles by major stars, such as “Takes Two to Tango” (1952) by Pearl Bailey, “Can’t Buy Me Love” (1964) by the Beatles, “Like a Rolling Stone” (1965) by Bob Dylan, “Easy Come, Easy Go” (1967) by Elvis Presley, and “Apples Don’t Fall Far from the Tree” (1973) by Cher. The proverbs cited in these songs are usually interpreted seriously: They are valued expressions of general human behavior and feelings.

Proverbs are not always taken at their face value. People have always been aware of the existence of contradictory proverbs. Such proverb pairs as “Absence makes the heart grow fonder” and “Out of sight, out of mind” are ample proof that proverbs do not express universal truths. Their truth value is actually quite limited and always dependent on the particular context in which they are used. Realizing that proverbs often are too rigorous in their moral or ethical message, and due to the fact that they have been quoted too often as ultimate wisdom, people have parodied and twisted them to get some humorous relief. There is even a special proverbial subgenre of “wellerisms,” which are based on the triadic structure of (1) a statement (often a proverb), (2) an identification of the speaker, and (3) a phrase that puts the statement into an unexpected situation resulting in a satirical, ironic or humorous comment. Well-known examples include “‘Everyone to his taste,’ said the farmer and kissed the cow” and “‘All’s well that ends well,’ said the peacock when he looked at his tail.” Some wellerisms are quite old and rather internationally disseminated, but America experienced a particular “craze” for wellerisms

in 19th-century magazines and newspapers. These “invented” texts followed the pattern of those that Charles Dickens placed into the mouth of his character Sam Weller (hence the term “wellerism”) in his novel *Pickwick Papers* (1836).

While wellerisms are a unique proverbial subgenre that dates back to classical times, there also exists a long tradition of proverb parodies based only on the actual texts. The folk have never considered proverbs to be sacrosanct, and while they express rigid precepts on the one hand, their very rigidity also leads to parody and punning. Often it is a matter of a short addition to the traditional proverb, as in “New brooms sweep clean, but the old one knows the corner.” This text has actually become proverbial in its own right over time. More common are small changes (a mere letter or word) within the short proverb text that changes it into an “anti-proverb” with an entirely new meaning: “A man’s best friend is his dogma,” “Money is the root of all wealth,” “Better mate than never,” “No body is perfect,” “Beauty is only fur deep,” “Chaste makes waste,” “One man’s meat is another man’s cholesterol.” Some of the more sexual examples are found as proverbial graffiti on bathroom walls, but so are such liberating new proverbs as “A woman without a man is like a fish without a bicycle” and “You have to kiss a lot of toads before you find your prince,” the latter being a proverbial allusion to the fairy tale “The Frog Prince.”

Advertising agencies have also discovered that proverbs in their traditional wording or cited with innovative twists can serve as effective attention getters. Realizing that most readers look only at the picture and the headline of an advertisement, it is not surprising that the slogans are often based on proverbs or at least on proverbial structures. They add a certain traditional authority to the slogan, especially in the case of biblical proverbs, and they also assure the recognizability and memorability of the slogan so that consumers will, in fact, think of it at the time of making a purchasing choice. Thus, a Vermont bank might simply use the headline “A penny saved is a penny earned” to proclaim its solid management of saving accounts, but a car company will use the altered proverb “A drive is worth a thousand words” to support its claim of a comfortable ride. Some slogans have attained proverbial status in their own right. Perhaps the best-known example is the slogan “When it rains it pours” by the Morton Salt Company, which most likely was based on the proverb “It never rains but it pours.” Even slogans that are not based on proverbs usually use proverbial markers, making clear that advertising is at least in part both popular culture and folklore.

Many advertisements also include iconographical representations of proverbs in the form of glossy and glamorous pictures. But this, too, is nothing new. Proverbs and their metaphors have been translated into woodcuts, emblems, and oil paintings since the Middle Ages. The Dutch artist Pieter Bruegel even illustrated more than 100 proverbs and proverbial expressions in his painting *Netherlandic Proverbs* (1559). There were also broadsheets depicting up to thirty-six individually framed proverbs, and perhaps one can look at these as precursors of sorts to the modern cartoons, caricatures, and comic strips that are frequently based on proverbs. As American society tends ever more toward the visualization of the world, it is to be expected that metaphorical proverbs will also be transposed into pictures. Many young Americans do not learn proverbs any longer in school or through reading, but they pick them up from the comic pages or the political cartoons in newspapers and magazines. Proverbs and their pictorizations are still very

suitable devices to communicate humorously or seriously about the social and human concerns that occupy modern Americans.

Proverbs, thus, are very much alive in modern society. While such other verbal folklore genres as the fable are declining, proverbs continue to play a considerable role in oral and printed communication. They even prolong the life of fables by reducing their longer texts to mere proverbial expressions, such as “sour grapes.” Older proverbs that use archaic words or whose ideas are no longer appropriate tend to disappear; other old standbys continue to be frequently used; and there are also those new proverbs that express the social worldview of the modern age. The future looks good for proverbs, for proverbs are never out of season.

Psychology and Folklore

The dynamic relationship between ideas in the two intellectual disciplines. Psychological theory has come to help some folklorists interpret the meanings of their materials, and some psychologists have turned to folklore for texts to help illuminate concepts in psychology. As the intellectual discipline that takes as its realm the understanding of the workings of the human mind, psychology addresses a number of concepts, such as “personality” and “identity,” that are of central interest to folklorists. When folklorists and other culture critics write of the “psychological functions” of a folklore text or a performance, they are making the assumption that human beings have certain biological and, possibly, socially constructed needs that folklore helps meet. Psychology addresses collective as well as individual needs, so folklorists can speak both of the individual psychological functions of folklore and of the ways folklore operates in the psychology of the group.

It was only near the end of the 19th century that scientific psychology emerged as a discipline separate from philosophy or theology, and the professionalization of the two intellectual disciplines in the United States occurred at almost the same time (the American Folklore Society was founded in 1888; the American Psychological Association, in 1892). Sigmund Freud’s work laid out the first understanding of the relations between psychology and folklore. Freud saw jokes, folktales, art, and other expressive behaviors as symptoms of the unconscious processes and contents of the mind. Just as the symptoms of an individual patient represented repressed thoughts displaced into more acceptable forms, so Freud saw collective expressive behaviors as clues to the thoughts society repressed in order for people to live together. Thus, the depth psychologies of Freud and others offer folklorists a theory to account for the symbolism present in the folklore (stories, jokes, riddles, proverbs, song lyrics, rituals, games, and material culture) of a group. Carl Jung and his followers, notably Joseph Campbell, went beyond Freud to posit universal archetypes in the collective human consciousness and looked to mythologies for evidence of these archetypes.

Despite the early popular reception of Freud’s ideas in the United States (he lectured in the United States in 1910) and despite the development of a psychoanalytical school of anthropological theory and practice in the 1930s and 1940s (represented in the late 20th century, for example, by the *Journal of Psychoanalytic Anthropology*), psychoanalytic approaches have not become common in American folklore studies. Alan Dundes is the leading proponent of the psychoanalytic approach, sometimes combining it with the structural approach he has also helped promote in folklore studies, but most folklorists have not followed his lead. Some folklorists have been openly hostile to psychoanalytic approaches, complaining that the theory posits an unacceptable universalism and that the method relies so much upon the analyst’s idiosyncratic interpretive performance that the interpretation is not reproducible. Dundes’ own practices attempt to refute these charges, but he and other psychoanalytic folklorists cannot deny the fundamental disagreement they have with some other folklorists over the ability of the folk to help the folklorist

interpret their own folklore. For Dundes and others ascribing to the psychoanalytic approach, the folk can show us the meanings of their folklore texts only indirectly, as those texts reflect the unconscious and serve their psychological functions only to the extent that the folk do not bring the repressed thoughts and anxieties (about sex, death, or racial hatred, for example) to consciousness. For other folklorists, the folk's interpretations of the meanings of their lore are valuable contributions to our understanding the multiple meanings of texts in their performance contexts.

Folklorist David Hufford has urged folklorists to expand their interdisciplinary cooperation with psychologists beyond the psychoanalysts, and he demonstrates the fruits of psychological approaches in his own work on the folkloric dimensions of medical beliefs and practices. But, again, few folklorists have accepted Hufford's invitation.

Psychological approaches lend themselves quite well to the study of children's folklore, as developmental psychology has a long history of theorizing and practice. Martha Wolfenstein wrote a classic psychoanalytic study of children's humor, and Brian Sutton-Smith has combined developmental psychology with folklore methods to study the structures and functions of children's storytelling and joking. The notion of "competence" in folklore performance studies (for example, narrative competence) intersects with developmental psychology in studies in which folklorists have determined at what ages and at what stages of cognitive development children are capable of understanding and telling stories, jokes, riddles, and so on.

Feminist folklorists have turned to some of the work done by feminist psychologists for ideas to bring back to the study of women's folklore. Carol Gilligan and others attempting to create a "new psychology of women" since the 1970s provide concepts and vocabularies for understanding the very different functions of communication and identity within women's small groups, but feminist folklorists have been reluctant to adopt even the feminist revisions of Freud offered by Juliett Michell, Nancy Chodorow, and others. Still another area awaiting the applications of feminist psychology is the folklore of male folk groups. One version of the new "men's studies" emerging in the 1990s brings two decades' worth of feminist theory to bear upon the creation and expressive performance of masculinities, and feminist psychology could shed new light on men's folklore.

Those folklorists who have written on the relation between folklore and psychology—notably, Dundes, Fine, and Hufford—generally bemoan the fact that there is so little interdisciplinary cross-fertilization between these two intellectual disciplines, which share a common interest in questions of meaning and identity. This lack became all the more pronounced in the 1980s, as senior scholars (such as Jerome Bruner) in social psychology, child psychology, and other specialties within psychology turned increasingly from experimental approaches toward a "narrative paradigm" that would be familiar to folklorists. Folklorists and psychologists have a great deal to learn from one another, but as of this writing (1995) the possibilities of this interdisciplinary cooperation have yet to be fulfilled.

Public Folklore

The representation and application of folklore within new contexts, accomplished through the actions of folklorists or other cultural specialists, frequently through collaboration with concerned community members. A public-folklore activity may be directed toward a community within which a tradition is customarily practiced or may cross cultural boundaries through presentation to a general audience. Public folklorists may represent and interpret the traditions of their own or of different communities. They generally strive to collaborate with tradition bearers and community members to enable them to represent, preserve, and perpetuate their own traditions. Through public-folklore activities, folklorists “intervene” (see Whisnant 1983) in communities to achieve specific purposes, such as the conservation or revitalization of traditional cultural practices, reinforcement of group identities, or the amelioration of social problems.

Most contemporary public-folklore activity in the United States involves traditional-arts programming. Since these activities generally occur in new contexts removed from their customary settings within communities, much of the creative challenge in public folk-arts programming lies in the reframing of traditions (see Sheehy 1992). Through reframing, a tradition receives special attention as an art form singled out from everyday life. When presenting reframed folk arts, public folklorists strive to appropriately represent how traditions are practiced in the traditional settings and sociable occasions where they live and breathe in daily life—such as dance halls, duck blinds, kitchens, or schoolyards and during weddings, tall-tale “lying” sessions, quilting bees, or at a *quinceanera*.

The “representation” of folklore through public programming requires special artifice to recapture such traditional contexts as well as interpretive strategies to help audiences understand how tradition bearers infuse meaning, symbolism, order, and aesthetic sensibilities within their folk arts. These techniques are employed within a wide variety of genres of representation, including exhibitions, festivals, concerts, artists’ residencies in schools and community arts organizations, film and media productions, lecture-demonstrations, and recordings. All of these types of public programming rely heavily upon original field research among traditional artists.

The folklife festival is an especially complex mode of presentation. Growing out of approaches developed by the Smithsonian Institution’s Festival of American Folklife in the late 1960s and early 1970s, folklife festivals in the 1990s utilize multiple techniques of recontextualization and interpretation. In these festivals, traditions are often presented within contexts that evoke or replicate the places and events where folk arts are found in the artists’ own communities. Storytellers may swap tales on a porch of a vernacular house, musicians play for a dance party, craftspersons make crafts in a setting like their workshop at home, carnival reenactors process about the festival grounds. Festivalgoers are encouraged to interact with artists as they dance to a traditional-music ensemble or ask questions of crafts demonstrators.

The interpretation of traditions at festivals is also carried out through signage, program booklets, and workshops. Festival workshops explore issues relating to featured traditional cultures and delve in depth into stylistic elements of traditional art forms. They combine artistic performances, demonstrations, and discussion among tradition bearers.

The use of such diverse media of interpretation reflects a strong emphasis on public education in contemporary folkarts programming. Interpretation helps dispel stereotypic distortions of folk arts as simple, unsophisticated, and resistant to change while providing bridges to understanding other cultures when traditions are presented outside of their communities of origin. Folklorists often collaborate with tradition bearers to prepare them to interpret their folk arts without the folklorist's mediation. Academically trained public folklorists also work with "community scholars," lay folklorists who document, interpret, and present the traditions of their own communities. During the late 1980s and early 1990s, institutes to train community scholars were established by folklorists. These institutes equip community members to effectively assume primary responsibility for local folk-arts presentation and perpetuation.

Museums serve as venues for the exhibition and public performance of both contemporary and historical folk traditions. While elitist resistance to folk culture persists in some museums, many history and art museums find that folklife can provide palpable links between past and present and open up new relationships with previously underserved cultural communities. History museums provide opportunities for representation of many different kinds of folklife. Ongoing presentations of traditional work practices and recreational activities are key interpretive activities in "living history" museums made up of reconstructed cultural landscapes of particular periods in the past. In other history museums, public folklorists have curated exhibitions dealing with such topics as urban play, local ethnic festivals, county fairs, and maritime traditions.

Two sharply contrasting approaches to exhibiting folk art are used in American art museums. Exhibitions curated by public folklorists view folk art as embodying the aesthetics and values of particular cultures. They stress contextualized interpretation of the historical and social circumstances of the production of visual folk-arts. Objects in these exhibitions are chosen as both representative and aesthetically exemplary examples of the visual traditions of a culture. In contrast, folkart specialists (as opposed to public folklorists) choose objects for exhibitions on the basis of putatively universal aesthetic values and their own sense of connoisseurship (see Baron [1981] 1987:14–15). They often consider folk art within the same framework as "outsider" or "naive" art, all said to be expressions of the individual genius of artists who lack formal training. Folk-art specialists are not associated with the field of folklore studies. They carry out their research independently or in association with galleries and museums supportive of their approach.

Exhibitions of contemporary folk art curated by public folklorists are based upon documentation of living folk artists. Many of these exhibitions result from surveys of the folk arts of particular states and regions within states. Interpretive programming organized by public folklorists for folk-art exhibitions often involves demonstrations by artists, ideally in galleries alongside their works on display.

Although many American museums contain collections of historical folk artifacts, relatively few actively collect the works of living tradition bearers. Outstanding exceptions to this pattern include the Museum of International Folk Art in Santa Fe, New

Mexico, the Roberson Center of Binghamton, New York, and the Michigan State University Museum in East Lansing. All of these museums have curatorial departments devoted to folk art or folklife.

Folk-arts-in-education programs utilize the indigenous traditions of local communities to provide alternative learning experiences for young people. Through these programs, students encounter tradition bearers teaching about their traditional knowledge and demonstrating their artistry. These interactions occur in classrooms, in auditoriums, and in student research projects guided by folklorists. They provide validation for the living cultural heritage of students, thus building self-esteem and forging a stronger sense of community. By enabling young people to experience the diverse cultural traditions represented within a school population, folk-arts-in-education programs contribute to intercultural understanding.

Curricula designed for folk-arts-in-education programs integrate traditional systems of knowledge and art with other school subjects. Art is viewed expansively as ubiquitous among human cultures and accessible to the experience of a young person in his or her own home and neighborhood. In socialstudies classes, students are equipped to learn about the cultures they inhabit as well as those distant in time and space. Mathematical learning is enhanced as students learn about pattern, order, and the uses of numbers in folk arts. Communication skills are developed through the participation of young people in school programs involving local oral traditions and through student writing about the folk arts they have researched and observed.

Through documentary film, video, and audio productions, the reach of public folklore extends far beyond the communities where traditions are practiced. They are frequently broadcast through the Public Broadcasting System, National Public Radio, and local public-radio stations. The form, length, and orientation of public-folklore productions are strongly influenced by the interests of these broadcasting outlets.

The creation of documentary film and video productions is shaped by what Gerald L. Davis calls the "cultural eye," which selects out and "illustrate[s] significant elements of expressive, aesthetic performance in contexts a mature community recognizes and values as traditional" (Davis 1992:115). Comparable selectivity is exercised in radio productions by what might be called the "cultural ear," where context is evoked through the use of ambient sound and excerpts from fieldwork interviews. Extensive editing occurs in creating these productions, as the public folklorist creates a "story" that offers native and folkloristic perspectives upon traditions and their contexts (see Spitzer 1992:88).

Recordings produced through public-folklore programs tend to deal with traditions ignored or underrepresented in commercially issued recordings. They generally include notes that provide detailed information about a music's cultural and historical contexts, its stylistic features, and the performers featured in the recording. Such recordings are issued through independent record companies or by private not-for-profit and government folklife programs.

Public folklore is viewed by some folklorists as part of a larger enterprise of "cultural conservation." Nonartistic dimensions of traditional culture are especially apt to be considered within the domain of culture conservation. As cultural conservationists, folklorists join with specialists from other disciplines concerned with "heritage protection" in an "integrated approach based on grass-roots cultural concerns and guided

by ethnographic perspectives” (Hufford 1994:3). The efforts of cultural conservationists are often directed toward research and advocacy about environmental protection and historic preservation. Folkloristic interests in cultural conservation include the preservation of traditional land-use and work practices within environmental planning, incorporation of traditional cultural activities within economic development schemes, mitigation of the effects of highway construction and other public works upon traditional community life, and planning for cultural tourism that allows for the perspectives and directions desired by local traditional cultures. Challenging dominant standards for designating places of historic and cultural significance, folklorists argue for official recognition of places of local, vernacular significance.

Public folklore has been known by several names in postwar America. Each term reflects the concerns of folklorists of particular periods. During the late 1940s and early 1950s, “the utilization of folklore” referred to activities that put folklore materials to use within new contexts. In referring to folklore as “materials,” this term reflected the text-centered orientation of folklorists at the time. Folklorists expressed considerable concern about the authenticity of adaptations of folklore to new audiences, accuracy of sources, and appropriateness of altering folklore in new contexts.

“Applied folklore” supplanted “the utilization of folklore” as the term of choice in the 1950s and was used with increasing frequency over the next two decades. The practice of applied folklore entailed the application of folkloristic knowledge for socially useful and ameliorative purposes as well as traditional arts programming. Folklore was “applied” in such arenas as health care, urban planning, education, and the fostering of intercultural understanding (see Botkin 1953; Sweterlitsch 1971). During the 1960s and 1970s, the term “applied folklore” addressed concerns of social relevance, advocacy, and activism.

In the late 1970s, the term “public-sector folklore” came into use. The use of this term reflected the dominant role assumed by folklife programs in the government “sector” at the time. As government folklife programs spawned new programs by nongovernment entities in the late 1980s, the term “public folklore” was adopted. Both “public-sector folklore” and “public folklore” encompass activities covered by “the utilization of folklore” and “applied folklore” earlier in the postwar period.

The establishment of the Smithsonian Institutions Festival of American Folklife in 1967 signaled a renewal of federal folk-cultural initiatives, which had previously included the Bureau of American Ethnology, established in 1879; the Archive of American Folk-Song of the Library of Congress, founded in 1928, and the folklore program of the Works Progress Administration, which was in operation during the 1930s. Major federal-government folk-cultural programs were established at the National Endowment for the Arts (NEA) in 1974 and the American Folklife Center of the Library of Congress in 1976. Under the leadership of Bess Lomax Hawes in the late 1970s and into the 1980s, the NEA’s folk arts program developed a national infrastructure for folk-arts programming. It provided initial funding for folk-arts coordinators at state agencies in virtually every state and jurisdiction. These coordinators survey and document traditions, produce folk-arts presentations, assist artists to promote and market their traditions, and provide financial support and technical assistance to local organizations interested in developing folkarts programs. Beginning in the mid-1980s, public-folklore programs spread beyond government agencies to museums, regional arts organizations,

local arts councils, and, with increasing frequency, private not-for-profit organizations devoted exclusively to folk-cultural programming.

American public-folklore activities undertaken by government and nongovernment programs are informed by ideologies, even if they tend not to be explicitly stated. In contrast, the "ideological" manipulation of folklore for Romantic nationalist and authoritarian purposes in other countries is easier to adduce. American public-folklore programs are characterized by a culturally relativistic approach to cultural difference, regarding each group as possessing worth and value and subject to evaluation on its own terms. American culture is considered to consist of multiple group identities within a pluralistic nation. "Cultural equity" is often viewed as a fundamental tenet of public-folklore work. First formulated by Alan Lomax, it refers to the global defense of cultural and stylistic diversity against the hegemonic, homogenizing forces of mass culture and electronic media (Lomax [1972] 1985).

The ideologies informing American public folklore can be evaluated as part of a cultural critique. For Barbara Kirshenblatt-Gimblett, a public-folklore ideology that celebrates diversity and affirms unity in diversity may "mask inequity and conflict" and uncritically embrace "received notions of ethnicity and ethnic group, of heritage and traditions." She believes that academic folklorists have a special responsibility to contribute to critical discourse about these matters (Kirshenblatt-Gimblett [1988] 1992:33, 42). Since American public-folklore programming tends to celebrate traditions and defers to the stated interests of the communities whose traditions are presented, critical discourse about ethnicity, heritage, tradition, and social inequity usually does not occur in public programs. However, public folklorists are mindful of these issues as they choose who and what to present and develop interpretive approaches for presentations in collaboration with community members.

Much of contemporary critical scholarship about public folklore assesses the impact of the intervention of folklorists upon traditional communities. David Whisnant contends that "the public sector folklore enterprise is unavoidably interventionist," impacting upon "the lives of individuals and in the institutions that embody their collective will and vision" (Whisnant 1983:234). Public folklorists often reflect upon how their involvement with tradition bearers changes the forms and contents of art forms and the relationships of artists to their communities. Artists who formerly created only for friends, family members, and neighbors redirect their work to new markets opened up by public-folklore presentations. Their work may become commodified, created for a cash economy, and changed in its cultural significance and formal qualities. The changes resulting from a folklorist's intervention can also be beneficial, resulting in new sources of income for low-income tradition bearers, validation of devalued art forms, creative stylistic innovations, and new personal horizons for artists enjoying travel and enhanced recognition.

Critical scholarship about public folklore also analyzes the power relationship of folklorists to traditional communities. By choosing to present certain aspects of traditional cultures to the public, the folklorist is said to act as the authenticator of traditions deemed worthy of preservation and presentation. Folklorists may "invent" traditions in selecting out particular dimensions of a culture as embodying continuity with the past. The folklorist thus exercises power to define a culture and objectify artists (see Kirshenblatt-Gimblett [1988] 1992). Others writing critically about public folklore stress

the dialogical character of transactions between the folklorist and the tradition bearer. Within such a relationship, the representation of traditions is a collaborative, mutually defined undertaking rather than a starkly contrastive subject-object encounter. Through equipping community members to document and present their own culture and by training community scholars, public folklorists engage in the empowerment of traditional communities (Baron and Spitzer 1992).

Public folklorists tend to place special emphasis upon the preservation, presentation, and perpetuation of traditions no longer widely practiced. However, their rhetoric of presentation stresses that folk arts are “living traditions” rather than residual remnants of past practices. The act of public presentation may be intended to revitalize traditions that are endangered within their communities of origin. Newer, emergent folk arts rooted in older traditional forms are also presented in public-folklore programs. For example, community-based African American hip hop may be presented in programs that provide information about its antecedents in older Black musical and movement styles.

The choice of traditions to present to the public involves a kind of curatorial decision making. The folklorist selects traditions that can be made accessible to the public and meet criteria of skill or artistic excellence. Through the exercise of such selectivity, some aspects of culture are necessarily excluded. The traditions represented may appear to audiences as normative, although differences may exist within a community with regard to traditional cultural practices associated with gender, age, sexual orientation, or social class. As Mary Hufford indicates, reliance of folklife projects upon funding from arts agencies beginning in the 1970s led to an emphasis upon traditions that could be justified as aesthetic in order to obtain support (Hufford 1994:3). This situation began to change by the early 1990s, as a diversification of funding sources and broadening interests of public folklorists engendered representation of a wider spectrum of folklore traditions to the public.

Puckett, Newbell Niles “Barry” (1897–1967)

Sociologist and folklorist noted for his studies of the American Southern Black and his extensive collection of popular beliefs and superstitions from Ohio. As a young man working for his bricklayer father, Puckett (nicknamed “Barry”) became fascinated with the stories of his Black coworkers. This experience later helped shape the focus of his research. Deciding to seek a career in sociology and folklore, he enrolled at Yale University, receiving his Ph.D. in 1925. During his course of study, he began recording and classifying the folk beliefs and traditions of the American Black. He published the results of this research in *Folk Beliefs of the Southern Negro* (1926). His findings also allowed him to contribute to the study of onomastics, producing the articles “Names of American Negro Slaves” (1937), and “American Negro Names” (1938).

Throughout his career, Puckett was active in the Ohio and Cleveland folklore societies, ultimately being honored as a Fellow of the American Folklore Society. In his tireless search for early superstitions remembered by the natives of Ohio, he traveled thousands of miles, collecting more than 10,000 different superstitions. At times, in order to obtain beliefs from informants, he would even pose as a conjurer. Wayland D. Hand presided over the posthumous publication of a compendium containing this information, titled *Popular Beliefs and Superstitions* (1981) from Ohio. Hand noted that Puckett regarded this work as a companion piece to his *Folk Beliefs of the Southern Negro*.

Q

Quilt Making

Processes and customs involved in the construction of threelayered textile bedcoverings. Quilts typically consist of a decorated top, a soft filler, and a plain lining. Quilts may include a number of different practical or decorative needlework processes, among the most common of which are piecework, in which cloth pieces are seamed together; appliqué, in which cloth pieces are sewn directly to a background fabric; embroidery, in which the surface is decorated with plain or colored yarns, and the actual quilting stitches that fasten the layers together.

Quilt making is a domestic activity traditionally performed by women, either singly or in groups. While ostensibly seen as practical bedcovers, quilts function in a variety of symbolic roles within families or communities. The complexity of quilt making within American society means that not only folklorists, but also scholars in many other fields study aspects of the subject, including scholars in textile, social, and art history; women's studies; communications; American studies; and popular culture.

In various American communities, particularly during the 19th century, the making of quilts was often associated with marriage and preparation for setting up a household. The number and quality of the quilts prepared by a young woman might have served as an indication of her suitability for marriage. Special quilts were typically the property of women and were often given or bequeathed to female relatives or friends.

One of the primary functions of quilts has always been to demonstrate the creativity, artistry, originality, or technical expertise of their makers. Other forms of needlework, such as samplers, also served this function, although, while samplers were displayed within the family home, the display function of quilts operated within the larger community. Quilt competitions in local fairs served as arenas in which women vied for public acclaim for their accomplishments in womanly spheres, and quilts were the most significant of the items entered. At times when women's opportunities for public recognition were limited, excellence in quilt making provided such recognition.

Beginning during the Civil War era, women's groups have used quilts to raise funds for churches, community groups, and other causes. During the late 19th and early 20th centuries, these fund-raiser quilts typically included embroidered names of persons or businesses who paid a few cents to have them included. The finished quilt was usually auctioned or raffled, depending upon the group's attitudes toward gambling. Church groups often used the money for mission work or to provide furnishings for their church building.

The sharing of quilt patterns and techniques has served as a basis for communication and interaction among women, not only in the 19th century when such exchanges were face to face, but later through quilt-pattern columns regularly printed by local, regional, and national periodicals.

Historic evidence suggests that while both quilting and patchwork (a term that often includes both piecework and appliqué) are ancient techniques, they were not combined in the making of bedcovers until, perhaps, the 17th or 18th century in Europe. A major influence for quilt making in Europe was the influx of Asian goods resulting from the Crusades and, later, sea trade with India: Among the goods brought from India to Europe were block-printed and dyed cotton fabrics, a novelty to Europeans limited largely to wool and linen textiles. Imported cottons were popular for clothing, bedcoverings, and bed curtains. An 18th-century English ban on the importation and use of imported cottons, intended to aid the domestic wool industry, was largely ineffective, although resulting shortages may have contributed to the practice of cutting out and appliquéing individual printed motifs on bedcovers and bed hangings. These appliquéed bedding textiles replaced an earlier and more time-consuming English tradition of embroidered textiles. Appliquéed, embroidered, and whole-cloth quilts (those without patchwork) represented the valued possessions of well-to-do families.

European settlers in the American colonies brought with them a variety of bedding textiles, including quilts and woven bed “ruggs” (sometimes spelled “rugs,” this coarse, shagged textile is not to be confused with floor carpets), coverlets, and

A QUILTING PARTY IN WESTERN VIRGINIA.

(The Repository, no page 98.)

blankets. In colonial household inventories, quilts were always less numerous and more highly valued than other bedding. The popularity of quilts expanded in the late 18th century, aided by improvements in textile and printing technologies.

The earliest American quilts resemble their counterparts in Europe: They tended to be large (often more than 100 inches per side), square, and the designs generally included a central motif surrounded by one or more concentric borders. In the Northern colonies, households made glazed, solid-colored, whole-cloth, or simply pieced wool quilts, called "calimancoes" (sometimes inaccurately called linsey-woolseys). In the Southern colonies, quilt makers favored lightweight, white wholecloth quilts, which were sometimes decorated with embroidery or stuffed work (small bits of filling inserted into the quilted design to add dimension). Because they served a decorative, not a utilitarian, function, early quilts generally have little or no filler and are typically highly embellished with quilting designs.

During the first half of the 19th century, block-style quilts gradually supplanted the European framed-center style in America. Recent evidence suggests that the development of early block patterns may have originated in the major folkcultural area of southeastern Pennsylvania. As German immigrants had no tradition of patchwork bedcovers, the new American designs appear to be a result of a combination of English traditions of making patchwork quilts and German design elements and color choices.

The 1840s mark the beginning of an era of development and expansion in American quilt making. New developments in domestic textile technology provided quilt makers with more fabric options at less cost, and, at the same time, westward migration contributed to the dissemination of patterns and styles.

A number of quilt styles went in and out of fashion during the 19th century. A method of piecing fabric over small paper templates developed in Great Britain and became popular in mid-century in American cities that traded with Britain, such as Charleston, South Carolina.

In the Mid-Atlantic cultural area adjoining the Chesapeake Bay, a local tradition developed of making sampler album appliqué quilts (in which each block represents a different pattern). The style, which has become known as the Baltimore Album quilt, is characterized by highly elaborate appliqué motifs, typically floral but sometimes depicting other designs such as birds, buildings, or "cut-paper" abstractions. Typically, each block is signed or inscribed by the maker, donor, or other designee. The album style spread throughout settled areas of the United States between 1840 and 1860.

The late 19th century represents the era of most widespread involvement in American quilt making. A large number of pieced and appliquéd patterns developed and were disseminated during this period. Domestic fabrics were inexpensive and plentiful so that, for the first time, quilts were made by all social classes, for utilitarian as well as decorative uses.

Mary Ellen Bowens sits beside her striped-piece quilt. Chicago, 1977. Photojonas Dovydenas. American Folklife Center.

Perhaps the first nationwide quilt fad occurred between 1880 and 1900, as quilt makers everywhere made crazy quilts. While the impetus for this movement is unclear, possible contributing factors include Japanese decorative arts and English needlework, both of which were introduced to American audiences at the Centennial Exposition in Philadelphia in 1876. Crazy quilts are typically formed of irregular pieces of cloth attached to a cloth foundation and embellished with decorative embroidery. Late-19th-century crazy quilts generally included a large variety of silk remnants, which were available by mail order. Crazy quilts originated, not from economy or need, but from the late Victorian love of embellishment and excess.

After 1900, crazy quilts were no longer popular among urban quilt makers, but rural women made them from recycled wool and cotton clothing. Even the 20th-century folk versions of crazy quilts, however, usually include some embroidery. The production of utilitarian crazy quilts in the early 20th century led some writers of the period to conclude, incorrectly, that crazy quilts were the original, utilitarian form from which other quilts had developed.

The subject of quilts made by African American women is a controversial one. Surviving African American quilts from the 19th century are rare and are usually indistinguishable from those made by non-Black quilt makers. Art historians have pointed out compelling visual similarities between both historic and contemporary African textiles and late-20th-century African American quilts, but the absence of intervening evidence prevents the establishment of more definitive links.

The most famous African American quilter of the 19th century was Harriet Powers, whose two known extant quilts represent scenes of biblical and local history. These pictorial quilts, evidence of significant individual artistry, may also represent a larger African American tradition, of which little other documentation survives.

Generally, African American quilt makers who have lived in proximity to White quilt makers have produced similar quilts, while Black quilt makers who worked in comparative isolation from outside influences, including publications, developed their own intuitive, eclectic styles, techniques, and design traditions.

Many Native American groups adopted quilt making as contact with White settlers gave them access to woven cloth. Plains tribes in particular found that quilts substituted easily for decorated buffalo robes, and that certain patterns, especially the Rising Sun (later called Lone Star), were similar to traditional Native American designs. Contemporary Native American powwows include quilts as important elements in their gift-giving rituals.

American quilt making during the 20th century was influenced by two major factors. First, the Colonial Revival movement in the decorative arts encouraged women to make quilts like those of their ancestors. With the availability of inexpensive blankets, only the very poor had continued to make utilitarian quilts, so women's magazines suggested quilt making as a new hobby for middle-class women.

The second factor was the dissemination of quilt patterns through popular magazines and "story papers," inexpensive or free publications that included advertising, articles, and needlework columns, including syndicated quilt patterns. These two

Sharecroppers make a quilt. Near Pace, Mississippi, 1939. Photo Russell Lee. Library of Congress.

factors created a climate for a renewed interest in quilt making during the period 1925–1940.

Quilts made during this period typically feature pastel colors, in both solids and small-figured prints. While occasional quilt makers employed favorite patterns from the 19th century, such as the Log Cabin and the Rising Sun, they more often used some of the new patterns shown in periodicals. The most popular patterns of the early 20th century include Double Wedding Ring, Little Dutch Girl (also called Sunbonnet Sue), Dresden Plate, and Grandmother's Flower Garden.

This period is also characterized by the development of a class of professional designers, collectors, and quilt entrepreneurs. Marie Webster designed quilts for *Ladies' Home Journal* beginning in 1911, and her book *Quilts: Their Story and How to Make Them* appeared in 1915, the first monograph on the subject of quilts. Anne Orr authored a regular needlework column in *Good Housekeeping* magazine in the 1920s that launched a design and mail-order pattern business.

During the 1940s and 1950s, interest in quilt making declined generally, although patterns and kits were still available. In addition to quilt makers, there were other individuals who began to collect patterns and quilt-related ephemera. Beginning in the late 1960s and early 1970s, a renewed interest in quilts and quilt making emerged. By the 1980s, hundreds of thousands of quilt makers had formed guilds throughout the United States, in order to share their interests, provide mutual support, sponsor competitions, and raise money for charitable causes. A second generation of “quilt professionals,” including authors, designers, and teachers, developed to serve the needs of these groups.

An interest in American-style quilt making spread internationally during the 1980s, particularly in Europe, Japan, Australia, and New Zealand, where American techniques have been adapted and merged with local needlework and design traditions by contemporary quilt makers.

Another important movement in the late 20th century has been the development of state and regional quilt projects. These projects originated in response to the desire to better understand quilt making traditions, both local and national. In the knowledge that hundreds of thousands, perhaps millions, of quilts exist but are generally not available to public view, quilt makers and interested others designed public “quilt days,” during which the quilts in a local area could be brought out to be examined and photographed. As of 1993, each of the United States had begun at least one such project. Typically, the projects result in an archive of photographic and written documents, one or more exhibitions, and a book. The accumulated data from the projects are beginning to reveal important regional and local traditions within American quilt making.

In addition to a new generation of quilt makers who make quilts as art, to hang on walls, there remains a large number of traditional quilt makers, who, while not making quilts from necessity, make them for use, or potential use, on beds. Traditional quilt makers typically have grown up with a knowledge of quilts, prefer using familiar patterns, and make quilts as gifts for family and friends.

In the late 20th century, national groups have used quilts collectively to make political statements, including the Peace Ribbon, the combined quilt panels of thousands of contributors that was wrapped around the Pentagon; and the NAMES Project, which collects and displays quilt panels commemorating persons who have died from AIDS (acquired immune deficiency syndrome).

R

Radio, Amateur

A government-licensed, noncommercial radio service found throughout the world. Amateur radio is *not* citizens band (CB), an unlicensed and (in the United States) rather undisciplined radio service some countries permit for short-distance communication. An international transmission medium for folklore found in society at large, amateur radio also possesses its own body of lore and custom.

Radio amateurs, known as “hams,” transmit folklore by two principal means. One, obviously, is over the radio, using frequencies assigned to the amateur-radio service. The other is via the radio-club newsletter.

Some of the radio frequencies available to amateurs support worldwide communications. It is possible for a joke originated in San Francisco to be known in Tel Aviv in a matter of hours. Although much folklore transmitted via amateur radio passes in real-time personal conversations, much is also circulated using computer-based bulletin board stations where items are posted for many other hams to read. These stations automatically relay messages over the air to one another internationally, posting those designated as public on each intermediary station. Although most of the material thus circulated is humorous, urban legends have also appeared.

Radio-club newsletters often use traditional filler items, depending for their humor on the reader’s technical knowledge. Newsletter editors exchange copies of their papers and reprint these items as needed. For example, “a reward of 500 micro-Farads is offered for information leading to the arrest and conviction of Hopalong Capacity. He is charged with the induction of an 18-turn coil, Milli Henry, who was found choked and robbed of her Joules. He was last seen riding a kilocycle....” Another example states that “for years it has been believed that electric bulbs emitted light. However, recent information has proven otherwise. Electric bulbs don’t emit light, they suck dark.” The complete items develop their mock-serious subjects with puns and examples.

Club newsletters also reprint urban legendary material such as “Litde Buddy,” the story of a terminally ill child who wanted to amass the world’s largest postcard collection. Hams were encouraged to send him postcards showing their amateur radio station call signs; these colorful “QSL cards” are normally exchanged by hams who have had a conversation on the air. In the early 1980s, newsletters circulated a cautionary tale claiming that contact lenses could be cooked onto one’s eyeballs during the use of heat-producing workbench tools. Several legends, all quite unverifiable and unreliable, circulate through newsletters concerning the origin of the nickname “ham” for amateur radio.

Amateur radio also has its own body of lore and custom, including a traditional vocabulary heavily indebted to early telegraphers' jargon. Not found in any government's rules or any electronics textbook, this terminology underscores the importance of custom in a future-oriented, technological hobby.

For example, a "lid" is someone who ignorantly or wilfully violates rules and customs, a poor operator. Conversations are commonly ended with "73," signifying "best regards." Under appropriate circumstances, "88," meaning "love and kisses," may be used in place of, or in addition to, "73." An "Elmer" is someone who mentors a newcomer in how to become licensed and how not to become a lid. "Band cops" are self-appointed guardians who rudely correct others' operating errors, real and imagined. "Homebrew" radio equipment is built by hams themselves from electronic components; the equivalent term in model railroading is "scratch-built," along the lines of baking a cake "from scratch" using basic ingredients rather than a cake mix. A "hamfest" is a combination trade show and flea market at which hams sell or trade components, new equipment, and used gear. Hamfests are like village market days, in which social interaction is at least as important as economic activity.

Radio amateurs take pride in having to pass licensing examinations and in rules that keep ham radio free of commercial activity and foul language. Esprit de corps is carefully maintained through indoctrination of new licensees in customs and values, over and above the government's formal rules.

Considerable effort is expended, for example, to teach newcomers never to use CB slang, such as "ten codes" ("Tenfour, good buddy"). Inevitably, some language from CB has crept into common usage. For example, it is now generally acceptable to refer to one's given name as a "handle," but one should still never call it a "personal." Club newsletters frequently editorialize against both the use of CB slang and the incorrect use of ham slang. There is, in other words, a conscious emphasis on purity of folk speech.

Mastering the technical material and formal rules is only the first step toward becoming a radio amateur. A person must also learn customs and folk speech to be accepted as an insider.

Railroaders

Workers of the nation's railroads possessing rich occupational folk traditions and a pervasive occupational identity. Railroading inspired songs, tales, poems, legends, and also stories by nonrailroaders, as well as railroad-related place names.

Among the folk genres railroaders shared were personal experience narratives, nicknames, slang, stories of railroad characters, esoteric codes and attitudes, work songs and chants, union lore, poems, jokes, initiation pranks, tricks, food and lodging lore, stories of drinking, of gambling, and of womanizing, cautionary tales, and occupational techniques passed on by word and example (to supplement, or subvert, the industry's tradition of extensive written rules).

Railroading, which reached its last peak in the 1940s, developed several occupational crafts, foremost in folklore being the locomotive engineers. These men saw themselves as the most important workers, while other railroaders envied and resented their arrogance and their place in the popular mind. Discussions abounded about whether the conductor or the engineer was the most important person on a train. An engineer might be called a "hoghead" or defined as "a fireman with his brains baked out," while a conductor might be referred to as "the big ox" or defined as "a man, with or without brains, displaying pencils."

Other crafts on the moving trains were those practiced by the fireman and the brakeman. The conductor was in charge of the train and its contents but not the engine. Engineers often talked of "hauling" a certain conductor. Firemen worked on the engine and kept coal in the firebox to heat the steam to drive the engine; they worked for the engineer and were promoted to engineer. Among the slang names for them were "bakehead" and "clinker mechanic." Their stories concern having to deal with the engineer and having to shovel prodigious amounts of coal, perhaps because of a heavy train or because of the amount of steam wasted by an unskillful engineer.

Brakemen did the track switching, the coupling of cars, and the braking of individual cars. They were promoted to conductors. In early days, brakemen had to climb along the tops of cars and set and release hand brakes, a dangerous activity, especially in bad weather. Stories tell of brakemen being killed or having fingers or limbs amputated in accidents. When a brakeman hired out, the trainmaster would reputedly ask to see his hands. If he had a finger or two missing, the trainmaster knew he was experienced. Brakemen were often drifters in the early days and were called "boomers." Railroaders tell stories about such men either because they were interesting to talk to, were notorious drinkers, gamblers, and womanizers, or were unscrupulous characters. A few railroaders handled trains in the yard, putting trains together. Many boomers were hired during peak seasons to work in the yard.

Railroad lore also concerned telegraphers, dispatchers, signalmen, machine shop or roundhouse workers, section hands (track-repair workers), and passenger-train chefs and porters. Telegraphers, or operators, manned the stations along the road. They received messages by telegraph or telephone, including train orders instructing various trains as to

when they were to take to a side track to let another train pass. They were called “brass pounders” or “lightning slingers.” One of their jobs was handing up written train orders on a forked stick or hoop to passing trains, a dangerous and harrowing task. Stories about telegraphers deal with men who could send and receive messages by American Morse code very rapidly, and about their mistakes, sometimes resulting in train disasters.

Telegraphers sometimes became train dispatchers, whose job was (and is) to control train traffic efficiently without causing train collisions. Dispatcher errors could result in train wrecks, and legends persist of dispatchers who committed suicide, knowing that two trains were soon to collide and there was no way to stop them in time (they had no radio contact in the past). Women often worked as telegraphers and dispatchers, the only crafts in which they were allowed until recent decades.

Section crews, sometimes called “gandy dancers,” are known in folklore for the work chants that they used to line track by hand. One man would sing out a two-line rhyme followed by such words as, “Hey, boys, won’t you line ‘em [push, push]/Hey, boys, won’t you line ‘em [push, push],” as a way of keeping everyone moving in unison. The folk singer Huddie Ledbetter (Lead Belly) recorded some of these chants.

The Black men who worked on Pullman sleepers developed a lore of their own, including “George” stories (a porter was often called by that name), stories about treatment by passengers and conductors, about long hours of work at low pay, about labor organizing (they had their own union), and about activities in the civil rights movement. Jack Santino reported that porters generally had good relationships with their wealthy, elite passengers, although they did encounter some abuse (Santino 1989). Their main source of abuse came from tyrant, racist conductors under whom they were forced to work; their jobs could be in jeopardy if they gave the conductor the least amount of trouble. Much of their lore deals with maintaining personal dignity and solidarity while suffering from racist stereotyping. In the civil rights movement, porters carried messages from city to city and served as a conduit among Black organizers and Black communities.

Folk ballads deal with train wrecks, usually centered on the engineer. The legendary engineer John Luther “Casey” Jones inspired several folk ballads and blues because of the 1900 train wreck in which he died. Beside “Casey Jones,” “The Wreck of the Old 97” is the best-known wreck ballad. Another legendary figure is John Henry, who was involved in the building of railroad tunnel and the digging out of rock manually by drill and hammer in competition with a steam drill. In modern legendry, Jan Harold Brunvand collected versions of a story, “The Baby Train,” in which the whistling of an early morning train at a crossing awakens sleeping couples. Since they cannot go back to sleep and it is too early to get up, the couples end up having sex, thus increasing the incidence of births in that vicinity.

Railroaders tell stories of characters they met whose adventures are akin to local-character anecdotes told in communities. They mention dirty men who seldom washed themselves or their work clothes, and eccentrics, such as a man who wore his overcoat in winter and summer. A legendary character on the Baltimore and Ohio Railroad in Ohio was an engineer named “Peg” Clary, who had a wooden leg below the knee as a result of a railroad accident. One of his tricks was to complain of his leg and then stab it with a knife in front of a stranger for the effect it would have.

Nicknames are a prevalent form of folklore among railroaders. Sometimes it was a man’s physical or behavioral characteristic that yielded names like “Baloney Nose,”

“Bounce,” or “the Whispering Hope.” Often the name came from the work, including an error made by the man: “Silo Bill” because he mistook a silo for a water tower, “Hobby Horse” because he spotted a carload of hobby horses at the stock chute, or “Bone Crusher” because he was a rough handler.

Place names often relate to railroading. Helper, Utah, was so named because that was the point at which helper engines were attached. Chicago Junction, Ohio, started as a railroad town; later they changed its name to Willard, in honor of Daniel Willard, a president of the Baltimore and Ohio Railroad. When the Denver and Rio Grande Railroad built a remote track, they named the starting point Dotsero, for “dot zero” on the map.

Rainey, Gertrude (“Ma”) (1886–1939)

First significant female blues singer in America, known as “The Mother of the Blues.” Beginning her professional singing career as a child in 1902, she matured into an exceptional vocalist and popular recording artist of the 1920s, with ninetytwo existing recordings, one-third of which were her own compositions. A hybrid of the popular culture of show-business minstrelsy and the folk legacy of country blues, Ma Rainey moved back and forth between the two traditions throughout her career. She performed both rural blues and popular songs with equal proficiency and was also skilled as a dancer and a comedian, sometimes accompanying her songs with humorous skits. Instrumental backing on Ma Rainey’s recordings includes jazz bands, piano, guitar, banjo, fiddle, bass jug, musical saw, and slide-whistle (or kazoo). Her singing style—characterized by masterful use of slurs, moans, and blue notes—was the paradigm for the classic blues technique of Bessie Smith, Alberta Hunter, Ida Cox, Sippie Wallace, and Victoria Spivey. While Bessie Smith refined the style and made it well-known, Ma Rainey was its earliest practitioner and perhaps its creator. Like the most eloquent of the classic blues, her songs compellingly expressed anger, sexual jealousy, revenge, despair, exhaustion, strength, and hope from a female point of view.

During the Depression era, when the classic blues lost its popularity owing to the increasing ascendance of swing music, she stopped appearing professionally, although still a robust performer. She is memorialized in Memphis Minnie McCoy’s biographical ballad “Ma Rainey,” recorded in 1940, six months after Ma Rainey died.

Randolph, Vance (1892–1980)

Ozark folklorist. Born into a middle-class family in Pittsburg, Kansas—his father was an attorney and a Republican politician, and his mother was a librarian and a member of the DAR (Daughters of the American Revolution)—Randolph was attracted early on to the ethnic diversity and radical politics of the surrounding mining camps, and later devoted a long lifetime to the collection and documentation in print of the traditional folkways of the nearby Ozark Mountains.

After dropping out of high-school, working briefly for the *Socialist Appeal to Reason*, graduating from the local college and completing an M.A. in psychology at Clark University, teaching high school biology, and spending most of a brief stint in the U.S. Army in the hospital, Randolph moved in 1920 to Pineville, Missouri, where he spent the next sixty years earning a living as a self-described “hack writer” while he collected and published very nearly the entire traditional culture of his adopted regional home.

Randolph’s first scholarly efforts were 1920s studies of dialect in *Dialect Notes* and *American Speech*, and studies of Ozark folk beliefs and play-parties in the *Journal of American Folklore*. His first books, *The Ozarks* (1931) and *Ozark Mountain Folks* (1932), went virtually unnoticed by academic reviewers and were sometimes resented by local residents sensitive to the region’s reputation for “backwardness,” but they are recognized in the late 20th century as early instances of what are now called folklife studies.

The 1940s saw the first publication of Randolph’s work by a university press, when Columbia brought out *Ozark Superstitions* (later reprinted in 1964 as *Ozark Magic and Folklore*) in 1947. His four-volume *Ozark Folksongs* was also printed at this time (1946–1950). Randolph’s folktale collections were published in the 1950s—*We Always Lie to Strangers* (1951), *Who Blowed up the Church House?* (1952), *The Devil’s Pretty Daughter* (1955), *The Talking Turtle* (1957), and *Sticks in the Knapsack* (1958). His book-length study of Ozark speech, *Down in the Holkr*, appeared in 1953.

Hot Springs and Hell, a collection of nearly 500 jokes and anecdotes praised by one reviewer as the first “fully annotated jokebook” in American folklore scholarship, appeared in 1965, three years after Randolph’s marriage to Mary Celestia Parler, an English professor and folklore collector at the University of Arkansas. With the publication in 1972 of *Ozark Folklore: A Bibliography*, a massive work featuring 2,500 annotated entries, and the 1976 appearance of *Pissing in the Snow*, another folktale collection, which became the only portion of his bawdy materials to be published in his lifetime, Randolph completed his long lifetime’s work in collecting and preserving in print the songs, stories, beliefs, and speech of the Ozark region. Through most of this period he also wrote, entirely for money and mostly under a variety of pseudonyms, everything from an etiquette book and adventure tales for young readers to science booklets and soft-core pornography.

Randolph was elected a Fellow of the American Folklore Society in 1978, two years before his death. A second volume of his bibliography appeared in 1987, followed in

1992 by the remaining bawdy materials in two large volumes, *Roll Me in Your Arms* and *Blow the Candle Out*.

Rap

A term used by African Americans to define a stylized way of speaking. Salient features of a rap are braggadocio, double entendre, formulaic expressions, signifyin', and "playing the dozens." Folklorists trace the popularity of this speech genre to 1960s Black nationalist H. "Rap" Brown, whose praise name (nickname) depicted his style of speaking, called rappin'. Although Brown is credited for the name of this genre, elements of rap can be traced from African epic bardic traditions to rural southern-based expressions of African Americans such as toasts, folktales, sermons, blues, and game songs (such as the hambone).

African Americans transported Southern traditions during massive migrations to Northern urban centers between the 1920s and the 1950s. In the new milieu, Southern traditions were transformed and modified to reflect urban life. This new context also fostered a style of speaking known as jive talk, a metaphorical way of speaking that uses word and phrases from American mainstream English, but reinterpreted from an African American perspective (for example, man becomes "cat"; or house becomes "crib"). The art of jive is predicated on its ability to remain witty and original—hence its constant fluctuation in vocabulary over the years.

Between the 1930s and the 1950s, jive gained prominence in the performances and speech culture of jazz musicians like Cab Calloway, Louis Jordan, and Dizzy Gillespie and comedians like Redd Fox, Pigmeat Markham, Jackie "Moms" Mabley, and Rudy Ray Moore, who was known for popularizing toasts like "The Signifying Monkey" via audio recordings. In addition, Black radio disc jockeys—namely, Al Benson and Holmes "Daddy-O" Daylie—introduced jive talking to music (in rhyme) via the airwaves.

By the mid-1960s, jive was redefined and given newer meaning by H. "Rap" Brown, who adorned his political speeches with signifyin', rhyme, and double entendre. Although his way of speaking inaugurated the shift from jive to rap, Brown's stylized speech soon gained popular acceptance among young urban admirers as rappin'. It was not, however, until the late 1960s that Brown's speaking style was set to a musical accompaniment by political poets such as the Last Poets of Harlem and Gil-Scott-Heron, who recited rhyming couplets over an African percussion accompaniment.

In the late 1960s and the 1970s, the concept of rappin' over music emerged among Black music artists as two distinct song styles: the love rap (as in the music of Isaac Hayes) and funk rap (for example, George Clinton and his group Parliament). Unlike rappin' performed by early entertainers, these raps were loosely chanted over a repetitive instrumental accompaniment.

Rap as a distinct musical genre evolved in the Bronx, New York, during 1972 with itinerant disc jockeys called "mobile djs," who mixed prerecorded hits alternately on two turntables while reciting party phrases to the crowd in a microphone. Because deejaying became a demanding art, party-styled emcees teamed with deejays, thus giving rise to rap's 1990s form.

Rap music artists include Kool Moe Dee, Queen Latifah, Public Enemy, and Arrested Development, among others.

Recitation

Dramatic, solo, oral performance of prose or poetry spoken from memory or read from manuscript. Recitation is a major Anglo American folk and popular tradition that traces back to the British Isles. Many of the items performed derive from written sources; other recitation texts were composed by their performers and are known only to a small group. Perhaps for these reasons, there are no indexes to American (or British) recitations, and the widespread distribution of recitations in Anglo American tradition, their status as traditional performance, and the value they share with other folklore as a source of information for understanding people and cultures were seldom recognized by folklore research until recently.

Recitation was frequently encountered and occasionally noted in the British Isles from at least the 17th century; the *Oxford English Dictionary* indicates that the word “recitation” in the sense of spoken oral performance of memorized or read material was in use in England in the mid-17th century.

The popular-culture history of recitation in the British Isles is intertwined with its popularity in folk culture. The Irish poet and dramatist William Butler Yeats described the career of a “gleeman” who recited as well as sang in Dublin during the late 18th and early 19th centuries, and the clear implication was that the gleeman was part of a widespread, ancient tradition. Recitation was an important aspect of the musichall and pub performance traditions of the British Isles, and it is still very much a part of popular entertainment there. Stanley Holloway is well known in Britain for his many years of professional recitation performance; books of recitation texts made famous by his performances are widely distributed, and recordings of his—and a number of other well known, cherished performers’—recitation performances are still occasionally broadcast over radio and provide a major source of inspiration, and parody, for British folk and popular entertainers.

The recitation-performance tradition was part of the oral tradition that the early British settlers brought to America, and the status and interactions of recitation in folk and popular culture in America are similar to the role it fills in Britain.

Although the folk recitation-performance tradition was seldom accorded the same stature or attention as folksongs or ballads, it was frequently noted by travelers, local historians, and folklorists. Many references to recitations were made more or less in passing by early American folklorists. John Lomax, in fact, not only observed recitation while he was collecting cowboy songs, but also learned the classic cowboy recitation “Lasca,” written by the English popular poet Frank Desprez, and performed it at the 1911 Modern Language Society of America convention. From similar scattered evidence, it seems clear that recitation has long been a part of Anglo American folklore.

The importance of recitation in American popular culture is much more easily and completely documented. In the early years of the 20th century, a series of pamphlets titled *Werner’s Readings and Recitations* were sold in great numbers to provide texts for reciters. Recitations constituted a relatively high percentage of the total record sales in the

United States during the first quarter-century of the medium. The popular entertainer Cal Stewart, who billed himself as “The Talking Machine Storyteller,” recorded thousands of recitations during the 1890s and the early decades of the 20th century. Hank Williams, Johnny Cash, Perry Como, Tex Ritter, Joan Baez, Tom Mix, and Andy Griffith are among the many American recording artists who have made records featuring recitation.

Popular-culture recitation fed and reinforced the folk recitation tradition. Folk and popular reciters alike relied upon Werner’s collection, and many of the recitations recorded by Stewart—or, for that matter, Cash—passed into oral tradition and underwent the same sort of variations and reworkings as other folk forms such as ballads and tales. Still, recitation was largely ignored by folklorists until well after World War II.

Even an incomplete history of Johnny Cash’s recitation “The Stars and Stripes” demonstrates the complex interaction between popular culture and folk culture. The original version of Cash’s poem—using the flag as a symbol for the nation in lines such as: You see, that flag/Got a hole right there, /When Washington carried it/Across the Delaware—was disseminated primarily by television and ended in the Vietnam War period. But a recent public performance by St. Johns, Arizona, reciter Delbert Lambson included a new stanza he had added that brought the poem up to date by mentioning Operation Desert Storm.

The first major folklore collection and analysis of recitation in America dealt not with Anglo American forms, but with the related African American form, the “toast.” With the exception of scattered research and occasional mentions in folksong and ballad collections—particularly those of Henry W. Shoemaker, (see Shoemaker 1919)—there was almost no significant scholarly work directed toward the Anglo American recitation until the 1970s. A description of a recitation, a reciter, and a recitation performance was published in a regional American folklore journal, (*AFF*) *Word* [Aiiizonz. Friends of Folklore], in 1972 and was followed a year later by more description in a *Journal of American Folklore* article. A session of the 1974 American Folklore Society annual convention was devoted to the topic. Revised versions of the session papers, along with four others, were published in a special issue of *Southern Folklore Quarterly* in 1976. These seminal articles were in turn followed in 1978 by a special sixty-three-page issue of *Southwest Folklore*, which served as extended liner notes for a documentary record, *Uncle Horace’s Recitations* (1987 *AFF* [Arizona Friends of Folklore] Flagstaff, Arizona), featuring twelve recitations by one performer and transcriptions of the rest of his repertoire. Yet another article on recitation, concerning a bawdy text (Baker 1987), appeared in the *Journal of American Folklore* in 1987, and in 1990 the first book devoted completely to the subject of Anglo American recitation was published (Cunningham 1990). With this research, a picture of Anglo American recitation and its place in folklore is beginning to emerge.

It is clear that the oral tradition of America and the British Isles has long included individuals, families, and communities for whom the dramatic oral performance of poems and stories is as natural as speaking. Programs as varied as the *ceilidh* held at Bunratty Folk Park in Shannon, Ireland, and the Old West Show at Mesa, Arizona, continue to feature recitations in the 1990s. These performances utilize stories and poems from a variety of written and oral sources circumscribed by a broad range of performance conventions that govern their scripted, fixed-form, nonextemporaneous performances. The same sort of performances also take place as a part of the folklore of both groups.

Some performers memorize their recitations, others read their's. In either case, both the reciters and their audiences have a clear concept of a script, a correct form of what is being performed. The reciters recite and the audiences provide the attention essential to the form's survival because that which they create and that which they adopt and adapt alike embody their values and beliefs while entertaining and fulfilling expectations and emotional needs.

Texts recited in the 1990s may be taken from traditional ballads or popular poetry (Ernest Lawrence Thayer's "Casey at the Bat" is probably the single most popular and most widely distributed such text in America, and "The Green Eye of the Little Yellow God," by J.Milton Hayes, holds the same position in Britain), or they may be written by performers themselves in the manner and form of traditional ballads or popular poetry; what makes recitation a folk genre is that it is a traditional oral performance. Elements of performance run through all presentations of recitation texts. Most of them are actually performed before an audience, and those that are not (such as those collected by folklorists outside of normal contexts) adhere to performance characteristics of the genre and *could* be so presented. The size of the audience ranges from a few family members to fairly large groups that are a part of family or community gatherings; they all share a basic familiarity with the conventions of recitation performance, which are introduced, indicated, and communicated in various subtle or more obvious ways. Performers are frequently formally introduced to their audience by a "master of ceremonies," or, in less formal situations, performers introduce themselves. Reciters stand while their audiences remain seated. By their performances, the reciters create and command an invisible stage so that their audiences recognize recitation in progress, enter the performance, and play their roles, too. A theatrical or a subtle gesture, a twinkle in the eye, words that tumble over each other, a shout, a whisper, the rising or falling of pitch, sometimes the tinkling of a piano or the sobbing of a violin, and even silence—all call into being a world of imagination wherein the audience becomes a part of the performance and shares the performers' evocation and evincing of joy and sorrow, laughter and tears.

Recitation is not as common in popular or folk entertainment in either the British Isles or America in the 1990s as it was in the 1890s, but wherever there are opportunities for reciters to perform, and wherever their performances are valued by their audiences, the tradition of recitation continues.

Regional Folklore

Folklore generated or circulated within a particular region of the country and that reflects peculiar features or aspects of life in that region. Regional folklore may be indigenous to a particular place or it may be “regionalized” as people move from one part of the country to another and adapt their folklore to their new home.

In the history of American folklore scholarship, regional folklore has been a constant, if relatively minor, theme. Articles on folklore collected in various regional settings appeared more or less regularly in the *Journal of American Folklore* from its initial issues in 1888 through the 1940s. During that same period, the establishment of state and regional folklore societies and their journals both reflected and stimulated interest in regional folklore. The focus in these journals, and in the work of regional folklorists in general, was almost exclusively on the collection and publication of texts. Some regional folklore collectors concentrated on particular genres. Cecil Sharp, for instance, was interested in English ballads in the Appalachians. But the first half of the 20th century also saw multigenre collections within specific regions or states. Frank C. Brown, for instance, gathered exhaustively in North Carolina, while Vance Randolph was doing the same in the Ozarks. Underlying these collections of regional folklore seems to have been a conception of folklore as items that remained relatively unchanged during their transmission through generations of tradition bearers, rather than as the creative expression of people as shaped to some degree by their experiences, of and in, a particular place.

An exception to this view was promulgated by Benjamin A. Botkin, who was interested in the indigenous folk products of regional experience. Botkin’s chief vehicle for his ideas about regional folklore was his own periodical, *Folk-Say*, initiated in 1929. Although Botkin’s views had little direct impact on other folklorists at the time, he was part of a cadre of American historians, literary scholars, geographers, and sociologists who evinced a growing interest in regionalism and regional culture during the 1930s—an interest that culminated in the conference on “Regionalism in America” held at the University of Wisconsin at Madison in 1949.

Mid-century, in fact, seems to mark a turning point in folklorists’ conceptions of regional folklore, as foreshadowed in Richard M. Dorson’s *Bloodstoppers and Bearwalkers: Folk Traditions of the Upper Peninsula* (1952). When Dorson suggests in this book that the Upper Peninsula of Michigan is a “seedbed for folk culture,” he is proffering, albeit implicitly, the notion that regional folklore can be understood as a response to UPers’ (who sometimes call themselves “Yoopers”) local experiences. Dorson’s ideas about regional folklore appear more fully in *American Folklore* (1959) and *Buying the Wind: Regional Folklore in the United States* (1964), in which he samples folk materials from several distinctive cultural regions.

Where Dorson hinted at the possibilities of studying the folklore that is generated within a region rather than merely collecting the folk materials that happen to circulate within it, Américo Paredes presented a full-blown study of that very process in “*With His Pistol in His Hand*”: *A Border Ballad and Its Hero* (1958). Paredes argued that the *corrido*, the native ballad form of the border country on the Lower Rio Grande Valley, was a product of historical and cultural forces in that region.

In the 1960s, folklorists' fundamental conceptions of the nature of folklore underwent a powerful transformation from the idea of folklore as static item to the notion of folklore as dynamic process. In the wake of this revolution, Suzi Jones argued in a 1976 article in *the Journal of the Folklore Institute* that the changes effected in folklore as people move from one place to another reflect adaptations to local regional environments. Regionalization, therefore, is the process by which folklore is transformed through people's response to place. Jones went on to suggest that regional folklore becomes a mark of regional identity and sense of place, as a rhetorical strategy for demonstrating familiarity with the local environment. According to this view, a regional folk group exists where people share a body of folklore by virtue of living in a certain geographical area that forms the basis for a shared identity as consciously expressed in their lore.

The relationship between regional folklore and local experience can be seen in three ways. First, imported forms of cultural expression can be adapted to regional conditions. Second, folklore can emerge from particular regional conditions and experiences. Third, folklore can be used to express a sense of identity with a place.

Adaptation of folklore occurs when people move into a place, bringing with them the traditional forms of expressions from their former homes, and alter those forms in response to the new setting. The dogtrot house in the Southern United States, with its characteristic breezeway, seems to have developed as a response to the summer heat and humidity of the place. Similarly, the hymn "Beulah Land" was parodied by homesteaders on the Great Plains in the 1870s, and in other parts of the arid and semiarid West after the turn of the century, in response to the region's harsh environmental conditions.

Regional folklore also emerges from specific local conditions and expresses the critical elements of the regional experience from the resident's point of view. In Mormon Utah, for instance, an area marked by low rainfall, an elaborate body of custom, belief, and narrative about water has developed. Often regional folklore evolves from particular historical or economic factors, such as dominant ethnic or occupational groups. The folklore of southern Louisiana is shaped nearly equally by the influence of the Cajuns and by its characteristic waterways, which provide many of its residents with their livelihood.

Finally, as Jones suggested, regional folklore can be used as a means of expressing identity. Within each American region, residents have devised ways of distinguishing between insiders and outsiders, and they often tell stories detailing the differences. The "Arkansaw Traveler" is perhaps the best-known example, "but is paralleled in a wide variety of other stories from Maine Down Easters' accounts of 'summer folks' to westerners' anecdotes of 'dudes.'" Also declaring pride in regional identity are aphorisms about drinking from a local water source or wearing out a pair of shoes in a place as a warranty that one will be become a permanent resident.

At the end of the 20th century, regional folklore seems to be holding its own in the face of mass-produced goods and the dominance of popular media. A number of academic regional-studies centers have been established since the mid-1970s, and public interest in local and regional forms of cultural expression has been stimulated by the activities of public-sector folklorists and other cultural conservationists who draw attention to those forms through museum exhibits, festivals, and other forms of programming.

Religion, Folk

A term covering a wide range of religious phenomena that have interested folklorists, anthropologists, and other scholars. Folklorist Don Yoder, who has done a great deal of research in the area of religion, provided the definition other folklorists turn to most often: "Folk religion is the totality of all those views and practices of religion that exist among the people apart from and alongside the stricdy theological and liturgical forms of the official religion" (Yoder 1974:14). The study of folk religion often overlaps with the study of folk medicine and folk beliefs.

Folklorists and others have approached the study of folk religion in North America in many ways; this entry describes seven of the most prevalent and important approaches. In many instances, there can be significant overlap among these heuristic categories.

The seven categories are: (1) religion of the "folk society"; (2) religious practices of "the folk"; (3) religion of dissenters from orthodoxy; (4) religion as lived and experienced; (5) syncretistic religious practices and beliefs; (6) religious folklore; and (7) religious practices of the group to which the folklorist belongs or once belonged.

Religion of the "Folk Society"

Most conceptions of folklore, including Yoder's, rely on an (often unstated) assumption that folk culture exists in opposition to "mainstream" or "modern" culture. The concept of "the folk society," best known from Robert Redfield's article of that name makes this contrast explicit. The folk society exists in isolation from the mainstream society, retaining old practices and beliefs long after mainstream society has abandoned them, passing on its wisdom orally rather than through writing, and maintaining traditions in the face of change.

Folk religion, from this perspective, would include oral, traditional, residual, and informal religious beliefs and practices no longer recognized or active in mainstream society. The classic example of religion of the folk society would include the religious practices of any peasant people living alongside, but largely isolated from, a relatively more modern, urbanized society.

Religious Practices of "the Folk"

Related to, and often influenced by, the folk-society model are many folklorists' studies of the religion of people who might be said to "look like folk." This would include the rural and urban poor, as well as groups isolated from the mainstream by geography,

culture, class, or preference. What makes a group of people “look folk” can vary from time to time, situation to situation, and folklorist to folklorist, but generally speaking any religious group or practice that seems nonmainstream, exotic, or marginal (from the folklorist’s point of view) might well be labeled folk religion. Good examples include groups that maintain an older lifestyle, such as the Old Order Amish or the Pennsylvania Dutch; groups that are marginal in their society, such as Pentecostals; and groups made up of ethnic or racial minorities with their own distinctive practices, such as Black Baptists and Latino Catholics.

William M. Clements’ discussion of the “folk church” in American society also fits in this category (Clements 1978). Clements defines as “folk churches” Protestant groups that exist apart from mainline denominations and on the margins of mainstream society.

Religion of Dissenters from Orthodoxy

Another conception of folk culture useful for the study of religion is the image of folk culture as a “culture of contestation,” in the phrase originated by Luigi Lombardi-Satriani in 1974. From this point of view, folk culture is not merely in the shadow of mainstream culture, but is in an active state of conflict with popular or elite culture. Folklorists are often interested in subgroups within major religions that are distinct from the majority by virtue of gender, sexual preference, race, or other personal characteristics or philosophical stances, and who explicitly or tacitly protest or challenge some of their religion’s tenets and/or practices.

Religion as Lived and Experienced

Another way of understanding the “folk” does not relegate them to a separate folk society, or to the status of a dissenting minority, but includes all of us as we live our lives day by day. Leonard Norman Primiano’s formulation of “vernacular religion” draws attention to religious beliefs, practices, and experiences as they are understood, undertaken, and expressed by all people, modern and traditional, urban and rural (Primiano 1993). The opposition here is between an ideal of religion—the institutional, codified, set form of religion—and religion as experienced. While a distinction is maintained between institutional religion and vernacular

In front of the courthouse on court day, people listen to an itinerant preacher. Campton, Kentucky, 1940. Photo Marion Post Wolcott. Library of Congress.

religion, this conception of folk religion draws attention to that which all people, no matter what their background or social standing, have in common by way of religious experience. Urban sophisticates as well as rural rustics partake of vernacular religion.

Syncretistic Religious Practices and Beliefs

Syncretistic religions are sometimes considered folk largely because they are thought of as “hybrid” rather than “pure.” Syncretistic religions, created through a blending of two or more religions, are especially common where world religions (Christianity, Islam) encroach on local religions through the efforts of missionaries. Most studies of North American folk religion in this sense have focused on blends of African, Native American, and Catholic religious beliefs and practices, such as *vodun* and *santeria*.

Religious Folklore

There are a large number of folk genres, such as legends, jokes, verbal art (including sermons—see Lawless 1988; Rosenberg 1989), foodways, family traditions, material culture, and the like, that can be found both in and outside of religious settings. The study of any such “ordinary folklore” that happens to have religious aspects or sacred overtones

can well be described as religious folklore (Danielson 1986). Well-known examples would include Mormon saints' legends and ethnic religious holiday traditions.

Religious Practices of the Group to which the Folklorist Belongs or Once Belonged

There are a large number of studies by folklorists of the religion to which the folklorist adheres or once adhered. Examples would include studies of Mormons by William Wilson or the husband-and-wife team of Austin E. and Alta S. Fife; the Amish by John A. Hostetler; and Catholics by Primiano. This type of study is related to the tendency of folklorists to study their own region (Vance Randolph in the Ozarks) or ethnic group (Américo Paredes' work with Texas Mexicans).

The term "folk religion" is increasingly controversial as well as generally imprecise. Both the controversy and the lack of precision are exacerbated by the vagueness of the constituent terms "folk" and "religion," which are in their own right difficult to define. Elaine Lawless, a prominent scholar of religious folklife, begins her 1988 book, *God's Peculiar People*, by discussing definitions of folk religion, but in her 1993 work, *Holy Women, Wholly Women*, she does not use the term at all. Many scholars prefer to avoid the term "folk religion," substituting such terms as popular religion, unofficial religion, vernacular religion, and religious folklore and folklife.

Reuss, Richard August (1940–1986)

Folklorist primarily remembered for his work on the folk-revival movement and on politics and American folklore. Reuss was a native of New York City, did his undergraduate work at Ohio Wesleyan University and his graduate work in folklore at Indiana University. He taught for several years at Wayne State University in Detroit until budget cuts resulted in his position being terminated. He then taught at several schools, including Indiana University, until he decided to shift vocations. In 1981 he received a master of social work degree from the University of Michigan, and thereafter he worked in that field.

Although Reuss published many articles, his most important work, *American Folklore and Left-Wing Politics, 1927–1957*, remains unpublished. Shortly after finishing this work as his Ph.D. dissertation in 1971, he submitted it to a university press that accepted it, providing that certain extensive revisions were made. Having just undergone the rigors of writing the dissertation, Reuss decided not to undertake this revision immediately; as a result, the manuscript became something of an underground classic. This dissertation reflected his long-standing interest that began when, as a teenager, Reuss participated in the folk-revival movement of the late 1950s. Later he worked as a volunteer for *Sing Out!* and *Broadside*, two important revival magazines; he also acquired an impressive personal library that included many revival publications. Reuss became interested in the history of the movement in which he had participated, and he wrote papers on the subject both for his undergraduate and graduate classes. This was at a time (during the late 1960s to 1970s), when most professional folklorists considered the folk-revival movement irrelevant to their academic discipline.

Reuss had a number of other passions, including the history of folklore studies, as evidenced by his establishing a journal, *Folklore Historian* (1983). Concurrent with this was a strong interest in the role of women in American folklore scholarship. He also founded the Michigan chapter of the Committee to Combat Huntington's Disease and became a member of that organization's national board. The apparent lack of records concerning the history of his own family and that of his wife led Reuss into extensive genealogical work as well. A long-time hobby of collecting baseball cards gained him such national attention that in 1971 he was featured in a front-page story in the *Wall Street Journal*.

In 1987, the year after Reuss' death, the Folklore and History Section of the American Folklore Society established a prize in his name for the best student paper dealing with the history of folklore studies.

Revivalism

A term used by folklorists to describe the conscious use of folklore to express or represent ideas about identity and/or art. The term has been used most frequently to describe practitioners of folk music particularly during the 1960s (Rosenberg 1993), and storytellers, starting in the 1970s (Sobol 1992). “Revivalism” is sometimes used by folklorists as a straightforward descriptive term to describe certain kinds of social movements, but it has more frequently carried with it meanings of judgment about authenticity. It is one of those terms, like “fakelore” (Dorson 1969), “folklorism” (Bendix 1988), “folksay” (Hirsch 1987), and “folkery” (Dean-Smith 1968) that has the potential to draw attention to often overlooked reflexive dimensions of thinking—be they academic, intellectual, or casual—about folklore.

An early appearance of the term “revival” in connection with folklore came in the writings of English folksong collector Cecil Sharp, who in 1907 called for a revival of English folk music. Following his lead, the English Folk Dance and Song Society became the center of the social movement called the first British folksong revival—although the strong interest in the ballad during the 18th century has also been characterized in retrospect as a revival—and this led indirectly to later-20th-century folksong revivals in Britain and elsewhere. Sharp, however, was using the term metaphorically (its oldest sense) to describe the refurbishment of a repertoire or genre, as when we speak of the revival of a Shakespeare play or some other historical work of art. “Revival” has also been used as a metaphor for the awakening of religious spirit since at least the time of Cotton Mather; during the 1970s to 1980s, folklorists have grown more interested in religious revivalism as a social phenomenon with folkloric aspects. This area of inquiry has, however, been considered by folklorists to be essentially different from that of secular revivalism and is generally treated as an aspect of the folk-organized religion continuum.

By the 1960s, when folklore emerged as a professionalized discipline, folklorists tended to read the term “revival” literally rather than metaphorically and, having shifted their focus outward from cultural products to include cultural producers and contexts, tended to see the term as referring to the resuscitation of “living” traditions in these new terms. Consequently, they used it to describe the uses of insiders’ cultural products by outsiders, individuals from “other” cultural contexts. This perspective coincided with the apogee of the commercial folk-music boom of the 1960s. “Revivalism” thus became a pejorative or judgmental term for folklorists, referring to the contextually inauthentic or spurious, used, characteristically, to describe situations in which individuals or groups perform texts, enact customs, or create objects that are based on traditions from outside their own personal historical and/or cultural experience.

Revival—whether referred to literally or metaphorically—has been problematic to folklorists for another reason. While folklorists have typically defined their materials as emerging from a matrix of “unselfconscious” cultural production or enactment, any attempt to revive such materials implies some degree of self-consciousness. Those most

interested in the revival of folklore tend to have, like Sharp, conscious (and articulated) political, artistic, or cultural agendas that extend far beyond the original contexts of production. Ironically, then, given their pejorative use of the term, folklorists have been among the principal folklore revivalists.

When folklorists analyze situations in which differing degrees of awareness about such matters are manifest, they tend to create categories of classification that differentiate on the basis of awareness and agendas. Ellen Stekert, writing in 1966 about the urban folksong movement, spoke of four groups: “traditional singers,” “imitators” (she later altered this to “emulators”), “utilizers,” and “new aesthetic” singers. For Stekert, traditional singers are those who “have learned their songs and their style of presentation from oral tradition as they grew up” (Stekert 1993:96). Joe Wilson and Lee Udall, in their 1982 book addressing folk-festival organizers and managers, present a somewhat similar, though more detailed, set of categories. They first separate performers into two categories: Those “reared in the culture from which the performed materials are drawn” are distinguished from those “who adopt elements of style and materials from cultures into which they were not reared.” This allows them to split what is in essence Stekert’s first category three ways: “traditional folk performer,” “aware traditional performer,” and “evolved traditional performer” (Wilson and Udall 1982:20–23). These subdivisions allow for the idea that traditional performers might lose the unselfconscious quality in their performance; they also split the second, nonreared, category into subdivisions that resemble Stekert’s last three.

This is good as far as it goes in that it admits the possibility of nonunselfconsciousness, but what is usually left unsaid is that there is often collaboration among the reared and the nonreared with a revivalist or revitalizationist goal in mind. Examples abound within the domain of music: Since the 1960s, for example, the growth of old-time fiddle music associations in North America has been characterized by the participation of individuals who grew up hearing and performing fiddle music together with those who did not. They share a perception of this music culture as being threatened by outside forces, and they collaborate to protect and promote the tradition. Similarly, the late-20th-century storytelling revival brings together those who learned Jack tales from their family and friends and those who first encountered such *Märchen* through the Grimm brothers or Walt Disney. In a more general way, collaboration between insiders and outsiders occurs whenever folklorists conduct research into a tradition. Today folklorists recognize the intellectual necessity and ethical imperative for dialogue with their informants in the process of research and publication. As scholars become “aware” and “evolved” in their attitudes about the traditions they study, so, too, do the tradition bearers. Consequently, the possibility of revivalism always exists whenever anyone identifies something as folklore.

Revolutionary War

American War for Independence from British rule. Any war creates a semifolk occupation—that is, an occupation with its own lore into which members come for a set period of time before returning to another part of society. This differs from a genuine folk occupation in that its members are from heterogeneous backgrounds and are made homogeneous only by the temporary situation. In such an occupation, the lore may be either brought from the outside and adapted to fit the new situation, created by the homogeneity of the semifolk occupation, or may be popular lore created by educated persons associated with, or looking back on, the occupation.

Three examples from the American Revolution will illustrate. The tale of the scout Tim Murphy shooting an enemy Indian hiding behind a rock by bending his rifle and firing the bullet in a curve is an old European folktale (Type 1890E in the Aarne-Thompson *Type-Index*). The story simply attached itself to the reputation of this famous rifleman. On the other hand, the New York legend that Murphy's shooting of Scottish General Simon Fraser from a tree was the turning point in one of the battles at Saratoga is a genuine bit of lore rising out of the Revolutionary experience. But stories like those about Nathan Hale and his famous last words, or Paul Revere's ride to Concord, are dramatizations that have been made part of Revolutionary lore after gaining popularity at the literary level.

Soldiers joining the armies or shipping aboard the privateers brought their own legends, songs, beliefs, and folkways with them. These were genuine bits of the lore of the colonial farmers, sailors, lumbermen, and villagers who came from Massachusetts, Pennsylvania, and Virginia to make up the troops. The traditions were adapted and melded into a body of material to serve the fighters. Genuine Revolutionary folk

As the one-sixthdollar note of 1776 shows, a theme of the revolution was the punning motto MIND YOUR BUSINESS. Library of Congress.

heroes like Murphy and the better-known Ethan Allen had their reputations salted with anecdotes and motifs common to this Anglo-colonial lore. They are bitten by snakes who get drunk on their alcohol-laden blood; they run deer into the ground because it is more fun that shooting them; and they grab their rifles and knock flies out of the air.

A major example of lore brought to the war from the communities that provided the troops is *The Green Mountain Songster*, printed in 1823 by "An Old Revolutionary Soldier" calling himself "a follower of Gen. Washington." It is a collection of British and colonial American songs and ballads—some old, some recent—that must have been sung around the campfires forty-five or so years before at Aquidneck or Valley Forge. Although the book contains no music, most of the songs are well enough known that scholars can make a good guess as to their tunes.

One piece in the *Songster*, "The Plymouth Colony," uses the phrase "yankee doodle dandy." "Yankee Doodle" was, of course, the best-known folksong of the Revolution. Originally a ballad-like song written during the French and Indian Wars by a British

Army surgeon, George Shuckburgh, it set an old British refrain to an even older European melody. Popularized by the British in the early days of the Revolution as a means of mocking the shabby colonial troops, it was taken over by the colonials with many variations. Even today, the refrain beginning “Yankee Doodle went to town” and its tune are known to every American, although Shuckburgh’s full text and the dozens of variations have been forgotten.

Also popular was “Chester,” a hymn written by one of the Boston patriots, music master William Billings. Given fresh lyrics to fit the political situation, it was sung throughout the war. In the 1990s, the hymn is still known to the shapenote singers of the South. “The World Turned Upside Down,” the song played at Cornwallis’ surrender, was another favorite.

To the soldiers fighting the war, the names most Americans associate with the Revolution—Paul Revere, Nathan Hale, John Paul Jones, Benedict Arnold, British Major John André, and the like—were everyday participants, however remote they may have seemed. They were certainly not folk heroes like Murphy and Allen. They owe their “legends” to publicity and literary endeavors fostered in the 19th century as our country began to establish cultural, as well as political, independence. Nor have the flag-waving fathers of these stories been bothered by presenting distorted pictures of these heroes who fought in a war in which loyalties and purposes were often confused.

Most Americans do not know or care that Paul Revere was a “mechanic” (part of the Underground) in Boston whose ride to warn of the British raids ended with his capture near Lexington before he got to Concord, and that his efforts were shared by William Dawes and Samuel Prescott; that Nathan Hale was an ill-prepared spy who almost certainly never said “I only regret that I have but one life to lose for my country”; that John Paul Jones was a hero to pro-colonial sympathizers in Europe and even England; that Benedict Arnold was not alone in thinking it would be best if the conflict were ended to British advantage; and that young, handsome Major André, besides being a fool to get captured, was sympathetically treated by many colonials.

Nonetheless, these figures have replaced the real folk heroes—the Murphys, the Allens, the Enoch Crosbys (a spy who was probably the model for James Fenimore Cooper’s Harvey Birch), and the John Champes (the soldier assigned to kidnap Arnold after his treasonous act at West Point). These, too, have been eclipsed, this time by frontier and Western figures, the shapers of what we regard as our “manifest destiny.” Somehow Davy Crockett seems more national, less colonial, than Murphy or Allen.

Richmond, W.Edson (1916–1994)

Folklorist, literary scholar, professor emeritus of English literature and of folklore at Indiana University. Richmond was born and raised in Nashua, New Hampshire. He earned B.A. and M.A. degrees from Miami University of Ohio and his Ph.D. from Ohio State University, where he studied under Francis Lee Utley. Initially an instructor at Ohio State, in 1945 he took a position at Indiana University and remained there until his retirement in 1986. He was acting chairman of freshman literature in 1955–1956 and acting chairman of the folklore program in 1956–1957.

Richmond received an ACLS (American Council of Learned Societies) grant to attend the Linguistics Institute at the University of Michigan. In 1952–1953, he was vice-president of the American Folklore Society. In 1953–1954, he held a Fulbright Research Professorship at Oslo, Norway, and during that time he also lectured in folklore in Salzburg, Austria. In July 1954, he was a lecturer in American culture at Oslo, and in the fall of that year he was the Indiana University delegate to the Congress of Modern Languages and Literatures in Oxford, England. He was Fulbright visiting professor of English at the University of Helsinki, Finland, in 1959–1960, and in September 1959 he was the American Folklore Society delegate to the Scandinavian Folklife and Folklore Society Research Association. He also chaired the awards committee of the Chicago Folklore Prize, and for many years he compiled the annual bibliography published by the American Folklore Society.

Richmond served as editor of *Hoosier Folklore*, later renamed *Midwest Folklore*, and of the *Journal of Folklore Research*. He also edited *Studies in Honor of Professor Stith Thompson* in 1957. His specialty was the ballad, a subject on which he compiled a major bibliography (Richmond 1989) and wrote more than twenty-five essays and nearly 100 reviews. He sustained a lifelong interest in Scandinavian ballads and folklore, and spent a great deal of his life in Sweden and Norway, studying and lecturing. In 1977 Richmond was admitted to the Norwegian Academy of Science and Letters.

In 1985 a festschrift dedicated to Edson Richmond was published, reflecting the devotion his students and colleagues felt for him. By his friends, Richmond was admired for his warmth, his charm, and his courtliness. In his private life, Richmond was a skilled yachtsman, and he served in several capacities with the Bloomington (Indiana) Yacht Club, ultimately as commodore of the club. He died on August 11, 1994, in Bloomington Hospital at age 78.

Rickaby, Franz (1889–1925)

Pioneering scholar of occupational folksong. Born in Rogers, Arkansas, Rickaby was raised in Springfield, Illinois, where he distinguished himself as a poet and a musician. He received a B.A. from Knox College in Galesburg, Illinois, in 1916 and an M.A. in English literature from Harvard University in 1917. From 1917 through spring 1923, Rickaby was an instructor at the University of North Dakota. He taught subsequently at Pomona College, Claremont, California, from 1923 until 1925, when he died at thirty-five of heart failure—a consequence of rheumatic fever.

Rickaby did not study the ballad at Harvard under Francis James Child's disciple George Lyman Kittredge. Rather, work with regional arts in North Dakota and a summer job in Charlevoix, Michigan, brought familiarity with what he called a "cultural frontier" wherein ballads flourished. He developed a "comparative balladry" course in 1919 and began collecting ballads on field trips and through students. His papers reveal 243 folksongs gathered, with variants from singers in North Dakota, Minnesota, Wisconsin, and Michigan.

Rickaby's posthumous *Ballads and Songs of the Shanty-Boy*, published in 1926, includes fifty-one texts, most accompanied by tunes. His "Introduction" and notes provide our first rich glimpse of lumber-camp singers, their performance style, their ethnic diversity, and the social meaning of their songs. Rickaby's book also mentions his critical reliance on three untrained logger-folklorists (William C. Bartlett, Michael Cassius Dean, and Otto Rindlisbacher) and offers a fine sketch of ballad-maker William N. Allen (alias "Shan T. Boy"), many of whose woods poems were published in *The Hodag*.

Riddle, Almeda (1898–1986)

One of the most famous Ozark folksingers of the 20th century. Riddle's widespread acclaim was largely a result of her appearance at folk festivals, a number of her commercially released recordings, and her book written in collaboration with folklorist Roger D. Abrahams. An articulate woman with an excellent memory, Riddle learned her first song, "The Blind Child's Prayer," when she was seven years old. Her father, J. L. James, was a major influence and the source of many of her songs. There were, however, other influences, the most important of whom was an uncle, John Wilkerson. Her mother and other family members and friends also contributed to her repertoire, which she estimated eventually grew to more than 600 songs. Ninety percent of these Riddle learned by age eighteen.

In 1916 Almeda married Price Riddle, and she subsequently had four children by him. A cyclone that passed through her home near Heber Springs, Arkansas, on November 25, 1926, claimed the life of her husband and youngest child. Almeda was also seriously injured, but she survived to face the rigors of raising three young children by herself during the Depression. During these trying times, she continued to sing, as she said, just to keep her sanity, and occasionally she learned new songs. This activity brought her to the attention of folksong collector John Quincy Wolf Jr., who in 1952 recorded some of her songs. A few years later, Wolf brought her to the attention of the folksong-revival audience, enabling Riddle to begin a career as a singer at folk festivals throughout the United States. During the 1960s and the early 1970s, she maintained a heavy performing schedule, but health problems eventually forced her to quit touring.

In 1970 Abrahams produced the book *A Singer and Her Songr. Almeda Riddle's Book of Ballads* based on several hours of interviews with Riddle. This volume challenged the popular stereotype of folksingers as inarticulate and illiterate rustics. The book's six chapters contain a wealth of Riddle's comments on her songs and their sources. Her repertoire ranged from Child ballads to sentimental pop songs of Tin Pan Alley. Riddle considered the Child items the classics, but this view may reflect a recognition that folklorists considered such material the most important as well. A new edition of *A Singer and Her Songs*, titled *Preserving Even the Scraps*, focusing on a broader range of Riddle's folklore genres, was compiled by Abrahams and Deborah Kodish, but to date (1995) has yet to be published. In 1983 a video, *Now Let's Talk about Singing*, dealing with Riddle's life was produced by George West. The following year, in 1984, West and W.K. McNeil issued Riddle's final album, *How Firm a Foundation and Other Traditional Hymns*. Shortly thereafter, Riddle moved into a nursing home in Heber Springs, where she died on June 30, 1986.

W.K. McNeil

Riddle Joke

Type of riddle whose *proposition* (question) serves as a setup for the punch-line answer. Some riddle jokes draw on the resources of the *riddle conundrum* in that they depend on word play (for example, “What would happen if a girl ate bullets?—She would grow *bangs*”) or on sound play (“What happened when the cow jumped over the barbed wire fence?—*Utter* [udder] destruction”). *Parody riddle jokes* extend the nature of riddle-joke humor into absurdity and nonsense. Typically, they violate mainstream assumptions of what can happen in the everyday, “real” world (“What’s black, sits in a tree, and is dangerous?—A crow with a machine gun”). In addition, riddle jokes can attempt to extend the durational impact of the humor through the use of the *riddle chain*—that is, a series of two or more interactionally sequential and topically related riddles in which subsequently given riddles build upon previously given ones. An example of a riddle joke chain is: “What’s red and white and sits in a corner?—A baby chewing on razor blades. What’s red and green and sits in a corner?—The same baby, two weeks later.”

Riddle jokes often occur in topical cycles—that is, riddle jokes exploring a single topic develop as a fad; eventually, interest in that set of jokes declines, and the set is subordinated to, or replaced by, the next (and newer) joke fad. For instance, *little moron jokes* became popular in the 1940s and 1950s (“Why did the little moron tiptoe past the medicine cabinet?—He didn’t want to wake the sleeping pills”). After World War II, *Polack jokes* surfaced. In their initial versions, they served as satiric commentary on the Polish army’s ineffective defense of its homeland against invading Nazi forces in 1939 (“How do you tell a veteran Polish soldier from a rookie?—By the bullet holes”). By the 1960s, Polack-joke topics had broadened beyond the historical and had come to replace little moron jokes. Polack jokes then became the most frequently employed riddle-joke means for portraying stereotypically inept characters.

Various joke cycles have developed over the years. One cycle, popular during the 1970s, considered the nonsensical activities of fruits. There were, for instance, *banana jokes* (“What’s yellow and goes click-click?—A ballpoint banana”) as well as *grape jokes* (“What’s purple and conquers continents?—Alexander die Grape”). Some of the cycles current in recent years have focused on *celebrities* such as the popular singer Dolly Parton, who is also known for her well-endowed bustline (“Why are Dolly Parton’s feet so small?—Nodiing grows in the shade”), on natural as well as human-made *disasters* (“What’s 12–8– 12?—The measurements of Miss Ethiopia” [referring to the 1980s Ethiopian drought and resulting famine], and “Have you heard the weather forecast for Kiev?—A high of 9,000 degrees and cloudy” [referring to the 1986 nuclear plant disaster in the Chernobyl-Kiev region of the USSR]), and on incurable *medical conditions* (“Do you know why all die alligators in Florida are dying?—They’ve got gator-AIDS” or “What’s one advantage of [having] Alzheimer’s? [The condition eventually results in severe memory loss and disorientation.]—You keep on meeting new people”).

Typically, *ethnic riddle jokes* attribute a ludicrous and socially inappropriate trait to the ethnic group allegedly about whom the joke is told. The word “allegedly” is

important because with many ethnic joke formulas—for instance, “How do you tell the bride at a(n)——wedding?”—the ethnic name “slot” in the riddle question can be filled with a reference to any one of a number of different ethnic groups (“How do you tell the bride at an Irish wedding?” or “How do you tell the bride at a Polack wedding?”). In each case, the answer—“She’s the one in the maternity dress”—remains the same. Ethnic riddle jokes may accuse the target group of, for instance, physical dirtiness (“Why don’t they allow Italians to swim in the Hudson River?—They would leave a [dirty] ring on the shoreline”), the inappropriate management of body apertures (“How do you break a Polack’s finger?—Hit him in the nose”), spousal abuse (“What’s an Irish theater party?—Watching a neighbor beat up his wife”) or “uncivilized” food practices (“What happens to the garbage in Italian restaurants?—They serve it in Puerto Rican restaurants”).

Christie Davies has reported that, around the world, the most frequently told type of ethnic joke is that which attributes the qualities of stupidity, ineptness, and/or ignorance to some target group (Davies 1990). An example is: “How many Polacks does it take to pull off a kidnapping?—Six. One to kidnap the kid and five to write the note.” According to Davies, the 20th century’s emphasis on the acquisition of information (particularly of specialized knowledge), coupled with conditions of rapid social and economic change, have fostered people’s anxieties concerning what they do not know about the world around them. Jokes emphasizing *other people’s* stupidity, Davies has suggested, may reflect and partly assuage those anxieties. Furthermore, feelings of superiority or of concern regarding others’ ineptness may become especially focused if an allegedly inept group leader or group is viewed as having considerable influence on people’s lives. This is illustrated in *Polish Pope jokes* told about a supposedly simpleminded Pope John Paul II (“What does TGIF on the Pope’s slippers mean?—Toes Go in First”) and in jokes about NASA’s technological failings with respect to the *Challenger space shuttle* (which exploded in flight in January 1986, killing all seven aboard) (“What does NASA stand for?—Need Another Seven Astronauts”). Within the *Challenger* cycle, some jokes allege teacher and crew member Christa McAuliffe’s incompetence as an astronaut. This incompetence was presumably due to her naiveté as a civilian and to her supposedly inherent weaknesses as a woman (“What were the last words of the [shuttle’s] commander?—‘Not that button, bitch!’”). Regional riddle jokes can also attribute to targeted groups the qualities of stupidity (“What happened when the smart Okies [residents of Oklahoma] moved to California?—It lowered the IQ of both states”) or of cultural backwardness (“Do you know why they had to drop the teaching of drivers’ education at Tech [Virginia Polytechnic Institute] this year?—The mule died”).

The United States is not the only country whose citizens tell ethnic riddle jokes. For example, the following was told by Belgians about the Flemish (an ethnic group in Belgium): “Why did the Americans have the Negroes and the Belgians have the Flemish?—Because the Americans had first choice.” Related to the ethnic joke is the *international slur (blason populaire)*, a derisive joke (or other insult) that the citizens of one country tell about the citizens of another country. One example is the Belgian joke given above. In addition to poking fun at the ethnic Flemish, it also manages to insult the residents of another country (African Americans). Another example is a joke that Americans have told about the residents of Mexico, allegedly all of whom want to enter the United States as illegal immigrants: “Why aren’t there any swimming pools in

Mexico?—Because everyone who could swim [across the river separating the two countries] is in the United States.”

Simon J. Bronner has summarized various folklorists’ hypotheses as to why certain riddle-joke cycles developed in particular sociopolitical and/or socioeconomic environments (Bronner 1988). Roger D. Abrahams and Alan Dundes (in Dundes 1987) have speculated, for example, that the *elephant riddles* of the 1960s developed among European Americans as a tension-releasing response to African Americans’ involvement in the civil rights movement. Abrahams and Dundes point to the metaphoric awkwardness of a large, powerful, dark-colored animal from the jungle—that is, the riddle-joke elephant (representing African Americans)—as it tries to fit into “civilized” society (that is, a society dominated by European Americans). An example emphasizing the idea of “fitting in” is: “What is harder than getting a pregnant elephant into a Volkswagon?—Getting an elephant pregnant in a Volkswagon.” In addition, such jokes can suggest defensive measures to be taken against the elephant: “How do you keep an elephant from charging?—Take away his credit card.”

Secondly, one hypothesis about the *dead-baby jokes* of the 1960s and 1970s suggests that they arose as a response to the brutality of the Vietnam War, during which assumptions about the sanctity of life were severely tested. Typically, deadbaby jokes consider ways in which babies can die (“What’s blue and sits in the corner?—A baby in a [plastic, food-storage] Baggie”) as well as ways in which the bodies can be disposed of (“What is easier to unload: a truckload of dead babies or a truckload of bowling balls?—A truckload of dead babies because you can use a pitchfork”). A related hypothesis emphasizing the sanctity-of-life theme associates deadbaby jokes with concern over contraception and the abortion rights movement.

Thirdly, the proliferation of *lightbulb jokes*, from the late 1960s into the 1980s, has been associated with that era’s increasing reliance on technology, with people’s growing concern over energy shortages, and with people’s increased awareness of (and sometimes lack of patience concerning) the special interests claimed by a variety of regional-, ethnio-, and genderbased groups as well as by foreign groups whose activities have impacted upon Americans. Examples of lightbulb jokes that comment humorously on special-interest groups include the following:

How many Californians does it take to change a lightbulb?—Six. One to screw the bulb in, and five to share the experience.

How many JAPs (Jewish American Princesses) does it take to change a lightbulb?—Two. One to call her father, and the other to open a can of Diet Pepsi.

How many gay men does it take to change a lightbulb?—Five. One to screw in the Art Deco lightbulb, and four to stand back and yell, “Fabulous!”

How many Iranians does it take to change a lightbulb?—One hundred. One to screw the bulb in, and ninety-nine to hold the house hostage

[referring to the period in 1979–1980 during which Americans were held hostage in the American Embassy in Iran].

Finally, some folklorists have linked riddle jokes about sensational murders and disasters to people's possible disgust with media reports of those events. In Willie Smyth's opinion, media presentations exploit viewers' emotional reactions to such events while, at the same time, promoting the media's and corporate America's own interests through product commercials (Smyth 1986). The folk response to this manipulation, it seems, comes in the form of riddle jokes that propose their own uncomfortable connections between death, disaster, and commercialized product, for example:

Why should (assassinated Prime Minister of India) Indira Gandhi have changed her deodorant?—Because her Right Guard couldn't protect her.

Why do they drink Pepsi at NASA?—Because they can't get 7-Up (that is, seven astronauts up).

Riddles and Puzzles

Riddle: A type of enigmatic interrogative routine characterized by a *proposition* (that is, an implied or stated question), posed by the *riddler* (the initiating participant). The proposition is intended to call forth a reply from the *respondent* (the riddler's coparticipant). The respondent's reply is verbal and is oriented toward the proposition's solution. Roger D. Abrahams and Alan Dundes have noted that riddles are "framed with the purpose of confusing or testing the wits of those who do not know the answer" (Abrahams and Dundes 1972:130). The basic interactional unit of riddling is the *riddle act*, which consists of all of the interactional moves involved in posing, responding to, and providing the answer to a riddle proposition. Riddle-act organization can vary depending on the traditions of the culture or group involved as well as on the situational circumstances of the particular riddling encounter. However, the following sequence of moves appears to be typical: (1) the riddle-act invitation (for example, "I've got one"); (2) the riddler's proposition ("What goes up when the rain comes down?"); (3) the respondent's initial response (offering a guess); (4) any riddler-respondent interaction during the contemplation period (requests for, and the supplying of, hints), and (5) the riddle answer sequence (which includes the supplying of an answer [such as "Your umbrella"] and confirmations of, or challenges to, that answer as the "correct" solution).

Riddles of various kinds are widespread across the world and throughout history. Generally speaking, they are traditional within the cultural group in which they are used. Charles Francis Potter has discussed riddles from historical and comparativist perspectives (Potter 1972). The present discussion surveys some of the situational and interactional contexts of riddling, common rhetorical strategies found in English-language riddles, some of the types of riddles, and some of the ways in which riddles have been studied.

Situational and interactional contexts as well as the appropriate personnel of riddling vary according to cultural and group values. However, the social situations in which riddles are told often develop as *riddle sessions* (a type of social interaction consisting of a series of riddles, possibly interspersed with other performative and/or conversational material). Some riddle sessions are restricted to adult riddlers and respondents (though it does appear that adult riddling is relatively rare in mainstream American society). In "The Turtles" initiation rite, which is often conducted in bars and other public drinking areas, a previously initiated Turtle member (often male) asks a potential respondent (often female): "Are you a Turtle?" If the respondent does not give the appropriate ritual response (which is "You bet your sweet ass I am!"), the respondent is expected either to buy the riddler a drink or to submit to the asking of four potentially embarrassing riddles: (1) "What is it a man can do standing, a woman sitting down, and a dog on three legs?—Shake hands"; (2) "What is it a cow has four of and a woman has only two of?—Legs"; (3) "What is a four-letter word ending in *K* that means the same as intercourse?—Talk"; and (4) "What is it on a man that is round, hard, and sticks so far out of his pajamas you

can hang a hat on it?—His head.” In contrast, riddling in other types of session can involve both adults and youngsters.

In *pedagogic riddling*, the adult takes on the role of teacher; the child, the role of student. For example, in some Ozark mountain homes of the 1930s, parents regarded children’s “workin’ out [the answers to] riddles” as an appropriate intellectual discipline. For its part, adult-child *leisure-time riddling* (during which riddling is pursued primarily or ostensibly for entertainment) can develop between parents and youngsters as a way of relieving monotony—for instance, during long car trips or in the home during the joint execution of household chores. Finally, leisure-time sessions can be restricted to children only. This may be the most frequently occurring type of riddling interaction in the United States in the late 20th century. Children’s riddling can develop on the playground during recess, in the cafeteria at lunchtime, on the school bus, or in neighborhood backyards. Because adult supervision in these areas is typically distant enough to permit children’s peer group interests to hold sway, youngsters often engage in what John Holmes McDowell has called *contentious riddling*—that is, riddling in which participants are verbally aggressive, take liberties with one another, and repeatedly test each other’s social competence (McDowell 1979). These sessions can be organizationally diffuse as the children variously engage in riddling per se, knock-knock routines, narratives, songs, name-calling, obscenities, and a variety of victimization procedures.

In their phrasing, riddles point to some of the interpretive work the respondent is expected to do. At a basic level, this work involves the respondent’s coping with a riddle’s use of one or more common rhetorical strategies. *Verbal riddles* employing *description* present information about the appearance, qualities, activities, or nature of some entity, phenomenon, or event (“What has teeth but no mouth?—A comb”). Descriptive propositions are also found in the *word charade*, a riddle whose proposition divides the answer *as a word* into syllables and gives a description of each:

My first drives a horse,
My second is needy,
My third is a nickname,
My whole is a bird.
Answer—Whip-poor-will.

As a second strategy, riddles can depend on the use of either *comparison* (“Why is an alligator like a sheet of music?—Because they both have scales”) or *contrast* (“What’s the difference between a flea and an elephant?—An elephant can have fleas, but a flea can’t have elephants”). A third strategy is that of *narration*. In the following, the riddle proposition and its answer each tell small stories:

Whitey saw Whitey in Whitey.
Whitey sent Whitey to drive Whitey out of Whitey.
Answer—Mr. White sent a white dog to drive a white
cow out of his cotton field.

Fourth, riddles using definition fall into at least three groups: (1) riddles that ask for a definition (“What’s the definition of a skeleton?—A striptease gone too far”); (2) riddles that involve negative definition—that is, the proposition identifies a category (such as doors, but then immediately indicates that category’s inefficiency relative to a particular member (“When is a door not a door?—When it’s a jar [ajar]”); and (3) riddles whose proposition provides a definition and asks for the defined term (“What kind of bow can you never tie?—A rainbow”). The two *nonverbal riddle* types summarized here rely on the strategy of description. *Gestural riddles* often depend on gestural description as part of their proposition: (“Hold your hands over your head, wriggle your fingers, and ask, ‘What’s this?’—A midget playing a piano”).

Visual descriptive riddles (called doodles in the 1950s) use a hand-drawn sketch as the descriptive segment of their proposition. For example, consider this sketch, which would be accompanied by the riddler’s asking, “What is it?”:

The answer is “A ship arriving too late to save a drowning witch.”

Riddle types have also been distinguished in terms of expectations about their difficulty of solution. Generally speaking, folklorists have called riddles “true” if their answers can be reasoned out, based on information supplied in the riddle proposition and on the respondent’s adequate experience with, and recall of, tropes, symbols, and other relevant conventions shared within the particular culture. In terms of rhetorical strategies, the *true riddle* employs description and comparison. In the following true riddle, the proposition describes a stronghold containing gold. The answer makes possible a comparison between the stronghold, the gold, and an egg:

In marble walls as white as milk,
 Lined with skin as soft as silk,
 Within a crystal fountain clear,
 A golden apple doth appear.
 No doors there are to this stronghold
 Yet thieves break in to steal the gold.
 Answer—An egg.

True riddles have garnered extensive attention in literature (for example, Taylor 1951). In contrast, the answers to other types of riddle are usually regarded as somewhat to very

arbitrary. At the “somewhat arbitrary” end of the spectrum is the *conundrum*—that is, a riddle based on punning or on other word play. The punning may occur in the proposition (“What has four wheels and *flies*?—A garbage truck”) or in the answer (“What kind of money do people eat?—*Dough*”). In the relatively arbitrary *riddle joke*, the proposition serves as a setup for the punch-line answer (“What’s tall and says ‘eef eif eof muf’?—A backward giant” or “How do you confuse a Polack?—Put him in a round room and ask him to stand in the corner”). Riddle jokes often run in topical cycles (such as *dead-baby jokes* or *dumb-blond jokes*) and, through stereotyping, may poke fun at a specific ethnic group (as in *Polack jokes*) or at a group with a particular medical condition (as in *AIDS jokes* or *Alzheimer’s disease jokes*). *Parody riddle jokes* extend the humor and arbitrariness of riddle jokes into absurdity and nonsense. What marks them as extensions is the degree of violence they do to mainstream assumptions of what can happen in the everyday, “real” world (“Why do elephants have flat feet?—From jumping out of palm trees”).

In *catch riddles*, the proposition sets up the respondent for some sort of victimization. For example, the catch riddle:

A: What’s red, purple, green, yellow, gray, sky-blue, and green?

B: I don’t know.

A: I don’t know either, that’s why I’m asking you.

tries to “catch” the respondent in the conventional assumption that riddlers already know the answer to the riddle propositions they pose. In the type of catch riddle known as the *pretended obscene riddle*, the riddler tries to prompt the respondent into saying (or at least thinking) about something sexual or otherwise risqué (“What word starts with *F* and ends with *CK*?—Firetruck”). For their part, the answers to gestural riddles and to visual descriptive riddles are usually difficult to guess. Because there exist no widely accepted systems for interpreting either gestures or individual graphic lines, squiggles, or dots, answers in both of these riddle types are typically quite arbitrary. For example, in addition to the answer (“A ship arriving too late to save a drowning witch”) given with the visual riddle sketch presented above, that sketch can also be described by the answer “A woman sitting down with her legs crossed.”

Riddles can be studied in a variety of ways. Some studies have considered riddles’ use of the *riddle block*—that is, those aspects of the riddle that interfere with the flow of information, thereby complicating the respondent’s attempts to figure out the answer. Abrahams (as summarized in Abrahams and Dundes 1972) has given four techniques by which the image (or *Gestalt*) offered by the proposition can be impaired:

1. Opposition: The component parts of the presented image do not harmonize (“What has eyes but cannot see?—A potato”).
2. Incomplete detail: Not enough information is given for the provided image parts to fit together in a recognizable image (“What is white, then green, then red?—A berry growing”).
3. Too much detail: Inconsequential details bury the important traits, or misleading information diverts attention from them (“As I was crossing London Bridge, I met a man who tipped his hat and drew his cane, and now I gave you his name. What is it?—Andrew Cane”).

4. False image: The details provided suggest an obvious answer; however, that answer is not only “wrong” but is also possibly “off-color” and, therefore, embarrassing (as in pretended obscene riddles such as “What’s long and hard and contains semen [seamen] ?—A submarine”).

W.J.Pepicello and Thomas A.Green have considered various riddle blocks that foster different kinds of ambiguity (Pepicello and Green 1984), including *linguistic ambiguity* and *metaphoric ambiguity*. Linguistic ambiguity yields multiple linguistically based meanings for an utterance. An example, based on aspects of phonology (the intonational stress and pauses between words) is found in the riddle “What bird is lowest in spirits?—A bluebird,” which exploits the meaning of “bluebird” (a species of bird) and the meaning of a “*blue* bird” (an emotionally sad bird). Metaphoric ambiguity fosters multiple metaphorically based frames of reference. An example is found in the riddle “There is something with a heart in its head.—A peach” in that the primary metaphor *heart* refers both to the bodily organ known as a heart and to a fruit pit that is shaped like the bodily organ.

Riddling has been considered in terms of its structure of context, which David Evans (in Köngäs-Maranda 1976) has discussed as the structuring of a session not only in terms of the interactional relationships emergent among its participants, but also in terms of the developed interrelationships obtaining among the riddles presented (as in riddle sequencing). Riddling has also been approached in terms of the functions it serves for its participants. McDowell, for example, has pointed to various socialization functions served in children’s riddling (such as youngsters’ acquisition of an artistic competence, their augmentation of sociability and interactional skills, and their exercise of skills concerning the assertion of self) (McDowell 1979). The final area of research to be mentioned here concerns children’s developmental acquisition of competence in riddling. Richard Bauman and McDowell provide useful analyses of acquisition parameters, including discussions of children’s made-up riddle routines (Bauman 1977; McDowell 1979).

Puzzle: A type of enigmatic interrogative routine characterized by a *proposition* (consisting of, or including, a question) that describes a problem. The *puzzler* (the initiating participant) offers the proposition, which is intended to call forth a reply from the *respondent*. This reply, which may be verbal or behavioral, is oriented toward the problem’s solution. Puzzles tend to be traditional within the culture or group in which they are used. Unfortunately, there has been little analytic work done on puzzles, particularly in either distinguishing them from riddles or in arguing in detail that they are indeed a subset of riddles. As treated here, puzzles are interactional forms. As such, *puzzle-act* organization is analogous to riddle-act organization.

Abrahams and Dundes have suggested that there are two major teleological categories of puzzle: (1) puzzles whose proposition presents a problem and then asks for its solution, and (2) puzzles whose proposition presents a problem *as well as* its solution and then asks how that solution was derived (Abrahams and Dundes 1972). An example of the first category—puzzles that offer a problem and request its solution—is the following *narrative puzzle*:

Two boys, each weighing 100 pounds, and their father, weighing 200 pounds, wanted to cross the river in a boat that could carry only 200

pounds at a time. How did they accomplish this? Answer—The two boys go across and one boy brings back the boat to his father. The father goes across, and the boy that was left brings back the boat to the boy on the other side. Then both boys cross over and join their father.

Another member of this category is the *genealogical puzzle*:

Brothers and sisters have I none,
 But that man's father is my father's son.
 Who is he?
 Answer—The speaker's [I's] son.

Also included are various *pencil-and-paper puzzles*. In this example, the proposition is verbal, but the solution is to be rendered graphically:

How can you get ten horses into nine stalls in a barn? (You can't squeeze two horses into one stall.)

T E N H O R S E S

Another type of pencil-and-paper puzzle is the *rebus*, a graphically rendered puzzle that, according to a dictionary definition, represents “words or syllables by pictures of objects or by symbols whose names resemble the intended words or syllables in sound” (cited in Preston 1982:110). Rebus inscriptions may also indicate meaning through the strategic use of spatial relationships as well as through type styles and sizes and occasionally through color graphics. The puzzler presents the respondent with an inscription and asks a question such as “What does it say?” The respondent's task is to “read” the inscription. *Literal rebuses* emphasize the use of conventional graphic symbols for the rendering of language (such as the letters of the alphabet):

SOMEWHERE

RAINBOW

“Somewhere over the rainbow”

WOWOLFOL

“A wolf in sheep's clothing”

Pictorial rebuses emphasize the use of pictures:

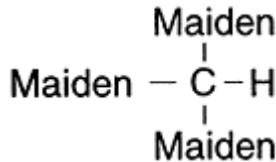

“Read (reed) between the lines”

“Pointer Sisters”

Rebuses often challenge the conventions of written language by finding alternate ways of representing meaning. For example, three of the rebuses given above employ spatial relationships to suggest the meaning of prepositions: the word “somewhere” is placed over the word “rainbow”; the word “wolf” is located with in the word “wool”; and a picture of a reed is placed *between* two vertical lines. The puzzle “Pointer Sisters” is a hybrid of literal and pictorial rebus traits in that the word “sisters” is rendered alphabetically but in a typographic style with varying letter sizes that suggests the pictorial shape of an arrow (that is, a pointer). Some rebuses are based in special knowledge. Recognizing that the chemical symbols HCCl_3 stands for chloroform, for instance, facilitates one’s figuring out that the answer “Maidenform” goes with this inscription:

As mentioned above, the second major category of puzzles involves those whose proposition gives both a problem and its solution and then asks how that solution was derived. An example is the *coin puzzle* (a puzzle based on a knowledge of currency values) (“How can you change a dollar into exactly fifty coins?—Forty pennies, eight nickels, two dimes”). Here, the proposition gives the solution in that it indicates “that some combination of coins makes a total of fifty possible, the [challenge] being which coins?” (Abrahams and Dundes 1972:138). Another example is the *detectivestory puzzle*, whose proposition describes the conclusion of a murder mystery and then asks how it was solved—specifically in the case below, how the man behind the counter knew whom to tell the police to arrest:

A man standing behind a counter reads in the newspaper that some woman has been killed in Switzerland in a fall down a mountain. He immediately calls up the police and tells them to arrest the husband. Why?—He is an airline agent. The week before, he had sold this man two tickets to Switzerland, one one-way and one round-trip.

Finally, folklorists have identified certain types of puzzles in terms of the particular knowledge frame on which the puzzles draw. Such *special-knowledge puzzles* include

genealogical and coin puzzles as well as chemical rebuses (all illustrated above). Another type is the *geographical puzzle*:

A family built a big square house with each side facing south. A big bear wandered by. What color was the bear?—The house was built at the North Pole. That is the only place on Earth where each side would face south. The only bears in that region are polar bears. So the bear was white.

Still another is the *arithmetic puzzle* (“If a chicken and a half

A 19th-century morph, on the thennovel theme of evolution. Lithograph, H.S. Crocker and Co., 1889. Library of Congress.

could lay an egg and a half in a day and a half, how long would it take five chickens to lay five eggs?—One day.” As might be the case with puzzles of any sort, the arithmetic puzzle is vulnerable to reframing as a *puzzle catch*:

A: If it takes a woodpecker eight months to peck a 4-inch hole in a tree, how long would it take a grasshopper to kick all of the seeds out of a pickle 7 inches long and 3 inches thick?

B: I don't know.

A: I don't know either, that's why I'm asking you.

Rinzler, Ralph Carter (1934–1994)

Musician; producer of concerts, recordings, and documentary films; a scholar, patron of traditional crafts, and the founding director of the Smithsonian Institution's Festival of American Folklife. Rinzler also founded the Office of Folklife programs and served as an assistant secretary at the Smithsonian.

Rinzler came to the Smithsonian to develop his plan for a living cultural presentation of folk and working-class community-based culture under then Secretary S.Dillon Ripley and James Morris. The Festival of American Folklife on the National Mall was largely Rinzler's creation in 1967, and its immediate success established a national commitment to the public presentation of folk cultural traditions. The popular festival grew to become the centerpiece of the 1976 U.S. Bicentennial and continues into the present. Rinzler's work on the festival involved hundreds of scholars, community artists, and cultural exemplars of every background from across the nation and the globe and inspired many to research and present their cultures in public settings. Alan Lomax, Bess Lomax Hawes, Roger D.Abrahams, Bernice Reagon, Henry Glassie, and Archie Green were some of the many activist, academic, and artistic colleagues in this effort.

As the Smithsonian's assistant secretary for public service from 1983 to 1990, Rinzler encouraged the cultural diversification of the Smithsonian in staffing, collections, exhibits, and programs. He established the Cultural Education Committee and the Committee for a Wider Audience, and he continued to bring into the Smithsonian many professionals from minority communities. Rinzler was also an innovator in the use of sophisticated technology to disseminate information from the Smithsonian collections. He founded the National Demonstration Laboratory and encouraged the development of digital media products that could reach a broad public.

Rinzler first explored the study of culture at Swarthmore College and later at the Sorbonne in Paris. His interest in folk music grew from exposure to Library of Congress recordings and the work of the Lomaxes, Charles Seeger, and Albert Lloyd. Rinzler traveled to many university folk festivals and mastered folk styles on several stringed instruments, including the mandolin. He was a member of the Greenbrier Boys, a bluegrass group of the folk revival with whom he toured and recorded. Rinzler was one of many musician-scholars at the time who were attracted to Woody Guthrie, and who worked on Folkways Records. He worked closely with Bob Dylan, Joan Baez, and Mary Travers in a variety of roles. As he became more knowledgeable about the roots of folk music, he recorded and then for some time managed the careers of Arthel "Doc" Watson and Bill Monroe. During the 1960s, he did considerable fieldwork on traditional folk music, traversing the country, recording numerous musicians, including Cajun fiddler Dewey Balfa, and bringing them to the Newport Folk Festival. It was during this time that Rinzler developed the model of a research-based presentation of culture and saw the positive effect of exposing traditional music to broader audiences. Though he himself stopped performing professionally once he was at the Smithsonian, Rinzler played the mandolin and banjo at home or at his beloved Naushon, Massachusetts, island retreat

with Pete Seeger, Charlie Sayles, Mike Seeger, Hazel Dickens, David Grisman, Johnny Hartford, and numerous others.

Rinzler led the Smithsonian to acquire Folkways Records from Moses Asch in 1987, a move that enabled not only the preservation of the collection, but also the continued production of new recordings. The viability of Smithsonian/Folkways and a dynamic approach to the distribution of a museum collection was assured with the financial and critical success of *Folkways: A Vision Shared*, an album for which Rinzler won a Grammy Award in 1988 as coproducer. He also performed with Taj Mahal on the album and in a video of the same name which was nominated for an Ace Award in 1989. Rinzler produced several other recordings on the new Smithsonian/Folkways label, including the Grammy-nominated *Roots of Rhythm and Blues* (jointly with Columbia Records) that was based on a program he cocurated at die 1991 Festival of American Folklife with Worth Long. Other releases included a documentary compact disc (CD) on the Watson family, two CDs of his 1956–1969 recordings of Bill Monroe, and a two-volume CD that expands the Folkways release of recordings he made at the home of old-time musician Clarence Ashley. The latter includes the first recordings made of Doc Watson. At his death, Rinzler was working on a three-volume expansion of Harry Smith's seminal *Anthology of American Folk Music*, first published in 1952. Rinzler also produced a five-part series of Folkways instructional videos on folk music taught by master traditional musicians.

Rinzler's interest in contemporary traditional crafts led him to a long-term association with American potters in the Southeast. Through scholarship, museum exhibition, and other forms of support, he strove to help them continue to practice their craft. He led efforts to make *Raised in Clay* a successful Smithsonian Institution exhibition that toured the United States. With Nancy Sweezy and John Kenneth Galbraith, he helped revitalize the Jugtown pottery in Seagrove, North Carolina, which was still in production in 1995. He produced a film titled *The Meaders Family, North Georgia Potters*, and, in collaboration with Robert Sayers, he wrote a monograph of the same title. The same collaboration produced a monograph and Cine Golden Award-winning film on *The Korean Onggi Potter*.

Rinzler was a member of several professional societies, a lifelong member and a Fellow of the American Folklore Society. He also served on the White House Task Force for Music in Education. He was an active member (1976–1981) and vice chair of the U.S. National Commission to UNESCO (United Nations Educational, Scientific, and Cultural Organization). Rinzler maintained collegial relationships with scholars, administrators, and cultural activists in many parts of the world, and he was a longtime board member of many organizations, including the Highlander Center.

Rinzler won many awards, including Washingtonian of the Year. He was awarded the Smithsonian Secretary's Gold Medal in 1993 for developing the Festival of American Folklife as a paradigm of modern museum practice, which combines humanistic scholarship, community service, grass-roots arts advocacy, and high-quality public education.

Richard Kurin

Ritchie, Jean (1922–)

Folksinger, folksong collector, and composer. The youngest of fourteen children in a farming family near Viper, Kentucky, Ritchie was educated like the others at the Hindman Settlement School. There educators collected and taught ballads as part of primary education. Her older sister Edna had, in fact, sung ballads for Cecil Sharp during his 1916 visit to the school. Moving later to the Viper public high school and then to Cumberland College, Jean Ritchie became a social worker and used ballads as part of her work in New York City's Henry Street Settlement.

Her singing came to folklorists' attention in 1946, when she attended the Renfro Valley Folk Festival in Kentucky and met Artus Moser, then on a collecting trip for the Library of Congress. He recorded her versions of "Father Grumble" and "Lord Bateman," among others, and when these ballads were released the following year on 78-rpm records she found herself in demand for folk concerts at New York University. By 1950 she had recorded her first LP, and in 1952 she won a Fulbright grant to collect folksongs in the British Isles. Her well-known autobiography and song anthology, *Singing Family of the Cumberlands* (1955), appeared soon after.

Her upbringing and Hindman education made Ritchie familiar with the performance style of the unaccompanied ballad, but because she trained her voice during her college days she was able to modify the hard-edged native-ballad sound to a sweeter style more acceptable to urban audiences. Between her family's store and her own fieldwork, she developed a huge repertoire, and by the start of the 1960s folk-revival movement she was acknowledged to be one of the foremost, and most authentic, interpreters of folk ballads.

The wife of filmmaker George Pickow, she participated in many films and sound recordings documenting Appalachian ballads, folksongs, and singing folk games. She also composed a number of original songs, of which "Black Waters," a protest of water pollution caused by strip mining, is the best known.

Robb, John Donald (1892–1989)

Composer, educator, and student of folk music who contributed substantively to support for folkloristics in New Mexico. Born in Minneapolis in 1892, Robb attended Yale University, graduating in 1915. After teaching in China and serving in the armed forces during World War I, he attended Harvard Law School. While practicing law in New York from 1922 to 1941, he continued his studies in musical composition. Robb left the law to become professor of music and chair of the music department at the University of New Mexico in 1941. He was named acting dean of the College of Fine Arts in 1942 and dean in 1946, a position he held until his retirement in 1957. His musical mentors included Roy Harris, Paul Hindemith, Darius Milhaud, and Horatio Parker. His more than 200 compositions include solo instrumental, vocal, chamber, and symphonic works in addition to operas, musicals, dances, and electronic recordings. A number of his compositions are based on folk music. Robb received numerous awards for his compositions and scholarship.

Upon his arrival in New Mexico, Robb was fascinated by Native American, Hispanic, and Anglo American folk music. Moved by romantic notions of the “disappearance” of such traditions, he conducted extensive fieldwork throughout the state, initially using wire recorders. He also recorded folk music during his travels to Latin America, Nepal, Japan, and elsewhere. His collection, which contains more than 3,000 items, is housed in the John Donald Robb Archive of Southwestern Music in the Fine Arts Library at the University of New Mexico in Albuquerque; it has been used extensively by scholars. While his writings include articles that focus on a wide range of New Mexican music and dance forms, his two books are centered on Hispanic folksong. While *Hispanic Folk Songs of New Mexico* (1954) is a short collection of songs with commentary, his *Hispanic Folk Music of New Mexico and the Southwest: A Self Portrait of a People* (1980) is a monumental work that provides systematic documentation and analysis of a wide range of musical genres.

Robb was an early and tireless promoter of the study of folklore in New Mexico. In addition to his efforts to secure institutional support for folklore research and teaching at the University of New Mexico, he was founding member and president of the New Mexico Folklore Society, and he played a key role in organizing annual meetings and in the publication of the *New Mexico Folklore Record*.

Charles L. Briggs

Roberts, Leonard Ward (1912–1983)

Collector of Appalachian tales, ballads, legends, and family traditions. Roberts was born in a log house on Toler Creek, Floyd County, Kentucky, the seventh of eleven children. At the age of eighteen, when he enlisted in the U.S. Army, he had completed one year of high school. He returned home from three years in Hawaii, completed high school in two

years, and enrolled at Berea College, where he set a state record for the javelin throw. Eager to become a novelist like Jesse Stuart, he accepted an unsolicited scholarship to the Iowa Writer's Workshop, offered apparently upon the recommendation of his college roommate Lawrence Edward Bowling, already enrolled in the program. His M.A. thesis was a novel with autobiographical elements, about a teacher in eastern Kentucky. At Iowa he studied Shakespeare and Milton under Visiting Professor Hardin Craig, who invited him to the University of North Carolina, an invitation he was able to accept when his teaching for the Army took him to Chapel Hill in 1944. There he seems to have met Stith Thompson and William Hugh Jansen, both then at Indiana University.

He enrolled at Indiana in 1948 and followed Jansen to Kentucky the next year. His 1953 dissertation, published in 1955 as *South from Hell-fer-Sartin: Kentucky Mountain Folktales*, established him as the leading American *Märchen* (fairy tale) and folktale collector. This book was followed by *Old Greasybeard: Tales from the Cumberland Gap* (1969), his collection of ballads and folksongs titled *In the Pine* (1978), and the monumental *Sang Branch Settlers: Folksongs and Tales of a Kentucky Mountain Family* (1974). In the latter work, which documented the oral history, folklife, and interconnected traditions of the Couch family of Hardin County, Roberts anticipated the focus on acquisition, performance, and context found in the next generation of American folklife scholars. His massive legend collection, unpublished because he had not yet decided how to organize the material and he hoped that a definitive typology might be forthcoming from the work of Wayland D. Hand, resides with his other papers in the Southern Appalachian Archive at Hitchens Library at Berea College, Berea, Kentucky.

Roberts taught at secondary schools, including Pine Mountain, and at small mountain colleges—Brevard, Piedmont, Union, Morehead, West Virginia Wesleyan, and finally Pikeville College, less than 10 miles from his birthplace. There he established the Appalachian Studies Center and the Pikeville College Press—both dismantled after his death—and he de-voted his attention to genealogical studies, to the work of the Kentucky Place Name Survey, and to publishing local historians. Roberts served from 1964 to 1968 as vice president and then president of the National Folk Festival Association. All of his life he functioned as musician, dance caller, and storyteller. He developed his signature story, “Raglif Jaglif Tetartlif Pole,” from the version of his Aunt Columbia Roberts, learned while he was collecting for his dissertation in 1950.

Roberts died in the Floyd County in which he was born. A coal company gravel truck hit his pickup as he was pulling onto Route 23 from the Mare Creek road on which he lived, killing him instantly.

Robinson, Rowland E. (1833–1900)

Vermont farmer-sportsman and author. With little formal education, Robinson did not begin to write until after middle age when his sight began failing, and he wrote most of his realistic stories and nature essays after he was totally blind. Except for a few years spent in New York City as an illustrator of magazines when he was a young man, Robinson never left his area of Vermont. He had a lifelong interest in the folklore and history of his region; and hiking, hunting, fishing, trapping, and sketching around his Ferrisburgh farm enabled him to come in direct contact with the oral traditions and material culture of his neighbors.

In realistic stories like those in *Uncle Lisha's Shop* (1887), *Sam Lovel's Camps* (1889), *Uncle Lisha's Outing* (1897), *A Hero of Ticonderoga* (1898), and *A Danvis Pioneer* (1900), Robinson drew upon nearly every form of folklore, including speech, proverbs, riddles, rhymes, games, beliefs, cures, songs, tales, customs, arts, crafts, and architecture, and, utilizing the frame device, he presented this lore in authentically reconstructed social and physical contexts. Among his writings, most of which were collected in a seven-volume centennial edition (Robinson 1934–1938), are a history, *Vermont: A Study of Independence* (1892), and collections of essays on nature and folklife, including *In New England Fields and Woods* (1896) and *Silver Fields and Other Sketches of a Farmer-Sportsman* (1921).

In his Author's Note preceding the text of his fourth book of fiction, *Danvis Folks* (1894), Robinson pointed out that he paid less attention to narration than to depiction of Vermont folklife in the early part of the 19th century: "It [*Danvis Folks*] was written with less purpose of telling any story than of recording the manners, customs, and speech in vogue fifty or sixty years ago in certain parts of New England." Since his main purpose for writing stories was to preserve folklore, his writings offer a literary ethnography of 19th-century Vermont folklife. As Richard M. Dorson observed, in a "carefully wrought series of vignettes portraying the folkways of a Vermont pioneer community," Robinson "harmonized form and material with results unequalled, in this genre, anywhere else in American literature" (Dorson 1946:221–222).

Rocky Mountains

A giant geographical and psychological folk region stretching from Canada to Mexico between the West Coast and the Midwest excepting metropolitan areas. The location of this area was perhaps most pervasively and dramatically expressed by Bernard DeVoto in his alternately lyrical, moving, and funny Foreword to Benjamin A. Botkins' 1951 compilation, *A Treasury of Western Folklore*. DeVoto began by defining the folk West very precisely and scientifically in terms of climate, placing the beginning of the West where the annual rainfall drops below 20 inches, roughly the 100th meridian. "East of 100 degrees is something else," he wrote, "but west of it is assuredly West." After this very exact description, however, he added that there were some places included by his description—primarily urban and suburban areas—that should *not* be, and some areas outside of his mechanical definition that *should* be within it.

In 1980, twenty-eight members of the Rocky Mountain Folklife Caucus of the American Folklore Society identified the Rocky Mountain folk region very much as DeVoto had earlier defined the entire West. The region as drawn by the members of the caucus rarely followed state lines. Portions of Arizona, Colorado, Idaho, Montana, New Mexico, Utah, and Wyoming were included as a part of the region by twenty-five or more of the twenty-eight folklorists; areas of Nevada, Oregon, and Washington were included by ten to seventeen; and sections of California (six), Kansas (two), North Dakota (five), South Dakota (seven), and Texas (nine) were also included by some of the professional folklorists answering the survey. Those surveyed had as many exceptions as DeVoto did. Some specifically excluded areas that others specifically included. Minor differences aside, however, the survey indicated that the essence of the Rocky Mountain folk region is its unique geography and geology and its low population density.

Cultural geographers use the term "ecumene" to describe that portion of the Earth controlled and civilized—divided by roads and fields into right angles, a favorite design of man

A tourist from back East prepares to ascend Pike's Peak. Colorado, 1905. Collection J.W.Love.

precisely because they are rare in nature. The single most important geographical fact about the Rocky Mountain area is that most of it is not a part of Earth's ecumene in this sense. Its immense canyons, interconnected mountain ranges, forests, deserts, wild rivers, big skies, and sudden, fierce "natural" disasters are the reality through which all things come in the folklore of and about the Rocky Mountains. Perhaps it is the sheer size of the Rocky Mountain area that has caused there to be such extensive folklores both of the area and about the various groups in the area. DeVoto said that the Westerner feels "his personality shrunk to miniature size by the enormousness in which he lives."

There are many ethnic, occupational, hobby, and religious folk groups that are, or have been, a part of the Rocky Mountain folk culture through its long recorded history and prehistory. Many of them and their traditions are a part of both the folklore of the area and the folklore about the area. The "old ones," the Native Americans of prehistory, are regularly recalled in the area through their pervasive legacies. The old ones' descendants are many, and they are parts of many living tribes and vital cultures. "Coronado's children," as well, still live in the Rocky Mountain area and militantly trace their lineage

to Spain. Mexican Americans from different sections of the area speak similar but different Spanish dialects reflecting the fact that they are a part of similar but different subcultures. Men called *vaqueros*, “cowboys,” and “buckaroos” all work with stock, but each word refers to a related but different subculture of the Rocky Mountain area. Rocky Mountain Mormons, ranchers, miners, sheepherders, Basques, and loggers have all been recognized as regional folk groups. Mountain men and ring-tailed roarers (braggers and fighters) have been widely investigated by, respectively, scholars in American history and American literature. Hunting, fishing, trapping, hiking, rock hunting, mountain climbing, skiing, river running, horseback riding, and bird-watching are all popular hobbies of Rocky Mountain folk, and there is a core few in each group who have made their hobbies their lives and their primary cultural identification. The folklore of some of these groups of the Rocky Mountain area has been collected, but the folklore of many has not, and there has been little research concerning the widespread American folklore *about* either category of groups.

The folk-cultural Rocky Mountain area is a way of thinking on the part of a great diversity of folk groups who have lived with and, to some extent at least, become a part of this land. There is great diversity of folk cultures of the Rocky Mountain region, and there are some major differences between general American folklore about these groups and their own traditions, but there are also some general regional characteristics of the folklore of, and the folklore about, Rocky Mountain folk. Living with enormousness DeVoto noted has produced a cross-cultural Rocky Mountain lore that emphasizes humor, is eclectically mystical, and supports an unwritten code stressing freedom, egalitarianism, and aesthetics.

Rocky Mountain folk place great emphasis upon laughter and talking well. Humor and the artistic dimension of communication are positive values shared by many groups in the region. From colorful folk speech to complex narrative traditions, and from practical jokes to stories of practical jokes, Rocky Mountain folk enjoy performing.

Many Rocky Mountain folk also seem to have as a part of their lives a kind of cross-cultural mysticism or natural religion in addition to, or in place of, their official religious faith. While many are active members of formal, organized religions, many more are not, although most of both groups profess an awareness of the supermundane and acknowledge it with a fascinating blend of eclectic belief, ancient ritual, and perhaps New Age ceremony.

Freedom is one of the most important values in the Rocky Mountain area, romanticized and avidly sought in both the folklore of, and, the folklore about, the region. While cowboys in American popular culture wore either black or white hats in keeping with their assigned roles, cowboys and other Rocky Mountain Anglo Americans at the end of the 20th century dress in full, ethnographically accurate, 1880s buckaroo regalia or contemporary blue jeans and sweat shirts. “Don’t Fence Me In” is an old, traditional, frequently collected Rocky Mountain ballad. The fact that the song was originally written by Robert H. Fletcher, a cowboy poet, rewritten by Cole Porter, featured in a Roy Rogers movie, and passed into Rocky Mountain oral tradition says a lot about the ideals that cut across the cultures past and present. Most Rocky Mountain folk relate to that old cowboy ballad Cole Porter rewrote and celebrate and practice individual freedom—just like the folklore about them says that they do. In the land of the “Tumbling Tumbleweeds,” lots of folk have made the kind of freedom extolled by the folklore about these weeds a part

of their lives. (That song, too, is popular culture, but the weeds are still real, they do tumble, and Rocky Mountain folks catch them crawling over their fences, dip them in white wash or spray paint them, and use them as Christmas trees—as well as chuckle when a set blows by at eye level.) What the folk most often say is that the enormity of the land shows what a minuscule and minor part of creation is man, and that this knowledge is liberating so that anyone who has known the land and his own insignificance can never be anything but free.

Egalitarianism is also a valued part of the Rocky Mountain folk code. Botkin noted that, “things being transient and conditions changing, it is the man that counts, judged not by what he says but by what he is and does.” Women very early established their importance as coequals with men in the Rocky Mountain folk area. Nowhere else in America does a woman at the folk level so naturally enjoy the equality and power rightly due her as a member of the human race as she does in the folk culture of the Rocky Mountains. For example, Martha Arriol, a teenage German immigrant, who had read about the derring-do of the great fictional Westerner “Old Shatter Hand” in popular German Western novels, came to Nevada and became a ranch cook during the first quarter of the 20th century. Many years later, she vividly recalled the equality of a land where there were not enough ranch hands to go around. “I even helped on horseback,” she said. “We had to help hold cattle and do things.” The clear Rocky Mountain folk ideal, like all ideals in all cultures sometimes honored by its breach, is that people should be judged by what they do rather than by who they are—or, by extension, regardless of their gender.

A natural outgrowth of these dual emphases upon freedom and egalitarianism is an extreme emphasis upon artistic expression. Many Rocky Mountain folk accessorize their clothing with Native American traditional jewelry—and know its history and aesthetics—and an unusually high number have tried their hand at making it themselves, or painting pictures, or writing, or other arts and crafts. Other Rocky Mountain folklore forms and values, also, stress a strong sense of, and concern with, aesthetics. Just as the Rocky Mountain woman, in general, has a greater degree of social freedom than women in other American folk areas, so the Rocky Mountain man is more free to be concerned with color, form, and design than men in most other American folk regions. This emphasis upon aesthetics coupled with an appreciation of performance has led to a long tradition of performance art best described as leg pulling. The chief complaint made by the folklore about the Rocky Mountain folks’ lives, tall tales, clothing, cedar smudges, and Indian jewelry is not so much that they dress informally, are concerned with aesthetics, and are aware of, and perhaps to some extent more accepting of, alternate realities than other Anglo Americans, but rather that mentally and physically they are always costumed and posturing and, as DeVoto noted, knowing at some level that they are getting away with something—and enjoying it.

The folklore of the Anglo American Rocky Mountain folk-cultural area was called into being partly by dichotomous metaphors that were a part of the folklore about the area: garden and wilderness, noble savage and child of nature, boom and bust. In folklore about their area, Rocky Mountain folk found international narrative themes, motifs, and characters to develop and localize and to use to entertain themselves and others. Rocky Mountain folk took the folklore about themselves and developed a richly diverse, flourishing folklore of the area stressing reality and humor through an emphasis upon

accurately presented geographic, cultural, and human detail. Rocky Mountain folklore was further developed by the addition of local characters and local settings, gaining—even in parody forms such as tall tales—verisimilitude by grounding folklore in ethnographic and personal terms. Folklore about the Rocky Mountain area, in turn, continued to view the area and its inhabitants as dichotomous metaphorical referents and adopted and adapted the areas' folklore to the same end, in the process creating a new folklore about it by eliminating much of the emphasis upon accuracy and replacing living persons with stock characters. Folklore of the Rocky Mountains took these stereotypes, again, and revitalized them with realism and both folklore *of*, and folklore *about*, the Rocky Mountain folk area have lives of their own with far-ranging consequences. Ring-tailed roarers, Native Americans, cowboys, and the land itself all underwent a similar process in their movement from folklore *of* to folklore *about*. In each of these cases, folklore of the Rocky Mountains began as generalized stereotyped dichotomous themes and values. These values and themes helped shape the developing folklore of the Rocky Mountain folk-cultural area grounded in persons and places and then—so transformed—were carried forward in images and ideas in new folklore about the Rocky Mountain folk area again once more in terms of types. The interaction continues.

In effect, both the folklore of the Rocky Mountain area and the folklore about the Rocky Mountain folk area exist simultaneously as mountains of the imagination. The former serves as a broad, general metaphor, while the latter provides an experiential account of reality. Like a whirling, three-dimensional universe of moons, planets, and suns moving in their interrelated and interactive courses, the two Rocky Mountain folklores (of and about) intertwine stories, objects, customs, thoughts, and unconscious integrative principles, and shape and reshape them and each other in terms of freedom, egalitarianism, and aesthetics.

Rodeo

A sport deriving from the 19th-century folk games of the American cowboy, particularly as those games involved the work skills of roping and riding. Possessing the characteristics

*At a rodeo. Cheyenne, Wyoming, 1905.
Collection J.W.Love.*

of community involvement, celebration, and ritual, rodeo is perhaps the only true folk festival to have sprung entirely from North American roots. While Wild West shows were instrumental in its popularization, rodeo is unique among American sports in having developed from the daily work of a manual-laboring occupation into a major spectator and participant sport.

Just as much of the cowboy's working methods and equipment derived from the Spanish *vaquero*, so, too, rodeolike activities are first recorded, as early as 1792, in Spanish North America. By the 1860s, and particularly following the onset of the great Texas-to-Kansas cattle drives that followed the Civil War, exhibitions and competitions of steer roping and bronc riding, the two most difficult and dangerous parts of a cowboy's job, became a common feature of range-country celebrations. The first modern rodeo was held at Prescott, Arizona, in 1888, a Fourth of July event that featured cash prizes for steer-roping and bronc-riding contests, engraved trophies for the winners, and an admission charge for spectators. Canadian rodeo, developed around the turn of the 20th century largely through American influences, is interchangeable with the American version. The earliest Canadian "stampede," as the sport is usually termed there, was at

Raymond, Alberta, in 1902; the largest rodeo in Canada is the Calgary Stampede. Two of the largest, most important rodeos in the United States are the Pendleton, Oregon, Roundup and the Cheyenne, Wyoming, Frontier Days. The most prestigious rodeo, however, is the National Finals Rodeo of the Professional Rodeo Cowboys Association, held annually since 1959 and featuring the top fifteen contestants in each event.

A contemporary rodeo is generally composed of three rough-stock events and up to five timed events. In bareback bronc riding, saddle bronc riding, and bull riding, contestants must ride for eight seconds, with equal points being given for both the quality of the ride and the bucking ability of the animal. Bareback riders use a surcingle called a bucking rig; saddle bronc riders, an association-approved saddle; and bull riders, a loose rope that is pulled tightly around the back of the bull; when released it is pulled off by a bell, whose clanging adds to the spectacle of the ride. In the two standard timed events (calf roping and steer wrestling, also called bulldogging) and the three optional timed events (team roping, single-steer roping, and cowgirls' barrel racing), winners are determined by speed. A calf must be roped, thrown by hand, and three legs tied, while a singlesteer roper must rope and trip the steer from horseback, then tie the animal before he regains his feet. Team roping consists of a "header," who ropes the horns, and a "heeler," who ropes the two hind feet. Contestants must "dally"—that is, wrap the tail of the rope around the saddle horn after catching the animal—rather than tie the rope hard and fast before roping. Barrel racers run a cloverleaf pattern around three barrels set to form a triangle in the arena. Of these eight events, only saddle bronc riding and the three roping events are derived from actual ranch work.

Early-day rodeos often featured a dozen or more contest events, many of them directly related to ranch work: wild horse racing, wild cow milking, calf branding, relay racing, and chuck wagon racing. Trick and fancy roping and riding, at one time contest events, are now staged strictly as exhibitions. Earlier competitions for men and women were separate, as they are in the 1990s, but until the time of World War II women's events at regular rodeos included bronc and steer riding, relay races, roping events, and bulldogging. Today cowgirls compete primarily against one another in barrel races or in roping and rough-stock events at all-women rodeos.

A feature of nearly all rodeos is the clown. In the early years of rodeo, when cows or steers were ridden, clowns provided humor, but since the 1930s, when bulls were first introduced to the sport, rodeo clowns have also performed a pragmatic function: distracting bulls from fallen riders. This serious function differentiates the rodeo clown from the clown figure in other folk groups or festivals.

As are many athletes, rodeo cowboys are subject to a number of superstitions. The color yellow, for instance, is unlucky, as is eating peanuts at a rodeo or placing a hat on a bed. Spitting in a hat just before a ride, on the other hand, is said to bring good luck. The customs and language of rodeo are also distinctive. A "go-round" is one complete cycle of competition at a particular rodeo, while the "average" is won by the cowboy with the best combined score in all go-rounds. "Two wraps and a hooey" describes the tie made on a calf's legs, while "missed him out" means that a bronc rider has been disqualified because he failed to spur the horse in the shoulders on the first jump out of the chute. "There's never a horse that can't be rode and never a man that can't be throwed" is a traditional saying illustrating the spirit that led to the development of rodeo, a spirit depicted in the story line of the folksong "The Strawberry Roan."

As rodeo has become more and more slick and professional, there has been a movement, which began in the Southern and Central Plains, to return, through “ranch rodeos,” to the type of cowboy folk games from which rodeo originally sprang. Contestants (usually four to a team rather than individual competitors) are working cowboys competing under the sponsorship of the ranch they work for and riding their own horses or those of the ranch. The events, which vary from locale to locale depending upon the ranching practices of that particular area, often include such things as calf branding, wild horse racing, cattle sorting and penning, bronc riding (using a stock saddle and both hands), cattle doctoring, and trailer loading.

Rodgers, James Charles (“Jimmie”) (1897–1933)

Known professionally as “The Singing Brakeman” and “America’s Blue Yodeler,” generally considered “The Fadier of Country Music.” Largely ignored for many years by folksong collectors because of his identity as a popular entertainer on commercial records and radio, more recently Rodgers has been recognized as an important link with a valuable body of older traditional music, especially the country blues of Black musicians, which he heard growing up in the Deep South and drew on heavily for his famous “Blue Yodels” and other blues-related songs. He was, as John Greenway pointed out as early as 1957, “a folksong catalyst” who “had a most pervasive if not profound effect on American folksong” (Greenway 1957:231).

Born in Meridian, Mississippi, the son of a railroad section foreman, Rodgers developed show business aspirations early in life. At the age of thirteen, he won an amateur talent contest in his hometown and shortly afterward ran away to join a traveling medicine show. When those efforts came to nothing, he was put to work on the railroad by his father and spent the next dozen years or so at a variety of jobs on “the high iron”—as call boy, flagman, baggage master, brakeman—which took him far and wide across the nation. Throughout the period prior to World War I and into the 1920s, Rodgers made repeated attempts to earn a living as an entertainer but without success. After developing tuberculosis in 1924, he found the physical demands of railroading increasingly difficult and began to turn his attention full-time to his music, organizing amateur bands, playing on street corners, taking any small entertainment job he could find. Again, the results were meager and discouraging.

Rodgers’s first big break came in August 1927. By this time he had located in Asheville, North Carolina, where he fronted a string band known as the Jimmie Rodgers Entertainers and broadcast briefly on the local radio station, WWNC. Learning that Ralph Sylvester Peer, an agent for the Victor Talking Machine Company, was making field recordings of area entertainers in nearby Bristol, Tennessee, he impulsively loaded up the band and went there with the hope of gaining an audition. Before they could record, however, the band broke up, and Rodgers convinced Peer to let him make his first recordings solo, accompanied only by his own guitar.

Within a year, he was fast becoming a star of national stature. Billed as “The Singing Brakeman” and “America’s Blue Yodeler,” Rodgers played first-run theaters in major cities, broadcast on radio stations throughout the country, and embarked on an extensive vaudeville tour through the South on the prestigious Loew Circuit. In the ensuing five years, he traveled to numerous cities across the nation, including New York and Hollywood, to record for Victor, and eventually recorded 110 titles, including such classics as “Blue Yodel No. 1” (“T for Texas”). “Waiting for a Train,” “In the Jailhouse Now,” “Frankie and Johnny,” “Treasures Untold,” “My Old Pal,” “T.B. Blues,” “My Little Lady,” “My Blue-Eyed Jane,” “The One Rose,” “Miss the Mississippi and You,” and the series of twelve sequels to “Blue Yodel” for which he was most famous. In the

course of his brief career, Rodgers recorded with numerous other musicians of the time, including such “hillbilly” or country-music names as the Carter Family and Clayton McMichen, and in at least one instance with a star of major national prominence—Louis Armstrong, who appears with him on “Blue Yodel No. 9.” In 1931 he toured with a Red Cross benefit show headed by Will Rogers, who jokingly called him “my distant son.”

During the years from 1928 to 1932, Rodgers’ career was at its pinnacle. By late 1932, the Depression and his failing health had begun to take their toll. Audiences for live entertainment shrank, record sales plummeted, and Rodgers was too ill to undertake the ambitious film projects and international tours he had planned. After a sporadic effort to book theater dates in the spring of 1933, he went to New York to fulfill a contract with Victor for twelve recordings. Scarcely able to stand before the microphone, he rested between takes on a cot set up in a rehearsal room across the hall. On May 26, two days after finishing the sessions, he collapsed on the street and died a few hours later in his room at the Hotel Taft.

Although Rodgers’ career and resulting fame derived largely from his commercial recordings, the roots of his art were in the traditional melodies and folk music of his Southern upbringing. As a boy, he was exposed to a vast body of musical influences typical of that time and place: down-home fiddling, the banjo ditties of medicine show minstrels, the old standard church hymns absorbed by almost every Southern consciousness, even the light classics and maudlin tearjerkers of the Victorian stage favored by the maiden aunt who raised him. Later, in his teens and early twenties, roaming the country as a railroad brakeman, he was drawn to the rhythmic work chants and keening country blues of the Black section-crew laborers, “gandy-dancers” who sang as they set new rail ties or hung about the roundhouse.

From these diverse strains, Rodgers fashioned songs that somehow retained their fine old homespun flavor yet were strikingly fresh and original. At least a third of his 110 recorded titles are variants of traditional songs or contain elements that can be traced back to folksong origins. In turn, many of those Rodgers recordings—“T for Texas,” “Waiting for a Train,” “Frankie and Johnny,” “In the Jailhouse Now”—carried the tradition forward, not merely as the “country classics” of music-industry hyperbole but as familiar standards in the consciousness of a broad segment of the population. Although Rodgers often altered and rearranged the anonymous folk material he had absorbed as a youngster, in adapting it to the new technology of the 20th century—for wider audiences reached by phonograph record and radio—he performed a key role in preserving, transmitting, and disseminating vital elements of American musical culture.

The folk-like process of altering sources and recombining scattered elements can be seen in Rodgers’ first recording. For “The Soldier’s Sweetheart,” he drew on variants dating back to the Spanish-American War, borrowed the tune to “Where the River Shannon Flows,” and, in memory of a friend killed in the Argonne Forest, updated the setting to World War I. A similar instance is “Waiting for a Train,” which, in fact, can be traced back to a stage recitation of the mid-1800s but which had passed through any number of “folk” variants before it reached Rodgers, including “Danville Girl,” “Wild and Reckless Hobo,” “Ten Thousand Miles from Home,” and others now authoritatively collected as genuine folksongs.

The thirteen “Blue Yodels” display a panoply of the maverick phrases and vagrant stanzas common in African American blues; through the years, several have been

collected as “authentic Negro songs” by folksong scholars to whom Rodgers was unknown. The Blue Yodels are, in the words of country-music historian Bill C. Malone, Rodgers’ “unique contribution to American folksong” (Malone 1985:86). Other songs made popular by Rodgers but not written by him have also been admitted to the canon. So eminent an authority as Frank C. Brown thought that “Away Out on the Mountain,” composed for Rodgers by Kelly Harrell, bore clear internal evidence of being a folksong and might even be “a relic of the days of Davy Crockett” (Belden and Hudson 1952:371).

Rodgers’ popularity was such that he himself became a folkloristic icon of sorts as the subject of numerous folktales about his life and adventures. Bits of folk-say involved titles of songs he had made popular, and there were several versions of how he had “invented” the yodel when he eyed some attractive woman (whose occupation varied from story to story) and sang out, “I see your legs-o-lady-dee-hee.” Anthropologist Hugh Tracey, working among the Kipsigi tribe of East Africa in the 1950s, reported a female puberty rite in which the young maidens chanted seductively before a centaur-god, half man and half antelope, known as “Chemirocha”—Kipsigi pronunciation of “Jinimie Rodgers,” whose magnetic appeal on old records had moved them to elevate him to the status of a demigod (Oliver 1959:10).

Romanian Americans

Romanian-speaking immigrants and their descendants. The vast majority of ethnic Romanians who settled in the United States came from the Austrian-Hungarian Empire in the late 19th and early 20th centuries. Along with Serbs, Hungarians, Saxons, ethnic Jews, and Gypsies, all of whom shared some folkways, Romanians (also identified as Rumanians or Roumanians), established enclaves in America closely tied to village and region in the old country. Few came from the “Old Kingdom” of Romania (Moldavia and Wallachia). After World War II, the then borders of Romania incorporated much of the territory from which the immigrant Romanians came: Banat (adjacent to, and including, parts of northern Serbia), Bukovina (including much of the ethnically Romanian former

Soviet state of Moldova), and especially Transylvania (those formerly Hungarian-dominated lands north of the Carpathian Mountains).

Spurred by visions of quick cash to be made in America that is graphically captured in the folk proverb of this era, *Mia di dolar si ban de drum inapoi* (A thousand dollars and money for the trip home), thousands of Romanians joined other immigrants of the “new wave” coming to urban industrial centers from farms of southern and eastern Europe. By the end of World War I, immigrants identified as Romanians numbered more than 100,000, and some Romanians were documented as Austrian or Hungarian. Even though thousands of the “birds of passage,” as they were called, had returned to the old country with their hard-earned dollars, many young men stayed, sending for wives and sweethearts to join them as they were able to move out of boarding houses, supporting families on more or less steady pay from mills and factories.

The experience of immigration itself was incorporated into traditional folk expression. The earliest immigrants, often young men only in their teens, composed songs about their experiences. These were sung and written down aboard steamships or in cramped quarters of boarding houses. These folksongs followed the formulaic traditions of the “blueslike” *doina*, particularly the *doina de duca* (leaving songs) or *cinteci de strain* (songs of estrangement), traditionally sung in Romanian villages when young men left home or were conscripted into the Army. Describing the difficulty of earning a dollar, the poor living conditions of the unskilled workers, and homesickness, these “America songs” were often sent back home as bitter, sarcastic commentary on the American Dream. Still found in folksong repertoires in parts of modern-day Romania (especially Transylvania), these songs were not transmitted beyond the first immigrant generation in America.

Folktales have been widely collected and studied in Romania, but this important folk tradition has not remained vital among Romanian Americans any more than among other 20th-century immigrant groups. The great *basme* (wonder tales) are known through translations of 19th-century collections, if at all. Several immigrant *povestitori* (storytellers) in America have been recorded, but their *Märchen* (fairytale) traditions have not taken hold in America. Among many American-born Romanians, however, there is an awareness of folktale stereotypes of certain characters described in Romanian humorous tales, such as Pacala (a famous trickster), the *prost* (generic fool), priests and priest wives, and especially *tigani* (Gypsies). While few remember specific anecdotes about these Old World stereotypes, many people share the traditional attitudes toward them, as memories of stereotypical traits have become part of an ethnic sensibility.

As a result of a regional diversity in the old country, the American Romanian folk culture had from the beginning distinctive regional characteristics, although much of this intragroup diversity has been gradually diffused during the 20th century. Always a relatively small ethnic presence in America, Romanian American communities are based increasingly on formal religious organizations (including the Romanian Orthodox Church in America) and various cultural organizations devoted primarily to pan-Romanian “folklore revival” activities among the younger generations. Ethnic-neighborhood contexts of folklife, a coalescence of regional styles, repertoires, and dialects, have declined dramatically in the last two generations. Some Old World regional distinctions in foodways and music persist in a few settlement cities, such as Detroit, Cleveland,

Philadelphia, and Gary, Indiana, that are based on the regional migration patterns of the early 20th century.

In communities where the American-born Romanians are active in ethnic affairs, different churches at Christmastime sponsor groups of *colindatori* (carolers), who visit houses of parish members. Also, about six weeks before Christmas, congregations of various Romanian Orthodox and Roman Byzantine Rite Catholic churches sing some *colinde* (carols) at the Sunday worship service after liturgy. Sometimes, on Christmas Eve, casually organized groups travel in cars to other parish members' homes. These *colindatori* will be invited inside to sing and be offered refreshments. Sometimes the host is expected to make a donation to the carolers, who in turn give the money to the church. In Romanian villages *colindatori* are always groups of young men and boys who will be ritually offered refreshments. The donation to the church is an American innovation. Also, American *colindatori* are not limited by age or gender. In south Florida, where some immigrants still live, groups have been mainly composed of elderly people. In the Cleveland and Detroit areas, however, where there are more active American-born people, groups may be largely composed of high-school students or young people returned from college for the holidays.

Songs most commonly sung are the *colinde* not usually limited to a local village in the old country. “*Trei Pastori*,” “*O Ce Veste*,” and “*Florile d’Albe*” are the three most popular songs passed down to younger generations. While there once were known regional variations of these songs, nowadays the words are standardized and learned partly (and increasingly phonetically) from mimeographed sheets with words from homemade songbooks.

Romanian folk dances and dance music have also been adapted to a multiethnic environment in America, not always by ethnic Romanian Americans. Eastern European and Balkan dance bands may play Romanian dance music as a part of the mixed repertoires required by such multiethnic bands, who perform at weddings and other festive occasions, including bar mitzvahs, for different ethnic communities. From the beginnings of immigration, Romanian dance music was adapted to American opportunities. Manufactured brass and woodwind instruments, known to a certain extent in the Old World, replaced the traditional handmade folk instruments as soon as musicians could afford them. Romanian and Gypsy orchestras recorded dance tunes in the 1920s on RCA Victor and Columbia Phonograph Company labels, performing numbers that reflected regional sensibilities: “*Memorii din Banat*,” “*Invaritata dela Chicago*,” “*Doina din America*,” and “*Doina din Seliste*,” to name a few. Dance music and dance styles became associated with a specific settlement community dominated by immigrants from specific Romanian regions: The Cleveland folk-dance style was identified as Transylvanian; the Chicago and Philadelphia style, as Banatian; and a Gary—East Chicago style, also as Transylvanian.

Although some specialty folk-dance groups consciously try to preserve Old World regional authenticity in their dancing, most younger generations who still perform Romanian folk dances have adapted a greatly simplified American style that shows little or none of the variation that marked village or regional dances for the immigrants. The dances most often performed as Romanian folk dances are performed generically throughout Europe as well as America: *the hora unirea*, (basic circle dance), and the *sarba* (snake dance), done in a long winding line with arms placed on adjacent dancers’

shoulders, are the most popular. Some people still remember the *strigaturi*, or traditional shouts, that traditionally accompany many Romanian dances.

Foodways remain as an important ethnic social marker. Romanian American foods, basically peasant fare adapted to Americanized tastes and ingredients, may be served in honor of the standard American “heritage holidays” celebrated by multiethnic Americans of Romanian ancestry: Thanksgiving, Christmas, and Easter (although Romanian Orthodox celebrate *Craciun* [Christmas] and *Pas* [Easter] according to the Byzantine calendar). On these occasions, people might eat *mamaliga* (stiff corn mush) and *sarmale* (stuffed cabbage on sauerkraut) along with turkey and dressing or ham and potatoes. *Clatita* (a crepe or pancake) and *cozonac* (a cake) would also be appropriate to celebrate a festive occasion with an edinic touch.

People in the late 20th century tend to disassociate themselves from Old World folk belief. Third and fourth generations remember that their grandparents believed in the evil eye (*deochi*), but dismiss this once widespread tradition as “just folklore.” Likewise, the stories of *strigoi* (witches) and of the appearance of *dracul* (the devil) that have been passed down are now told for amusement, set in a time and place long ago and far away. One complication in the folklore of belief is the belief by Americans in general that Romanians, especially those of Transylvanian ancestry, have something to do with Dracula. Folk custom and belief in Romania in the 1990s do have some interesting parallels to the literary creation of Bram Stoker, but the obsessive connection devoted by American popular culture to this aspect of Transylvania has had impact on edinic identity of Romanian Americans, leaving some insulted and some amused.

Members of a recent generation of immigrants, those who defected from the communist regimes after World War II, have energized some traditional Romanian American communities in important ways. Because they mostly are not from peasant or rural village backgrounds, the “newcomers” have tended to focus more on political and intellectual pursuits than on maintaining and reviving the Old World folkways.

Rumor

Unverified information of uncertain origin often spread by the oral tradition, as well as by phone, fax, broadcasting, or computer. Although rumors may be malicious or idle, they thrive in most societies worldwide, in both urban and rural settings. Rumors affect all facets of human experience, and almost every person has participated at one time in either the simple form of rumor (gossip) or the more complex form that is closely akin to the legend.

Rumor topics circulate around sex, love and marriage, murder, war, illness, religion, crime, race, politics, and so on. In the United States, rumors thrive about California falling into the sea, about Chinese restaurants serving chopped cat, and about President John F.Kennedy's assassination in 1963. Whatever the subject, once a potentially dangerous or embarrassing rumor enters oral tradition, it gains powerfully in strength and dominance. The more intriguing the subject or deed, the stronger the paths of dissemination. While some rumors tend to remain extremely simplified in their recreations, many tend to grow until they reach proportional dimensions that are almost unrecognizable to earlier renditions of the lore. Both creativity and exaggeration account for the endless versions in this field. The creative energies of the tellers allow for a type of subjectifying that reflects personal perception and remembrance and local geographical and physical setting. Exaggeration, a common characteristic of rumor, often takes the form of multiplication: One person becomes five; one incident becomes ten; \$100.00 becomes \$1,000.00; and the midget becomes the giant.

Rumors are legitimate folkloric items, whether the contents of the rumor narrative are true or contrived. Rumors almost always suggest to the folk that there must be some truth involved: "Where there's smoke there's fire!" Folk members can readily point to cases wherein initial rumors prove to be accurate. On the other hand, history teaches that the most powerful and tragic rumors may be utterly baseless. The thousandfold repetition of the scapegoat rumor that Adolf Hitler invented against the Jews of Germany proved to be groundless but, nonetheless, highly effective in his campaign of He-braic genocide. The stories in ancient Greece that Socrates was destroying the minds of the youth and causing them to turn to violence resulted in his death. During the early 20th century, rape rumors (the sexual assault of Whites by African Americans) triggered numerous race riots in American cities.

While relatively little research has been done on rumor, folklorists, psychologists, sociologists, political scientists, and anthropologists continue to probe this phenomenon in an effort to understand better the origins, the dissemination process, and the effects that rumor has had and continues to have on communities throughout the world.

S

Saint's Day

Christian holy day and holiday. Since the 2nd century, Christians have established special days in honor of martyrs and models of holiness. Usually observed on the reputed date of the saint's death, these holy days originally involved worshipful veneration at his or her tomb and, consequently, were quite localized. Later, local church calendars began to include feast days honoring saints from other churches. By the Middle Ages virtually every day of the year had become part of the sanctoral cycle, the annual round of holy days devoted to venerating particular saints. Moreover, many saints' days had become civic holidays as well as occasions for piety.

Though almost every day is a saint's day, an individual Christian observes only a few of them. These may include the feast of his or her patron saint, the holy person under whose special guardianship the person was placed when baptized. Often the person shares the saint's name. In some American ethnic groups with a strong Catholic heritage, the saint's day replaces a birthday celebration.

During the course of the year, Christians may also participate in the feast of the patron saint of the parish church, civic community, occupation, or some other group to which they belong. Moreover, since entire countries or regions may enjoy the special care of a particular saint, Americans whose ancestors came therefrom may observe that saint's day. For example, an Irish American seaman named Michael who attends St. Anne's Church might acknowledge at least with prayer the feast days of Sts. Patrick (March 17), Nicholas, patron of sailors (December 6), Michael (September 29), and Anne (July 26).

Though community observances of saints' days often assume specific ethnic dimensions and may, in fact, become expressions of ethnicity as much as of religious devotion, certain features are relatively consistent. Almost always, churchmen will carry the saint's statue through the community, usually arriving at the church for a Mass, which may be celebrated by a priest representing the community's ethnic heritage. Since in the late 20th century the festivities are frequently held on weekends instead of the traditional dates for feasts, several days may be given over to celebratory activities evincing little overt religiosity. Food booths and carnival-like games raise funds for the organization in charge of the celebration. Music, including that of the relevant ethnic folk heritage and contemporary popular music, provides accompaniment for dancing. A festival king and queen, often young children, may be crowned.

Though community saints' days flourish in virtually every American ethnic group with religious roots in Catholicism, no group has continued to observe such a variety of saints' feasts (*feste*) as Italian Americans, who use these occasions to demonstrate their

enduring *campanilismo* (a sense of identity with their specific ancestral village). Consequently, Italian communities in the United States hold *feste* honoring Sts. Gennaro (Neapolitans), Rossilia (Palermitans), Paulinus (Nolani), Giuseppe (southern Italians, especially Sicilians), and many others.

Each saint's day celebration has its distinctive qualities, but they all remind the participants of who they are religiously, ethnically, and sometimes occupationally.

Sandburg, Carl (1878–1967)

American author and collector of folksongs. Sandburg, the son of Swedish immigrants, was born in Galesburg, Illinois. He is best known for his six-volume biography of Abraham Lincoln, which was published between 1926 and 1939 and won him the Pulitzer Prize in 1939, and for his poetry, which earned him a second Pulitzer Prize for *Complete Poems* (1950).

While a teenager, Sandburg was possessed of a restless wanderlust that drove him to travel as a self-styled “Eternal Hobo.” Riding fire freight trains across the country to industrial centers and working odd jobs, such as delivering milk and washing dishes, during the 1890s depression, Sandburg recorded folksongs in his pocket journals. In the American heartland, Sandburg listened to hoboes, railroad workers, and harvest hands sing about their frustrations and hopes. Returning to Illinois, Sandburg learned more songs while selling stereographs door to door. He also served as district organizer for the Social Democratic Party in Wisconsin and was secretary for Milwaukee’s Socialist Mayor Emil Seidel, from 1910 to 1912. The job he held the longest, from 1917 to 1932, was newspaper reporter for the *Chicago Daily News*.

After establishing himself as a writer, Sandburg embarked on a multivolume biography of Lincoln. When he traveled on research trips, he also collected regional folksongs. Presenting lectures and poetry readings to raise research funds for his Lincoln biography, Sandburg concluded each session, playing his guitar and crooning ballads, especially his favorite, “Hallelujah, I’m a Bum.” Audience members provided him new variations of lyrics and tunes.

As a folksinger, Sandburg preserved the American vernacular voice. Enchanted with folk music, Sandburg collected new songs from labor organizers, folklorists, strangers, and famous friends, including poet Robert Frost and journalist H.L. Mencken. He traced versions’ origins and studied America’s history through its music, believing that songs reflected average peoples’ life stories and feelings.

In 1926, at the same time that his two-volume *Abraham Lincoln: The Prairie Years* was released—the first part of the Lincoln-biography series—Sandburg recorded an album of songs from Lincoln’s era. Inspired to publish a collection of his folksongs, he compiled 280 songs in the well-received *American Songbag* (1927), one of the first books of authentic American folksongs.

Sandburg introduced each song with a description of how he collected it. The songs represented America’s diverse regional, socioeconomic, and ethnic characteristics. Spirituals, railroad ballads, prison and work-gang blues, ditties, and military songs depicted America from colonial days to the 20th century.

While preparing another Lincoln-biography volume, this one on the Civil War, Sandburg collected American folk sayings, slang, and proverbs in *The People, Yes* (1936). Sandburg’s *New American Songbag* (1950) offered additional folksongs that he had collected during his travels. Sandburg concentrated the remainder of his literary work

on poetry and prose, enjoying folk music as entertainment on his Flat Rock, North Carolina, goat-farm retreat, Connemara, where he died in July 1967 at age 89.

Saxon, Lyle (1891–1946)

Writer and public-sector folklorist. Though born in Bellingham, Washington, Saxon grew up in Baton Rouge and was greatly attached to Louisiana as a place. Though he lived in New York for several years, he spent most of his adult life in New Orleans and in the Cane River country near Natchitoches.

Saxon worked as a journalist for much of his life and used his columns to promote restoration of the French Quarter and to encourage people to wear elaborate costumes for Mardi Gras. Though his desire was to write fiction, he became famous as a popular historian of Louisiana with such books as *Fabulous New Orleans* (1928), *Old Louisiana* (1929), and a biography of pirate Jean Lafitte, which was made into a movie by Cecil B. De Mille.

Though he included folklore in his books, it was primarily because he was recognized as an interpreter of Louisiana that he was asked in 1935 to head the Federal Writers' Project in the state. This project was part of the Works Progress Administration and had as its purpose providing employment for white collar workers during the Depression, who would undertake useful research and writing. Collecting folklore was a central undertaking. Saxon supervised this collecting, which resulted in *Gumbo Ya-Ya: A Collection of Louisiana Folk Tales* (1945), the book he coedited with Edward Dyer and Robert Tallant, and which stands as an end result of early government-sponsored folklore research.

Saxon's view of folklore was not sophisticated, and *Gumbo Ya-Ya*, though very readable and containing much information on Louisiana folklore, is primarily journalistic and limited in scope.

Scandinavian Americans

Immigrants to North America who came primarily from Norway, Denmark, Sweden and their descendants. Dorothy Burton Skaardal and others use the term “Scandinavia” to refer only to these three countries, arguing for the exclusion of Iceland and Finland primarily on the basis of language familiarity among contemporary speakers of Norwegian, Danish, and Swedish. This argument notwithstanding, Iceland is included here because of the similarity of language (Icelandic being an old form of Norwegian) and ethnic origin, and because of historical ties between Iceland and the development of Scandinavia. Iceland was an important link to the other three countries during the Viking Period and continued thereafter. The Icelandic Sagas are uniquely tied to the Norwegian Sagas, and during the period of Norwegian exploration Iceland was geographically an important link on the North Atlantic sailing and settlement route.

The term “Nordic” is also used to describe this group of five countries in northern Europe and is the term employed by the Nordic Council. In general, Finland is thought of as being one of the “Nordic” countries. Finnish peoples in Finland and North America do not, however, customarily identify themselves as Scandinavian. The term “Scandinavian” also takes into account some aspects, including folklore, of the people from Greenland and the Faeroe Islands (both part of Denmark), Aaland, a self-governing island province belonging to Finland and located between Sweden and Finland, and several other substantial island populations belonging to one of the primary Scandinavian countries.

Scandinavian American folkloric materials generally derive from the periods of immigration and settlement to North America and encompass the oral folklore of the group (folktales, legends, beliefs, sayings, and other forms of traditional oral lore) and the material folk culture of the group (the material objects made by Scandinavian Americans after their arrival in North America). In addition, much of the folklore carried on by Scandinavian Americans in the 1990s is the result of relearning Scandinavian traditions by the succeeding generations living in North America. Taken together, the oral and material forms of folklore represent the substantial body of traditional materials identified with, and perpetuated by, Scandinavian Americans. As an identifiable ethnic group, the descendants of the three primary Scandinavian American populations—the Norwegian Americans, the Danish Americans, and the Swedish Americans—and, to a lesser extent, the Icelandic Americans, make up a significant and highly visible immigrant influence in North American culture. The Icelandic American influence is more vis-

ible in Canada than it is in the United States.

The folklore of American immigrant groups in general, and of Scandinavian Americans specifically, follows two lines of development. First, ethnic groups migrating to America brought specific traditions that were alive in their home country at the time they decided to immigrate. This is particularly true of Scandinavian Americans inasmuch as Norwegian, Danish, Swedish, and Icelandic cultures exhibit a strong attachment to their national traditional folk culture and to the historic events of their countries. Second, each ethnic group developed a hyphenated-American folk culture, retaining a portion or segment of their Old World home culture in the New World while creating new folklore

in the host culture. The development of new forms of folklore enables the immigrants to maintain a tie to the Old World culture while living in the New World culture and describes for the immigrant groups their new lives.

The folklore of modern-day Scandinavian Americans evolved from language, habits, and customs that the groups brought with them and was limited to forms of oral and material folk culture that could be transported to North America. Hence, many oral pieces of folklore that could not survive translation into English also vanished once the speakers of original languages had disappeared. The disappearance of many language-based forms of folklore among Scandinavians, particularly Norwegian, Danish, and Swedish immigrants, was due in part to the speed with which Scandinavians adopted the English language and North American forms of daily life. As a consequence, the folklore collector would not expect to find long narrative classic Scandinavian folktales such as those collected in Denmark in the mid-19th century by Hans Christian Andersen or in Norway by Peter Christen Asbjørnsen and Jørgen Moe. As an ethnic group, Scandinavian Americans joined the mainstream of North American culture within one or two generations, and, as a result, the longer, more complicated forms of folklore disappeared.

Some forms of traditional Scandinavian material folk culture, such as architecture, also disappeared; however, many forms of material folk culture persisted in North America. The folklore of Scandinavian Americans that is collected and studied in the 1990s is largely made up of the materials that survived from the first and second generation of Scandinavian immigrants. There are a number of Scandinavian American museum collections that contain folkloric materials, most notably Vesterheim: Norwegian American Museum (Decorah, Iowa); the Danish Immigrant Museum (Elk Horn, Iowa); the Swedish American Museum (Chicago); and the Nordic Heritage Museum (Seattle). Each of these collections contains significant historical, oral-historical, and material forms of traditional Scandinavian-American folklore, including textiles and weavings, furniture, wood carvings, boatbuilding, costumes, and other material items related to daily life in America. Many of the items of material folk culture, such as the immigrant painted chest or trunk, were brought from the immigrant's country of origin to the New World. Of the collections mentioned, the Vesterheim Collection, which is said to be the largest immigrant ethnic collection in North America, contains the most significant and well-documented body of materials.

Scandinavian Americans immigrated to North America throughout the history of the Americas. Early immigration of Norwegians, Danes, and Swedes dates back to the 17th and 18th centuries; however, by far the greatest numbers of immigrants from Scandinavia came during the last quarter of the 19th century and the first quarter of the 20th century. The emigration from Norway, Denmark, and Sweden exhibited characteristics similar to the overseas movement from Europe in general. Following a large movement of immigrants to North America during the period from the 1870s to the early 1890s, there was a decline of immigrants due to the economic depression of the early 1890s. Immigration returned to predepression numbers during the first two decades of the 20th century.

The numbers of Scandinavians immigrating to North America were very high in proportion to the total numbers of each country's population. Norway experienced the highest immigration intensity of the Scandinavian countries to North America. Between 1880 and the end of 1893, an average of ten of every thousand Norwegians immigrated,

for a total of 256,068, and nearly all—99.25 percent—came to the United States. Between 1900 and 1915, another 235,410 Norwegians immigrated to the United States. The Norwegian Bureau of Statistics, using the U.S. Census of 1920, calculated that 1.2 million people of unmixed Norwegian descent, almost half the population of Norway, were living in the United States. Also by 1920, there were another 700,000 persons in the United States of mixed Norwegian descent.

The numbers of immigrants were almost as high for the other Scandinavian countries. For example, according to Varick A. Chittenden, between 1881 and 1930 more than 278,000 Danes immigrated to the United States. When Scandinavian Americans began to build their own communities in North America, they tended to settle near one another, enhancing the overall impact of the group. In the Midwestern United States, ethnic Scandinavians dominated some geographical regions in both the rural and urban areas. In Chicago, for example, Norwegians, Danes, and Swedes tended to congregate in the same areas of the city. In the countryside, in Wisconsin, Iowa, Illinois, Minnesota, and the Dakotas, Norwegian, Danish, and Swedish communities were often located close to one another. As a consequence, Scandinavian Americans reinforced their Old World traditions, even if they married a Scandinavian from a country other than their own. Still, by 1920, the Norwegian Bureau of Statistics estimated, 90 percent of the Norwegian-born immigrants married people who were either Norwegian or part Norwegian.

The oral folklore of ethnic Scandinavian Americans collected during the late 19th century and throughout the 20th century has been primarily minor and more modern types of folklore genres. Jan Harold Brunvand notes in his study of Norwegian folklore in Alberta, Canada, that the mode of folk expression that best endured is the brief oral narrative, either an anecdote or a traditional joke form (Brunvand 1974). For the three primary countries under discussion, the impact of immigration was unsettling for the immigrants and their families both at home and in their new home. Such large numbers leaving small countries, coupled with the immigrants' natural fidelity to their ethnic identity, led the immigrant populations to maintain their ethnic customs perhaps even more than they might have otherwise. Among the genres of folklore that were strongest during the settlement period were those that reflected the difficulty of immigration to a new country. Naming towns, villages, and farms reflected the immigrants' ethnic heritage. Hence, the names of settlements such as Norway, Michigan, Nonvay, Iowa, or New Norway, Alberta, announced to the immigrants and their neighbors the country of origin of the newly landed immigrant. "Dane Town," an informal name of a settlement in Iowa south of Council Bluffs across the Missouri River from Omaha, Nebraska, was never a formal designation, but it lasted through the first and second generations of Danish settler—after which it faded into memory. A similar fate befell "Swedetown," a section of northwest Salt Lake City, Utah. The process of naming was an important link to life in the Old World.

By far the largest body of oral-folklore materials that exists among Scandinavian Americans has to do with the actual process of settlement. Oral accounts and early newspapers abound with folkloric narratives that contain the recurring themes of settlement, including farm building, urban settlements, church building, famous characters in the settlement, and, of course, stories of neighbors who may or may not have been Scandinavian in origin. Chittenden, in his study of the folklore of a Danish community in New York, also notes that the oral folklore of ethnic Danes clearly

depended upon the continued use of the language of the group (Chittenden 1985). During the second and third generation, when the language was used less frequently, traditional proverbs, sayings, riddles, rhymes, folktales, and folksongs faded from use and were largely forgotten among the folk. The fact of language currency is also evidenced in the older studies of Scandinavian folklore. Einar Haugen published his studies of early Norwegian ballads and songs in the 1930s and 1940s and Ella Valborg Rolvaag published her study of Norwegian American folk narrative in the 1940s.

Perhaps the strongest evidence of Scandinavian American folklore lay in the material folk culture produced by the group. It is not surprising, even in an ethnic group in which the original language was quickly disappearing, that the things produced by the group would continue to reflect their strong northern European heritage. Buildings, fishing boats, churches and church furniture, and many smaller handmade items designed for daily use continued to be part of the active Scandinavian American heritage. Possibly the first great monument to their Nordic heritage is the massive altar carved for the Seaman's Lutheran Church in Brooklyn, New York, and now housed at the Vesterheim Museum. Bay Ridge, a small Norwegian community located near the shipping docks in New York, was the site of a Norwegian immigrant community, and the altar served immigrants and Norwegian sailors alike for many years.

Among the finest examples of Scandinavian American folklore are the material-culture objects related to wood carving and wood painting. Wood carving among Norwegian Americans is documented by Marion J. Nelson, past director of the Norwegian-American Museum, who notes that the strongest traditions of carvings represented in North America come from the Gudbrandsdal and Telemark regions of Norway. Nelson points out that the strongest tradition of Norwegian carving represented in North America is acanthus carving, in which carvers exhibit a mastery of scroll design and intricate carving technique (Henning, Nelson, and Welsch 1978). The tradition of rosemaling (rose painting), primarily among Norwegian Americans, is a tradition that had its roots in Norway but was largely unpracticed in North America for several decades before experiencing a revival during the 1930s. Rosemaling styles, often named for different provinces in Norway from which a specific tradition originates, also display a mastery of painting small, intricate, natural patterns.

Two of the nearly 150 National Heritage Awards from the National Endowment for the Arts have gone to Norwegian Americans representing the traditions of wood carving and rosemaling. Leif Melgaard, who immigrated in 1920 to Minnesota, was recognized in 1985 for his expertise in wood carving. Known for the intricate detail in his wood carving, Melgaard learned his art at the Craft School of the Museum of Industrial Arts in Dakka, Norway, a school that had its origins in the Norwegian government's attempt to foster the indigenous folk crafts of the country. Ethel Kvalheim, who grew up in Wisconsin among Norwegian American neighbors, was recognized in 1989 for her expertise in traditional Norwegian rosemaling, which she learned from a neighbor as well as from classes offered at the Vesterheim Museum in Iowa. Melgaard and Kvalheim represent both the immigrant generation and the succeeding generation of Scandinavian Americans who express their culture through artifacts.

Perhaps as frequently as any other immigrant group to North America, Scandinavian Americans retained and created material-culture objects that expressed cultural values. Carved wooden spoons, painted drinking bowls, elaborately decorated silver jewelry,

carved pieces of furniture, skis with heads of supernatural beings carved on the tips, flat woven rugs or tapestries, and traditional regional costumes are some of the items Scandinavian Americans use to display their heritage. Many artifacts reflected life in the old country, while handmade items were comments on life in the new country. For example, the well-known Norwegian American carver Ole Olson (1882–1966), known as “Ole the Hermit,” carved small caricatures of the Norwegian immigrant types he knew from his native Valley City, North Dakota (Nelson 1989).

The folk arts and material culture among Scandinavian Americans were generally closely linked to the production of functional items related to daily life, a tradition that was carried from the old country to the New World. Farm buildings and boatbuilding provide two good examples of this phenomenon. While Scandinavians infrequently made buildings that were exactly like those made in their homeland, their American buildings were similar in general appearance to the Scandinavian archetype, but also expressed the immigrant’s relatively quick assimilation in the new country. This assessment was noted by Norwegian folklorist Reidar Bakken in his fieldwork documentation of a granary from an Iowa farm. The granary, which was subsequently moved to the Norwegian Emigrant Museum in Hamar, Norway, was built in 1874 by a Norwegian immigrant who had come to the United States ten years earlier and exhibited qualities that more closely resembled traditional American Midwestern log buildings. It is documented that Norwegian American boatbuilders in Puget Sound in the Pacific Northwest continue to build boats using traditional styles inherited from the west coast of Norway as well as techniques from Denmark and the Faeroe Islands.

Most studies of contemporary folklore, and especially immigrant folklore, note that the tendency is for folklore to be expressed in shorter, more compact folklore genres such as the short joke or folk saying. This is certainly true of the development of forms of Scandinavian American folklore. Chittenden and Brunvand comment on this phenomenon and early immigrant novels illustrate this development (Brunvand 1974; Chittenden 1985). One reason for the decline of longer folklore genres is the disappearance of the immigrant language. Scandinavian Americans in the second and third generation will customarily be able to repeat counting rhymes and numbers in the original language while not being able to speak the language. Also, during celebrations such as birthdays and holidays such as Christmas it is likely that Scandinavian Americans will know prayers or songs in the original Scandinavian language while not knowing exactly the meaning of the specific Scandinavian words. One rhyme often repeated by Danish Americans involves an adult naming in Danish a child’s forehead, eyes, nose, mouth, and chin as he touches each part of the face, ending with a tickle under the chin. The rhyme serves to teach the child the names of the facial parts in Danish as well as to entertain. Today the Danish words are repeated even when the teller cannot speak the language.

Celebrations and holidays offer contemporary Scandinavian Americans an opportunity to express their ethnic heritage. Holidays observed in Scandinavian countries are popularly recognized in North America. Two examples are the Danish Constitution Day on June 5 (*Grundlovs Dag*) and Norwegian Independence Day on May 17 (*Syttende Mai*). On these days, Danes and Norwegians in North America engage in an intense celebration of their ethnic heritage with traditional songs, foodways, national flags and ribbons, dance, and speech. Christmas, New Year’s Day, and Midsummer Day (the

summer solstice, around June 21) are also days that allow Scandinavian Americans the opportunity to celebrate their ethnic heritage. For example, Danes will make *aebleskiver* (Danish pancakes), *rullepolse* (pressed meat), *frikadeller* (meat balls), and *kleiner* (pastries) for holidays, while Swedes and Norwegians will prepare ethnic foods and build all-night fires for Midsummer, the longest day of the year. A standard foodway for Scandinavian Americans is coffee and tea with *smørrebrød* (butter and bread), an open-face sandwich of cheese or meat for any occasion. Among Swedish Americans, the celebration of St. Lucia (December 13), the ritual initiation of the Christmas season, is an important expression of their ethnic culture. Larry Danielson's study of this celebration in Lindsborg, Kansas, notes that among Swedish Americans the festivities are a public celebration performed each year as an expression of Swedish ethnic identity (Danielson 1991). In a similar way, Oakland, Nebraska, the self-proclaimed "Swede Capital of Nebraska," celebrates its Swedish identity with a festival held early in the summer.

One of the most important sources of Scandinavian American folklore is the rich body of immigrant literature. Immigrant Scandinavians and first-generation Scandinavian Americans produced a vast number of novels, short stories, and chronicles that related their lives in North America. Even though Scandinavian Americans assimilated into the population perhaps more easily than many other immigrant groups, they produced a literature that reflected, and commented on, their values and lives as a result of immigration. Perhaps the best example of the immigrant writer is Ole Edvart Rolvaag (1876–1931). In the novels *Giants in the Earth* (1927) and *The Third Life of Per Smevik* (1912), Rolvaag drew on the motifs of Norwegian folklore to describe the plight of the immigrants in their new country. An excellent account written by the grandchild of an immigrant is Kathryn Forbes' *Mama's Bank Account* (1943), in which the author uses folklore to describe the Americanization of a Norwegian family in California. Some of the best accounts of immigration were written by Scandinavians who researched and interviewed immigrants to North America. Two classic works in this genre are Johan Bøjer's *The Emigrants* (1925), an account of Norwegian families in North Dakota, and Vilhelm Moberg's *Unto a Good Land* (1954), the chronicle of a Swedish immigrant family and their travel to Minnesota. Scandinavians in North America also produced a body of cultural and historical writing, the purpose of which was to instruct Scandinavian Americans about the old countries. Berner Lofthfield's *Norge: Det Norske Folks Historie* (1900), published in Minneapolis, was an effort to teach Norwegians born in America about Norway.

In general, Scandinavian Americans are conscious and proud of their European heritage. The oral and material-culture folklore of the group reflects their particular history and settlement in North America. Like the literature, the collected oral narratives provide significant information and insight into Scandinavian American folkways. An example of the oral narratives that describe the process of settlement comes from a Danish woman born in Iowa of Danish-born parents. She told of growing up in "DaneTown." "It was always called DaneTown," she said, referring to the period from the 1880s to the 1920s, "I suppose because we were all Danes and there were new ones moving in all the time. People coming from Denmark could tell that the place was full of Danes." When she concluded the interview, she commented directly on Scandinavian heritage. "I always add a little cardamon to a lot of my food. It gives it a 'Danish' flavor, especially to the *aebleskiver*." Foodways, rhymes, songs, stories, artifacts, and house

decoration used in the 1990s exhibit Scandinavian American folk traditions brought from the old countries and also developed in North America. Many of the traditions carried on in North America are believed by Scandinavian Americans to add a special “Norwegian, Danish or Swedish” flavor to their lives.

Scarborough, Emily Dorothy (1878–1935)

Folklorist, novelist, and teacher. Scarborough, who used Dorothy as her first name and was known affectionately as “Miss Dottie” or “Aunt Dot,” was a distinguished scholar and writer whose brief professional career spanned only seventeen years. While working as a teacher of creative writing at Columbia University in New York City, she wrote five novels, including *The Wind* (1925), which is regarded as a minor classic, and published two major folksong collections, *On the Trail of Negro Folksongs* (1925) and *A Song Catcher in the Southern Mountains* (1937). She also wrote and edited various other books, poems, short stories, reviews, and essays.

Scarborough was unusually well educated for her day, receiving a B.A. from Baylor University in 1896, an M.A. there in 1899, and a Ph.D. from Columbia University in 1917. She also studied at Oxford University in 1910, before that university awarded degrees to women.

She was elected president of the Texas Folklore Society in 1914, and her presidential address, “Negro Ballads and Reels,” was the first public statement of her interest and expertise in folklore. Recognizing the blues as an original, indigenous American art form, she also interviewed W.C.Handy and published the first known scholarly article about him and his music in 1923.

Scarborough was squarely in the tradition of the literary approach to folklore materials, but she was not exclusively an “armchair scholar.” She gathered the texts and tunes of many of the folksongs in her collections directly from the informants and then conducted extensive research and developed voluminous correspondence to annotate her materials thoroughly and place the materials in the context of other scholarly findings. She was well known by all of the leading ballad and folksong scholars of her generation, both in America and abroad. Her collections are exceptional not only for the extensive contextual data she provided about her informants, but also for her descriptions of her collecting methods and experiences.

Schoolcraft, Henry Rowe (1793–1864)

The first person to collect and analyze a large body of American Indian folklore. While serving as an Indian agent at Sault Ste. Marie, Michigan, Schoolcraft married into a Scots-Irish and Ojibwa family, the members of which served as an invaluable key to the culture.

The import of Schoolcraft's study of Indian folklore came from his use of native informants, his attempt to maintain at least some of their oral style in the translations, and his efforts to make a thorough collection of oral narratives. In his *two-volume Algie Researches* (1839), Schoolcraft published the narrative folklore he had collected among the Ojibwa. At a time that predated the establishment of folklore as a discipline, Schoolcraft emphasized the importance of understanding the language and of rendering exact translations. He discussed the Ojibwa narratives as reflectors of cultural values, religious beliefs, cosmology, history, child-rearing practices, and political perspective. As A.Irving Hallowell remarked: "Historically viewed, Schoolcraft was a pioneer in the collection of the folklore of any nonliterate people anywhere in the world. No other material of any comparable scope, obtained directly from American Indian informants, was published until several decades after *Algie Researches*" (Hallowell 1946:137). Schoolcraft's work was, Hallowell added, the first comprehensive collection of the myths and folktales of any Algonquian speakers. Thus, Schoolcraft provided a stimulus for subsequent collections of American Indian folklore.

Scottish Americans

Major contributors to American social and cultural life since the earliest days of British settlement. A Scot named Thomas Henderson was one of the original settlers of Jamestown, Virginia, in 1607 (Donaldson 1980:909). Altogether about 1.5 million migrants have come to America from Scotland, which currently has a population of roughly five million.

During the 17th and 18th centuries, tens of thousands of Scots were transported and voluntarily migrated to British America, settling first along the Eastern seaboard, concentrating in greatest numbers in the Southern colonies. When the first U.S. Census was taken in 1790, at least 6 percent of the population was of Scottish or Scotch-Irish background (descendants of English-speaking Lowland Scottish Protestants who began colonizing the Northern Irish province of Ulster at the behest of James VI of Scotland and I of England in 1610). Between 1715 and 1775, roughly 250,000 Ulster Scots Presbyterians came to America, most landing in the middle colonies and gravitating to the colonial frontier. Nearly 2.5 percent of Americans claim some degree of Scottish ancestry, while approximately 3.3 percent identify themselves as Scotch-Irish, a term originating in America, not in Britain, where the terms "Ulster Scots" or "Scots-Irish" are preferred.

Scottish Americans and their Scotch-Irish cousins have not been clannish from a demographic perspective. Instead, American Scots have intermarried more than any other single European-American ethnic group, contributing to the general cultural mix of English-speaking America on many levels. Scottish influences pervade American folk music. Alexander Campbell "Eck" Robertson, Bill Monroe, Jim and Jesse McReynolds, Howdy Forrester, Jim Buchanan, Fiddling Cowan Powers, John Cowan Hartford, and Stuart Ian Duncan are a few notable 20th-century American fiddlers and bluegrass musicians with Scots ancestors. Folksinger Jean Ritchie and her family, and Woody Guthrie and his son Arlo, also have Scottish roots. Perhaps 40 percent of the Child ballads are distinctly Scottish rather than English in origin; most ballads found in Appalachia in the 1990s are still current in Northern Ireland and Lowland Scotland. Scottish singing styles have influenced various American regional ballad traditions. Many American fiddle tunes were originally Scottish, such as "Hop High Ladies" ("McLeod's Reel") "Leather Britches" ("Lord McDonald's Reel,") and "Too Young to Marry" (the tune of Robert Burns' "My Love Is But a Lassie-o"). Upland Southern American cabins, settlement patterns, and farming practices reflect Lowland Scottish and Ulster Scots prototypes. Scots influences are evident in American New Year's and Halloween celebrations, particularly in the South.

American regional dialects and folk speech are filled with Scottish and Scotch-Irish retentions. The hard postvocalic *r* that characterizes inland and Western American regional pronunciation patterns originated in north Britain, particularly Ulster and Lowland Scotland. The soft postvocalic *r* of America's Eastern coastal dialects from Maine down to Louisiana agrees with modern standard British usage, which emanates

from metropolitan southern England. Nonstandard expressions like “used to could” for “used to be able to” and “done gone” for already gone” still commonly used by Southerners have been traced to north British sources. Scottish words in American folk speech are as localized as “bonnyclabber” for clabbered milk in eastern Massachusetts and as widely distributed as “pinky” for little finger and the exclamation “wow!” Golfing terms like “caddie,” “birdie,” and “bogey” have become as familiar to most Americans as Campbell’s soup, McDonald’s hamburgers, or Lassie, the canny collie who was perhaps America’s favorite canine television celebrity.

Other Scottish contributions to American folklife are less obvious, less innocuous. Throughout its history, Scotland has been complex and conflict ridden. The successive waves of Scots who migrated to America included Gaelic-speaking Highlanders and English-speaking Lowlanders; Catholics versus Episcopalians versus Presbyterians versus Nonconformists and Dissenters; Tory royalists versus Whig republicans; repressive Calvinist fundamentalists and liberal secular humanists; Americanized pragmatists and nostalgic Romantics. Long-standing differences in language, religion, ethnicity, and regional politics carried over from the British Isles contributed to the tensions leading to the American Revolution and still affect the cultural politics of the United States (see Fischer 1989). Most Highland Scots in the colonies remained loyal to the Crown and removed to Canada following the Revolution. So many Lowlanders and Ulster Presbyterians supported colonial independence that many Tories were convinced the American Revolution was at heart a Scotch-Irish insurrection (Jackson 1993:121).

The anti-Catholic Lowland Scottish Calvinists who subjugated Ulster envisioned themselves as a righteous minority in a wicked world, a Church Militant justifying its violence against demonized infidels through a covenant with God transcending corrupt worldly authority. Their descendants on the American frontier carried on traditions of severely plain church architecture, rejection of a paid clergy, and insistence upon moralistic, repressive church discipline. Early Calvinist reformers in Scotland burned bagpipes, smashed fiddles, flogged fornicators, and hanged witches (Farmer [1947] 1970:117–158). Camp meetings, singing in unison, “lining out” of hymns, banning of musical accompaniment in church, and violent opposition to sinful secular amusements like fiddling, dancing, and ballad singing are all part of the legacy of militant covenanters and seceders who left the Presbyterian Church in America to join more radically evangelistic denominations. Historians note bickering between contending Scottish sects; the high degree of individualism and fragmentation of American Protestantism, especially in the South, is an extension of this schismatic tradition.

By the time most Ulster Scots arrived in America, the traditional system of clans (families bound by feudal ties between chiefs and their retainers) had largely disappeared in the Lowlands. Clans survived in the Highlands, however, well into the 18th century and were reorganized and revitalized following the series of Jacobite rebellions that failed to restore the Stuart dynasty to the British throne. Some Scots in America quickly came to think of themselves as Americans; others found ways of expressing their sense of Scottishness that did not conflict with their identities as Americans. Even as Scots played leading roles in British and American industry, medicine, the military, education, and politics, many still were deeply attached to the idea of Scotland.

The disintegration of the Jacobite cause gave rise to Scottish romantic nationalism, which survives in various forms even in the late-20th century. The Disarming Act of

1747, which followed Bonnie Prince Charlie's defeat at Culloden, specifically prohibited displays of Scottish national symbols, including kilts, tartans, plaids, and Highland bagpipes. Loyalist Highland regiments, however, were exempted from the bans on the kilt and pipes. Their officers refined modern Scottish martial music and costume, inventing regimental tartans, which in turn inspired the clan tartans we know today. In 1778 a group of Scottish gentlemen dwelling in London founded the Highland Society, so that they could periodically gather together "...in that garb so celebrated as having been the dress of their Celtic ancestors, and on such occasions at least to speak the emphatic language, to listen to the delightful music, to recite the ancient poetry, and to observe the peculiar customs of their country" (Trevor-Roper 1983:26). This group successfully petitioned the House of Commons in 1782 to repeal the ban on Highland dress and other strictures of the Disarming Act. By this time, a flourishing Scottish Romantic nationalist movement engaged artists and intellectuals like Robert Burns, who championed traditional Scottish music and the Lowlands Scots dialect during his brief, brilliant career.

Long before the 1745 Uprising or the American Revolution, Scottish immigrants in the New World were forming special-interest groups preserving the social and cultural traditions of their homeland. In 1657 a Scots Charitable Society was established in Boston, possibly the first organization of its kind anywhere (Donaldson 1966:44). Increased Scottish migration to America during the 18th century saw the establishment of St. Andrew's Societies in Charleston (1729), Philadelphia (1749), New York (1756), and Savannah (ca. 1750). Then as now, these societies provided periodic opportunities for the celebration of Scottishness. Some Scots in America were apparently engaged in the Scottish romantic movement before the American Revolution or the repeal of the Disarming Act, as Donaldson noted: "It is, however, curious that so early as 1765 George Bartram, a native of Scotland who had become a cloth merchant in Philadelphia, was advertising 'best Scotch Plaids for gentlemen's gowns and boy's Highland dress'" (Donaldson 1966:128).

The continued expansion of British industrialism and imperialism led to the establishment of more Scottish immigrant organizations and revivalistic institutions in the late 18th and 19th centuries. The state visit of George IV to Edinburgh in 1822 orchestrated by Sir Walter Scott inspired another wave of newly invented clan tartans. The patronage of the Balmoral Highland Games by Victoria and Albert established the prototype for modern Highland games, reaffirming the ties of the Scottish clans through their chiefs to the British royalty: "British national and imperial identity chimed quite nicely with a powerful strand of Scottish national identity, reinforced by Protestantism, Unionism, and militarism" (McCrone 1992:209). It seems ironic that the British aristocracy and the Lowland Scots came to romanticize the Highland Gaels and to expropriate selected features of their culture, after having struggled for centuries to subdue and disperse them (see Chapman 1992).

Roughly two million people left Scotland between 1830 and 1914; nearly half went to America. Burns' birthday was celebrated in New York as early as 1820; by 1836 the Highland Club of New York held its first annual Highland Games. Within a very short time, Caledonian Games including most of the sports and performing-arts competitions featured in the contemporary Highland Games were being held in major Scottish settlements in the United States, Canada, and New Zealand (see Redmond 1971). Though initially organized to celebrate Scottish culture, the Caledonian Games were soon open to

the general public, regardless of national origin. During their peak years, the Caledonian Games attracted tens of thousands of spectators and participants. The same period also saw the formation of modern clan societies, which reorganized the traditional Scottish system of hereditary chiefs and retainers as formally chartered special-interest associations with elected officers and dues-paying members.

By the turn of the 20th century, most aspects of modern Scottish cultural revivalism were already in existence. Highland Games, Burns Suppers, and clan societies continue to flourish in the United States, Canada, and other Scottish diaspora communities. The magnitude of this interest can be gleaned from the annual listings of Scottish American organizations and events compiled by Angus Ray of Barrington, Illinois, publisher of *The Highlander: The Magazine of Scottish Heritage*, which reports a circulation of over 40,000. *The Highlander's* 1993 Directory Issue lists 255 clan societies, 172 Scottish societies, such as Saint Andrew's and Caledonian societies, 227 bagpipe bands, 179 vendors, 171 clan chiefs, 53 miscellaneous Scottish organizations, and 64 Highland Games and Gatherings. These figures only begin to suggest the actual number of Scottish American special-interest organizations. Emily Ann Donaldson's *The Scottish Highland Games in America* lists a minimum of 80 Highland Games held during 1985–1986 across the United States from Maine to Maui, featuring not only athletic events, but also competitions for Highland solo dancing and Scottish country dancing, solo piping and pipe bands, fiddling, Celtic harp, and sheepdog trials (Donaldson 1986).

Within the Scottish American heritage community there are many special-interest groups, part of a complex of Scottish social and cultural organizations that has been developing since colonial times. These organizations thrive because Scottishness is still meaningful to many people, regardless of the fact that Scotland ceased to be a sovereign state nearly 400 years ago. The idea of Scotland is still very much alive in Scotland in the 1990s. According to Scottish sociologist David McCrone, seven out of ten modern Scots consider themselves Scottish, not British, and an additional 19 percent consider themselves Scottish *and* British (McCrone 1992:198).

Many Americans consider themselves Scottish in spirit, though American by birth. Even though their ancestors might have left Scotland because their lairds displaced them to make way for sheep, there are Scottish Americans who thrill to Burns' often quoted lines: "My heart's in the highlands, my heart is not here. /My heart's in the highlands, a chasing the deer." Not all Scots share or appreciate that Romantic, nostalgic vision. In fact, debunkers have challenged the historical authenticity of the icons of Scottish Romantic nationalism for more than 200 years. James MacPherson, who claimed to have recovered gems of ancient Scots Gaelic poetry, was called a forger, yet his *Ossian* poems (1760–1763) contributed to the rise of romantic nationalism and the academic study of folklore in the 18th and 19th centuries. Modern Scottish antiroyalists have little love for tartans, kilts, and bagpipes, which they perceive as symbols of dependency and complicity in British colonialism. Their efforts to unravel the cult of the kilt, to expose it as a recent, spurious fabrication, have not changed the feelings of those Scots at home and abroad who do find positive value in the kilt and other emblems of Scottish identity. (The modern pleated kilt is quite literally a fabrication of the early industrial age, the product of the collaboration of an English foundryman, Thomas Rawlinson, and a Scottish chief, Ian McDonnell of Glengarry, who employed a regimental tailor in

Inverness to fashion a garment less clumsy and bothersome in the workplace than the toga-like belted plaids still commonly worn by Highland Scots) (see Trevor-Roper 1983).

Alan Dundes has said that folklorists cannot prevent the folk from believing fakelore is folklore. If a group of people like Scottish Americans identifies with a set of cultural symbols, then it matters little whether these symbols are ancient or recently invented. As McCrone says: "Traditions may be invented; symbols of national identity re-manufactured. Perhaps there is a suggestion in the word 'invented' that myths and traditions are fabricated; what seems to happen is that the cultural raw materials are refashioned in a manner that gives coherence and meaning to action. The task is not to debunk these inventions, but to show how and why they are put to such telling use" (McCrone 1992:30).

Seeger, Charles Louis (1886–1979)

Outstanding musicologist of the 20th century. Seeger worked in virtually every facet of music, including composition, teaching, education, theory, ethnomusicology, and the relationship between music and society and between music and language. He was instrumental in the founding of many learned societies, including the American Musicological Society and the Society for Ethnomusicology.

Seeger was born in Mexico City and divided his youth between Mexico and Staten Island, New York. After graduating from Harvard University in 1908, he spent two and a half years in Europe preparing for a career in composition.

In 1912 he joined the faculty of the University of California, Berkeley. During his six years there, he developed a curriculum that included exposure to other musical cultures; he also immersed himself in the study of philosophy and history, which influenced much of his later writing.

In the early 1930s, Seeger realized the importance of folk music as a complement to fine-art music. Beginning in 1935, he headed cultural programs within President Franklin D. Roosevelt's Resettlement Administration and later the Works Progress Administration. These appointments gave him the opportunity to apply his theoretical notions to solving social problems. He used vernacular music to help heal social tensions and foster community goals. From 1941 to 1953, Seeger worked with the Pan American Union to bring close ties between musicians throughout the Americas.

From 1961 to 1971, Seeger was associated with UCLA's Institute of Ethnomusicology. During these years, he wrote many theoretical articles. He spent his final years in Bridgewater, Connecticut, where he continued to write.

Despite his considerable contributions to the field of musicology, he will undoubtedly be best remembered as father to a number of children, including Pete, Michael, and Peggy, all of whom made their mark as performers of folk and folk-like music.

Seeger, Pete (1919–)

Folksinger, songwriter, and social activist. Seeger was a major figure in America's folk-music revival. He sought to link music with social change, doing so by popularizing traditional folksongs, then changing the words to address social issues: workers' rights in the 1940s, the role of government in the 1950s, civil rights and the peace movement in the 1960s, environmental issues in the 1970s and 1980s, and the role of technology in the 1990s. Seeger served as a bridge between traditional folksingers of the 1930s and 1940s and the popular folk performers of the 1960s and later.

Seeger was born in New York City, the son of musicologist and activist Charles Seeger, who left his son a legacy of musical theory and political radicalism. Pete entered Harvard University intending to go into journalism, but when he was unable to find employment after he left Harvard, he began playing his four-string banjo for schools and camps. Later he learned the five-string banjo, an almost extinct instrument, which he adapted to many different kinds of music. His elongated instrument, emblazoned with the credo "This machine surrounds hate and forces it to surrender," became the symbol of the tall, lanky performer.

Pete Seeger was fortunate to be living on the East Coast, where Huddie Ledbetter (Lead Belly), Woody Guthrie, Alan Lomax, Aunt Molly Jackson, and Moses Asch were laying the groundwork for the folk revival. They shared their vision, musical skills, and songs with him. In 1940 he traveled with Guthrie, playing to and learning the songs of American farmers and workers.

With Lee Hays, Seeger organized his first performing group, the Almanac Singers, in 1941. The members of the group—Seeger, Lee Hays, Millard Lampell, then Guthrie, and later others—played primarily to union groups. During this period, Seeger joined the Communist Party, believing in its program.

After World War II, during which Seeger served for three and a half years in the U.S. Army, he and Lee Hays joined with Ronnie Gilbert and Fred Hellerman to form the Weavers, a more professional singing group that, while still political, appealed to a larger audience. Among the group's biggest recorded hits were "Wasn't That aTime," "Kisses Sweeter Than Wine," "Wimoweh," "Tzena, Tzena," "Michael Row the Boat Ashore," and scores of their own versions of traditional folksongs. Although the Weavers were blacklisted in 1952 because of Seeger's earlier Communist Party affiliation, Seeger was in 1962 acquitted of contempt of Congress. The Weavers directly influenced many folksingers of the 1960s, including the Limelighters, the Kingston Trio, Arlo Guthrie, and Peter, Paul, and Mary. Seeger left the Weavers in 1957 in order to spend more time with his growing family.

They settled in Beacon, New York, overlooking the Hudson River, where Seeger built a cabin, continued to write songs and to perform, and became involved in environmental issues. Among the many songs, either composed or sung by Seeger and closely associated with his name, are "We Shall Overcome," "Turn! Turn! Turn!" "Waist Deep in the Big Muddy," and especially "Where Have All the Flowers Gone?" In 1969 Seeger helped launch the sloop *Clearwater* as a vehicle to educate children and Hudson River inhabitants about the dangers of pollution, and in the 1990s he continues to worry about the destructive potential of technology. An uncompromising idealist, Seeger hopes to pull

the world together with music. He has performed for somewhere between four million and five million people in forty countries, and he has released in excess of fifty albums, recording more than 300 songs.

Although Seeger's main contribution has been entering some types of folk music into mainstream American music, he is concerned that the role of many kinds of the traditional American folk performers has been minimized.

Semiotic Approach

Semiotics—the study of signs and sign systems. A “sign” is something present that stands for something absent, as a cross represents Christianity; a “sign system” is a set of signs and rules for their use. Semiotics is both a discipline and an approach used by other disciplines, including folklore.

While there have been recent attempts to document early theorizing that can belatedly be described as contributing to semiotics, there are two major early theorists who clearly intended to establish a new field of study: Ferdinand de Saussure (1857–1913), a Swiss linguist, and Charles Sanders Peirce (1839–1914), an American philosopher. Saussure thought there was something missing in the study of linguistics and introduced “semiology” as the science to “study the life of signs within society” (1916/1969, p. 16). Peirce wanted to expand the study of logic to include the study of signs and proposed calling the new field “semiotics” (1931–1958). It has become common in the United States to use the term semiotics to refer to all of the work of Saussure and Peirce and the followers of both (rather than semiology, a term more in favor in Europe) in deference to the fact that Peirce devoted the greatest amount of time and effort toward developing the groundwork of the discipline and in an attempt to consolidate rather than draw fine distinctions between areas of related research. Within folklore, Saussure has clearly had the greatest influence.

Part of what is interesting about semiotics is the breadth of topics covered (Sebeok 1986). At the least, everything that is granted meaning by humans can be included; a few

scholars also include animals and even plants. What is important is not merely that semiotics encompasses many things that are rarely grouped together, but that it explains how they are similar. In each case, whether the topic is food, painting, or poetic imagery, something (the sign) conveys meaning—meaning that would not otherwise be obvious, or that we could not otherwise present in such a condensed form. It is not breadth of scope for its own sake that is significant, but breadth of scope for the surprising fact that so many different actions, objects, and behaviors, in so many different contexts, all appear to operate in a similar fashion that warrants attention.

Largely due to Saussure's role as a linguist, his early statements about semiotics are generally understood to imply that language should be taken as the model for other semiotic systems and that linguistics serve as the model for how to study all semiotic systems. There has been considerable discussion about the appropriateness of this presumptive role of language as the preeminent semiotic system and about whether linguistics is always the best model for semiotic analysis. Such discussion does not change the fact that language has, to date (1995), usefully served as the model for much work within semiotics.

As proposed by Saussure, each sign has two parts, termed the "signifier" and the "signified." The signifier is visible or in some other way present (for example, a flag is visible, and the word "flag" is audible); the signified is invisible but referred to (the country that verbal and material flags represent). In other words, the signifier is the explicit aspect of a sign, a material presence of some sort; the signified is the tacit element of a sign, something literally absent yet functionally present because it has been invoked.

In addition to designating the component parts of any sign, semioticians commonly sort the class of signs into different groups or types. Of the sixty-six potential varieties Peirce originally identified, three have gained wide acceptance. In each case, the relationship between the signifier and signified serves as focus of attention. An "icon" has the relationship of similarity (a photograph of someone is an icon since the signifier—the photograph—resembles the signified—the person it represents). An "index" has the relationship of contiguity (the top of the wedding cake kept for the first anniversary is an index since it served as a physical piece of the original event). A "symbol" has the relationship of arbitrariness (a white bridal gown is a symbol of innocence, standing for something it neither resembles nor was taken from).

Semioticians have touted the concept of the sign as the basic building block used in the construction of human meaning. The following quotation is from Charles Morris, but the sentiment is fairly common: "Indeed, it does not seem fantastic to believe that the concept of sign may prove as fundamental to the sciences of man as the concept of atom has been for the physical sciences or the concept of cell for the biological sciences" (Morris 1938:42). As with literal building blocks, signs function by being combined into larger sets; technically, the term for a set of signs is a "code." Yet the concept of code includes more than "groupness"; it also includes rules governing the use of signs. All codes share the same characteristics. Among these, two are critical. First, each code has a set of signs arranged into what are called "paradigms," and it is from each set of possibilities that a single one is chosen for a given purpose. For example, in the clothing code, all shoes are a single paradigm; it is from this set that each of us chooses one possible pair of shoes to wear each day.

Second, individual signs are chosen from paradigms and combined into new sets termed *syntagms*. For example, to go with the particular shoes I chose to wear today, I chose one shirt from the paradigm of shirts, and one pair of pants from the paradigm of pants; taken together they form a new group termed a syntagm. Meaning arises from the combination of two things: the choice of a particular sign from the range of possibilities (paradigms) and the combination of individual signs into new meaning sets (syntagms).

There are three main types of codes: (1) logical (those used by science, such as mathematics or Morse code); (2) aesthetic (those used by art, such as architecture or photography); and (3) social (those used by groups of people during interaction, such as language or clothing). It is primarily social codes that are of interest to folklorists, although aesthetic codes may also become a focus of attention. Most study of material culture and verbal art could appropriately use semiotics as an analytic tool. Some examples of scholars who have applied a semiotic approach to material aspects of culture are Roland Barthes (1967), Petr Bogatyrev (1971), and Bela Gunda (1973); some who have applied a semiotic approach to verbal art are Vladimir J. Propp ([1928] 1968), John H. McDowell (1981), and Danielle M. Roemer (1982).

Just as a single sign does not convey meaning alone but only as part of a larger system (a code), so also a single code does not stand alone but functions as one part of a system of codes. This system of codes does not yet have a name that everyone has agreed upon, but the most likely term is “culture” for, as Umberto Eco suggests, “to communicate is to use the entire world as a semiotic apparatus. I believe that culture is that, and nothing else” (Eco 1973:57; see Leeds-Hurwitz, 1993:155–176 for elaboration). Just as some aspects of meaning are determined from the (larger) code rather than the (smaller) sign, so are some drawn from the largest level of all, the entire set of codes utilized within a single culture. Presumably, one reason there has been so little focus at this level to date (1995) is the difficulty of such study; however, it is the logical next step in semiotic analysis.

Sermon, Folk

A sacred, hortatory oration, thematically based on Scripture, usually orally performed and transmitted. These performances are, to an extensive degree, spontaneously composed. Folk preachers may have been formally educated—many have not been—but their mode of preaching and the sermon's content are not decisively determined by their education. Scriptural support for oral preaching and for the irrelevance of formal education is found in Luke 24:49; the preacher does nothing to prepare himself for his mission, but rather waits—tarries—until the Spirit descends:

And, behold, I send the promise of my Father upon you: but tarry ye in the city of Jerusalem, until ye be endued with power from on high.

The only fit sermon subject is the kingdom of God, as prescribed by Luke 16:16:

The law and the prophets were until John: since that time the kingdom of God is preached, and every man presseth into it.

A few of the elements characteristic of folk sermons—oral performance and transmission, belief in the necessity of such spontaneity—are found in learned, conventional sermons as well, as preached by a very wide spectrum of priests, rabbis, and ministers. Most folk sermons in the United States are preached by Baptists, Methodists, and Pentecostals, and by a host of divines who are not squarely in the mainstream of American religious expression. More commonly, American preachers deliver sacred messages from a manuscript, prepared in advance, one that may actually have been reworked over months, even years. In a literate society, this mode of sermon preparation and transmission is the norm. Oral composition is with many preachers actually an article of dogma, deriving from the New Testament. For many folk preachers, it is not merely unnecessary to be educated, it is also probably a de-

terrent.

This form of preaching, and the resultant product, has been difficult to locate precisely in history. It may have been the product of marginal New England religious experiences; from there (if of American origin) it moved south, where it was found in colonial days among the Quakers and Shakers in the Middle South. Observers of Baptist sermons noted that emotions were expressed freely, and consequently these sermons were attacked by Anglicans for their “vehement pathos” and their “histrionics.” Traditional divines belittled this unorthodox preaching style as the “Baptist whine.” This style of 18th- and 19th-century sermon delivery was notable for its emotionalism, its free expression, and the musical tone of the preachers; it sounds much like the performance of the chanted folk sermon of the late 20th century.

African Americans are the most prolific and the most skilled practitioners of this form. Historically, the basic skills of oral sermon performance may have been acquired at the many camp meetings held throughout the colonies and the early states. Both Blacks and

Whites attended these open-air services, and though the races were usually seated separately, the preaching could be heard by everyone. Yet, certain characteristics of these performances—for instance, the call-and-response style of performances found even in the 1990s—probably derived from Africa. So it is possible that what has become known as the American folk sermon came from Africa along with slaves shipped forceably to the New World. It is possible also that the modern-day form is the product of a blending of Black and White sacred cultures.

This style of preaching orally performed, spontaneously composed, and characterized by free emotional expression, became popular during that religious movement of the early 19th century, the Second Great Awakening. During this period, a large number of African Americans were proselytized and converted. The “barking” and “jerking” of the Baptists and the Methodists, contemptuously derided by conventional New England divines, were first recorded during this period. The outdoor camp meetings, such as the one at Cane Ridge, Kentucky, attended by 20,000 people, were thought to be further examples of “primitive” behavior.

Chanting and other dramatic vocal modes liven the sermon, avoiding monotony, which in an oral performance could be especially deadly. The chanted folk sermon is dramatic, and its performer is a sacred actor, using many of the techniques of the stage performer to make the sermon more effective: gesture, facial expression, eye contact, and alteration of voice pitch. Many folk preachers, and others, believe that emotion expressed in church—the greater the abandonment the better—is appropriate. Frenzy, passion, and glossolalia (speaking in tongues) are signs of the presence of the Lord. If church services are not emotional, the minister (or priest or rabbi) is thought to have failed to evoke the Spirit of God.

Chanting builds the emotional tension of the performance; the preacher’s tone of voice, increasing pace of delivery, and mounting emotional content move toward an emotional climax. The emotional curve of the entire performance is not significantly different from an audience’s aesthetic response to well-written theatrical drama. In these important ways, the chanted folk sermon is an analogue of the secular aesthetic work embodying the catharsis of classical drama.

For these reasons, the spoken sermon is livelier and more dramatic than conventional performances, even for the uninitiated, to hear. The conventional text-based sermon, prepared in writing, is appropriate for the belief that God should be apprehended through intellectual exertion. The folk sermon appeals more directly to the emotions; a quiet, thoughtful congregation indicates to the folk preacher that God is not present. An outsider may think of such services as “emotional,” but the preacher and the congregation view the performance as spiritual.

This delivery style establishes an intimacy between preacher and congregation, similar to the close relationship between the preacher and his or her God. The folk preacher is likely to say, “Jesus said to me the other day...” or “St. Paul said...” The folk preacher may advise St. Peter not to worry about his children, or the leader of the Jews may be referred to as “Old man Moses.” God and his saints are existential, living, and close at hand, not distant, or aloof, or abstract. The preacher addresses that God and his saints directly and immediately, a face-to-face confrontation with the divine presence in a meaningful world.

Oral recitation of spontaneous material allows the preacher a great deal of flexibility in performance. The sermon can be lengthened or abridged depending upon the preacher's inclination, and that may be decided by several personal factors, including a response to the congregation. If they are listless, the preacher can choose to enliven the performance or to abbreviate it. Conversely, an excited congregation may stimulate the preacher to further performative heights.

The folk sermon's structure is potentially fluid. While many ministers strive for the conventional "text-context-application" format, during actual performance that form can vary considerably. The "text" for the day, and its scriptural "context" take only a short time to deliver. The "application" is the major portion of the sermon and may be composed of any of several generic components: exemplars, anecdotes, biblical narratives, first-person accounts. Seldom do these elements have to occur in a specific order; the preacher is free to insert them in the sermon as necessary or expedient. Thus, the folk sermon's form is fluid, its constituent elements are variable, and the order of their occurrence variable. Generic delineations are difficult to formulate.

Folk sermons in the United States are more often chanted than spoken formally. The preacher begins the performance in a conventional oratorical mode, gradually increasing the pace of delivery and the voice's emotional tension. Shordy into the sermon, the preacher of chanted performances is partly singing the message; by the end, he or she may break into song, spiritual or popular. The method of composition is approximately that described by Milman Parry and Albert Bates Lord in their several works on oral-formulaic composition and performance. The preacher's professional skills must be at the same level of the Yugoslavian *guslari* (traditional epic singers): Having mastered the material and the music of the delivered line, he or she can then improvise. But the basics must first be mastered, just as with jazz musicians, who must know their material intimately before being able to creatively depart from it. The preacher's utterance in the chanted-sung sermon is a metrically consistent line, of a regularly employed length, that induces frequent repetition of word and phrase. Thus, the formula of the Parry-Lord oral-formulaic theory is created. Composition by manipulation of oral formulas—those words and word groups that occur regularly in certain metrical situations—is common. The performances of some preachers are heavily formulaic: Up to 17 percent of their uttered lines are repetitions of other lines within the same performance. Most, however, are not nearly so repetitious.

The themes observed by Parry and Lord also occur. In the sermons, these take the forms of set scenes or episodes, often from the Bible. The preacher may have mentally formulated a description of the four horsemen of the apocalypse, or of Ezekiel preaching in the valley of dry bones. These themes are composed of several (sometimes more than two-score) formulas, not memorized but loosely structured, and which can be used in performance as a unit. Such employment eases the preacher's compositional task, enabling him or her to concentrate on the material ahead and, over several performances, facilitates honing the style and the message of the retained passage.

The folk character of the folk sermon derives from the content of the text, principally the origin of the materials from which the sermon is constructed. What differentiates the folk sermon from its literate, strictly biblical-based, kin is the preacher's use of folk materials.

Several kinds of materials may be found. Depending upon the preacher's background and musical competence, fragments of popular music—not gospels or church-sanctioned hymns—occur. Popular songs, not usually thought of as belonging to a sacred service, are used, particularly if the preacher feels confident in his or her singing ability.

Certain favored locutions and metaphors are also used, often derived from secular sources. The preacher may exclaim, "Hark Hallelujah," or "God from Zion," or "Ain't God all right?" Folk preachers rephrase Scripture colloquially: "Now hear the word of the Lord" instead of the original "Thus *saieth* the Lord God unto these bones." Or a homespun portrait of one of the four horsemen: "Dressed in raiment/White as driven as the snow." He wore a "rainbow 'round his shoulder."

Unconventional as these devices are, they are received with understanding by the congregation. The message always gets through. The congregation in the churches described here usually participate actively in the service, calling out individualized responses *ad libitum*. Their participation can influence the preacher's lexical choice, even in the form the message of the day will take.

This antiphonal call-and-response is not prepared in any way, except what tradition and custom directs. Both parties—preacher and congregation—are expressing their individual addresses to God.

The metrical folk sermon, chanted or sung and making heavy use of conventional, popular materials, is also used in ostensibly secular contexts. The most notable examples are the sermons of the Reverend Martin Luther King Jr. (especially his "I Have a Dream" speech) and the Reverend Jesse Jackson (perhaps most famously his address to the Democratic National Convention in 1988).

Yet, these contexts are not entirely secular. Certainly the civil rights march in Washington, DC, was in large measure religious, as was Jackson's address to the 1988 convention. If there was any doubt about the seriousness of the speaker, or of the message, that misunderstanding would be dispelled by the nature and style of the speaker-preacher.

When delivered by inspired preachers, the folk sermon has proven to exert a potent influence over a very wide range of congregations and audiences, literate and sophisticated (and jaded), as well as folk groups.

Shape-Note Singing

A style of sacred choral performance, popular almost exclusively in the Southern United States. It is based on religious songbooks employing a nonstandard method of musical notation in which rectangular, circular or half-circular, triangular, or diamond-shaped characters are correlated with the traditional naming (solmization) of pitches in the major diatonic

NEW BRITAIN. C. M. Baptist Harmony, p. 123.

1 Amazing grace! (how sweet the sound) That saved a wretch like me! I once was lost, but now am found, Was blind, but now I see.

2 'Twas grace that taught my heart to fear, And grace my fears relieved: How precious did that grace appear, The hour I first believed!

3 Through many dangers, toils, and snares, I have already come; 'Tis grace has brought me safe thus far, And grace will lead me home.

4 The Lord has promised good to me, His word my hope secures; He will my shield and portion be, As long as life endures.

5 Yes, when this flesh and heart shall fail, And mortal life shall cease, I shall possess, within the veil, A life of joy and peace.

6 The earth shall soon dissolve like snow, The sun forbear to shine; But God, who calls me here below, Will be for ever mine.

“Amazing Grace” as it appears in shapenote notation in The Sacred Harp, 3rd edition (1859). The melody is in the middle part.

scale—that is, fa sol la fa sol la mi fa or do re mi fa sol la ti do. These “shape notes” (also known as “patent,” “character,” or “buckwheat notes”) accordingly lent their name to the style, sometimes also described as “fasola,” “dorayme,” or “Sacred Harp singing,” this last after the most popular of the shapenote hymnals, *The Sacred Harp*, by B.F.White and E.J.King, first published in 1844. Part of an organized movement to improve rural- and small-town hymnody, the shape-note method enabled individuals unacquainted with the rudiments of formal composition to sight-read. It was disseminated and perpetuated through “singing schools”—usually held in the summer and lasting for around two weeks—taught for a nominal fee by itinerant “masters”; through community “singings” (described in the traditional advertisement as “all day with dinner on the grounds”); or through county, state, or national conventions.

American singing schools first appeared in 18th-century New England with efforts to reform congregational singing in colonial churches, and they were rapidly carried to the rural South by singing-school teachers and songbooks employing various systems of nonstandard notation. The four-shape method, still in use, first appeared in 1801, and by the second decade of the 19th century it had spread south through Pennsylvania and the Shenandoah Valley of Virginia and west to Kentucky. Around mid-century, a seven-shape scheme was also introduced and gained wide popularity, though the four-shape system retained its adherents, supported in large part because of extraordinarily successful four-shape songbooks such as *The Sacred Harp* and William Walker’s *The Southern Harmony and Musical Companion*, first published in 1835.

Soon disappearing in the urban Northeast, shape-note singing and its attendant institutions perfectly suited the social conditions and cultural climate of the South, abetted by the region's numerous and energetic singing-school masters, composers, and songbook compilers. From its hearth in the Deep and Upper South, the practice eventually spread as far west as east Texas, in the 1990s the site of some of the most active shape-note singing circles. Aside from their role in religious observance and musical expression, singing schools and similar gatherings constituted important social occasions in areas where such opportunities were otherwise limited. Indeed, while shape-note hymnody was especially associated with denominations or sects that prohibited many of the secular entertainments and musical traditions of their less devout neighbors, the style gradually assimilated much of the general character of Southern folksong. Written in three or four parts with the melody in the tenor, the songs typically employ the gapped scales found in much folk music, often even borrowing specific melodic or textual elements directly from secular folksongs; such is the case, for example, with the popular hymn "Wondrous Love," set to the air of the older British ballad "Captain Kidd" (Laws K 35); or "The Old-Fashioned Bible," whose melody is a variant of the fiddle tune "Fisher's Hornpipe," its text a parody of "The Old Oaken Bucket." Harmonies often rely on nonstandard intervals that are nonetheless common among Southern folksingers (such as harmonic progressions in parallel octaves or fifths, frequently lacking the third), while the style as a whole offers individual singers considerable latitude to vary or ornament parts in actual performance.

More specifically, there have developed within the shape-note repertoire a number of distinct song types or styles representing different traditions or historical periods. In addition to "folk hymns"—that is, religious texts set to existing folk melodies harmonized in the traditional manner—"psalm tunes" have perpetuated the large corpus of northern European hymnody formally transmitted via the church. Another commonplace type is the "fuguig tune," an inheritance from the New England composers that is characterized by a distinctive counterpoint in which the lead shifts between the registers. Originating with the religious revivals of the early 1800s, "camp-meeting songs" are similar in their sources and structure to the folk hymns, distinguished mainly by their lively tempos, syncopation, and use of refrains. Still another parallel to secular folk tradition is the religious ballad, some instances of which (such as "Wicked Polly" [Laws H 6] or "The Romish Lady" [Laws Q 32]) have rivaled their secular counterparts in popularity. Though primarily a White tradition, shape-note singing also gained some currency among Blacks, whose songbooks and singing style more overtly reflect African American traditions and musical traits (here as in other aspects of Southern folksong, however, it is often nearly impossible precisely to distinguish the interrelated strands of Black and White tradition). In the early 20th century, there also arose a quartet style more typical of the modern gospel idiom, a trend promoted by professional touring groups sponsored by large songbook publishers. Moreover, while shape-note singing has remained primarily associated with the print medium, alternative channels such as records and radio have in the 20th century exercised a growing influence.

Like many older singing traditions, shape-note hymnody has suffered somewhat in popularity of late, especially in the years since World War II. However, the style appears to be experiencing something of a revival in the 1990s, as Southerners, sustained through

the years by state and local organizations and now often encouraged by the interest of folklorists, increasingly recognize shape-note singing as an important aspect of their musical and cultural heritage.

Sharp, Cecil James (1859–1924)

English folksong collector, musician, and educator. Sharp was born November 22, 1859. Though largely self-taught as a musician, he was formally employed in that capacity for much of his life. In 1903, motivated by a series of chance encounters with traditional music, Sharp embarked on an unparalleled career as a collector of English and Anglo American folksong and dance. He was instrumental in reviving the English Folk-Song Society and in founding the English Folk-Dance Society with which the Folk-Song Society later merged. Apart from his scholarly work, he helped popularize traditional music among the middle class through his arrangements of folksongs for home and school. Between 1916 and 1918, he and his assistant, Maud Karpeles, spent forty-six weeks in the Southern Appalachians, amassing a landmark collection of Anglo American material. A tireless fieldworker despite his poor health, Sharp had by the time of his death on June 23, 1924, personally noted nearly 5,000 tunes from traditional singers and musicians on both sides of the Atlantic.

In his American fieldwork, Sharp's focus on English "survivals" caused him to neglect many equally important musical forms. He thus failed to record religious material, derivations of popular compositions, or local or migratory American songs, even when these were offered by his informants; except for noting a few fiddle tunes, he claimed to have encountered virtually no instrumental music. Nevertheless, the authoritative edition of Sharp's American collection, published posthumously as *English Folk Songs from the*

Southern Appalachians (1932), can only with considerable qualification be characterized as overly narrow, containing as it does 968 tunes for 274 individual ballads and songs.

In 1930 Cecil Sharp House was established in London as the permanent home of the English Folk Song and Dance Society. While there is no comparable monument to Sharp's contributions to American folklore, he indisputably remains one of the founders of serious folksong scholarship in both Great Britain and the United States.

Sheep Camp

A covered wagon in which sheep herders live. The wagon is entered through a split (Dutch) door in the front from which draft animals can be reined as they pull the camp. The interior arrangement of wood or gas cook stove on the right (as the camp is entered), cabinets on the left, and bed spanning the rear is almost ubiquitous. A table either folds up or slides underneath the bed frame, and there are bench seats along the walls with storage beneath them on either side of the central table. The top of the older camps is canvas stretched across wooden bows, but in the 1990s most are aluminum-topped. The running gear used to be wooden wagon frames, but more recent, homemade camps use old truck chassis, axles, and wheels with rubber tires, and they are pulled by pickup trucks. The largest sheep camps of this design are about 7 feet wide and 16 feet long and are found throughout the Intermountain West. Larger camp wagons of a completely different design are found in the San Joaquin Valley of California. These are large, rolling wooden boxes with movable, rather than builtin, furniture. They have large shutters that span the wagon's length on both sides and swing up to provide ventilation through screened, full-length openings.

In the Intermountain West, sheep camps are used by some herders all year long, and by others mostly in the winter months, depending on the range where they tend their flocks. In steep, mountainous country, during the summer when sheep prefer the high mountain meadows to the hot, brushy valley floors, herders often pack their camp on pack horses or mules and sleep in canvas "teepee tents" (pyramidal, one- or two-man tents suspended from two poles that form an A-frame). In the winter, the sheep are moved to the lower reaches and the herders live in a sheep wagon. Whether living in teepee tents or sheep wagons, herders are regularly supplied by a camp tender, often the sheep boss for the ranch who owns the sheep and who hires the herders. A small

“commissary wagon,” containing mostly feed for the horses and dogs, is often trailed behind the main camp.

James Candlish, a blacksmith in Rawlins, Wyoming, is often credited as being the inventor of the sheep camp. In 1884, however, the same year Candlish reportedly built his first camp, an account of an almost identical contrivance appeared in a London publication, *Prairie Experiences in Handling Cattle and Sheep*, by Major W. Shepperd. The fact that sheep camp is so simple and obvious, and the fact that wagons of similar, if not identical, design were being built in several places at the same time, are strong indicators that there were probably several inventors; the sheep camp was in all likelihood a polygenetic creation. The Gypsy caravan of Europe is similar in form and use to the more modern sheep camp, but proving any direct connection in the development of one from the other has proved fruitless.

The first sheep camps were undoubtedly homemade, but by about 1892 the Schulte Hardware Company of Casper, Wyoming, was commissioned to construct a sheep wagon based on the older, traditional form. The first major manufacturer of such wagons was the Ahlander Company of Provo, Utah, which started production in 1918. Between 1920 and 1976, their last year in business, Ahlander produced more than 3,000 of their famous “Home on the Range” model, many of which are still in use in the 1990s. Other commercial manufacturers were the Studebaker Company, the Consolidated Wagon and Machine Works, Madsen, and Eddy. All but Studebaker were located in Utah. In 1995 there were two commercial builders still advertising in the *National Wool Grower*: the Wilson Brother’s company in Midway, Utah, and Western Wagons in Ten Sleep, Wyoming.

In addition to its practical use, the sheep camp has become a traditional symbol for the Western sheep industry. The nostalgic icon of an old sheep wagon and a grizzled herder appears as the logo for the National Wool Growers Association Memorial Fund and Heritage Foundation, as well as in cartoons targeted for people in the wool-growing business.

The traditional form of the Intermountain sheep camp, whether homemade or commercially manufactured, has remained essentially unchanged for more than 100 years. Its use on the range continues, and its evolution as a traditional symbol of the Western sheep industry continues to grow.

Shepherd

One whose job requires months of isolation on the Western landscape, overseeing the welfare of a band of sheep in a transhumant way of life. A shepherd is required to keep an accurate count of his charges, take note of their health, and move them over their grazing area in such a way as to prevent the abuse of soil and vegetation. Regardless of how modern his outfit is, the shepherd's work is permeated with tradition, with folk culture.

From the late spring until early fall, he will live in a tent or a sheep wagon as his sheep graze on summer range, often Bureau of Land Management range or U.S. Forest Service lands. From late fall until late winter, he lives in a shepherd's wagon, an insulated and portable home, while he looks after his charges on their winter pastures or feeding grounds. Almost without exception in the Euro-American tradition of sheep raising, shepherders are male.

In the American West, herding sheep is at, or very near, the bottom of the success scale. It is a job for those who, for whatever reason, can do little else. The immigrant is a good candidate for a job as shepherd because he does not have to know English, he does not have to be elaborately trained, and he does not need to own special tools or equipment. Remuneration is low, but that fact is misleading. Shepherders are provided tobacco, room and board, and they eat well, making legendary the hospitality that sheep camps provide their occasional visitors.

The numbers of sheep making up a band will vary from time to time and from season to season, depending upon the purposes for which a band is put together. Sheep may be banded together on the basis of age, by grade of wool, or for any reason that a sheepman might wish homogeneity. When pregnant ewes and short yearling ewe lambs (those not quite a year old) are trailed from winter ranges or feeding grounds prior to lambing and shearing, they often make up bands numbering 3,000. For the lambing itself, ewe bands typically number 1,000 individuals; if they all produce a living offspring, the band numbers 2,000, although the birth of many twins might cause the size of the band to be reduced to keep it at the optimum size of 2,000. Each band has one herder; for every two bands, a camp tender is customarily provided whose duty is to move the herders' tents or wagons from location to location, perhaps bake some bread for the herders, restock the supply of food, and do for both of his herders whatever is necessary to enable each herder to concentrate on his sheep.

The customary preparation of a shepherd is a fairly simple process: The neophyte is placed with an old-timer. If

*Shearing sheep. Rosebud County,
Montana, 1939. Library of Congress.*

there is any basic sensitivity to animal nature and a corresponding sense of responsibility, the newcomer becomes a sheepherder.

Seldom if ever is a sheepherder called a “shepherd” in the American West, and it is the West, of course, that developed large-scale range sheep operations. Although the two words denote the same thing, connotatively they are quite different.

In the British Isles, more particularly along the borders where Scots and English have shed and mingled their blood for centuries, one of the world’s great livestock hearths developed. There, where sheep thrive on the bent grasses and heather of the Cheviot Hills, those who tend flocks are shepherds. But to Americans, whose sheep eat the native

bunch grasses and shrubs, that word suggests the Christian Church with Jesus the Good Shepherd and with the tradition of the pastor. Even the shepherd's crook, which in churches with an episcopate has become stylized as the crozier, is different in the American West. The European crook, or staff, has a wide hook for catching sheep by the neck. Shepherders, by contrast, use sheep hooks with a small crook for catching sheep by the leg. Further comparisons could be made, but the point is secure that there is a semantic fracture between these two words.

Such a linguistic dislocation is a bit surprising in view of the prominence of folk of British ancestry in the development of large-scale American livestock enterprises. In many parts of the West—the Southwest may be an exception—those involved with cattle and sheep raising were mostly from the British Isles and Ireland. From ownership and management down to the herders themselves, folk with names identified with Wales, England, Scotland, and Ireland are prominent if not predominant. In the sheep business of Oregon and Idaho, for example, Scots by way of Appalachia (the Scotch-Irish), by way of emigration via Canada, and by way of direct removal from Scotland to America were prominent. However, since herding sheep was a job anyone could do regardless of language skills or previous training, many different linguistic groups were represented in sheep camps throughout the West. Greece contributed men from the Peloponnese, veritable Arcadia, for instance. But the linguistic group often incorrectly presumed to be the founders of sheep ranching in the West is the Basques. These enterprising folk, seldom sheepmen in their homeland, learned to be shepherders in the American West following the precepts and examples of their British-descended teachers.

Whether from Tennessee or Visaya, the herders shared a routine that was traditional, varying according to local circumstances of rangeland and such other variables as the price of lamb and wool and the fiscal strategies of the sheepman. That routine is best exemplified when the shepherd is out on the range in late spring, summer, and early fall.

He has trailed his sheep from the lambing area to the latespring pasture, which may be at a fairly low elevation, perhaps 3,500 feet above sea level. His tent will have been set up by his camp tender, who leaves him a supply of drinking water, wood for his camp stove, food for the dogs, and food for the herder, which might include a fresh loaf of sourdough bread. He will remain at this campsite as many days as the supply of grass and water allows.

His day begins early, because his sheep will begin to graze at first light, and he does not want them to scatter too widely. If he ate a sandwich before he left the tent, he can stay with his sheep until the middle of the morning, when they tend to seek shade, lie down, ruminate, and nap until the middle of the afternoon. During their repose, the herder returns to his tent, cooks a meal, feeds the dogs, and, if necessary, waters them. If the camp tender is still with him, the noon meal will have been prepared. Then the herder returns to the beddeddown sheep before they begin to graze, gradually moving them in the direction of the camp in order to be near there by sundown. He fixes his supper, feeds the dogs again if they have worked especially hard, and after he eats he may fix a sandwich to eat just before he leaves camp in the morning. He counts his markers—customarily one black sheep for every 200 ewes—at least once a day. If he is a light sleeper, he may be wakened several times by noises that could presage problems for his band in the form of predators, electric storms, or any other source of trouble.

At the appropriate time, the sheep move ever upward to new grazing areas, the herder and the dogs leading and urging them along and keeping the flanks controlled lest the band expand and separate. By the time the sheep have moved to their subalpine pastures, both lambs and ewes have gained weight. If feed is good and all has gone well, the lambs will be ready for shipment by the middle of September.

With the total number of sheep reduced by the number of fat lambs shipped, the herders reconstitute the remaining ewes and any lambs that need fattening into new bands and return to the lowlands to fall and winter grazing areas, where tents are replaced by sheep wagons. The sheepman must reduce his work force, for the reduced numbers of sheep require fewer herders.

Many traditional stories circulate about how the laid-off herders spent their enforced winter vacations in an earlier time when Tennesseans and Basques made up much of the shepherd population. Winter was a time when the unemployed herders checked in at hotels or boarding houses and, if so inclined, went on monumental drinking binges and kept company with prostitutes. By the end of winter, the savings were gone, and the herders were eager to return to work, which began with lambing. Herders do not wince when, after lambing, they castrate in the traditional way by using their pocket knives to open the scrotum and their teeth to pull out the testicles and spermatic cords.

Shepherders are the subject of many other traditional narratives. In some of these stories, the herder goes insane from trying to make up his bedroll day after day, frustrated because he cannot discover the long axis of his soogan, the quilt or tarpaulin-covered blanket that is very nearly square. There is also the herder whose mind snaps under the strain of the constant counting of sheep. Loneliness, too, destroyed the mental equilibrium of more than one legended shepherd. Some herders on whose hands time hung heavily fought the waves of depression by stacking rocks, creating monuments to aging intellect, by placing rocks in circles or other geometric shapes, and by carving on aspen trees. And it is true that homesickness, isolation, and loneliness did conspire against some of these shepherders. An anonymous song puts the matter well in its lament for this difficult life:

A tear runs down his wind-tanned cheek,
And a sob that shakes his frame,
For he's just a poor shepherd
And has sheep on his brain.

But is also true that for some the lowest rung on the success ladder was a temporary condition. The herder who let the owner hold his wages, who proved himself reliable by not losing any sheep, who was kept on the payroll over the winter because of the first two facts could, after five years or so, collect enough back wages to make a good down payment on an outfit of his own. More than one Scotsman, Irishman, Welshman, Basque, or mountaineer from Appalachia connected with the American Dream of upward mobility by this route.

Shine

Fictional Black hero of the *Titanic toasts* or songs who, after having his warnings about the ship's sinking ignored by its White captain, escapes through amazing physical feats and common sense while ignoring the pleas and bribes of the White passengers. In this well-known toast, Shine, the stoker and only Black person aboard the ship, initially warns the captain that the ship is taking on water. His warning is ignored as the captain relies on the ship's pumps to save them. Realizing that the ship is sinking, Shine jumps overboard and swims to safety. Various toasts present different passengers begging for his help and offering, in exchange, money, sex, or other rewards, all of which he turns down so that he can save himself:

Here come the captain.
 Say, "Shine, Shine, please save me,
 I make you rich as any shine can be."
 Shine said, "Captain, to save you would be very fine,
 But I got to first save this black ass of mine."

Shine and the *Titanic* toast appear throughout Black folklore in various forms. The Shine character appeared occasionally in 19th-century minstrelsy, but he generally is found in later toasts that focus on the sinking of the *Titanic*. Although various suggestions as to the origin of his name exist, it probably derives from Black slang referring to a very dark-skinned person (Levine 1977:428). The *Titanic*-related character probably originated as a result of the denial of passage by the ship's company for Black boxer Jack Johnson. Langston Hughes notes that while Black people were denied passage on the ship, "folk versifiers insist that there was one Negro aboard" (Hughes 1959:367). Ironically, although no Blacks were aboard the ship, this toast is found primarily in Black folklore (Jackson 1974:35).

While the toast was first collected in the 1930s and early 1940s, it probably appeared much earlier in Black folk legend (Levine 1977:428). It continues to appear in the 20th

century, and it has even been adopted and modified by White toast-tellers (Johnson 1981).

The importance of Shine in Black narrative is often seen in his representation of the entire race. His words and actions demonstrate personal empowerment as well as a challenge to White authority (Jackson 1974:37). Additionally, while he crosses accepted class and race boundaries in his profane and direct replies to the White passengers' requests that he save them, his responses also demonstrate the transparency of such boundaries as well as a practical focus on surviving. He also is able to accomplish this triumph through rebellion and a rejection of established social rules while, at the same time, remaining within legal boundaries, thus "defeat[ing] [W]hite society on *its* own territory and by *its* own rules" (Levine 1977:420).

Shivaree

A noisy mock serenade given to newlyweds. It consists of noise made outside the couple's home in the evening with anomalous instruments, especially pots, pans, kettles, and other metal implements, bells, guns, and musical instruments played out of tune or in other than the normal fashion. The band may include traditional improvised noisemakers such as tick-tacks, horse fiddles (a plank sawed against the edge of a large box), or devil's fiddles (consisting of a rosined string passed through the bottom of a tin can). The noise does not cease until the shivaree band is offered money or invited into the house for food and drink. At this stage, they may play practical jokes on the couple, such as rearranging the contents of the kitchen and booby trapping the bed. Either the bride or the groom may be subjected to physical hazing, such as being carried out of the house, covered with messy substances, and dumped in a pond.

The term "shivaree" is derived from the French *charivari*, which designates the same custom. "Shivaree" is the term known all over Canada and most of the United States; less common names for the custom include "serenade," "belling," "horning," "callathump," "bullbanding," "warming," and "skimmelton."

In addition to its function as a benign rite of passage for newlyweds, the shivaree was used as an extralegal ritualized expression of disapproval that enforced community morality by publicly shaming transgressors. Common targets for this folk justice were widows and widowers who remarried quickly, couples mismatched in age or rank, adulterers, and spouse beaters. These punitive rituals ranged from mild satire to extreme violence, sometimes ending with death or injury. In French Canadian areas and in New Orleans, remarriages were the most common target: The noise was kept up, sometimes for days, until the target paid a fine that was often given to charity.

Charivari (rough music) was a widespread popular custom in Europe, where it was primarily an expression of community disapproval or derision, and is now rare. In North America, the function of the shivaree expanded from an expression of public disapproval to a benign well-wishing extended to all newlyweds. The predominance of the term “shivaree” and its derivation from the French *charivari* have led to the assumption that the custom was brought to America by French settlers, but the existence of *charivari* customs throughout Europe suggests that other immigrants also brought their versions of the custom.

Because of social changes and a long tradition of official opposition—it was frequently outlawed as a danger to law and order and a challenge to authority—the popular-justice shivaree is rare in North America after the 1890s. Since World War II, the benign shivaree has been reported sporadically in rural areas of the United States. In some Canadian rural communities, however, the practice still thrives.

Shoemaker, Alfred L. (1913–?)

Founder of the first college department of folklore in the United States, cofounder of the Pennsylvania Folklife Society, and influential American folklife scholar. Shoemaker became assistant professor of American folklore in 1948 at Franklin and Marshall College in Lancaster, Pennsylvania, where he became head of the new Department of American Folklore. The department adopted an innovative folk-cultural model emphasizing the ethnological study of American regional-ethnic groups and their material and intellectual culture.

Shoemaker was particularly influential in introducing folklife and material-culture studies into American folklore studies. He offered groundbreaking courses on folk art and Pennsylvania German folk culture. Along with the department, Shoemaker established with Don Yoder and J. William Frey the Pennsylvania Dutch Folklore Center, which added a public-outreach component to the college's folklore research activities. Under Shoemaker's leadership, the Center produced a newspaper called *Pennsylvania Dutchman* (later the journal *Pennsylvania Folklife*), which claimed the largest circulation (more than 10,000) of any folklore serial in America, and it published more than twenty pamphlets and books on folklife topics. The Center established the Pennsylvania Dutch Folk Festival (later the Kutztown Folk Festival), which grew to be America's largest folk festival; seminars on folklife studies; cultural study tours to Europe; and a folklife museum and archives.

Shoemaker was eminently qualified for the task of introducing European folklife approaches into American academe. Born in the Pennsylvania "Dutch" country in Lehigh County in 1913, he received his A.B. in 1934 from Muhlenberg College followed by ethnological studies at universities in Munich, Heidelberg, Uppsala, and Lund. He returned to the United States and in 1940 received his Ph.D. in German at the University of Illinois. After World War II, he studied at the Irish Folklore Commission and the Folklore Institute in Basel, Switzerland. In addition to teaching German at Lafayette and Muhlenberg Colleges before going to Franklin and Marshall, he also served as curator of the Berks County Historical Society in Reading, Pennsylvania.

After 1952 Shoemaker resigned his teaching position to devote himself to the Center, and the department was dissolved. In 1956 he incorporated the Center and moved it from Lancaster to Kutztown. In 1958 the Center changed the title of its serial to *Pennsylvania Folklife*, still under Shoemaker's editorship, and expanded its scope from the study of Pennsylvania Germans to the full range of regional-ethnic groups in and around Pennsylvania. It was the first American journal to carry the folklife banner. Reflecting the broadening scope of Shoemaker's activities, the center became the Pennsylvania Folklife Society in 1959. In 1959 and 1960, Shoemaker published important studies of the Pennsylvania barn, Christmas, and Easter, under the imprint of the Pennsylvania Folklife Society. The society had a financial setback in 1963 and was reorganized without Shoemaker in its management.

After being institutionalized with mental illness during the mid-1960s, Shoemaker reportedly became homeless. He occasionally took up shelter in New York City at the home of a former folklife associate, but his whereabouts became unknown after 1970.

Shoemaker, Henry Wharton (1882–1958)

Pioneer collector of folklore in the central Pennsylvania mountain region and first official state folklorist in the United States (1948–1956), serving the state of Pennsylvania. As a journalist after 1898, he reported legends from Pennsylvania mountain residents and workers in lumber and hunting camps and coalfields, which he first published in central Pennsylvania newspapers and then more widely in the book *Pennsylvania Mountain Stories* (1908). This was the first of twelve volumes in the Pennsylvania Folklore Series (1908–1924) that promoted the culture and landscape of central Pennsylvania. From his home near Lock Haven, Pennsylvania, Shoemaker devoted much of his energy to environmental conservation and considered folklore associated with the endangered landscape deserving of preservation along with the state's forests and wildlife.

Praised for drawing attention to the traditions of the Pennsylvania “mountaineers,” Shoemaker nonetheless drew criticism for his alteration and occasional fabrication of legends. A prolific writer, he produced more than 100 books and pamphlets and hundreds of articles. In addition to his books of legends, for which he is best known (and most criticized), he published reliable collections of songs and ballads (*Mountain Minstrelsy of Pennsylvania* [1931]), folk speech (*Scotch-Irish and English Proverbs and Sayings of the West Branch Valley of Central Pennsylvania* [1927]), and crafts (*Early Potters of Clinton County* [1916]).

Shoemaker became a prominent newspaper publisher in Pennsylvania after World War I and published many folkloristic pamphlets and books by himself and others. In 1924 he cofounded the Pennsylvania Folklore Society with Bishop J.H. Darlington, and he was its president from 1930 until 1957. From 1924 to 1932, he published a series of monographs for the society. He held several appointments to state government commissions and was particularly active in public-history activities: He was chair of the Pennsylvania Historical Commission (1923–1930) and president of the Pennsylvania Federation of Historical Societies (1925–1926). In 1930 President Herbert Hoover appointed him minister to Bulgaria, a post he held until 1933. While he was minister, he took notice of Bulgaria's official efforts to preserve its folklore. In 1935 he began a daily column for the *Altoona Tribune* in which he covered regional folklore and history and called for cultural conservation efforts. He had an opportunity to develop his plans when he was appointed state archivist of Pennsylvania from 1937 to 1948 and director of the State Museum in Harrisburg from 1939 to 1940. In the posts, he called for the state to sponsor collection and preservation of folklore.

After the archives, museum, and historical commission merged to form the Pennsylvania Historical and Museum Commission following World War II, he oversaw the creation of the Division of Folklore in the commission in 1948 and took the position of first state folklorist. In that post, he sponsored publications, meetings, festivals, and

exhibits now common in public-folklore programming, although he entered into bitter disputes with academic folklorists in Pennsylvania over his popularized presentations of folklore. Shoemaker left the post in 1956, and a similar state folklore program was not established until 1966, again with the Pennsylvania Historical and Museum Commission. Shoemaker died near his McElhattan, Pennsylvania, home in 1958.

Shout

A dance-like form of group worship in the African American community. The shout consists of singing, polyrhythmic clapping, and foot stomping, and is generally performed in a ring formation. A syncretism of West and Central African rituals with Christianity, the shout expresses intense religious devotion. Shouting is practiced by men and women, young and old, all over the Southern United States and also in Northern cities where Black migrants have settled. The shout was first recorded by White observers in the mid-19th century and is still in evidence in the late 20th century.

Shouting is akin to spirit possession in African and African Caribbean religious practices, but its imagery and language are those of Christianity. Its name may be derived from the Islamic word *saut*, which means to walk or run around the *Kaaba*, a cube-shaped building in the Great Mosque of Mecca. The African antecedents of the ring shout were probably the Bakongo and other cultures' ring dances honoring ancestors. The counterclockwise motion of the ring imitated the movement of the sun across the sky.

The shout is not considered a dance by most practitioners, and shouters are careful not to cross their feet. This distinction is made because dancing is frowned upon by the Baptist and Methodist faiths to which most shouters belong. Shouts are generally held in churches, smaller "Praise Houses," or the homes of elders. If possible, benches or chairs are pushed to the wall to make room for the shouters. Ring shouts usually take place in the evening and can follow a weekday prayer meeting or Sunday service. Christmas Eve traditionally provided an opportunity for slaves and their descendants to hold an all-night shout.

A shout may sometimes be accompanied by musical instruments, but the most vital music comes from the voices, hands, and feet of the participants. The songs that carry the shout are usually African American spirituals that allow for improvisation. A strong singer or dancer starts the shout with his or her song and movement and the inspiration of the Holy Spirit. Four or five others stand back and act as “basers,” singing refrains over and over, clapping, and stomping their feet to the beat. As others join in, the circular movement begins, with shuffling feet, and increases in intensity and motion. Dancers may retreat to the outskirts of the circle or outside the building to rest, rejoining the ring later.

Fluidity and flexibility characterize the expression of the shout, with room for each shouter to improvise and alternate among the various roles that keep the shout moving. Participants and those on the sidelines can make comments such as “Sister Rosa can shout!” and exhortations such as “Join, shouters!” The shout is an event that involves the whole person and community in vigorous physical exercise, spiritual communion, and artistic expression.

Skinner, Charles M. (1852–1907)

Author of popular myth and legend collections. Raised in Cambridge, Massachusetts, in a family dominated by Universalist clergy, Skinner migrated to Brooklyn, New York, to pursue a career in journalism. For many years a writer for the *Brooklyn Daily Eagle*, he took an unusual interest in myths and legends, compiling several popular collections mostly from written sources.

As a journalist, Skinner devoted much of his attention to nature writing and the outdoors movement. Beginning in 1890, he contributed to *Century* magazine, *Outlook*, *Atlantic Monthly*, and other magazines, articles on sky gazing, insects, urban gardening, hiking, and the Brooklyn electric trolleys. Permeating these was a concern for the social and economic ills of unrestrained urbanization and an effort to bring the principles of American Transcendentalism to bear on turn-of-the-century life.

In 1896 Skinner turned to folklore, publishing a two-volume compilation of *Myths and Legends of Our Own Land*. The book achieved strong sales and was influential in shaping popular tastes in folklore. Principally, it included local legends, organized by region, and suggested a national folk culture that assimilated materials from European Americans with other native and immigrant ethnicities. Using this basic plan, Skinner followed this collection with *Myths and Legends beyond Our Borders* (1898), *Myths and Legends of Our New Possessions and Protectorates* (1900), *American Myths and Legends* (1903), and *Myths and Legends of Flowers, Trees, Fruits, and Plants, in All Ages and in All Climes*, which was published posthumously in 1911.

Skinner's work was largely ignored by folklorists until Richard M. Dorson resurrected him as an exemplar of unprofessional practices, citing Skinner's dependence on unreliable and unidentified sources and his rewriting of texts to cater to popular tastes. But Skinner was never guided by these standards, instead using principles derived from nature writing and Transcendentalism to develop through local legend a rejuvenated American sense of place.

Slavic Americans

A disparate group of varied nationalities who share ancestral mother tongues belonging to the Slavic family of languages. There is no historical evidence that Slavs ever constituted a single unified group. Despite politically motivated claims by adherents of pan-Slavism, millennia of separate development has led to distinctly differing Slavic cultures.

Scholars generally divide the main Slavic nationalities into three groups: (1) Eastern Slavs, including the Russians, White Russians, and Ukrainians; (2) Western Slavs, Poles, Czechs, and Slovaks; and (3) South Slavs, Slovenes, Croats, Serbs, Bosnians, Macedonians, and Bulgarians. Within these categories, there is a fair degree of linguistic mutual intelligibility, which markedly decreases across the divisions.

Mass migration of Slavic immigrants to North America occurred for the most part in the second half of the 19th century and the early decades of the 20th, although significant numbers of Slavic immigrants also arrived earlier than, and subsequent to, this period. The majority of Slavic immigrants were peasants in their homelands with relatively little formal education and few resources beyond their willingness to labor. Therefore, the greater portion of arriving Slavic immigrants found a livelihood in North America's rapidly developing heavy industries. The largest concentrations of Slavic Americans still are to be found in industrial cities and mining areas,

First-generation immigrants at Russian Sunday school. Potrero Hill, San Francisco, California, 1940. Note the inscription in Cyrillic letters. American Folklife Center, Cowell Collection (WPA).

although increased geographic and social mobility has diminished this concentration, especially in the decades since World War II.

There are significant communities of nearly every Slavic group in the cities of the Eastern U.S. megalopolis from Baltimore to Boston, in the mill and mining towns of western Pennsylvania, in all of the larger Great Lakes industrial cities, in Midwestern meat-packing centers, in Western mining towns, and in the Pacific Coast cities to which many Midwesterners and Easterners migrated. It is well known that Slavic Americans have labored in industries such as steel, meat packing, and coal, copper, and iron mining, but there are also significant Slavic rural farming communities, some established as early as the mid-19th century: of Czechs in eastern and central Wisconsin, southern Minnesota, eastern Nebraska, southern and central Texas, and Oklahoma; of Croatians in California's Pajaro and San Joaquin Valleys; of Poles in the onion-growing area of south-central New York state, in the potato-growing region of central Wisconsin, and intermingled with the Czech farmers and ranchers in Texas.

In the 20th century, other Slavic Americans managed to fulfill their dream of land ownership after earning a nest egg through toiling in the mines and mills. Often they had to settle for marginal farmland in regions with a short growing season. For example, in Wisconsin, the Slovaks of Moquah, the Poles of Pulaski, the Ukrainians of Clayton, and the Slovenes of Willard fit this pattern.

Slavs with a seafaring tradition, especially the Croatians from Dalmatia, settled in coastal communities, on New York's Long Island, and in New Orleans, Los Angeles, San Francisco, and Seattle, where they follow nautical pursuits: in all aspects of the shipping business, in shipbuilding, and notably in fishing. Dalmatians have fished off the Alaska coast from Washington ports, dominated tuna fishing in San Pedro, California, and have been the predominant oystermen in Buras and Empire, Louisiana, at the mouth of the Mississippi River.

Like other southern and eastern European immigrants, most Slavic American communities have been the victims of both overt and subtle forms of discrimination and prejudice. Pejorative terms such as "Polack," "Hunky," "Bohunk" and "Rusky" have been directed at Slavic Americans, usually designating a stereotype of the Slav as a dim-witted, coarse laborer. While most Slavic Americans acknowledge that prejudicial attitudes toward them have decreased, a legacy of this experience is a preoccupation with a type of ethnic boosterism that seeks to emphasize the length of time that some members of their nationality have been present in America and to point out prominent co-ethnics who have had notable achievements or attained celebrity.

For example, Croatians argue that the Croatian Indians who once inhabited the Carolina coast were the descendants of shipwrecked Croatian sailors from 16th-century Dubrovnik who intermarried with the local native people. Croatians are proud that

monumental works by sculptor Ivan Mestrovic adorn the grounds of the United Nations building in New York and loom up along the Michigan Avenue lakefront in Chicago. Poles emphasize the important roles of Thaddeus Kosciuszko and Casimir Pulaski in the American Revolutionary War and are also eager to point out that McDonald's hamburger magnate Ray Kroc was Polish American. Russians mention their 19th-century California colony at Fort Ross; Serbs point to the scientific contributions of Nikola Tesla and to the pitching prowess of Pete Vuckovich. Slovenes note that U.S. Senator Frank Lausche was one of theirs as is polka king Frankie Yankovic; Ukrainians are proud of their macho movie star Jack Palance. Narratives affirming the significance of their group's contributions to America are a tradition readily found in most Slavic American communities.

It is important to remember that Slavic American ethnic communities are not homogeneous. There are class and educational differences stemming from divisions in their Old World society. These differences became especially apparent with the arrival of large numbers of urbanites as displaced persons after World War II. The culture, experience, and out-look of these middle-class political refugees tended to differ considerably from those of the peasant economic immigrants and their American-born progeny.

Also, there are regional differences within the ethnic groups, stemming either from their origins in a particular section of the homeland or from American regional differences. For example, the Hutzuli ethnic group from the Carpathian region of western Ukraine differs considerably from the lowland Ukrainians while they share many cultural traits with the Polish Gorali of the Tatra Mountains. The Gorali, in turn, are distinct from the Poles of the Vistula River Valley. Many Polish Americans are very conscious of distinctive traits owing to their origins in either the Prussian, Russian, or Austrian sections of the partitioned Poland of the 19th century.

The Czechs provide a good example of regional differences that have developed in North America. It is easy to distinguish the ethnic musical style of Czechs from Wisconsin from that of Czechs of Texas or Nebraska. Moreover, all of these are distinct from the music of urban Czech Americans from Cleveland or Chicago.

Some of the Slavic nationalities are relatively homogeneous when it comes to religion. The Bulgarians, Macedonians, Russians, and Serbs are all predominantly followers of Eastern Orthodox churches. Most Croatians, Poles, Slovenians, and Slovaks are Roman Catholics. The Ukrainians, however, are divided three ways among Eastern Orthodox churches, Eastern Rite churches (which follow liturgical practices similar to the Orthodox but profess allegiance to the Vatican), and Roman Catholicism. Most Czechs are Catholic, but there also are significant numbers of Protestants among them. Bosnians are a largely Islamic Slavic nationality, but there is considerable disagreement over whether the term "Bosnian" applies also to the numerous Orthodox Serbs and Catholic Croats from that troubled country.

Despite their considerable differences, it is possible to mention some common traditional forms emphasized by nearly all of the Slavic American ethnic groups. Church choirs, which perform liturgical music, are strong in both Orthodox and Catholic Slavic communities. Most larger Slavic American communities also support secular choirs, orchestras of folk-derived instruments, and ensembles that perform choreographed folk dances in peasant costume.

The model for these activities, which are self-consciously organized with the purpose of foregrounding positive symbols of ethnic identity both for internal and external consumption, stems from a convergence of the folk-based symbols from 19th-century national movements in the homelands and efforts since the 1920s by American social workers and ethnic-diversity enthusiasts to assist immigrants' adaption to, and acceptance in, American society through public events and festivals involving the sharing of performing arts, crafts, and foodways.

Many textile traditions, especially forms of embroidery, have been retained in Slavic American communities owing in part to the needs of folk-dance ensembles for replicas of peasant garb from the past. Other crafts traditions, often involving woodworking, musical instrument making, or the creation of elaborately decorated Easter eggs, have been invigorated by the symbolic meaning ascribed to them as manifestations of ethnic identity.

Smith, Abraham (“Oregon”) (1796–1893)

Legendary raconteur and folk doctor. Born in Tennessee, Smith migrated first to the Midwest (Illinois and Indiana) in 1821, then to Oregon in 1852; in 1859 he returned to Indiana, and finally moved to Chrisman, Illinois, where he died at age 97, having established a legendary reputation as a folk doctor (earning him one nickname “Sassafras Smith”) and a storyteller. His fame lasted for more than a century, and may still exist in oral tradition.

Smith was the subject of one of the first exhaustive scholarly folklore studies of an American hero; William Hugh Jansen in his 1949 doctoral dissertation researched Smith's life to analyze the process by which a folk hero generates legends and the extent to which the legendary details correlate with historical fact. Smith's acclaim derived largely from his story-telling abilities, and his known repertoire of more than seventy tales included legends, tall tales, jokes, and lengthy traditional folktales. His stories about Oregon earned him his better-known nickname.

Jansen also analyzed Smith's storytelling and repertoire; Jansen's delineation of Smith's performer-audience relationships and how these were intertwined with performance style, genre, and context marked a seminal analytic approach now commonly employed in folkloristics.

Although “Oregon” Smith's reputation was limited to a confined area in the Midwest, that it lasted so long is testimony to the tenacity of folk-historical data, no matter how distorted they may become. Smith's legendary existence is an excellent example of the Swedish folklorist Carl Wilhelm Von Sydow's notion of the “oikotype,” a distinctive geographically limited and persistent form of oral narrative.

Smith, Bessie (1894–1937)

Known as “the Empress of the Blues,” Smith was born in Chattanooga, Tennessee. By 1902 both of her parents were dead, and shortly thereafter the young girl was singing on the streets. Even then she reportedly possessed a fine voice; in 1903, at age nine, she made her professional debut at Chattanooga’s Ivory Theater. A few years later, she met Gertrude “Ma” Rainey, an important blues recording artist of the 1920s and eight years Smith’s senior. Smith toured with Rainey in the Rabbit Foot Minstrels, in which the older singer was given star billing. Because of this connection, Rainey is often called Smith’s teacher, but it is more accurate to cite Rainey as simply an important influence on Smith.

Smith’s first recordings came in 1921, but these sides, made for the Emerson label, were never released. Her first issued sides, “Downhearted Blues”/“Gulf Coast Blues,” were cut for Columbia on February 16, 1921, and sold approximately 800,000 copies. The sales figure was phenomenal, since “Downhearted Blues” had been a previous year’s hit for Alberta Hunter, and Smith’s recording included uninspired accompaniment. Smith’s achievement established her as a star, and over the next ten years she recorded more than 150 sides, mostly for Columbia.

Bessie Smith lived only four years after her final recordings, and her last days were unhappy. She continued singing in nightclubs and theaters, but her work was usually limited to renditions of popular songs such as “Smoke Gets in Your Eyes.” Audiences occasionally demanded blues, but most people considered her earlier work old-fashioned. In fact, Smith might have passed out of public view altogether except for a controversy about her death. On September 26, 1937, she died of injuries suffered in an auto accident at Coahoma, Mississippi. An account first printed in a *Downbeat* article, later popularized by Edward Albee in his play *The Death of Bessie Smith*, said that she had bled to death after being refused admittance to a hospital because of her race. Another report claims that she died of exposure while awaiting attention in a hospital waiting room. The most likely account is that she was taken to the Black hospital in Clarksdale, Mississippi, where she died of her injuries. A week later, she was buried in Sharon Hill, Pennsylvania, but her grave remained unmarked until 1970 when a *Philadelphia Inquirer* reporter conducted a successful fund-raising campaign to buy a stone.

A majority of Smith’s 160 issued sides are of very high quality, and they include many definitive versions of blues songs. Her repertoire ranged from traditional songs like “Careless Love” to double-entendre numbers like “I’m Wild about That Thing,” to ragtime pieces like “Cake Walking Babies,” to original compositions like “Poor Man’s Blues.” Her songs spoke of privation, bad luck, bad women, and both good and bad men, but it was Smith’s voice that ultimately made each piece distinctive. Her rich contralto was a subtly controlled instrument. By skillfully using timing and phrasing, she gave

fresh value to almost every song, providing nuances of feeling that the casual listener could miss. Her habit of holding over a word or a syllable into the next bar was widely copied. Highly influential, both in her own time and later, Smith's recordings still sell well.

Smith's performance style is often called "classic blues," but is perhaps more accurately labeled "city blues" or "jazz blues." It is distinguished by a jazz accompaniment, often consisting of instrumental responses and an orchestral, or "stride," style of piano in which a single instrument may fill the function of an entire band. The pianist makes rich harmonies with the right hand, while the left hand supplies a powerful bass line and emphasizes the strong beats with low-register octaves or tenths and the weak beats with mid-keyboard chords. The style also has a formulaic structure, standardized beginnings and endings, and a notable absence of any string instruments.

Smith, Grace Partridge (1869–1959)

Collector of folklore from the area of southern Illinois known as "Egypt." A folklorist by avocation rather than profession, Smith did most of her work after retiring in 1938 from the University of Iowa, where she had worked as a teacher, editor, and writer.

In 1946 Smith helped organize the Carbondale-based Illinois Folklore Society, which remained active until 1962. She was the society's president, a member of its board of directors, and a contributor to its newsletter. She was also active in the American Folklore Society, serving as a councilor from 1952 through 1957.

Smith's published works include short articles on proverbs, folksongs, children's folklore, narratives, beliefs, and folk speech. She had a special fondness for supernatural materials, tall tales, humorous anecdotes, and slang. In addition to studies of Illinois folklore, Smith researched the traditions of her own New England family and published studies of folk motifs in literature. She contributed forty-three short entries on folk belief and superstition to *Funk and Wagnalls Standard Dictionary of Folklore, Mythology, and Legend* (1949–1950).

Although known as a regionalist, Smith took a comparative approach, tracing the history and origins of the materials she collected. She was influenced in part by her son-in-law, Alexander Haggerty Krappe, and her work is typical of the then current literary approach to folklore. Smith was one of the first folklorists to note the appearance of folktale elements in modern comics. Her work with her own family's traditions anticipated later interest in family folklore.

Smithsonian Institution Center for Folklife Programs and Cultural Studies

A unit of the Smithsonian Institution in Washington, DC, that promotes the understanding and continuity of contemporary grass-roots cultures in the United States and abroad. The Smithsonian Institution is a unique public trust founded in 1846 and dedicated to the “increase and diffusion of knowledge” among humankind. The Smithsonian has a staff of 6,000 employees and includes sixteen national museums, a zoological park, research institutes for astrophysics and tropical biology, a press, two national magazines, various membership organizations, a traveling exhibition service, and a variety of other programs.

The Smithsonian Center for Folklife Programs and Cultural Studies produces the Festival of American Folklife, Smithsonian-Folkways Recordings, exhibitions, documentary films and videos, symposiums, and educational materials. The Center conducts ethnographic- and cultural-policy-oriented research, maintains a documentary archival collection, and provides educational and research opportunities. The Center works with other Smithsonian museums and programs, has a scholarly and technical staff, and relies upon hundreds of contract scholars, temporary employees, and volunteers. Activities are funded through federal appropriations, Smithsonian trust funds, grants and contracts, donations, and product and concessions sales. Center projects have received scholarly, public, and critical acclaim; its work on issues and methods of cultural representation has provided a model for other organizations and activities in the United States and internationally.

Prior to 1992, the Center was known as the Office of Folklife Programs. The office, established in 1976 with Ralph Rinzler as director, grew out of the Festival of American Folklife unit of the Smithsonian’s Division of Performing Arts. Peter Seitel was director from 1982–1988, and Richard Kurin became acting director and then director in 1990.

The Festival of American Folklife is a research-based living cultural exhibition, held annually since 1967 outdoors on the National Mall of the United States for two weeks around the Fourth of July holiday. Over the years, it has brought more than 16,000 musicians, artists, performers, craftspeople, workers, cooks, storytellers, and others from fifty-three nations, every region of the United States, scores of ethnic groups, more than 100 American Indian groups, and more than sixty occupational groups to the National Mall to demonstrate their skills, knowledge, and artistry. The festival has energized local

and regional tradition bearers, provided a training ground for two generations of public folklorists, and inspired many other cultural programs.

In 1987 the Smithsonian acquired Folkways Records, founded and operated by Moses Asch for four decades. Folkways activities are coordinated by the center as a “museum of sound,” a business, and an archive under the direction of Anthony Seeger. The archive includes the Moses and Francis Asch Collection; documentation from the festival, its research, and special projects; and the Cook and Paradon record collections. Every one of the more than 2,000 Folkways titles is available on audio cassette through a mail-order archival service.

Smithsonian/Folkways produces new releases and reissues on CD, LP, and cassette. New releases grow out of festival and research projects, such as a multivolume set on Indonesia done in collaboration with the Indonesia Performing Arts Society sponsored by the Ford Foundation, and recent recordings on U.S.-Mexico Borderlands, New Mexico, Hawaii, and the former Soviet Union. Special recordings based on festival programs—*Rhythm and Blues* and *Musics of Struggle*—have been jointly produced with Columbia Records. A benefit album to support the acquisition of Folkways Recordings, *Folkways: A Vision Shared*, produced with Columbia Records, won a 1988 Grammy Award. Other products include audio recordings to accompany scholarly books, booklets for a thirty-volume *Video Anthology of World Music and Dance*, a children’s series of recordings and videos, a folk-music instructional video series, CD-I, and CD-ROM educational materials.

The Center produces Smithsonian museum and traveling folklife exhibits—*Southern Pottery*; *Celebrations*; *Aditi: A Celebration of Life*; *Stand by Me: African American Expressive Culture in Philadelphia*; *Grand Generation*; and *Workers at the White House*. The Center produces Smithsonian Folklife Studies, a series of documentary films and monographs. It sponsors symposiums on key cultural issues with collaborating institutions—for example, *Other Orient: Soviet and American Views of Muslim Society*, and *Seeds of the Past, Seeds of Commerce, and Seeds of Industry*—held for the Columbus Quincentenary. The Center has also coproduced television and radio programs, documentary films like Marjorie Hunt and Paul Wagner’s Academy Award-winning *The Stone Carvers* (1985), and popular books like the *Smithsonian Folklife Cookbook* (1991). The Center provides curatorial and production assistance for special projects, among them the U.S. Bicentennial in 1976, concerts for the Jimmy Carter and Ronald Reagan presidential inaugurals, and America’s Reunion on the Mall, a festival for the inauguration of President Bill Clinton.

Center programs and research focus on issues of cultural representation, conservation, and creativity. The Center’s most distinctive contribution has been the development of a dialogue and collaboration with the people whose traditions and aspirations are represented. Current collaborative research projects on the African diaspora, cognate American and Eurasian cultures, and the cultural landscape of Jerusalem are indicative of interest and range. Scholarly staff draw upon folklore, cultural anthropology, ethnomusicology, social history, ethnic and area studies, and cover various American and world regions. Recent examples of scholarship include Thomas Vennum’s monographs on *Wild Rice among the Ojibway* and *Lacrosse: Little Brother of War* and Olivia Cadaval’s exhibit on *Tirarlo al la Calle* (Taking to the Streets). Several scholars serve as faculty at local universities. Some have won prestigious recognition, such as Anthony

Seeger, winner of the American Musicological Society's prize for best monograph, former president of the Society for Ethnomusicology, and 1993 inductee into the American Academy of Arts and Sciences. The Center is a vehicle for increased staff diversity in the Smithsonian, as former staff head important other offices and programs; it also has a distinguished outside advisory group.

The Center offers a variety of educational programs. Fellowships allow predoctoral, postdoctoral and senior post-doctoral scholars to work at the Center. One recent Fellow completed a textbook on American folk music; another completed a new Smithsonian/Folkways Recording. The Center's projects annually involve hundreds of volunteers and about a dozen or so college interns. A community-scholars program, initiated as a Summer Folklore Institute, brings lay scholars to Washington, DC, to discuss their work, meet with public officials, increase skills, and learn about other cultural organizations. Educational programs for primary and secondary schools include curriculum kits on folklife, teacher-training materials and courses, and cooperative instructional programming with selected schools.

Richard Kurin

Social Protest in Folklore

Traditional forms of expression used as vehicles for responding to social injustice. Members of social groups constituted by ethnicity, nationality, religion, class, ideology, gender, sexual preference, occupation, region, and other aspects of common identity have drawn upon shared expressive traditions to voice dissatisfaction with social, economic, or political conditions. Social protest through traditional expressive behavior may be individual (graffiti) or collective (parades), and may assume a variety of forms, both verbal and nonverbal. The message may be explicit, or it may be "coded," with hidden meanings understood largely by the subject group.

Indigenous peoples of the Americas have responded to their subjugation by Europeans through such vehicles as traditional oratory (for example, Tecumseh, a Shawnee chief, on the fate of Indians of the Northeast: "They have vanished before the avarice of the White Man, as snow before a summer sun") and ritual (such as the Ghost Dance of Plains Indians, both a revitalization movement and a form of passive resistance against genocide). In recent decades, powwows—festivals featuring ritual dance, craft, and native foods—have been held throughout North America to promote unity among Native Americans and to present a collective response to the continued adverse treatment of indigenous peoples.

The American Indian Movement (AIM), an activist group formed in the 1970s, has adapted and applied traditional spiritual teachings and practices in the pursuit of social justice. Leonard Peltier, an AIM leader in prison as the result of a confrontation with FBI agents at Wounded Knee, South Dakota, in the 1970s, has a symbolic presence at many pow-wows, where his guiding spirit and message of unity and resistance are publicly acknowledged (a portrait of him is often seen hanging over the drummers' tent during performances).

African Americans have a tradition of social protest reaching back to their initial forced migration to the Americas. In the Old World, musician-bards, such as the West African *griots*, offered praise but also sharp social criticism; even drummers injected biting commentary into their rhythmic messages. Prohibited from such overt cultural practices, slaves developed new forms of expression, such as Christian sermons drawing liberally from the biblical account of the Exodus and the sayings of the prophets, and spirituals, which similarly carried covert messages of social protest such as “Let My People Go.” Later on, these songs formed the basis for more direct exhortation during the civil rights movement that began in the late 1950s. The lyrics to such spirituals as “We Shall Not Be Moved” and “We Shall Overcome” were adapted, with topical verses sung for particular occasions.

In some African American communities, parades and festivals commemorating the Emancipation Proclamation (such as Juneteenth, celebrating June 19, 1865, the day the Proclamation was announced in Texas) have been, and still are, conducted, both celebrating enfranchisement and protesting its incomplete realization.

Trade-union and political movements in North America have a well-documented history of enlisting traditional expressive forms, especially song, in the service of social protest. King George III’s restive colonists broadsided the loyal troops of the mother country by throwing back a popular British army tune to them in the form of the satirical “Yankee Doodle.” This parody appeared in countless incarnations, serving collectively as a weapon of protest against the Tories, as well as a vehicle for verbal attacks among competing factions of the Revolutionists.

The broadside, or topical folksong, dating back at least to the 16th century in England, has been one of the most popular vehicles for social protest among labor song-poets of the 19th and early 20th centuries, and peace activists in more recent times, who produced songsheets and booklets of lyrics, with instructions “to be sung to the tune of” a well-known song. The IWW (Industrial Workers of the World, or “Wobblies”) *Little Red Song Book*, first issued in 1910, achieved among the widest circulation of such collections.

One of the most popular bards of social protest in the 20th century, Woody Guthrie, commonly penned topical lyrics and set them to well-known traditional tunes, a practice followed by his spiritual protégé Pete Seeger, who continues to employ folk music as an instrument for social change. An informal periodical titled *The Broadside*, started by activists in the early 1960s, was published for nearly three decades. The magazine *Sing Out!*, a successor to the *People’s Songbook* of the 1950s, began as a vehicle for disseminating topical and protest folksongs; while no longer primarily political, it still occasionally publishes songs of civil rights, peace, environmental, and other activists for whom folk music remains an important vehicle for social protest.

In the “internationalist” spirit of the political Left, many songs of one group were adapted in form and content to become universal odes to social justice. One of the best-known instances of this crossover is that of African American spirituals, such as “We Shall Overcome,” which has become an anthem not only for the civil rights activists, but for tradeunion, women’s, peace, environmental, and other groups as well (Spanish-speaking farmworkers sing it as “Nosotros Venceremos”).

Forms of social protest among working people in North America have reflected both the diversity of occupational cultures and the multiethnic character of many workplaces. The vast body of labor lore has included veiled criticisms of management communicated

in songs, drama, occupational jargon, ritual slowdowns (creative modification of the work process by stylized movements, gestures, and the like engaged collectively in a workplace to slow down the pace of production, often in response to a “speed-up” ordered by management) or sabotage of the work process.

Festivals and parades have often served as stages for labor and political protest. In Europe, tradespeople have for centuries organized such public events, both to display pride in their craft and to protest their treatment in the workplace. Such public demonstrations often involved rituals adapted from ethnic and religious practices of the groups to which the artisans belonged. These traditions were carried over into the New World, where artisanal processions were conducted as early as the 17th century. Workers’ parades often parodied local customs, as in Philadelphia, where the popular mummers’ processions provided part of the inspiration for the costumes and ritual antics of strike parades.

Song-poems have been among the most popular mediums of labor protest. In form and content, they have reflected both the class and the cultural background of their composers. Commonly set to traditional tunes, they were recited at the workplace and performed by workers’ choruses. These choruses were organized not only by trade, but often within ethnic sections of trade unions and political organizations.

Traditional ethnic and religious rituals have also been transformed by workers into expressions of social protest. As an instance, members of the Jewish labor movement adapted the Passover Seder, which commemorates the Exodus, and to also pay tribute to contemporary struggles for liberation.

In the fields and orchards of the Southwestern United States, migrant workers have used traditional expressive forms in the service of the farm workers’ movement, which was long headed by the legendary labor leader Cesar Chavez. Farm workers of Mexican ancestry have chronicled their plight, as well as efforts to unionize agricultural workers, in *corridos*, sung newspapers whose form may be traced back to the medieval Spanish ballads or romances. *El Teatro Campesino* (farm workers’ theater) has employed the folk drama and song of rural Mexicans and chicanos to portray the lives and struggles of migrant farm workers.

The “unfinished revolution” of women for full equality has been reflected in direct and indirect forms of protest. Sometimes a contrary voice may appear as a subversive message in traditional expressive forms. Women have historically carried on a covert protest against inequity through their activity in the socially assigned realm of the “domestic” arts. A primary example of this is quilt making. Designs stitched into quilts have not only represented traditional patterns, but have sometimes reflected a “quiet protest,” as in the crazy-quilt “epidemic” of the late 19th century. Partly a rebellion against rigid design standards, it was also, by extension, a protest against constricting social codes for women.

Another way that quilts have provided a social voice for women is through their use as commemorative documents. Historical scenes and commentary were often sewn into the fabric of these decorative, yet functional, artifacts. As North American women took part in social movements in the late 19th and early 20th centuries—such as abolition, temperance, and suffrage—they employed their traditional skills in making quilts that raised consciousness (and funds) around issues of social injustice. The tradition of “protest quilts” has been updated by such projects as the “Peace Quilt” and the “AIDS

Quilt.” The NAMES Project has enlisted relatives and friends of people who died of AIDS to sew memory patches, which are then stitched into large sections that are often presented at gay and lesbian civil rights demonstrations; the AIDS Quilt, when displayed in its entirety, has covered several acres. Within the nuclear disarmament movement, images and messages of peace have been sewn into sections by women and men from throughout North America and displayed at various public actions; as an instance, in the 1980s pieces of the Peace Quilt were held up by members of a human chain encircling the Pentagon in Washington, DC.

Sociological Approach

Emphasizes the interrelationships of folk culture, social structure, and human interaction. Since sociology is the study of human groups and social organization, it is hard to imagine any folkloristic research, except perhaps the most formal literary analysis, that is not in some way sociological. As many disciplines in the humanities now recognize that human artistic products are inevitably connected to the sociopolitical context in which they were produced, a sociological perspective to folklore has become essential. In essence, the sociological approach investigates how biography and history are linked.

There have actually been numerous sociological approaches to folklore, although relatively few professional sociologists have explicitly addressed folkloric issues. Folklorists who examine community life (for example, Linda Dégh and Henry Glassie), the interplay of techno-industrial order and traditional culture (Hermann Bausinger, Lauri Honko, and Simon J. Bronner), and the role of context and performance features in creativity (Robert Georges, Roger D. Abrahams, and Richard Bauman) might each be considered a “sociological folklorist.” Yet, such an approach is so inclusive that one might merely classify folklore as a corner of the sociological enterprise. In contrast,

problems also arise from considering in the sociological domain only that which is published by a trained sociologist, leaving the approach too narrow and idiosyncratic. Still, one can echo Kenneth Thompson's surprise that sociology and folklore have not had closer linkages (Thompson 1980).

While boundaries of truly sociological approaches are inevitably hazy, a sociological perspective emphasizes the central position of social structure or interaction processes. The question "What does a text mean?" can only be answered through an examination of the broader contexts in which narrators and audiences operate. To distinguish a sociological approach from an anthropological one requires a primary focus on contemporary, Western, industrial societies, although this is by no means a perfect division.

Sociological approaches to folklore were not foreign to early folklorists or sociologists. William Graham Sumner, professor of sociology at Yale University, made the important distinction between stateways (laws or rules of a social system) and folkways (traditional ways of doing things). Joseph Jacobs, one of the Victorian English folklorists, had a distinctly sociological appreciation for the interpersonal dynamics of diffusion and the role of a folk group as a bounded behavior community, a point later emphasized by Alan Dundes. Howard W. Odum and his colleagues at the University of North Carolina, including Guy Benton Johnson and Newbell Niles Puckett, maintained a vigorous interest in folk culture, and much important collecting of African American traditions and music arose from this interest (see Odum 1953). Emile Durkheim, one of the "fathers" of sociology, and his student Marcel Mauss shared a profound interest in folk culture, particularly in the role of religion in providing a cohesive force for social order. Indeed, near the turn of the 20th century both sociological and folklore journals published articles linking the two disciplines.

Subsequently, several empirical areas have generated important studies that might be labeled a sociological approach to culture: (1) impression management and performance, (2) group dynamics and the creation of folk groups, (3) social control and social conflict, and (4) nation building and social change. Each approach produced considerable research tradition, but can only be summarized briefly here.

Impression Management and Performance

Performance theory, which did much to revitalize folklore theory in the late 1960s and 1970s, owed much of its own vitality to the insight of sociological analysts, such as Erving Goffman in his *Presentation of Self in Everyday Life* (1959), and other dramaturgical theorists, who tirelessly pointed out the existence of demands for impression management and effective presentation of self. The sociological argument claimed that individuals desired to act in such a way as to maximize the esteem that they received from those with whom they interacted. All social life could be analyzed from a theoretical metaphor grounded in actors, props, settings, and backstage preparation. Folkloristics, with its emphasis on the act of narration, proved to be a fertile ground for this metaphor, and researchers examined the art of narration in light of the immediate

contextual constraints, often examining the collaborative qualities of narration, the effects of audience response on the content of narration, and the use of discursive practice to achieve behavioral dominance or social status. Further, the presentation of identity operates on a community level, as recent examinations of touristic traditions have indicated. One of the most exemplary works in this genre is Michael Bell's *The World from Brown's Lounge* (1983), a study of a west Philadelphia bar. Bell demonstrates how the employers and customers use narrative strategies to achieve important ends. Performance is, or can be, goal directed, in this case promoting sociability and supporting the organization by creating an environment in which clients will spend money. The fundamental goal of narrative, from this point of view, is to allow individuals to have others respond in ways that they consider socially desirable.

Group Dynamics and the Creation of Folk Groups

The recognition of the importance of folk groups (as they are called by folklorists) or subcultures (as sociologists usually refer to them) indicates a set of similar concerns. How do groups of various sizes create shared meanings, and what is the nature of the culture that is created. Louise Pound reminded folklorists in 1945 that folklore was simply traditional lore found among homogeneous groups. Gary Alan Fine speaks of a phenomenon he labels "idioculture"—referring to the collective traditions of a small group (Fine 1982). This model has been pursued both by folklorists who examine groups of ever-smaller size and by sociologists who expand the model of small-group culture to other substantive venues.

Sociologists argue persuasively that group culture serves a "boundary—maintenance" function: excluding outsiders from participation and also providing justification for internal cohesion by recognizing external threats. Everyone who has just joined an ongoing group recognizes how difficult it is to understand the humor and gossip swirling around. Family culture perhaps provides the most dramatic instance of this process by which tradition is localized: an intimate group, whose members are separated legally and/or biologically from those outside and whose traditions emphasize these boundaries.

Social Control and Social Conflict

One of the traditional areas for sociological study is the tension between domination and control in a society and protests against this domination and control. Social organization sometimes seems like a minuet between the forces of social control and those who wish

to contest that. Often this rivalry takes place within the cultural domain, and cultural tradition can be used as a means of reacting to the power structure (Calhoun 1982).

The cultural challenge is met by attempts by elites to control those dominated through folk stories and beliefs—whether these are children, women, or those of a dominated race. From the standpoint of elites, collective and political ritual is often an essential means by which community is created and continually solidified. On whatever level—the individual or the societal—folk traditions can serve as a means of socialization and education.

Organizations frequently attempt to regain authority by means of a collective ideology—an approach that has come to be known as organizational culture (Martin 1992). This identity serves to cement individuals to the larger unit, although it is possible that individuals construct traditions to counter organizational hegemony through the establishment of counter-cultures.

Groups and individuals also create, spread, and manipulate tradition in order to improve their status position within a hierarchy. This is perhaps most evident in folklore denigrating racial and ethnic groups, of which, tragically, there is much. Ethnic humor is a powerful motivating force (Davies 1990). Some folklore creates social deviants, such as the lore about threats to children from Halloween sadists (Best 1990) or kidnappers (Carroll 1987).

In other words, folklore is created to achieve ends that influence the relationship among groups and the relationship between individuals and organizations.

Nation Building and Social Change

Sociologists study the organization of society on both the level of social interaction and the level of the nation state (and the world system). Nations use folklore to justify their legitimacy (Hobsbawm and Ranger 1983). Within folkloristics, perhaps the most compelling study of the uses of national tradition is William A. Wilson's *Folklore and Nationalism in Modern Finland* (1976), which examines the use of the *Kalevala*, the Finnish national epic, by Finnish nationalists to provide legitimacy for their nation. In sociology there has been considerable interest in the process of commemoration of events and political leaders. Barry Schwartz demonstrates in *George Washington: The Making of an American Symbol* (1987) that Americans constructed the image of George Washington as a heroic and moral leader to capture some of the virtues that they believed were important for the creation of a new nation; the legends that surround Washington reflect these virtues. *What we remember and how we remember* explains something critical about the nature of the social order.

Sociologists and folklorists also agree that folklore is responsive to social and technological change. As the structure of a social system changes, so, too, do its traditions. Without this recognition, we would be left with a static model of culture, instead of the recognition that culture is dynamic. Culture changes with other alterations in the social structure: occasionally ahead of structural change and sometimes as part of a cultural lag (Ogburn 1937).

The disciplines of folklore and sociology have numerous points of fruitful contact. It is a shame that these similarities have not previously been better articulated. We should avoid the mistake of claiming that folklore is only a branch of the larger discipline of sociology—that is self-evidently not true. Still, one cannot help think that many of the most central issues of folklore are the ones that find their mirror in the concerns of sociologists. For the two disciplines to recognize their common concerns would enrich each.

Solstices, Summer and Winter

The dates on which the sun's ecliptic reaches its extreme northern and southern latitudes. In the Northern Hemisphere, these fall around June 21 and December 22, which are known, respectively, as Midsummer and Midwinter Day. The celestial turning points have been celebrated for millennia with rituals designed to ensure the progress of the sun. In both pagan Europe and pre-Columbian North America, fire making and dancing were common practices. The Sioux Sun Dance, for example, was a summer solstice rite; Pueblo kachina dancing was a winter counterpart.

In Europe, Christianity absorbed pagan solstice customs, and in the case of the winter solstice virtually effaced them. The Catholic Church's early growth may be credited partly to the skill with which it conflated Roman and Persian solstice festivals (the Saturnalia and Mithra's birthday) to the birthday of the Christ Child, the "light of the world." Christmas gradually obscured other December rites, although the lighting of a

“new fire” was preserved vestigially in the northern European custom of burning a Yule log.

Midsummer festivals, too, were Christianized, although the traces of sun worship remained more visible. When the liturgical calendar established June 24 as the Feast of John the Baptist, the bonfires that traditionally had honored the sun came to be associated with the saint whom Jesus called “a burning and shining light” (John 5:35). In parts of Europe, they are still called St. John’s fires, although the attendant revelry has been muted. Traditional amusements included nocturnal dancing and leaping through, or over, the bonfire flames.

St. John’s Day was introduced to North America by European immigrants, especially those from sun-poor Scandinavia, who transplanted not only the bonfires and the dancing, but also the belief—probably a pagan survival—that Midsummer’s Eve was suited to divination. Midwestern folklore is rich in midsummer spells, many of which, like Halloween divinations, enable girls to identify future husbands. Fortune-telling and love were also linked, although more erotically, in the snake-dance ritual established for June 23 by New Orleans “voodoo queen” Sanite Dede (Anderson 1960).

Water, appropriately, also figures in beliefs surrounding the Baptist’s feast day. In Latin areas, including Mexico and Puerto Rico, public bathing was a St. John’s tradition, while Slavic families forbade their children from swimming until the saint had “blessed the water” on June 24 (Cohen and Coffin 1987:218). In one divination, a girl seeks her betrothed by reading the shape of an egg white in a glass of water; in another, the index is a wreath floated on a stream.

In the 1990s, such devotions are less visible than civic festivals. In Minneapolis, *Svenskarnas Dag* (Swede’s Day) draws tens of thousands of tourists to a midsummer folk fest. Seattle’s Vasa Day celebrates folk traditions in honor of Sweden’s first king, Gustavus Vasa. At the *Fyr-Bal Fest* in Ephraim, Wisconsin, business leaders elect a “Viking chieftain” who consigns a “winter witch” effigy to a bonfire. A number of Alaskan communities hold midsummer festivals that celebrate both the memories of the Yukon gold rush and the late June arrival of the midnight sun.

South

A region rich in folklore, but one so stereotyped that it is difficult to approach objectively. Hoop-skirted belles vie with barefoot hillbillies and cotton-picking sharecroppers in the popular imagination. These distortions ignore the substantial middle-class population, dubbed “the plain folk of the Old South” by historian Frank Owsley. Yet they do reflect an important reality: the role of the land—both as terrain and as the basis for an agrarian way of life—in shaping the culture.

How do we define the region geographically? Where does the South begin and end? Although the Civil War and its aftermath certainly heightened the region’s separateness, a historical approach based on membership in the Confederacy is not entirely satisfactory, for Kentucky would be left out, as would border states such as Maryland and Missouri that are, in part, culturally Southern. Central to the formation of a distinctly Southern culture was the plantation system with its enslaved labor force; the large African American presence has been a major shaper of the region’s character. Defined in this way, it could be argued that the South extends as far west as east Texas, beyond which the Southwest is more Western than Southern.

Within this relatively homogeneous region there exists topographically and ethnically based diversity. The Upland South (the Appalachian and Ozark Mountains), which hardly participated in the plantation system, is nevertheless Southern in its own way and shares certain features with the Lowlands; the Cajun and Creole cultures of southern Louisiana, with their French roots, are clearly different from the more typical northern part of the state, yet still recognizably Southern. This dynamic tension between a unified Southern identity and affiliation with smaller communities is crucial to understanding the region’s folklore.

Not all of the traditions practiced in the South are exclusive to the region. So what is Southern about Southern folklore? A group of folk-cultural traits helps distinguish the South from the North and West, while at the same time acknowledging subregional differences. As it is for people, much of a region’s folk-cultural “personality” can be attributed to a combination of heredity (cultural rather than genetic, of course) and environment. The regional “stew” developed its unique flavor as settlers of varying Old World backgrounds exchanged traditions and responded to conditions in their New World locale, such as climate and natural resources. This process is particularly evident in the genres of material folk culture, wherein basic survival needs are channeled into culturally preferred patterns.

Southern folk architecture emphasizes wood construction, with walls of horizontal logs (a continental European trait introduced via the Mid-Atlantic) or a framework cov-

ered with weatherboards, and wood-shingle roofs. In the Deep South, external chimney placement is typical, a carryover from southern England as well as a function of the warm climate; the raised pier-and-sill foundation (which allows air to circulate under the floor)

is drier and less laborintensive than the underpinning of the North. Other features reinforced by the climate are galleried porches (possibly an African influence via the West Indies) and detached kitchens. Certain building types, such as the narrow, gable-fronted shotgun house (introduced from Haiti), are also regional. The bare-swept yard as a landscape tradition may have African origins.

No realm of folklife is more evocative of a region than its foodways. Greens, such as turnip and collard, loom large as a Southern vegetable, boiled for hours with fatty pork and the residual liquid (“potlikker”) also eaten like soup. Pork was the everyday meat until the rise of the poultry industry, reaching its pinnacle of preparation in barbeque; hog lard was the medium for deep-fat frying. Corn remains a staple grain, manifested in such bread types as skillet-cooked pone, molded sticks and muffins, deep-fried hush puppies, and pudding-like spoon bread. The distilling of corn into moonshine and bourbon can be traced to Ireland (where other grains were used). Homemade cane syrup was the chief sweetener for those unable to afford sugar. Plant foods introduced from Africa via the slave trade—the peanut (its folk name, “goober,” derived from the West African *nguba*) and okra (its African name, *gumbo*, applied to the coastal stew in which it is often an ingredient), among others—have made their culinary contributions. The peculiar habit of clay-eating as a mineral supplement also may have been brought from Africa. Coffee was the hot drink of choice (even in the late 1990s, tea is understood as iced), with buttermilk, a by-product of churning, a favorite cool drink (as in Ireland).

The folk craft of pottery has a number of regional features. Green or brown woodash- and lime-based alkaline glazes, used on stoneware of the Deep South since the early 19th century, are found nowhere else in the country and probably derive from China via printed descriptions. Rectangular cross-draft kilns and treadle wheels with ball-opener levers are key elements in the regional production technology. Large jugs for storing cane syrup, jugs with applied faces (first made by slave potters in South Carolina), and pottery gravemarkers (alternatives to more expensive stone) are ceramic types concentrated in the South.

There are also characteristic furniture types. Tall-legged case pieces—the huntboard (a variety of sideboard or buffet) and the smaller cellarette (for storing wine bottles) and sugar chest (for keeping solid sugar cones)—discouraged vermin and echo the pier-and-sill foundation of buildings. The round lazy-Susan table with its smaller turntable (another possible Chinese inspiration) could serve several courses at once with a minimum of passing. The meal bin with two lidded compartments, commonly found in Upland cabins, is an idea undoubtedly brought from Ireland. “Mule-ear” chairs, with their backward-curving rear posts, lean comfortably against a porch wall, and the springy “joggling board” on plantation porches was a pre-trampoline delight for children.

Regional characteristics of Southern folk textiles are less apparent. The predominant filling material for quilts (before the recent availability of polyester) was cotton, an obvious result of its availability as a crop. Hand-woven bedcoverlets typically are of the overshot type in mixed cotton and wool, lighter than their all-wool Northern counterparts. Such distinctive basketry traditions as the work in dyed river cane by Cherokee and Choctaw Indians and in coiled grass by Blacks of the Atlantic Coast tend to be localized or ethnically based, rather than panregional.

Such tangible traditions were not accepted as part of the American folklorist’s research domain until the 1960s, whereas oral and musical traditions, which serve to

enhance a people's quality of life and transmit community values, have been studied since the late 19th century and are what will first leap to the minds of many readers when thinking of Southern folklore.

Folk music and song have always been major vehicles of aesthetic expression in the South. Several of America's most important musical gifts to the world—Negro spirituals, blues, jazz, and bluegrass—arose as Southern folk idioms, the African American presence dominating the first three and influencing the fourth (which Bill Monroe and others developed mainly out of the White old-time string-band tradition, beginning in the 1940s). Commercial broadcasting and recording of American folk music was concentrated in the South, with record companies issuing blues and old-time performances in the 1920s and paving the way for the popular sounds of rhythm and blues and country and western. More old British ballads have been found in the South than in any other region, and the South also leads in the number of ballads created in the United States.

The most significant folk-musical instrument the South has produced is the banjo, originally a slave instrument with West African forerunners that became a mainstay of mountain music. The Appalachian dulcimer appears to have evolved from the *scheitholt*, a type of German zither transplanted in Pennsylvania. Southern fiddling features a drone or chorded sound reminiscent of bagpipes of the British Isles, from whence the instrument was brought. The French accordion is central to the pulsating sound of Cajun dance music and its Black counterpart, zydeco. The South contributed to the development of the American square dance, while producing such distinctive forms as buck, or flatfoot, and clog dancing (both having roots in the British Isles).

What could be called an oratorical aesthetic—emphasis on skill with the spoken word—permeates Southern life and is manifested in legal and political oratory. In folklore this love of entertaining talk is channeled into traditional preaching and storytelling. Several distinctive groups of folktales hark back to the Old World, such as the mountain Jack tales (popularized by Richard Chase) and African American animal tales (popularized by Joel Chandler Harris), while others, like the “Old Master and John” tales told by Blacks, grew out of Southern experience. Riddling was popular in the Uplands, and Southern speech is often creatively punctuated with colorful proverbial usages.

Southernisms also can be found in the realms of folk belief and custom. Witchcraft once was prevalent in the mountains and among African Americans, who often called it “hoodoo” and gained from it some sense of control as an oppressed minority. Voodoo, a folk religion emphasizing spirit possession, was imported from Haiti to New Orleans; more recently it was introduced to Miami, as was its similarly African-derived but Catholic-influenced Cuban counterpart, *santeria*. A southern folk sect that also involves spirit possession—in this case, by the Holy Ghost—and that is part of the White Pentecostal movement—is serpent handling.

A Southern custom illustrating the centrality of the family is Decoration Day, when members of a community come together in the summer to clean up their local cemetery and decorate their ancestors' graves with flowers. “Turnouts,” in which children barred their teacher from the schoolhouse until they were granted a holiday, was a curious frontier custom brought from Britain; the frontier “sport” of “gander-pulling,” in which horseback riders vied to yank off the greased head of a live male goose, was no more

cruel than modern-day cock and dog fighting. Early Southern Christmas customs supplanted by the modern American observance include shooting off firecrackers, the ritual shouting of “Christmas gift” first thing on Christmas morning, and costumed teenagers known as “fantastic riders” or “surnaters” who sometimes played pranks as they made the rounds of their community (a survival of British “mumming” or “guising,” and similar to Mardi Gras as celebrated in rural Louisiana; in both cases, the luck-bringing visits were institutionalized as parades in urban areas).

While this catalog certainly is not complete, it at least suggests the regional character of Southern folklore as an overlay to the historical, sociological, and linguistic approaches emphasized elsewhere in defining the region. Another distinguishing feature as important as any of the foregoing is that the South is a region of retentions, where traditions once shared with other parts of the country have been maintained after disappearing elsewhere. This can be attributed to the isolation of the dispersed farming population from centers of change, poverty following the Civil War, and a conservative tendency to cling to the old ways.

An example from the realm of traditional clothing is the sunbonnet, which passed out of fashion in less sunny climes (except for “plain” sects such as the Amish) but remained a common part of women’s apparel in the rural South (especially the Uplands) until recently. In the food domain, grits (coarsely ground corn stirred into boiling water and eaten like mashed potatoes with butter or gravy) are still routinely served—even in fast-food chains—as part of the Southern breakfast, while their Northern equivalents—hasty pudding and mush (eaten as hot cereal with milk and sweetening)—are all but extinct. The White spiritual, an early type of religious folksong once quite widespread, survives as a continuous tradition only in the South. The South also is the only region where Euro-American folk pottery is still made, with the Meaders, Brown, Hewell, and other families working with elements of a preindustrial technology. A handcraft revival, begun about the turn of the 20th century and focused in Appalachia, stimulated crafts by providing classroom instruction and creating outside markets.

Rural-based Southern folk traditions remain vital; more than a third of the 143 outstanding American folklore practitioners awarded National Heritage Fellowships by the National Endowment for the Arts through 1991 are Southerners. But the South is rapidly becoming more like the rest of the country as urbanization, mass culture, and shifts in the economic base have their impact. Some of the characteristics that give the region its distinctiveness are destined to yield to modernization; but at the same time, incomers from other regions and countries (as exemplified by south Florida) are transplanting “new” traditions in a process akin to that of the early settlement period. The regional folk-cultural “stew” is still cooking.

Southern Arts Federation Folk-Arts Program

Regional folk-arts program serving a nine-state area in the South. The Atlanta-based Southern Arts Federation (SAF) established its folk-arts program in 1989 to serve the traditional artists and arts presenters of Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, and Tennessee. The program was the first to be based at one of the seven regional arts organizations in the United States and was funded initially by a grant from the National Endowment for the Arts folk-arts program. Building upon the work accomplished by state folk-arts programs, the SAF goals are to create networks, provide leadership, and effect positive change in the folk-arts communities of the South.

The first regional-arts service organization to be formed in the South was the Southern States Arts League. The league was established in 1921 in Charleston, South Carolina, to assist visual artists reach a wider regional audience. Exhibitions were sponsored by the league in a number of Southern cities, the most successful being the 1935 exhibition mounted in Nashville, which was attended by a reported 12,000 visitors. The Southern States Arts League also sponsored an annual conference and published a monthly newsletter in an effort to further arts education in the South and to help the public develop a "sense of art values." Due to internal conflicts and other factors, the league was dissolved in 1950, leaving a void in regional-arts services for a period of twenty-five years.

The Southern Arts Federation, incorporated in 1975 through the Southern Growth Policies Board, was established to share, enrich, and preserve the diverse artistic expression of its nine-state Southern region. The SAF is a nonprofit organization supported by its nine member states' arts agencies, the National Endowment for the Arts, and corporate and foundation partners. From its inception, the SAF and its member-state arts agencies have addressed the fundamental and advanced needs of the artists and arts institutions that inhabit this region of rich cultural diversity and rapid cultural transition.

Recognizing the vast, underserved constituencies of traditional artists and arts presenters in its region, the SAF convened a meeting of Southern folklorists in 1987 to provide guidance on how the agency might best address the needs of Southern folk artists. From this meeting, a proposal was developed and submitted to the National Endowment for the Arts folk-arts program to establish the position of regional folk-arts coordinator. The SAF folk-arts program works closely with Southern state folk-arts

programs to bring local and state initiatives into a regional network. The program disseminates information, creates opportunities to collaborate across state lines, provides performing and visual-arts touring programs, artist fellowships, and educational programs, produces publications and media products, and lends technical assistance to locally-based folk-arts projects in the region.

Peggy A. Bulger

Southwest

Arid region with Arizona and New Mexico at its core, featuring native cultures, a strong Hispanic and Mexican presence, and an Anglo presence since the 1840s. The American Southwest is not an easy area to define. Most scholars will agree on the states of Arizona and New Mexico, the southern parts of Colorado and Utah, and west Texas around El Paso. However, the differences start there. Does one include the Mojave Desert of California? How far into Texas does one go? How far into Utah and Colorado? Does one define the area on the basis of physical characteristics, shared life forms, cultural characteristics, or a combination of all three? This vagueness of boundaries appears to be one of the characteristics of the region.

However one sets its boundaries, the Southwest is a dry land in comparison with the rest of the United States. This dryness, while very real, did not prevent indigenous cultures from developing there, more or less influenced by developments in Mesoamerica. The native cultures vary widely, from the village-building pueblo peoples of the north to the desertdwelling O'odham of southern Arizona, to the Navajo and Apache peoples, probably relatively recent arrivals in the region.

The first Europeans in the American Southwest were Spaniards, with a history of exploration dating from Cabeza de Vaca's journey through the region in 1535–1536, and a history of settlement dating from the arrival in northern New Mexico of Oñate's colonists in 1598. By the 1840s, there were Mexican (previously Spanish) settlements in northern and southern New Mexico, El Paso, and southern Arizona. In 1848 much of the region became part of the United States through the Treaty of Guadalupe Hidalgo ending the war with Mexico; southern Arizona was added in 1853 through the Gadsden Purchase. Since that time, the region has been subject to increasingly intense immigration, both from the rest of the United States and from Mexico.

Culturally speaking, the Southwest has been defined mostly from the outside. Santa Fe, Tucson, and El Paso may resemble one another when seen from New York or New England, but from within the region one sees the differences as much as the similarities. Most of the writers who have fixed the images of the region in literature have come from elsewhere.

From the beginning, with Coronado's quest for a rich native civilization, Europeans have come to this region in search of something. Minerals, land for cattle raising, and native souls to bring into the fold of the Catholic Church were important objectives during Spanish times. Those three goals remained important through much of the 19th and 20th centuries as well, with business opportunities and, increasingly, a place to lead

the good life eventually supplanting them. The lure of the Other seems to remain as strong as it was in Coronado's time.

In order to understand the region fully, one must remember that it has been "the Southwest" only since the 1840s and 1850s. Before that it was northwestern Mexico; before that, stretching back in time to the early 16th century, it was northwestern New Spain. Before that, if some archaeologists are to be believed, the region was the northernmost extension of the high cultures of the Valley of Mexico. Paradoxically, the cultural features that most distinguish the 1990s Southwest as a tourist destination—the features that comprise its identification with the Other—result from its historic character as a northern or northwestern frontier.

It is a cliché that there are three cultures in the Southwest: Native American, Hispanic, and Anglo. This is, of course, an oversimplification. Native American cultures in the region differ from one another in every way imaginable. Hispanics vary from the descendants of 18th-century settlers in northern New Mexico to late-20th-century from Mexico, Central and South America, and even Spain itself. Anglos include Anglo Americans, African Americans, Asian Americans—everyone, in fact, who is neither Hispanic nor Native American.

Hispanic cultures may be best discussed under two headings: the Hispanos of northern New Mexico and southern Colorado, and Mexican Americans everywhere else. Younger, more politically active members of both groups often prefer the term "chicanos." New Mexican Hispano culture has its roots in the 17th- and 18th-century colonial settlements in the region. It is traditionally pastoral, agricultural, and Catholic in nature. Religious arts include *alabados* (hymns), carved and painted *santos* (sacred Catholic images), and such ritual music and dance clusters as *los Matachines* (a ritual contra dance spread throughout much of former New Spain). The Penitente Brotherhood, a religious organization devoted to emulating some of the sufferings of Jesus Christ and providing community social welfare, permeated many of the villages, intensifying the ritual life. Secular forms include *romances* and their descendants, *corridos* (ballads), traditional tales in a wide variety, and a rich store of proverbs, riddles, and other forms. Secular folklife includes a repertoire of instrumental dance music (fiddle and guitar), a distinctive regional architecture based on adobe construction, and agricultural techniques including the organization of irrigation water.

Mexican American culture is much more widely distributed in the Southwest than is the northern village culture. There has always been passage to and fro across the border; a major wave of immigration accompanied the Mexican Revolution of 1910–1928. Other waves have succeeded this first one, and the Mexican Americans of the late-20th-century Southwest come from all parts of Mexico, bringing with them a variety of regional traditions.

Religious traditions include some that are similar to those of the New Mexico Hispanos. *Los Matachines*, for instance, is danced all over the region. Belief clusters involving the saints, death, and ghosts also have a wide distribution throughout the area. Tales of the devil appearing at a social dance have been collected in southern Colorado, northern New Mexico, and southern Arizona. *La Llorona*, the wailing woman who haunts watercourses and threatens to carry off children, is present in the Southwest as she is all over the Mexican American world. Tales of buried treasure are told and believed all through the Southwest as they are in much of rural Mexico.

Traditional music of the region ranges from unaccompanied *alabado* and *corrido* singing, to guitar-accompanied singing, to full orchestral styles. The latter include the *norteño* style with accordion lead, developed along the Texas-Mexican border, and the relatively recent import of mariachi music, once the regional folk music of the Mexican state of Jalisco and now the national musical symbol of Mexico.

Traditional foods vary within the region, but all are based on corn, beans, and chile peppers. In southern Arizona, wheat and beef gain importance; in northern New Mexico, pork is more common. Common all over are the tortilla and its derivatives, the enchilada and the taco; the tamale, a native Mexican dish often served on holiday occasions; and soups and stews using meats, beans, hominy, and other vegetables.

Traditional material culture includes the creation of several classes of ephemeral folk art. *Piñatas* are containers made of clay, or molded out of papier mache, and covered with cut and fringed colored tissue paper. They may take many different shapes: animals, clowns, and such popular culture figures as Superman and the Teenage Mutant Ninja Turtles. They are filled with candies and broken by children at birthday parties and other festive occasions.

Cascarones are eggshells that have been filled with confetti and decorated and that are broken over partygoers' heads. Paper flowers are traditionally made for weddings, to decorate home altars, and for floral offerings on the family graves at All Souls' Day.

All of these art forms have been taken over by Anglo Americans and used, not for their original purposes, but as interior decorations. The dominant society of the Southwest has a long history of co-opting elements of culture from both Hispanics and Native Americans and using them to give a regional flavor to their lives. This has happened with architectural forms, with foods (especially corn chips and salsa), and with such selected items of dress as the *guayavera* shirt of tropical Mexico.

This is not to say that Anglo American culture in the Southwest is simply derivative of Mexican and Native American cultures. Many traditions found elsewhere in the country—Mormonism and cowboy culture among others—flourish in the Southwest in their own regional variants, but much of Anglo folklore that is distinctive to the region reflects in one way or another the presence of Native American and Hispanic traditions. Some of this lore is prejudicial and stereotypical in nature. Beliefs, stories, and jokes hinging on negative stereo types of Mexicans and Indians abound.

Paradoxically enough, the same Anglo society that produces this negative lore uses Hispanic and Native American images in its construction and marketing of the Southwest as a tourist and retirement region, which is the way the Southwest has been marketed since the turn of the 20th century, when the Fred Harvey Company sought to lure tourists to stop at its hotels while traveling by train across the continent. The marketing of the region by Anglos to other Anglos continues with such 1980s concepts as the "Santa Fe Style."

Spirituals, African American

Religious folksongs by African Americans. Along with folktales, spirituals and their kindred folk-cry-derived genres—worksongs, field hollers, and the blues—form the bedrock of African American culture. Composed mostly during the period of American enslavement of the African, spirituals are a synthesis of African and Christian religious values and symbolism and of African and European musical aesthetics. Characterized often by an extraordinarily rhythmic lyricism, they have made homes for themselves in the plantation field as well as in the concert hall.

Spirituals in their thematic aspects tell the story of an embattled people and stand at the core of traditional African American Christian theology. They function as antidotes to the distorted Christianity disseminated by the slave masters for the purpose of indoctrinating the enslaved into submission. Fugitive Harriet Jacobs (alias Linda Brent) wrote in *Incidents in the Life of a Slave Girl* (1861) that slaves often reacted to the hypocritical teachings of the “Christian” slave masters by singing lines like “Ole Satan’s church is here below; /Up to God’s free church I wish to go.” Spirituals comment on the chaotic aspects of the slave’s existence and constitute a formidable corrective to slavery’s chaos.

Spirituals function also to help this new, African-descended people construct a sense of selfhood. Spirituals propose three distinct localities of refuge where one might find or forge a new identity: the wilderness, the mountaintop, and the lonesome valley. They spell out the religious and secular dimensions of conversion, giving specific guidance for the preservation of the soul.

Placing the spirituals into categories helps demonstrate their range and richness. Nine useful groupings are:

Lyrics of Sorrow, Alienation, and Desolation. Marked by despair and weariness, this category emphasizes experiences of unhappiness, abuse, disappointment, longing, yearning, exile, loss, beleagueredness, and disillusionment with humanity. Songs in this group reflect the slaves’ identification with the crucified Christ and focus heavily on their confusion about their loss of birthright, identity, and place in the universal order.

Lyrics of Consolation and Faith. Noted for their arduous attempt to maintain spiritual wholeness, these songs provide fortification against bewilderment. Uniting joy and sorrow, hope and despair, these songs testify to the transforming power of the spirit. Starkly affirming that healing balms do exist, they speak of healing agents available to

those who have experienced the insufferable. They address both personal and communal uplift and express concern and compassion for the tragic circumstances of humanity.

Lyrics of Resistance and Defiance. Defining the slave's reality as a condition of war, these songs demonstrate the will of the enslaved not to be overcome by the brutal aspects of their physical, political, psychological, and social reality. They convey one fundamental message: Continue to struggle. Emphasizing unity and organization and marked by dogged determination, their tone is audacious and valiant.

Lyrics of Deliverance. These songs speak of deliverance through means of physical escape, death, and resurrection. They appeal for release from all forms of obstacles and victimization and look forward to reunion with persons lost from the community. These songs proclaim the need for spiritual preparation in order to move to a better life. Much attention is given to alerting others to opportunities for escape. This category in particular consists of many songs that are reputed to have been used to signal captives of the feasibility of running away.

Lyrics of Jubilation and Triumph. Proclaiming the moral reordering of the New World, the enslaved nurtured and savored the word "jubilee," making it central to their sacred and ceremonial consciousness. Almost any form of triumph against the force of slavery becomes the subject of a spiritual, but, somewhat ironically, these spirituals express a resistance to stoicism and pessimism in the face of a harsh world. They celebrate affirmative psychology and spiritual resilience and serve as rituals of invigoration and exultation.

Lyrics of Judgment and Reckoning. These songs focus on the disharmony in the world and on the fact that correction or justice is needed. They refuse to accept that life in its present form is the norm of existence. Retribution will be meted out to this unnatural ordering. The time for the Reckoning Day seems well overdue, but each individual, free and slave, must stand ready to his or her moral account at the bar of judgment.

Lyrics of Regeneration. Confronted with constant attempts to render them degenerate, the captives created many songs about how to keep themselves charged with the life force. Thus, there are numerous songs about the electrifying, invigorating, and purifying baptism rituals.

Lyrics of Spiritual Progress. This category of songs dwells on the migratory experience of the human to a greater realm of existence. The progress of the soul is achieved by degrees. One must learn to interpret the signs along the way. True movement begins with humility, faith, steadfastness, and honest confession. The personal journey may be lonely; yet, it has no ultimate meaning without consideration for one's community.

Lyrics of Transcendence. This category of songs insists on creating a place and time beyond the historical moment and, indeed, beyond history itself. This transcendent capability reveals the vanity of earthly life by emphasizing that which is not bound by human definition. These songs show how the enslaved often merged the future with the present to create for themselves a sense of inner peace regarding their sojourn in the American wilderness.

Seen from the perspective of their formal aspects, both utilitarian and aesthetic dimensions are dominant in the spirituals. Thus, they can be called the sacred vernacular poetry of the African American experience. Sophisticated, though not erudite, in their employment of structural and semantic features, the spirituals demonstrate the American musical genius at its best. Essentially choral in origin (as opposed to solo), the musical

style features unique breaks, syllabic quavers, off-tones and tone glides, and rare balancing and manipulation of principles of melody, rhythm, and harmony.

In their adept mixing of naiveté, dignity, and sophistication—qualities of the tragic and the epic—the semantics of the spirituals run the gamut from the magnificently simple, to the ambiguous, to the utterly confounding. As a result, the spirituals establish themselves as a prototypic layering from which later modes of African American musical and poetic arts could expand.

More specifically, the spirituals utilize a number of stylistic and rhetorical features. One is an assertion or reaction to a philosophical truth, often made emphatic by beginning the song with the chorus (For example, “Oh, the land I am bound for, /Sweet Canaan’s happy land/I am bound for”). Another is clear, sharp phrasing through the vigorous use of Anglo-Saxon words (for example, “I looked over Jordan/And what did I see/Coming for to carry me home?”).

Spirituals also employ maximal exploitation of repetition via individual words, refrains, and choruses (“I’m going to tell you about the coming of the Savior; /Fare you well, fare you well. / I’m going to tell you about the coming of the Savior; /Fare you well, fare you well. /There’s a better day a-coming, /Fare you well, fareyouwell”).

There is a predominance of familial and communal pronouns (“I met my mother the other day, /I gave her my right hand, /...I met my brother the other day; /I met my deacon the other day; /I met my elder the other day, /I gave him my right hand, /And jus’ as soon as ever my back was turned, / He scandalize’ my name....”); a partiality toward call-and-response prompted by emphatic use of the vocative (a call or appeal) (“Mammy, is massa going to sell us tomorrow? /Yes, yes, yes! /Mammy, is massa going to sell us tomorrow? /Yes, yes, yes!”).

Spirituals also make use of the easy interchange of phrases, verses, and stanzas. Thus, segments of one song may float easily into another song, as with the blues. Spirituals also feature the pervasive use of iambic tetrameter alternating with iambic trimeter, a variable but rudimentary beat or rhythm, and the predominance of the *abcb* rhyme scheme.

Frequent use is made of the listener as a creative device (“Believer, O, shall I die? /O, my army, shall I die? /Jesus died, shall I die? /Died on the cross, shall I die?”), of figures of speech (“My brother sittin’ on the tree of life, /And he heard when Jordan roll”), and of the antiphonal structure, in which the verse and the refrain are sung alternately (“I have a leader over there, /I have a leader over there, /I have a leader over there. /Play on your harp, little David, /Play on your harp, little David, /Play on your harp, little David. /I have a Savior over there, /I have a Savior over there, /I have a Savior over there. /Play on your harp, little David, /Play on your harp little David, /Play on your harp, little David”).

The meaning of the spirituals has been disputed by some who claim that the songs have no political intent, only a religious one, and others have argued that people of African and African-descended cultures were incapable of producing such artistic treasures, claiming, therefore, that the spirituals are grounded in European culture and are derived mainly from the so-called “White spirituals.”

St. Patrick's Day

March 17, the feast day of St. Patrick, patron saint of Ireland, who brought Christianity to Ireland and reputedly chased away all of the country's snakes in the 5th century. People associate the shamrock with St. Patrick, as he used it to explain the concept of the divine trinity (Father, Son, and Holy Ghost).

Primarily a religious holiday in Ireland, St. Patrick's Day has become a time to demonstrate pride in Irish heritage for those living in the United States. In the mid- to late 1800s, lavish St. Patrick's Day parades became common in large American cities. Parades still provide the focal point of many St. Patrick's Day celebrations. In Washington, DC, members of the Ancient Order of Hibernians lay a wreath on the grave of John F. Kennedy. People of both Irish and non-Irish descent wear green on this holiday; children who do not wear green may get pinches from their classmates. Shamrocks and shamrock-shaped pins often appear on this day. It is traditional for many bars to offer green beer and for bakeries to sell greeniced cakes. Dinners of corned beef and cabbage abound on St. Patrick's Day; one can also find "green eggs and ham" breakfasts. One original ethnic hybrid is the green "leprecohen bagel," sold in New York City.

Various planting traditions connected with St. Patrick's Day indicate that this is a good day to begin sowing crops. Potatoes, peas, cabbage, or tomatoes planted on March 17 will make their owner prosperous. And, of course, a four-leafed clover discovered on St. Patrick's Day will bring good luck all year.

Stagolee

African American badman folk hero, also known as Stackerlee, Stackalee, Stacker Lee, or Stagalee, whose outrageous behavior, specifically the murder of Billy (or Bully) Lyon (also Lyons, Lion, Lions, O’Lyons, or Galion) over a magical Stetson hat, has been the subject of folksongs, legends, and toasts since the 1890s. According to oral tradition, Stagolee was supposedly born in Missouri with a veil over his face and consequently had supernatural powers, which he sought to increase by selling his soul to the devil. In some versions, Stagolee was intoxicated as the devil lured him into the pact. For payment, the devil gave him the hat, which enabled the protagonist to accomplish even more extraordinary feats, such as eating fire and changing his size and shape. Some say he went west, and in April 1906 he blew San Francisco down in response to a bartender who was too slow in serving him; others say that Stagolee jerked out the bar and pulled out its pipes—along with the rest of the town’s water pipes connected to it—causing the San Francisco earthquake. The song’s beginning introduces some of the more typical characteristics of the badman. The following lines come from Southern Black prisoners and appear as examples in Roger Abrahams, *Deep Dotun in the jungle: Negro Narrative Folklore from the Streets of Philadelphia*:

Stagolee, he was a bad man, an’ ev’body know,
He toted a stack-barreled blow gun an a blue steel forty-four.

Stackerlee, he was a bad man,
He wanted the whole world to know
He toted a thirty-two twenty
And a smokeless forty-four (quoted in Abrahams
1970a:131)

Finally growing intolerant of Stagolee’s obnoxious behavior, the devil removed the hat and its magical powers by using a professional gambler, Billy Lyon. The events leading to Lyon’s death include a barroom brawl, which ensued in Memphis, St. Louis, or

elsewhere (depending on the version) following Billy Lyon's theft of Stagolee's hat; consequently, Stagolee shot and killed him. Most versions of the ballad include Lyon begging for his life, crying that he has two or three children and an innocent wife, whereupon Stagolee typically responds:

Damn your children,
 And damn your lovin' wife.
 You stole my good old Stetson hat,
 And now I'm goin' to have your life (quoted in Courlander
 1963:178)

Other versions focus on Stagolee's capture, his remorse, and his sentencing, or perhaps even have the devil climbing out of hell and shouting, "Come and get this bad Stagolee before he kills us all" (Courlander 1963:179). The following are the last nine of seventeen stanzas of a chain-gang worksong text that comes from Black prisoners in the Mississippi Penitentiary. This text includes the arrest, conviction, and sentencing of Stagolee and a final encounter with the devil:

The high sheriff told the deputies,
 "Get your pistols and come with me.
 We got to go 'rest that
 Bad man Stagolee."

The deputies took their pistols
 And they laid them on the shelf—
 "If you want that bad man Stagolee,
 Go 'rest him by yourself."

High sheriff ask the bartender,
 "Who can that bad man be?"
 "Speak softly," said the bartender,
 "Its that bad man Stagolee."

He touch Stack on the shoulder,
 Say, "Stack, why don't you run?"
 "I don't run, white folks,
 When I got my forty-one."

The hangman put the mask on,
 Tied his hands behind his back.

Sprung the trap on Stagolee
But his neck refuse to crack.

Hangman, he got frightened,
Said, "Chief, you see how it be—
I can't hang this man,
Better set him free."

Three hundred dollar funeral,
Thousand dollar hearse,
Satisfaction undertaker
Put Stack six feet in the earth.

Stagolee, he told the devil,
Says, "Come on and have some fun—
You stick me with your pitchfork,
I'll shoot you with my forty-one."

Stagolee took the pitchfork,
And he laid it on the shelf.
Says, "Stand back, Tom Devil,
I'm gonna rule Hell by myself" (quoted in Lomax
1960:571–572)

Some scholars place the character, either real or imaginary, as a roustabout who gained his notoriety during the late 19th century's steamboating days along the Ohio River, until a murder conviction ended his career. Many claim the ballad "Stacker Lee" was composed on the levees, where it was most popular. Versions of the story on which the ballad in Black oral tradition is based include one that claims Stagolee actually existed and that his mother was a chambermaid on one of the many steamboats that carried the name of *Lee* and that plied the river between Memphis and Cincinnati, St. Louis and Vicksburg. Another story suggests he was born while his mother was a cook on board the *Stacker Lee*, on which he became a roustabout or a stoker; however, Stagolee allegedly murdered his arch-enemy, Billy Lyon, before the *Stacker Lee* was built, so the first account seems more compelling. One of the most convincing arguments that identifies the 1890s in St. Louis as the time and place for events informing the ballad of "Stackerlee," comes from John David's doctoral dissertation, *Tragedy in Ragtime: Black Folktales from St. Louis* (David 1976).

Besides appearing as the subject of the ballad and prose narrative tradition, Stagolee has also emerged as a main character in toasts. "Stackolee," wrote Bruce Jackson in his book on Black prison toasts, *"Get Your Ass in the Water and Swim Like Me": Narrative*

Poetry from Black Oral Tradition, “Is about an irrational badman who engages in gratuitous violence and joyless sexuality, a man who fires his gun a lot but is almost totally nonverbal. He is the archetypal bully blindly striking out [at] any passing object or person. His sheer strength and big pistol bring him fame, but there are for him no solutions....” (Jackson 1974:13). Versions of the Stagolee toast emerge among males in military and other settings such as prisons, street corners, parties, and bars. While the bully ballad focuses primarily on Stagolee’s motives for killing Billy Lyons, the toast concerns itself more with which of the two badmen is the meaner, and it usually has Stagolee sexually violating Billy’s woman. In toasts Stagolee exercises his virility in direct rejection of women and femininity, such as in a confrontation with a woman who approaches the hero after he has murdered Billy’s brother, the bartender. The woman attempts to keep him there until Billy arrives:

“Hi there, baby, where’s the bartender, if you please?”
I said, “Look behind the bar, he’s with his mind at ease.”

So she peeped at her watch, it was seven of eight.
She said, “Come upstairs, baby, let me set you straight.”

Now, we went upstairs, the springs gave a twistle,
I threw nine inches of dick into that bitch before
she could move her gristle.

Now we come downstairs big and bold.
They was fucking on the bar, sucking on the floor.
Then you could hear a pin drop. Benny Long [Billy
Lyon] come in (quoted in Abrahams 1970a:76)

And of course, Stagolee also demonstrates his powers in battle:

And out went the lights.
And Benny Long was in both of my thirty-eight
sights.
Now the lights came on and all the best.
I sent that sucker to eternal rest,
Widi thirteen thirty-eight-bullet holes ‘cross his mother-
fucking chest (quoted in Abrahams 1970&77)

Abrahams has offered an interesting interpretation of the badman in Black oral traditions: “Where the trickster is a perpetual child, the badman is a perpetual adolescent. His is a

world of overt rebellion. He commits acts against taboos and mores in full knowledge of what he is doing. In fact he glories in this knowledge of revolt” (Abrahams 1970a:65). In his subsequent work, *Positively Black*, Abrahams examines more closely the use of such stock characters in folklore, demonstrating that “a stereotype will always exhibit the bias of the group that fashions it” (Abrahams 1970b:11). Stagoles actions in the toast form exhibit the importance of bravery as well as words, as the above story’s ending attests:

I was raised in the backwoods, where my pa raised a
bear,
And I got three sets of jawbone teeth and an extra layer
of hair.
When I was three I sat in a barrel of knives.
Then a ratdesnake bit me, crawled offFand died.
So when I come in here, I’m no stranger.
‘Cause when I leave, my asshole print leaves “danger”
(quoted in Abrahams 1970a:77)

As Abrahams observes, “the endings of many texts [of toasts] are conventional boasts which may have traveled from the river with the stories of Stack.” The Black heroic conceptions of Stagolee, as the genres in which the figure appears demonstrate, have also remained intact, although some versions of the earliest ballads describe Stagolee’s killing of Billy Lyon as simply a “good man’s” response to a bully:

Stack-O-Lee was a good man
One everybody did love.
Everybody swore by Stack,
Just like the lovin’ stars above.
Oh, that Stack—that Stack-O-Lee (quoted in Roberts 1989:208)

In short, Stagolee epitomizes the Black badman folk hero, whose interpretation demands a genre- and culture-specific approach. He may exist as the dramatis persona in song, such as those ballads Howard Odum collected in the early 1900s; he may exist in both song and tale, such as diose diat Mississippi John Hurt told and sung in which the badman was White (Jackson 1974:4); and he may exist in both Black and White toasts (Evans 1977; Jackson 1974:44–54; Wepman, Newman, and Binderman 1976).

Steelworkers

Laborers in the nation’s steel mills. The stories, music, and visual lore of steel towns speak of the harsh working conditions in the industry, the long struggle for labor unionization, the close connection between work and cultural background (ethnicity, religion, race), and the strong sense of pride among workers and their families in the mill communities during the heyday of steel.

Since the mid-1870s, the term “steelworker” has carried with it an aura of toughness and strength. For more than 100 years, steel built the industrialized nations. The center of steel production in the United States was southwestern Pennsylvania, due to the availability there of natural resources, river transportation, and a long tradition of mechanical and engineering inventiveness. Pittsburgh became known as “The Steel Capital of the World.” It was there that Andrew Carnegie and Henry Clay Frick, with the help of financiers such as R.K. Mellon, established the industrial empire that became U.S. Steel Corporation, in a miles-long chain of Monongahela River Valley towns—Homestead, Braddock, Duquesne, McKeesport, Clairton, and others. Their rivals, Jones and Laughlin and others, built mills at Aliquippa and elsewhere along the Upper Ohio and Allegheny Rivers in the Pittsburgh industrial district.

From about 1880 to 1920, southwest Pennsylvanias steel mills burgeoned through intensive capitalization and technological innovation, generating a complex network of interrelated manufacturing in the region that became known as the site of “America’s Second Industrial Revolution.” With this impetus, steel quickly replaced iron as the

preferred structural material throughout the United States. "Big Steel" and "Little Steel" companies established new steel mills all over the Northeast and Midwest (Ohio, West Virginia, Illinois, Indiana), and in the South (Alabama). The transportation and construction industries, based on steel, flourished from coast to coast.

In response to the rise of these huge corporations, the Pittsburgh region also became the crucible of industrial unionism, where both the American Federation of Labor (AF of L) and the Congress of Industrial Organizations (CIO), as well as the United Steelworkers of America (USWA), began. Watershed events in labor history occurred in the region and still resonate in community memory: the Pennsylvania Railroad strike of 1877, the Homestead strike and battle in 1892, the great steel Strike of 1919, and the struggles in the late 1930s that resulted in passage of the Wagner Act and protection of workers' rights.

In the mill towns of Pennsylvania, Ohio, and West Virginia, at first both labor and management were primarily of northern European stock. Soon, the demand for labor attracted waves of immigrants from eastern and southern Europe, along with African Americans from the South. In the Deep South, most steelwork was done by African Americans, under the management of the predominant Scotch-Irish. Except for during wartime, women did not work on the shop floor in the steel industry until the equal-opportunity and affirmative-action laws of the 1970s.

After World War II, the "Big Steel" corporations stopped investing in their older American plants, opting instead to begin new operations overseas. As suddenly as they had arisen a century earlier, the vast steel mills began to close in the 1980s, laying off hundreds of thousands of workers virtually overnight and dimming the economic future of once booming industrial towns. In the 1990s, these towns, including those in the former "Steel Capital" Pittsburgh region, have realized they must retrain their workers, reclaim their environments, and restructure their economies to include steel making where possible, but never again to depend upon it solely.

Systematic documentation of steelworker lore began in the 1940s, when George Korson asked Jacob Evanson, a talented public-school choral director in Pittsburgh, to collect folk music from mill workers in the area for a chapter in Korson's book on Pennsylvania lore. Evanson's chapter still stands as one of the most comprehensive and thoughtful field studies on the folklore of steel (Evanson 1949). His published versions of songs such as "The Twenty-Inch Mill" and "The Homestead Strike" drew national recognition through performances and recordings by singers such as Pete Seeger and Vivien Richman (see Richman 1959).

From the 1950s to the 1970s, collecting and analysis of steelworker lore continued with work by folklorist Hyman Richman and journalist George Swetnam, although no major projects were undertaken. Then, in the late 1980s, the precipitous decline of steel in the Pittsburgh area reignited documentation efforts. The regional nonprofit Steel Industry Heritage Corporation (SIHC), together with the Pennsylvania Heritage Affairs Commission, conducted a three-year ethnographic study of the traditions of steel and steel-related communities in six counties of southwestern Pennsylvania, to generate a variety of oral history and folklife programming. The SIHC is working in the 1990s with state and federal agencies to establish a heritage-park program and a Steel Heritage Center in the region. The Historical Society of Western Pennsylvania produced an exhibit on Homestead's history and is developing a worker's-house museum in Pittsburgh.

Elsewhere in the country, the city of Birmingham, Alabama, has developed the Sloss Blast Furnace national historic site and conducted oral-history projects in the Birmingham steel district.

The largest steel mills often employed thousands of workers at one site, in dozens of hierarchically organized departments. The process of steel making requires working with molten metals at temperatures of 3000°F and more. Over the years, the work has often involved severe physical discomfort (noise leading to permanent hearing loss, extremes of heat and cold, air laden with chemicals and fine metal dust, floors soaked with water and grease, long hours of double and even triple “turns” to earn much-needed overtime pay—or to avoid losing one’s job). Early on, there were virtually no safety rules or procedures to protect workers, and, though working conditions continue to improve, health and safety are still issues in the 1990s. The oral histories collected from workers often describe accidents and disasters (furnace explosions, crane-operating miscalculations), along with narratives of how problems were averted by quick thinking and action. Songs created by early-20th-century Slovak immigrant workers describe their efforts to adapt to the harsh conditions of the mills in the new land and the effects of accidents on workers’ families. There are tales of ghosts in mills where workers died on the job, and stories of accidental “burials” of workers in ladles of molten steel or of their interment in unmarked graves within the mill complex (ascribed to management’s attempts to suppress knowledge of the deaths).

The fifty-year struggle to unionize the steel industry was as much about working conditions and injury compensation as about wages. Songs and stories tell of strikes and battles and of repression by the company’s “cossacks” (the Iron and Coal Police) and their hired Pinkerton guards. Among the most famous songs was “The Homestead Strike Ballad,” one of several recounting the events of the strike and lockout at the Homestead Works in 1892. In 1993 folklorist Archie Green published his analysis of the long-term influence in American industrial folklore of the songs from the Homestead strike.

The ever-present danger, the need for dependable teamwork, and the solidarity forged through unionization efforts often have prompted intense camaraderie among steelworkers. “Reunion committees” of former employees at the Homestead Works, the Duquesne Works, and the mills at Aliquippa still meet annually, years after shutdown.

Ethnicity has also been an important factor in the steel workplace, especially during the early years of the industry. Signs showing plant regulations were often printed in a halfdozen languages. Foremen could hire and fire at will; ethnic tensions ran high between labor and management, and often among workers themselves, as they struggled to keep their jobs. Promotion was often denied to eastern and southern Europeans and to African Americans. English-speaking mill managers coined insulting names such as “garlic snapper” and “Hunkie” to refer to immigrant workers; the workers, for their part, called managers “cake-eaters,” “Johnny Bulls,” and “Irish.” (The 1919 steel strike was dubbed the “Hunkie Strike,” because so many foreign-born laborers took part in it.) Workers also gave each other nicknames based on cultural background, appearance, work habits, or other characteristics, a practice that continues (“Babe,” “Lefty,” “KentuckyMike”). Interethnic practical jokes were part of mill life, as was the sharing of skills and games from the old country. Because of linguistic barriers and the high noise level in the mills, a supplementary communication system of gestures and sign language evolved.

Until college education became more widespread after World War II, much of the knowledge of iron and steel technology was passed down through semi-oral tradition from veteran workers to new ones. Although there were blueprints and manuals for equipment operation, workers often devised more efficient techniques on their own and invented modifications to the equipment. Production terminology and descriptions of work processes have found their way into workers' songs such as the late-19th-century "The Twenty-Inch Mill" and the late-20th-century "Steel Mill Scat."

In steelworkers' stories, strength of body, manual skill and dexterity, quick reactions in a crisis, and care for the safety of others are the most valued traits. Many mills have had local worker heroes embodying these characteristics about whose exploits stories and tall tales are related. Hyman Richman was told about Henny Palm in McKeesport, "Armstrong Joe" at the Edgar Thomson Works in Braddock, and Mike Lesnovich at the Duquesne Works. There are stories of antiheroes, too—clumsy or loutish workers, harsh or villainous foremen. Perhaps the best-known popular image is Joe Magarac, the Paul Bunyanesque steelworker superhero (Richman 1953).

In steelworking towns, the mill and the community were usually closely interrelated. Often the company had built much of the worker housing, and then controlled the town by putting company managers into political office. In southwestern Pennsylvania mill towns, immigrant workers usually lived in the flat areas close to the river and adjacent to the plant gates, while managers lived on slopes overlooking the mill (where the air was cleaner). Sometimes the company would give land or a building for a parish church, to encourage worker loyalty and indebtedness. A well-known example of industrial corporate paternalism was Andrew Carnegie's nationwide gifts of public libraries (actually community centers), a practice he started in Braddock and Homestead. The companies often built ballfields and sponsored baseball and football teams, encouraging rivalries between mill workers from neighboring towns. (At one time, the town of Duquesne had twenty baseball teams!) People's continued identification with these sports is reflected in their strong loyalty for the region's professional teams, the Pittsburgh Steelers and the Pittsburgh Pirates.

The liminal areas between the workplace and the community for most workers were the mill bars, which were (and in some cases still are) the worker's first stop after receiving a paycheck at the plant gate, before heading home. Located along streets just outside the gates, these establishments served large quantities of alcohol day or night. Among the most famous drinks is the "boilermaker" (named for one of the toughest jobs in a steel mill), which, in Pittsburgh, is also known as a "shot 'n' a beer" or an "Imp 'n' Iron" (Imperial whiskey with an Iron City Beer chaser). Mill bars, along with ethnic halls and "sportsmens clubs," still function as male workers' social centers. Mill workers' wives belong to ladies' auxiliaries of ethnic fraternal societies, and Christian Mothers' organizations in their church parishes.

In Pittsburgh in the 1990s, there are still large neighborhoods with concentrations of specific ethnic groups: Italians in Bloomfield, Germans in Troy Hill, Jewish and Asian groups in Squirrel Hill, Ukrainians on the South Side, Polish people in Lawrenceville, and eastern Europeans followed by African Americans in the Hill District. In the nearby mill towns, ethnicity was less differentiated geographically: eastern and southern European immigrants grouped together in the worker-housing areas, while those of British and German background lived "up the hill." Nowadays ethnicity is more a matter

of choice than proximity: The suburbanization of the 1950s and 1960s has diluted the original ethnic neighborhoods, but new forms and contexts of cultural expression allow people to maintain their sense of ethnic identity.

Religious denominations in the region still include, among others, Roman Catholic, Byzantine Cadiolic, Maronite Cadiolic, Russian Orthodox, Antiochian Orthodox, Serbian Orthodox, as well as Protestant groups (Presbyterian, Episcopalian, Methodist, Lutheran, Mennonite, Society of Friends, Holiness/ Pentecostal) and the branches of Judaism. Newcomers to the region since World War II have introduced Hinduism, Islam, Baha'i, and other religions as well. When the 19th-century immigrants established their religious institutions, they further subdivided the denominations by nationality, so that some people would go to "the German church," others to "the Polish church," and still others to "the Lithuanian church" or "the Croatian church"—all Roman Catholic. (Even Jews in Pittsburgh identified their synagogues by nationality.) Some of this ethnic-religious linking persists, with special services still conducted in the old-country language, Saint's-Day parades, and church-sponsored old-country food and craft sales.

Some of the many ethnic-based social clubs and insurance associations still remain in the mill towns of Pennsylvania and Ohio, with Croatian, Slovenian, and other fraternal organizations continuing to sponsor music and dance ensembles and youth groups. *Kolo*, polka, and *czardas* dancing, tamburitza combos and *ballabale* bands, and German singing societies continue as a living legacy of the steelworking era.

In their homes, churches, and clubs, workers and their families also continue to express their cultural heritage through visual means. Men use metalwork skills they learned in the mill to craft sculptures or invent small machines during leisure hours at home, recycling scraps of steel that would otherwise have been thrown away by the company. Working families create shrine-like home displays of gear, tools, and metal test-samples from the mills, or of ethnic family heirlooms. Icon and egg "writing," mural painting and stenciling are still practiced; the murals at St. Nicholas Croatian Catholic Church in Millvale (near Pittsburgh), for example, combine ethnic, occupational, and religious symbolism.

In the 1940s, Pittsburgh schoolchildren regularly performed steelworking folksongs and folk-like songs arranged by Choral Director Jacob Evanson. In the 1970s, two Pittsburgh playwrights produced "Steel City," a documentary drama that incorporated narratives collected from steelworkers in Aliquippa. Local interest in, and promotion of, the legendary folklore (or fakelore) hero Joe Magarac have continued unabated, in spite of folklorists' attempts over the years to quash the Magarac stories as inauthentic. The Duquesne University Tamburitians (founded in the 1930s), the Pittsburgh Folk Festival (started in the 1950s), and the Pittsburgh International Folk Theatre (begun in the 1990s) present highly stylized arrangements of eastern and southern European folk dance, and encourage mill-town children's participation in "junior tamburitians" and other folklore-based performing groups sponsored by local ethnic churches and clubs.

Stepping

A dynamic performance tradition among African American fraternities and sororities involving various combinations of dancing, singing, chanting, and speaking. This complex performance event and ritual draws on African American folk traditions and communication patterns, such as call-and-response, rapping, the dozens, signifying, marking, spirituals, handclap games, and military cadence chants. Stepping routines also incorporate material from popular culture, such as advertising jingles, television theme songs, and Top-40 hits. Fundamentally, stepping is a ritual performance of group identity. It expresses an organization's spirit, style, icons, and unity.

Like any other kind of folklore, step routines are transmitted orally and by example, but they are also transmitted by videotape and copied texts. Chapters of Greek organizations from nearby schools frequently visit each other and exchange steps, and national meetings provide the opportunity for steps to circulate widely. Since each fraternity and sorority has common symbols and history, each group has a core of material in common. For example, each fraternity and sorority has "trade steps," by which each group is known. Kappa Alpha Psi performs a trade step called "Yo Baby Yo." The oldest Black fraternity, Alpha Phi Alpha, founded in 1906, has a trade step called "The Grand-Daddy Step." And the oldest Black sorority, Alpha Kappa Alpha, founded in 1908, performs a trade step known as "It's a Serious Matter." Each of these trade steps has a recognizable rhythm, set phrases, and set movements that remain fairly constant, yet each can also be varied in innovative ways.

To establish and maintain a unique Greek identity, each fraternity and sorority must define itself with symbols and styles that distinguish it from any other group. Members

first learn to step as part of their initiation process, and they are expected to perform publicly as a sign of their new status. Stepping performances have become a key way for displaying and asserting group identity, as well as for negotiating the status of each group within the social order. Members of Kappa Alpha Psi, for example, are noted for their dexterous use of canes, while Alpha Phi Alpha members pride themselves on the vigor of their stepping.

Stepping is a form of ritual communication that employs at least three distinct types of acts: cracking or cutting, freaking, and saluting. In the crack or cut, one group makes fun of another group, either verbally, nonverbally, or both. Freaking refers to a member who breaks the norm of synchronization and unity, in an attempt to get greater audience response. The freaker, or show dog, as he or she is sometimes called, is a crowd pleaser. Saluting is a ritualized greeting in which a fraternity or sorority greets another Greek organization by imitating the steps, style, or symbols of that organization.

The Black Greek organizations step in order to get publicity, promote unity and identity, raise money, and express a competitive spirit among the various fraternities and sororities.

Storytelling

Solo performance of an oral narrative. The ancient art of storytelling endures as a recreational and educational activity in both rural and urban settings. Parents continue to tell bedtime tales. Other tellers share jokes, personal stories, legends and urban legends in social and educational contexts. Religious teachers tell stories to transmit spiritual history and values. Naturalists tell stories to teach about the environment. Frightening stories, a specialty at Halloween, are commonplace at slumber parties and summer camps. In fact, most people can identify someone in their family or community as “a natural born” storyteller.

A new development since the 1970s has been the mushrooming of “nontraditional,” “contemporary,” “revivalist,” or “professional” storytellers. Unlike a traditional storyteller, who typically learns stories from, and tell stories to, populations who share a cultural heritage, a nontraditional teller may appropriate stories found in published texts, from cultures with which neither the teller nor the audience have firsthand experience.

Performance oriented, story interpretation is shaped by the individual teller's personal taste. A story heard at a festival, even from a traditional teller, may go through idiosyncratic transformations.

Nontraditional storytelling was stimulated in the late 19th century when library schools began training librarians to tell stories. "Story hours" were offered in U.S. libraries as early as 1896, and in 1909 the American Library Association sponsored a story-hour symposium.

The popularity of nontraditional storytelling in the 1990s is documented by the hundreds of storytelling festivals, classes, conferences, and publications. National and regional storytelling directories list more than 1,000 storytellers in the United States performing in schools, libraries, museums, coffeehouses, theaters, and festivals. Magazine and newspaper articles have further demonstrated public awareness and appreciation of the art of storytelling. It is not uncommon for thousands of people to attend regional storytelling festivals.

The National Association for the Preservation and Perpetuation of Storytelling (NAPPS), founded by Jimmy Neil Smith in 1973, has played a major role in promoting both traditional and nontraditional storytelling through its festivals, conferences, and publications. NAPPS publishes a quarterly magazine, *Storytelling*, and sponsors an annual festival in Jonesborough, Tennessee, which more than 9,000 people attended in 1992.

The Black Storytelling Festival, an annual event since 1983, takes place in various urban settings around the country. The majority of the organizers, audience, and tellers at this festival are African American.

As modern technology becomes progressively impersonal, the face-to-face intimacy and simplicity of storytelling appears to be gaining personal and social appeal. Ironically, sales of storytelling audiocassettes and videotapes are also growing.

A newer trend is the telling of traditional oral narratives, especially by psychotherapists, to help people obtain insight and heal psychological wounds. Therapeutic storytelling has been popularized by storyteller-authors like Joseph Campbell, Robert Bly, and Jack Zipes. Conversely, telling traditional tales obtained from published texts by other nontraditional tellers is decreasing, supplanted by an increasing preference for telling original, personal, and family tales.

Despite theoretical and cultural differences between traditional and nontraditional storytellers, the *storytelling event* emerges as remarkably similar, and in some contexts, such as a Sunday-school classroom teacher telling stories, the line between traditional and nontraditional storytelling is, at best, fuzzy.

Structural Approach

An approach whose goals are to discern and describe the basic structural components of a folklore genre or example and the interrelationships between or among them. The principal impetus for structural studies by American folklorists was the 1968 English translation of Vladimir Propp's 1928 *Morfologija skázki* (Morphology of the Folktale). Propp determined that fairy tales have a maximum number of thirty-one "functions" (actions of the dramatis personae), which always occur in a set sequence, unless they undergo a process of transformation. Obligatory functions in Propp's scheme are the pairs "lack" and "lack liquidated" or "villainy" and defeat of the villain ("victory"). Optional functions include such pairs as an "interdiction" and its subsequent "violation" and a difficult task and its eventual accomplishment, or "resolution."

Alan Dundes adapted Propp's scheme, identifying minimal structural units as "motifemes" instead of functions (Dundes 1962). In analyzing a set of North American Indian folktales structurally, Dundes discovered that functions (motifemes) that Propp had discerned in fairy tales are inherent in other kinds of traditional narratives and even in other folklore genres, including superstitions (Dundes 1964). Like Propp, Dundes demonstrated that while the content and style of folklore examples may vary considerably over time, structural elements and their patternings do not. Dundes posited that motifemes—like phonemes and morphemes in language—are finite, stable, and recurrent. But each also has multiple "allomotifs" because of content variations. In North American Indian folktales, for instance, allomotifs of the motifeme "lack" include a lack of water, food, or fire and an inability to bear children or to remove and juggle one's eyes. The motifeme "interdiction" may have as its allomotifs the warning not to face the west wind while digging for roots, not to remove and juggle one's eyes more than a specified number of times (usually four), and not to open a particular box or other container because its contents (such as darkness or pestilence) will be exposed or escape. Because these motifemes (functions) occur in pairs in North American Indian oral narratives, just as they do in Euro-American fairy tales, lacks are predictably liquidated, and interdictions are always violated.

Since its objective is to uncover the fundamental framework of folklore forms and examples, the structural approach is reductionist in nature. Dundes' structural analysis of a corpus of superstitions he recorded in Brown County, Indiana, led him to offer this definition: "Superstitions are traditional expressions of one or more conditions and one or more results with some of the conditions signs and others causes" (Dundes 1961). Dundes noted that when the conditions are signs, the superstitions can be called "sign superstitions" ("If there's a ring around the moon, it's going to rain" or "When you hear a dog howling, somebody is going to die"). Human beings cannot or do not intentionally produce signs, but instead merely perceive and interpret them. The basic structural

components (conditions and results) in sign superstitions are related temporally, since the results follow in time the appearance of the conditions. When the relationship between conditions and results is causal, the superstitions can be termed “magic superstitions” (“Turn a dead snake’s belly up to bring about rain” or “Wear a blue bead around your neck to protect yourself from the evil eye”). In magic superstitions, human action is intentional and is assumed to bring about (cause) a predetermined result. A third (hybrid) category, that Dundes calls “conversion superstitions,” combines the other two, with intentional human actions neutralizing or reversing results that signs foreshadow—for example, “If you spill salt, you’ll have bad luck, unless you throw some over your left shoulder” or “If you drop a comb, you’ll have bad luck, unless you step on it, turn around three times, and make a wish” (this conversion resulting in one’s not only averting bad luck, but also having a wish come true). These three kinds of superstitions, note Elli Köngäs-Maranda, and Pierre Maranda, are structurally identical and therefore can be represented by a single formula: “If A, then B, unless C” (Köngäs-Maranda and Maranda 1962:178).

Structural analyses of other folklore genres similarly illustrate the reductionist preoccupation of the approach. The structure of many proverbs can be described formulaically as $A=B$, as in such examples as “Business is business,” “Enough is enough,” and “Boys will be boys.” Other proverbs exemplify an $A\neq B$ (A is the opposite of B) patterning, as in “Service is no heritage” and “A fair exchange is no robbery.” Inequality rather than nonequality is expressed in still other proverbs—for example, “Half a loaf is better than no bread” and “A taleteller is worse than a thief,” which can be said to have an $A > B$ (A is greater than B) and an $A < B$ (A is less than B) structure, respectively (Dundes 1975:103–118; Köngäs-Maranda and Maranda 1962:176–177).

Material objects such as traditional crafts and buildings have also been subjected to structural analyses. For his 1975 study, *Folk Housing in Middle Virginia: A Structural Analysis of Historical Artifacts*, Henry Glassie analyzed 338 dwellings structurally. He hypothesized from his data that the houses he investigated were constructed according to a single set of rules that builders generated sequentially. Planning for all of the houses under scrutiny began with a square as the basic geometric entity. The square was then often transformed, the result being the creation of up to two different classes of shapes and up to three shapes allowable in any given whole. Working from a single set of generative and transformational rules, one could construct houses in such variations as single or double story and with from one to four chimneys. The transformations and such dependent forms as porches and sheds accounted for the existence of a set of dwellings that shared a basic structure but also varied and exhibited readily perceivable differences. Inferring and then describing precisely the set of structural rules followed in creating such houses is analogous to the linguist’s discovery and description of the grammar of a language, notes Glassie, and such rules in both cases are both generative and transformational in nature.

Stubblefield, Blaine (“Stub”) (1896–1960)

Riverman, singer of traditional songs, publicist, Chamber of Commerce executive. Stubblefield was born and reared in Enterprise, Oregon, and in this setting he absorbed materials identifiable with the history and traditional lore of Hell’s Canyon, North America’s deepest gorge.

After graduating from the University of Idaho, where he had been president of the student body, he worked for the Spokane, Washington, Chamber of Commerce and for the American Automobile Association, publicizing Idaho’s newly completed north-south highway (US 95) from Weiser to Lewiston. He became publicity manager for Varney Air Lines, the predecessor of United Air Lines, with head offices in San Francisco. For many years, he was aviation editor in Washington, DC, for McGraw-Hill. He returned to the West in 1949 and began operating a fleet of boats and barges through the Snake River Canyon, serving at the same time as secretary of the Weiser Chamber of Commerce.

Drawing upon his broad acquaintance with traditional music, both instrumental and vocal, he obtained \$150.00 from the Chamber for the establishment of the Northwest Mountain Fiddlers’ Contest, an annual function that by 1963 had evolved into the present National Old-Time Fiddlers’ Contest. Held the third full week each June in Weiser, it is one of the noteworthy festivities in Idaho, drawing participants quite literally from coast to coast and border to border, with some performers coming from Canada.

While in Washington, DC, Stubblefield recorded sixteen songs for Alan Lomax in the recording laboratory of the Library of Congress. Rae Korson, head of the Archive of American Folk-Song there, reported that in April 1938, “Stub” recorded eleven songs, including “Nelly at the Wake,” “The Farmer’s Cursed Wife,” and “Way Out in Idaho,” all accompanied with guitar. In January 1939, he recorded two unaccompanied songs, “Bryan O’Lynn” and “Poor Miner,” and three songs accompanied with guitar: “It’s Hard Times, Boys,” “Taji Buggeroo,” and “The Lowlands Low,” the last one in two versions.

Stubblefield died of cancer December 18, 1960.

Superstition

Also called folk belief, the lore of the supernatural, magic, and omens. In common parlance, the word "superstition" is loaded with pejorative connotations. Thought by many to be rooted in the pagan traditions of earlier, more primitive stages of human culture, superstition is conceived of as the irrational belief of the naive, uneducated, and the ignorant in superhuman powers. The fact that the term is, in the minds of the popular masses, so loaded with negative preconceptions would, in itself, reduce its value as a scholarly concept. But this problem is exacerbated to a considerable degree by the fact that prominent scholars, in attempting to define the term, have themselves been greatly influenced by the popular notions handed down by Western tradition.

The process by which "superstition" became a loaded term was delineated in a study of the term from its first recorded use in ancient Rome to modern times (Harmening 1979). Although the precise etymology of the word eludes classical scholars, there is no doubt that its first recorded use was in the term *homo superstitiosus*, meaning "seer" or "prophet." Cicero later associated the term with *superstes*, a thing "left over" or a "survival," an etymology that was characteristically seized upon by both Jacob Grimm and E.B.Tylor.

For a time used as a synonym for *religio*, the term later became a pejorative synonym for excessive religious fervor that characterized the intrusive mystery cults from the Orient that plagued Rome in pre-Christian times. The Roman Catholic Church fathers stressed this pejorative meaning when they sought to contrast the fatal moral depravity of pagan religions and cultures to the moral harmony of Christian faith. Augustine in so doing used *superstitio* in the sense of a false faith, a meaning that is still evident in such terms as German *Aberglaube*, Dutch *overgeloof*, Danish *overtro*, and in a now obsolete English term used by the 14th-century theologian John Bromyard to condemn "this blyndnesse of old misbelieve" (quoted in Opie and Tatem 1989:viii).

This legacy of associations was adopted first by the clergy of Western nations and later became a focal issue for all of the philosophers and writers in the so-called Age of Reason during the 18th century, when superstition was reviled as the depraved wallowing of the unenlightened in the irrational ignorance of the "Dark Ages." Edmund Burke (1729–1797) in 1790, even declared superstition to be "the religion of feeble minds."

Nineteenth-century Romanticism saw a momentary respite in the centuries-old rejection of superstition as scholars like the Grimm brothers sought in these "survivals" fragments of the glorious myths and religions of the pagan past (Ward 1981, Vol. 2:534–553). However, in the Age of Positivism that dominated the succeeding century, these survivals were viewed by Tylor and his contemporaries as part of the excess baggage from primitive times that exerted a retarding force on the inexorable progress of cultural evolution.

It is apparent that the term "superstition" has become in its long cultural history burdened with increments of pejorative associations to the degree that its use as a scholarly construct has been called into question. Some have sought to solve the problem by eliminating the term from the scholarly lexicon and replacing it with "folk belief," "popular belief," "folk science," and even "conventional wisdom." Each of these terms, however, has its own drawback that introduces new problems. Folk belief for example,

shares the same negative connotations that the word “folk” has in popular usage, and because the word “popular” connotes for many the lore of the broad masses as opposed to the world of scholars and the intellectually elite, such terms as “popular belief” are not satisfactory. The term “belief” is also problematic because it implies an element of faith in the efficacy of a given proposition or prescription. There are, however, specific superstitions that have become traditional and are cited even by those who do not believe in them. For example, most Americans in the late 20th century know that “to break a mirror means seven years’ bad luck.” When someone in an American household breaks a mirror, the notion is likely invoked by a household member. But the fact that individuals know and cite this “belief” does not necessarily imply that they believe it. For such items that persist in tradition, even when belief is absent, the term “superstition” remains useful (Ward 1993:xviii-xix).

American folklorists demonstrate a growing tendency, if not a consensus, to see folk belief as an element of tradition that makes its presence felt in a variety of forms of folklore (such as amulets and charms, folktale, legend, ballad, proverb, custom, ritual, and folk religion), while restricting the term “superstition” to the verbal utterances in which “beliefs” are framed (see Dundes 1961). Wayland D.Hand, America’s most distinguished student of belief and superstition, insisted on using both “popular belief” and “superstition,” and both words are evident in the titles of the collections of belief materials that Hand edited in his lifetime. Moreover, *The Encyclopedia of American Popular Belief and Superstition*, founded by Hand and being edited in the 1990s retains both words in its title (Hand and Ward 1993). Hand found justification for using both terms in the somewhat questionable distinction he drew between “superstitions” as being “patently false” and potentially harmful and “popular belief” as “faiths and foibles” of “a negligible or frivolous kind” (Hand 1961–1964, Vol. 6:xxi).

In spite of the fact that generations of scholars have inherited the legacy of negative associations invoked by the word “superstition,” there remains the need for a term that refers to the long history of these notions in popular tradition without necessarily implying belief; and because the English language does not provide us with any other term for this purpose, “superstition” remains a valuable, if somewhat flawed, scholarly construct.

The popular notions of Americans about the nature of superstition were greatly influenced by the British Anthropological school, which included such renowned scholars as Herbert Spencer (1820–1902) and E.B.Tylor (1832–1917). Spawned by the Age of Positivism, which championed the scientific method with its stress on laws of natural causality and nurtured by the doctrine of “cultural evolution” that emerged from Darwin’s discovery, this school culminated in the figure of Sir James Frazer (1854–1941) and his monumental twelve-volume work, *The Golden Bough*. In the first volume, and especially in the famous chapter on “Sympathetic Magic,” Frazer analyzed the “magical” thinking that underlies superstition and, in so doing, identified mental processes that were supposed to characterize superstitious behavior everywhere.

In keeping with the tenets of positivism, Frazer saw magical thought processes as natural laws. The basic principle of what Frazer called “magic” was the perceived affinity linking individual items in a sympathetic relationship. In identifying the two basic principles of sympathetic magic, Frazer wrote: “Practices based on the Law of Similarity may be termed Homeopathic Magic; those based on the Law of Contact or Contagion,

Contagious Magic.” Homeopathic magic assumes that “like produces like, effect resembling cause,” while contagious magic implies that “things once in contact continue even afterwards to act on each other.” The principles of homeopathy thus are premised on the perceived bond between things or actions that resemble one another. For example, the belief that “If you drink all the bubbles on the surface of your cup of coffee, you will soon have lots of money” is based on the recognition that the shiny round bubbles look somewhat like coins. Thus, bubbles and money are symbolically linked to each other. Another example, “Eating walnuts will help intelligence,” is based upon the perceived similarity of the brain with the two hemispheres of a shelled walnut. The principles of contagion, by contrast, imply not so much contact as notions of contiguity. Human imagination infers a permanent and contiguous relationship between items that once were either in contact or were parts of a whole that later became separated. The dairy farmer’s fear that if someone boils milk, he or she will injure the cow that produced it exemplifies this principle. The fact that the milk has been completely separated from the cow does not diminish the perceived bond between the two (Ward 1993:xxi).

In spite of the fact that they have been discredited by modern anthropologists, Frazer’s basic analysis and his implicit theories are irrefutable, and they continue to be cited by those who seek to understand the essence of traditions of belief. This fact, however, does not mean that Frazer’s work can go completely unchallenged. For Frazer, like all scholars, was a product of the time in which he lived and worked. His choice of the word “magic” to describe the mental processes of superstitious behavior reveals a great deal about his own assumptions and preconceptions. In keeping with the principles of cultural evolution, Frazer was convinced that all human culture evolved from the simple and primitive to the complex and civilized along a unilinear route. Thus, the same “laws” that governed the evolution of the simple forms of life ultimately into *Homo sapiens* were also seen as operative in all cultural spheres, including those of a spiritual nature. At the bottom of the evolutionary scale—that is, at its most primitive stage—was a faith in “magic.” At the top of the scale, toward which there is an inexorable drive, lies monotheistic religion. According to this model of human history, those of us who now live in a high civilization and worship one god are the end result of a development that began with primitive savages who practiced magic. Superstition was thus seen by Frazer and his contemporaries as the modern survival of humankind’s most primitive impulse. It was, therefore, inferred that anyone who remained superstitious in the modern age was guilty of primitive and even “savage” thinking. Frazer evidences this attitude when he calls upon his readers to recognize “the spurious system behind the bastard art” of magic. “Homeopathic magic,” he writes, “commits the *mistake* of assuming that things which resemble each other are the same; contagious magic commits the *mistake* of assuming that things which have once been in contact with each other are always in contact” (writer’s emphasis). He further suggests giving “the name of magic to the whole erroneous system,” that he considers “one great disastrous folly.”

One of the first scholars to question the Frazerian paradigm was the Austrian philosopher and Cambridge professor Ludwig Wittgenstein (1889–1951). In a number of aphoristic writings between 1927 and 1945, Wittgenstein questioned the evolutionary model that separated the various levels of “savagery” from “civilization.” He further insisted that “magic” was a vitally essential aspect of human life and that human beings suffer because people like Frazer have helped deprive us of its benefits. “Frazer,” wrote

Wittgenstein in 1967, “is much more savage than most of his savages, for they would not be so far removed from the understanding of a spiritual matter as an Englishman of the twentieth century.”

The recognition that beliefs and superstitions are vital to humanity has come slowly to the scholars of the 20th century, but the signposts have been there for many decades. In 1819 the German poet Johann Wolfgang von Goethe, in a collection of aphoristic observations, stated that “Der Aberglaube ist the Poesie des Lebens” (Superstition is the poetry of life). Although Goethe did not explicate precisely what he meant by these words, it is evident that he recognized the affinity of superstition, which Frazer later decried as “sympathetic magic,” with the splendid metaphors of the world’s most gifted poets. Thus, when a priest sprinkles the naked body of a maiden with water in the attempt to ensure both rain and the fertile productivity of the earth, it is, to be sure, an example of the principles of homeopathic magic at work, but it is also much more than that. It is a vivid drama that demonstrates to divine powers the needs of the supplicants while using the dramatic and powerful metaphors that one finds in the best of the world’s poetry. Indeed, one could argue that the ability to engage in metaphoric and analogous thinking that is evidenced in “sympathetic magic” was a highly significant milestone in the development of the brain of *Homo sapiens*.

There are similar poetic uses of metaphor in many thousands of the beliefs stored in the UCLA archive. There is, for example, a belief that an empty bird’s nest should hang in the loft of a cabin where a woman is about to give birth (Hand and Ward, Forthcoming, Vol. 2: entry titled “Empty”). The fact that people equate the woman’s womb to the empty nest is, again, a valid case of homeopathic magic. However, instead of debasing this belief as an example of primitive and naive ignorance or as “faulty reasoning,” one should rather acknowledge the poetic value of its metaphoric dimension. One can, furthermore, imagine the potential benefits from such a belief in the days on the frontier when expectant mothers were days removed from any access to medical aid. One can envision the father’s act of finding an empty nest and his placing it in the loft providing at least a modicum of solace and comfort for the woman in labor.

Other scholars who took Frazer to task included the Swedish folklorist Carl Wilhelm von Sydow and his student Albert Nilsson (later known as Albert Eskeröd). Drawing on the work of the German scholar Wilhelm Mannhardt, Frazer had discussed the widespread European agricultural custom of taking the last sheaf of the harvest, shaping it anthropomorphically, decorating it with colored fabrics and trinkets, and then using it as the centerpiece of the harvest festival. Frazer adopted Mannhardt’s inference that the honoring of the sheaf represented the survival of the early pagan worship of a Spirit-of-the-Grain” (*Korndämon*). Frazer also saw survivals of this heathen divinity in the beliefs and legends surrounding the Rye-Wolf and the Rye-Witch, frightening demons that were thought to inhabit grain fields.

Von Sydow objected strenuously to these inferences of pagan survivals and instead suggested universal emotional needs and the play instincts of human beings (Von Sydow 1934). He pointed out that the first and last in a sequence of items or events invariably attract attention to themselves solely by virtue of the fact that they stand out from others. Writing in German, he labeled these elements *externe Dominante* (external dominating elements); he contrasted these with the emotional needs and instincts of humans that he called *interne Dominante* (internal dominating concerns). He also took Frazer and his

contemporaries to task for their having missed the essence of belief traditions when they assumed faulty reasoning behind the thought processes that they labeled “post hoc, ergo propter hoc” (after this, therefore caused by this)—that is, the tendency of the naive mind to assume causality when two events occur in a temporal sequence (B occurs after A, therefore B was caused by A). It was, von Sydow insisted, the scholar who was being naive when he assumed that any two events could be so linked. With highly convincing examples, von Sydow demonstrated that the chronological sequence of two arbitrary events was in itself not the occasion for inferring causality. Instead, it was only when the two events linked an *externe Dominante* with an *interne Dominante* that an individual assumed a causal sequence between the two. Von Sydow’s student Albert Eskeröd later expanded these terms into three categories: *Milieudominanzen*, *Interessendominanzen*, and *Traditionsdominanzen*.

Von Sydow also criticized Mannhardt for his insistence in seeing traditions of the Rye-Wolf and the Rye-Witch as survivals of ancient heathen agricultural divinities. They were, he argued, a product of the playful spirit of humans and, above all, a means of frightening children so that they would not play in the grain and trample it before the harvest. He considered such traditional behavior not as ancient pagan beliefs, but rather as “fictions”—that is, free inventions created either for pragmatic reasons or from the human play instinct. The tradition of the “demon in the well” was, for example, not a creature of ancient folk beliefs, but rather a “cautionary fiction” a bogeyman created so that children would not lean over the well and thus be in danger of falling in. In addition to cautionary fictions, von Sydow also saw “jocular fictions,” “pedagogical fictions,” “etiological fictions,” and “taboo fictions” underlying many traditional customs and beliefs. He further argued that both the emotional needs and the play instinct were there from the beginning. In other words, he saw—as Magne Velure has put it—play and jesting as perpetual factors that are equally as primordial as magic and cults. “Said in another way, *Homo ludens* is not necessarily a degenerate *Homo religiosus*” (Velure 1983:113). Donald Ward has also demonstrated the central role diat play occupies in traditional beliefs and customs (Ward 1993:xxvi–xxviii).

One chapter in the history of the term “superstition” that we have not yet surveyed occurred when Christian missionaries sought to convert the peoples of Europe to the new faith. Seeking to eliminate recalcitrant pockets of paganism, medieval theologians and clergy began to conduct a more or less systematic study of the pagan superstitions they were fighting. In so doing, they divided superstition into three main categories: *superstitio observationis*, *superstitio divinationis*, and *superstitio artis magicæ* (Harmening 1979:1–42 and passim). The first two categories deal with attempts of individuals to read signs in order to determine future events. They differ in that *superstitio observationis* involves the passive attempt to identify and read the signs provided in nature or elsewhere in one’s environment, while *superstitio divinationis* designates the active attempt, usually in the form of a divinatory ritual, to produce signs that the specialist (priest, shaman, sorcerer, and the like) then interprets as auguries of the future. The third category, *superstitio artis magicæ*, by contrast, refers to the “magic arts,” the specific rites of sorcerers to enlist superhuman forces to achieve desired ends. These magic practices, which were either malevolent or beneficent in their goals, were characterized by the use of magic books, symbols, and other implements as well as herbs, verbal charms, incantations, and the like.

There have been in recent decades new attempts to categorize superstition. Curiously, these later efforts have repeated the observations of medieval clergy without necessarily improving upon them. Swedish folklorist Eskeröd, for example, distinguished between omens that betoken various events and human acts that are thought to achieve desired effects. He saw superstitions, above all, as structured utterances consisting of a stated condition and an anticipated result, with some of the conditions being signs and others being causal actions. To designate these two kinds of sequences, Eskeröd used the actional and perfective Latin participles, *ominant-ominat* and *causant-causat*. Thus, “If geese fly south early” (*ominant*), “there will be an early winter” (*ominat*). But, “If you whistle on board a ship” (*causant*), “you will whistle up a storm” (*causat*).

The American folklorist Alan Dundes made essentially the same distinction when he classified superstitions into three categories. “Sign superstitions,” wrote Dundes, “consist of one or more signs that are thought to indicate a result.” Thus, “if one notes a ring around the moon, one can predict rain” (Dundes 1961:29). Contrasted to this are “magic superstitions” that “often consist of multiple conditions [that]... serve as a means of production and prescription rather than prediction. In contrast to sign superstitions, human activity in magic superstitions is intentional rather than accidental” (Dundes 1961:30). Dundes added a third category that he labeled “conversion superstitions,...a hybrid category in which, for the most part, sign superstitions are converted into magic superstitions, often in the attempt to neutralize the unwanted result of a sign superstition.”

Dundes’ observations have been challenged by several scholars of folklore. Ward noted that, in divinatory rites, human activity is never “accidental,” as Dundes insists (Ward 1968), and a causal sequence of events need not be intentional, as, for example, when someone unwittingly “whistles up a storm” aboard a ship. Ward, moreover, notes that there is a vast body of beliefs in which it is not possible to distinguish between the passive reading of omens and the active use of magic to achieve a result. For example, a woman in Virginia maintains that “if in handling a loaf of bread you accidentally break it into two parts, it is a sign that there will be wet weather for a whole week” (Virginia: UCLA Archive). Does the use of the expression “it is a sign” indicate the absence of the notion of causality in this belief? Here the distinction between omens and causal agents seems to disappear. Ward suggests that it is likely that the woman is oblivious to this difference because she associates the two phenomena without necessarily seeing a direct linear relationship between them. Ward adduces a number of examples from the UCLA Archive in which the informant’s choice of either a causal or an ominal verb seems to be highly arbitrary. There are, for example, countless variants of a belief documented throughout the United States that shows a perceived link between the call of a crow and an approaching storm. In many of the variants, one detects an *ominant-ominat* sequence: “If a rain crow calls”: “you can expect rain,” “it indicates rain,” “it is a sign of rain,” “it is a sure sign of rain,” and “it foretells rain.” Other variants of the belief, however, indicate a *causant-causat* sequence: “If the rain crow calls”: “it is calling for rain,” “it brings rain,” “...causes rain,” and “...is sure to bring rain.” It is doubtful if the tradition bearers in these cases perceive any essential differences between supposed ominal and causal agents. Ward infers from these observations that folk belief often sees related phenomena existing in configurations other than that of linear causality, resulting in beliefs in which it is impossible to distinguish between a “sign” and a “cause.” An example: A student has a dart board in his study where he is preparing for an important examination. He

interrupts his study, picks up three darts and says to himself: "If one of these darts strikes the bull's-eye, I will get an 'A' on my exam." Although the dart's striking the bull's-eye is related to the good grade, it is not perceived as the direct cause of it. The two events exist in an associative relationship that is nonlinear.

Dundes was also taken to task by Michael Owen Jones for having treated superstitions as "superorganic" entities divorced from the human beings who are the bearers of the tradition (Jones 1967). For Jones, the people who make the utterances in living contexts are more important than the utterances themselves, and he suggests a modification of Dundes' categories that better represents the manner in which individuals invoke superstitions in their daily lives.

By observing carefully the manner in which living humans invoke superstitions, folklorists could discover significant aspects of human behavior. One can, for example, note how people, when invoking folk beliefs, invariably draw a firm dividing line between knowledge and belief. The former is accepted as fact, while the latter is accepted or rejected on faith. Thus, one farmer may plant his corn with the onset of the waxing moon because he "knows" it is most auspicious to do so, while the second farmer "believes" it to be so. The distinction is not mere academic hocus-pocus. People are aware that certain things can be known while others have to be accepted on faith. One will ask if you believe in ghosts, UFOs (unidentified flying objects), guardian angels, and Santa Claus, but they will not ask if you believe in the Empire State Building. The very question "Do you believe?" implies both the recognition of the need for faith and, more important, the possibility of doubt. A hunter will not say, "I believe in whitetail deer," but he might very well say, "I believe in Bigfoot." When he does so, he communicates that the latter does not belong to everyday reality and that its existence must be accepted or rejected as a matter of faith. He furthermore acknowledges that doubt is present. Indeed, belief in supernatural entities thrives on a degree of doubt, for without it the encounters with them would not result in the numinousness central to supernatural experiences. Theoretically, if one accepted ghosts completely as part of everyday reality, seeing one would be no more significant than seeing one's spouse at the breakfast table. The point is, however, that people do not accept ghosts as everyday reality, nor do they "know" that ghosts exist; they occupy a dimension that is separate from daily reality, and they exist, above all, in human faith.

Anyone interested in studying belief and superstition must acknowledge the great work accomplished by one man, Wayland D. Hand. Hand assembled a massive archive of more than one million belief items (located at the University of California, Los Angeles), and he developed a classification system for these materials that serves as the model for all such collections worldwide. This system also has been applied by Hand to the regional collections of American beliefs that he edited (Hand 1961-1964, Hand, Casetta, and Thiederman 1981; Hand and Talley 1984). We also owe Hand a debt of gratitude for his analysis of superstitions that has contributed immeasurably to our understanding of belief as it has been, and continues to be, practiced by humans everywhere. That we now understand the processes of magical transference and divestment, plugging, pulling-through, measuring, and so forth is largely due to the published books and essays of Hand.

One more item from Hand's archive can serve as an exemplary model for the thought processes upon which the idea of transference is founded. "To cure a child of bedwetting,

take him to a cemetery at midnight and have him urinate into an open grave.” When the grave is later filled with the coffin of the deceased and covered over with earth, the affliction is thought to be transferred to the beyond, a realm from which there can be no return. When we consider that the UCLA Archive contains more than a million such items, we begin to grasp its potential for helping us understand the human condition. For such beliefs are not (to use Hand’s own words) mere “mental errors” and “abberations of the human mind,” they are pure artistry. It is obvious that Goethe was correct when he asserted that superstition is poetry.

Talking Trash

A Southern male leisure activity involving several genres of folk speech and folklore; also, insulting, self-aggrandizing speech, often in a sports context. The kinds of talk in “talking trash” in the rural and small-town South are linked by performance context and by thematic threads of humor and aggressiveness. Roughly equivalent terms for “talking trash” are “shooting the breeze,” “telling lies,” “bullshitting,” and “talking garbage.”

Trash ranges from casual small talk about favorite activities such as hunting and fishing, to teasing, joke telling, and formal yarn spinning. Participants exchange whoppers, traditional tall tales, and stories of exaggerated personal experience. Whoppers, or exaggerated descriptions, may occur alone, in series, or in a story about telling a whopper. For example, the whopper “It got so hot last summer my hens laid hard-boiled eggs,” may occur by itself or in series with other weather-related whoppers. It may also appear in a story showing how the shrewd country fellow makes a fool of the visiting city dweller.

Traditional tall tales, another important component of talking trash, have been studied in many folk cultures and are one of the roots of the humor of the old Southwest in American literature.

While stories of personal experience may not “go into folk tradition,” the custom of narrating personal experience is deeply traditional. When men are talking trash, it may be difficult, and sometimes not especially relevant, to know how much these stories are based upon fact. The “fish story” in the context of talking trash does not depend on mere fact for its meaning. This is because when men talk trash, their speech is not so much “about” the events narrated as it is about the sociable event in which the talking trash event occurs.

Talking trash with other men increases mutual good feelings among participants, even when one man's narrative talents lift him above his fellows. The term “master narrator” was applied by Richard M. Dorson to the expert yarn spinner, or trash talker, who makes a conscious effort to improve his craft. He is recognized for his large repertoire of tales and admired as an unusually skillful narrator by his fellows, who enjoy talking trash with him and telling tales to others about his verbal feats. To support his reputation, gained from being a character in his own stories, the master narrator cultivates a personal style and an air of eccentricity. He thrives on the praise of others.

However, master narrators are not typical of trash talkers. All properly sociable men are expected to be able to contribute a clever experience story or wisecrack to the conversation. Through talking trash, men make characters of themselves and promote

good humor within the group. However good it is, though, the humor found in talking trash is not gentle. By 1990s mainstream-culture standards, it is rough and violent. It is the humor of an America that laughed at physical humor in popular knockabout film comedies—people slipping on banana peels, having pianos fall on them, and being stuck in the bottom with pitchforks. It is the kind of humor found in old Southwestern humor.

For example, an African American from Georgia narrated the story of a dispute in a turpentine camp, in which a White supervisor angrily chased a Black worker. The strong Black man bent a pine sapling until his pursuer came close and then let it snap back, knocking the White man down hard. The narrator said this was very funny. With or without racial components, talking trash among both Blacks and Whites in the rural South demonstrates the participants' relish in such stories for "cartoon violence."

In recent years, a second sense of the term "talking trash" has emerged. Related to the aggressiveness and rough humor of trash talking in the rural South, this is insulting speech that "trashes" (derides, degrades, hurts) the listener. Examples from the popular press illustrate this sense of "talking trash." In a 1993 newspaper article, in North Carolina, the *Charlotte Observer* reported: "The South Carolina Supreme Court dealt chivalry another blow. Talking trash to women and girls is no longer a crime. The court...threw out a 50-year-old law, saying it's old-fashioned to think women...need special protection—in this case, from cuss words, obscenities, or suggestive remarks."

And the national news magazine *Newsweek*, also in 1993, commented: "[Baseball's] strength is also its weakness: It has a corner on the market for nostalgic, romantic sports hooley, but spectators increasingly favor basketball's fast-paced, trash-talking, macho hooley."

Tall Tale

Humorous narrative, usually short, based on exaggeration. Tall tales are also known as "windies," "whoppers," "tales of lying" and, simply, "lies." To dismiss tall tales as lies, however, is to ignore the important creative and artistic dimension that characterizes their performance in those milieus where they have flourished.

Tall tales are usually told as factual accounts of real happenings, with the audience encouraging the narrator to spin out his yarns (there seem to be few or no female tall-tale

tellers) while, in order to maintain a serious mien, listeners make that “willing suspension of disbelief” necessary to a successful session.

The subject matter of tall tales is certainly related to historically male-dominated occupations, with hunting and fishing narratives often dominating the tale teller’s repertoire. Thus, a hunter will recount how, while using an old-time muzzle-loader, he was unable to take aim on more than a couple of birds amongst the hundreds lining the shore of a bay; he will tell how he judged the bay’s curvature, then bent his gun barrel around a rock to suit the curve, with his resulting shot bagging dozens of birds.

Another will relate how, lacking shot, he loaded his gun with nails and was able to shoot a fox, nailing its tail to a tree; the fox jumped out of its skin, however. But the following year, the hunter shot the same fox, which he recognized, thereby gaining two skins from the same animal.

Fishermen in Newfoundland tell of the reef they hauled their dory onto in order to light a fire and boil their kettle, only to discover, as they are leaving, that the reef was, in fact, a whale. Others tell of a pond or river in which they were wading while playing a particularly large fish and how, on grabbing some tufts of grass to pull themselves out, they discover they have, in fact, caught a brace of hares; in addition, their hipwaders have filled with eels while they were struggling with their initial catch.

Many tales are told relating the remarkable qualities of certain individuals—about the great eaters and drinkers, the remarkable marksman, the extraordinary strong man, the remarkable spitter who could spit out a fire over which a steer was roasting.

Tall-tale tellers relate what they have seen or encountered in their travel—enormous fruits or vegetables, exceptionally thin or fat animals, or creatures able to pass on to their offspring various acquired traits; thus, the bitch whose hindlegs had been severed, and who had been provided with a little cart on which she could drag herself around, gives birth to a litter similarly endowed.

Extremes of weather are also the subject of tall tales. Rains so heavy it was impossible to tell where a lake ended and the sky began have been confirmed by sightings of fish flying in the air and birds swimming underwater; remarkable cold snaps in which conversations were frozen solid, to be heard in the spring thaw, are told by certain woodsmen.

Such themes, covering almost anything to be encountered in the natural world, have formed the stock-in-trade of the tall-tale narrator. In the 1990s, however, most people are likely to have encountered the tall-tale in its literary manifestations, such as in the published accounts of the doings of Paul Bunyan, but while Bunyan is widely held to be representative of American folklore, in actual fact there is little or no evidence such a character ever existed in folklore, or indeed that the stories attributed to him ever circulated in oral tradition.

The tall tale is generally transmitted in oral tradition in two ways: secondhand, as when a person attributes an exploit or an experience to another party who originally told the tale as a personal experience—this is how most tall tales have been recorded by collectors—and firsthand, as when the collector is fortunate enough to participate in a natural tall-tale-telling session.

There is ample evidence to suggest that a natural tall-tale-telling context—for example, the “liars’ bench” in general stores, around a campfire, or any habitual gathering place—might include a good deal of swapping of yarns: one man might tell of

a fishing exploit, with another man trying to cap it with one of his experiences—and the listeners doing their best to encourage such friendly competition, urging or provoking the participants to further narrations of their unlikely feats and taking pleasure both in the process and in the artistry of the narrators, who would begin with a detailed and plausible account of their experience, at the very end of which the exaggeration would be uttered, with the habitual pokerface expression.

The friendly rivalry typical of such yarn swapping seems, however, to have been absent entirely when audiences were faced with the kind of characters whose names have become synonymous with the tall tale in the regions where they flourished. These are the men whose reputations as “liars” spread beyond their immediate confines, and who brooked no competition in the matter of tall-tale telling. Indeed, their narrative style was such that prospective listeners sometimes had to be extremely careful in the way they broached the subject of the narrator’s exploits. It was no good asking for a “tall tale,” for example; to encourage a storyteller to begin a tale, the subject would have to be raised indirectly, with a passing ref-

“Kansas Potatoes on Wheels.” Blue Mound, Kansas, 1889. Photo W.H. Masters. Library of Congress.

erence to someone’s recent fishing trip, for example. And woe betide the listener careless enough to make an uncharitable comment during the narration—the narrator might well stop dead and refuse to say another word, or stomp off in high dudgeon. Such “tall tale heroes” could be touchy individuals, but they were often so famous locally that their names and tales lingered long after their death.

These masters of exaggeration have only occasionally been brought to the attention of a wider public. The best known of these is undoubtedly Baron Münchhausen (Hieronymous Karl Friedrich, Freiherr von Münchhausen [1720–1797] of Bodenwerder,

Brunswick, Germany), whose authentic yarns, documented by contemporaries, were taken up and published by Rudolph Erich Raspe, in the high-flown style of the late 18th century. Raspe's literary redaction became so popular that the baron's name became a byword for tall-tale heroes when folklorists began documenting them in the 20th century.

Some notable North American tall-tale heroes include Abraham "Oregon" Smith (1796–1893) from Indiana, whose exploits were first noted by Herbert Halpert in 1942 and then treated at length by William Hugh Jansen; Gib Morgan (1842–1909), who told his yarns in the context of the oil fields and was given a literary treatment in 1945 by Mody Boatright (1896–1970); and Jim Bridger (1804–1881), Western explorer and the man who was instrumental in opening up Yellowstone National Park. He was one of the earliest liars to come to more than local fame, since his tall tales, which he used to spin to greenhorn tourists, were included in early publications concerning Yellowstone.

John Darling (1809–1893) of New York state was first brought to public attention by Harold W. Thompson (1891–1963), but his yarns were, like those of Münchhausen and Morgan, also given a literary reworking, by Moritz Jagendorf. Darling was known to his contemporaries as "the damndest liar in seven states," and he used to tell his yarns at clambakes, elections, dances or "frolics," barnraisings, and the like.

"Captain" John Hance (ca. 1850–1919) of Arizona was, like Bridger, a guide who used to spin his tales to tourists, in his case while they visited the Grand Canyon. He once told a friend how he could convince a tenderfoot that frogs ate boiled eggs and make them believe the frogs would carry the eggs a mile to find a rock to crack them on.

A Canadian tall-tale hero was Dave McDougall (184?–1928) of Alberta. It was said that "the three biggest liars in Alberta were Dave McDougall; John McDougall [his brother] was the other two." Lorenzo "Len" Henry (1852–1946) of Idaho was described by Jan Harold Brunvand as "a Münchhausen," just as was Darling; other tall-tale tellers who have been documented include Daniel Stamps (1866–1950) of Illinois, Jones Tracy (1856–1939) of Maine, Ed Grant, also of Maine, Bill Greenfield of New York, Benjamin Franklin Finn of Oregon, and Moses Stocking of Nebraska; in Newfoundland, Albert "Ding-Ding" Simon (188?–1968) possessed a nickname suggestive of another dimension to his character beyond that of a "liar."

While these men, and the many others whose tall tales have not been documented, owed their reputations to their narrative skills and often fertile imaginations, as often as not they were seen as somewhat marginal characters in the very societies that nurtured them. As explorers and guides, they were often solitary individuals; while admired for their narrative talent, they had to be treated with kid gloves in order to get them yarning; and they might be, as was Simon, mocked for eccentricities of behavior or any other observable peculiarity. They may or may not be a vanishing breed, but they have indubitably enriched the oral literature and verbal arts of America.

Talley, Thomas Washington (1870–1952)

Folklore collector, teacher, writer. Though he was known for years in Nashville as a distinguished chemistry professor at Fisk University, Talley was also a pioneering gatherer of African American tales and songs. A native of middle Tennessee's rural Black culture, Talley was not only himself a product of the traditions he documented, but he was one of the first Black folklorists to do substantial fieldwork and publication. As a youth, he sang with a group from Fisk, the New Jubilee Singers, and by the early 1890s he was collecting songs and tales as he moved through various college teaching jobs in the South.

The year 1905 found him back at Fisk as a professor, and he soon came under the influence of colleague John Work II, who in 1915 had published *Folk Songs of the American Negro*. Challenged by Work's assertion that "Negro folk music is wholly religious," Talley compiled a collection of secular songs that he published in 1922, *Negro Folk Rhymes (Wise or Otherwise)*. Predating more famous collections by Dorothy Scarborough and by Howard W. Odum and Guy Benton Johnson, Talley's book featured songs from the preblues rural Tennessee Black community and showed that this musical tradition was more complex and far-ranging than had been previously thought. In a long appendix, "A Study in Negro Folk Rhymes," Talley offered a richly detailed account of some of his collecting and described in great detail some elements of rural Black music. (In 1991 an expanded edition of the book was issued, incorporating newly found music notations that were not in the original.)

Negro Folk Rhymes was widely reviewed and well received, and Talley at once set about compiling a companion volume of middle Tennessee tales. This manuscript, *The Negro Traditions*, was finished in 1923 or 1924, but for some reason it could not find a publisher. By this time, Talley's work at Fisk was becoming more demanding, and he gradually put his folklore interests aside; upon his retirement in 1942, he did write a long article about his tales in the journal *Phylon* and made further attempts to get his work published. It was not until 1993, however, that Talley's large collection of tales was finally published.

Tamburitza

A family of fretted stringed instruments brought to the United States and Canada by immigrants from Croatia, Bosnia, and the Vojvodina section of Serbia. Tamburitza (the term also refers to the music played on these instruments) comprises an active American musical subculture with the core of musicians and audience members from the Croatian American and Serbian American ethnic communities. The tradition is strongest in western Pennsylvania and in Great Lakes industrial cities, where tamburitza combos regularly play for weddings and picnics and in taverns and restaurants. The activities of more than two-dozen youth tamburitza ensembles in the United States and Canada are supported and coordinated by the Junior Cultural Federation of the Croatian Fraternal Union. An acclaimed touring collegiate ensemble is based at Duquesne University in Pittsburgh. Thirty to forty professional combos assemble annually for the Tamburitza Extravaganza, an event sponsored by the Tamburitza Association of America.

There are five contemporary tamburitza instruments, from smallest to largest: *prima*, *brac*, *celo brac*, *bugarija*, and *berde*. They range in size from smaller than a mandolin to larger than a string bass, but the instruments have never been completely standardized. There are three competing “systems”: Sremski, which most American players use; Farkas, an older system of instruments, now seldom played; and Jankovic, a newer system utilized by school orchestras in Croatia.

The modern tamburitza is a South Slavic adaption of the Middle Eastern long-necked lute with a small pear-shaped body. Precursors of the modern tamburitza were brought to the Balkans by the Ottomans as early as the late 14th century. Since then the Middle Eastern types of the instrument, such as *saz* and *baglama*, as well as such shepherd and peasant adaptations as *sargija*, *icitel*, *samica*, and *dangubica*, have been played, usually solistically, by people of the various Balkan nationalities: Croats, Serbians, Bosnians, Albanians, Macedonians, Bulgarians, and *Roma* (Gypsies).

From the second half of the 19th century until World War I, South Slavic musicians in the Hapsburg Empire, imbued with the spirit of the era’s nationalist movements, developed tamburitza orchestras as a refined but folk-connected symbol of national identity. Such South Slavic musicians and composers as Pajo Kolaric and Miroslav Majer from Osijek and Milutin Farkas and Ivan Zajc from Zagreb used tamburitza performances as a form of opposition to Austrian and Hungarian political and cultural domination. To “ennoble” the folk instrument, artisans created tamburitzas in various sizes, like the members of the violin family. Unlike the earlier instruments, which played a Middle

Eastern or a Western diatonic scale, by the end of the 19th century the newer tamburitzas were devised to play a Western chromatic scale. The new compositions included classical-influenced tamburitza symphonies and concerti as well as vocal pieces with lyrics in the then suppressed national languages. (Analogous nationalistic musical movements in the 19th century led to the creation of Italian mandolin orchestras, Ukrainian bandura orchestras and Russian balalaika orchestras).

The orchestral tamburitza efforts originated in such urban areas as Osijek and Zagreb but soon had an impact also upon villagers. Although some peasant players of the earlier forms of tamburitza have continued to make and play them, more have learned to play the more adaptable orchestral tamburitzas and have put them and the related orchestral musical concepts and skills to their own uses. By the last decades of the 19th century, small ensembles using orchestral tamburitzas became a fixture in village and small-town taverns and at rural celebrations of weddings, saints' days, and other festivities. Thus, the village tamburitza combos and the urban orchestras were well established in their homelands at the time of the greatest migration of South Slavs to North America.

Numerous reports and photographs from the beginning of the 20th century establish the presence of tamburitza groups in the mining and industrial communities where the bulk of the South Slavic peasant immigrants first settled: between 1900 and 1910, groups were active in industrial cities such as Buffalo; Johnstown, Pennsylvania; Milwaukee; Chicago; Pittsburgh; and in small mining towns like Chisholm, Minnesota; Centerville, Iowa; Rutland, Illinois; South Range, Michigan, and Bingham Canyon, Utah.

In the 1910s, record companies including Columbia, Edison, and Victor began to record tamburitans. Columbia recordings made in March 1912 by Andras Tavic with singer Vlado Konstantinovic may be the earliest, while the influential tamburitza pioneer Vaso Bukvic recorded on Columbia in 1916 with his brother Mirko and on Victor in 1917 with Sandor Huszar. The number of commercial recordings of tamburitza artists by the major companies as well as by small ethnic labels such as Balkan in Chicago and Zora in Detroit increased through the 1920s, continuing until World War II. Some of the influential artists of this era included Stevan Zerbe, the Skertich brothers, the Kapudji brothers, Dusan Jovanovic, Milan Verni, the Crlenica brothers, Djoko Dokic, the Popovich brothers, and Dave Zupkovich, and the orchestras Zvonimir, Banat, Javor, Jorgovan, Zora, Balkan, and Balkan Serenaders.

Orchestras like Zvonimir and the Elias Serenaders toured nationally on the vaudeville and chatauqua circuits, exposing the music to a broader audience. Instruction manuals, original compositions, and orchestral arrangements of folk songs by Charles Elias Sr., his son Charles Jr., and Rudolf Crnkovic made it possible to establish the network of youth orchestras in North America.

The Duquesne University Tamburitans, founded in 1937 by Matt Gouze and led by Walter Kolar from the 1950s through the 1980s, have provided college scholarships to outstanding young musicians and dancers. A majority of them come from the ranks of the junior tamburitza orchestras. Many of the veterans of the Duquesne or junior tamburitza ensembles have gone on to perform in professional combos such as Veseli, Cigani, Sinovi, and Slanina and to teach tamburitza to subsequent generations of young players in the youth groups.

Tattooing

A traditional practice whereby pigment is introduced under the skin to form permanent designs for decorative or religious purposes, or as a means of identification. A tattoo often functions as an expressive form, people choosing specific designs to express loyalty, love, hate, mortality, and humor.

Tattooing in the Western world went through cycles of popularity, decline, and revival. The Picts, or “the painted ones,” Teutons, Gauls, Scots, and Brits were tattooed. However, since the Bible forbids it (Leviticus 19:28), tattooing declined as Christianity spread through Europe. Subsequently, when European explorers in the 16th to 18th centuries discovered, and eventually brought back and exhibited, tattooed natives of North America and the South Seas, the practice was considered exotic; and in the late 1700s the Tahitian word *tatau* was adopted. European sailors who voyaged to the South Seas returned with tattoos as souvenirs of their journeys, and tattooing became an established tradition among sailors.

The beginnings of tattooing in the United States coincided with the beginnings of the American traveling circus. From the 1850s to the 1930s, heavily tattooed sideshow freaks were a popular attraction; also, itinerant tattooists traveled with the circuses.

At the turn of the 20th century, New York was a busy port catering to sailors, and Chatham Square became a center of tattooing. It was there that the electric tattoo “gun” was invented by Samuel O’Reilly and developed by his student Charlie Wagner. Besides a network of master tattooists, there was also an abundance of unskilled amateurs. Lewis Alberts saw much poor work done on, and by, shipmates when he served in the Spanish American War. When Alberts returned to the United States, he established himself in Chatham Square as tattooist “Lew the Jew” and endeavored to raise the level of artistry. His background as a wallpaper designer inspired him to distribute sheets of popular tattoo designs that tattooists could copy. Tattoo parlors, both in the United States and overseas, displayed Alberts’ designs on their walls. Such wall charts, known as “flash,” account for the widespread diffusion of tattoo designs; another factor in diffusion is the transience of many tattooees.

Although tattooing is practiced by a relatively small segment of the American population, tattoos record and reflect national experience. The first professional tattooist in the United States did a booming business during the Civil War, tattooing military emblems on both Yankee and Rebel soldiers. Tattooing flourished in both American and European navies during the World Wars, when military and national emblems and patriotic slogans became part of the standard flash. Characters from American popular culture like Popeye, Mickey Mouse, and Betty Boop entered circulation as well.

Although in the 1880s and again in the 1920s tattooing enjoyed short-lived popularity among American and European aristocracies, the art was generally associated with drunken sailors, circus freaks, and members of motorcycle gangs. After World War II, it became unfashionable, but in the late 1960s interest in tattooing was revived by hippies and others active in the peace movement. The West Coast became the new center of tattoo. Designs such as peace signs, astrological signs, and marijuana leaves reflected the spirit of the times. Singing stars like Janis Joplin, Joan Baez, and Cher got tattooed and subsequently so did many of their fans.

Until the 1970s, most people had gotten tattooed because it was a tradition of a group to which they belonged. Since the mid-1970s, an increasing number of unaffiliated individuals have been getting tattooed. In the 1980s, a new term for tattoo—"body art"—gained some currency. In the 1990s, standard flash is still the norm, but there is a trend toward personalized or even custom-made designs; Japanese and neotribal designs are increasingly popular as well. Also, although most tattooists apprentice with a master tattooist in order to learn the craft, traditionally practicing their skills by tattooing grapefruit, a small number of tattooists in the late 1900s are graduates of art school who have chosen the tattoo as their medium.

Taylor, Archer (1890–1973)

One of the greatest folklorists of his generation. His scholarship enriched two disciplines, German and folklore. Taylor's bibliography dirough 1960 consists of nearly 500 items (Hand and Arlt 1960:356–374), many of them authoritative works of compilation and classification of various genres of folklore. His classification system for formula tales (see Taylor 1972:369–394) was adopted in Stith Thompson's 1961 revision of *The Types of the Folktale*. Taylor wrote historic-geographic studies of folktales, including *The Black Ox* (1927) and "The Predestined Wife" (Taylor 1972:395–492), and of a ballad, *Edward*

and *Sven i Rosengård* (1931) (see also Taylor 1929). His favorite folklore genre was the proverb, on which subject he published more than 100 articles, reviews, and books, including *The Proverb* ([1931; index 1934] 1962). Many articles and several books on riddles culminated in *English Riddles from Oral Tradition* (1961), which provides comparative notes from all over the world.

While Taylor is usually described as a comparativist and not as an Americanist, he made both major and minor contributions to the study of American folklore. In addition to his *English Riddles* (with its Anglo American material), his notes on English and American riddle tales were the basis of a sequel, Roger D. Abrahams' *Between the Living and the Dead* (1980, FFC 225). Taylor collected oral proverbs in *Proverbial Comparisons and Similes from California* (1954) and literary ones, with B.J. Whiting, in *American Proverbs and Proverbial Phrases, 1820–1880* (1958). A technique he used in many of his articles was to give an American example of a traditional item and then explain its peculiarities by displaying its European antecedents. Many of his short notes comment on or ask for more information about purely American folklore (see Taylor 1947, 1959).

Taylor was educated at Swarthmore College and received his Ph.D. in German in 1915 from Harvard University, where he studied with many distinguished scholars, including George Lyman Kittredge (thus Taylor was part of the scholarly tradition of ballad scholar Francis James Child). In 1939 he became professor of German at the University of California, Berkeley, where he remained until his retirement in 1958. He was largely responsible for founding the California Folklore Society (Cattermole-Tally 1989), and he edited its journal, *California Folklore Quarterly* (later *Western Folklore*), from its inception in 1942 through 1954. He also edited *Proverbium* from 1965 until 1973.

Early in his career, Taylor cultivated European contacts, which led to the entry of European ideas, including exhaustive citations of parallels and the historic-geographic method, into American folklore scholarship. As evidenced in his incisive, sometimes caustic book reviews, he insisted on high standards in folklore scholarship. To Taylor folklore was the material that is handed on by tradition, either by word of mouth or by custom and practice, and, furthermore, "comparison is an essential and typical method in folklore" (Taylor 1964:116). He envisioned collections and indexes as tools that should be used to construct a firm foundation that would ultimately support the study of "the historical, social-historical, literary-historical, cultural, psychological, and methodological implications" (Taylor 1964:121) of the subject under scrutiny.

Terry, Sonny (Sanders Turell) (1911–1986)

Traditional blues vocalist and harmonica player. Terry was especially known for his longtime touring partnership with Piedmont blues guitarist Brownie McGhee. Terry's music was distinguished by smooth and rapid transitions from vocalizing to harmonica playing, interjecting wails, moans, whoops, and hollers, achieving a particularly closely knit rhythmic structure.

Born Sanders Turell near Greensboro, North Carolina, Terry learned to play the harmonica from his father when he was a young boy. Separate accidents at play, when he was eleven and sixteen years old, left Terry blind in both eyes. In the early 1930s, he toured with medicine shows and was a street musician in Durham, North Carolina, playing for tips with two blind guitarists, Gary Davis and Blind Boy Fuller. Terry and Fuller made several records together before Fuller's death in 1941.

In 1939 Terry appeared in a historic Carnegie Hall concert, "Spirituals to Swing," where he shared the stage with Big Bill Broonzy, the Golden Gate Quartet, Benny Goodman, Count Basie, and others. He settled in New York in the early 1940s and figured prominently in the folk-music revival in the following two decades, recording with such artists as Woody Guthrie, Pete Seeger, and Burl Ives, as well as McGhee.

For three years, beginning in 1946, Terry performed on Broadway in *Finian's Rainbow*, and in 1955 he was in *Cat on a Hot Tin Roof* with guitarist McGhee. The two appeared together in the Steve Martin film *The Jerk*, and Terry provided soundtrack music for *The Color Purple*.

Terry's partnership with McGhee began in the early 1940s. Together they recorded dozens of albums on such record labels as Savoy, Fantasy, Folkways, Verve, and Prestige. They were featured at the Newport Folk Festival and at coffee-houses across the country, and they toured Canada, India, Mexico, Japan, Australia, and New Zealand as well as the United States. In 1982 Terry received the prestigious National Heritage Fellowship from the National Endowment for the Arts.

Terry died in Mineola, New York, on March 11, 1986.

Henry Willett

Thanksgiving Day

Holiday observed on the fourth Thursday in November in the United States and the second Monday in October in Canada. Celebrations of thanksgiving and harvest festivals were known throughout Europe long before the Reformation and the coming of the Pilgrims to America. The Saxons and the Celts celebrated Harvest Home; the Romans observed Cerealia; the Israelites feasted during the Feast of Tabernacle, and all celebrated through communal eating. In America the first Thanksgiving was observed by the Popham colonists at Monkegon as part of the thanksgiving service of the Church of England; early churchmen referred derisively to Thanksgiving Day as St. Pompion's Day (Pumpkin Day). In a similar vein, modern Americans sometimes refer to the holiday as "Turkey Day." A second Thanksgiving took place in 1623 to give thanks for the end of a drought in July; the next recorded public Thanksgiving was celebrated in Boston by the Bay Colony in gratitude for the safe arrival of ships bearing food and friends. These early celebrations, more recreational than religious in nature, often lasted for several days and involved games of skill as well as eating.

Attitudes toward other holiday celebrations affected how Thanksgiving was celebrated. The Puritans were suspicious of the idolatry of the English Christmas celebration; however, over the years, their Thanksgiving holiday took on many aspects of English Christmas, including the reunion of family and friends and the serving of special foods. In time, turkey replaced beef roast, and pumpkin pie became an expected dessert.

In its early history, Thanksgiving was a moveable feast, not tied to any particular date. From 1631–1684 twenty-two public Thanksgivings were held; in 1742 there were two. Thanksgiving was celebrated on whatever day and in whatever season seemed appropriate. The idea of good harvest and a thanksgiving feast formed a natural connection.

Thanksgiving became a nationally recognized holiday during the American Revolution when Congress recommended a day be set aside for that purpose. However, after the General Thanksgiving for Peace in 1784, the custom was omitted until

*In Castle Garden, New York,

Library of Congress.*

the adoption of the federal Constitution in 1789, when Washington and the Congress assigned Thursday, November 26, as a day for a national observance. Although the observance became uniform and traditional throughout New England, it was not recognized in the South until 1858 when eight governors sent forth proclamations much after the New England model, in spite of some opposition by their constituents to “Yankee ideas.” President Abraham Lincoln recommended special days for Thanksgiving during the Civil War. Although few Americans had much to be thankful for, this symbolic idea began to heal the wounds. Credit for the permanent status of Thanksgiving Day as a national holiday must be given to Sarah Josepha Hale, editor of *Godey's Lady's Book*, who worked for years to promote this idea, petitioning congressmen and the president himself. Thanksgiving thus became a national institution, supported by the power and authority of the national government but based on an ancient agrarian tradition of giving thanks for bountiful harvests. In Canada a Thanksgiving holiday was first observed in 1879, but is celebrated in October.

The center of Thanksgiving is the dinner; the central symbol of that meal is the turkey. Although there is no evidence that turkeys were eaten at the first Thanksgiving, Governor William Bradford of Plymouth Colony himself mentioned that during that autumn wild turkeys were plentiful. The fowl suppliers in New Jersey and Pennsylvania began to push the idea of turkey for Thanksgiving in the mid-19th century, and by 1883 the American

public adopted the Thanksgiving turkey. Historians, writers, and artists rendered not just contemporary Thanksgiving tables laden with turkey and pumpkin pies, but also the tables of times past.

In this same commercial vein, Thanksgiving has traditionally marked the official opening of the Christmas shopping season. In 1939 businessmen urged President Roosevelt to move the date of Thanksgiving from the last Thursday in November to the next-to-last in order to increase the number of shopping days before Christmas. Some Americans actually celebrated Thanksgiving twice that year, ordering twice as many turkeys. But in 1941, Congress officially mandated the last Thursday in November as the day of celebration, and so it has remained. Thus, a powerful set of historical memories reinforced by federal authority and the popular and commercial media created a Thanksgiving Day celebration more traditional and uniform today than in the past and the most uniformly celebrated of all of our national holidays, especially in terms of food.

Lin T.Humphrey

Thomas, Jeannette Bell (1881-1982)

Author of local-color stories pertaining to folklife in the Kentucky-West Virginia border region and director of the American Folk Song Festival, held annually near Ashland, Kentucky, from 1930 until 1972. Jean Thomas was widely known as “The Traipsin’ Woman.”

Born Jeannette Bell in Ashland, Kentucky, on November 14, 1881, she attended parochial school and won local acclaim as an artistic singer. Upon graduation from high school, she worked as a legal stenographer, attending circuit court sessions in the mountains of eastern Kentucky, and it was there she first encountered indigenous folk music.

Her marriage in 1913 to businessman Albert Hart Thomas ended in divorce a year later, and she never remarried. She attended Hunter College and the Pulitzer School of Journalism, and between 1913 and 1925 she maintained various secretarial positions in Kentucky, Ohio, and New York. Her friendships with Greenwich Village artists and socialites—and a brief stint as a script girl in Hollywood—gave rise to theatrical ambitions. Instead of becoming an actress, however, Thomas forged a successful career as a writer and a presenter of Appalachian folk culture.

Between 1925 and 1930, she supplemented her secretarial work with magazine and newspaper writing and also began to feel her way as an entrepreneur of folk culture. In 1928 she created a media stir by bringing to New York an aged Kentucky fiddler, J.W.Day, to perform at the elegant Roxy theater. She presented Day as the rustic “Jilson Setters,” called him “the last minstrel,” and made much of his repertoire of “Elizabethan” ballads and fiddle tunes.

Two articles inspired by her experiences in the Kentucky mountains appeared nationally in *American Magazine* in 1929 and 1930. One of these told an appealing tale of “Jilson Setters,” while the other introduced Thomas herself as “The Traipsin’ Woman,” a moniker she eventually adopted as a legal part of her name. The two

magazine stories were immensely popular and set the stage for Thomas' future success as a writer of books based on Appalachian history and folklife.

In 1930 she gathered a group of friends near Ashland, Kentucky, to hear a concert by local folk musicians. This "singin' gatherin'" evolved into the American Folk Song Festival, an annual event directed by Thomas that also became a thread of continuity through her long life. In conjunction with the festival, Thomas chartered an American Folk Song Society in 1931. This brought her into conflict with Robert Winslow Gordon of the Archive of American Folk Song at the Library of Congress, who founded an organization of the same name at roughly the same time.

Thomas' first book, published in 1931, was *Devil's Ditties*, a collection of mountain folksongs presented in an unusual descriptive format. This was followed by six other books within the decade, including Thomas' autobiographical *The Traipsin' Woman* (1933) and her most famous work, *The Singin' Fiddler of Lost Hope Hollow* (1938), which featured the half-imaginary "Jilson Setters" as its central character. Thomas' accounts of Kentucky mountain life interwove Appalachian regional history and folklife with supposed Elizabethan mannerisms, Chaucerian speech, and uplifting but sentimental plots.

She published no further books after 1942, but instead turned her attention to producing the American Folk Song Festival and to entertaining visitors at her museum home, "The Wee House in the Woods," a brick replica of a Tudorstyle cottage built for her in Ashland. Her energy seemed boundless, and she continued to direct the festival until old age took her into a nursing home in 1972. She died there in 1982 at the age of 101.

In retrospect, although Thomas maintained an impressive roster of associates in American letters, entertainment, and business, her American Folk Song Festival was anathema to academic folklorists, who still tend to criticize its excessive Anglo-Saxon emphasis, its staged theatrical aspects, and its pseudo-historical presentation of Appalachian folk culture. While Thomas possessed a valuable awareness of folklife in Appalachia, she chose to ignore documentary modes of representation in favor of the theatrical-pageant tradition and the local-color story. Her failure to provide tangible sources for her findings undermined the validity of her work in the eyes of many folklorists. But while academicians have been less than positive about her contributions to the field, Thomas' books nevertheless found an enthusiastic readership, and her American Folk Song Festival remained popular with general audiences for more than four decades.

Thompson, Harold W. (1891–1963)

Collector of New York state folklore. Thompson's collecting and devotion to that folklore spanned the years 1915 until his death in 1963. He was seminal in the formation of the New York Folklore Society in 1944 and served as its first president from 1945 to 1950.

Thompson had as his goal to make folklore materials accessible to the widest possible audience. To that end, he introduced folklore to his students at Albany State University (1915–1940) and at Cornell University (1940–1959), presented monthly radio broadcasts on folklore between 1935 and 1943, and encouraged the use of folklore by teachers. In addition to his work with the New York Folklore Society, Thompson served as president of the American Folklore society in 1942 and was elected a Fellow of the American Folklore Society in 1959. He was a Guggenheim Fellow in 1925 and was the first American to be named a Life Fellow of the Royal Society of Edinburgh and of the Society of Antiquaries of Scotland.

Because Thompson strove to present folklore in a manner accessible to a nonacademic audience, his work was criticized by some folklorists for being too popularist. However, the criticism pertained to presentational style rather than quality, as Thompson was a thorough and careful researcher. His collecting of oral literature from the various regions of New York state and his proactive stance toward folklore scholarship in New York was instrumental in laying the groundwork for future folkloristic study of New York state.

Thompson, Stith (1885–1976)

Many would agree, Americas most important folklorist. The breadth and depth of his contributions speak for themselves.

Thompson was born near Springfield, Kentucky. After attending Butler University and the University of Wisconsin in Madison, he received his M.A. degree from the University of California, Berkeley, in 1912, and his Ph.D. degree from Harvard University in 1914. His dissertation, written under George Lyman Kittredge, was titled *European Borrowings and Parallels in North American Indian Tales*.

After teaching at several other universities, Thompson went to Indiana University in Bloomington in 1922. Over the years, he taught courses in English language and

literature, and he wrote and edited several widely used textbooks. As early as 1922 he began offering courses in folklore—among the earliest such courses offered in the United States.

Thompson's efforts to promote folklore as a subject to be taught in colleges and universities culminated in his establishing at Indiana the first Ph.D.-granting program in folklore in the country. The first doctorate in the program was awarded in 1953.

Thompson also supported and encouraged the establishment of folklore courses in other colleges and universities, and often these were taught by his former students. Hence, it can be said that one of his major contributions was that he was largely responsible for establishing folklore on a firm academic footing in the United States.

A second major contribution lies in his own research. He published a number of scholarly works that earned him recognition as one of the world's greatest folktale scholars. His fame rests largely on a group of indexes and surveys of the world's folktales, including *European Tales among the North American Indians* (1919), *The Types of the Folktale* (1928, a translation and expansion of a work by the Finn Antti Aarne), *Tales of the North American Indians* (1929), and *The Motif-Index of Folk-Literature* (1932–1936; rev. ed. 1955–1958). Other major works included *The Folktale* (1946), *Four Symposia on Folklore* (1953), and *One Hundred Favorite Folktales* (1968).

Thompson's final major contribution to folklore study is that he helped introduce European folklore methods and goals into the United States. During the late 19th and early 20th centuries, when British folklore scholarship was mainly concerned with identifying supposed ancient survivals in contemporary folklore, and when American folklore scholarship concentrated on ballads, few American folklorists knew of the research being done with folktales in Finland, Germany, and elsewhere in Europe. This research emphasized the comparative analysis of single, widely known stories to discover their original forms, places of origin, and paths of distribution. To facilitate this comparative analysis, scholars encouraged extensive collecting, classification, and archiving.

During the 1920s, through his travel and research, Thompson became acquainted with Finnish and other European scholars and their work. Through his publications and teaching, he helped make other American folklorists aware of European folktale research and its ramifications. He had, therefore, a marked influence on the direction of American folklore scholarship in the 20th century.

After he retired from teaching at Indiana University in 1955, Thompson continued his research, among other things by revising and enlarging his earlier indexes. He also taught at several other universities as a visiting professor.

Warren E. Roberts

Thorp, Nathan Howard (“Jack”) (1867– 1940)

First known collector of cowboy songs and first to edit and publish a cowboy songbook, *Songs of the Cowboy* (1908). Thorp was born in New York City and educated in New Hampshire, but he spent his summers on his brother’s ranch in Nebraska. He loved the Western cowboy life, and in 1886 he moved to New Mexico to buy horses to be trained as polo ponies. There he learned the techniques of cowboying. In 1889, with his banjo-mandolin and on horseback, he rode to various cow camps in New Mexico, Texas, and Indian Territory collecting songs sung by cowboys. This was probably the first Anglo folksong field collecting in the United States.

In 1898, while trail herding cattle from New Mexico to Texas, Thorp wrote “Little Joe the Wrangler”; in 1908 he took twenty-three of his collected songs as well as songs he had written to a printer in Estancia, New Mexico, and had 2,000 paperback copies printed at six cents a copy. In 1921, angry that John A. Lomax, folksong collector, had used songs from his book without giving credit, he expanded his text to 101 songs and republished it. As a cowboy poet, Thorp had his poems published in *Poetry*, *Literary Digest*, and numerous cattlemen’s publications. He was also a skillful raconteur; J. Frank Dobie credited Thorp as his source for many stories.

Thorp died in his home near Alameda, New Mexico, on June 4, 1940.

Toast

A recitation or salute by an individual, sometimes with drink in hand. The following comes from one “Slim” of Jefferson City, Missouri, who recited it to Bruce Jackson in June 1964:

Well here’s to the crane that flew down the lane and lit upon the mast
pole.

Stretched his neck and shit a peck and sparks flew from his asshole.
(quoted in Jackson 1977:229–230)

Scholars have most notably characterized toasts as a type of folk poetry and/or traditional prose narrative coming primarily from African American oral tradition, although folklorist David Evans reminds us that “such recitations have long been a standard part of men’s gatherings, which usually involve drinking, among both Whites and Blacks” (Evans 1977:130). Folklorists concur that toasts circulating in black oral tradition are “usually long poetic recitations that tell a story or portray a situation” (Evans 1977:130). Performed toasts contain rhymed couplets coming from numerous sources. Roger Abrahams discusses the manner in which African Americans possibly appropriated the term in his seminal collection, *Deep Doivn in thejungle: Negro Narrative Folklore from the Streets of Philadelphia* (Abrahams 1970:109–111), suggesting that on the one hand the minstrel show may have affected the tradition’s early history but that on the other hand the form of toasts current in the late 20th century perhaps derived from the custom of verse toasts pledged with a drink (Abrahams 1970:109). Certainly the end of World War I and the subsequent Prohibition era must have had an effect on such a function; however, most of the informants who appear in 20th-century collections of toasts are male prisoners or minors unable to purchase liquor and who are often performing for a folklorist, with *no* drink in hand. Conversely, another published collection by Anthony M. Reynolds shows that liquor probably still plays an important role.

Reynolds includes in his collection a description of more natural settings among Black males in the free world: “The formal telling of toasts unrolls as the bottle of scotch is drained, and ends in laughter and discussion in much the same way it began” (Reynolds 1974:299). Reynolds recorded a representative body of toasts in South Central Los Angeles that he demonstrates come from a wide range of sources, including some locally well-known printed ones, such as George Milburn’s *TheHobo’s Hornbook* (1930). He distinguishes the “society toasts” from the bad man (for example, “Stackolee”) and “contest” toasts (“The Signifying Monkey”), both of which have appeared in several collections. Society toasts, unlike the other types, lack obscenities, are fit for mixed company, have a greater frequency of internal rhyme, have a moralistic tone, and obtain close identification between the storyteller and the main characters (Reynolds 1974:273–274).

Perhaps one of the most popular toasts in Black oral tradition is the following version of a *Titanic* toast, which Bruce Jackson recorded in a southeast Texas prison farm in 1966. The protagonist, Shine, is a cross between the bad man and the trickster characters in African American folklore. This toast appears in Jackson’s 1974 collection, “*Get YourAss in the Water and Swim Like Me*”: *Narrative Poetry from Black Oral Tradition*:

It was sad, indeed, it was sad in mind,
April the fourteenth of nineteen-twelve was a hell of a
time,
When the news reached a seaport town
That the great *Titanic* was a sinking down.
Up popped Shine from the deck below.

Says, "Captain captain," says, "you don't know."

Says, "There's about forty feet of water on the boilerroom floor."

He said, "Never mind, Shine, you go on back and keep stackin' them sacks,

I got forty-eight pumps to keep the water back."

Shine said, "Well, that seems damned funny, it may be damned fine,

But I'm gonna try to save this black ass of mine."

So Shine jumped overboard and begin to swim, and all the people were standin on deck watchin him.

Captain's daughter jumped on the deck with her dress above her head and her teddies below her knees

And said, "Shine, Shine," say, "won't you save poor me?"

Say, "I'll make you rich as any shine can be."

Shine said, "Miss, I know you is pretty and that is true,

But there's women on the shore can make a ass out a you."

Captain said, "Shine, Shine, you save poor me,

I make you as rich as any shine can be."

Shine say, "There s fish in the ocean, whales in the sea, captain, get your ass in the water and swim like me."

So Shine turned over and began to swim,

People on the deck were still watchin' him.

A whale jumped up in the middle of the sea,

Said, "Put a 'special delivery' on his black ass for me."

Shine said, "Your eyes may roll and your teeth may gnt,

But if you're figurin on eatin' me you can that shit."

Shine continued to swim, he looked back, he ducked his head, he showed his ass,

"Look out sharks and fishes and let me pass,"

He swimmmed on till he came to a New York town, and people asked had the *Titanic* gone down.

Shine said, "Hell, yeah." They said, "How do you know?"

He said. "I left the big motherfucker sinkin' about

thirty minutes ago” (quoted in Jackson, 1974:185–186)

Jackson provides a brief discussion of some psychosocial functions of toasts as they occur in “certain kinds of parties, among youths hanging around street corners, [and] among inmates in jails and prisons” (Jackson 1972:123). Identifying themes and “culture hero” types characteristic of the genre, Wepman, Ronald B. Newman, and Murray B. Binderman compare and briefly discuss such culture heroes within toasts that Black prisoners performed during the 1950s and 1960s (Wepman, Newman, and Binderman 1976:1–15), while William Labov and colleagues give a linguistic treatment of toasts that also employ the trickster and the badman as protagonists (Labov, Cohen, Robins, and Lewis [1968] 1994:329–347). Additionally, Wepman and colleagues identify the point of view in which performers typically narrated toasts; much of their own data contained third-person points of view, in contrast to the first-person point of view Reynolds reports. However, by assessing the collections of toasts from which folklorists draw conclusions when characterizing toasts in general (Jackson 1975; Wepman, Newman, and Binderman 1974), David Evans rightly identifies some folklorists’ failure to print complete texts of the toasts they discuss” (Evans 1977:129). Nevertheless, Jackson, Labov, and other researchers have made available to the folklorist not only representations of folklore performances, but also, particularly with Reynolds’ study, the contextual settings in which they typically emerge.

Finally, responding to Evans’ request that folklorists attend to the genre as it appears among groups other than Black males, James D. Johnson documents the tradition among Southern Whites (Johnson 1981). Although Jackson never heard the *Titanic* from Whites (Jackson 1974:181), Johnson reports a version of the text among his informants, who, having learned it from other Whites, were surprised to hear that the protagonist was Black (1981:332)! Nevertheless, in Black oral tradition the *Titanic* toast proclaims the futility of earthly grandeur and riches, while taunting Whites for excluding Blacks from the doomed vessel (including the Black heavyweight champion of the world. Jack Johnson). This toast’s

relevance to racial tensions endures, even though the meaning such toasts have to those who perform and enjoy them will always be culturally specific. But the toast is more than a response to racial indignities. As Jackson observes:” [Shine] is the only one who has enough sense...to swim away from the sinking supership.... His power is total—body and mind—and so he alone gets home free, perfectly safe to fuck and signify as he wishes. That all this happens while a shipload of rich Whites drown is a gorgeous bonus.”

Tongue Twisters

Verbal puzzles perpetuating practical principles of plain and perfect pronunciation. Or, more scientifically defined, a tongue twister is “...a kind of speech play which has as its goal the correct pronunciation of combinations of words that are difficult to articulate rapidly and repeatedly” (Jorgensen 1981:67). The best-known example in English is the

one beginning “Peter Piper picked a peck of pickled peppers...” which first appeared in print in 1674 as part of an entire alphabet comprising “a weird collection of characters, from Andrew Airpump to Walter Waddle” (Schwartz 1972:117).

Tongue twisters may be as short as two words—“toy boat,” “truly rural,” “Peggy Babcock,” or “preshrunk shirts,” for example—their difficulty lying in the challenge to repeat the same simple phrase several times rapidly without error. But most tongue twisters are complete sentences like “She sells sea shells by the sea shore”; “Around the rugged rock the ragged rascal ran”; and “How much wood could a woodchuck chuck if a woodchuck could chuck wood?” The latter example is often parodied, yielding such variations as “How many cans can a cannibal nibble, if a cannibal can nibble cans?”

Among the tongue-twister sentences that may lead one to uttering an impolite word are those beginning, “I slit a sheet a sheet I slit...” and “I’m not a fig plucker nor a fig plucker’s son...” A similar challenge—not to slip into a risqué utterance—occurs in the tongue-twister song that starts “Sarah, Sarah, sitting in a shoe shine shop./All day long she shines and sits...” Most tongue twisters, however, are innocent of such indecencies, or go no further in that direction than something like “He ran from the Indies to the Andes in his undies.”

Besides tongue-twister songs, there are also tongue-tangling rhymes, such as the well-known limerick about the “tutor who tooted the flute” who “tried to tutor two tooters to toot...” But a truly challenging tongue twister need not be lengthy or elaborate, since there is difficulty aplenty in trying to repeat several times without error something as deceptively simple as “Rubber baby buggy bumpers.”

Tongue twisters, in general, function merely as entertainment, or (in the case of the off-color references) as pranks. However, some further functions have been documented, including to practice proper articulation for public speaking and singing, to test the fit of a new set of false teeth, to audition actors, and to train students in speaking foreign languages. A German class, for example, might struggle with this jaw breaker: “*Wir Wiener Waschweiber würden weisse Wäsche waschen wenn wir wüssten wo wärmes Wasser wäre*” (We washerwomen of Vienna would wash our washing white if we knew where some warm water was). Much simpler, but still a tough line to pronounce, is the Norwegian phrase “*fire ferske friske fiske*” (four fine fresh fish).

Tongue twisters are usually thought of as children’s folklore, but they seem to be well remembered by people of all ages. When one writer mentioned his interest in this genre in a magazine circulated nationally, he received more than 13,000 tongue twisters from readers. Most contributors mentioned oral tradition via older friends and relatives as their sources (Potter 1972:1117). An experiment asking subjects to recite tongue twisters until a mistake was made revealed the kinds of errors most likely to occur and the sound combinations most frequently leading to mistakes. Confusion of similar morphemes was the most common kind of error, yielding garbled phrases such as “See shells she sells...” or “Rugger baby bubbly gumpers...” Some subjects in the experiment, however, employed strategies for improving their performances, such as setting the texts to mental music, following a rhythmic beat in pronouncing them, grouping words together into patterns, or *not* thinking about the meaning of the words being said (Jorgensen 1981).

Tooth Fairy

Mythological sprite of childhood that magically appears at night to make an exchange, usually monetary, for a shed baby tooth. An acknowledged 20th-century popular-culture figure, the tooth fairy has roots in age-old rites of passage that mark the child's transition from infant to cognizant youngster. As such, the tooth fairy and the ritual of exchange (gift for tooth) tie in with superstitions and ancient ceremonies of life, death, and rebirth. Ancient folk methods to dispose of the shed baby tooth—throwing it to the sun or to a rodent, usually a mouse or some other animal; throwing it over or onto a roof; placing it in a tree, wall, or piece of furniture; salting, burning, or hiding it; or having someone or something swallow it—are practiced in the 1990s in European, African, and Asian countries, and in some isolated areas of the United States. However, in North America a singular tooth fairy takes precedence over these older rituals.

Variouly known as an ubiquitous “good fairy” or “fairy godmother,” one or more fairies appeared in the United States early in the 1900s to exchange a tooth for candy or money. Later, this “good fairy” became specialized, as shown in Lee Rogow's 1949 story, “The Tooth Fairy.” Rosemary Wells' 1980 survey showed that the rate of exchange from 1900 to 1980 reflected the rising price index, that a singular tooth fairy was firmly entrenched in family life, and that parents voluntarily promoted the practice.

Economic affluence, emphasis on the child, an explosion of media fairies, and, more recently, commercial enterprises, helped change the tooth fairy from folk belief to national icon. In children's literature alone, this fairy appeared in sk known stories in the 1960s, eleven in the 1970s, twenty-nine in the 1980s, and eighteen in the first two years of the 1990s, not to count the innumerable cartoons, jokes, and references in adult literature. The 1980s also saw the rise of commercial pillows, kits, jewelry, dolls, boxes, and banks. The late 1980s fairy became the “Expanded Duty Tooth Fairy,” interested not only in children's good dental-health habits but in their social ones as well. The fairy, typically female and beneficent, always arrives at night while the child sleeps, generally looks under the pillow and absconds with the shed tooth after leaving a fair exchange. While this action is stereotyped, the reasons for the action vary, as does the image (adult, child, animal) and the tale involved.

This seemingly simple rite of passage is really complex and significant. It marks the physiological change in the child, the sociological one when the child shifts from home to school, and the psychological one when the child accepts an adult view and disbelieves in the fairy. It is a cultural event as well, promoted by parents to encourage imagination, but also to hold the child back from entering the harsh adult world too soon. The tooth-fairy period is voluntarily initiated twice, first in childhood, then in parenthood. It can last until all twenty baby teeth exfoliate, contrary to other cultures in which only the first shed tooth is honored, and it is enacted without a verbal charm or saying, again contrary to other cultures.

The tooth fairy's genealogy is obscure. England, Ireland, and Scotland have referenced fairies for centuries. However, these fairies were capable of evil as well as good, and any fairy could act on a child's behalf. The singular tooth fairy with a dedicated occupation was not documented by Iona Opie and Moira Tatem until a 1987 entry in the latest edition of *A Dictionary of Superstitions*. Current British children's stories of the late 20th century still place a tooth fairy in a large group of similar scavengers. Tad Tuleja has conjectured a possible relationship with the toothless Italian witch Marantega who functions as a tooth fairy, but by 1920, the referent source date, the fairy, not a witch, was well established in American folklore. More probable is the metamorphosis from tooth mouse, a much older and more widespread tradition, to tooth fairy through an 18th-century French fairy tale, "La Bonne Petite Souris," in which a mouse, changing into a fairy to help a good queen fight an evil king, hides under a pillow to heckle the king and punishes him by knocking out his teeth. Although Tuleja, William Carter, and colleagues think this is a "credible mechanism" to tie the two traditions of tooth mouse and tooth fairy together, no child, no exfoliated baby tooth, and no exchange of tooth with replacement gift are involved. The actual progenitor of the tooth fairy is still conjectural.

Toys, Folk

Traditional handmade objects used by children at play. Folk toys are artifacts of the cultures that produce them, and as such they serve as one of many possible ways to begin investigating the traditions of a culture. They are especially important as one aspect of the study of children and play and as one form of material culture.

Traditions of toymaking have likely existed for thousands of years. Some of the miniature models of people, animals, and objects of clay or stone frequently found by archaeologists at sites around the world are thought to have been toys. In addition, some religious objects have a secondary use as toys once they have fulfilled their primary religious function (for example, Hopi kachina dolls). A small animal on wheels made of clay found in excavations of an early Mexican culture in which no other evidence of the wheel has been discovered is perhaps a toy; it is said to demonstrate the degree of creativity achieved by toymakers.

Folk toys can be made by children themselves, in which case they are often quite temporary (“cootie catchers” and paper folded into a specific form and used to tell fortunes). They can be made by adults for use by children, usually by parents or caretakers, in which case they are generally more permanent (cornhusk dolls), or they can be made by trained craftspeople for a larger clientele, in which case they are often not only more permanent but more elaborate (limberjacks, a jointed human figure that dances on a board).

Folk toys are made of any convenient materials, including wood, clay, plants, paper, fabric, metal, sand, or snow. If made by children, they most often utilize recycled or “found” materials (as when rubberbands are saved to make a “Chinese jump rope”). Adults, especially those who make toys for sale, are more likely to purchase new materials as needed. Folk toys come in many varieties: Dolls are common (often made of natural materials such as nuts, apples, or corncobs dressed in scraps of fabric), but there are also toys that move or require specific physical skills for their use (such as a ball and cup tied together by a string, in which the task is to get the ball into the cup), balance toys (such as a fisherman, pole, and fish, constructed so that he stands upright at the edge of a table and the fish swims under the table), puzzles (in which several pieces of wood or metal are combined in various ways and the puzzle is to assemble and reassemble them), and toys integral to various games (such as balls).

Folk toys have been most popular in places where there is little money to spare for store-bought toys. Thus, in the United States, Appalachia has been a major source of folk toys, made by parents for their children out of available materials, in lieu of spending money for commercially produced toys. In the 1990s, these same toys may be made for sale to outsiders, bringing money into the area. In places where folk toys have been usurped by mass-produced toys, they may still be found in attics and in boxes on back shelves, unused but functioning still as reminders of the family’s past, or in museum collections where they serve as communal reminders of the past (Leeds-Hurwitz 1984).

In the modern urban United States, folk toys made by adults for their own children are becoming rare, as parents are often too busy to make toys, tending rather to purchase them. Anecdotal histories suggest that many folk toys were made by grandparents for their grandchildren as part of child-care responsibilities. Thus, it is to be expected that as

more children are in day-care settings, separated from previous generations, some traditional folk toys will disappear. Also, the widespread increase of time spent watching television implies a decrease in the time children spend learning how to turn natural and discarded materials into toys. In addition, watching television generally includes watching ads for mass-produced toys, increasing interest in them.

However, there is simultaneous movement in the opposite direction: Folk toys are being rediscovered by craftspeople (Spotswood 1975) and are showing up at art and craft shows, there to be purchased by parents who have less time but more money to spend on their children's needs and desires. And, despite the fact that mass-produced toys are available to a majority of children in this country, most children still make some toys for their own use. A few questions to any group of children or parents quickly reveal that many of the same toys made a generation ago are still being made in the late 1990s, including slingshots, paper airplanes, and cat's cradles. Notwithstanding the widespread use of television and other media, children continue to pass a wide variety of traditions from one generation to the next, so it is unlikely that folk toys will ever completely disappear.

Folk toys fulfill too many uses to be eliminated merely because of the availability of commercial toys. As with any toys, folk toys encourage the growth of the child in a variety of ways, including physical, social, and cognitive development. In addition, toys created by children for their own use encourage creativity and a feeling of accomplishment. Wherever children manipulate the elements in their environment, whether that entails using leaves to represent family members in pretend play (Clavard 1977) or combining a stick with a rubberband to make a slingshot, they can be said to have created folk toys. Wherever adults make toys by hand for children, whether they are trained specialists carving elaborate wooden vehicles or parents putting string through a button to make the moonspinner remembered from their own childhood, they also can be said to have created folk toys. Clearly, folk toys of some sort are to be found virtually everywhere there are children.

Despite their wide presence, folk toys have never become a major topic of interest in and of themselves in folklore (or any other field). In folklore, the strong historic emphasis on verbal art can be blamed for discouraging substantial attention to physical objects such as toys. Even with the growing current appreciation for studies of material culture, toys must overcome what has been termed the "triviality barrier" affecting all of children's folklore (Sutton-Smith 1970); that is, they don't seem to be highly significant. In addition, there is a practical constraint: Folk toys, especially those made by children for their own use, frequently have a short lifespan. Even once they have been noticed and granted stature as a potential research topic, it is difficult to study ephemeral objects—like

*Ruth Webster and her doll. Ohio,
1905. Collection J.W.Love.*

sand castles, snow sculptures, or string figures—that may be created and abandoned in the same day.

As a result of these influences, publications on folk toys are few. These tend to fall into several distinct categories: Some treat toys as a craft, providing detailed instructions mainly intended for parents wishing to make toys for their own children (Schnacke 1973); others treat toys as one of several expressive forms indigenous to an area, documenting them for future generations (Page and Smith 1985). Some brief descriptions of toys are included in works by anthropologists or folklorists primarily interested in children's play more generally (Bronner 1988:199–236; Dargan and Zeitlin 1990:11–120). Historically, the majority of the writing on folk toys has emphasized the objects themselves, much as early research on verbal art separated the forms of interest from their speakers and context, compiling lists of proverbs or jokes while ignoring the context from which they were drawn. As our ideas of how to study other forms of folklore change, the goal in studying folk toys is likely to change as well, moving from simple documentation of form to consideration of additional issues.

Theoretically, there are at least five major issues requiring investigation. The first concerns the definition of *folk*: What is it exactly that separates folk toys from other toys? How many children need to play with a toy, how long-standing does the tradition need to be, before it is defined as folk? How many changes are permitted to the original design? What of the means of passing on traditions: When an adult learns the design from a book, and then begins making similar toys, is that still traditional?

The second issue is one of *boundaries*: When commercial toy companies adopt designs for traditional toys and mass-produce them (as happened with the “clutch ball” for infants, now available from several manufacturers), is it still a folk toy? Where should the line between traditionally made toys and mass-produced toys be drawn? What are the critical elements: the design? the maker? the quantity available? the materials? the connection between the toymaker and the child given the toy?

The third issue is related to *community*: What is the community that should be studied as the appropriate environment for a folk toy? Traditionally, it was sufficient to assume a geographic region or an ethnic group as the obvious community, but in the heterogeneous world of the late 20th century, in which people move around and ethnic groups are far from the distinct homogeneous communities they once were, it is a more complex matter. When someone from Appalachia moves to the Midwest and gives new neighbors traditional toys, which they then pass on to their own children, what is the group within which the particular toy should be understood to exist?

The fourth issue concerns *context*: Serious thought needs to be given to what information must be included in a study of folk toys. To date (1995), the emphasis has been on the toy itself, but that is rather limited. At the minimum, information concerning three critical components—the toy, the maker, and the user (the functional roles of maker and user should be distinguished, even though the same person may fulfill both roles)—seems essential. This implies incorporating into a single study description of the particular objects used as toys (how they are made and of what materials, how they are used, the geographic region in which they are common), description of the maker and the role of toy making in his or her life (how the skill was acquired, how often toys are made, the reasons for making them—for their own use or for others, as gifts or for sale), and description of the larger social context (how the toys function for the children who play with them, what sort of games or play they encourage, what sorts of identity they express, how they serve to develop creativity).

The fifth issue is one of *creativity*: Folk toys are often said to require creativity on the part of their makers and to encourage the development of creativity on the part of the children who use them. This should be investigated. What do toy makers have to tell us? What other arts or crafts are toy makers involved in? What do studies of children making their own toys demonstrate? Are there, for example, any connections between early interest in toys demonstrating scientific principles (such as balance toys) and later interest in science?

Answering these and other related questions will provide a strong foundation for the study of folk toys as it develops in the future. Documenting what folk toys look like and how they are made is important, but it is only one part of what there is to understand. Discovering the roles folk toys play in the social world, for the children who use them as well as for everyone who makes them, should be the ultimate concern.

Trapping

The practice of capturing animals through the use of any mechanical device that kills or immobilizes the prey without requiring the presence of the trapper. The use of such devices is ancient: Egyptian tomb paintings depict the use of fish traps, but the practice undoubtedly has its roots in prehistory, with the earliest use of tools of any kind.

Fur provided a major economic incentive for European explorers of North America from the first, and all early accounts of the riches of the New “World include descriptions of the abundance of valuable fur-bearing game. The development in the 15th and 16th centuries of a practical, reliable, and portable metal-spring trap that could be manufactured in quantity and packed into the wilderness with ease gave further impetus to the exploration of the American frontier. The Hudson Bay Company, founded in 1670 and still in existence, provided the foremost outlet for sales to the European market.

The dramatic and colorful role played by the professional trapper in American history has overshadowed the ongoing role of part-time practitioners—farmers and woodsmen with sufficient skill to put food on the table, rid their land of nuisance species, and supplement their income with fur sales. Most contemporary trappers belong to this part-time category, if only because state regulation of the activity in the United States limits the trapping of most species to an annual season of a few weeks or months. In the 1990s, the most frequently trapped mammals in the United States include beaver, opossum, skunk, muskrat, bobcat, mink, otter, raccoon, marten, bear, red and grey fox, nutria, and coyote.

Like hunting and fishing, trapping is an activity that must be learned by observation and experience. Many rural youngsters begin with simple homemade snares, pitfalls, deadfalls, and boxtraps, the designs for which are often centuries old or more. However, most serious would-be trappers eventually graduate to the steel-spring trap. To do so, they typically enter into an informal apprenticeship with a more expert individual who instructs the pupil in highly traditional aspects of the activity such as the habits and

temperament of the target animals, the placement and construction of a trap set, the concoction and use of aromatic baits and lures, the responsible regular running (checking) of the trap line, humane dispatch of appropriate target animals, and techniques for release of accidental catches. In many rural communities, trapping under the guidance of a knowledgeable older man is considered an especially appropriate training for young boys, teaching them the virtues of patience, careful observation, hard work, and responsibility. Because some capital is tied up in the purchase of equipment, trapping is also understood to provide early training in financial management. Furthermore, successful implementation of educational and regulatory programs concerning animal population control at the state and local level since the 1930s has strongly reinforced the conviction among trappers that their work enhances the general health and strength of the fur-bearing species in their region. The predominant metaphor is agricultural: A trapper frequently speaks of “harvesting,” and a female or young male of a target species that is released is “left for seed.”

The activity thus carries for many participants a complex set of positive values and sentiments that go far beyond its practical utility. In addition, although few trappers trap purely “for the sport” in the same sense that American hunters hunt and fishermen fish, trapping affords its competent practitioners enormous personal satisfaction difficult to convey even to sympathetic nontrappers.

Historically, trapping has never shared the aristocratic traditional heritage that is a component in hunting—a heritage deriving from the deeply held classical and European belief that the hunt provided the best possible means for peacetime maintenance of military skills. Within the Anglo American tradition, the aristocratic youth George Washington hunted; Abe Lincoln, a backwoods boy, trapped. Among the general public, the romantic historical picture of the trapper on the frontier coexists uneasily with increasingly negative images of the contemporary trapper arising in part from the anti-fur stance of the animal rights movement, which gained momentum in the 1970s.

Trapper reaction to the “antis” has fundamentally altered the culture of trapping. Where once the communal aspect was limited to the dyads of the teacher-pupil relationship and the partnerships established between pairs of experienced trappers, trappers have now organized groups on the regional, state, local, and national levels for the purposes of educating the general public, neutralizing the political momentum of the animal rights lobby, and cooperating with state game agencies.

These organizations provide a forum for a great deal of informal interaction as well, adding substantially to the folklore of contemporary trapping. Meetings provide an opportunity to share narrative accounts of the adventures of the last season and to pass around the latest “anti” jokes and stories. (A whole cycle of humorous tales circulates concerning the animal rights activist Cleveland Amory, most of which turn on his putative ignorance of “real-life” animal behavior.) Snapshots of previous seasons’ take are often brought out: Because the catch is sold, photographs provide the sole means of visual documentation. Pelts are arranged with a careful eye to pleasing and impressive composition. Garb at the meetings often includes items identifying the wearer as a proud trapper: Baseball caps, enamel pins, and T-shirts with the organization logos and slogans abound, although such clothing is less commonly used in the field, where the requirements are warmth and durability.

The meetings also provide an opportunity for participation by wives and girlfriends. Although women are seldom full participants in trapping itself, they are often very active in the local trapping organizations, providing support such as bookkeeping, food preparation, dues collection, and fund-raising through women's auxiliary organizations.

Trapping as a traditional activity has not been extensively explored by folklorists, with the exception of beliefs documented in the hunting sections of the major compendiums compiled by Wayland D.Hand and others. Most trappers are pessimistic about the future of the pursuit; it is possible that within a generation or two it may have passed completely from the roster of traditional American outdoor skills, with its latter years relatively undocumented.

Travis, Merle Robert (1917–1983)

Folk musician known for his distinctive guitar style, folk- and country-music vocal performances, and original compositions. Travis perfected and popularized the Muhlenberg County, Kentucky, guitar-playing technique known as the “thumb style” and, later, “Travis-picking,” in which the thumb and index finger play simultaneously a song's melody with rhythmic, harmonic, and bass accompaniment. Although the paradigm of this mediod was introduced to the region in the 1920s by the African American folk musician Arnold Shultz, Travis learned it from White coal miners, Mose Rager and Ike Everly in particular. The technique was subsequently adopted by numerous musicians, including the master guitarist Chet Atkins, becoming a prominent instrumental element of the commercial country sound of the 1940s and 1950s.

Travis was also a folksinger, performing such pieces as “John Henry,” “I Am a Pilgrim,” and “Nine Pound Hammer” throughout his career, and a composer who wrote both folklike and popular country-western songs. Many of the tunes in Travis' “folksong” mode dramatized and celebrated the lives and work of coal miners in his native region during the 1930s, some becoming popular nationally. “Dark as a Dungeon,” for example,

has been widely recorded, as has “Sixteen Tons,” which was a No. 1 hit for Tennessee Ernie Ford in 1955.

In the mid-1940s, Travis became a major figure in the Los Angeles country-music scene, writing and recording several hit “honky tonk” songs in the Western Swing idiom, among them “No Vacancy,” “Sweet Temptation,” and “Divorce Me C.O.D.” Travis was given a Pioneer of Country Music Award in 1974 and was inducted into the Songwriters Hall of Fame in 1970 and the Country Music Hall of fame in 1977.

Trickster

Considered by scholars of religion as humanity’s most ancient god. “Trickster” is a truly universal figure with many faces and roles. In North America, he is ubiquitous in Native American lore, where he takes the form of Coyote, Rabbit, Raven, and others. He is equally strong in African American traditions, where he is seen as Brer Rabbit, John, and Shine, among others. He appears in the traditions of yet other minority groups, such as the Latter-Day Saints and European immigrant groups. He lurks in European antiquity in the form of Hermes, Loki, and Christ, but—provocatively—it is now difficult to identify anything in the folklore of mainstream Euro-America that smacks of Trickster, unless the tall tale is rooted in that tradition.

Trickster is more likely to be discovered through roles and functions than through labels and appearances. As the scholarly name suggests, one of the characteristic activities of Trickster is the playing of tricks. Inordinately clever, he frequently lures others into humiliation, injury, or even death. He gives false hope of new skills and powers, but others are harmed by the attempt to emulate him. He betrays anyone who trusts him, and, in the venerable tradition of con artists everywhere, he reveals their venality and stupidity. Even in the grimmest of situations, as when he murders babies, he is likely to leave a propped-up smiling head as a final trick for the returning parent. As if to redress the balance, he reveals his own astounding ignorance of even the most basic realities, as in the story of his challenge of Rattlesnake to a biting contest, with fatal results to himself. In truth, Trickster is as much tricked as tricker in the countless stories about his dealings with others, often leaving the analyst to ponder who is the Trickster.

Especially notable in the Native American Trickster, but present in his alter egos in other traditions, is the trait of heedless self-gratification. For the Trickster, to feel a desire is to satisfy it. The impulse alone is adequate motivation, and there are no strictures of morality or rationality to impede him. This characteristic has led to major Freudian interpretations of some of the Trickster plots, for much of his behavior seems a clear illustration of the meaning of the id, neatly separated as it is from the ego and superego. In many texts, Trickster appears as a figure bent on self-gratification at any cost, and he is as heedless of personal consequences as he is of the cost to others. For him there is no past or future, only the present fulfillment. Paul Radin and others have pointed out his preconscious state, as seen in peculiarities such as his penis kept rolled up in a pack on his back, and his anus, which can be dealt with (and punished) as a separate person. As an alternate psychological viewpoint, C.G.Jung, in an essay included in a publication of Radin's study, approached the figure as a cultural expression of the archetype of the "Shadow," which exists in all humans. While there is not likely to be any sort of unanimity concerning psychological interpretations of folktale figures, both the Freudian and the Jungian perspectives offer helpful approaches to the complexities of the Trickster, which manages to confound all simple attempts at understanding.

In any case, his identification as the personification of the id makes Trickster the perfect antihero by almost any definition. He is the individual who is isolated from society and who has no concern for it. He is the one creature without goals for himself or others. He is a menace to society without being its enemy, and he brings disaster to others without any malevolence. He is the rule breaker par excellence: He mocks religious rituals, scorns the "proper way to do anything from cooking to war, has sex with his grandmother, and betrays all trusts." Since the Native American worldview stresses the ability of powerful people to do shape shifting, he even can transform himself into a woman and marry (temporarily) the son of a chief, thus mocking even sex, marriage, and family. Trickster is the breaker of taboos, and it does not take full Freudian analysis to see in that fact the source of his humor. There is something simultaneously horrifying and satisfying about his breaking the rules all humans in society chafe at. He does, it has been observed, what everyone would like to do, but cannot, whether because of fear, reason, or virtue. Trickster is the ultimate poor role model for living in community, and thus the opposite of the hero.

Despite his antiheroic role, however, he also manages sometimes to be the benefactor of society. In a fascinating set of Native American stories, he participates in the creation of the present order. In some cases, he creates good things just by accident or as a by-product of activities with other purposes. In other cases, as in the Iroquoian creation stories, he alters the creator's work to make it less perfect, as when he changes fruits to pine cones and makes the rivers run only in one direction, so humans will have to work hard to paddle upstream. In these myths, it is clear that Trickster is operating at some level of "divinity" and is connected with the primal forces of the universe. The scholarly label "Transformer" has thus been affixed to this form of Trickster as a way of warning people that something far beyond the playing of tricks is involved here.

The Trickster-Transformer is, somewhat confusingly, at least partly a heroic figure. He embodies powers that are legitimate goals for humans, and he does, in fact, accomplish good things for human society, which is worth emulating. He is thus to some extent a hero, after all. This heroic trait is seen much more clearly in African American

Tricksters, where the trait of cleverness seems to rise to prominence in a way not seen in Native American traditions. The African antecedents were strongly embodied in American slave traditions, and the resulting tales of Uncle Remus have become a part of all Americans' lore. Br'er Rabbit, clever nemesis of the more physically powerful animals, does not stand alone, however, because the more human "John" is still outwitting "Old Marster" and other representatives of the dominant White society. The cleverness of the Trickster is probably the ancient characteristic that transformed the figure into a protest element for African Americans, for Trickster is the appropriate hero for the powerless—he is clever, glib, and extraordinarily intelligent; he understands his opponents much better than they understand him, uses their weaknesses against them, humiliates them repeatedly, and yet maintains his mask of submissiveness.

In Trickster traditions as in so many other aspects, North America became a melting pot. As alien versions of the figure came together, new syntheses arose. One of the most debated occurred in the Southeast, where European Tricksters vanished as African and Native American Tricksters merged. The Hare of the Eastern Woodlands met the Rabbit of Africa, and motifs were exchanged, leaving scholars to argue for the primacy of one over the other for more than a century. Aurelio M. Espinosa, in studying one single tale, argued that the complexities of the relationships of European and African folklore before reaching the New World have to be taken into account, and he found that the Spanish influence in the American Southeast was more powerful than is usually thought. It is unfortunate that the folklore of both groups was collected late, for if earlier data were available it might be possible to trace the changes in plot, form, and function of the Tricksters in the emerging South. It seems clear that the exchanges went in both directions, but it would have been of great interest to be able to follow the steps in the evolution of the new syntheses.

In view of the multiple roles and characteristics of the Tricksters in North America alone, it probably is a mistake to lump all of them together under the one categorical name "Trickster." Yet, there are unifying diemes that make that act thought provoking, if not reasonable. As noted above, the psychological interpreters have found universal meaning in some aspects of the Trickster, and those discussions cannot be easily dismissed. One scholar, Mary Douglas, has offered a philosophical argument from another perspective. Focusing on African Tricksters, she suggests that the ultimate function of the figure is to remind people embedded in culture that their culture is itself an invention and is, therefore, limited. From that view, the Trickster is a god far beyond cultural gods, one whose awesome power is that he represents Reality beyond culture. There is some support for that interpretation in the Native American tradition of sacred clowns, which can be seen as a ritual-dieatrical version of the Trickster in several ways. As commentators have pointed out, there is much to ponder in the fact of cultural institutionalization of ritual figures whose main function is to mock the rituals in which they appear.

It is clear that mainstream American culture does not permit mockery of the sacred, much less insist upon it, and Douglas' perspective at least gives some insight into why the obnoxious behavior of the Trickster-clown might be considered so important. That argument may help explain why the Trickster seems to have vanished from European American folklore, for mainstream American religion and philosophy seem to have little tolerance for prophetic critiques, tricksters, or sacred clowns. It may be that the

contemporary Tricksters in mainstream American society will have to be sought not in folklore, but in popular culture, in such phenomena as comic strips and rock bands.

Truckers' Folklore

Oral traditions shared by American truck drivers. Because they work in relative isolation and need timely information, truckers rely heavily on informal oral networks. Though handy and often entertaining, these networks encourage fantastic tales, both true and untrue. Tales of the small town—name forgotten—where one man served as patrolman, judge, jailer, banker, and telegraph employee may be safely discredited only because a trucker would never forget the name of such a town. Equally fantastic stories about a scalemaster extorting money from truckers (and that scale having been bombed) are true. The following riddle-joke (which has variations among other groups) illustrates the problem. “Q: What’s the difference between a fairy tale and a trucker’s story? A: The fairy tale starts out, ‘Once upon a time,’ and the trucker’s story starts, ‘This ain’t no lie.’”

Truckers have unique versions of urban legends. Rumors of the truck in which a driver died (and literally exploded after several summer days) parallel the urban legend about a cheaply

Workers load tires onto a truck for shipment. Charlotte, North Carolina, 1943. Photo John Vachon. Library of Congress.

available “Death Car” whose successive owners cannot rid it of its smell. In the trucking variant, the smell, which has resisted sandblasting, causes heart attacks and blackouts, and the death truck’s number is said to be the “Beast s” number, 666.

Stories drawn from trucking tradition indicate that truckers may once have enjoyed their own versions of “The Vanishing Hitchhiker,” though these are not in circulation in the 1990s. In those versions, it is the truck driver who vanishes mysteriously. In one version, a rescued rider conveys the drivers greetings to truck-stop employees and is-told that years before, the trucker drove off a cliff to avoid a stalled school bus. His ghost now helps motorists. In another variant, the ghost adopts and trains a fledgling driver before disappearing, leaving the newcomer with his truck.

Two other genres are the cautionary tale and the Trickster tale. In most cautionary tales, a truck driver suffers for unconscientious or noncollegial behavior. Disasters (spilled, spoiled, or stolen loads, collisions, arrests, and so forth) follow shoddy work, failure to help colleagues, or refusing radio communication. Trickster tales, on the odier hand, illustrate cleverness in fooling law-enforcement personnel, toll-road authorities, shippers, and occasionally even dispatchers. Tricks range from practical operating tips to the impractical tales of a man who avoided punishment by pouring coffee on his illegal

log book and claiming that his urine bottle (to be used by truckers when they can't or won't stop; more a joke than a reality) had spilled. Both genres illustrate an ethic of personal responsibility: drivers who do not adhere to that ethic are punished, as are officials who challenge it.

CB (citizens band) radio use in the 1990s is more subtle than the flashy styles popularized in the 1970s. Numbered signals have faded, leaving only standards such as ten-four (agreement), and ten-twenty (location). Meanings of other words have shifted: the once-friendly address, "good buddy," is now considered an insult. And older terms (like "discolights" for the signal lights atop police cars) are being revived. Most surviving terms are practical metaphors, like "chicken coop" (scalehouse), "load of postholes" (empty trailer), or "bingo card" (permit stickers). Others compare trucks and humans: Driving is "running," the cab's front may be a "nose," an overturned vehicle is "belly-up," nontruckers are "four-wheelers," and prostitutes are often "commercial carriers." Because one shouldn't "walk" (overlap speaking) on someone else's transmission, many traditionalized speech patterns, like saying "come on" or "four" after speaking, reflect etiquette shaped by the CB.

Handles (CB nicknames) are social overtures, as the names "Country Convert," "Rambling Rabbi," "Florida Boy," and possibly "Moonshine" indicate. "Salt Shaker," who collects salt and pepper shakers, is often hailed by "salt shakers" who salt winter roads. And the handle "Eightball" has been used by both a pool player and a balding African American trucker. Other CB names express images of trucking, as do "Lone Wolf" and "Midnight Runner." And since a shared sense of persecution can evoke community among truckers, most can identify with "Oudaw," "Trouble," and "Nobody." Because truckers use the CB for everyday communication, they are unlikely to use sexy names as their primary handles, though some adopt secondary handles in order to flirt or joke anonymously. Some truckers clown, pretending to be drivers for another company; when other drivers return the "favor," this creates a running gag.

Running gags are popular among truckers. For example, the straight line, "Be quiet so I can get some sleep," predictably elicits a chorus of "Turn your radio off!" Neither the straight man nor the respondents actually believe anyone would ask an entire truck stop to refrain from talking; they are mocking their own radio use. Some running gags convey social values by echoing belligerent speakers with a barrage of caricatured threats. Others are less didactic: Truckers caught in the same traffic jams have been known to experiment with limericks and animal imitations. Not surprisingly, running gags are most common in traffic jams, truck stops, and other situations where killing time is a shared goal.

One running gag is part of a cycle of jokes about a company we'll call Huge. A Huge truck in the act of parking elicits a chorus of "Watch out! Huge's backing up!" (In contrast, Huge drivers tell of a colleague who sports a striped cane and dark glasses as a gag.) In another joke, a Huge driver who is reprimanded for ignoring a crashed colleague responds, "Ha! We don't have wheels on top of our trucks." The jokes are also visual: Graffiti beside toilet-paper rolls sometimes reads "Huge job applications." In this and other cases, jokes are used to force collegiality: Huge drivers are snubbed or teased because their company is considered unethical.

All of these folklore forms help truckers discuss and share feelings about their work. Slang, jokes, and narrative traditions depict conditions and convey values important to

professionalism, and CB handles allow truckers from diverse backgrounds to announce identity with a minimum of fuss. But shared culture does not mean homogeneity. Within the traditions outlined, new diversities have arisen: haulers of various commodities, drivers for each company, union men, and independents all have unique traditions. If specialization and diversity are tests of true cultures, then trucking delivers.

Clover Williams

Turnbo, Silas Claiborn (1844–1925)

Pioneer collector of Ozark folklore and oral history. Turnbo amassed one of the most important collections of Ozark material. He acted on his own without funding, working intuitively without prior guidelines and often without much encouragement. Turnbo's collecting began as early as 1866 and continued at least until 1913. His earliest interviews were, apparently, done incidentally; whenever he met someone with worthwhile information, he usually made notes and filed them away for later use. It was not until the 1890s that he started thinking in terms of a larger project, one in which he actively sought out old-time Ozarkers who would supply him with details about the past.

Turnbo's material was first published in numerous columns about "old-times" in several Arkansas and Missouri newspapers from 1898 to 1907. Two self-published books, both titled *Fireside Stories of the Early Days in the Ozarks*, appeared in 1905 and 1907 and registered disappointing sales. Attempts to convert his massive collection into profitable books were unsuccessful. In 1913 Turnbo sold his collection to William Elsey Connelley, secretary of the Kansas State Historical Society, for \$27.50—the only money Turnbo ever received for his work. Portions of the Turnbo manuscripts made their way to various libraries in Arkansas and Missouri, and in 1987 six volumes of Turnbo's stories were printed without contextual commentary.

Turnbo's collectanea is still valuable because the data are very detailed and the documentation is good. It is strongest in the areas of material culture and folk narrative.

Twain, Mark (1835–1910)

Pen name of Samuel Clemens, best known for works set on the Mississippi River, including *The Adventures of Tom Sawyer* (1876), *Life on the Mississippi* (1883), and *Adventures of Huckleberry Finn* (1885). Twain was an outstanding localcolor writer, one whose skills lay in capturing the peculiar characters, humor, mannerisms, and settings of American regions.

Mark Twain in 1907. Photo Underwood & Underwood. Library of Congress.

Twain was born and grew up in Missouri, learning journalism and printing from his brother. He had a short-lived career as a riverboat pilot on the Mississippi River just before the Civil War. Then he accompanied his brother west to Nevada and California, working as a reporter and writer from 1861 to 1866. He eventually married and settled in Elmira, New York, and later in Hartford, Connecticut, although he traveled widely.

Twain was a charter member of the American Folklore Society in 1888, along with a few other American authors such as Edward Eggleston and Joel Chandler Harris. Twain was already aware of the popular interest in American folklore. In 1882 he had met Joel

Chandler Harris and George Washington Cable in New Orleans and proposed a national tour, with each author speaking and reading from his own (folklore-based) works. Harris refused because he was too shy for stage appearances, but Twain and Cable did tour from November 1884 to February 1885. Like the other writers who helped form the American Folklore Society, however, Twain dropped out after only a few years, probably because the scientific interests of the society's ethnologists did not coincide with his own interests.

Many of Twain's publications are of interest to folklorists. He is widely known for his ability with tall tales (such as "The Notorious Jumping Frog of Calaveras County" and, in *Roughing It* (1872), "Grandfather's Old Ram") as well as humorous tales on himself (such as "The Private History of a Campaign that Failed" and "The Story of a Speech"). His works not only include examples of many forms of folklore, but also point out their value in regional cultures. The forms he recorded and commented on range widely, from folk speech to folk customs, from folk art to folk games. His masterpiece, *Adventures of Huckleberry Finn*, is a storehouse of folklore. The book's plot begins with a folk belief (Huck's flicking a spider into a candle, killing it, and, therefore, causing bad luck—and his feelings of helplessness in not knowing how to avoid the bad luck). Later chapters contain many other examples of folklore, from the "witch-riding" of Jim in Chapter 2 to a list of "signs" in Chapter 8. In fact, *Huckleberry Finn* is arguably a work *about* folklore, preferring it to Tom Sawyer's "booklearning."

Twain captured in his works the sense of humor, character types, and customs of the West and Mississippi River region. Twain's works gave folklore prominence and demonstrated how rich and significant folklore is in American culture.

U

UFO Lore

Narratives and beliefs concerning unidentified flying objects, supposed extraterrestrial spaceships visiting the Earth. Gallup Polls indicate that nearly all Americans have heard of UFOs, several million claim to have sighted one, and approximately half of the population believes they are real and not illusory. On this basis, UFOs qualify as perhaps the most vigorous paranormal belief of the modern age.

Pilot Kenneth Arnold watched nine silvery, disk-like objects fly in front of Mt. Rainier at supersonic speeds on June 24, 1947. The press summarized his description with the term “flying saucers,” beginning a continuous symbiosis of UFO lore and the mass media. Hundreds of people throughout the country reported these disks over the next two weeks. Individual narratives of personal experience count as the basic unit of UFO lore, but several times since 1947 the occasional sighting has grown to a wave of hundreds, even thousands, of reports coming from wide areas over a short period of time, usually a few weeks to a month. Flying-saucer reports spread worldwide soon after Arnold’s sighting.

The typical reported UFO experience is the unexpected observation of a mysterious aerial object by persons going about their everyday activities. It comes and goes, leaving behind only puzzlement and wonder. UFO reports range in complexity from descriptions of a distant light in the sky to close encounters, when witnesses observe the craft in detail or even glimpse its occupants. Strangest of all are abduction reports. Short aliens with bulbous heads and enormous eyes capture humans from cars or bedrooms, float the captives inside a UFO, and subject them to a bizarre and painful medical examination. It often includes the harvest of eggs and sperm to create hybrid alien-human children. These cases have burgeoned in number since the 1970s.

UFO beliefs have proved fertile for elaboration and extension. Some investigators speculate that “ancient astronauts” landed in the distant past, building such monuments as the Great Pyramid and inspiring ancient myths. Others attribute the disappearance of ships in the Bermuda Triangle and alleged mutilations of cattle in the West to UFO activity. A cosmic drama of good versus evil plays out in the conflicting opinions of “contactees,” who claim to have met beautiful “Space Brothers” concerned with the salvation of mankind, and the abductees, who claim to have encountered dwarfish aliens bent on some exploitative and soulless project.

A rumor-legend persisting from 1947 in the 1990s concerns the crash of a UFO in New Mexico. The Air Force recovered the debris and several alien bodies, which have

remained hidden ever after. A government conspiracy to hide the truth about alien visitation is an enduring theme of UFO lore. Sinister “Men in Black” intimidate witnesses to remain silent, and, according to an especially florid rumor, a government pact with aliens allowed them to build underground bases in the Southwest. The agreement went sour, and in the 1980s President Reagan ordered the “Star Wars” project not to defend against the Soviets, but to flush out the unwelcome invaders.

The folk of UFO lore divide into two camps—proponents and opponents—locked in spirited dispute over UFO reality. Proponents range from interested believers, to eccentric cranks, to serious “ufologists.” The latter group investigates cases, writes about the phenomenon, and organizes societies to carry on ufological research. These societies publish periodicals that open the main channel of contact among the far-flung membership. Ufologists argue that once they separate hoaxes and misidentifications from the UFO record, a residue of detailed, well-documented cases stands as persuasive evidence that a genuinely mysterious phenomenon exists. It includes seemingly physical machines with capabilities surpassing any known aircraft, and occupants of unearthly appearance.

Opponents assert that all cases reduce to conventional causes with no residue left over. These skeptics point out media coverage and science fiction as sources of expectation, while the proneness to fantasy of some witnesses and leading questions from investigators seeking to confirm their personal beliefs suffice to realize even the most exotic tales. They also observe that UFO reports are simply not strange enough; they replicate the content of legends about ghost lights, demonic encounters, or fairy kidnap, preserving plot and function while transforming outmoded supernatural traditions into the up-to-date guise of extraterrestrial visitation.

Ukrainian Americans

Immigrants to Canada and the United States and their descendants from a territory in eastern Europe now officially called Ukraine. This country borders with Romania, Hungary, Slovakia, Poland, Belarus, and Russia. When the first Ukrainians came to North America, their territories were part of the Austro-Hungarian and Russian Empires. Ukrainians arrived in three waves: 1870s–1914, 1920–1939, and 1947–1955.

Ukrainian immigrants during the first wave settled in Pennsylvania, where they found work in the mines, as well as in New York, New Jersey, Michigan, Ohio, Illinois, Connecticut, Massachusetts, and Rhode Island, usually being employed in factories there. A small number settled elsewhere and became farmers. In Canada the first wave of Ukrainian immigrants settled mainly on homesteads on the prairies, where a significant number are still involved in agriculture; others worked in mines and on railway gangs. In the 1990s, Ukrainian communities are found in major cities of both Canada and the United States.

Ukrainians who came to North America derived from a variety of dialectal regions. The majority of immigrants in the first wave had little or no education but a rich oral lore. The settlement patterns in the New World (either urban or with huge distances between farms) did not resemble the village or small-town life to which they had been accustomed. Also, the new settlers now found themselves in a foreign-language milieu. These factors weakened the traditional oral-lore processes among Ukrainians, especially among those born in North America. A form of bilingualism, sometimes termed “macaronism,” developed among Ukrainian Americans in which English words became part of Ukrainian-language texts and vice versa. An example of this is found in the following lyrics (with English words italicized):

Skrypky hraly i tsymbaly; *Dzhoniz Meri* tantsiuvaly.
Tantsiuvaly *dyfrent* valets; *Dzhoni Meri* stav na palets.

[The violins were playing, and so was a hammered
dulcimer; Johnny was dancing with Mary.

They were dancing a different waltz; Johnny stepped
on Mary’s toe.]

In many instances, Ukrainian names were Anglicized (Bill and Bob substituted for the Ukrainian given names Vasyl and Bohdan) or, North American place names were humorously Ukrainianized (*Derzhy syto* [hold the sieve] was used for Jersey City and *Mizerota* [poverty, wretchedness] for Minnesota).

Many examples of minor verbal genres—proverbs, proverbial sayings, riddles, and the like—are found in the speech of Ukrainian North Americans. Proverbs included “Not every pig comes on four feet” and “A good wife and health are the greatest treasures.” Riddles are found in song texts or early childhood education material, for example:

“There are no windows or doors yet the house is full of people”—Answer: Pumpkin or melon seeds, or “Who died yet was not born?”—Answer: Adam. Rhymes and folk poetry also were part of Ukrainian settlers’ cultural baggage. A great number of these texts were produced in North America, and others were published in newspapers or in separate collections. One popular example is Fedyk’s *Pisni imigrantivpro Kanadu i Avstriiu* (Immigrant Songs about Canada and Austria) (1908).

North America as a land of milk and honey became the subject of myths and legends. After generations of Ukrainian settlement in America, stories appeared to “prove” that Ukrainians arrived in the New World much earlier than most people believed. (A certain Lavrentey Bohoon supposedly accompanied Captain John Smith to Jamestown.) Ukrainian folktales also made their way to the New World. Some were repeated with minimal variations. For example, an anecdote is told in which a husband on his way to town is instructed by his wife to buy her a pair of boots, “*bom bosa*” (because I go about barefoot). He returns home without them, saying that “Bombosa” boots are not sold in any of the stores. Other stories went through major transformations as with the following tale:

There, in Winnipeg, I was told about this Dowbush. That these big landowners had a big orchard in their village; well and right in the midst of it they would gather. Well and there was Dowbush.

A certain woman whose name was Zazulie [cuckoo bird]...Well and...“Crawl up there Zazulie!”

And she crawled up there on the fruit tree, and he shot her because she was Zazulie [a cuckoo bird]. Dowbush,

Easter eggs, painted by Maria Brama, using traditional Ukrainian motifs. Chicago, 1977. Photo Carl

*Fleischhauer. American Folklife
Center.*

he says, shot a cuckoo bird on a tree. (quoted in Rudnyc'kyj 1956:79)

In Ukrainian folk tradition, the real Dowbush was, in fact, a highwayman hero who robbed the rich and gave to the poor.

Folksong texts had greater staying power than narrative lore, partly because the melody, meter, and rhyme served as mnemonic devices. It is not unusual to hear third- or fourth-generation Ukrainians in North America singing folk or popular Ukrainian songs without understanding the lyrics. A great many Ukrainian folksongs are of a lyrical nature. For example,

[O] the cuckoo cooed,
The cuckoo cooed.
O my sweetheart is in the old country,
And I, poor one, am here.
And the cuckoo cooed
On the wide bridge,
“Do come, do come, my sweetheart,
At least visit me.”
My head is aching so much
That I’m squinting my eyes.
There’s no one to ask me
Why I’m worried.

Other folksongs are more historical, including the recitative epic *Duma* forms (performed in North America almost exclusively by professional singers often accompanied by the national Ukrainian instrument, the *bandura*). Folk music performed by North American Ukrainians has changed from traditional tunes to more popular ones, although polkas and waltzes are still common at Ukrainian weddings. Ukrainian folk music is performed by groups ranging from smaller bands with a traditional instrument, such as the *tsymbaly* (hammered dulcimer), to the more elitist and urban band. The hurdygurdy (*lira*), which was popular at the turn of the 20th century when a great many Ukrainians came to North America, is in the 1990s almost unknown among Ukrainians in the New World. Other instruments, such as the *drymba* (Jew’s harp) have become exotic.

Many of the customs practiced and believed in by Ukrainians in the old country survived in North America, at least in the first and second generations, and superstitions are not uncommon among Ukrainians. For example, Ukrainians may not greet guests or pass items to one another across a threshold for fear of bad luck. Black cats crossing a path bring bad luck just as they do with mainstream North Americans. Unmarried persons should not sit at a corner of the table during a meal, because then they won’t get married for seven years. Some superstitions exhibit white magic, such as, for example, throwing

knives and forks on the ground when storm clouds approach someone's farm to avoid hail damage.

Traditional calendar customs and rites of passage were much richer in the old country than in the New World. In North America, only Christmas (known for its meatless meal on the eve of the holiday and the mumming and caroling activities that go on almost to Epiphany) and Easter (preceded by ritual whipping on Palm Sunday and the decorating of special Easter eggs that make up part of the food basket blessed at the church service) are celebrated by the majority of the Ukrainian American population. Some communities visit with the dead and have their graves blessed either on the Sunday after Easter or on Whitsunday.

Parish feast days and weddings are occasions for community celebrations, as are the newer festivals that bring in visitors from several states or Canadian provinces. Ukrainian social dances performed in the old country on Sundays and at weddings to regional folk tunes survived to some degree in North America. A uniquely North American *kolomyika* or *hopak* evolved in the 1960s, combining the spontaneity of social dance with the spectacle of rehearsed acrobatic moves from a staged dance. Ukrainian dance on stage has become an extremely productive and visible symbol of Ukrainian culture in North America.

The once popular one-act plays have either disappeared or made room for more professional performances. Some common folk gestures used by Ukrainians include *the figa z makom*, performed with the thumb sticking out between the index and long finger signifying a big "nothing" for the recipient; the flipping of the long finger against one's throat signals a "drink" or "drinking." A gesture for a stupid act or stupidity is often made by slapping one's forehead or by pointing one's index finger to one's temple and rotating it back and forth. Hide-and-seek and other chasing games have been popular among children, and various traditional card games, such as *troyka* and *kaiser* among Ukrainian adults.

When Ukrainians moved into unsettled or uncultivated parts of North America, they tended to construct the traditional thatched-roof buildings with clay ovens or other structures they had possessed in eastern Europe. In some cases, temporary dugouts were constructed before a pioneer family could move into more comfortable housing. But Ukrainians soon adapted to mainstream framed-lumber construction, although the inside of the dwelling would often be decorated with religious icons or other important cultural symbols, such as portraits of the poets Shevchenko, Franko, or Lesia Ukrainka. Such decorations can also be found in modern city houses or apartments. Many Ukrainian churches were built in the first half of the 20th century, undergoing several unique architectural stages and producing many unmistakable rural and urban landmarks across the continent.

Folk arts and crafts have been maintained more than oral folklore expressions since the command of one's ancestral language is not necessary to produce these items. The best-known examples are the batik-decorated Easter eggs called *pysanky*, which are sold throughout the calendar year. The embroidery of shirts and other forms of clothing as well as ritual towels is another tradition retained in North America. Folk costumes are especially valued by members of Ukrainian dancing ensembles. The more ambitious a repertoire of an ensemble, the greater the likelihood of its members possessing a variety of folk costumes. In some families, during the main religious or community celebrations,

the wearing of embroidered items of folk costumes is encouraged. Folk-medicine rituals persist, notably for healing victims of the evil eye.

Ritual foods were mentioned above as part of calendar customs. The meals prepared for Christmas (with twelve meatless dishes) and Easter (including sausage, eggs, butter, cheese, and *paska*, or Easter bread) tend to emphasize the Lenten and post-Lenten periods respectively. Olier folk foods for which the Ukrainian kitchen is known include *holubtsi* (stuffed cabbage rolls), *kapusniak* (sauerkraut soup), *pyrohyvarenyky* (dumplings), *studenets* (headcheese), *kovbasa* (garlic sausage), *oseledtsi* (herring), and in some cases *salo* (pork fat). Ukrainians in general do not shy away from alcoholic drinks. A well known Ukrainian proverb is: *De kovbasa i charka, mynet'sia i svarka* (When you have garlic sausage and a drinking cup, even an argument will cease). The lifestyle of Ukrainian settlers of east central Alberta from 1892 to the 1930s is represented at an outdoor museum named the Ukrainian Cultural Heritage Village, east of Edmonton, Alberta. *Bohdan Medwidsky*

Uncle Remus

Fictional narrator of the 19th-century African American folklore compiled by Joel Chandler Harris. A Georgia journalist, Harris recorded the Uncle Remus stories depicting such characters as protagonist Brer Rabbit and his adversary Brer Fox. Folklorists consider Harris' interpretations, derived from internationally told folk motifs, to be the first compilation of authentic African American folklore.

While working on a Georgia plantation during the 1860s, Harris listened to slaves tell stories. In October 1876, as associate editor of the *Atlanta Constitution* newspaper, Harris created Uncle Remus, a composite of the slaves he knew, as the narrator of dialect sketches. The original Uncle Remus character was described as a freedman living in postbellum Atlanta who visited the *Atlanta Constitution* office to complain about Reconstruction politics.

Inspired by William Owens' article, "Folklore of the Southern Negroes," in the December 1877 *Lippincott's* magazine, outlining the story "Buh Rabbit and the Tar Baby," Harris molded Uncle Remus into a plantation storyteller of animal fables. "The Story of Mr. Rabbit and Mr. Fox as Told by Uncle Remus," appeared in the July 20, 1879, *Atlanta Constitution* under the heading "Negro Folklore."

Harris portrayed Uncle Remus telling his stories to a White boy. A humorous, wise narrator, Uncle Remus recited his allegories, using animals such as rabbits and turtles as heroes who outsmarted wolves and foxes. Brer Rabbit manipulated situations so that the weak triumphed over the strong. Brer Rabbit's nemesis, Brer Fox, countered traditional European animal tales in which fox, not a rabbit, usually played the role of the cunning hero. Explaining such themes as pride, revenge, and self-preservation, Uncle Remus justified Brer Rabbit's behavior no matter how cruel or violent.

When he recorded his stories, Harris was unaware that a body of scientific folklore scholarship existed or that parallels of his Uncle Remus tales circulated in other cultures. Receiving letters from folklorists and philologists, including John Wesley Powell of the Smithsonian Institution in Washington, DC, about the ethnological significance of his tales, Harris began to study folklore.

Folklorists reviewed his first book, *Uncle Remus: His Songs and His Sayings* (1880), as a valuable collection of southern black folklore previously unknown outside the region. In 1881 Thomas Frederick Crane wrote the first significant essay about Harris as a folklorist, noting parallels in other tales and encouraging more formal research of Black folklore. By 1888 Joseph Jacobs expressed a theory that Uncle Remus' origins were in India, where animal fables featured hares. An essay in the *Journal of American Folklore* initiated an ongoing debate among folklorists of whether Uncle Remus had African or Indian origins. Other folklorists focused on Harris' use of dialect.

Harris joined the American Folklore Society and read folklore theory, embracing a comparative approach. For his second book, *Nights with Uncle Remus* (1883), Harris researched in the Harvard University library's folklore collection and wrote a thirty-two-page, footnoted Introduction, defining his methodology for selecting tales. Harris emphasized oral collection, verification to ensure authenticity, and study of parallels and variations. He compared his stories to animal legends in other countries.

While some folklorists believed that Southern Blacks had appropriated stories from these societies, Harris argued that the Uncle Remus tales revealed unique aspects of African American culture; he noted that slaves in cotton-, tobacco-, and rice-growing areas of the South had developed differing versions of folktales. To provide examples, he created the character African Jack, a Sea Island slave who told Uncle Remus tales in a gullah dialect. Additional characters, the Virginiaborn cook Aunt Tempy and house girl Tildy, recited their versions of each story.

By the 1890s, Harris shunned the study of folklore. David D. Wells, in his article "Evolution in Folklore" in the May 1892 *Popular Science Monthly*, suggested that Harris had incorporated aspects of White culture to alter the original Uncle Remus tales to make Blacks seem more civilized. An angry Harris realized that folklorists who promoted the theory of cultural evolution were using his tales to declare that Blacks were culturally inferior to Whites and to criticize Black folklore. Harris denounced their methods and abandoned the study of comparative folklore.

In his third Uncle Remus book, *Uncle Remus and His Friends* (1892), Harris described himself as a casual folklore collector with no systematic method of acquisition. He stated that his folktales were valuable merely for enjoyment and their insight into human nature and moral themes. He satirized folklorists in his 1898 story "The Late Mr. Watkins of Georgia: His Relation to Oriental Folk-Lore."

Harris focused on publishing plantation worksongs and hymns in national magazines and *The Tar-Baby and Other Rhymes of Uncle Remus* (1904). He collected his remaining local legends in *Told by Uncle Remus* (1905) and *Uncle Remus and Brer Rabbit* (1907) but, to prevent his stories from being misinterpreted, he removed all of the characteristics that folklorists had targeted. Brer Rabbit became more precocious and Uncle Remus more fallible. These works provided grist for Walt Disney's 1946 animated movie *Song of the South*, which distorted the original tales.

After Harris died in 1908, *Uncle Remus and the Little Boy* (1910), *Uncle Remus Returns* (1918), *The Witch Wolf: An Uncle Remus Story* (1921), and *Seven Tales of Uncle Remus* (1948) were published in addition to new editions and translations.

Numerous articles and two book-length studies (Bickley 1981; Brookes 1950) have analyzed Uncle Remus' value as folklore. Scholars have criticized the Uncle Remus tales for their racist and sentimental stereotypes. Folklorists were disappointed that Harris rarely named his informants or provided data about each tale's collection. They also wished that he had narrated the Uncle Remus tales in their original settings instead of relying on the artificial framework using the boy. Still, Harris and Uncle Remus have been most credited for inspiring collectors and scholars of African American folklore.

Elizabeth D.Schafer

Urban Folklore

Traditions and creative expressions that reflect general conditions of urban life or the history and traditions of a particular city. Urban folklore is a combination of folklore brought with the city's inhabitants from their former homes, and of folklore that arises in response to life in the city.

Each city is unique, reflecting the peoples who have come there and the forces—geographic, political, economic—that have compelled its growth. Cities provide fertile grounds for cultural interaction and exchange, and cities inevitably force cultures and traditions to change, often in unexpected new directions. Bringing together diverse peoples, with many values, beliefs, and customs, creates the possibility of new cultural exchanges, the interaction of unlikely combinations of traditions, as well as the potential for conflict and misunderstandings. Folklore, a continually changing reflection of val-

Friday-night service at McGee Temple, Church of God in Christ. Chicago, 1977. Photo Jonas Dovydenas. American Folklife Center.

ues and beliefs, helps explain how people make large and inhospitable cities into places small enough to nourish a human community

Folklore that comes with new arrivals inevitably changes. Some things that do not speak to a community's new life in the city are "lost." Some musical instruments may no longer be played, and rural clothing styles are exchanged for the dress of the city. Children born in the city may not speak the language or dialect of their parents; they may speak English with an accent distinctive to that city, or even a particular part of a city. Other traditions, however, flourish, changing in response to the new place and growing stronger in their new homeland.

Folklore also arises in response to the life of the city, often in old forms but with new content. People have painted on walls for thousands of years; but in American cities of the 1960s, large mural paintings on buildings, reflecting Latino and African American experiences, became part of a unique grass-roots urban-art movement.

The study of folklore in Europe and the United States was originally focused on rural arts, traditions, and folklife. As recently as 1971, American folklorists were debating whether or not there was folklore in cities and, if so, what was it like? Beginning in the late 1960s and into the 1970s, folklorists and others began to pay more serious attention to the folklore of cities. Not-for-profit organizations directed by folklorists began to appear, the first in Memphis and New York City, later in Chicago, San Antonio, and elsewhere, to document, present, and support the arts and cultural expressions of the city and city dwellers. Lowell, Massachusetts, even became, in the 1980s, the site of the first urban-industrial folklife heritage park, located in the city's textile mills.

Cities in the United States are centers of migration and immigration, reflecting the great movements of people off the land and into urban areas. Each city has a different mix of people who were searching for a better life, either economic or political. America's cities continue to draw immigrants from around the world. At the turn of the 20th century, urban areas reeled under the impact of thousands of immigrants from eastern and southern Europe and the Middle East. As the late 20th century's great wave of immigration continues, urban areas are growing even more diverse, bringing peoples of many different cultures and religions from Latin America and the Caribbean, Africa, and Asia.

Economic and political events around the world reverberate in American cities. Refugees from Laos, Ethiopia, and Guatemala declare their existence and concerns through cultural activities. In "port of entry" city neighborhoods, refugees and poor immigrants find themselves side by side. Vietnamese and Laotian New Year's celebrations, traditional dance groups (some professional, some for children), exhibitions and sales of crafts are important. These activities serve as sources of connection to their lost homes, help establish viable urban ethnic communities of support, and provide a source of income for some artists. As in the work of artists displaced from Eastern Europe after World War II who fled to the United States, themes of loss and longing for the homeland are often depicted in refugee artists' work.

The movement from rural areas to cities, one of the traditional sources of urban migration, continues. Urbanites with farming experience often become urban gardeners, growing the foods of their cuisine in vacant lots. In Philadelphia and Chicago, African American urban gardeners grow okra, mustard greens, and other necessities of Southern "soul food." "Hillbillies" worked in the automobile factories of Detroit. In New York City, Puerto Rican men build *casitas*, little houses in the traditional island style, on vacant lots. The *casitas* serve as clubhouses and reminders of home. *Vaqueros* transplanted from the *ranchos* of Mexico drive pickup trucks, wear Western hats and boots, teach their children to rope in city parks, and attend and participate in urban rodeos.

Verbal folklore flourishes in the city. "Urban legends," contemporary legendary stories, circulate in oral tradition in cities from coast to coast, telling of alligators in New York City sewers or of "The Vanishing Hitchhiker." Such legends are reported as fact in newspapers, or take on local reality: "The Vanishing Hitchhiker" appears in Chicago as "Resurrection Mary," who waits by Resurrection Cemetery on the city's southwest side.

Legends such as these help define a city's sense of itself as a particular place. Each city has its own ghost stories. New Orleans, for example, boasts a tour of haunted sites. Famous people can provide another good image for a city, such as Father Nelson Baker

of Lackawanna, New York, who founded a famous orphanage that cared for generations of immigrant children. Stories of Father Baker have taken on miraculous overtones, with many of the themes of the stories of saints, such as the belief that his touch could heal the sick. In contrast, Al Capone and the image of the gangster have long dominated Chicago's image around the world.

Immigration to a city may change a community's stories. Mexican immigrant stories in Los Angeles, collected in the late 1960s, told of *La Llorona*, the weeping woman searching for her lost children. Some storytellers believed that *La Llorona* appeared only in Mexico; others thought that she could appear in Los Angeles. They also told stories of ghosts and religious tales of virgins and saints and recounted personal experiences, such as fighting with Pancho Villa. But, frequently, the legends and old stories are gradually forgotten. Storytelling continues, but people tell stories of their own lives, of immigration and struggle to make a new life, and of the events and everyday life while growing up in the city.

Southern cities, long dominated by the duality of White and Black residents, have a unique sense of tradition. Antebellum Charleston, South Carolina, was a cultural and economic center. One of the oldest cities in the United States, its communities of Orthodox Jews, French Huguenots, and African Americans are still important influences on the city's life. Throughout the older neighborhoods can be seen the beautiful tradition of fine wrought-iron fences created by African American craftsmen. The Charleston area is also home to an important community of African American sea-grass basket weavers, whose work can be traced back to the designs and techniques of African basketry.

Cities, where many people live close together, create urban stresses and strains. Graffiti art on subways, walls, and rooftops provides a way for young people without access to formal art resources to assert their presence in the urban scene. The owners of the property where the graffiti appears, however, feel threatened and must bear the cost of its removal. Transportation is an important theme. Modern ballads have immortalized the story of a passenger lost forever on the Boston subway and the notorious practice of towing cars to Chicago's city pounds—where cars are stripped of all usable parts before they can be reclaimed.

Urban crime victims tell true stories about their experiences, and fears about safety sometimes lead to frightening rumors. Police respond quickly, often with limited effect, to reassure the public when such rumors break out. Some rumors seem to erode the fabric of city life. One such rumor involved the courteous driving practice of a driver blinking headlights at cars driving at night without headlights on. A report circulated (often by fax) that drivers who blinked their headlights at another car would be shot as part of a gang initiation. Even when the story was debunked, many drivers stopped the practice. City dwellers felt betrayed by this rumor. In a place where neighbors often do not know one another, and a feeling of community is hard to create, this practice was a way to connect in a friendly fashion with an unknown "neighbor." Now, it was corrupted into a danger.

Cities may also concentrate feelings of distrust and misunderstanding. In urban African American communities, various rumors circulate widely reflecting beliefs that African Americans individually and as a group are being attacked physically and exploited financially. One rumor holds that the Ku Klux Klan owns the Church's Fried Chicken fast-food chain, and that "something" is put into the chicken to make Black men

sterile. Another says that the Reebok company, which sells high-priced athletic footwear to young African Americans, is owned by South Africans. Given the history of atrocities against, and systematic exploitation of, African Americans, these rumors seem plausible to many members of that community. The legends reflect African American historical and contemporary experiences that provide grounds to fear that African Americans are not yet free of organized attempts on their rights to safety and freedom.

Urban dwellers often create their own sense of place and community through life in a particular neighborhood. Neighborhoods may draw a particular ethnic group together; “point of entry” neighborhoods may be multicultural. Some cities create new forms of segregation, as in Detroit, where the city is predominantly Black, and Chicago, where African Americans are clustered on the south and west sides of the city.

People develop varied mental maps of large cities. In heavily Roman Catholic cities, parish boundaries may serve as geographic identifications. Political wards and city-designated neighborhoods compete for space on inhabitants’ mental maps with more local designations such as precincts, block-club areas, gang turf, or “the block.” Children in some neighborhoods may never leave their neighborhood while they are growing up or may never go downtown.

In Baltimore paintings on screens brighten some neighborhoods with rural scenes, and they, too, express a sense of place. In many cities, block clubs announce their presence and agenda (often antigang violence) with signs at the end of each block. Shopping strips declare the communities they serve through the languages and signs and such advertisements as “We send packages to Poland.”

In crowded cities, “the street” is often part of the city experience. People sit on their stoops, children play in the street, and young people gather to flirt or show off. In African American communities, tap dancing, doo-wop quartets and breakdancing started as street corner activities but became important influences in American popular culture. Street performers are part of a centuries-old tradition, one that cities have long sought to regulate. Street performers blow saxophones, pump accordions, pull together tight quartet harmonies, and even juggle and eat fire.

Crowded cities also treasure their open or green spaces. Venice Beach, next to Los Angeles, is famous for its boardwalk and beach that provides a colorful array of leisure-time activities for participation or observation. City dwellers take part in, or just watch, roller skating, weight lifting, volleyball, picnics, and fireworks on the Fourth of July. Central Park in New York City and the Lake Michigan beaches in Chicago provide similar crucial “green space” to people who live surrounded by concrete.

City dwellers personalize and beautify their environment in ways large and small. Many homes have carefully landscaped and decorated shrines to the Virgin Mary, from yards in San Antonio to windowsills in New York City. In Los Angeles, the sculpture of Watts Towers looms over South Central Los Angeles, a monument to its visionary creator, an Italian immigrant.

There is a folklore of work in the cities as well. Even white-collar businesses nurture the lore of office workers. Secretaries post images that circulate in photocopied form from desk to desk (now through faxes), such as the cartoon of laughing figures who ask, “You want it when?” Computer programmers and “hackers” have developed their own lore, which, with the exponential growth of computer use, reaches a wide audience. One example is the “smiley face,” created using the colon, a hyphen, and the right parenthesis

marks: -) and meant to be “read” sideways. It is used to give feeling or tone to written words exchanged over computer bulletin boards and dialogue groups that might otherwise be misinterpreted, playing the role of tone of voice or facial expression. There is a large lexicon of similar computer images.

City-style occupations spawn their own brand of occupational lore. Industrial work created new communities of people who worked in the mill, lived in its shadow, and drank in the tavern between. The meat-packing industry, the steel industry, the garment industry, and the automobile-manufacturing industry among others, all created their own traditions as sons followed fathers into the factories for several generations. Stories flourished, about work on the floor, or about legendary figures like Joe Magarac, or the apocryphal tale of smuggling out the components to build a new car, one piece at a time. Ironworkers, who are responsible for much of the dangerous work of riveting together steel high-rise buildings, “raise the tree,” placing a newly cut tree on the top of completed skyscrapers. “Mom and pop” family-owned stores and businesses are often beloved in neighborhoods or become known even citywide. Chicago’s Lou Mitchell’s is famous as the breakfast place of politicians and politician-watchers. Traders on the great exchange trading floors, lawyers, stewardesses, and many others all develop their own stories.

Leisure in the city takes on particular urban forms. The streets and buildings of the city provide a special context for children’s play. Children use the sidewalks, streets, and vacant lots of New York City as playgrounds for stickball and “skelly.” Urban fishermen fish in the Pacific Ocean off the piers of Santa Monica, California, and wait for nighttime smelt runs each spring along Chicago’s Lake Michigan beaches. New Yorkers fly pigeons from rooftops or take their ease on rooftop “tar beaches.”

The sheer diversity of traditions found side by side in many cities is part of the excitement of urban life. Cities are the perfect theater for large-scale events such as parades. Parades sponsored by ethnic communities mark special ethnic holidays. The floats and marchers often provide a snapshot of an ethnic group’s organizations and interests. The Doo-Dah parade in Pasadena, California, started as a light-hearted response to the Rose Bowl parade; Greenwich Village is the scene of an annual Halloween parade in which marchers may appear in such getups as “the intersection of Fifth Avenue and 59th Street.”

The Vietnam Veterans parade of 1986, held in Chicago, was a national event marking the first-ever public event honoring Vietnam veterans. With the parade came a traveling version of the Vietnam War Memorial that stands in Washington, DC. As at the original wall, family and friends left moving and carefully constructed mementos, some almost shrines, by the name of a fallen loved one.

Art forms metamorphose and take on unique flavors in each city. Traditional music, for example, goes on in homes, churches, and community centers, but also in nightclubs, convention centers, and major concert halls.

African American music has influenced much of the development of typically “American” music. Jazz and the blues helped make New Orleans and Chicago famous, along with cities in between such as St. Louis and Kansas City, Missouri. Gospel music has flourished in urban centers, providing both diverse audiences and performers access to recording possibilities and contacts with publishers and other ways to “spread the good word.” Gospel quartets flourish in some cities, such as Memphis, while elsewhere choirs dominate. Gospel music brings people to church on Sunday, enlivens official city or

political celebrations, or enriches city coffers by attracting thousands of singers to national conventions. Rap music grew out of the life of urban inner-city youngsters, drawing on the rich musical traditions of their African American communities to create a new sound. In many ways, the music of young African Americans in the inner-city drives most of American popular music.

The music of immigrants has become part of the fabric of city life. Polka music is a national phenomenon with followers in both urban and rural areas, concentrated in cities with large Eastern European populations. Different cities and regions have their own styles, avid dancers, and fans, who congregate in urban nightclubs weekly, or in annual conventions at airport hotels to share their passion for polka with thousands of others.

Tamburitza music, a string-band sound played by Serbs and Croatians, also evolved a peculiarly American sound. In the 1920s and 1930s, American-born children of immigrants grew up listening to their parents' music at weddings and at home and to popular music and jazz in city nightclubs. Some of the American-born tamburitza musicians changed the irregular rhythms common in the Balkans (7/8 often became 3/4) and added subtle, jazz-influenced changes in rhythmic accompaniments. The bands continue to provide for many of the same musical needs in American cities that they fulfilled in Balkan villages. Musicians accompany brides to their wedding services and play for the reception as well as for other social events. But tamburitza orchestras are no longer very popular as dance bands.

In the 1970s, Los Angeles Japanese American musicians combined traditional Japanese drumming with jazz and other European sounds to create distinctively "American-style" *taiko* drum orchestras. More recent immigrant communities may present, side by side, rock bands and traditional orchestras for their audiences' listening pleasure.

Urban traditions continue, reenergized and transformed in each new generation. Traditions pass informally from older generations to the younger (often within the family) or from child to child. Communities also create their own educational institutions for young people, to help ensure that the children feel connected to particular symbols and aspects of their culture and religion. Ethnic-heritage schools teach language and history; church schools teach religion (and often language—whether Arabic for Islam, Greek for Greek Orthodoxy, or Hebrew for Judaism). Junior orchestras, dance groups, and Scout troops are also important teachers and conveyors of traditional forms of creativity.

Architecture reflects who is here as well. Particular skyscrapers come to be known as symbols of the city: the Empire State Building symbolizes New York City; the Renaissance Center is Detroit's attempt to revitalize its downtown. The architecture of homes reflects dominant periods in a city's history, from the adobe homes of Southwestern cities to San Francisco's Victorian gingerbread houses, known as "Painted Ladies" for their brightly painted decorations, often painstakingly restored.

Churches, synagogues, temples, and other houses of worship provide a culturally appropriate place for congregations to gather, and these become part of the urban landscape as well. Italian stone carvers worked for many years to complete the National Cathedral in Washington, DC, with its distinctive Gothic styling, complete with gargoyles. In Chicago, the Drehobl family has supplied stained-glass windows to houses of worship for three generations. Eastern Orthodox churches share older eastern

European neighborhoods with Catholic parishes (of the Roman and Eastern rites). The churches' stonework, spires, and sometimes gilded golden domes are a continuing testament to the love, sacrifice, and often workmanship skills of the early congregations. Orthodox Jewish shuls (houses of worship) and yeshivas (schools) may be found in storefront buildings. More recent arrivals such as Buddhists and Hindus first take over older churches or storefronts; later they build their own, more suitable buildings, reflecting the architectural heritage of their religions.

The buildings echo the city's diverse religious beliefs and practices. On Ash Wednesday, the Wednesday before Lent begins, men and women in tailored business suits appear at work with a smudge of ash on their foreheads. In Boston, New York City, and Chicago, during Italian *American festas*, many strong men hoist platforms carrying a saint or the Madonna onto their shoulders for an annual procession. Worshipers kiss the statue, pinning on money, medallions, or other offerings. Eastern Orthodox cantors and choirs sing music with roots in Byzantine times. At the harvest festival of Sukkot, observant Jewish families raise a temporary structure, semi-open to the sky, in which to eat and remember the wandering of the Jews in the desert. Whether the sukkah is in the backyard, on a deck, or on a rooftop or fire escape, the meaning is the same. In Buddhist gatherings, monks with shaven heads and saffron robes chant and offer blessings. Among Hmong refugees from Laos, shamans remain important interlocutors with the spirit world.

Urban churches may also be the scenes of miracles. Icons in Eastern Orthodox churches have been reported to "cry" when moisture was seen trickling from the painting's eyes. Crowds of believers (of many faiths) gather at the church to see each miraculous occurrence.

Cities also offer a choice of healing traditions, both physical and psychic. "Readers and advisers," who read palms and use other methods of divination, are found in many urban neighborhoods. Many Mexican Americans seek out Mexican healers (*cumnderas*), and buy their medication from a herbal pharmacy (*botanica*), in the neighborhood. Chinese herbal medicine remains popular among Chinese immigrants and has found new support among the New Age community. In the city, these healing systems mix and intermingle in many new ways, sometimes confusing, but often inventive and helpful.

Traditional practices and beliefs reflect each religion's roots in ancient times, and new transformations show continuing vitality in a vastly different place and era. What is new at the end of the 20th century, perhaps, is the broad mix of cultures and peoples. U.S. cities are becoming a meeting ground for cultures, languages, traditions, and religions with roots around the globe, not just in Europe.

Urban Legend

An apocryphal contemporary story, told as true but incorporating traditional motifs, and usually attributed to a friend of a friend (FOAF). Such stories were formerly termed “urban belief tales” and are also called “contemporary legends,” “modern legends,” and “modern urban legends.” While neither the subject matter nor the circulation of urban legends is necessarily “urban,” the stories usually reflect diemes of modern life in cities or suburbs. They concern such topics as crime, technology, current events, sex, academe, professions, government, and celebrities. Some modern urban legends are clearly *not* modern, *not* urban, and *not* always told as true, but at least jowe’ variants of the stories thus classified must fit these criteria, although other versions of modern urban legends may have ancient and/or rural prototypes and may sometimes be told merely for entertainment, usually in the form of jokes. Still, the term “urban legend” is used by many folklorists, and has become the generic usage among members of the public and journalists (who sometimes use the less accurate term “urban *myth*”) to refer to many of the unverified odd “true” stories that circulate both orally and in the media in the modern world.

Although some folklorists in England and the United States collected and studied individual urban legends earlier, the American folklorist Richard M. Dorson focused attention on the whole genre in the last chapter (“Modern Folklore”) of his 1959 textbook *American Folklore*. The widespread popularity of urban legends and some interpretations are suggested in the series of books by Jan Harold Brunvand, *The Vanishing Hitchhiker* (1981), *The Choking Doberman* (1984), *The Mexican Pet* (1986), *Curses! Broiled Again!* (1989), and *The Baby Train* (1993). Similar collections of urban legends have been published in England, Scandinavia, Germany, Holland, South Africa, Australia, and elsewhere. Growing from a series of annual seminars that began at the University of Sheffield, England, in 1982, the International Society for Contemporary Legend Research (ISCLR) was formed in 1988. The society publishes a newsletter, *FOAFtale News*, and an annual journal, *Contemporary Legend* (1991–).

The ten major headings of the “Type-Index of Urban Legends” included in Brunvand’s 1993 book—along with a sample legend-tide from each—suggest the range of stories to be found in this genre: Automobiles (“The Slasher under the Car”), Animals (“The Microwaved Pet”), Horrors (“The Babysitter and the Man Upstairs”), Accidents (“The Exploding Toilet”), Sex and Scandal (“The Girl on the Gearshift Lever”), Crime (“The

Kidney Heist”), Business and Professions (“The Procter and Gamble Trademark”), Government (“The Wordy Memo”), Celebrities (“The Elevator Incident”), and Academe (“The One-Word Exam Question”). These and hundreds of other “true stories that are too good to be true” circulate by word of mouth among adolescents at slumber parties and bull sessions, among office and factory workers during breaks, and among just about everybody at car pools, parties, dinners, and other social gatherings.

Urban legends have invaded popular culture. Such legends appear regularly in the press, especially in tabloids, and they are further disseminated via photocopies, faxes, and computers. The stories are repeated on radio and television talk shows, and they have inspired sitcoms, films, and even serious literature. The New York City legend “Alligators in the Sewers” is depicted on a T-shirt sold by the New York City Department of Environmental Protection on which a cartoon allusion is captioned “The Legend Lives....” The same story has been the subject of comic books, children’s literature, and a Hollywood film (*Alligator* [1980]), and it was a major theme in Thomas Pynchon’s 1963 novel titled *V*.

New urban rumors and legends regularly appear. For example, in late summer 1993 a warning about murderous gang initiations spread nationwide, mostly through faxes. A report in the Memphis, Tennessee, *Commercial Appeal* in mid-August described “heavily faxed” warnings, claiming to be official police bulletins, that warned of gang members driving at night with their car lights off. Supposedly, if someone blinked his own lights as a warning, the gang member would pursue the car and kill the occupants. As this anonymous rumor spread—via faxes and computers and by word of mouth—the story acquired details about claimed actual incidents of this kind, names of investigating authorities, and the supposed actual date of “Blood’s [initiation] Weekend,” said to be September 25–26, 1993. Police, journalists, and folklorists debunked the stories, and no such crimes were committed; by December 1993, the “Lights Out!” warnings had all but disappeared, but the premiere episode of a CBS-TV police drama, *Traps*, starring George C. Scott and broadcast in March 1994, mentioned a “Headlight Killer Taskforce” that was investigating “Lights Out!”-type crimes. Thus, in the space of about eight months an urban rumor emerged, developed some legendary features, made its way into contemporary popular culture, then apparently faded from popularity.

“The Mexican Pet” story illustrates how variations of an urban legend reflect different social or cultural themes. The first versions noted by folklorists described an American family vacationing in Mexico who adopts a stray Chihuahua dog and smuggles it home, only to learn from their veterinarian that the creature is a sewer rat, not a dog. This version depicts kind-hearted, if law-breaking, tourists traveling in a country with lower standards of public cleanliness. Later versions of the story claimed that the rat-dog was found at a major seaport (Baltimore, New York City, Los Angeles, and the like) and had come off a ship from a Third World country; thus, unclean conditions seemed to be invading the United States. In Europe the counterpart story was told about tourists from “clean” northern countries (such as Sweden, Holland, or England) who adopt the pet while traveling in a “dirty” southern or eastern country (such as Spain, Egypt, Thailand). In American versions in the mid-1990s, the “dog” is found floating on a piece of driftwood off the coast of Florida or Northern California, but it turns out to be a rat from either Haiti (Florida) or China (California); thus, the stray animal has become a symbol of refugees attempting to enter the United States illegally.

Rumors and legends have probably always been a feature of urban life, and sometimes virtually the same “modern” story can be documented from very early writings. For instance, a story about a supposed shopping-mall crime in which a boy is sexually mutilated, even killed, by members of a youth gang, has been traced to anti-Semitic analogues of Chaucer’s “Prioress’s Tale” and even earlier to anti-Christian stories documented in classical sources. “The Choking Doberman” legend, although including such modern aspects as a veterinarian, a telephone warning, and a modern crime situation, is actually a recent variation of an ancient fable that was first transmuted into a European legend and later adopted contemporary details as the story spread to the New World.

Most urban legends either originate from unknown sources or are updating of older traditional legends, but occasionally one can be traced to an actual event. A good example is “The Unsolvable Math Problem,” an account of how an undergraduate student mistakenly solved all three problems written on a classroom chalkboard, assuming they were all part of a test. In reality, the test had only *two* parts, and the third problem was given by the instructor as an example of an unsolved proposition that had baffled even Einstein. The instructor had written the problem on the chalkboard before the test began and was amazed that the student—unaware of the challenge and arriving late for the test—had naively found the solution that had long eluded the experts.

In the mid- to late-1980s, the story of the mathematics prodigy solving the Einstein-puzzler became a favorite pulpit anecdote as ministers retold the incident more-or-less as they had read it in the book *Robert Schuller: The Inside Story* (1983) or in newsletters containing inspiring anecdotes for ministers that had reprinted the Schuller version. The Reverend Robert H. Schuller, who hosts the weekly “Hour of Power” television worship service from the “Crystal Cathedral” in Garden Grove, California, attributed the story to “a meek little fellow” who told him, while sitting next to him on an airplane trip, the true story about solving an unsolvable problem. Schuller identified the teller as “George Dantzig...[of] the Physics Department at Stanford University.”

In oral tradition, “The Unsolvable Math Problem” had developed varying versions as it spread from person to person. (For example, most people attributed the story to some particular university, and others claimed that the student had solved nine out of ten “unsolvable” problems.) But Schuller himself had modified the story as he heard it from Professor George B. Dantzig, who actually teaches in the Department of *Mathematics* at Stanford. In 1940, as a *graduate* student at the University of California, Berkeley, Dantzig had solved not one but *two* previously unsolved problems in *statistical analysis*, mistakenly thinking that the problems written on the classroom chalkboard were part of the class *homework*. Among the several changes (noted in italics above) Schuller made as he repeated the story as an example of successful “possibility thinking” was the reference to Einstein. After passing through the conduits of print, pulpit anecdote, and oral repetition, the story acquired a life and details of its own quite apart from Dantzig’s actual experience.

When “The Unsolvable Math Problem” and its background appeared in an article on urban legends in the September 1990 issue of *Reader’s Digest*, the story once again achieved widespread printed circulation, perhaps next to be re-seeded as an anonymous urban legend in “folk” circulation. As the *Digest* concluded, “[It] all goes to show that even when it comes to urban legends, truth *can* be stranger than fiction” (Jan Harold

Brunvand “The Case of the Choking Doberman” pp. 129–132. Professor Dantzig himself, amused at the notoriety his feat has earned him among mathematicians and the general public alike, has suggested that the problem in the story should not accurately be called “unsolvable,” since he (plus his anonymous counterpart in the legend) did, in fact, solve it, or in Dantzig’s case, solved *them*.

Utley, Francis Lee (1907–1974)

Medievalist, folklorist, linguist, and teacher. A native of Wisconsin and a graduate of the University of Wisconsin, Utley earned his master’s degree and doctorate from Harvard University. He joined the English department at Ohio State University in 1935 and introduced folklore studies there soon after. During Utley’s thirty-nine years at Ohio State, he facilitated the creation of the Folklore Archives and fostered establishment of the Center for Medieval and Renaissance Studies.

Former students remember Utley as a gentle, book-loving man who gave generously of his time and guidance but demanded academic rigor in return. Many Utley students, including D.K. Wilgus, Bruce Rosenberg, and W. Edson Richmond, went on to distinguished careers in folklore. Both Utley’s academic approach to folklore and his in-home seminars reflected the influences of his Harvard mentor, George Lyman Kittredge.

An avid reader and a prolific writer, Utley’s major work, *The Crooked Rib*, examines medieval attitudes toward women. Many scholarly articles demonstrate Utley’s eclectic interests, from medieval balladry to Ohio place names, as well as his extensive research on flood narratives. After his death, Ohio State acquired Utley’s legendary, annotated, 21,000-volume personal library through the generosity of his widow, Ruth Scott Utley.

As president of the American Folklore Society (1951–1952), Utley decried disciplinary rivalries. He insisted that scientific rigor, aesthetic sensitivity, and holistic investigation were all essential to the collection, analysis, and documentation of folklore. An indefatigable scholar and promoter of folklore studies, Utley served in numerous

organizations, including as president of the American Name Society (1966) and of the College English Association (1969).

V

Valentine's Day

February 14, associated with love and courtship since medieval times. Two Christian martyrs, one a bishop and the other a priest, share the feast day of St. Valentine; legends tell of their good deeds. The Roman festival of Lupercalia, when young men drew the names of young women from an urn, is one of the earliest predecessors of Valentine's Day. Since the late Middle Ages, February 14 has been the day when people expect birds to begin their spring mating. It has also been a day to begin sowing particular crops, such as lettuce and onions.

In 19th-century America, young men pulled the names of prospective sweethearts from a hat at play-parties. Recognizing the "first-met" as a valentine sweetheart and seeking to dream of a future husband by sleeping on bay leaves sprinkled with rose water are among the Valentine's Day customs that came to America from the British Isles.

Printed valentine cards became common in America after 1860. Since then a great many people have exchanged valentines with serious or humorous wording. For adults the purchase or creation of cards and gifts can be an absorbing task. Children take delight in such comic parody verses as "Roses are red; they grow in this region. / If I had your face, I'd join the Foreign Legion." Valentine's Day parties for children may include heart-shaped cakes and other special refreshments; some children dress in red and white clothes.

With its commercial emphasis on the purchase of cards and gifts, Valentine's Day may seem to have lost some of its traditional essence. However, valentine verses still circulate orally, and local customs continue to develop.

Vampires

Supernatural creatures thought to be humans who return from their graves to victimize the living. American vampires have widow's peaks and pale skin. Sensuous entities, they dress in black or tuxedos with black capes, sleep by day, and prowl by night seeking victims to suck their blood. They attack by sinking their fangs into the necks of their prey—often beautiful maidens. Once bitten, victims become vampires, but garlic, a crucifix, or daylight can prevent an attack. Staking the vampire through the heart will kill it and allow the vampire to rest in peace.

Contemporary American vampires differ sharply from European vampires. Movies have influenced popular ideas about vampires, particularly the 1931 portrayal of Count Dracula by Bela Lugosi, based on Bram Stoker's 1897 book *Dracula*. Although Stoker's creation was fictional, it was based in part on exploits of a real 15th-century Wallachian tyrant, Vlad Tepes, whose acts of cruelty included mass impalements of enemies, inspiring the nickname Vlad, the Impaler. Stoker's creation also drew upon widespread and ancient beliefs that undead spirits caused life's tragedies: barren fields, plague, milkless cows, malformed babies. Some Transylvanian villagers still believe that vampires prey upon unwed dead men or women. Dead single persons of marriageable age receive symbolic weddings at their funerals.

In New England, 19th-century newspaper accounts tell of bodies of tuberculosis victims being exhumed and hearts burned to prevent their taking the lives of other family members. That idea no longer prevails in America. Instead, the media version of vampires has become the standard—highly commercialized and trivialized. The vampire logo occurs on Count Chocula cereal boxes, hot-sauce bottles, and wine bottles. Advertisers use it for snail killer, pizza, batteries, light beer, and security systems. Adults as well as children popularize vampire costumes at Halloween, and youngsters learn to count by watching "The Count," a vampire on TV's *Sesame Street*.

Vampires inspire the creation of a continuous stream of books, short stories, films, television shows, plays, fan clubs, fan magazines, and conventions. Sexuality and power may account for their mass appeal. Some people identify themselves as vampires by wearing black and avoiding the light. Others go to the extreme imitation by drinking human blood. A 1989 survey of college and high school students found that 27 percent believed it possible for vampires to exist as real entities. Media bombardment of the symbol feeds this belief.

According to one explanation for its origin, need for a scapegoat for the plague fueled the creation of the vampire. The first victim who died became the most likely suspect. When survivors exhumed the body, they misunderstood and misinterpreted the stages of putrefaction. Expecting to find a dried up body, instead they found blood on the lips of a bloated corpse, a natural phenomenon of the decomposition process. Erroneously, they assumed that it fed upon the living. When the gaseous cadaver moaned or cried after being staked, this reinforced the idea that the body was still alive, thus a vampire.

Vernacular

A potential synonym for “folk.” The term “vernacular” has been used at least since the 17th century to indicate the rootedness of a given cultural expression within a particular nation, region, or province. Most often applied to language—specifically to dialect variations of received standard speech—“vernacular” is a word that signals indigenous character.

Having a Latinate origin, “vernacular” was never the term of choice among northern Europe’s 19th-century Romantics, who pioneered the study of local custom and habit that came to be known as folklore. They opted instead for “folk,” a term with a Teutonic pedigree that would both separate their scholarly ventures from classical Mediterranean learning and allow them to affiliate with the presumed nobility of newly emerging nations and empires. Moreover, since *verna*, the word’s Latin root, describes specifically a homeborn slave, “vernacular” carried for some the despicable connotations of misery, servitude, and failure. These unpleasant attributes obviously did little to enhance the term’s overall popularity.

Contemporary associations for “vernacular,” however, are considerably more positive. In the late 20th century the term signals authenticity, vigor, and independence. A vernacular building, for example, is presumed to naturally belong in its setting by virtue of its design, construction, and history. By contrast, an academic attempt to create a similar form will seem like an out-of-place affectation. Since the word “folk” has become freighted with contradictory and confusing meanings, “vernacular” is looked to more and more as a fresh alternative. Lacking, so far, a history of misuse, the word “vernacular” is now encountered frequently in folkloristic discussions.

To a great extent in the United States, the term owes its validity to the growth of material-culture research in the field of American studies in the 1950s. Folklorists seem to have encountered the term chiefly through their investigations of the sources of American folk buildings. It was British restoration architect Sir Gilbert George Scott who first used the word “vernacular” in connection with buildings in 1857 in his book *Remarks on Secular and Domestic Architecture*. Following almost a century’s worth of publication on rural buildings of all types, an English scholarly organization calling itself

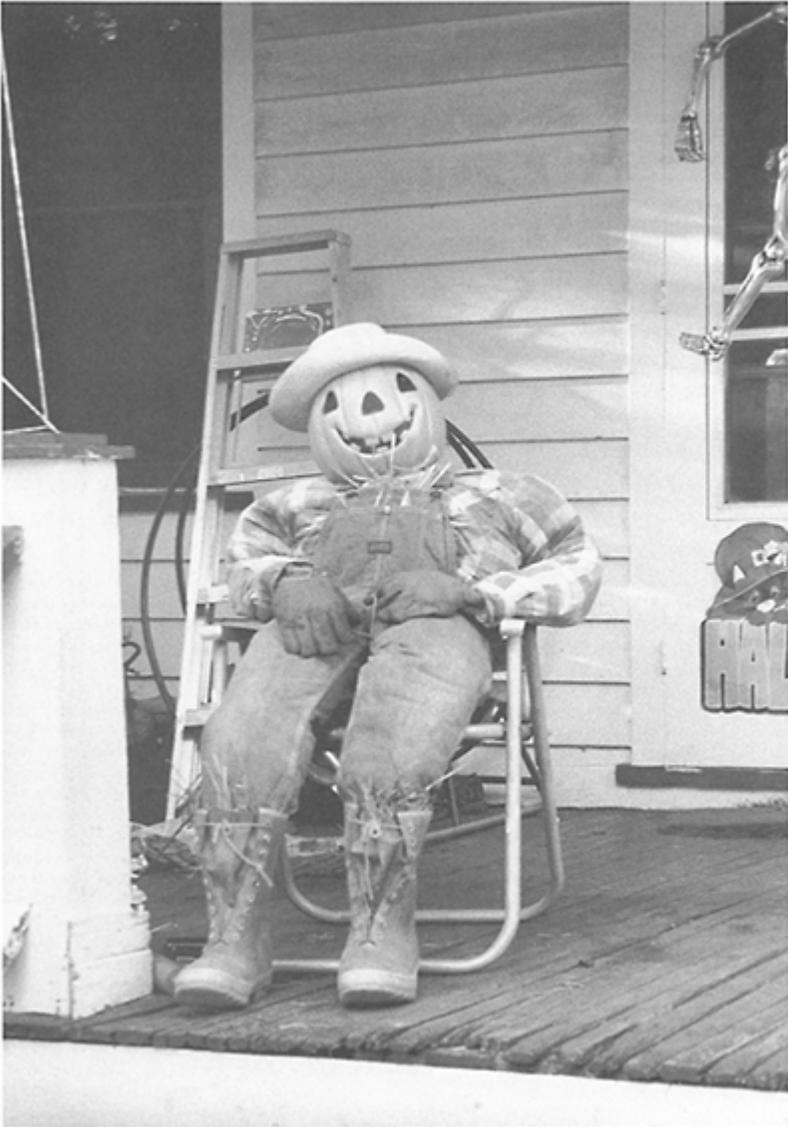

the Vernacular Architecture Group (VAG) was founded in 1954, and in 1970 it began to publish an annual journal, *Vernacular Architecture*. By 1979 an American counterpart, the Vernacular Architecture Forum (VAF), was established to promote interdisciplinary dialogue on the topic, and soon, it too, began to publish not only a quarterly newsletter, but also occasional collections of papers from the organization's annual meetings titled *Perspectives in Vernacular Architecture*.

One by-product of VAF activities has been the further legitimization in American scholarly circles of the word "vernacular" as the preferred descriptor for architectural expressions that otherwise might be referred to as folk, traditional, native, indigenous, popular, ordinary, local, or customary. It may not be long before the term "vernacular" is regularly used to describe other genres like art, craft, food, medicine, music, and so forth. Henry Glassie already suggested this trajectory when he wrote: "Vernacular architecture is one area of folk art that has been accorded careful historical study and so supplies usefiil inspiration for the whole field" (Glassie 1989:264). One wonders then if the discipline of folklore might not eventually be re-named "vernacular studies." It was more than forty years ago that one scholar suggested that folk arts be dubbed "Vernacular Arts." However, given the fact that much that can be properly described as vernacular lies beyond the boundaries of folk culture, the word "folk" will probably never be completely supplanted.

Vietnam War

The era from roughly 1965 to 1975. The folklore of the Vietnam War included both older ongoing traditions of the U.S. military and new folklore generated in the unique context of the war. Folk naming, slang and jargon, superstitions, jokes, songs, proverbs, graffiti, and narrative forms from the older stream of Army lore remained in active circulation, much of it learned in basic training as the informal education of new soldiers into the group. Terms like Jeep (from GP—general purpose vehicle), slang like “shit on a shingle” (creamed chipped beef on toast), beliefs like the “three on a match” taboo, sayings like “Military intelligence is a contradiction in terms,” cadence calls like “I wanna be an airborne ranger” or those involving “Jodie,” the civilian who in the soldier’s absence gets his girl and/or car—all this older Army lore persisted into the Vietnam era.

As the war developed, new folklore emerged. Technical slang evolved, such as “lurp” (for LRRP, long-range reconnaissance patrols) and “huey” (for UH, utility helicopter). One famous term came from the radio alphabet letters for V and C—“Victor” and “Charlie”—the faceless Viet Cong enemy thus becoming the personalized “Charlie,” while “dink” and “slope” evolved as racist epithets for all Vietnamese people. Vietnamese words and terms became part of the soldiers’ slang as well—*sin loi* (sorry about that), *didi mau* (go away), *di wee* and *chum wee* (lieutenant and captain), and a pidgin scale of good and bad (number one and number ten respectively) were very common. “Taxi girl” became the generic term for a prostitute, though the Saigon-based reference didn’t apply to “the bush,” that is, to (rural areas). The slang term for the United States was “the world,” as in “I’ll be back in the world in fifty-four days.”

The soldiers cycled into and out of the war individually in one-year assignments rather than as units. This created a great emphasis on their DEROS (date of estimated return from overseas) and on their “short” (as in a small number of days remaining) status, leading to quips like “I’m so short I trip over rugs.” Xeroxed “count-down calendars,” with one section to be colored in each day for 365 days, were ubiquitous. These depicted such things as maps of the United States, naked “round-eyed” [non-Oriental] women, or the word HOME. Superstitions surrounded “short” soldiers; it was considered good luck to be around anyone who was a “two-digit midget” or less.

A common form of verbal lore was a set of combat corollaries to Murphy’s Law. The first was usually “Murphy was a grunt” (infantryman), and others were wry or cynical comments on combat, military bureaucracy, or the building frustration of being in a war with no clear mission. Some examples: “Remember, your weapon was made by the lowest bidder”; “The easy way is always mined”; “No inspection-ready unit ever passed combat”; “All five-second fuses last three seconds”; “The only thing more accurate than incoming fire is incoming friendly fire”; and “Peace is our profession—mass murder is just our hobby.”

Traditional narratives circulated widely, often in the form of rumors—of large-scale confrontations with the NVA (the regular army of North Vietnam), of mass troop movements down the Ho Chi Minh Trail, of the entry of the Chinese into the war, of MIG aircraft in use by the enemy (a rare but deadly occurrence), or of large groups of defectors forming villages in Cambodia or Laos. Legends circulated too—about CIA (Central Intelligence Agency) operations, about the generals and politicians running the war (President Lyndon B. Johnson and General William Westmoreland were favorite topics), about the tunnel complexes under Cu Chi and the Black Virgin Mountain, Nui Ba Din. A common theme of folk anecdotes was the lucky wound or the self-inflicted wound that got a soldier out of combat.

As the body count grew, the 1960s counterculture emerged full blown, and opposition at home to the war became more vocal—especially after the January-February 1968 Tet Offensive in which 3,895 U.S. troops were killed—and graffiti, Xeroxlore, sayings, jokes, anecdotes, and folk narratives in Vietnam began to reflect these changes. Peace symbols on helmet liners, as tattoos, or as necklaces proliferated; anecdotes emerged of soldiers who stopped carrying weapons, even into combat; the elaborate embroidery done by Vietnamese “mama-sans” on fatigue jackets began to state new themes—“Another soldier for peace”; “Black man killing yellow man for white man”; and “Killing for peace is like fucking for virginity” all appeared beside the older motifs of “Proud American”;

“I’ve been to Hell”; or “Semper Fi” (*Semper Fidelis*, always faithful, the Marine Corps’ motto). Numerous belief tales about what protesters back in “the world” were doing to Vietnam vets found wide circulation.

A distinct folklore of the Vietnam vet also emerged as increasing numbers of soldiers returned to find themselves having great difficulty readjusting to civilian life. Jokes about vets cussing obsessively at dinner, much to grandma’s dismay; anecdotes about vets strangling their wives when awakened without warning; and the use of the “crazed Vietnam vet” as villain in both folk and popular narratives—added to the extensive but deeply ambivalent folklore of America’s longest and most confusing military venture. The novels of Tim O’Brien about the war give an accurate and detailed picture of the performance context of much of the folklore enumerated here.

W

Walton, Ivan (1893–1968)

Collector of Great Lakes folklore, with emphasis on sailors' songs. As a teenager in Ludington, Michigan, Walton visited the docks and listened to songs and stories of sailors. In the 1920s, he was already documenting these performances, and by 1932 he was spending summers on ships or around the lakes and on Beaver Island, Michigan, collecting the folklore of sailors, fishermen, and their families.

After receiving his B.A. in 1919 at the University of Michigan, Walton taught English literature while he continued graduate work for a time at the University of Chicago and the University of Illinois. In 1938 Walton and other Michigan folklorists, including Thelma James, E.C.Beck, and Emelyn Elizabeth Gardner, formed a folklore interest group, and in 1940 Walton founded the Michigan Folklore Society. In 1955 he established and taught the first folklore course at the University of Michigan.

Along with Beck, Walton participated in the song-collecting project of Alan Lomax, one result of which was the Library of Congress recording *Songs of Michigan Lumberjacks* (AFS L56).

When Walton died in 1968, he was one of the leading experts on Great Lakes folklore. Although he had not completed the manuscript of his life's work, he had presented papers at conferences and written articles based on his research. Walton's legacy, a vast collection of materials from more than thirty years of research, is housed at the Bendey Historical Library at the University of Michigan. An inventory compiled by Wil Rollman and Cheryl Baker was published by the library in 1979.

Ward, Marshall (1906–1981)

Traditional Appalachian storyteller who specialized in Jack tales. It was Ward who in 1935 acquainted the folklorist Richard Chase with the term “Jack tale” and introduced him to the many members of his family and community on Beech Mountain, North Carolina, who performed the stories—among them his father, Miles Ward and uncle Monroe Ward (grandsons of Council Harmon, the most immediate major conduit of the tradition), and the brothers Ben and Roby Hicks, also grandsons of “Old Counce.” These four men were the primary sources of the stories published in Chase’s *The Jack Tales* (1943).

Ward was himself an exceptional storyteller, having internalized twenty-five of his father’s Jack tales before he entered primary school. He performed the stories throughout his life, especially enjoying telling them to his fifth-grade students at the Banner Elk Grade School, where he taught for thirty years. The folklorist Charlotte Paige Gutierrez believes that Ward’s talents as a storyteller were directly related to his career as a schoolteacher. For example, Ward, unlike his fellow storytellers Ray and Stanley Hicks, inserted into the tales his personal advice about how best to conduct one’s life, and he modified Jack’s actions to the extent that they displayed much more edified and less violent behavior. Further, Ward’s performance style was much more animated than the Hickses’, surely an adjustment undertaken to retain the attention of young schoolchildren. Other of Ward’s important stylistic devices analyzed by Gutierrez include his use of voice changes and vocal dynamics, mimicry, facial expressions, and illustrative gestures.

Ward contributed greatly to the preservation and perpetuation of the Jack-tale tradition by performing them for seventy years for schools, festivals, and for his neighbors.

Warner, Frank (1903–1978) and Anne Locher Warner (1905–1991)

Collectors, performers, and interpreters of American folksong. In the late 1930s and early 1940s, at the same time that Richard Chase was investigating the Beech Mountain, North Carolina, story tradition, Frank and Anne Warner were discovering the parallel song tradition.

Their continued involvement in the folksong movement, especially in the Northeast, led to lectures and articles, to stints at the Pinewoods Folk Music Camp of the Country Dance and Song Society, to Frank's position as founding board member of the Newport Folk Festival in Rhode Island, and to Anne's publication of *Traditional American Folksongs from the Anne and Frank Warner Collection* (1984). The last, organized by repertoire and region, includes the important songs of New York's Yankee John Galusha, New Hampshire's Lena Bourne Fish, Frank Proffitt Sr. and other North Carolina singers, and many more.

Born in Selma, Alabama, Frank Warner at the age of six moved with his family to Jackson, Tennessee, home of railroad engineer John Luther "Casey" Jones. Six years later, the family moved to Durham, North Carolina, where Frank in time studied under Frank C. Brown at Duke University. In the early 1930s, he had a radio request program on WBIG, Greensboro. Son of a YMCA (Young Men's Christian Association) secretary, he, too, became a professional Y organizer and executive. In 1932, shortly after moving to New York City as program director of the Grand Central (now Vanderbilt) YMCA, he met Anne Locher. They were married in 1935 and had two sons, Jeff, an actor and folksinger, and Gerret, a filmmaker.

Anne Locher Warner, born in St. Louis, grew up in St. Paul, Minnesota, and in Chicago, where she attended Northwestern University. Leaving without a degree, she came to New York City in 1925. Her career included positions at the Council of Foreign Relations, the China Institute, and Hofstra University. Her last position was as executive secretary to the county executive of Nassau County, New York.

In 1938 the Warners took their first trip to North Carolina to meet Nathan Hicks, who had made them a dulcimer. There, during an afternoon of music making, they met Frank Proffitt, who sang "Tom Dooley" for them. Thus began a lifetime of collecting, recording, and promoting American folksong. Frank recorded seven albums, carefully replicating the performance style appropriate to each piece. He appeared on TV and radio and in film, taught at Cooperstown, New York, and served as president of the New York Folklore Society, vice president of the Country Dance and Song Society, and program director of the society's Pinewoods camp. A 1963 series of lectures was published as *Folk Songs and Ballads of the Eastern Seaboard: From a Collector's Notebook* (1963). Anne, in addition to her book, published articles in *Appalachian Journal*, *North Carolina Folklore Quarterly*, *New York Folklore Quarterly*, *Sing Out!*, and elsewhere. Both served as trustees of the National Folk Arts Council.

The Warners pioneered the use of electronic recording devices in the field. Their work is characterized by rich documentation of context, attention to whole repertoires, and a sense of responsibility to singers, including returning royalties to them. (When a recording by the Kingston Trio turned “Tom Dooley” into an international hit, they helped negotiate the settlement to return at least some of the earnings to the Proffitt family.) Pursuing full careers while fitting collecting and writing into evenings, weekends, and vacations, Anne and Frank Warner were the last of the great amateurs in a field now fully professionalized.

Watermen

Men whose economic survival depends upon the resources of inland waterways, bays, and (in a broader definition of the term) oceans and seas. Watermen’s traditions include the material culture of their trade—small boats, traps, nets, hunting calls, decoys, floats, and the like—as well as stories and foodways, shad planking and seafood dishes. As with many working groups, there is often a level of social importance

*Watermen's boats and houses.
Edgartown, Massachusetts, 1910–20.
Library of Congress.*

recognized within the group that directly correlates to one's expertise in making the tools of the trade, such as nets or hunting calls. Watermen can often recognize one another's style of workmanship in the specific crafts, and an individual with a special talent may earn a few extra dollars from his colleagues for his more expert product.

The craft that watermen use in coastal waters tends to be a small shallow-water boat, like a skiff or a gunner boat. Sometimes small houseboats, called floating cabins, have been employed to make liveable the land too wet for conventional housing and to place the waterman as near to his source of income as possible. Seldom are these houseboats more than just practical places to eat and sleep, and they are almost always occupied only during the work season by working men.

Watermen, perhaps because of the time spent in self-reliant, male-dominated work communities, sometimes develop carefully guarded recipes for traditional coastal fare, such as crab or turtle soups, fish specialties, and muskrat dishes. They also maintain secret preparation techniques, like the seven cuts it takes to completely debone the American shad—whose boniness earned it a Native American name that translates to “porcupine inside-out fish”—and the precooking used to rid muskrat of some of its gamey flavor. These techniques and recipes are almost never shared outside the community and sometimes the with older watermen.

In its broadest use, the term “watermen” is applied to all workers of the water, including those whose occupation is limited to the harvest of one specific product—for example, fishermen, oystermen, lobstermen, and crabbers. But in some regions, such as the East Coast of the United States, the term is reserved for men who spend their lives adapting to the many varied resources of the water and wetlands. Their activities tend to

differ from season to season. Depending on his geographic location and the climate, a waterman may hunt waterfowl, fish, catch turdes, and trap small game, such as muskrats. He may also serve as a guide to amateur groups of hunters or freshwater fishermen. His survival is based on his ability to derive a living from whatever the wetlands and the adjacent waters have to offer him, and the changing market often determines where he places his greatest emphasis. Also, although a crabber or an oysterman may tolerate being identified as a waterman, the terms are not strictly synonymous, and he is just as likely to make the correction to a more specific descriptive term when identified this way.

The term is seldom, if ever, applied to women, although there are some rare cases of women who would fit the above definition. It is common for women to be seen by the watermen as an outsider group and to be treated with the same level of derogatory humor as are the government fish, game, and wildlife officials who impose regulations on the watermen. Watermen's stories are typically based on aspects of the work environment and, like the environment, the stories tend to be male specific. These stories also emphasize the close bonds within the community and may reflect an "us against them" mentality. Sometimes heroes are found in the watermens stories and tall tales whose successes have to do with defeating nature, wildlife officials, or women.

Although many watermen are involved with conventional wildlife conservation groups, it is not uncommon to find a feeling of entitlement from the watermen when it comes to water and wedand resources. Their opinion that it is the sport fishermen and hunters, and industry, who do the most damage to natural resources adds to their sense of a closed "us against them" community.

Lifelong residents of coastal towns whose professions are not water oriented, but who enjoy water recreation, may also call themselves watermen, especially if their fathers or grandfathers were professional watermen. Usually, one does not adopt the term if one is not proficient in many of the same activities as the professional waterman.

William W. Warner, in his book *Beautiful Swimmers: Watermen, Crabs, and the Chesapeake Bay* (1987), charts the historical use of the term "watermen" back to Sir Thomas Malory's *Morte D'Arthur*, written in 1469–1470. According to Warner, the term has since then lost all but its archaic connotations in England and has migrated to the communities who work the waters on the East Coast of the United States. Warner offers further defining qualities of the term, such as that it is used "to separate those who had the resources to acquire land and those who didnt and went out on the water for subsistence." In the late-20th-century a waterman may or may not own land, and may or may not have a land residence, but he always goes "out on the water for subsistence."

Waters, Muddy (McKinley Morganfield) (1915–1983)

Chicago blues artist. The best-known transitional Mississippi Delta to Chicago bluesman, Muddy Waters was influenced by Son House and the recordings of Robert Johnson. While in his teens, he played with local string bands at house parties and country breakdowns. In the early 1940s, he ran his own juke joint in Mississippi and in 1941 he was field recorded by folklorist Alan Lomax. Moving to Chicago in 1943, he worked with other Delta musicians at rent parties and small taverns, where transplanted Southerners with a taste for downhome music supported Southern-born blues musicians. After an abortive test recording for Columbia Records in 1946, Waters began a productive thirty-year collaboration with Chess records. Initially recorded in a more-or-less solo format, Waters put together outstanding bands known for their “head hunting,” or job-stealing, ability. Like Walter Jacobs, Jimmie Rodgers, Walter Horton, Junior Wells, James Cotton, Otis Spann, Willie Dixon, and countless others worked with, and were influenced by, Muddy Waters.

While his regional edenic deep-blues style never appealed to the majority of African American record consumers, Southern Blacks and city folks with Southern roots supported his music. Through the 1960s and 1970s, however, his African American audience waned and he worked more and more for a revival audience. From down-home Delta folk artist, to Chicago edenic star, to international superstar, Waters changed his music very little. A distinctive if limited instrumentalist, he was a great vocalist and a superb bandleader who recognized talent in others and had the strength to mold it into his own sound. His overall aesthetic remained keyed to the African American oral tradition, and his music has a timeless quality fueled by his personal charisma, the strength of his supporting musicians, and the quality of the Chess studios, which captured and polished the blues tradition at its best.

Watson, Arthel (“Doc”) (1923–)

Virtuoso of the flat-picked acoustic guitar. From Deep Gap, North Carolina, Watson, with his vast repertoire of folk, country, and rockabilly songs, was one of the most

commercially enduring instrumentalists to emerge from the folk revival. From his first New York concert in 1961 until his semiretirement in the late 1980s, Watson performed throughout the world, spending as many as 300 nights a year on the road and producing more than two dozen recordings.

Watson was born in Stoney Fork, North Carolina, the sixth of nine children born to Annie and General Dixon Watson. He contracted an eye disease as an infant that left him blind before he was two years old. His musical education began at home with a new harmonica in his holiday stocking each year and, at the age of eleven, a homemade banjo, built by his father. When he was twelve years old, Watson purchased a \$12.00 Stella guitar and began to learn songs from the family's collection of 78-rpm recordings of the Skillet Lickers, the Carter Family, the Carolina Tar Heels, Jimmie Rodgers, Riley Puckett, and Mississippi John Hurt.

Watson acquired the nickname Doc when he was eighteen years old. While preparing to play for a remote radio broadcast at a furniture store, an announcer, deciding that Arthel was too cumbersome for the air, called him Doc. The name stuck.

It wasn't until 1953 that Watson became a successful working musician, teaming up with Tennessee piano player Jack Williams in a country-western-rockabilly band. It was during the 1950s that Watson, playing a Les Paul electric guitar, developed his skillful flat-picking style, often playing fiddle leads on the guitar.

In 1960 folklorist Ralph Rinzler, while researching traditional musicians in North Carolina, was introduced to Watson by legendary banjo player Clarence Ashley. Impressed by Watson's skill, Rinzler arranged for him to play at Town Hall in New York City and at the Newport Folk Festival in Rhode Island in 1961. Soon after, Watson was much in demand at concert halls, coffeehouses and festivals across the country.

In 1946 Watson married Rosa Lee Carlton, the daughter of accomplished mountain fiddler Gaither Carlton. They had two children. Son Merle developed into an accomplished guitarist, and in 1964, at the age of fifteen, he joined his father as accompanist, road manager, and guide. For more than a decade, father and son were near-constant musical and personal companions until Merle's tragic death in a tractor accident in 1985.

To date (1995), Doc Watson has won four Grammy Awards, and in 1988 he was a recipient of a National Heritage Fellowship from the National Endowment for the Arts.

Weatherlore

Beliefs and practices related to prediction, interpretation, and control of the weather. Most weather beliefs focus on signs of things to come, but many indicate magical causes and effects. Proverbs, tales, legends, rituals, and material culture extend the scope of weatherlore, which has regional variations but often covers large segments of the United States.

By far the largest corpus of weather customs and beliefs has to do with rain, a crucial ingredient in the growing of crops. People have scrutinized the sun, the moon, the stars, the sky, animals, birds, and insects to figure out when rain will come. For example, Illinois folklore states that a solar halo may indicate rain before night; a sun dog (parhelic halo) north of the sun means rain from the northwest, while a sun dog south of the sun means rain from the southwest. After an eclipse of the sun, one can expect five full days of rain. From New York folklore comes a proverb familiar to many Americans: "When there's a ring around the moon, rain is coming soon." A moon that has changed during the night may presage a wet season. Stars can also give clues about rain, as in this New York proverb about an upside-down Big Dipper: "If the stars are in a huddle, the world will be in a puddle." African American folklore states that if a circle around the moon encloses three stars, there will be rain in less than three days.

Colors of the sky and patterns of clouds are frequent indicators of rain. One popular mariners' proverb, also known by farmers, explains, "Red sky at night, sailors' delight. Red sky at morning, sailors take warning." Red skies generally signal rain, unless they follow gray. In New England tradition, a greenish tinge near the horizon means that rain will come soon, while a purple haze indicates a return to fine weather. Cloud patterns such as a "mackerel sky" (clouds in parallel bands) are widely recognized as rain indicators: "Mackerel sky, mackerel sky, three days wet and three days dry."

Animals, birds, and insects have a prominent role as weather forecasters throughout the United States. People say that cows will lie down, dogs and cats will become agitated, and ants will scurry to shelter as rain approaches. Seagulls will fly inland as a rainstorm builds; fish will begin to bite more readily, and bees or flies will sting harder. Even flowers can foretell rain's approach by the opening and closing of their buds.

Since flora and fauna can forecast rain, it is not surprising that people also can do this under certain circumstances. Rheumatism or a broken bone can make a person feel twinges before a rainstorm. Other sensations that presage rain include pains in corns, ringing in the ear, and a "lazy feeling." Itching on the heel or sole of the foot can mean either rain or snow; more specifically, if the nose itches three times in an hour, rain will come within twenty-four hours. An Illinois proverb states, "Curls that kink and cords that bind, sing of rain and heavy wind" (Hyatt 1965:30). Some people think that the elderly are better forecasters, because old bones feel rain more acutely than young ones.

Deliberate efforts to bring rain are fairly prominent in American folklore. The oldest practices come from Native American lore. For example, the Hopi snake-antelope dance calls upon the well-known power of snakes to invoke rain. Dancers wash the snakes in yucca suds, then release them toward the north, south, east, and west. Snake dances and other kinds of rain dances have occurred among numerous Native American peoples. Cross-culturally, snakes and other reptiles have a strong connection to rainmaking. According to both African American and general American folklore, one can bring rain by turning a dead snake belly-up or hanging it on a fence.

In the late 19th century in Nebraska, professional "rainmakers" sought to earn their pay by firing explosions from balloons, building large, smoky fires, or setting off gunpowder explosions from high peaks. More recent and lighthearted formulas for bringing rain include forgetting to carry an umbrella, opening an umbrella in the house, stopping a swing by dragging one's feet, and (probably most popular of all) washing and waxing a car.

Those who want to prevent rain may follow the Illinois adage, "Preparation for rain scares it away" (Hyatt 1965:32). One way to stop rain from coming is to turn upside down all buckets and other receptacles that are out in the yard. To keep rain from spoiling a picnic, some try to "fool" the weather by making no plans until the day the picnic will occur. In spite of people's best efforts, July 4 is likely to be rainy because—according to popular belief—ammunition and fireworks bring rain down from the sky.

On certain ceremonial occasions, rain has the onus of causing bad luck. A rainy wedding day may be a bad omen for the newly married pair; in North Carolina, rain (or snow) on the wedding day means that the groom will die first. On the other hand, some newlyweds who have married on rainy days have contended that rain brings especially good luck. Since rain is helpful for farmers, it may bring good things for the young couple. Nonetheless, rain on the traditional day for sweethearts, Valentine's Day, is a sign of trouble on the farm: Hens will stop laying.

Next to the many signs and results of rain, indicators of the onset and severity of winter fill the annals of American weatherlore. Animals and birds can tell us if a winter will be harsh: Caterpillars will become very fuzzy; cats, dogs, foxes, and skunks will grow heavy coats; turkeys will roost high in a tree; and hogs will run around widdly straws in their mouths. In New England, oysters will burrow deep into their beds in the ocean. A popular New York proverb predicts winter's development: "As the days begin to lengthen, the cold begins to strengthen." Concern about heavy snow and fog ("A January fog will freeze a hog") emerges from folklore of the Northeast. Magic for stopping snow is somewhat rare; however, a Texas custom calls for striking a sputtering log in the fireplace to dislodge gas, break the spell of winter, and make the snow stop falling (Hendricks 1980:146).

Folklore across the United States chronicles many positive effects of winter. In North Carolina, a snowy winter means a good crop year, because the land is wet and insects are not numerous. Similarly, in Illinois snow at Christmas and wind on New Year's Day bring fruit in profusion. A "white Christmas" means health in New England: "When Christmas is white, the graveyard is lean; but fat is the graveyard when Christmas is green" (Botkin 1947:633).

Even though snow has these beneficial effects, people watch eagerly for signs of winter coming to a close. Groundhog Day or Candlemas Day, February 2, is the day when a groundhog, badger, or bear can foretell winter's end. If willows bud early and ducks lay ahead of schedule, one can expect winter to end early. And if a person sees baby squirrels in open nests in late February, an early spring is almost certain to arrive.

Since the 1950s, when the neopagan movement gathered force in England and North America, some individuals who identify themselves as neopagans or witches have accepted responsibility for causing severe winter weather, rainstorms, and winds. Using spells that date back to medieval European magic, neopagans have claimed to bring about dramatic weather changes, including blizzards and hurricanes. One medieval spell used in the 1990s involves knotting a cord while facing in a certain direction and whistling or spitting for wind or rain. When the spell setter releases the knots, the preset weather will come forth to surprise local inhabitants.

Just as medieval lore has influenced neopagan weather spells, ancient mariners' beliefs have had an impact upon relatively recent folklore of the sea. There are many stories and customs about buying the wind: throwing a nickel, a dime, or a quarter

overboard to purchase a breeze for a sailing ship or small boat. This practice originates from efforts to buy the wind through human sacrifice in ancient times. One Texas narrative tells of a man who, in his greed for favorable weather, bought a dollars worth of wind. His boat capsized, and his wife and children drowned (Mullin 1978:35–40).

Folklore about tornadoes, mainly from the Midwest and the Southwest, has to do with both prediction and prevention. Midwesterners say that a sky with a sickly, greenish cast tells you that a tornado is coming; Texans predict that a tornado follows the first thunder after the last snow. Those intrepid enough to try to deflect a tornado can turn it in another direction by driving a double-bit ax into the top of a stump, with the ax handle pointing in the direction desired. Deflection may not be necessary, though, if one relies on the belief that a tornado cannot strike a town located in a valley or between mountains or hills (Hendricks 1980:147).

Like tornadoes, lightning is something to deflect or avoid. “Lightning never strikes twice in the same place,” a well-known proverb, helps to explain why people sometimes hide under burnt trees or logs. Methods for warding off lightning in Illinois include throwing an ax into the yard and burning blessed palm leaves. In Texas, people may cover mirrors and cross their suspenders. Some Americans believe that unplugging their television sets and wearing rubber shoes will decrease their chances of having lightning strike their homes. Lightning has connotations of divine punishment and diabolical presence, as in the African American belief that if lightning strikes while a man is dying, the devil has come for his soul. Some Native Americans on the North Pacific Coast have explained lightning as a flash of the Thunderbird’s eye; others have perceived lightning as Thunder’s wife or younger brother.

The precursor of lightning, thunder has many colorful explanations. Texans say thunder is the result of the devil’s potato wagon turning over, while Native Americans on the North Pacific Coast say it comes from Thunderbirds flapping their wings or striking trees. Pueblo Native Americans sometimes call thunder by rolling two stone balls in front of a meal altar in their kiva. There are two Cherokee thunder boys, Tame Boy and Wild Boy. Some American children enjoy baking a “thundercake” when they first hear thunder and starting to eat it when the storm breaks (if the storm allows enough time for baking).

In addition to the rich array of verbal folklore, material culture shows a strong orientation toward the weather. Weathervanes featuring horses, arrows, and other figures are very popular. In Pennsylvania Dutch country, hex signs depict raindrops, thunderbolts, and other symbols of weather, either to propitiate or prevent. Even though meteorological science has taken over the official forecasting of American weather, folklore still offers a significant way for people to seek understanding and control of phenomena that often seem to defy rational analysis.

Weaving

The interlacing of two elements at right angles most often used in the construction of cloth. A loom is used in weaving to provide tension on the vertical, or warp, units while the horizontal, or weft, element is passed over and under the warp.

The weaving of cloth developed as one of the household arts and has been seen primarily as women's work in Western culture. However, when weaving evolved into the textile industry, males took over the occupation. In weaving, many currents exist simultaneously and intertwine. Woven textiles are either utilitarian or decorative and can be both. Weavers may use equipment as simple as a piece of cardboard and a stick or may employ complex looms and mechanisms. Weaving has been produced for personal, domestic use and manufactured for commercial sale. A weaver must have considerable skill to get a product at all, let alone be proficient at the craft. So, while other household arts have survived as popular hobbies, handweaving is practiced by relatively few when compared to the number of quilters or knitters.

Weaving encompasses a wide world from dish towels to huge narrative tapestries. Certainly weaving first began to supply functional items, but, like other crafts, embellishment made the use of these functional items more pleasing. Even the humble dish towel presents a wide range of options for the weaver. The weave structure may be the simple over-one-thread-and-under-the-next construction of a plain weave, or a diamond pattern created by varying the number of threads passed over and under in the repeated sequence. A waffle weave, the name indicative of the miniature indented grid created by the thread interlacement, combines function with design by increasing the absorbency of the towel. Desiring a greater visual effect, the weaver might choose a Damask structure, in which a warp-faced satin weave opposes weft-faced satin elements. Weave structures provide both decorative and functional qualities to the product.

Besides patterns created by combining the vertical warp elements with the horizontal weft elements, the weaver may employ color to enhance the towel. The towel can be a single color in both warp and weft, but decorative elements may be increased by weaving the body of the towel in a single color and switching to another color for a patterned border. Stripes of different colors in the warp produce striped towels if woven with a

single color in the weft. When the striped warp is crossed with weft stripes, a plaid fabric is created. A checked towel results if uniform warp stripes, such as two light threads followed by two dark threads, are then woven with the same sequence of light and dark.

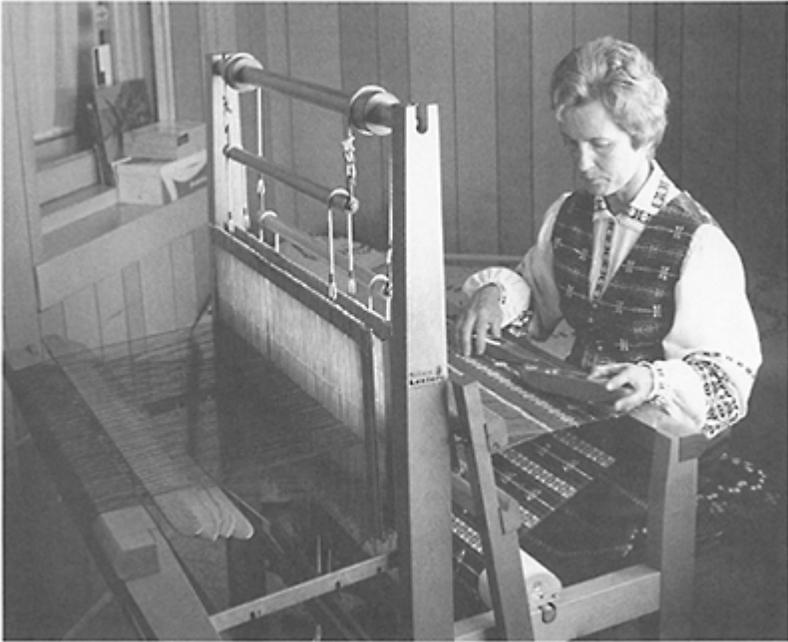

Fiber content and yarn size present other decisions to the weaver that will greatly affect the product. For the dish towel, the practical choice would be linen or cotton because of the absorbency of the fibers, wear potential, and reasonable cost. The function of the product, ease of construction, and decorative aspects all figure into the selection of yarn texture and size.

Continuing to use the dish towel as an example, this item would need a minimum of finishing after cutting from the loom. Most likely the towel would be woven vertically with selvages forming the two sides. A selvage is the edge of the fabric where the weft yarn reverses direction to combine with the warp in the next interlacement in the sequence. The resulting edge is firm and will not unravel. Hemming to a desired length or fringe completes the top and bottom of the towel. Warp left unwoven creates fringe, and the weft is secured with a locking stitch to prevent raveling.

Even for the very modest dish towel, a great number of decisions must be made in the production, with all affecting the usefulness and aesthetic qualities of the item. Other utilitarian weaving has at least as many functional and decorative considerations, and, most of the time, more. In your own home, walk from room to room and examine how and where textiles appear. Looking into the bedroom, you can catalog rugs on the floor, curtains at the window, and the bedcoverings—sheets, blankets, and spread. When you open the closet door you will see woven cloth in most of the garments. Textiles are so much a part of our daily lives and so easily and cheaply available that little thought is given to how they come to be. And since most of this fabric comes from machines in factories far away from sight, the significance and complexity of the process is not understood. The development of textiles coincides with the history of civilization at many important points. Domestication of animals for wool and the cultivation of crops for fibers led up to the Industrial Revolution, which began with the invention of the spinning jenny and continued with teaching machines to weave.

Very early in their histories, most cultures of the world discovered weaving independently and developed very complex structures for combining two elements. Carbon-dating of a piece of calcified fabric from near the headwaters of the Tigris River in what is now southern Turkey places the oldest cloth found at an age of 9,000 years. Archaeologists from the Oriental Institute of the University of Chicago identified the cloth as composed of linen fibers, but they also suspected that domesticated sheep and goats supplied wool.

Weaving is among the oldest crafts, predating even pottery. Baskets formed out of reeds probably represent the first weaving. While efficient for carrying multiple small items, baskets did not lend themselves to the transportation of water. Clay pressed inside the basket functioned better to contain liquids, as indentations of reeds in shards of prehistoric clay pots attest. A happy accident of civilization occurred when

*Aldona Veselka, Lithuanian-American weaver, at her loom. Chicago, 1977.
Photo Jonas Dovydenas. American Folklife Center.*

a clay-lined basket caught fire and burned away the reed, thus firing the clay into a vessel.

Before weaving can begin, the elements to weave have to be amassed. Reeds, grasses, vines, or other plant material constituted the earliest substances woven, used in baskets and mats. Twisting or spinning short fibers gathered from plant and animal sources produced a pliable element very suitable for weaving. Spinning can be accomplished with easily improvised equipment. A potato with a pencil stuck in it can function as a simple drop spindle. The weight assists in keeping the element turning, while the spinner feeds the fibers into the strand. A stick with a rock bound to the bottom served early spinners as a drop spindle. A spinning wheel speeds up the process. The actual twisting of the fibers occurs only at the very tip of the spindle, with the wheel simply being the mechanism for turning the spindle. In the United States, two major types of wheels have been used. The Great Wheel, or Walking Wheel, is a large wheel that the standing spinner keeps in motion with an occasional thrust from her hand. She draws out the fiber and lets it twist, taking three steps in the operation. The spinner sits on a stool for the smaller Flax Wheel and works a treadle with her foot, keeping the wheel turning to drive the spindle. Spinning is a time-consuming activity, taking many spinners to keep one weaver supplied with yarn. Unmarried women put to the task engendered the word "spinster," which although somewhat archaic still persists as a term for the unattached female.

The preparation of fibers for spinning depends on the source for the material. Natural fibers come in two basic types: cellulose from plants and protein derived from animals. While many other plants produce fibers that can be spun, cotton and flax have proven the most versatile and the easiest to grow. Linen or other long plant fibers draw directly from the distaff attached to the Flax Wheel in the spinning process. The term "distaff" to denote female lineage derives from this piece of spinning equipment.

Although the hair of most animals can be spun, wool from sheep is the favorite because of the early domestication of the animals and the rapidity with which the sheep grows a new coat. Carding prepares the wool fibers for spinning. Hand cards with rows of bent teeth comb the fibers in opposite directions to align them. Like wool, silk is also a protein fiber; it comes from the cocoon of a silkworm. Silk, although it can be spun, more often is unwound as a single filament from the cocoon after exterminating the worm inside. Rayon is a man-made fiber, of a cellulose base. Synthetic fibers, such as nylon, acrylic, and polyester, manufactured from combinations of chemicals, mimic properties of natural fibers. When spun, the synthetics reach the market under a variety of trade names like Orlon, Dacron, or Trevira.

Even though some fibers have color in their natural state, the tendency has been to add color. Dyestuffs to color yarn come from many natural sources, and throughout history the less accessible colors have had tremendous value. Royalty chose purple because of its scarcity, and brown fell to the common man because of the easy availability in many different tree barks. Most dyestuffs come from plants, although the red of cochineal derives from an insect, and the regal purple from a shellfish.

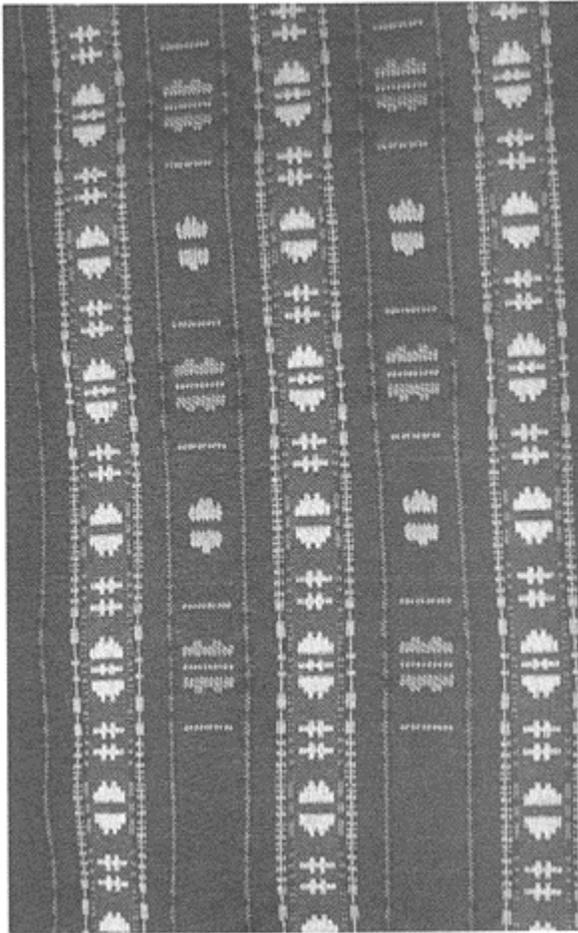

Specification of substance and time and temperature combine in natural dyeing formulas that passed down in families. The process first involves boiling yarn in a mordant, a chemical with a metal base. In the dye bath, the mordant unites with the dyestuff to form a tighter chemical bond than the dye alone would produce. Indigo does not require a mordant, because in this chemical process the indigo oxidizes when the fiber is exposed to air after being removed from the dye bath. Other than onion skins that give a golden brown color, most dyestuffs are very toxic. Pictures of dyeing for home use usually show a large iron kettle over a fire. The metal pot supplied the mordant while the open air dispersed the toxins. Since it is extremely difficult for large quantities of yarn to be dyed with natural dyes, the formulation of chemical dyes was of major significance to the textile world.

A loom may be a very large complex device or a small hand-held one such as the pronged metal, or now plastic, square that thousands of children have used to weave pot holders with cotton loopers. The function of a loom is to hold the warp, or vertical, threads at equal tension. Down through history some ingenious devices to do this have come into being. In ancient Greece, the vertically suspended warp was weighted with rocks. Several different peoples have come up with a loom in which the weaver is part of the warp tensioning. With various regional differentiations, the warp is stretched between two rods, with one end tied to an immovable object like a tree and the other rod secured around the waist of the weaver by a strap. With this back-strap loom, the weaver adjusted the tension by leaning back.

While the main purpose of the loom is to keep equal tension on warp threads, many other features contribute to the efficiency of the process and assist in pattern formation. The standard loom for the American handweaver is a foot-powered, four-harness jack

type, constructed of maple and capable of weaving fabric 40 inches wide. The foot pedals, or treadles, activate the harnesses, which raise threads through a counterbalance, countermarch jack, or dobbie mechanism. The number of harnesses determines the complexity of the weave structures possible on the loom. With more harnesses, more complex structures can be attempted, but more is not necessarily better; only different in kind. On a four-harness loom, thousands of patterns can be woven within four-harness weave structures. When combined with variations in color and yarn weight and texture, the possibilities are endless.

Before the weaver begins the actual weaving process, the loom must be dressed or warped. After planning the project, the weaver needs to put the exact number of warp threads needed to the same length. Winding threads in the desired

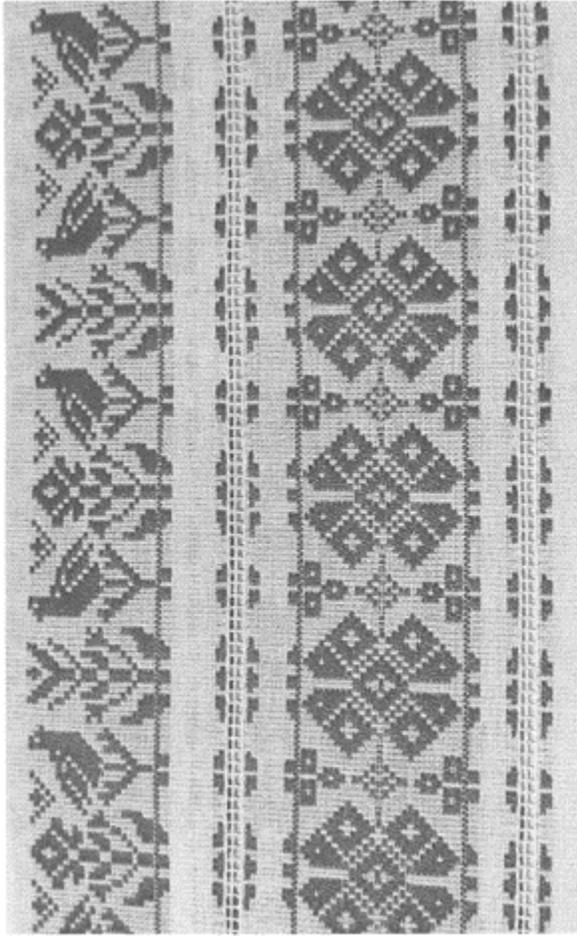

Cloth woven by Aldona Veselka, using traditional Lithuanian motifs. Chicago,

American Folklife Center.*

color sequence around pegs on a warping board or rotating them around a reel measures and arranges the threads. Although methods of putting the warp on the loom differ, all threads are separated through the reed, pass in the planned order through heddles on the harnesses, and are stored on the warp beam at the back of the loom. The long and tedious process of warping must be done accurately. A mistake will either make weaving impossible or show as a very visible defect throughout the entire fabric. A warp may be the length of a single project or long enough to accommodate many items. To return to the dish towel example, the threading of the loom takes the same time for one item as it does for 100. Because the weaver has options to vary the pattern and choose weft yarns of different kinds and colors, the resulting 100 towels may be identical or each one may be unique.

When the warp is finally tied to the cloth beam of the loom, the weaver is ready to begin the actual process of weaving. A treadle is depressed, bringing up threads and creating a shed; the shuttle with the weft yarn is thrown through the shed; and the weft is packed into place by the beater before advancing to the next shot or pick. The treadles activate the harnesses according to a desired sequence for the pattern.

Weavers save patterns in a system called a draft. Drafts from the early American years use long strips of paper that have lines drawn on them similar to a music staff. Tally marks denote the positioning of the warp threads on the harnesses

Cloth woven by Aldona Veselka, using traditional Lithuanian motifs. Chicago, 1977. Photo Jonas Dovydenas. American Folklife Center.

in the sequence in which the warp thread must be placed to achieve the pattern. Usually, the old draft rolls have tiny holes where generations of weavers have placed pins to keep their place during the warping.

The early American colonists led a frontier life, but the colonies were not intended from their inception to be self-sufficient. The parent country wanted raw materials from its satellites and also desired a market for finished goods. Unfortunately, a very large ocean lay between parent and child. And while this economic model worked well on paper, the practicality of transporting goods caused many problems, including increasing the cost of those goods. So one could assume that fabric production that could have been

done in the home would have been. However, the colonists imported most of the textiles they used. Fashion, habit, and the extent of the skills required in home fabric production account for this. In some of the colonies, attempts to establish commercial textile manufacturing met with laws forbidding their establishment. When the Industrial Revolution advanced in the mid-18th century, with the invention of the spinning jenny followed by the automation of the loom, the secrets were jealously guarded and export of machinery forbidden. Although the colonial powers curtailed the development of a domestic commercial textile industry, methods for the construction of power looms found their way to America in the minds of immigrants. Although not of fine quality, local cloth manufacturing grew rapidly.

Individuals who came to the New World did know how to prepare fibers and weave. With an understanding of the weaving process, they were able to make spinning wheels and looms using simple woodworking tools. During the Revolutionary War, the wearing of "homespun" even gained fashion as a defiant and patriotic gesture. After the war, handweaving continued as a home art, most often in isolated areas where people had very little possibility of earning money to purchase necessities. Frontier life included weaving, but frontier settlers readily abandoned the tedious work when options to purchase textiles became available.

With increased migration to the United States in the 19th century, different peoples brought their skills in textile production with them. When ethnic groups concentrated in rural areas and farmed, the likelihood of continuing some weaving increased. Hispanic families wove rugs in the Southwest, and Scandinavian peoples brought their weaving to the Midwest. While household necessity played some role in the weaving, decorative and traditional cultural items proved more popular. Examples of weavers' work can be found in ethnic museums throughout the United States. While some of this has a traditional base, as seen in the folk costumes in the Lithuanian Museum in Chicago, most items defy specific cultural identity.

Since the rigidity of the weaving process imposes conditions on the product, and since the history of woven textiles is extremely long, the attribution of different weaving techniques to specific ethnic groups is very tricky. It is not even possible to trace to a specific European country the lineage of the most admired American woven item, the overshot coverlet. Found in hundreds of individualized patterns, coverlets, unlike totally utilitarian items, have been saved rather than discarded when signs of wear appeared. The older coverlets employ a linen warp, while the ones from early in the 20th century use a commercially spun bleached cotton yarn. Handspun and naturally dyed with the blue of indigo or red of madder, wool creates the pattern in the weft. Although coverlets can be found in many weave structures, overshot is by far the most common because it could be produced in the home on a four-harness loom. While some names like "Whig Rose" or "Lee's Surrender" refer to specific designs, others like "Pine Tree" or "Snowball" denote specific pattern figures. Weavers named patterns as they ordered design elements in new combinations, so similar patterns may have very different titles, or the variation may carry the same name as the original.

Besides handweaving items for home use, during the 1800s handweaving existed as a commercial venture, with the weaver producing commissioned items. Sometimes the customer would supply some of the material, such as handspun weft yarn. Primarily in the South, itinerant weavers traveled from plantation to plantation setting up looms and

weaving with the help of slave labor. As in the Revolutionary War, the South considered it patriotic to wear homespun during the Civil War. Although the South produced cotton, the North owned the mills that turned it into cloth. By the mid-19th century, most fabric came from industrial looms. Although the names of some handweavers in the 1800s are known, many more worked outside the historical record with only an occasional product surviving to attest to their existence. Through her diary, we know that after her husband's death, Narcissa Erwin Black ran a thriving weaving business on the family plantation in McNairy County, Tennessee. An African American woman, Chany Scot Black, owned her own loom and assisted Narcissa Black in all phases of the weaving process both before and after Emancipation.

In the latter part of the 19th century, thousands of looms were sold to farm families in the Midwest, marketed as a vehicle for providing supplemental income. Many of these looms featured a fly-shuttle, a spring mechanism for propelling the shuttle through the open warp, or devices to control the raising of harnesses in set sequences. Rag rugs rolled off looms by the thousands and became quite fashionable as a floor covering in Colonial Revival interiors. Many customers salvaged fabric from used clothing and worn household items to supply their own rags cut into strips and sewn together ready for use as weft. The weaver calculated the cost by the inch for the weaving of the rug.

In Britain, in reaction to Victorian industrialization, John Ruskin and William Morris started the Arts and Crafts movement to promote handcrafted items. When these ideas traveled across the Atlantic, eager converts enlisted in most major American cities. As a leader in the Arts and Crafts movement with Tiffany and Stickley, Candace Wheeler promoted home decoration and the textile arts and established cooperatives for women. She first learned weaving as a household art during her childhood in upstate New York. Max West, in a 1904 Department of Labor bulletin details the activities of the many centers that promoted weaving as part of philanthropic efforts to help diverse populations. The Acadians of Louisiana, the Mothers and Daughters Industry of Plainfield, New Hampshire, the Southern-mountain weaving around Asheville, North Carolina, organized by the Presbyterian missionary Frances Louisa Goodrich, and several dozen other cooperatives received his notice. Jane Addams included spinning and weaving demonstrations as part of the Hull House Labor Museum designed to emphasize the dignity and importance of labor while providing links to the European cultures of the Chicago immigrants. The Shakers wove for their own use in their communities in New England, Ohio, and Kentucky and for commercial sale.

Late into the 19th century in some parts of the Appalachian Mountains, women continued weaving, supplying many of the textile needs of their homes as part of a subsistence lifestyle. In 1892, shortly after assuming the presidency of Berea College at the western edge of the Appalachian Mountains in Kentucky, William Goodell Frost received the gift of a coverlet. He believed that encouraging women to weave would have two major benefits as he promoted the college in the North. First, the beautiful designs would stand as testament to the worthiness of their creators, overcoming the negative stereotypes of mountain people as barely civilized and lazy. Second, the sale of the items would provide much needed "cash money" to the weavers. When President Frost tried to commission half a dozen coverlets from a local woman, he received a detailed lesson on preparation of fibers and the dyeing and weaving process. The weaver estimated it would take twelve months to complete the work because many of the steps in the process could

be performed only at a specific time of the year. In 1911 Berea hired Swedish-born Anna Ernberg to manage the Fireside Industry that provided parttime employment to women working in their own homes. Ernberg not only expanded the home-based production, but also developed weaving as one of the Berea College student industries. Hundreds of girls paid their tuition to high school and college by working in the log buildings that housed the weaving on the Berea campus.

During the early part of the 20th century, more than 150 settlement schools sprang up in the remote areas of the Appalachian Mountains, not only to educate children, but also to provide for the social and health needs of the families. While Protestant denominations sponsored most of these schools, women's organizations ran some of the most successful of the programs. Women of the Pi Beta Phi fraternity moved into Gatlinburg, Tennessee, in 1912, and by 1915 looms followed as part of the industrial program at their school. In 1925 Winogene Redding assumed management of the weaving, and the number of women working in the cottage industry grew rapidly. In the ten years between 1935 and 1945, no less than ninety weavers worked for Arrowcraft, the shop named for the Pi Beta Phi symbol. Hundreds of women learned to weave, many of them setting up shops of their own or working in others that appealed to the increasing tourist trade promoted by creation of the Great Smoky Mountains National Park.

Other early school-based weaving programs prospered at Hindman and Pine Mountain in Kentucky, Crossnore and John C. Campbell in North Carolina, and Tallulah Falls and Berry in Georgia. Although Lucy Morgan started the Penland Weavers and Potters as a Fireside Industry of the Appalachian School in North Carolina, it became independent of the school during the Depression. Edward F. Worst, the manual arts coordinator for the Chicago public schools, demonstrated linen weaving to the Penland Weavers in 1928. Weavers around the country heard about the Worst visit through an article by Paul Bernat in the *Handicrafter* and requested to be included in the next workshop. The annual summer weaving institute expanded rapidly and, with the addition of other crafts, developed into the Penland School. Penland; the Arrowmont School of Arts and Crafts, which is still maintained by Pi Beta Phi in Gatlinburg; and the John C. Campbell Folk School at Brasstown, North Carolina, that grew out of the craft work of the settlement schools form the leaders in workshop-format craft education.

The women organizers who revived weaving in the Southern Highlands stated their two major goals as keeping alive a vanishing craft and supplying employment to local women. The weaving could be done at home while tending children, house, and farm. The settlement activity served as a model for other mountain craft businesses. In Berea, the Matheny Weavers and the Churchill Weavers; in Asheville, the Spinning Wheel; and at Russellville, Tennessee, the Shuttle-Crafters all began in the 1920s and turned out thousands of hand towels, placemats, and baby blankets, as well as the traditional coverlets.

The settlement workers met yearly in Knoxville, Tennessee, at the Conference of the Southern Mountain Workers and discovered that they shared similar problems in their craft production activities. After an organizational meeting in 1929 at Penland, the schools and the craft-production centers joined together under the banner of the Southern Highland Handicraft Guild. The new organization addressed the common problems of publicizing work, marketing, quality control, and upgrading skills of workers.

Mary Meigs Atwater, often referred to as “The Dean of American Handweaving,” published her first issue of the *Shuttle-Craft Guild Bulletin* in 1924. Through this subscription service for weavers, she shared her extensive research in weave structures and her pattern designs. Swedish weavers Margaret Bergman and Mama Valborg Gravander taught weaving and led the weaving community in their respective adopted homes of Seattle and San Francisco. Anni Albers brought the philosophy of the German art school, The Bauhaus, to this country. From her handweaving design studio in San Francisco, Dorothy Liebes produced fabrics that enlivened the use of color in weaving. Within a locality, the usual pattern was for there to be one principal teacher with guilds developing as groups of students desired contact and sharing with other weavers. Elsie Gubser led the handweaving community in Tulsa, Oklahoma. Lou Tate published the *Kentucky Weaver Newsletter* and taught weaving at her Little Loomhouse in Louisville. By the mid-20th century, most handweavers owned a copy of Marguerite Porter Davison’s *A Handweaver’s Pattern Book* and subscribed to Mary Alice Smith’s quarterly *Hand weaver and Craftsman*.

Within most cities of any size and quite a few rural areas, weavers have organized themselves into guilds. Weavers are by far the most organized of the crafter, and weavers, disproportionate to their numbers, assume leadership roles in craft organizations. Weavers Guilds hold regular meetings, sponsor workshops with weaving professionals, organize exhibitions, and engage in community-service education projects. Different parts of the country have either separate organizations or federations of guilds that sponsor regional conferences. On the national level the Handweavers Guild of America (HGA) sponsors Convergence, the major conference every two years that draws an average attendance of 2,000. The HGA, founded in 1969, offers many services to its members including the quarterly publication *Shuttle, Spindle, and Dye-pot*.

The bimonthly *Handwoven* and the quarterly *Weavers* aim their full-color magazines exclusively at the handweaver. The magazines concentrate on techniques, improving skills, and how-to-do-it projects, with an occasional article on textile history. Interweave Press, Dos Tejedoras Fiber Arts Publications, and Lark Books publish textile books, many of them of a technical nature aimed at the experienced handweaver.

Handweaving is practiced throughout the United States primarily by women. The typical weaver is in her late forties, married to a professional man, mother of two children, holds a degree, and has done some graduate study, most often in the sciences. Her weaving may be the major focus of her life or may fill leisure hours. She may weave as a commercial venture or be a serious investigator of her craft. She may weave garments and functional projects for her home or use weaving for artistic expression. She may have learned to weave at a craft school, a professional art school, or a college, but most probably it was at a recreation program or from an experienced weaver. However the introduction to weaving occurred, she has an extensive library of weaving books and takes an occasional workshop.

Weddings

Tradition-regulated ceremonies joining couples in marriage. Weddings have generated rich folklore that crosses all cultures with variations and often contradictions. Symbolizing the transfer of a woman to her husband's family, weddings follow a prescribed set of rituals and superstitions that people believe will ensure happiness and safety for the couple.

Basic themes of folktales about weddings include the enchantment motif of marriages, with animals who transform into humans who had been held under spells, brides who marry a hero who saved their life, and grooms who undergo an initiation rite or solve riddles to win the bride.

Modern weddings have mythological and historical precedents. The wedding date is a crucial decision. Only certain months and days, depending on the couple's culture, are acceptable. When agriculture dominated daily life, winter weddings were considered to be best: "When December's showers fall fast,

At a Lithuanian-American wedding, the bride's mother adjusts the bride's costume. Chicago, 1977. Photo Jonas Dovydenas. American Folklife Center.

Marry and true love will last." Weddings coinciding with the new moon ensured fertility. The site of the wedding also is important. Churches have replaced the older ceremonial location in the town square or near the tombstones of the couple's ancestors. Modern "church wedding" sites include the Las Vegas wedding chapels that add eccentricities to traditional wedding lore. Once the couple establishes a date and a place,

weather predicts the climate of their marriage: If a thunderstorm rages during the ceremony, for example, in one belief, the couple will be barren.

Superstitious taboos, such as the bride not baking her

In a traditional ceremony at the brides mother's home, Cambodian Americans Sopheap Muth and Pen Hing get married. Lowell, Massachusetts, 1987. Photo John Lueders-Booth. American Folklife Center.

wedding cake or making her gown, regulate prenuptial activity. The bride is also warned not to use her married surname or to wear her bridal gown before she is wed for fear of jinxing the ceremony. The participants' garb is also strictly regulated by custom. The well-known phrase "Something old, something new, something borrowed, something blue" dictates the basics of most bride's wardrobes. The wedding gown's color is especially crucial to depict chastity; popular rhymes note that "Married in white, you have chosen all right" but warn that "Married in pink, your fortunes will sink."

Brides also adorn their attire with trinkets and may wear a coin in a shoe in order to promise wealth. Some brides even carry sugar lumps in their gloves to ensure sweetness in their marriage, and many brides wear at least one item, often a veil, borrowed from a happily married woman.

Folk taboos about the bride include the warnings that she must not see the groom before the wedding, sometimes carried to the extreme of arranging for a proxy at the wedding rehearsal. This custom derives from protective customs to prevent brides from

being abducted. Stories about the groom distinguishing his bride from a group of veiled women continues this theme and seems to be the basis for having several bridesmaids. The wedding procession must carefully approach the church, and if a toad hops across the couple's path, some say, they will have good luck. The opposite is true if they encounter a funeral procession.

The couple should begin walking toward the altar on their right foot to the strains of the traditional wedding march, and it is a common tradition that the marriage will be a happy one if the couple's feet point in the same direction as the floor boards of the church. Gold rings, symbolizing the nobility and continuity of the union, are placed on the hands according to the couple's cultural customs. The bride is advised to cry to banish sadness for the remainder of her marriage.

In some cultures, the couple jump forward, or backward, over a broom handle to seal their vows. An old custom, seldom observed, requires that an older unmarried sister of the bride must "dance in the pig trough" during the wedding.

The wedding reception provides more folklore, mostly concerning the wedding cake. One popular belief says that if the bride cuts the cake first, with the groom placing his hand over hers, their marriage will be cooperative. This ritual also ensures fertility. Some traditions urge the couple to fast, while others insist that they eat their entire meal for good luck. Trinkets in the shape of rings, horseshoes, and cupids are often baked inside the cake. Cages of doves promote a harmonious home. In the Jewish community, breaking a glass promises luck and a lasting marriage. The wedding dance validates the couple's union.

As the couple depart for the honeymoon, guests throw rice or seeds to ensure fertility and prosperity. Bells and fireworks blare as protective magic against any ill wishes cast against the couple. Whoever catches the bride's bouquet (tossed over her head while she is facing away from the unmarried women at the reception) is commonly believed to be the next who will marry.

Many newlyweds exit the church under arches—swords or rifles if the groom is a military man—symbolizing their completing the rite of passage. Guests frequently decorate the honeymoon car, retaining aspects of the *charivari* (shivaree) during which the couple were serenaded loudly by friends.

Wells, Evelyn Kendrick (1891–1979)

Educator, collector, author. *The Ballad Tree* (1950), an outgrowth of Wells' popular ballad class at Wellesley College, was the first comprehensive ballad study to enliven accurate library scholarship with astute field experience. Wells had supplemented her years of collecting while on the staff of Pine Mountain Settlement School in Kentucky (intermittently from 1915 to 1930) with fieldwork in the Northeast and in Britain. An anthology, history, and critique, the volume includes ballads well beyond the Child canon, highlights the American tradition, analyzes aesthetic issues, provides detailed data about singers, treats even-handedly the creation-memorization issue, and devotes an entire chapter to context. Its portrait of Cecil Sharp as field collector is based on firsthand observation.

Like Bertrand H. Bronson, Wells considered tune integral to the ballad. *The Ballad Tree* features carefully annotated tunes. And a 1958 review article in the *Journal of the English Folk Dance and Song Society* hails Joseph W. Hendren's analysis of the interdependence of text and tune in *Study of Ballad Rhythm* while lamenting the inaccuracy of Vance Randolph's transcriptions and the separation of texts and tunes in the Frank C. Brown collection.

At Pine Mountain, Wells discovered the singing Ritchie family, later bringing two of the daughters to study at Wellesley. Like Sharp and Olive Dame Campbell, she was interested in social and recreational uses of folk dance and folksong, and she taught them at Pine Mountain, during her tenure at Wellesley (1935–1956), and at the Country Dance Society camp at Pinewoods, Massachusetts. In 1961 she received the Gold Medal of the English Folk Dance and Song Society.

William Bernard McCarthy

Welsh Americans

Immigrants and their descendants from Wales (*Cymru*, in the Welsh language). The Welsh, or *Cymry* ("fellow countrymen"), were the original British, a Celtic people who occupied most of Britain until Anglo-Saxon invaders in the 6th and 7th centuries started pushing them back into the north and the west, eventually into present-day Wales. "Welsh" is a Saxon term for "foreigners." The Welsh have been entwined in American history from the earliest days of European exploration and settlement—colonizing Virginia in 1607, searching for the Northwest Passage, and helping establish the new nation through such an illustrious figure as Thomas Jefferson. Apart from the individual explorers, the Welsh came in several waves of migration, each with its own motivation—seeking religious freedom, political and cultural freedom, and economic improvement.

The first religious exiles were Welsh Baptists who settled on the Plymouth-Rhode Island border in 1667 at a healthy distance from the disapproving Puritans. In the 1680s, Welsh Quakers settled on land purchased from William Penn and were soon followed to

Pennsylvania by Welsh Baptists who settled the area of Philadelphia, establishing their own Welsh barony before moving on to Delaware.

In the late 18th and the 19th centuries, driven by the economic pressures of an expanding population, poor crops, and rack-renting (extortionate rents, often equal to the full value of the land), emigrants from north Wales sought the farmlands of New York and then further west as they crossed the Alleghenies into western Pennsylvania, Ohio, Kentucky, Wisconsin, and beyond. In this period, the Welsh were also influenced by a new sense of nationalism and a desire to preserve their culture and language in the face of opposition from the English state and church. Their sense of being one people with their own language and culture had been forged in the period of the Anglo-Saxon invasions and had survived the loss of independence in 1282 and the Act of Union of 1536, but in the 19th century the Welsh faced yet more virulent assaults. Despairing of a future for their culture in their homeland, many were impelled to America by hopes of setting up Welsh communities, re-creating a Wales free of English interference (the impetus behind Welsh Patagonia in Argentina in 1865). Thus, Morgan John Rhys established Cambria with its townships of Beulah and Ebensburg in western Pennsylvania, and Ezeckiel Hughes led some of the settlers farther west to Paddy's Run in Ohio. A founder of the cooperative movement, Robert Owen, purchased the former religious community of New Harmony, Indiana, for his own attempt at a utopian society.

Nationalism also gave a new impetus to migration with revival of the story of Madog ab Owain Gwynedd, who reportedly discovered America in 1169 and settled among the Native Americans. Since he predated Columbus, his story had been important in the 16th century as a counterclaim for the English throne against Spanish claims on the New World. Anecdotal reports of White and of Welsh-speaking Indians combined with the revived legend to create a frenzy of interest. In the 1790s, John Evans' exploration of the Missouri River was a by-product of his search for the Welsh Indians, and Lewis and Clark were given Evans' maps with the directive to continue the search. The search for the Welsh Indians became a strong incentive for both immigration and westward exploration, and the legend remains a topic of delight and debate.

The 19th century also saw major migration connected with industry, drawing mainly on the skilled workers in south Wales. In the first part of the century, these migrants were coal miners who resettled in Pennsylvania and lead miners who joined the Cornish in Wisconsin. As industry grew, the skilled Welsh ironworkers filled such towns as Scranton and Wilkes-Barre in Pennsylvania and helped establish the steel centers of Pittsburgh, Cleveland, and Chicago, while other artisans went to the copper works in Baltimore. In the 1890s, after the imposition of heavy duties on imports into the United States, the virtual Welsh monopoly on tin-plating moved to Ohio, Pennsylvania, West Virginia, and Indiana. Also in this period, slate quarriers from north Wales emigrated to Pennsylvania and Vermont.

Wherever the Welsh migrated, even in the rough goldmining towns, they set up Welsh chapels. In Wales the Methodist revival played an important part in preserving and reinvigorating interest in Welsh culture; in America the chapel, or church as it became, continued as the focal point for community and language maintenance. Although English replaced Welsh as the language of worship in most communities by the early 1900s, so that only a few chapels in urban areas still hold services in Welsh, the churches continue to provide structure for expression of Welsh ethnicity. The immigrants also established

immigrant-aid societies, often called St. David's Society, which also provided, and in some places continue to provide, institutional concern for tradition, preserving, cultivating, and disseminating information on Welsh culture.

Two 19th-century cultural developments in Wales were carried by the immigrants to their new homes—the *eisteddfod* and the *gymanfa ganu*. The *eisteddfod* (medieval bardic competition) was revived by nationalist sentiment as a competitive festival celebrating Welsh literature, music, and odier arts. *Eisteddfodau*, complete with chairing of the bard, were very popular in the last century in both mining and farming communities. However, while they have increased in importance in Wales, occurring on both the local and the national level and within special-interest organizations, they are held in only a few locations in the United States, where the stress on poetic composition has, moreover, almost disappeared. Following a contrary pattern, the *gymanfa ganu*, whose importance has declined in Wales, is probably the most clearly established form of Welsh ethnic celebration in the States; it is carried out on local, state, and national levels. The *gymanfa ganu* (a hymnsinging service in the Welsh style of part-singing, developed as a product of Nonconformist worship in the 1830s. In both Wales and the United States, it has become a form of community celebration with congregations visiting each other to share the event. The *eisteddfod* and the *gymanfa ganu* are both of necessity carried out on a public, community level. Celebrations of St. David's Day, March 1, are also usually organized at an institutional level, with a church or a Welsh heritage society holding a special service or dinner to honor the patron saint of Wales. Individuals, however, may mark the day by following the Welsh custom of wearing a daffodil or a leek, but more commonly with a bouquet of daffodils and foods made with leeks.

According to legend, the leek has been a symbol of Wales ever since a successful battle against the Saxons when the Welsh, at St. David's instigation, wore leeks in their hats as their fighting colors. Other traditions set their first use as crests in the 14th century, at the battles of Poitiers or Crecy. The daffodil, with its similar image—green shoots rising out of a white bulb—has become an alternative symbol. At one more remove, green and white ribbons may be worn on St. David's Day. Green and white, along with red for the red dragon, are the colors of Wales. The red dragon has symbolized Wales at least since the 9th century, when it appeared in *Historia Britonum*, a history of the Britons. It has appeared on the coat of arms of various Welsh princes, and it flies against a background of green and white on the Welsh flag. The Welsh language itself is known as *Tafod y Ddraig* (the dragon's tongue).

The Welsh are noted for their nicknaming practices, necessitated by the notorious dearth of surnames, which were first required with the Act of Union. Most people, following the earlier system of identification, *ap* (son of), simply took the father's name with an additional genitive *s*, creating a limited field of names such as Davies, Evans, Hughes, Jones, Roberts, and Williams. Other names were formed by allowing *ap* to combine with the father's name (for example, *ap Hugh* evolved into the name Pugh), resulting in such names as Parry, Powell, Price, and Pritchard. However, because there were so few available first name and surname combinations, and one community could easily have, for example, several men named Dafydd Jones, community custom assigned nicknames, identifying people by their profession, appearance, or habits (Dai Llaeth [Milk] might deliver milk, while Dai Goch [Red] might have red hair). This custom continued in the United States where Welsh Americans settled together, but it has mostly

faded as Welsh Americans have integrated into American society, and the names within the communities have become more diverse.

Relatively little scholarly attention has been given to Welsh American folklore, partly because of a general failure to recognize Wales as separate and distinct from England, and partly because, after years of cultural contact, most folk traditions reveal little to distinguish Welsh Americans from their Anglo American neighbors. The few collections that have been made show that as the language disappeared so did much of the lore, with the older members of individual families retaining just a few songs or verses in Welsh or an occasional folk belief, such as that a wild bird in the house portends death. Individual Welsh Americans who choose to mark their ethnicity generally do so with certain symbols of Wales—the red dragon, the daffodil, the leek—or by preparing foods such as Welsh cakes for special occasions.

Wends (Sorbs) in the United States

West Slavic ethnic group, settled in central Texas in 1854. Wendish folklore is a blend of Germanic and Slavic folklore. Not surprisingly, Wendish folk traditions and beliefs in the United States have suffered the fate of those of other immigrant cultures. Wendish folklore in the late 20th century, to the extent that it exists at all, is found among the older generation. Motifs found in Texas as late as 1986 include the *wódny muz* (water sprite) and the *zmij* (kobold, or house spirit). An example of the latter is in the following tale:

A farm boy finds a baby chicken in the pasture shivering in the cold. He puts it behind the stove in the house to let it get warm and gives it some feed. The next morning a large pile of feed has mysteriously appeared. When the boy's father sees it, he realizes that the baby chicken is really a kobold. He tells his son to take it back to the pasture. (The moral is that it is wrong to make use of the demonic powers of the kobold.)

The Wends are the only group of Slavs who are primarily Protestant. In 1854, because of differences with the state church, a group of 500 conservative Wendish Lutherans under the leadership of Reverend Jan Kilian emigrated from Germany. Having disembarked in Galveston, they founded the farming community of Serbin (between Austin and Houston). The descendants of this immigration call themselves “Wends,” although the preferred academic term is “Sorbs.”

The Texas Wendish Heritage Society in Serbin has attempted in recent years to increase an awareness among Texas Wends of their cultural and folkloric heritage. The society does this via folk festivals, guest speakers at society meetings, and a museum.

White, John I. (1902–1992)

Collector and performer of cowboy songs, author of a book on cowboy-song origins. White was born into a musical family in Washington, DC. In 1924 he summered in Arizona, where he met Wickenburg dude rancher and cowboy singer Romaine Loudermilk. Inspired by Loudermilk, White learned the rudiments of guitar playing and acquired a taste for cowboy songs. In 1926, while attending graduate school at Columbia University in New York City, he landed a weekly, nonpaying, fifteen-minute radio spot singing cowboy songs on WEA. In 1929 he published a song folio, and between 1929 and 1931 he recorded twenty songs, five of them cowboy songs. From 1930 until 1936 White appeared as the Lonesome Cowboy in the weekly *Death Valley Days* program. In 1936, he left radio in order to pursue his career as a mapmaker.

Retiring from that career in 1965, White returned to the extensive files on cowboy songs and their authors that he had compiled during his years as a singer of cowboy songs. Soon he began to write articles on D.J.O’Malley, Gail Gardner, Will Barnes, and other cowboy poets and songwriters. These articles and other essays were later gathered into book form and published by the University of Illinois Press in 1975 as *Git Along Little Dogies: Songs and Songmakers of the American West*. It has proven to be one of the best books written on the origins of cowboy and Western songs.

White occasionally lectured and performed in his later years. His collections were donated to Utah State University in Logan, Utah.

James S.Griffith

White, Newman Ivey (1892–1948)

Collector of African American and North Carolina regional folklore. A native of North Carolina, White graduated from Trinity College (Duke University) and received a Ph.D. in English from Harvard University.

While working on his doctorate, he taught English at the Alabama Polytechnic Institute. At Auburn University, he collected African American songs from students, citizens, and local Black singers, a compilation that is still preserved in the Auburn University Library's Special Collections. White published his first article on methods of folklore collection in 1916 and accumulated a substantial number of songs, reflecting the rural Alabama culture, before he returned to teach at Trinity College in 1919.

At Trinity with colleague Walter Clinton Jackson, White compiled and edited *An Anthology of Verse by American Negroes* (1924). A pioneering treatise, it included detailed bibliographical notes by White. He hoped the text would educate Whites about Black perspectives and provide Blacks a literary heritage, thus establishing a basis for racial cooperation.

White resumed collecting African American songs from his students in North Carolina and compiled a seminal book, *American Negro Folk-Songs* (1928), his major contribution to folklore scholarship. This tome gave permanency to part of the African American oral tradition and earned White recognition as a folklore authority.

White's primary scholarship focused on the English poet Percy Bysshe Shelley. He chaired the Trinity English Department, abandoning his folklore studies for almost a decade until 1943, when he accepted the general editorship of the *Frank C. Brown Collection of North Carolina Folklore*. White, who served two terms as president of the North Carolina Folklore Society, completed only the first volume before his death.

Whittier, John Greenleaf (1807–1892)

Author and amateur folklorist. Known primarily for such poetic efforts as *Snow-Bound* (1866), a recollection of winter evenings in his family home, Whittier is often unrecognized for his pioneering work in folklore. Yet, as one of the first American folklore collectors to gather oral traditions intentionally and as one of the first collectors to regard the data he obtained as source material for creative literature, he is a significant figure in the history of American folklore scholarship.

Whittier's work in folklore was an attempt to perform important salvage work by rescuing examples of New England's "traditional lore" from oblivion. Much of the folklore Whittier presented came from printed sources, but the two books produced near the outset of his career, *Legends of New England in Prose and Verse* (1831) and *The Supernaturalism of New England* (1847), also contain items clearly taken from oral tradition. Whittier is vague in identifying informants, perhaps from a desire to protect his sources from ridicule because they believed in the supernatural. He has also been criticized, somewhat unfairly, for "improving" texts; but he was dealing with folklore as a creative writer rather than as a folklorist. His concept of folklore as consisting solely of

*John Greenleaf Whittier in old age.
Library of Congress.*

daring, romantic, ancient, rustic stories is narrow, but, when judged against the standards of the 1830s and 1840s, Whittier's two volumes are well-done collections of local legendry. In their focus on traditions of White residents, they are virtually unique for their time.

Wilgus, D.K. (1918–1989)

American folksong scholar and academician. Wilgus was born December 1, 1918, at West Mansfield, Ohio, not far from Columbus, where he later earned his B.A., M.A., and Ph.D. degrees at Ohio State University. His M.A. thesis (1947) was the first academic study of commercially recorded country music, and his doctoral dissertation (1954) was the recipient of the 1956 Chicago Folklore Prize and the basis for his authoritative history of *Anglo-American Folksong Scholarship since 1898* (1959), still the definitive work on the subject. Joining the faculty of Western Kentucky State College (now Western Kentucky University) in 1950, Wilgus moved in 1963 to the University of California at Los Angeles, where he helped establish the UCLA folklore program and acted for seventeen years as its chair. Wilgus was elected a Fellow of the American Folklore Society (AFS) in 1960, and was president of the AFS in 1971 and 1972. He served as Professor of English and music at UCLA until his retirement in June 1989. Wilgus died in Los Angeles on Christmas Day, 1989.

As a student of folksong, Wilgus was remarkable both for the depth of his scholarship and the breadth of his interests. His eclectic, empiricist outlook is best summed up by his own credo: “I have yet to find an approach to folklore from which I have learned nothing; I have yet to find one whose dominance is not dangerous” (Wilgus 1973:252; see Wilgus 1964:237). In addition to championing the comparative method, he conducted extensive fieldwork in the American South and in Ireland, simultaneously tackling monumental problems in ballad classification (Wilgus 1970; Wilgus and Long 1985). Through his research on “hillbilly” records, he was a pioneer in the study of folklore and mass media (see Wilgus 1965, 1971). Primarily a student of music and song, he nonetheless worked with other genres as well, most notably, the legend. In fact, the impossibility of neatly summarizing or characterizing Wilgus’ accomplishments may constitute the most fitting commentary of all on his wide-ranging contributions to the study of American folklore.

Wills, Bob (1905–1975)

“King of Western Swing.” Wills is often credited with creating this musical form, but it seems more accurate to say that helped define the style, and he was its most famous proponent. Born near Kosse, Texas, into a family with rich musical traditions on both sides, it was expected that Wills would show some musical inclinations. Families of both of his parents included some of the best fiddlers in that part of Texas, and young Wills followed in their footsteps by also becoming a fiddler. He frequently performed for ranch dances until he moved to Fort Worth in 1929, where he came in closer contact with urban musical styles that played an important role in the music that he helped popularize. Wills’ first recordings, both unissued, were made that year; the two tides, “Gulf Coast Blues” and “Wills Breakdown,” were a portent of things to come. They combined blues and traditional fiddle music, a distinctive feature of Western Swing.

Eventually, Wills recorded more than 550 sides, most with his Texas Playboys, organized in 1933. His music was a combination of traditional fiddle tunes, popular music, African American blues, and small-band jazz. Wills knew the bulk of his material from records, radio broadcasts, and other commercial sources, although many of the fiddle tunes were acquired from folk tradition. He resented the term “hillbilly,” and he deliberately sought to distance himself from that tradition by providing a type of string-band music that would appeal to both rural and urban audiences while simultaneously avoiding what he thought of as the hayseed connotations of country music. Wills did accept the term “Western” as an accurate description of his music, and he was also agreeable to the term “Western Swing,” first used in 1946 to describe the music of Spade Cooley. Wills and the Texas Playboys emphasized their Western identity not only by some of the tunes they played, but also by appearing in Western movies and by wearing conservative Western-style clothing.

In 1964 health problems forced Wills to give up the Texas Playboys; later he fronted other bands, and a special recording session in December 1973 reunited him with several former Playboys. Unfortunately, Wills suffered a stroke and could not complete the session; appropriately, the resulting album was titled *For the Last Time*. For his contributions to music, Wills was inducted into the Country Music Hall of Fame, and for his popularization of the cowboy image he was voted into the National Cowboy Hall of Fame as one of only two performers (the other was Gene Autry) to be honored by induction into both institutions.

Wiseman, Lulu Belle (1913–) and Scotty Wiseman (1909–1981)

Folk and country musicians, among the first to introduce Appalachian folk music to national audiences in the early 1930s. Known as “The Hayloft Sweethearts” and “The Sweethearts of Country Music,” Lulu Belle and Scotty were for almost twenty-five years mainstays of “The National Barn Dance,” broadcast coast-to-coast over the Chicago radio station WLS. With Scotty on banjo and Lulu Belle on guitar, the duet sang folksongs, gospel pieces, sentimental “heart” tunes, and mainstream country songs in exquisite two-part harmonies, interspersing the music with cheerful patter and cornball comedy routines. Extremely popular throughout their career, Lulu Belle and Scotty became the longest-lasting, most successful, and best-loved husband-wife duet in the history of country music, despite never having been part of the Nashville music industry.

Scott grew up in the Blue Ridge Mountains of North Carolina, absorbing the songs and instrumental styles of his family and neighbors. Influenced by Bascom Lamar Lunsford and Bradley Kincaid, he became both an accomplished performer and an industrious folksong collector, joining WLS in 1933 as “Skyland Scotty.” Wiseman was also a prolific composer, writing such country-music classics as “Remember Me” and “Have I Told You Lately That I Love You?”

Lulu Belle (Myrde Cooper) also spent her early years in Appalachia, learning the songs of her parents. Perhaps the first female country-music “superstar,” she joined WLS at the age of eighteen in 1932, becoming known as “The Belle of the Barn Dance.” In

1936 she was named “Radio Queen,” the most popular woman on radio, legitimizing her “mountain girl” image.

After marrying in 1934, Lulu Belle and Scotty recorded extensively, made innumerable radio broadcasts and personal appearances, and were featured in seven Hollywood films before retiring in 1958.

Witchcraft

The use of magic to cause harm; more broadly, the practice of magic. The words “sorcery” and “witchcraft” usually connote evil intent. Magic, however, can be helpful as well as harmful. Before the advent of the scientific method, people all over the world believed that an action performed on one thing could cause a similar effect on another thing. According to the British anthropologist Edward B. Tylor, this “sincere but fallacious” belief came from the confusion of the ideal (imaginary) and the real. James George Frazer, also a British anthropologist, coined the term “sympathetic magic” for this notion, because the two disparate things—which had once been in contact or consisted of one thing meant to represent the other—were expected to act in sympathy with each other. Frazer differentiated magic from religion on the principle that magic is thought to work directly, rather like technology, while in religion spirits are invoked to mediate the process. This can, however, be a difficult distinction to make.

It follows from Frazer’s analysis that the practice of magic ought to be democratic: It should work for anyone. And, in fact, many people experiment with do-it-yourself magic. Whether or not a person has ever done so, everyone at least recognizes the purpose of image magic, in which a doll, representing an enemy, is attacked with a pin, or a picture of the enemy is torn or burned, because the symbolism is both obvious and vivid. Evidence of such practices is to be found in most collections of American superstitions, and knowledge of them is also conveyed through the media of popular culture.

Such malicious rituals, fortunately, often fail in their intended purpose. However, in America, as in other parts of the world, it is believed that certain individuals who specialize in magic are better able than the rest of us to make it work. After the Middle

Ages in early-modern Europe, the Catholic Church equated the practice of magic with the power of the devil—taking what has been magic, according to Frazer’s definition, and turning it into something that corresponded to his idea of religion. A layer of beliefs in accordance with those of the Catholic Church’s position was superimposed on the existing strata of folklore, and, with time, these religious ideas became part of the popular tradition. In Catholic countries, witches were considered heretics and were persecuted by the Inquisition in a craze that lasted from the 15th through the 17th centuries.

In Britain and in New England, heresy was not an issue, and witches had to be convicted of particular crimes such as theft and assault. The notion that a mark on a witch’s body confirms a (private) association with the devil was more common in British than in European tradition. Toward the end of the witch craze (1692–1693), accusations in Danvers, Massachusetts led to the infamous Salem Witch Trials (see Demos 1982). As George Lyman Kittredge has shown (Kittredge 1972; see Leventhal 1976), belief in witchcraft was then an integral part of a prescientific worldview that included belief in such occult practices as divination and astrology. Accusations of witchcraft continued in the American colonies during the 18th century and sporadically thereafter.

In addition to witches, colonial America harbored several other kinds of practitioners of magic (Leventhal 1976:107–125). Among the Germans in Pennsylvania were a few *magi*, men in the Renaissance scholarly tradition who sought to understand “natural magic,” and many more *brauchers*, or “powwow doctors,” who used incantations and other magical practices for divination, to treat sickness, and to ward off evil. This tradition, which relies on such books as John Hohman’s *The Long-Lost Friend (The Sixth and Seventh Books of Moses)*, in contrast, are considered diabolical), still exists. The British counterpart of *brauchers*, called “cunning-folk” or “white witches,” consisted of men and women who claimed to be able to ward off and cast spells, find lost or stolen property, and tell fortunes. They generally claimed not to *be* witches, but rather that they *worked against* witchcraft. Slaves brought with them African magical practices (one of the Salem witches was an African from Jamaica) and conjure doctors who sought, on behalf of their patients, to combat them.

The most important characteristic of witches in traditional beliefs is the damage that is attributed to them: A witch can be blamed when people or animals sicken or die, when crops fail, or for any other sort of bad luck, including a faithless lover and inclement weather. They are thought to steal milk from cows and to prevent the butter in the churn from “coming.” Evidence such as mysterious balls of hair, and feather crowns in the pillow of the bewitched, point to witchcraft, as do fits (convulsions) that seem to result from the beating or pinching of an invisible attacker.

Traditional remedies for these problems include identifying and harming (often magically) the witch and protecting the victim or the house, stable, or churn with an amulet. Iron knives, horseshoes, and silver coins are popular amulets. A pin in a chair is supposed to immobilize any witch who sits there. Objects such as sieves with their many holes, and brooms with their many straws, are thought to keep the witch busy counting (it may be significant, though, that European witches fly on brooms, and those of central Africa fly in winnowing baskets that look very much like sieves, so counting may not be the whole explanation). Both salt and mustard seeds are numerous and are also irritants. The Bible invokes divine protection and, in addition, has too many words to count. Turning one’s clothes inside-out is thought to thwart witchcraft. Bottles are used to ward

off and also to trap witches. Witches are believed to be impervious to ordinary bullets, but they can be shot—killed or banished, both in person and in effigy—with silver ones.

It is difficult to restrict the idea of witchcraft to harmful magic because the same principles apply to helpful magic: As in many other arenas, one person's help is another person's harm. Witches are thought to use sympathetic magic against their victims, and the victims—or their representatives—use the same methods both to counteract the witchcraft and to attack the witch. Witches are sometimes identified, in accordance with the principles of contagious magic, by means of their victims—for example, enclosing the victim's urine in a bottle inflicts strangury on the witch, and burning a bewitched animal also burns the witch.

As noted above, it is generally recognized that the religious, demonological aspects of witchcraft represent a layer of beliefs that has been superimposed on popular traditions of sympathetic magic. What has not been noticed is that the popular tradition itself consists of two strands: one of sympathetic magical practices, which is used by witches and also by cunning folk and witch doctors, and another of bizarre narrative motifs. Witches in Europe and America are the subject of persistent legends, undoubtedly based on ancient beliefs, that credit them with peculiar powers. In the night, a sleeper is saddled, bridled, and ridden by the witch. This phenomenon is the origin of the word "nightmare" (this "mare" originally meant a goblin, not a horse) and is also the source of the phrases "witches' stirrups" and "mare's nests" for tangles in the hair. In one legend, the victim is able to bridle the witch, thus turning her into a horse, which he has shod; the witch-woman is discovered, with horseshoes nailed to her feet, in the morning.

In addition to riding on sleepers, witches are thought to fly not only up chimneys but also through keyholes. They are said to travel in eggshells, causing storms and other mischief (so it is a good idea to crush all eggshells). The ability to fly and the ability to change shape into an animal are points that witches share with shamans. In one popular legend, a witch or a pair of witches smear themselves with salve and fly out into the night. They are witnessed by a man who tries to copy them but makes a mistake and gets into trouble. Witches are supposed to be able to change themselves into animals, and if they are harmed in their animal form, the injury appears on the human. After the paw of a certain cat is cut off, a woman's hand is found to be missing. A man shoots a hare that stole milk from his cow and then discovers a neighbor with a similar wound. Especially in New Mexico, witches (*brujos*) take the form of owls. Especially cats, but also hares and owls, have been cast in the role of witches' familiars, demons that associate with them.

In contrast to the Inquisition's notion that witches meet together in covens, traditional American witches are usually portrayed as loners. The idea that they are allied with the devil is evident in oral tradition primarily in instructions for becoming a witch, which often include cursing God in rituals involving sunrise, crossroads, circles, threefold repetitions, and the like. Knowledge of white witchcraft is passed from one practitioner to another, sometimes only between those of opposite sexes, sometimes from parent to child.

The devil as a religious figure is less of a presence in African American witchcraft (called "conjury" and "hoodoo"). Instead, this tradition focuses on the power of the dead as manifested in such evocative things as graveyard dirt, bones (especially bones of ritually killed black cats), and rabbits' feet. In an American witch legend with African

antecedents, the witch takes off her skin before she flies away. When a man, observing this, rubs the skin with salt and pepper, the witch cannot put it back on and either sickens or makes a bargain with the man so he will wash the skin.

Nevertheless, in the American South it can be difficult to distinguish European witchcraft from African conjury: They were similar to start with, and each has borrowed from the other. Native Americans also have traditions of witchcraft, with witches that fly, take on animal forms, cause various kinds of trouble, and have to be ritually overcome. The same is true of Latin American witches and, although the evidence is scant, probably also of Asian ones—for example, Japanese foxes are thought to be able to bewitch and also to change into human form. This unanimity may be the product of an ancient set of beliefs about supernatural powers, which crystalized into a rather stereotyped pattern in Europe and into other patterns, unaffected by the Inquisition and its Protestant counterpart, elsewhere.

Today, while no “rational” person would admit to believing in the efficacy of witchcraft, there are still amateur and professional spell casters. Moreover, there is considerable interest in cults, particularly in satanism, which, whether practiced or only imagined, continues to be publicized by tabloids and horror films and even by respectable news media. Most of its motifs derive not from folklore, but rather from the Inquisition and other formal proceedings against witches.

The image of a witch as an ugly crone, which goes back to the 14th century, is immortalized in well-known films, such as *Snow White* (1937) and *The Wizard of Oz* (1939), and it is revived every year in Halloween costumes and decorations, so all children know that witches are scary. More recently, the image is the witch as a beautiful woman—for example, in the play and film *Bell Book and Candle* (by John van Druten, [1951]) and in the television series *Bewitched* (1964–1972). Fictional books about witchcraft are popular, especially with girls aged eight to twelve; their appeal seems to be the idea of having the power to do what one wants and to revenge the wrongs one has suffered. Girls, who also tell fortunes and entice spirits at slumber parties, are much more exposed to folklore of the supernatural than boys are. This difference in levels of awareness promises to prolong the stereotype that witches are usually women.

Feminists have responded to the flagrantly misogynistic idea of the Euro-American witch by insisting that witches were falsely condemned: They were wise women (white witches) persecuted by hostile agencies. Feminism is also prominent in the goddess-worshipping religion of self-proclaimed witches, founded by Gerald Gardner and called Wicca after the Old English word for witch. Wiccans and other New Age pagans are highly social, meeting regularly for celebrations, and most are conscientious, loath to use magic to do harm. In that respect, they resemble the cunning folk more than the stereotypical witch.

The idea, so attractive to feminists, that witches were part of a secret pre-Christian fertility cult has been around since the middle of the 19th century. Until quite recently, the evidence for it was entirely fabricated. For example, Charles Godfrey Leland’s *Aradia, The Gospel of Witches* (1899) is based on material from a single informant who was determined to tell the author what he wanted to hear. The evidence in Margaret Murray’s book *The Witch Cult in Western Europe* (1921) has long been known to be inadequate. Nevertheless, Murray’s entry on witchcraft, which popularized her belief in the fertility cult, was printed in the *Encyclopedia Britannica* from 1929 until 1969,

influencing a great many people, including such scholars as Robert Graves and Aldous Huxley. The historian Carlo Ginzburg has recently brought the idea of a fertility cult, this time directed *against* witches, into the realm of scholarly respectability (Simpson 1994).

Wolf, John Quincy, Jr. (1901–1972)

Collector of folk music in the Ozarks. Descended from pioneer Arkansas families, Wolf was reared in Batesville, Arkansas, where his father was a bank official and self-taught writer. He became a successful teacher and academician as chair of the English Department at Rhodes College.

He attended, then taught English at, Arkansas College in Batesville, where he met his wife, Bess Millen, a classical musician. Wolf earned his Ph.D. in English literature at Johns Hopkins University, then returned to Batesville briefly before moving to Southwestern at Memphis (now Rhodes College), where he spent the rest of his life.

His academic interest in ballads merged with his enthusiasm for his Ozark heritage, and beginning in 1941 he and his wife began to record the music they heard at festivals in the southeastern Ozarks. Through the years, his interests expanded to include Black folk music in north Mississippi and shapenote singing throughout the region.

As his taped collection grew, Wolf expanded his teaching to include folklore of various types, and student collections were added to the corpus. His academic attention began increasingly to be directed to issues in folklore, and he published a number of articles in professional journals in the field. At the time of his death in 1972, he was vice president of the Tennessee Folklore Society. His widow returned to Batesville and entrusted the tape collection to Arkansas College, where it is permanently archived.

Wood Carving

Making an object or a design in wood while manifesting traditional behaviors and working within traditional contexts. Traditional wood carving in the United States embraces a wide range of forms that accompany human beings throughout their lives.

In childhood, limberjacks, dolls, puzzles, and other toys entertain people. Adulthood's days of work and worship bring spoons, butter and maple-sugar molds, door handles, knife handles, and other utensils; decorated shelves, cupboards, and other furniture; chains, balls-in-cages, fans and fan towers, and books made to hold chewable spruce-gum balls; decoys and decoy helmets for hunting; signs; religious figurines, amulets, objects, and decorated surfaces; masks and totem poles. In old age, people make their memories tangible with human and animal figurines; miniature tools (pliers, plows, spinning wheels, crosscut saws, and the like); miniature traditional boats; transformed objects—cigar boxes turned into highly decorated picture frames, and peach pits carved into baskets; assemblages of human, animal, and object figurines made into scenes of farm, lumbering, and family life; and walking canes. Finally, in death, people have been remembered with carved wooden gravemarkers and other mortuary sculptures.

Traditional carvers differ from people who learn to carve from hobby books alone and from people who attend art academies. Traditional wood-carvers learn to carve informally, often by customary example; they watch others, especially relatives and friends who belong to the same regional, occupational, religious, racial, and ethnic communities. They usually produce forms that have been produced before; their emphasis is not so much on creating an object that no one has

Decorative wood carvings by Antanas Poskočimas, using traditional Lithuanian motifs. Chicago, 1977. Photo Jonas Dovydenas. American Folklife Center.

ever seen as it is on producing a good version—or their own version—of some artifact that embodies meaning to people in their communities. Traditional wood-carvers keep in touch with the communities that inspire them, constantly dipping into the community’s wellspring of knowledge, and they receive suggestions and criticism from community members.

Many traditional craftspeople who make objects from wood refer to themselves as “whittlers.” Some use the term “carver,” and some use both terms. Dictionaries present “whittling” as cutting or paring thin shavings from wood with a knife, a definition that emphasizes the use of one tool and stresses a casual, almost unintentional mode of production rather than an object itself. “Carving” conveys the use of chisels and other tools in addition to jackknives, as well as a more intentional mode of production of an

object. Both terms refer to the creation of three-dimensional objects and surface decoration.

“Sculpture,” dictionaries indicate, refers to the “art” of carving wood into three-dimensional representations. Such a definition would clearly include academically trained artists such as Henry Moore and Constantin Brancuși, sculptors in wood and other materials. Instead of claiming an exclusive plane for sculpture in the world of art production, however, folklore study argues that whittlings, carvings, and sculptures are all art, and that traditional artists may whittle, carve, or sculpt. All are aesthetic experiences, the results of play, of need, and of the shaping of deeply felt values into meaningful forms. One could say that there is a great deal of interplay among the three words: “whittling” refers to the production of three-dimensional objects and surface decoration using jackknives only; “carving” refers to the use of many tools, such as jackknives, chisels, and chainsaws, in making three-dimensional objects and surface decoration; and “sculpting” refers to the use of many tools in the production of three-dimensional objects.

Traditional wood-carvers learn their skills in a community where certain occupational, religious, regional, ethnic, and racial contexts overlap. Their learning also takes place in a particular historical moment when market pressures and attitudes toward collecting other peoples cultural goods influence production. Before about 1910, for example, most traditional wood-carvers rarely sold their work for money; instead, they gave pieces away or exchanged them for other goods with family and friends. With the increased interest in what the fine-art world called “folk art,” carvings were sought after for collections, both private and public. Also, the Arts and Crafts movement in urban centers and the southern Appalachians saw many Northern social workers encouraging recent immigrants and mountain people to carve for pleasure and profit and to sell their works through cooperatives. Since the mid-1960s, increased numbers of folklife festivals throughout the United States taught wood-carvers the possibilities of selling. Now many traditional wood-carvers make some or all of their living, especially as they approach retirement, from their carving. A detailed discussion of three wood-carving families will illustrate how traditional carvers learn their skills, how carving operates in their lives, and how market influences affect their work.

Beginning in the early 19th century, as lumbering concerns sent groups of men into the forests of Maine and then onto the North Central and Northwestern states, their traditional artwork traveled with them. Evenings in the “barroom” (bunkhouse) of a logging camp often found men singing, telling tales, playing cards, knitting socks, and carving wood. Especially men of Scandinavian, Russian, French, and Native American backgrounds decorated the frames and handles that they made for their bucksaws, knives, axes, and crosscut saws. Using one piece of pine and a knife, men fashioned books with a spine or a face that slid open; men climbed up spruce trees, cut “gum” (sap) balls from the limbs, and placed them in the books as gifts of chewing gum for mothers, sisters, and sweethearts. These gum books were often highly decorated with designs such as crosses, initials, and trees, and with row after row of carefully cut triangular chips. From a piece of white cedar, woodsmen also made hand fans and fan towers (vertical towers with a fan or two made to slip part way down the tower) as gifts or to while the time away with and then feed to the fire. Men less skilled in carving paid others to carve gifts for them. With the closing of many of the logging camps by the mid-20th century, the contexts for much

of the lumbermen's art is now the families and town communities of independent loggers, retired loggers, or descendants of loggers—people such as the Christiansens of Oakridge, Oregon, the VanAntwerps of Lansing, Michigan, and the Richards of Rangeley, Maine.

William Richard (1900–1993) of Phillips, Maine, a French Acadian logger who emigrated from New Brunswick, learned double-fan-tower carving from Raymond Bolduc, a fellow logger. As a child, William carved all of his toys and watched as his brother made a fiddle and as neighbors built and decorated homes, furniture, and tools. He passed on his logging and wood carving skills to his son and grandson, Rodney (1929) and Rodney Jr. (1955), who, as loggers and mill workers, also whittled toys and now carve chains, animals and birds, loggers with old-time woods tools, and other human figures from local basswood and pine, using jackknives, chisels, and chainsaws. Although no women in the family carve, Rodney's wife, Lucille, comments on the carvings and often affects the final shape of a form.

After attending several festivals in the late 1970s, the Richards began to sell their carvings. As the years passed, they created new versions of earlier carvings, often in response to customers' requests or dares. "Anything I can see in my mind," Rodney explains, "I can put in the wood." Rodney's work has been exhibited internationally, and, with a group of local supporters, he founded the Rangeley Lakes Region Logging Museum for the preservation and celebration of the logging heritage of western Maine.

To the southwest, in the mountains of northern New Mexico, the Lopez family carves *bultos* (images of saints, also called *santos de bultos*), *coronitas* (crowns), animals, trees with birds and animals, manger scenes and other religious scenes and stories ("Flight into Egypt," "Death Riding in a Cart"). All are carved in the round from local aspen, cedar, cottonwood, and pine. Folklorist Charles Briggs writes in his study of the family that Nasario López (1821–1891) was an image maker who, like others, used many colors of paint to decorate his images. Though all of his sons were carpenters, his youngest, José Dolores (1868–1937), was propelled into carving by a personal hardship when, in 1917, he worried continuously over his son who had left to serve in World War I. He began to decorate picture frames, clock shelves, and lamp stands with chip carvings and then turned to images, animals, and trees.

Further encouraged by folk-art collectors in the 1920s and pressed by rapidly changing economic conditions, José Dolores began to carve for a living, creating new forms and, at the request of patrons, leaving his carvings free of paint. His creativity lives on in the many carvers of Córdoba, including his children George (1900–1993), Nicudemos, Raphael, Ricardo, and Liria and their spouses Silvanita, Precídez, and Benita and several of his grandchildren and their spouses. Unlike the 19th-century carvings made by Nasario for the chapels and worshipers in nearby communities, contemporary carvings are purchased largely by persons of a different social class, cultural background, and religion. Where the carvings once mediated between Hispanic Catholics and their God, they now create bridges between people of dissimilar traditions.

Religious impulses have also inspired wood carving in African American communities. From the 1920s, Elijah Pierce (1892–1974), barber, preacher, and Mason spoke through wood to members of his Columbus, Ohio, community. "Everything I carve," he said, "I want it to tell some kind of a story" Pierce was raised on a farm near Baldwyn, Mississippi, and began carving as a boy, cutting names and designs into bark of trees on his father's farm, then carving small animals and hickory walking sticks. His

mother's brother, Lewis Wallace, taught him how to work in wood. "Anything that I could picture that I could carve, I used to carve it. Horses, cows, dogs, chickens.... I just naturally loved the knife when I was a kid."

Because of several childhood events, his Baptist family and community believed he had a God-given gift of prophecy and preaching. But Elijah, drawn to barbering and desirous of an independent trade, answered God's call through his carvings. He drew on the aesthetics of everyday living constantly performed within his African American community, transforming the sermons and stories he heard into wood. From the 1930s on, he created reliefs, sculptures, and assemblages of moral lessons and sacred stories—"Monday Morning Gossip," the "Grim Reaper," "Samson," "Christ Entering Jerusalem," and the "Crucifixion." His preaching stick, a walking stick made from a cue stick, is topped with a man, a barber chair, and a comb and decorated all over with secular, religious, and Masonic motifs. After a customer would enter his barbershop, Elijah would ask him his trade and then carve an emblem of it into a stick.

Elijah also carved secular pieces that featured African American heroes as well as community perspectives on national events and political figures—"Martin Luther King Jr. and the Kennedy Brothers" and "Pearl Harbor and the African Queen." His favorite carving, "The Book of Wood," consists of four two-sided panels of wood, each 27 1/8 inches by 30 3/4 inches carved with figures representing the seven great churches of Asia Minor and the thirty-three years of Christ's life on Earth. "Let's make a book," his wife, Cornelia, had suggested, "a book of wood." During summer vacations, Elijah and Cornelia packed their car with carvings and traveled to revivals and churches in a number of states, where they staged informal programs and explained the iconographic and moral implications of each carving.

He also gave carvings to members of his congregation, usually bestowing a sermonette at the same time. Recipients often commented on Elijah's powers of divination, as if the artist knew just who needed what story-carving. He and Cornelia also opened their home to people who wanted to see their "unique Biblical and Educational Art exhibit." In 1969 Pierce began to hang his carvings on the wall of his barbershop, and in 1971, a year after his first interview with an art student, his work was exhibited outside his community. Pierce's wood carvings have been shown internationally. "I dream things the way they ought to be," Elijah explained "I can see them in my mind and I know what they are going to look like."

Traditional wood carvings, whether whittled, carved, or sculpted, proceed from the talent of an individual whose work is informed by communally based aesthetics and performances. Influenced by the marketplace to differing degrees, traditional carvers also carve because they want to memorialize—and pass on—some aspect of their communities' wisdom and heritage. With a knife and some wood, carvers reach for the world and, sometimes, beyond.

Worksong

A song performed by an individual or a group at work to relieve the tedium, express thoughts or emotions, or facilitate the task by coordinating actions or movements; conversely, such performances are sometimes addressed not to the workers alone but to potential customers (as in auctioneers' chants or street vendors' cries), to draft animals or livestock (as in mule skimmers' calls or cowboys' night-herding songs), even to supernatural forces or beings deemed capable of hindering or helping in a task's completion (as in the butter charms for hastening the milk's turning). While many such songs may be identified by content alone, it is this work context that most fundamentally defines worksong, distinguishing it from "occupational song," which simply describes or derives from work processes or occupations or trades, or "labor song," associated with labor unions, their ideologies, and the pursuit of their goals and agendas. Admittedly, there is, as one would expect, considerable overlap among these categories, so that a given item might at different times fall under any one or all three headings. Moreover, songs of quite various origin whose contents evince no relation whatsoever to laboring are frequently performed by persons at work. Again, then, the laboring context is the ultimate determinant of worksong status, even if folklorists have concentrated on materials whose contents overtly reflect this function—understandably so, since so much of our evidence dates from an earlier time when folksong collectors were less concerned with contexts than texts.

Worksongs are relatively rare among Native Americans, with some notable exceptions, such as the corn-grinding songs of the Navajo and Pueblos or the paddle

songs found among some tribes in the Pacific Northwest. On the whole, however, this practice is best documented among Americans of African or European descent. (Given the importance of worksongs in Asia, one might anticipate their prevalence among Asian Americans, but documentation is in this case, unfortunately, lacking. So, for example, while railroad workers have been an especially rich source of worksongs, none seem to have been collected from the Chinese employed in building the Central Pacific during the late 19th century.)

Not surprisingly, the best-documented worksongs among American Whites are English-language performances often derived from the Anglo-Celtic traditions of Great Britain and Ireland. While there is considerable evidence of such singing among other European American groups, these traditions appear generally consistent in type, content, and context with the more extensively noted English-language examples.

Like their transatlantic counterparts, Anglo American women have sung at various tasks—washing, weaving, spinning, milking, and churning—in many instances the same or similar items as their British and Irish compatriots, such as, the ubiquitous “Come, Butter, Come.” Outside the domestic context, the shearing songs occasionally collected in the United States perpetuate the rich pastoral traditions of the Old World, where shepherds have been a source not merely of worksongs, but also of a large body of instrumental music (typically played on pipes, flutes, or whistles) fulfilling a similar function. While American pastoralists have produced no comparable instrumental traditions, the songs of the cowboy do provide a uniquely American parallel to the repertoire of European shepherds. The trail-driving songs intended to pace a herd’s progress while relieving the monotony of that arduous process often reveal themselves not only through their descriptions of life in the cattle camp or on the trail, but also by their jogging gait and the nonsense refrains built around the yips, hoops, and hollers with which the cowhands drove and directed the cattle; like many, “The Old Chisum Trail” is composed of floating stanzas that can be extended almost indefinitely:

Oh come along, boys, and listen to my tale,
I’ll tell you my troubles on the old Chisum trail.
Come a-ti yi youpy youpy ya youpy ya,
Come a-ti yi youpy youpy ya.

However, the largest body of cowboy worksongs were the lullaby-like night-herding songs, ostensibly employed to calm the bedded-down herd, more likely (at least in greater part) inspired by the boredom or loneliness of the rider on watch. Like many worksongs, night-herding songs appear to have been drawn mainly from existing traditions, Western or otherwise (thus, one commonly finds popular items such as “I’ll Remember Your Love in My Prayers,” a 19th-century “hit” by Tin Pan Alley composer William Shakespeare Hays, traditionally sung as night-herding songs), though a few items—for example, “Doney Gal,” or “Lay Down, Little Dogies”—may have originated in this context.

Given the available documentation, however, the most vigorous traditions of American worksong are without question those of African Americans. Partly an inheritance from Africa, where worksongs are especially prominent, often even closely resembling, in content and context, those of New World Blacks, partly a reflection of

social and economic conditions in the Americas, the extensive African American worksong repertoire encompasses a myriad of subtypes, most conveniently divided between individual and gang songs. The former are epitomized by the “field hollers” (sometimes particularized as “cornfield” or “cotton field” hollers) or “arhoolies”—an onomatopoeic term evoking these mournful, almost ethereal performances—in some regions also called “whooping” or “loud mouthing.” Although field hollers defy neat characterization or transcription, they are typified by relaxed meters (or even a seeming total lack thereof), irregular intervals or microtonality (that is, pitches falling between the standard half-steps of Western art music), and an especially high degree of improvisation and ornamentation, including glissandi and “bends,” slides between notes or shifts in register suggestive of yodeling, quavers or sudden changes in dynamics, and so forth. Frequently wordless, the holler’s verbal components, when present, may alternate between traditional commonplaces and the momentary thoughts or feelings of the worker. The following text from Alabama typifies such performances, simultaneously obscuring their usual vocal embellishments:

Ay-oh-hoh!
I’m goin’ up the river!
Oh, couldn’t stay here!
For I’m goin’ home!

Though sometimes directed toward others, as in the various calls addressed to “waterboys,” “bossmen,” plough horses or mules, field hollers are primarily vehicles of self-expression. Black gang songs, on the other hand, coordinate the movements of groups at work, at one time or another documented for virtually any activity—hoeing and harvesting, tree cutting, rail laying and tie tamping, rowing, lifting, and loading—requiring work gangs. In many African worksongs, as in much if not most African and African American vocal music per se, such pieces invariably assume an antiphonal (call-and-response) structure, linking the vocal interplay between leader and chorus to the rhythms of work, which may themselves become part of the song “texts,” manifested in the ringing of hammers, the falling of hoes, the chopping of axes, the stroke of oars, and the like. Workers may also conspicuously draw and expel breath to the beat of the song or rhythmically punctuate the performance with grunts of exertion. Typical is the following from a group of Mississippi convicts “chopping out” weeds (the italicized words coincide with the beat of their hoes):

Leader: I’ll *be* so glad *when*

Group: Uh huh!

Leader: the *sun* goes down.

Group: When the *sun* goes down.

Leader: I’ll *be* so glad *when*

Group: Uh huh!

Leader: the *sun* goes down.

Group: When the *sun* goes down.

Leader: I ain’t all that sleepy *but*

Group: Uh huh!

Leader: I *want* to lie down.

Group: But I *want* to lie down.

Leader: I *ain't* all that sleepy *but*

Group: Uh huh!

Leader: I *want* to lie down.

Group: But I *want* to lie down.

Even more than field hollers, Black gang songs are often, as in the foregoing example, vehicles of social protest or personal complaint, reflecting the oppressive or exploitative conditions with which African American workers have so often contended.

Ironically, the sea chantey, conventionally viewed as the quintessential Anglo-Celtic worksong type, may be largely a borrowing from Black tradition, a debt partly revealed by its identical coordination of group movements through antiphonal singing. In the following excerpt from a “short-haul” chantey, noted at Staten Island in the 1930s, the gang would heave together on the rope at the word “haul” ending each refrain:

Haul the bowline, the long-tailed bowline,
 Refrain: Haul the bowline, the bowline haul.
 Haul the bowline, Kitty, oh, my darling,
 Refrain: Haul the bowline, the bowline haul.
 Haul the bowline, we'll haul and haul together,
 Refrain: Haul the bowline, the bowline haul.

While collectors of American maritime traditions have overwhelmingly concentrated on White singers, chanting appears to have been every bit as common among African American seamen and dock workers. And although it has been suggested, such traditions may have been current among European sailors as early as the 15th century (the evidence is inconclusive), the sea chantey is indisputably best documented in 19th-century America, by which time Black and White crews had for centuries labored together along the Gulf and Atlantic Coasts and in the West Indies. Given the extreme rarity of such antiphonal worksongs in European and other European American traditions, coupled with their virtual universality among African and African American groups, it seems most likely that this custom is largely a Black innovation, even if many or perhaps most of the particular items in the chanting repertoire were created by Whites. (In fact, a 15th-century origin for the sea chanty would by no means disprove this hypothesis, since this in itself might simply reflect the well-documented interactions of Black and White crews along the West African Coast during this era.)

While most of the preceding examples derive from agrarian, or pastoral, or at least nonindustrial groups, worksongs are by no means unknown in the urban environment. The cries, chants, patters, and pitches of various occupations—peddlers, vendors, junk dealers, ragmen, shoeshine operators, grinders, and others—were until recently a common feature of many large cities; Baltimore, Charleston, South Carolina, and New Orleans have been especially renowned for such traditions. Although most of these forms have virtually vanished, the auctioneer's chant still enjoys a living tradition, and one may

hear similar performances from carnival barkers or roving concessionaires at sporting events.

On the whole, however, the contemporary urban context, the growth of technology, and the consequent mechanization of most occupations have been no kinder to worksong than to most other older forms of traditional music. Rather, worksong traditions survive in the late 20th century almost exclusively in settings where manual labor or physical activity serves an institutionalized function, as in the marching cadences of American servicemen and women. In fact, most of the foregoing traditions were moribund by the time folklorists began systematically recording them during the early to mid-20th century. Not coincidentally, the most extensive collections of African American gang songs were amassed between 1930 and the late 1960s in Southern prison farms, where forced agricultural labor was exacted as a penal sentence—in some cases, long after the mechanization of farm work had obliterated these traditions in the general population. One can hardly, then, mourn the passing of these remnants of the venerable Black worksong tradition.

In the 1990s, the average American is most likely to encounter traditional worksong at one remove—that is, through popular or art music, often reflecting professional composers' self-conscious appropriation of folk materials (to cite only two instances, the backing vocalists on Sam Cooke's 1960 hit, "Chain Gang," evoke the wordless antiphony of a Black work crew, while George Gershwin re-created the Black street cries of Charleston in his 1935 opera *Porgy and Bess*). More significant, however, are the less obvious, though more pervasive, imprints that some worksong traditions have left on popular idioms; again, the case is strongest for the African American strain, which substantially influenced the development of 20th-century genres such as the blues and gospel and, through these, contemporary world popular music.

World Wars I and II

The two major 20th-century conflicts, sources of folklore among both military and civilian groups. Emphasizing drama, misery, and historical significance, World Wars folklore continued a tradition established in the American Revolution and strengthened by the Civil War and other 19th-century engagements.

A rich folklore of the common soldier exists, but both enlisted men and officers shape the basic themes of military folklore. Enlisted men created folk customs to cope with

military demands and to bond with fellow soldiers, while officers encouraged folk patterns to reinforce comradeship and commitment to the military life.

Humor about rations, boredom, and cold provided cohesiveness and relief in the trenches and foxholes. Soldiers coined witticisms about such atrocities as gas attacks as well as such pleasures as leave time. In their leisure hours, troops told jokes in the canteen and created cartoons for camp newspapers, often depicting officers as bumbling incompetents who were less courageous than enlisted men.

Folk vocabulary described the war and its participants. Soldiers became commonly known as “doughboys” (from the biscuit flour they cooked) or GIs, and slang was created to cope with aspects of the wars, such as “cooties” (lice), “Jerry” and “Krauts” (Germans), “meat wagon” (ambulance), “Tommie” (British soldier), “Sammy” and “Yank” (American troops). Phrases such as “Stars and Stripes,” “The Great War,” “Keep the home fires burning,” and “The War to End All Wars” also circulated.

Wartime folklore, especially songs, expressed soldiers’ dissatisfaction and disillusionment with military life. Ballad scholar G. Malcolm Law argues that no true American folk ballads originated from World War I, only nonnarrative folk songs—such as drill songs and cadence chants—that reveal the voice of the composite soldiers and their culture. Soldiers yearned for adventure but usually encountered boredom. Their songs empowered the powerless who must succumb to military discipline. Traditional and popular military tunes also reaffirmed military values, purpose, and commitment as the World War I lyric that emphasized: “We won’t be back till it’s over, over there.”

Most war songs patriotically memorialized a major battle and fleeing Huns, expressed hopes for returning to civilian life, or described mothers and sweethearts back home. Others were off-color rhymes, depicting local women’s immorality and the taverns frequented or else complaining about superior officers, army life, and the ever-present mud. Parodies of songs were also common, such as substituting “Underwear” for “OverThere.”

World War I ditties, particularly the “Hinkie Dinkie Parlezvous” cycle, were constantly revised into new versions through communal composition as bored soldiers talked and sang at hospitals and over poker games. One typical stanza went: “John McGregor our top sarge—Parlezvous. /A nice little chap, but his head’s too large.” Another song criticized boxer Jack Dempsey, who avoided the draft by working in a shipyard: “Dempsey helped to build a ship, /But couldn’t see the ocean trip.” Some homefront lyrics even suggested women join military ranks: “If they should ever send a suffrage regiment I’d hurry to enlist.”

Both American and Allied soldiers disseminated rumors and legends about battlefield occurrences, often embellishing the stories as they passed them by word of mouth. British troops told that they saw the ghost of a famous soccer player, kicking a ball as he led troops on an attack mission. Other stories described enemy officers appearing, then disappearing, in the Allied lines.

Some soldiers told of a deserter army that lived underneath no man’s land, or that the German dead were rendered to fat at a tallow works, or that a giant German named “Joe the Lamplighter” placed the rocket glares and mortars in the sky, or that German Amazons manned machine guns and piloted planes. Others claimed that an Indian soldier, “The Gurkha with the Silver Knife,” terrorized German trenches, disemboweling the enemy.

Assigning nicknames to units, such as the Wildcat Division, was another popular custom. Some nicknames were derisive, such as the Sightseeing Sixth, a unit that allegedly arrived late to every battle. Shoulder patches worn by troops indicated their division through symbolic patterns and phrases.

Apparitions are a well-known motif in military oral narratives. In both wars, soldiers claimed to see the crucifixion or rainbows (providing the name for the Rainbow Division) in the sky before battles or above the enemy during encounters. Troops considered this a sign of divine favor and a good omen for victory.

Legends about folk saints defending soldiers and citizens abounded. Variations include the saint appearing as an old man before or during battle, prayers by the soldier or a family member resulting in miracles, the saint healing injuries and aiding prisoners of war to survive or escape, or the saint appearing in a dream. Saints were also credited with disabling enemy weapons and altering the direction of enemy planes and missiles.

Many soldiers wore protective amulets. In World War I, a black cat sewn on a uniform was considered good luck. Mistletoe, shells etched with the soldier's name, Bibles, and the 91st Psalm were pinned over hearts to keep soldiers from being wounded. Soldiers also considered wearing a heroes' clothing lucky and believed that carrying a loved one's possessions ensured good fortune. Aviators wore mismatched socks and shoes from successful missions, but they avoided apparel from fliers who had been shot down.

World War II soldiers, fighting for the symbolic Four Freedoms listed by President Franklin D. Roosevelt, served "for the duration." These troops contributed new jargon, jokes, and jingles to war folklore. The terms included "SOP" (standard operating procedure), "deuce and a half" (a two-and-one-half ton truck), and "GI" (government issue). Kilroy was a familiar name found in soldiers' graffiti.

Women participated in World War II as auxiliary troops, adapting popular songs such as "Gee, Mom I Wanna Go Home" with verses unique to women's experiences and frustrations with military life: "The stockings in the Army they're

*During the Great War (1914–18),
soldiers rest at a canteen staffed by
women of the Red Cross. Cincinnati,
Ohio. Library of Congress.*

made of binder twine” and “WAC [Women’s Army Corps] days, WAC days, dear old break your back days.” GI stories also belittled women at the front, describing the supposed promiscuity of USO entertainers who might, for example, misunderstand the military meaning of the word “mess.”

Soldiers spread tall tales in their barracks. Many military anecdotes, pivoting on absurdities and lies, embellished and exaggerated events and personages to emphasize the superiority of one military branch over the other. A popular tale about the “USS NeverSail,” really the *Tuscarora*, described a giant naval vessel manned by a monkey crew that sailed the Seven Seas.

Other tall stories depicted alcoholic mice, bent rifles that fired around hills to kill hidden Japanese soldiers, and the Ghost Dog of Florida Island near Guadalcanal that brought death or disaster to whoever saw it. Ghost ships and planes were common motifs of war folklore. Other tall tales known as “snow jobs” were perpetuated by drill instructors; these detailed severe punishments for minor infractions and functioned to scare recruits into conformity.

Soldiers circulated superstitions about how to be discharged or to flunk medical examinations, including eating a large stack of pancakes or sleeping with soap under both armpits. Soldiers believed that they had to eat all of the food on their plate to survive, and aviators threw glasses into fireplaces for good luck.

World War II folk imagery included bombers named for women and heroes and often decorated with erotic paintings and military symbols. Gestures, such as the traditional military salute learned by every enlisted man to express respect, or its derisive variation that involved thumbing the nose, and the two-finger “V for Victory” gesture popularized by British Prime Minister Winston Churchill boosted morale. In addition, political leaders used proverbs in their speeches to appeal to crowds.

On the homefront, wives were advised not to see their husband off to service or to talk about missions, past or future, in order to avoid bad luck. Schoolchildren stepped on cracks, believing that action killed Nazi soldiers. Rumors circulated about the possibility of men reported killed or missing in action unexpectedly returning home. The homefront also spread stories about Japanese and German invaders and saboteurs or domestic conspirators and traitors harming civilians.

Jokes about stupid civilians reinforced troops on the front. One story about a small Ohio town stated that when the citizens read the headlines “Americans fight with Axis,” they assumed the Allies were doing so poorly they had to fight with axes not rifles. Terms such as “Rosie the Riveter” acquired everyday usage, and gold stars symbolized sons and husbands sacrificed to war. Rationing, flour-sack dresses, and care packages also joined mainstream folk culture.

Other folklore themes of World War II include stories about soldiers still fighting the war on deserted Pacific islands decades after the war ended. Rumors also circulated about the atomic bomb, its monstrous effects on the Japanese people, and the possibility of the Germans almost detonating an atomic weapon before the Americans. Other tales

concerned the Holocaust and the fate of surviving European Jews. Stories abounded about Adolf Hitler and other prominent Nazis escaping the command bunker and safely moving to South America.

American traditions still glorify heroes of the two World Wars with patriotic motifs that incorporate Uncle Sam, the national colors, statues and memorials, commemorative items celebrating the anniversary of battles, and the observation of Decoration Day, Memorial Day, and Veterans Day with flags, parades, and red poppies to remember those who did not return.

X

Xeroxlore

Also known as “photocopylore,” signifies traditional items reproduced by xerographic or analogous means that subvert the primary intentions of those in ostensible control of those higher-level technologies; the ubiquitous photocopier has replaced older technologies used for making copies, such as carbon paper, and its name is accordingly used to describe the phenomenon. Examples of other devices used similarly include printing presses, photographic printing, mimeograph machines, computer printers, computer networks, fax machines, and coin-minting presses. The themes of Xeroxlore are similarly various: current events and contemporary concerns (recent scandals, specific politicians, feminism, taxes, health care, and popular culture generally, but also one’s circumstances of employment) as well as traditional concerns (sex and sexuality, humor at the expense of every conceivable group, and so forth). Here is a sample text:

Heaven is where the police are British, the cooks French, the mechanics German, the lovers Italian, and it is all organized by the Swiss.

Hell is where the chefs are British, the mechanics French, the lovers Swiss, the police German, and it is all organized by the Italians.

Any device that reproduces an item or transmits alphanumeric data may be employed in this folk practice, and most such devices are known to have been so employed.

Because Xeroxlore is the product of the unofficial use of technology, it reflects the customary practices of those who use it rather than the intentions of the institutions that own or control it. It is also affected by its host technology and often reflects folk attitudes to its institutional context: “Tell me again how lucky I am to work here.... I keep forgetting.” Xeroxlore usually contains a visual component—“The Last Great Act of Defiance” depicts an eagle swooping down upon a mouse who presents it the *digitus impudicus*

*This fractured-German warning
became a classic example of xeroxlore.
Photo courtesy of Judith Gray.*

("the finger")—and Xeroxlore is often parodic of the values of the host institution through fake memos and of the values of dominant culture more generally through obscene Christmas cards and the like. An example of Xeroxlore, reproduced by photocopy machines on paper, by coin-elongating machines on U.S. cents, and by private mints on oneounce silver ingots, reads:

Big cats are dangerous,
[representation of a tiger]
but a little pussy never hurt anyone.

Although the technology often serves seemingly innocuous ends, such as the circulation of favorite recipes, chain letters, and favorite published cartoons, even these are reproduced despite managerial restrictions on what may be copied and often in violation of copyright; their circulation may violate postal regulations. It is a small step from such transgressive uses of the technology to the photocopying of body parts.

Just as the technology is an extension of human faculties, so also Xeroxlore is an extension of traditional joking practices and of the making of items of material culture, novelty items in particular, whether printed and pictorially represented or materially constructed. Thus, the genres of Xeroxlore (parody letters, memos, and glossaries, folk poetry, folk cartoons, parodies of comic strips, and so forth) and its forms (fold-up novelty cards, Rorschach tests, and the like) are as significant as its themes. The folk make their own uses of technological innovations as they become available, just as they always have. The fragmentary record of printed and graphic folklore of the past includes typeset folk verse and World War II-era blueprints of female nudes with their body parts labeled as if they were airplanes. The practice in the 1990s includes use of facsimile machines to transmit photocopied materials, with an increasing proportion of pictorial material that that technology permits, and wholesale circulation of alphanumeric Xeroxlore by means of the Internet.

Although Xeroxlore is an international phenomenon, the product of whatever technology is available for its duplication and dissemination, all items of Xeroxlore are not equally widespread. Xeroxlore is frequently adapted to different cultural contexts, but many items are of interest to specific groups of people only, whether employees of a particular corporation, the citizens of a particular country, or the speakers of a particular language or dialect. Early Xeroxlore was largely male centered, but an increasing percentage shows a female perspective: “Twenty-five reasons why cucumbers are better than men.” Xeroxlore represents age-old human practices carried out by means of, and influenced by, modern inventions, but, despite the international availability of the same technologies, the same kind (and perhaps degree) of variation is to be found in it—based on race, color, creed, gender, sexual orientation, political ideology, and so forth—as in any other traditional practice. *Michael J. Y

Yarn

Narrative discourse or a narrative that is loquacious in style, usually picaresque in development, prone to hyperbole, and variable in form and length. The themes of the yarn typically deal with adventures and escapades in a manner either humorous or miraculous. Good “yarn spinners” (storytellers) are reputed to have had some experience of which they speak, especially if the narrative is first person, and they speak convincingly, although their listeners may or may not believe them. The term “yarn” lacks the analytical status of a folk narrative-genre term, such as “folktale,” “legend,” or “tall tale.” Instead, folkloristic usage of the term is casual and reflects local usage and classification. Richard M. Dorson, for instance, used the term in his essays on “Esthetic Form” and “Oral Styles” of American folk narrative but conceded that the terms of several such prose narrative traditions are imprecise and not sharply defined (Dorson 1972).

A yarn is defined by style, theme, and the scene of its telling more than by stability of content and form. Benjamin A. Botkin, in attempting a definition, followed the distinction Mark Twain made between “comic and witty stories,” on the one hand, and the “humorous story,” on the other. The former are concise, goal oriented, and display a more stable and transparent form than the latter, which “may be spun out to great length.” Unlike the anecdote or comic, witty story, yarns are more conducive to garrulousness and not constrained by any expectation to reach a conclusion or achieve self-containment. It is in this sense that “yarning” (or, “to yarn”) is sometimes used as a verb for conversation and conversational storytelling. Tellers spin yarns wherever the conditions for casual talk prevail, typically at the so-called “liars bench,” but this context does not exclude serious talk or hybrid narratives recognizable in other respects as legend or tale.

Although “yarn” resists any clear generic classification and can serve as a catchall classification for a usually humorous and rambling narrative, it is often treated as a form of tall tale or “lie,” possibly because of its association with the liars’ bench or because of the liberties a narrator may be expected to take with the presumed ignorance of his or her audience. In the sense in which “yarn” is a species of tall tale, it is a narrative that promotes an untruth as true, but it does so in language that focuses attention on accumulating detail and in a style that is loquacious, and it progresses with narrative development intended to betray the “lie” of the narrative. It is accepted by listeners as a good-natured deception.

While the place of yarn spinning may commonly be the liars' bench, the term and occasion is traditionally applied to sailors and refers to their discourse and the stories they customarily tell during the leisure hours aboard ship. It is probable that the term "yarn" as denoting a narrative arose in this context. The *Oxford English Dictionary* cites an 1812 text as a first example of "yarn" in its narrative sense. A subsequent text from 1835 cites Captain Marryat, a popular writer of sea fiction. But in seafaring, "yarn," "rope yarn," or "spun yarn" as terms referring not to narrative, but to the intertwining strands of yarn or rope yarn from which rope is made, date at least to the 17th century with the publication of *A Sea Grammar* by Captain John Smith; an earlier (1535) citation linked the term to fishermen's nets. A contemporary of Marryat's in a book titled *An Old Sailor's Yarns* (1835) included the term "long yarn" among the terms "narratio," "apostrophe," "approsiopesis," "obtestasis," "invocatio," and "simile" in a brief exposition on the rhetoric of sailors. Whatever the origin of the term for a narrative, folk etymologies combined the two meanings of an intertwining strand in the making of rope and of a narrative discourse loosely held together by a single theme.

The term is still in use among seamen and may be used interchangeably with the increasingly more popular term "sea story," perhaps to distinguish true personal narratives from the ambiguous sense of "lie" inherent in the term "yarn."

Z

Zydeco

The accordion-based dance music of Gulf Coast Creoles, the French-speaking Blacks of southwest Louisiana and southeast Texas. Often described by non-Creoles as a combination of Black urban blues and Cajun accordion music, zydeco actually represents a more complex hybrid whose roots predate, and whose development instead parallels, these cognate African American and Louisiana French musical styles. Conversely, while “zydeco” is now sometimes applied, especially by outsiders, to any or all varieties of Creole music, both past and present, Creoles themselves usually restrict the term to the bluesy, highly amplified dance music that developed in cities just after World War II. Much like urban blues and contemporary Cajun music, then, zydeco is actually a relatively youthful popular style whose ultimate origins nonetheless reach to the folk traditions of the late 18th and early 19th centuries, the formative era in Gulf Coast Creole culture.

It was during the Caribbean slave rebellions of the late 1700s that large numbers of *gens libres de coulour*, the forebears of the contemporary Creoles, arrived in southwest Louisiana from Saint Domingue (present-day Haiti), settling the bayous, prairies, and marshlands west of New Orleans. Originally subsisting as small farmers or ranchers, trappers and fishermen, even as slave-owning planters, these “free persons of color” intermingled in subsequent generations with other French- or English-speaking African Americans; with the descendants of the colonial French and Spanish of pre-1803 Louisiana; with later European émigrés (notably Germans, Italians, and Irish); with the *Américains* who arrived from the Deep or Upper South after the Louisiana Purchase; even with the remnants of the region’s Native American populations. However, the Creoles’ most important neighbors from that early period to the present have been the Acadians, or Cajuns, whom the French colonists exiled to southwest Louisiana from Nova Scotia (Acadia) during the French and Indian War.

Given that cultural context, Creole music predictably reflects an extraordinary range of influences; however, three particular musical strains assumed special importance in the early development of zydeco: the instrumental traditions, originally dominated by the violin and later the accordion, shared by the Creoles and Cajuns; the dance songs known locally as “juré singing,” a regional variant of the African and African American “ring shout”; and the rhythmic traditions of the Creoles Caribbean homeland. When, in the 1940s and 1950s, the social music derived from these various subcurrents further

assimilated the instrumentation and idioms of Black urban blues—the fourth major influence in modern zydeco—the *style*, as it's now known, came into being.

The drumming of Creole slaves in south Louisiana was routinely remarked by 18th- and 19th-century observers; besides providing zydecos rhythmic foundations, these percussive traditions also contributed one of the genre's most distinctive elements, the *frottoir* (rub board), a vest of corrugated metal that is rhythmically scraped and tapped with keys or spoons. Notwithstanding its unique form, the *frottoir* is actually only a regional variant of the ubiquitous African and African American “scraper.” Thus, among the most frequently noted instruments of 19th-century Creoles was the jawbone, the mandible of a large draft animal, played by scraping the teeth with a bone, key, or stick (notched gourds or sticks were put to similar use). This rhythmic principle was later transferred to washboards of the household variety and, after the 20th-century industrialization of the Gulf Coast provided the materials and means, to the rub board metallic vests.

These 19th-century polyrhythmic traditions were clearly compatible, and often coincided with the subspecies of the African American “ring shout” known as *juré* singing, a circular dance accompanied by the antiphonal (call-and-response) singing and the shuffling, stamping, clapping, or patting of the dancers. As among ring shouts generally, these highly expressive, often extemporaneous, songs might be either secular or sacred—the Cteole *juré* translates as “testify,” a term with both personal and religious connotations in Black culture—thereby anticipating in form and content many 20th-century popular styles (such as the blues or gospel, besides, of course, zydeco itself). Significantly, Creole folk etymology traces the term “zydeco” to a lyric commonplace first documented among *juré* singers in the 1930s, “*les haricots sont pas sales*” (the snap beans aren't salted), a metaphor for hard times. (The basic idea is that the singer hasn't even a scrap of salt meat to season this meager diet, a trope symbolically linked to various other hardships, including romantic difficulties.) The orthography of “zydeco” or its many variants—“zodico,” “zotico,” “zordico,” “zadeco,” “zarico,” and so forth—is thus said to be a phonetic representation of *s'haricots* (the elision of the final syllable of the plural article *les* with the noun *haricots*). Recent research suggests, however, that this idiom may also reflect a coincidental phonological similarity between the French word for beans and various West African terms for music and dance. Indeed, in late-20th-century Creole usage, “zydeco” functions much like the English word “dance,” referring, as a noun, to a social occasion involving music, dance, and drink, to the music played at such a function, to a particular dance step or to the tune that accompanies it—specifically, in the last two cases, to a fast, syncopated two-step; in other instances, “zydeco” acts as a verb, signifying participation in these activities.

The term's possible origins aside, however, all available evidence suggests that the late-20th-century usage of “zydeco” postdates World War II, before which the dance music played on fiddles and, later, accordions at Creole house parties, picnics, or the like was most commonly called “La La,” “French La La,” or simply “French music,” a tradition that, in conjunction with Afro-Caribbean rhythms and *juré* singing, constitutes a third seminal influence in zydeco. Derived in part from the Celtic fiddle tunes brought to Louisiana by the Acadians, this repertoire was both modified and enlarged in Creole tradition, especially after the arrival in the mid-19th century of the diatonic button

accordion, an instrument gradually supplanting the fiddle among Cajuns, but especially Creoles.

At least from the date of the earliest aural evidence (the sound recordings made in the 1920s), there has been such a considerable overlap between Cajun and Creole instrumental styles that, for practical purposes, these have often constituted a single tradition. This was especially so before World War II. For example, the playing of Amadé Ardoin, the legendary Creole accordionist who recorded extensively in the 1920s and 1930s, often with Cajun fiddler Dennis McGee, is virtually indistinguishable from that of his Cajun counterparts. As time passed, however, Creole tradition increasingly reflected its African American provenance—for instance, through a greater emphasis on rhythmic complexity at the expense of melodic development. These qualities were accentuated during or just after the war, as large numbers of Creoles migrated to Louisiana cities like Lafayette and Lake Charles, or, in Texas, to Beaumont, Port Arthur, and especially Houston. Granting Black French music's longstanding affinity to the blues—partly a result of direct influence, partly a reflection of a common African and African American origin—it was during this period that Creole musicians fully assimilated the urban rhythm-and-blues (R&B) style, an adaptation signaling the emergence of zydeco proper.

During its early urban phase, Creole dance music maintained the basic instrumentation of accordion and rub board, occasionally (though with decreasing frequency) supplemented by fiddle. For a time, too, the most typical performance settings were house parties or similar gatherings likewise recalling the rural tradition. Soon, however, Creole musicians were performing in cafes, taverns, and dance halls, adding the amplification and amplified instruments—electric guitar and bass, drums, even keyboards and horns—characteristic of the postwar blues band, in the process absorbing much of that genre's style and repertoire. Around the same time, many accordionists discarded the diatonic button accordion for the chromatic piano instrument better suited to the blues or popular items now added to the traditional repertoire of two-steps and waltzes, while lyrics in English were now interspersed with Creole French folksongs. Two concurrent developments conclusively mark the maturation of zydeco: the increased interaction between Creole music and electronic media, and the appearance of professional or semiprofessional “stars.”

Tellingly, the term “zydeco” itself first appears in its present sense on commercial recordings from the late 1940s and early 1950s, including among them the first records of the performer who more than any other shaped the genre, Clifton Chenier. Born at Opelousas, Louisiana, in 1925, Chenier learned to play the accordion from family and neighbors. In the late 1940s, he moved first to Port Arthur then eventually Houston, working as a truck driver by day, playing accordion at night with his brother Cleveland on rub board. By the early 1950s, however, Chenier was touring and recording with an expanded ensemble, scoring occasional regional or even national “hits” in the R&B vein. By the end of the decade, his recording career had come to a standstill, though he remained in demand as a regional performer, and in the early 1960s, he struck up a relationship with California record producer Chris Strachwitz. The recordings Chenier made over the next two decades for Strachwitz's Arhoolie label would largely define modern zydeco, not only solidifying Chenier's reputation within the Creole community but also earning him international acclaim. Besides drawing on French tradition and

blues, Chenier continually expanded zydeco's boundaries by incorporating elements of other ethnic and popular styles—rock, soul, country-and-western, jazz, and swing. By the time of his death in 1987, he had appeared with his Red Hot Louisiana Band throughout Europe and the United States, serving as the subject of television and film documentaries, articles, and books, even winning a Grammy Award as well as a Heritage Fellowship from the National Endowment for the Arts.

Following Chenier's example, Creole musicians have continued to test the limits of zydeco, encouraged by the growth of ethnic pride within the Creole community, by the growing interest of outsiders in Creole culture and music, and by the ever-increasing role of media formats such as tapes, CDs, and videos. Like many contemporary ethnic styles, zydeco in the 1990s leads something of a dual existence: valued within the Creole community as a symbol of cultural identity, simultaneously consumed by outside enthusiasts as a musical commodity. Zydeco reaches a global audience through the performances of Creole artists and through the work of popular musicians who have recently begun to experiment with this distinctive Black sound. Even within the Creole community, the trend is toward larger, more commercialized, and self-conscious venues like festivals and trail rides; among the most important of these are the enormously popular dances regularly held by most Catholic parishes with large Creole memberships. Moreover, while many African American styles such as the blues have suffered because of the changing musical tastes of young Black performers and audiences, zydeco, in the 1990s at least, continues to attract young Creoles, albeit with concomitant modifications, as witnessed by the influences from funk, disco, and rap. One of the most vital and viable of all African American musical traditions, zydeco appears destined to remain so for some time to come.

John Minton
